Mr. LEA. Now I understand you are preparing a statement of the number of soldiers employed, civilian labor and soldier labor.

Mr. CAMPBELL. On the cost-plus contract.

Mr. MAGEE. But they can't give that, as I understand, in the distribution of the soldiers to independent operators, but they can give us the soldiers and where they were distributed.

Mr. LEA. Yes.

Mr. MAGEE. And, as I understand, they will do that.

Mr. LEA. Before you entered into this contract with the Siems-Carey-Kerbaugh Co. what, if anything, did you ascertain as to their financial responsibility?

Mr. DISQUE. I ascertained that they were perfectly reliable from every angle that business men would think considering and within the limits of the contract that they were proposing to make.

Mr. LEA. What assurance did they give of the performance of their contracts, so far as the fitches were concerned?

Mr. DISQUE. They deposited with the War Credits Board, subcluding \$250,000 worth of Liberty bonds, a total of \$750,000 negotiable collateral.

Mr. LEA. Were these securities approved by the War Credits Board?

Mr. DISQUE. They were. In addition to that they gave their individual note for \$1,000,000.

Mr. LEA. And then some reference has been made here to a mortgage in Clallam County. What do you know about that?

Mr. DISQUE. That mortgage was required by the War Credits Board to protect the Government as additional security on the advances that were made to the contractors, and that was a mortgage on all the real or personal property that might be acquired or constructed under their operations.

Mr. LEA. That related to after-acquired property, did it?

Mr. DISQUE. After-acquired property. That was on the flitches contract, of course.

Mr. MAGEE. At the time it was given, of course, they didn't have any.

Mr. DISQUE. What?

Mr. MAGEE. At the time the mortgage was given they didn't have any property, as I understand.

Mr. DISQUE. No; they had no property then, nor had they had any advances. That mortgage was given to protect advances as they would be made.

Mr. MAGEE. It simply attached as they might acquire them?

Mr. DISQUE. As they might acquire them. And I want to say, as I have determined and learned, that the individuals who signed that note for a million dollars were personally responsible to that extent.

Mr. LEA. That is, they got parties other than themselves to sign this negotiable paper?

Mr. DISQUE. No. They signed it as individuals and jointly, and they were worth the amount of the note.

Mr. LEA. But what I mean is, was there anybody outside of their company that signed the notes?

Mr. DISQUE. I don't think so. I don't know, but I don't think so. They didn't sign that note as a company note; they signed it as individuals, against their own individual holdings.

Mr. LEA. Yesterday you referred to some resolution adopted by a lumbermen's association. What association was that?

Mr. DISQUE. You mean one I started to read and didn't read?

Mr. LEA. Yes.

Mr. DISQUE. That was not a lumbermen's association. I have been told by several men who were present, but a meeting of all lumbermen and loggers of the Northwest in Portland, after the armistice had been signed, at which they discussed the future of the industry, due to the changed conditions. Some 462 were present, I have been told by the man who acted as secretary.

Mr. LEA. Well, does the resolution have any relevancy to this investigation?

Mr. DISQUE. I think the resolution does, in that it was passed by the members present, without, as I understand it, any of my organi-

zation being present. I myself was in Washington, D. C., when this meeting was held, and a copy of it was mailed to me by the secretary of the meeting. Shall I read it?

Mr. LEA. I just wanted to see the general nature of it.

Mr. DISQUE. It starts at the bottom there [indicating to Mr. Lea.]

Mr. LEA. (after persuing the resolution). Now in reference to this resolution, ordinarily I think it would have no place in such an investigation as this, but in view of the fact that witnesses have come before this committee purporting to express the opinion of the loggers' association I would suggest that we simply put this in the record.

Mr. MAGEE. Put in anything that the General feels that he wants to go in. He will be given the fullest opportunity. If you want to put it in, or if the General does, why offer it.

Mr. LEA. Have you got any objection to this going in?

Mr. DISQUE. I have no objection to it.

Mr. LEA. Can the reporter take that and copy it?

Mr. DISQUE. I can give him a copy of it.

Mr. LEA. Very well. Then the reporter may insert that in the record.

Mr. MAGEE. Probably the better way would be to furnish him with a copy.

Mr. LEA. Yes. Mr. Disque, if you will, just furnish the reporter with a copy and the reporter can insert it at the proper place; or it will be all right to insert it in tomorrow's proceedings.

Mr. DISQUE. It is all ready. I can give it to him right now.

(Said resolution, pursuant to the foregoing direction, is set out herein as follows, to wit:)

RESOLUTIONS ADOPTED AT MEETING OF WEST COAST LUMBERMEN'S ASSOCIATION
AT HOTEL MULTNOMAH, PORTLAND, OREG., NOVEMBER 16, 1918.

Whereas we prepare now to sever our heretofore close associations with the Spruce Production Division of the Signal Corps, we desire most earnestly to give to the public a statement of commendation of the efficient and successful work of the division in the duty assigned it of securing the necessary quantities and quality of lumber needed for airplanes for all the allies. Far removed from the glamour and the glory that helps to alleviate the pains and suffering of the fighting front, the officers and men of this division have labored unceasingly, many of them realizing that in all probability the one opportunity for an active application of their chosen profession was being denied them while they devoted their ability and energies to the important work of supporting the fighting units. To Gen. Disque we reaffirm our many expressions of confidence, now proven undeniably justified, in his ability and integrity, and commend him and congratulate ourselves and our country that a man of such breadth of vision, such clear foresight, and such firm decision was placed in charge of this important work. We do not forget that it was necessary to prepare to an indefinite war and that all activities were planned to conform. The end was as sudden and unexpected as it was welcome. Closely allied to the Army, and as an absolutely necessary part of the organization that has made possible the accomplishment of these things, has been that body of men who have worked in the woods and mills, banded solidly and loyally together under the name of the Loyal Legion of Loggers and Lumbermen, and particularly to these men should be given the credit that they deserve. Now, therefore, be it

Resolved, That we, the representatives of a majority of the lumbering industry of the Pacific Northwest, in mass meeting assembled this 16th day of November, 1918, subscribe to the above as recognition of the faithful,

efficient, and valuable work of the department of the Government that have controlled the activities of this industry during that period of war in which the United States has been engaged.

The Loyal Legion having demonstrated its value in time of war, we favor its continuance in time of peace as a means of conference and understanding between all engaged in the manufacture of logs and lumber, provided it agrees to the principle of the open shop.

We request the continuance of the present military organization directing the Loyal Legion under General Disque during the reconstruction period.

Mr. LEA. Now if there is nothing further along this line I want to go to another subject. Have you any questions you want to ask about this particular subject?

Mr. MAGEE. No, I don't think so. I think this manner of asking questions will help us to get through.

Mr. LEA. Yes. In reference to the operations around Yaquina Bay and in that neighborhood, when did the Government, or, rather, the Spruce Corporation, begin operations in that vicinity?

Mr. DISQUE. It was in the spring of 1918.

Mr. LEA. And with what operation did it begin?

Mr. DISQUE. It began with the riving operation by the Warren Spruce Co.

Mr. LEA. And that was a cost-plus contract?

Mr. DISQUE. Cost-plus contract.

Mr. LEA. You referred to that yesterday, didn't you, in your testimony?

Mr. DISQUE. I think so.

Mr. LEA. You covered that subject yesterday?

Mr. DISQUE. Well, not to any extent. We merely brought it up that there was a cost-plus operation under way down there.

Mr. LEA. Was that your first cost-plus contract?

Mr. DISQUE. No. The first one was with the Grant Smith-Porter Bros. Co., and I believe they got under way first down at the mouth of the Columbia River, near Clatsop.

Mr. LEA. But this Warren Spruce Co. contract followed shortly after the other contract, didn't it?

Mr. DISQUE. Quite shortly afterwards.

Mr. LEA. And they went down there and began riving?

Mr. DISQUE. Began riving.

Mr. LEA. How did they ship out?

Mr. DISQUE. By rail over a branch of the Southern Pacific.

Mr. LEA. And when was that plan of operation changed?

Mr. DISQUE. That was changed possibly two or three months afterward as the spring developed, or the summer developed, after we had covered the emergency period and found it desirable to convert those operations into selective logging operations.

Mr. LEA. What side of the bay were they operating, to begin with?

Mr. DISQUE. On the north side.

Mr. LEA. In whose timber?

Mr. DISQUE. Well, I can not say; it was north of Toledo.

Mr. MAGEE. Is that what they call the Siletz country?

Mr. DISQUE. Up toward the Siletz country.

Mr. LEA. I would like to have you go ahead in your own way and tell what was done there and why you did it?

Mr. MAGEE. Let me see if I get that straight. When we speak of timber to the north it is in reference to what is called the Siletz

country, and when we speak of timber to the south it is with reference to the Blodgett tract.

Mr. LEA. Except, of course, there is timber along the coast that is not included in the Siletz country. But what I had reference to was the general area down there, including Alsea Bay and that whole region.

Mr. MAGEE. The Alsea Bay is to the south.

Mr. DISQUE. As these logging operations were contemplated we determined to drive our railway first from Toledo into what was reported to be some wonderful spruce around the Siletz River and along the slopes of the mountain range which parallels the coast there about two or three miles from the coast. We made our preliminary surveys and about that time had a complaint from the people down there that we were not taking the right route.

Mr. LEA. What route was this?

Mr. DISQUE. This is a route to get into the spruce north of Toledo. At that time we had no road in mind. There was a short railway which had been used as a logging road for some years, and I understand several people went broke trying to operate it. We took that over in our riving operations and at first considered extending that north, east of the range of hills, because it had been reported that that was the best route to acquire this timber for logging. Our own engineers recommended against the route east of the hills. The Toledo people and timber owners north of Toledo, including this Mr. Pendleton, by the way, who was here the other day, all insisted that we should build the road north from Toledo. I had several disinterested locating engineers go down there and report to me on the advisability of the railroad running over north of Toledo, east of the range or toward the coast, and then west of the range, and I found that the people of the district down there took such an interest in it and had run into a situation similar to that before, where you usually find local interests endeavor to outweigh efficiency methods. So I went down myself. I walked for two days over these routes. I found the stories that had been given to me about big quantities of spruce just north of Toledo and east of the range were not verified. I walked over that route, or rode over it on a horse, with several engineers and timber experts. We did not see enough fruit up there, as far as Otter Rock is concerned, to justify a donkey pulling it out, to say nothing of building a railroad. Furthermore, it was impossible to build a railroad.

Mr. LEA. How far is it above Toledo?

Mr. DISQUE. It is about 8 miles above the Toledo project, toward the coast.

Mr. MAGEE. How near the coast?

Mr. DISQUE. On the coast, but the range turns to the west.

Mr. LEA. You were north of Toledo, on a line with Otter Rock. Is that what you mean?

Mr. DISQUE. That is the point. Furthermore, you could not build a railroad east of the range along the slopes of that hill and expect it to operate at anything like the cost that we have put into the best of the roads we had built, nor could it have done so at any time. Those hills were just one big curve and trestle after another; the grade would have to be on the side of the hills and slides would have been continuous. So we went over and walked along the coast route clean

out through that north fork of Spencer Creek, and our engineers decided we could cross over the range on a $2\frac{1}{4}$ per cent grade and get down into the Siletz if we found next year, 1919, or 1920——

Mr. MAGEE. What grade was that?

Mr. DISQUE. Two and one-half per cent—if we found next year that there was any spruce over there; but for the current requirements there was enough west of the range and south of Otter Rock to take care of all immediate requirements that we had outlined. I walked, as I say, over both these routes, and it was perfectly apparent to me that the engineers I had sent ahead were correct.

Mr. LEA. Who were those engineers?

Mr. DISQUE. I can not tell you the names. They were officers of our division who were making surveys. One was Capt. Millar. I will say that one engineer was the engineer of the Simpson Logging Co., from Washington, asked because of the total impossibility of his having any interest. He went down and made a report. Capt. Harmon was another man from our own organization. Mr. Mark E. Reed sent his superintendent from the Simpson Logging Co. A. E. Hillier, a man from up in the State of Washington, who probably did not know anybody around Toledo, was another. We were trying to get an impartial report.

Then, after doing all of this getting that route picked out, the people of Toledo again sent a delegation up here and wanted us to go back over the subject. I asked Mr. Amos Benson to do that, just as a matter of leaving nothing undone, to be sure that we were correct. They promised to take him out and show him the feasible route to get over into the Siletz River from Toledo by going north. Mr. Benson is here in the city and can testify that he told me on his return that they took him out and walked him all day and ran into a mountain that you could not have climbed over with an inclined plane. Then he asked them where that route was, and they said, "Well, apparently, we have not found it." So he went back, and the next day, or the next night, they telephoned him at Newport and said, "Come over; we have another route," and he told them he had traveled over all the routes he was going over, and I certainly concurred in his action. They were trying to guess at a route to get us to build a railroad down there to help Toledo. That was the thought they had in mind. We were trying to get the spruce.

Mr. LEA. What did Mr. Miller have to do with that situation?

Mr. DISQUE. I do not know Mr. Miller.

Mr. LEA. The man who was a witness here the other day, who operated a railroad.

Mr. DISQUE. I think he was operating this little railroad down there when we first went in.

Mr. LEA. Was he connected with the mill at Toledo at that time?

Mr. DISQUE. I believe he was operating a small mill at Toledo.

Mr. LEA. And how near would this railroad that he wanted have come to his mill?

Mr. DISQUE. It ran right into it. That was the railroad that fed his mill.

Mr. MAGEE. Your mill is right next to his, is it not?

Mr. DISQUE. We did not have any mill at that time. The one we built was right next to his.

Mr. MAGEE. It would run right into yours, too?

Mr. DISQUE. Exactly.

Mr. LEA. So he would have made connections there.

Mr. MAGEE. I assume if they ran this road up it would have been the most feasible one, would it not?

Mr. DISQUE. As we found out the location of the spruce, and if the war had only lasted to the end of 1919, his route would have been worth nothing. We would have built for eight miles without justification.

Mr. MAGEE. I mean, if you could have got it you could have had a direct route?

Mr. DISQUE. No, we got into spruce by going in to the coast route much quicker than by going that way.

Mr. MAGEE. You have 26 miles, going up the coast route?

Mr. DISQUE. Oh, no; we get in the spruce going up the coast route in about five miles, I think.

Mr. MAGEE. I went over that route and I thought they told us 12 miles—

Mr. DISQUE. That road was not over $7\frac{1}{2}$ miles along the coast, and we were in spruce at least half the distance.

Mr. MAGEE. I mean, up to Otter Rock.

Mr. DISQUE. That is the one.

Mr. LEA. Can we not get the length of that railroad now?

Mr. DISQUE. Yes.

Mr. MAGEE. Then there was a rafting of 12 miles on top of that?

Mr. DISQUE. There was not any rafting on that line.

Mr. MAGEE. I mean, to get the logs down to where the mill was located.

Mr. DISQUE. Oh, no; we took them right over the road to the mill. There was not any rafting on the northern. That was the southern. Nobody in this investigation ever said that, nobody that could give competent evidence. The northern road including all its logging spurs was 10.83 miles.

Mr. LEA. Is that road completed for that distance, or not?

Mr. DISQUE. No, there was 1 mile and seven-tenths of that not completed.

Mr. MAGEE. Do I understand that over that road you said you get logs to your Toledo mill without putting them in the water?

Mr. DISQUE. Yes.

Mr. LEA. How?

Mr. DISQUE. That road connected with the Southern Pacific branch at Yaquina. It was just a few miles west of Toledo, and the Yaquina-Toledo section of that road was used once a day by trains of the Southern Pacific, I believe, and we had already entered into arrangements for trackage rights over that portion.

Mr. MAGEE. As I remember it, we went up from Newport and got on this road, and then rode up towards Otter Rock, and then went back on the spur; then came back and came down to the water and rode up around the water there two or three miles, or just a short distance, where a big trestle goes out into the water, and they told us that the logs go up there where they had a boom, and then they rafted to the Toledo plant. That is what they told us. Is not that what you understood, Mr. Lea?

Mr. LEA. That is what I understood. I think you are confusing the road north of Toledo with the coast road. I may be mistaken.

Mr. DISQUE. No. The logs from the operations north were to have come in by rail. They had physical connection right there.

Mr. MAGEE. That is impossible, I think. That ought to be a matter over which there could be no dispute, and it ought to be straightened out. If you will read Mr. Miller's evidence, and I think Mr. Morgan's evidence, I think you will see what I mean. I assume the men down there—we were in charge of Lieut. Patterson, the supervisor of the district, and Mr. Lawson—knew the situation, and I had the same impression that Mr. Lea got, and we rode over the line.

Mr. DISQUE. I do not know either of those folks. I do not know whether they were there when we were operating or had any knowledge of what we were contemplating doing.

Mr. MAGEE. But the road is constructed up around the water; that connects with a trestle. I do not know whether you call it a river or a bay; that connects with a trestle.

Mr. DISQUE. I will say here that the people you have just mentioned, Mr. Magee, do not know anything about this situation as it was planned and worked out during the war. They are new people, probably, or else were subordinates.

Mr. MAGEE. No; I am only speaking of the road as built. We went down and went over it, and we were under the charge of your people there, and it would seem as if they ought to know what the fact is.

Mr. DISQUE. I do not know who you were in charge of.

Mr. MAGEE. The district supervisor.

Mr. DISQUE. I will say that the physical connection of the north line with the southern railway permitted the logs to be hauled to our Toledo mill by rail, and I certainly had to get the idea as to how it was going to be done.

Mr. MAGEE. There was a great big trestle built up in the water.

Mr. DISQUE. That is to go to the Alsea track.

Mr. MAGEE. There are two of them, one on each side.

Mr. DISQUE. To afford a ramp for the railroad to go out to get on the ferry, because of the shallow water and tide movement. Mr. Holland, who is district supervisor down there, is in the room, and he can cover that subject if you desire.

Mr. H. H. HOLLAND. As we came down from Toledo, we came by boat, and I showed you the tie-up grounds above the Yaquina.

Mr. MAGEE. We took an automobile and went through the village, over a plank road a mile and a half or two miles, and found a platform up there. Then we got on the freight car with an engine and went up along the coast, up toward Otter Rock?

Mr. HOLLAND. Yes.

Mr. MAGEE. And then there was a spur that went toward the mountain?

Mr. HOLLAND. Yes.

Mr. MAGEE. And we went up that spur, and then we came back down over the same line when we got down to the starting point; we got down to the water. Is that Yaquina Bay? Then we went up around the water. Then it runs up around the water in a semi-circle up to a trestle, which we saw Sunday when we came up from the Blodgett tract. I understood that the logs coming from over

that road ~~and down over~~ this track to this water, went out on the trestle and were dumped.

Mr. HOLLAND. To be dumped thereon that side. The logs on the north side had a separate boom, and then the other pier came from the other side, and the logs were boomed and rafted. Then they were towed up to Toledo, and the idea was to get them up there.

Mr. MAGEE. That is the point exactly. In a case of getting out logs they were brought down over this railroad to the trestle and thrown into the water there where the pier was and then towed to the Toledo mill, a distance of 12 miles?

Mr. HOLLAND. Yes. You could, however, on the north line have taken the logs straight through on the C. & E. Railroad up to Toledo and dumped in the pond right there in the depot sloughs, where the other logs were that you saw dumped there.

Mr. MAGEE. If that was the plan, then there would be no necessity of building this road up to—what is it called, the bay?

Mr. HOLLAND. You had to build that road to get the physical connection with the C. & E. Your main line to the C. & E. ended at Yaquina. We made physical connection with that road and built that road up to a point 11 or 12 miles. It is about $3\frac{1}{2}$ miles up to that point on the railroad where you got the train that morning. It is $3\frac{1}{2}$ miles from Yaquina, you afterwards came down over that, a part of it.

Mr. MAGEE. Was it your intention to use the water at all in getting your logs to the Toledo mill?

Mr. HOLLAND. Yes; it could be done either way.

Mr. MAGEE. What was the intention of the company, and if that was not the intention, what was the purpose of building the road and trestle?

Mr. HOLLAND. You mean, coming around the bay?

Mr. MAGEE. Yes.

Mr. HOLLAND. The physical connection is worth more than the cost. There was always the chance of taking logs up on regular logging cars if you could produce logs faster than they could be cut up.

Mr. MAGEE. They had some logs cut up there.

Mr. HOLLAND. The logs that came over the north line; I do not know whether they are putting them into the water at Yaquina or taking them over this road. I know there we saw them.

Mr. MAGEE. They went around Yaquina Bay and onto the trestle and were then thrown into the water. They never took any logs over the Southern Pacific?

Mr. HOLLAND. No; it was only possible in case of rough water.

Mr. LEA. Then I guess we have gotten this straightened out beyond question. There is a railroad connection from the north coast line to the Toledo mill owned by the Spruce Production Corporation, and there is also—

Mr. MAGEE. As I understood Mr. Holland, he said there is a possibility of a connection with the Southern Pacific at Yaquina.

Mr. HOLLAND. There is a physical connection there.

Mr. LEA. So there is both rail and water connection along the bay there, as far as that is concerned. About how far south from the Toledo mill where you strike the Southern Pacific; how far did you use the Southern Pacific?

Mr. DISQUE. How far would we use the Southern Pacific?

Mr. LEA. Yes. Maybe Mr. Harrington can give you that.

Mr. HARRINGTON. About 8 miles.

Mr. LEA. And the Government road does not connect with Toledo, but with the Southern Pacific, which goes through Toledo?

Mr. DISQUE. The Southern Pacific, which passes right by Toledo and has a log boom right at the mill pond.

Mr. LEA. Now, will you go ahead with your explanation?

Mr. DISQUE. This may should be introduced, I think, as an exhibit to the committee's report, and is necessary to an understanding of this situation.

Mr. MAGEE. All right; that can be marked.

(The map above referred to was marked "Exhibit 12, Disque, September 5, 1919.")

Mr. DISQUE. This railroad that runs north is the Miller Road [indicating on map]. Here is a ridge running north and south at a point that is probably 7 or 8 miles above the river here. The ridge is defined by the numbers 23, 14, 11, 2, 35, 26, 23, and 14, and I will include it in a red loop. That is approximately the line of the ridge. Then this ridge had a point going to the west like that [indicating]. We determined after thorough surveys that it was not practicable to put a railroad along the east side of the ridge. Our information led us to believe, and we confirmed it subsequently, that spruce did not exist in the area east of the ridge until we reach section 25, except in such small quantities as not to justify any development that included railroads. We found approximately 150,000,000 feet of good spruce in the area west of the ridge between the coast and south of the Otter Rock Ridge.

Mr. MAGEE. One hundred and fifty million?

Mr. DISQUE. Approximately 150,000,000 feet.

Mr. MAGEE. I think that is what Mr. Morgan testified to.

Mr. LEA. He said one hundred and fifty or one hundred and sixty million.

Mr. DISQUE. We found we could not build a road east of the ridge at a reasonable cost, and after personal examination by myself and by engineers, that plan was abandoned. We found we could build a road from Yaquina north of Newport toward the coast and it would reach spruce of good quality at the end of the first 9 miles, and from there on for the next 3½ miles up past through what had been cruised and reported to be 150,000,000 feet of the quality of logs that we were interested in. We also found by surveys that we could cross along this north and south ridge first described here by going through from section 34 into section 26 and then descending down into the Jaybird Creek, through section 25 which, according to our cruises, began again a spruce area which followed the Siletz River to the north.

At this time and for 1919 we were not interested in anything north of the Otter Rock Ridge, and there was enough spruce west of the ridge, between that and the coast, to take care of our requirements. Now, there has been much talk to this committee about this eastern route, or the route north from Toledo. Let me show here; I have underlined in red the property which the principal witness, Mr. Pendleton, is interested in. You see that it lies east of the ridge. Only the people of Toledo wanted this timber to come out through

their town. It meant developing that harbor, it meant improving their properties, and is a laudable thing, of course, for any community to have in mind, but certainly not a thing for Government officials, under a war program, to consider.

Mr. MAGEE. Where was this possible connection with the Southern Pacific that you have been talking about?

Mr. DISQUE. Where was it?

Mr. MAGEE. Where is it?

Mr. DISQUE. Right at Yaquina. Locomotives have passed very many times from one to the other. That is the way we got our locomotives on that line. I have ridden right straight over it.

Mr. MAGEE. That comes up where, to Toledo?

Mr. DISQUE. Toledo is over here [indicating]. Here is the Southern Pacific. It stopped there [indicating]. We hook right onto it and go on up that way [indicating].

Mr. LEA. Now, did any of these engineers associated with the Spruce Production Corporation, or any practical loggers, make any reports to you as to the feasibility of these routes?

Mr. DISQUE. I had several reports.

Mr. LEA. Have you any with you?

Mr. DISQUE. I have.

Mr. LEA. Whose report have you?

Mr. DISQUE. I would like to read the report of Mr. Amos Benson, a man who had retired from the logging business, having made a success of it, and acknowledged in the community as a successful and experienced logger.

Mr. LEA. His residence is here at Portland?

Mr. DISQUE. Portland, Oreg. In a letter addressed to me on June 5 he says:

Monday morning, June 3, in company with Messrs. Morgan Hall and Derrick representing Siletz and Toledo people, Pvt. Ingram, whom I understand accompanied the party at request of Siletz people, and Messrs. A. J. McDonald, William Frost, two cruisers and loggers at my request and myself examined the proposed route for railroad connecting with Miller's railroad to Siletz River near tide water.

Their main contention was: This would be a direct and short route and in Spruce nearly all the distance.

I found they had not made any careful, intelligent examination of the ground from an engineering or logging standpoint, and the road would be impossible to build.

Starting from end of Miller's road at elevation of 230 feet it would need to raise to elevation 400 feet in three-quarters of a mile, then drop to elevation 200 feet on Siletz prairie, then raise to elevation 550 feet and drop to elevation 120 feet on Ludson's prairie, then raise to elevation 300 feet to cross ridge between Siletz and Jaybird, then it would take all the distance left to get down between there and mouth of Jaybird.

Between the 550-foot pass and 120-foot elevation there is not distance enough to get down on any grade that would be practical.

As to being in spruce all the way, it would not be in spruce any of the way. There is very little spruce between Siletz River and Jaybird Ridge, excepting probably 25,000,000 feet at head of Dewey Creek near top of main ridge, which could be taken over to ocean side of main ridge.

Tuesday Mr. Cobb, who is chief locating engineer here, and Messrs. McDonald and Frost examined Spencer Creek from top down. I did not accompany them, as I was sick. Mr. Cobb reports a very cheap line can be built down Speneer Creek.

All three report a large body of the finest spruce they have yet seen north of Yaquina, on head of Spencer Creek. At least 50,000,000 commercial cruise, on north fork of Spencer Creek.

Wednesday Messrs. Cobb, McDonald, Frost, and myself started at head of Jaybird Creek and run a reconnaissance down Jaybird. We found that it would be impractical, as the country is too rough.

Jaybird has a large amount of good spruce timber—probably 60,000,000 commercial cruise of good quality, but the average quality is not better than on ocean side of main ridge.

From what I have seen of this north country I have come to the conclusion that the spruce lays in three separate units that portion south of Otter Rock Ridge and west of main ridge, unit No. 1, North of Otter Rock Ridge and west of main ridge and south of Siletz Bay, unit No. 2. On Siletz River and east of main ridge, unit 3.

Unit No. 1 has largest amount of spruce, the best of which is as good as any in the Alsea or Siletz district.

I might say that Mr. Benson had also put in the Alsea.

Mr. MAGEE. Is he an engineer?

Mr. DISQUE. He is a logger, including every phase of it.

Mr. MAGEE. Not a civil engineer?

Mr. DISQUE. I do not know about that, but he is a man who has been handling logging operations, every activity connected with it.

Mr. LEA. Is he the son of the man who owns this hotel over here?

Mr. DISQUE. Yes.

Mr. LEA. How old a man is he?

Mr. DISQUE. About 40 or 42.

If a road is to be built from Toledo to tide water on the Siletz River it will have to follow down Siletz River all the way. About 18 miles of new construction and no spruce along same. I am convinced there is not enough spruce in Siletz River to justify this expenditure.

We have examined Spencer Creek and Rock Creek and can get a good line and not be out of spruce; in fact, if main line does not go this way it will be necessary to build branch lines to get spruce there, anyway. This would connect units No. 1 and No. 2. This road could be built along ocean to Siletz Bay and branch lines off same up adjoining creeks would tap all the spruce west of main ridge.

Then you could take machinery on scows up to head of tidewater on Siletz River about 18 miles to Big Bend and build cheap railroad up Jaybird Creek and adjoining creeks. And dump logs into water and tow or float them down to Kernville, head of Siletz Bay, and reload them on railroad and bring them down coast to Yaquina. This would avoid building a lot of dead line down Siletz River from Toledo, and this coast line has to be built, anyway, to get spruce on ocean side of main ridge.

Friday we are going to examine into feasibility of getting main line over 450 feet pass over Otter Rock Ridge so as to shorten main line. But if we find this impractical we know we can go up Spencer Creek and down Rock Creek.

Mr. Cobb had his preliminary line finished from Yaquina to Molack Creek (the first creek that has spruce), and it is $8\frac{1}{2}$ miles long.

Therefore, I would recommend that you proceed to build the coast line from Yaquina north at once while the good weather is on. And there is plenty of spruce in unit No. 1 to justify that expenditure if you went no further. This unit No. 1 can not go out any other way.

As to tree spotting and scaling at Toledo, and other operating and construction details in this district, I have not give them any attention at all, as I have devoted my entire time here trying to get the proper route picked out. So that after you get started you will have a practical operation.

Mr. MAGEE. As I understand, your line up along the coast, or rather up along the coast there isn't any spruce of any account there, to get into the spruce, as suggested in his communication, you have to angle off to the east?

Mr. DISQUE. His letter says that we get into spruce right here at Molack Creek.

Mr. MAGEE. You mean up along the coast road?

Mr. DISQUE. Yes; that is along the coast road.

Mr. MAGEE. I rode over it and I didn't see any, did you?

Mr. LEA. Where is that?

Mr. MAGEE. The coast road, right along the road we went over, on a spur, I guess a mile or 2 miles, up to a logging camp where there was some spruce. But I did not observe any spruce along the line of the road.

Mr. DISQUE. You will not find spruce fit for our purpose that close to the sea. Here is Molack Creek, the beginning of the spruce [indicating].

Mr. MAGEE. You ran your spurs in?

Mr. DISQUE. Like herring bones, in this direction.

Mr. LEA. The first of any quantity that we saw was where they were logging up there.

Mr. MAGEE. On that spur, a 7 per cent grade?

Mr. LEA. That is a 6 per cent grade.

Mr. DISQUE. That is the first place.

Mr. MAGEE. I thought that was grade enough so that if a train ever got loose it would not stop until it got into the Pacific Ocean.

Mr. LEA. Molack Creek is about how far from the end of this railroad up the coast?

Mr. DISQUE. From the end of it?

Mr. LEA. Yes.

Mr. DISQUE. About $3\frac{1}{2}$ miles.

Mr. MAGEE. I think it would be well to put that map in evidence. It is a pretty good map, it is the best map I have seen of the general location there.

Mr. LEA. That map is in evidence?

Mr. DISQUE. Yes, put that right in as an exhibit.

Mr. LEA. Have you a report of anyone else there?

Mr. DISQUE. On this northern route?

Mr. LEA. Yes. Now, Mr. Disque, did you see the report of A. E. Hillier on the examination of the Siletz River project of the Spruce Production Division?

Mr. DISQUE. I did. I was just looking for it here. Is that it?

Mr. LEA. Yes [handing document to witness].

Mr. DISQUE. Yes, I had that, or one like it in my hand just a minute ago.

Mr. LEA. I do not want you to read it all, but you can refer to some of the main features and we will put it in evidence. In the first place, who is Mr. Hillier and what is his experience and ability in this connection?

Mr. DISQUE. Mr. Hillier was at that time superintendent of the Simpson Logging Co.

Mr. MAGEE. Was he the one that you said Mr. Reed sent down?

Mr. DISQUE. Yes.

Mr. MAGEE. Is Mr. Reed connected with the Simpson Co.?

Mr. DISQUE. Mr. Reed is president of the Simpson Logging Co., and was one of the members of my advisory committee.

Mr. MAGEE. This is his superintendent?

Mr. DISQUE. This is his logging superintendent, whom he sent down there in order that he might have an intelligent idea of his

own when it came to vote on this problem. It was to assist Mr. Reed in giving his judgment, and he gave me a copy of the report.

Following you will please find the report on the Siletz River project of the Spruce Production Division of the United States Signal Corps, as per order received on the 8th instant. I found on examination that there were several features to be taken into consideration and on this account the report is more extensive than might have been expected.

The project under consideration is the advisability of building a railroad to take all the available spruce timber in townships 8, 9, and 10 south, range 11, and township 9 south, range 10, all west of the Willamette meridian, comprising that territory confined between the watersheds of the Siletz and Yaquina Rivers in proximity to the coast line.

The topography of this country is generally rough and broken. There is one main ridge starting in the south at the approximate center of townships 10-11, running practically due north through the center of 9-11, and from this ridge spurs run out on the west side to the coast and on the east side to the Siletz River, and between these spur ridges are small creeks. These ridges are not high, running from 300 to 700 feet in elevation, but they are extremely steep and the formation being of clay and soapstone makes a very unsatisfactory roadbed. There have been two preliminary surveys made in regard to opening up this territory for the production of spruce; one is known as the high line, the project of Mr. Von Arsdale, and the other the coast line, which is favored by the engineer in chief of this district, Mr. Cobb. It will be understood that it was impossible to make a close examination of this district in the time allowed, and on this account only the main features will be taken into consideration.

The high line as conceived and shown on the map here inclosed was to climb up on to this main ridge regardless of grades and alignment to procure an uphill haul for the timber tributary to it, with the idea of building branches west and east on these spur ridges as necessity required to reach the timber. Unfortunately the spruce does not lie on these ridges, but on the lower slopes and in the bottoms, and in many places it would require a mile of branch line to reach any considerable body of spruce. The necessities of the Government, as explained to me, require the full development of this territory in the least possible time and they desire to reach a daily output of 400,000 feet. This, as you know, is a large amount of timber to handle and requires a good roadbed and very fair alignment to be able to consistently operate without wrecks and breakdowns. I find on examination of this high line that the grades would be at least 5 per cent curvature in many places in excess of 40° and a line in general, that might answer the requirements of a two-sided camp, but under no consideration could it be regarded as a main line. The map inclosed with this report shows the locality and area of the spruce as given to me by their cruisers and engineers. In this it will be seen that practically all of the spruce lies west of the main ridge, except the timber lying along the Siletz River which will be considered later. The Spruce Production Division, United States Signal Corps, has extended a railroad line from Depoe Slough south to Toledo, and is at the present time operating two camps in section 24, 10-11, and expect to get all the spruce in sections 13, 14, 23, 24, 26, and 25 in this present high line.

A very fair explanation of this proposed high line would be to say that it would resemble very closely that line built by your company on the side hill in sections 10 and 15, 21-5, from Camp No. 2. The slopes would be approximately the same, and if anything the curvature would be more excessive; construction in volume would be very hard to maintain, and the feasibility of landing logs, ground-yarding, is very much to be questioned. In conclusion there would be no future for this road other than a logging road for this timber in this district only. In comparing this with the coast line later it will be borne in mind that the spur ridges running west would drop off in many places 4 per cent to 5 per cent, the construction would be the same in character as the main ridge, and the timber when loaded would have to be hauled up excessive grades.

In favor of this high line several points can be made; one feature being that they now are in spruce timber, and in a broad sense would continue to be so, and that they would have up-hill yarding.

Without digressing, I would like to point out that the difference in logging uphill and downhill in selective logging is not so great as if the whole tract was being handled. In selective logging, and in this locality especially, four

trees per acre would be a high average and, on this account logs would not necessarily run on a slope, as there would be no roads broken, the amount of trash pulled down to your donkey would be negligible. It would have to be ground yarding, it being impossible to use a high lead, and there are several points that Mr. Von Arsdale has brought up in this matter that I do not think should carry weight. As for instance, he claims that in yarding uphill, it would be much easier for the crew, as all lines would be run downhill. We surely must admit that in running out a straw line, or, without a straw line, a haulback, that it is immaterial where you take it, it has to be returned to the donkey before operations can commence; if you have to haul it down hill it must be hauled back up again, and if up, then down again to the donkey. This should not be taken as an argument in favor of downhill logging as it is conceded that uphill gives far more satisfactory results, but I do contend that in selective logging the difference is not so noticeable and is not great enough to compel construction of a main line in a locality where it is impossible to handle logs in volume.

In considering the coast line in relation to the high line, I should judge that the cost of construction per mile would be approximately the same. The cuts and fills, also bridging, may be a little heavier, but it is more accessible and can be carried on at as many different points as desired. There is a passable wagon road to the mouth of the Siletz that can be utilized for the transportation of material, supplies, etc., and a larger volume of work can be carried on at one time without interfering with the separate localities.

It is conceded that 8½ miles would have to be built before timber would be reached on this route (but bearing in mind that the Toledo Branch will be a producer for the next three months), this would take the line to a point on the map to a creek marked "Schooner." From there to the divide between Spencer and Rock Creek, which is marked 13½ miles, a large amount of spruce would be available. The several creeks marked between this area are small and very sluggish. They all have a fair-sized basin and apparently they gradually raise from 1 per cent to 3 per cent. These creeks could all be made quickly available to the road by building branch lines, although it is admitted that on nearly all of these creeks the timber of the first one-half mile is of too low a grade to meet the requirements of the Spruce Production Board's specifications. It is the intention of the engineers to build up these creeks. With this I do not agree, but would recommend holding on the high land wherever it is feasible and climb the ridges wherever possible and in this way get uphill logging, but taking the loaded cars down a 5 per cent grade in preference to hauling them up on the high line.

The contention of Mr. Van Arsdale that this road would have no future value is not justified by the facts at hand. By continuing the road from the Spencer Creek divide north to Kernville at the mouth of the Siletz River a vast amount of timber would be tributary to it. The Siletz River is a splendid logging stream and from all reports available is beautifully timbered. Tidewater extends back about 18 miles to Moury, in section 1, 9-11 and a boat drawing 6 feet of water can work at this point on the tide. Siletz Bay is shallow and not accessible to large ships, while Yaquina Bay on the contrary has possibilities of a deep-water harbor, and logs milled at Siletz Bay shipped over this proposed coast line would have the benefit of water transportation from Newport and interior markets east over the Corvallis & Eastern Railroad, of which this coast line would be a continuation.

The grades and alignment of this coast line are very fair and according to the figures given me by chief engineer, Mr. Cobb, would be less than 3 per cent, with a maximum of 16° of curvature. It is claimed that the first 8 miles to Schooner Creek will be in operation in 90 days.

If this road is considered purely as a logging road it is admitted that the initial cost is considerably higher than would be considered for a purely commercial enterprise. The length of the line would be approximately 27 miles and the estimated cost per mile \$30,000, making a total cost of the main line with the necessary switches, and without considering branch lines, of approximately \$900,000, but, as a matter of fact, it should be considered as an extension of the Corvallis & Eastern and as such I think would ultimately be a paying proposition. When it is considered that the spruce timber that the Government demands at this time is just as accessible to this road as the high line, that the cost of construction would be no more and that the output in volume will be more quickly reached, I earnestly recommend the building of this so-called coast route.

In regard to the timber in this area there is no question but that they are in a spruce belt, but the data at hand in regard to the amount, grades, etc., is wholly unsatisfactory. No systematic effort appears to have been made to determine the grades and volume suitable for airplane construction. The estimates have generally been taken from commercial cruises, which, of course, takes in everything, and I was unable to find any reliable data. In the limited time I spent in this locality I went over the high line into Jaybird Creek, down the Siletz to its mouth, back south along the coast, up Spencer 2 miles, went up Cold Creek and, while I saw a large amount of spruce, it is undoubtedly overmatured, very large, and low grade. The amount is variously estimated from two hundred to four hundred million and if from the 1st of February they have been unable to determine the amount it's an impossibility for me to try in a four or five day reconnaissance. I saw some very fine spruce on this tract mingler with a lot that was of low grade. The whole body can be considered tide-water spruce and there is no difference in quality between that lying east of the main ridge in Jay Bird Creek and on the Siletz than of that within a mile of the beach. There is good, bad, and indifferent amongst it all and of the whole body I should judge that of the standing spruce timber 75 per cent will be cut; of this 45 per cent will be realized in cants. There is also some beautiful old-growth yellow fir timber on the main ridge, notably in sections 26 and 35, 9-11 and 1, 2, 11, and 12, 10-11 that would make airplane stock. It is very long and clean, tight grain, and not overly large, averaging 50 inches at butt, and I have no doubt but that 25,000,000 feet of select airplane stock can be realized from this area as quoted.

I strongly recommend that the coast route be followed and built to the summit of the divide between Rock Creek and Spencer Creek, that branch lines be built into the timber east into the spruce area and developed as required. There is undoubtedly room for four or five separate camps in this locality that could get into action very rapidly, and I earnestly recommend that it be blocked out for separate individual contracts, estimates made on the amount available to each creek, that the topography be taken and some facts and figures be obtained to ascertain the amount of railroad construction that each one of these creeks should bear. It is unreasonable to expect the field force to put these branch lines in economically without knowing the volume of traffic expected to come over it, as a good deal cheaper line, heavier grades and more curvatures can be stubbed in for five million than for fifty, and I regret to say that I was unable to find any reliable data in regard to the amount of timber tributary to these creeks. These branches can all be built far enough east to reach to the top of the divide and over if necessary and by all means the fir airplane stock should be taken out with the spruce, as it is of fine grade, would make more timber tributary to a setting and lessen the cost of operation.

I recommend that the second unit to the mouth of the Siletz River be built and time taken to get the best possible location, that the country be blocked out and cruised, so that the branch lines will be built on locations most suitable for logging.

There is a new mill, just finished, at Kernville, mouth of the Siletz River, engage in cutting select spruce; it has a capacity of 50,000 per day and seems to be a very fair plant. They have a logging camp 1 mile above Maury and are dumping logs into the river with one donkey and sending them down on the tide, a distance of 16 miles.

There are several splendid chances to log into the river and there is no reason why there should not be twenty or thirty million feet in logs waiting for transportation when the road is completed. Machinery can be taken in this summer, pocket booms driven along the river and development started on a large scale. There is a good wagon road from Toledo to Mahoney's on the Siletz River in section 31, 8-10 and a truck can deliver supplies as desired. The river bottom is well settled and vegetables and meat can be produced in large quantities. While there is no question of the railroad building capacity of the organization established at Newport, known as the Warren Spruce Co., there is much to be desired in the handling of logs. In railroad construction they have a very capable body of men at the head, and while they can not build as cheaply as under private administration they are doing all that humans can do under the circumstances. They are badly hampered by red tape and inefficient officers although there are some very efficient men on the staff, but they are too few and it is a pity that more capable men are not sent there. Officers are in charge that have had absolutely no experience in railroad construction

or logging and when there are so many good men in the service it seems a pity that they are not better distributed.

If the logging camp located at Toledo and known as 3A is going to be a fair sample of the logging in this territory, it will be expensive and also a long time before maximum production is reached. The supply or purchasing department must be inefficient, as supplies are there in larger quantities than can be utilized and what is absolutely necessary is overlooked. As for instance, they are logging lare spruce and there is in stock 600 feet of 7/8-8 cut up in 20-foot lengths and shipped from Portland, out, for chockers. They are running two sides, 6-mile haul on the railroad, and have eight logging trucks to take care of the output. Building a 64-foot sled for a yarder and structurally weak at that.

It will be borne in mind that this examination was short and that means may have been taken to remedy these conditions, but one fact stands out clearly in all the operations in this district and that is that it is impossible to superintend the Siletz district from Portland as it is to run the Portland office from Washington, D. C.

I wish to report that every endeavor was made to facilitate my examination of this tract and that I received every courtesy that was possible and the co-operation of everyone in charge.

Trusting that this will give you the information requested in your order and prove satisfactory, I beg to remain,

Very respectfully,

A. E. HILLIER.

Mr. LEA. To what location does that refer?

Mr. DISQUE. To Jaybird Creek.

Mr. MAGEE. I suppose the only question, as I see it here, is whether it was feasible to get up from Toledo over this Miller line of road which you have described here?

Mr. DISQUE. The big question was if there was timber along here [indicating]. We would have preferred to have done it if construction was possible.

Mr. MAGEE. I say, it seems to me the only question is whether that was feasible?

Mr. DISQUE. Yes.

Mr. MAGEE. Because most of the timber is on the east side of the mountain.

Mr. DISQUE. Most of it is on the west.

Mr. MAGEE. The spruce?

Mr. DISQUE. Yes.

Mr. MAGEE. All the spruce is east, is it not, of this divide?

Mr. DISQUE. No.

Mr. MAGEE. I thought you said there was 150,000,000 on this side?

Mr. DISQUE. Yes; nothing over here to speak of [indicating].

Mr. MAGEE. And as I understood, on the other side, on the east side, according to the testimony of Mr. Morgan, I think it was, there was something like 550,000,000, as I remember it.

Mr. DISQUE. We have read these two statements of disinterested people, and I have been over that. There is no spruce in here to speak of that we could possibly touch. In here there is, after we get over this ridge.

Mr. MAGEE. That is east, is it not. However it may be, it is east of this mountain or ridge, or whatever you call it?

Mr. DISQUE. It is west of the ridge. Here is the ridge. The spruce that we were after was west of it.

Mr. MAGEE. How much do you claim was west of the ridge?

Mr. DISQUE. One hundred and fifty million feet.

Mr. MAGEE. That is what they said. Now, how much do you claim is east?

Mr. DISQUE. We do not know, and I do not think anybody does.

Mr. MAGEE. That is the point. They claim 550,000,000, as I recall, was east. In other words, they claim the bulk of the spruce is east, and that is the point. Now, assuming that the bulk of the spruce is east of the ridge and it was feasible to extend this Miller route, I presume that would have been the—

Mr. DISQUE. Yes, if the spruce was east, but it is not.

Mr. MAGEE. I am assuming that and trying to get at the facts if I can.

Mr. DISQUE. I intended to convey to you, Mr. Magee, that the spruce was east of the road, all right, but so far north that it would be farther north than we were interested in. There might have been a billion feet up in here. We had enough to satisfy us in there, so why build a road clear up into this country when we only had to go here to get it.

Mr. MAGEE. You mean you were after only the 150,000,000 feet?

Mr. DISQUE. That was enough for that year. Next year we would have been surveying and making our cruises and may have gone on. We were prepared to go on from that line with the least possible cost.

Mr. LEA. As I remember Mr. Morgan's testimony he said he had made some cruises of it here, but the body of this spruce in the Siletz is toward the northerly end, toward the tidewater.

Mr. DISQUE. Yes.

Mr. LEA. While it was said that there was 700,000,000 feet in this area we did not get it definitely located, except as Mr. Magee suggests, it was testified by Mr. Morgan that there was 150,000,000 to 160,000,000 feet on this area here.

Mr. MAGEE. There does not appear to be any difference there.

Mr. DISQUE. I do not know.

Mr. LEA. The other, he claimed, was on the other side, but he did not locate it.

Mr. MAGEE. I was simply assuming that if there was 550,000,000 feet east of the ridge and it was desirable to get at it, and it was feasible to extend this road, that would be the practical route.

Mr. DISQUE. We probably would have done that. I will say for your benefit that the cruises are printed upon this map, showing the amount of fir and spruce in each one of these sections, and it is a simple matter for anybody to find out how much spruce there is east of the ridge, west of it, north of it, by adding up those figures.

Mr. MAGEE. Suppose you extended this route here—I do not know what they call this road, what do they call it, the Miller road?

Mr. DISQUE. It has several names.

Mr. MAGEE. The Miller-Fischer road. Suppose that road was extended up into the spruce east of the ridge, what would be the length of the railroad?

Mr. DISQUE. We would have gone 10 miles before getting what they say is good spruce.

Mr. MAGEE. That is, you mean extending the road 10 miles.

Mr. DISQUE. We would have added 10 miles onto that line.

Mr. MAGEE. That line is now what?

Mr. DISQUE. About six.

Mr. MAGEE. It would make about 16 miles?

Mr. DISQUE. It would make about 16 miles before we would have gotten into what is reported to be good spruce. We do not know whether it is or not.

Mr. MAGEE. How much road would you have around the other way?

Mr. DISQUE. The other way we get into the spruce in $8\frac{1}{2}$ miles, that is, construction that was not one-fourth as difficult.

Mr. MAGEE. I mean if you went to the same place.

Mr. DISQUE. What same place?

Mr. MAGEE. Went over the ridge to get east of the ridge, if you wanted to get that spruce out east of the ridge and you went up the coast line how many miles of road would you have had?

Mr. DISQUE. To the same point it is 20 miles from Yaquina.

Mr. MAGEE. Then, from the Yaquina to Toledo how many?

Mr. DISQUE. From Yaquina to Toledo, 8.

Mr. MAGEE. That would be 28 as against 16 miles.

Mr. DISQUE. Yes; but it did not get you any place. There is no object in being there and you could not build a road up here anyway.

Mr. MAGEE. I was only assuming that the spruce was there and you wanted to get there. I do not know anything about it.

Mr. DISQUE. If we could have built along the east side of the ridge it would be the reasonable thing to do.

Mr. MAGEE. That is how it looked to me, if it was possible. It seems to me the only question here is whether it was to extend that Miller-Fischer road.

Mr. LEA. Now, do you have any other report there?

Mr. DISQUE. No, I have not on that. Mr. Magee, in connection with building that line; to have built the road east of the ridge, if you would walk along there. probably, instead of being 16 miles, as I told you, it would be probably 40, because you would be running back and forth, looping around the road. It its just like folding up a string and pulling it out.

Mr. MAGEE. I suppose it is an engineering problem.

Mr. DISQUE. Yes.

Mr. LEA. Now, is there anything else on this particular feature that you wanted to say.

Mr. DISQUE. I do not believe so.

Mr. LEA. Now, we will go to the question south of the bay. What was the necessity and justification for the building of the road south?

Mr. MAGEE. I do not think you showed what the cost of this road was.

Mr. LEA. Yes; the cost of this road; have you the figures available?

Mr. DISQUE. I think that statement has been introduced.

Mr. MAGEE. I do not recall it.

Mr. DISQUE. The general composite statement includes it, and I have no other copy here.

Mr. MAGEE. Well, how many miles of road were constructed, and what was the cost?

Mr. DISQUE. Do you want me to read that?

Mr. LEA. Yes, if you will give the facts there. What is the number of this railroad, to begin with?

Mr. DISQUE. No. 11.

Mr. LEA. How long, including all the spurs that were run off to the east, off up the various creeks?

Mr. DISQUE. Fifteen and sixty-six hundredths miles; the construction—cost was \$1,443,931.29.

Mr. MAGEE. What does that figure per mile?

Mr. DISQUE. \$99,212. That includes, of course, the entire terminal facilities there at Yaquina.

Mr. LEA. What do those terminal facilities consist of?

Mr. DISQUE. Train yards and repair shops; all the terminal facilities. The ferry is not included, but the ramp and entrance to it; the log dump, also.

Mr. MAGEE. Can we get in there a little more specifically just what it includes?

Col. STEARNS. Those in detail, Mr. Magee, were put in the record in the statement that went in.

Mr. LEA. That is right; I forgot about that.

Mr. MAGEE. Have you got separated there what the cost of the terminals and the yards, etc., and what the cost of the railroad proper was?

Maj. CAMPBELL. Docks and wharves, \$20,000.

Mr. MAGEE. At Yaquina?

Maj. CAMPBELL. Yes.

Mr. MAGEE. I want to see if I can get an idea of what the road cost, if you can tell us.

Mr. LEA. \$100,000 a mile.

Col. STEARNS. Part of the trestles were there, too; \$277,000 worth of trestles on the road.

Mr. MAGEE. What would you say would be the fair approximate estimate of the cost of the railroad per mile? Give us an approximate statement, if you can.

Mr. DISQUE. I think it is proper to include that entire cost and divide it by the mileage. That is ninety-nine thousand, that is what it is.

Mr. MAGEE. \$99,000 per mile.

Mr. DISQUE. Terminals, that is a part of the road.

Col. STEARNS. That also included liquidation expenses, though, and things of that sort.

Mr. CAMPBELL. I think probably the road itself didn't cost over seventy or seventy-five.

Mr. MAGEE. Will you get me an estimate of the cost of terminals, exclusive of the railroad property?

Mr. DISQUE. I can get that for you.

Mr. CAMPBELL. I said I thought probably that with this extra expense out of there, that the railroad itself would average about seventy thousand to the mile.

Mr. MAGEE. About \$70,000 to the mile?

Mr. CAMPBELL. I will get you the figures.

Mr. LEA. That will be better. If that is all, we will go to the subject of the railroad to the Blodgett tract. I wish you would briefly tell us about the purchase of the Blodgett tract, the amount of timber there, and why it was purchased?

Mr. DISQUE. The Blodgett tract, down near Alsea Bay, had been reported to us by the Federal Forestry Department as one of the finest stands of spruce out on the coast. It had been investigated

by their lumber engineer, or logging engineer, and that had been followed up by the reports of Mr. Benson, who spent, I think, several weeks in it, and other cruisers, indicating that it was, probably, for its size and quality, the best stand on the west coast.

Mr. LEA. Have you that report here?

Mr. DISQUE. We have the report here of the Forestry Service, Mr. Nelson's report.

Mr. LEA. How much spruce was there in there, according to that report?

Mr. DISQUE. Approximately 250,000,000 feet.

Mr. LEA. And how much timber in all?

Mr. DISQUE. Approximately 1,000,000,000 feet of timber.

Mr. LEA. And what amount was paid for the purchase of that tract?

Mr. DISQUE. In speaking of it as the Blodgett tract, I think we can save confusion by including some smaller areas that were purchased with it, that were right there adjacent to it. We paid, my recollection, \$675,000.

Mr. LEA. For all the tracts?

Mr. DISQUE. Yes.

Mr. LEA. And when was that purchased?

Mr. MAGEE. How much was it?

Mr. DISQUE. Six hundred and seventy-five thousand. That was purchased some time after the armistice was signed, the exact date I do not know.

Mr. LEA. Now, the suggestion has been made before this committee that Mr. Blodgett was bluffed or overawed in parting with this property, or that it was not gotten in just the way it should have been gotten. I wish you would give us the information you have about that.

Mr. DISQUE. Why, our office tried, for some time before deciding to build a road down to that property, to get Mr. Blodgett interested, either jointly with the Government or alone, in developing his property.

Mr. LEA. You might let the reporter mark the Nelson report now. (The report above referred to was marked "Exhibit 13, Disque, Sept. 5, 1919," and is copied into the record, in full, as follows:)

REPORT ON ALSEA TRACT.

FEBRUARY 4, 1918.

An examination of the timber on the "Alsea tract" was made at the request of Col. P. Disque.

In making this examination I ran compass lines once or twice through each section studying the quality of the timber, paying special attention to the spruce. At the same time I determined the feasibility of logging and riving operations. The results are embodied in this report. In the short time allotted it was impossible to make a detailed examination of all of the area, and the results indicate the conditions on the portions actually gone over; the remainder of the area was assumed to be similar.

LOCATION OF TRACT.

The timber known as the Alsea Bay tract lies in township 14 south, ranges 11 and 12 west, between the Alsea and Yachats rivers. The drainage is in three general directions, north into Alsea Bay, south into the Yachats River, and

west into the Pacific Ocean. The streams flowing north and south drain only a small portion of the area, while those flowing into the ocean drain the largest portion.

ACCESSIBILITY.

The north boundary is 4 miles distant from Waldport, Oreg., a town on Alsea Bay, the nearest seaport. Waldport lies 16 miles south of Yaquina, Oreg., the coast terminus of the Corvallis & Eastern Railway, a branch of the Southern Pacific Railway. Freight from Waldport is transported in two ways, by small steamer or gasoline schooner from Columbia River points and Yaquina, and from the latter place by wagon or auto truck along the ocean beach, which at low tide is a very satisfactory road. Freight from Waldport is handled in the same manner. Passengers are transported by the beach route. South of Waldport the beach is used in lieu of a road. Two roads from Alsea Bay terminate about 2 miles north of the tract, but these are not of a character to be considered in connection with the removal of the timber.

AMOUNT OF TIMBER.

Several estimates or cruises of the timber have been made. The results of two of them show a difference of about 4 per cent in the total of all species and 5 per cent in the spruce volume. The amount of timber by species as shown in both estimates follows:

	Acres.	Spruce.	Fir.	Hemlock.	Cedar.	Total.
		<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>
Cruise No. 1.....	12,801	316,770,000	236,520,000	218,720,000	270,000	822,280,000
Cruise No. 2.....	12,760	332,305,000	255,892,000	177,832,000	15,484,000	793,134,000

There is other timber outside of and adjacent to this area on which there is reported to be about 2,000,000 feet, making a total of 1,000,000,000 feet.

OWNERSHIP.

Of the above 12,000 acres Mr. Blodgett owns about 11,000 acres and the C. A. Smith Lumber Co. the remainder.

The area outside of the above tract that contains commercial timber is owned principally by individuals.

TRANSPORTATION FACILITIES.

Farm products, fish, lumber and other commodities in quantity must be shipped by small power schooners from Waldport. The depth of water on the bar at the entrance to Alsea Bay at low tide is reported to be from 6 to 8 feet and at high tide from 14 to 16 feet, probably the two low figures can be taken as being about right. This depth prohibits the operation of boats of large carrying capacity. During the time I was in the region the power schooner *E. F. Smith* was in port; the dimensions of the boat are length 65 feet, beam 20 feet, depth 7 feet. Lumber-carrying capacity was given at 60,000 feet. This boat is the same type and size as the other boats trading to this port. Freight is also hauled in wagons and auto trucks along the beach, but this requires ferrying the freight across two bays, making excessive handling costs.

POSSIBILITY OF INCREASING PRESENT TRANSPORTATION FACILITIES.

There is a possible means of increasing the capacity without increasing the number of boats, but shipments by water are limited by the weather conditions which may hold up shipping for a week at a time. The cost of rehandling on both ends of a route where the commodity must be loaded on a boat at one end and unloaded on a dock and then on cars is considerable and should be a factor in determining the relative merits of the possible means of increasing shipping facilities.

Shipment can be made by barges of greater length and beam but the same depth as that of the power schooners, and by this greater size a greater

carrying capacity can be obtained. Large tow boats can not get into the bay but barges could be towed across the bar by small boats and delivered to the large towboats outside. The barges now used in transporting lumber between the Columbia River and California or Alaska would be the best type to use.

MARKETING THE TIMBER.

In determining the possibility of marketing the timber several factors must be considered. The big problem is the transportation of the product. There are two ways of shipping—one by water and the other by rail. The form in which the timber is to be marketed must be considered as it can be marketed in the form of logs, lumber, and some of the spruce is rived stock. The annual output is another factor having a direct bearing on the matter.

RAILROADS.

To market the timber on the Alsea tract to the best advantage necessitates the construction of and operation of railroad from the coast terminus of the Corvallis & Eastern Railway. (S. P. Ry.) at Yaquina, Oreg., to the timber. This railroad should be considered as two roads, the portion from Yaquina to Waldport as the main line, and from Waldport to the timber as a logging road. To obtain a relatively steady and certain shipment of commodities out of and into the Alsea Bay region such a road is necessary—boats are too uncertain. The construction of the road from Yaquina to Waldport is not a difficult matter. The work would be light and any gradient desired could be obtained. Construction from Waldport to the timber is light. The distance from Yaquina to Waldport is approximately 18 miles, and from Waldport to the timber 4 miles. From the logging road spur lines will radiate into the timber. Tentative routes have been outlined but not included in the report as they have no bearing on the desirability of the timber. The railroad should be standard gauge using standard equipment. A narrow-gauge road could be built at a lower cost, but operating costs would be higher and reloading necessary. The annual output of the camp and the mill must be sufficiently large to furnish traffic enough for the railroad to operate without loss at a reasonable freight rate per 1,000 feet of lumber.

RAILROAD CONSTRUCTION.

The main-line construction would conform to lines of the same character. Construction of the logging spurs would be of a temporary character. The soil is as a rule of a clayey nature and will not stand up under traffic without ballast, and as the latter is scarce piling must be resorted to in a great many places. This class of construction is the cheapest in point of first cost and in maintenance under conditions obtaining on the area.

COST OF PRODUCT.

Marketing the timber in form of lumber will entail the conduction and operation of a sawmill. The location of this depends upon procuring a suitable site. If the mill was to be located on Alsea Bay a very desirable site is available. The lumber from the mill would be shipped to Yaquina on proposed railroad and from there on the Southern Pacific Railway. If the mill was located on Yaquina Bay the logs would be transported by proposed railroad to that point and the lumber shipped on the Southern Pacific Railway. If the timber was to be sold in the form of logs they could be hauled on proposed railroad to Yaquina and from there on the Southern Pacific Railway to the mills. The rived stock produced would be shipped under the same plan as for logs.

QUALITY OF STAND.

Spruce.—This species is old growth. The trees as a rule are large, tall, and well formed, very close grained and long fibred. The greater portion of the trees have root swellings, but not excessive—a few of them have a decided flare. The quality differs with locality—that on the north slopes and on upper benches is the best; south and west slopes and exposed ridges contain the poorest quality. Recently wind-thrown trees were examined and in some of them ground rot was found. Several broken top trees were seen which undoubtedly contained

a large per cent of top rot. Wind shake occurs along the western course along the western border of the spruce area. In places spiral grain was very prominent while in others there were very few trees of this class.

Along the lines run through the area the trees were tallied as splitting and not splitting. This indicates that 20 per cent of the trees would be suitable for splitting, and these had a clear length of from 30 to 90 feet. In this determination trees less than 4½ feet in diameter were not considered as suitable for splitting, although some would produce good stock. Of the remaining 80 per cent of the trees tallied, 50 per cent had clear or particularly clear boles, but were under the diameter limit set for splitting trees. The other 50 per cent were either rough or had spiral grain, but would saw some clear lumber. On parts of the area the spruce occurs so scattered and the country is so rough that it is not economically possible to get it out in the form of rived stock, and therefore these portions must be eliminated in riving calculations. If only the trees suitable for riving are taken out it is believed that the percentage of rived stock produced will be about 4 per cent of the total stand of spruce.

With a stand of approximately 300,000,000 feet the rived stock volume on the above base would be 12,000,000 feet, which is the maximum of good quality that can be obtained. The spruce in this area will produce from 15 to 18 per cent of airplane lumber if sawed. With an output of 50,000,000 feet of logs per annum the output of airplane lumber would be from 7,500,000 to 9,000,000 feet. Based upon the same percentage the output from the 300,000,000 feet would be 45,000,000 to 54,000,000 feet of airplane lumber, or approximately six times as much as by riving.

A more detailed examination should be made and the areas containing trees suitable for riving should be mapped, so that whatever development can be made can be put in to the best advantage.

Douglas fir.—This species is generally of an exceptionally good quality. The trees are large but of extreme size, and have a clear length of 100 to 150 feet. The size and length of the trees make it very desirable for wooden-ship construction, as it will saw long, clear planking, decking, ceiling, and timbers.

Hemlock.—The quality of this species varies over the area, ranging from very good to very poor.

Cedar.—This species is a fair grade and will be suitable for the manufacture of shingles.

LOGGING AND MILLING POSSIBILITIES.

The tract is a good logging and sawmill proposition from an operating standpoint. The timber is of a good quality and the amount is large enough to supply a sawmill cutting 50,000,000 feet per annum for 20 years. The transportation problem is the only drawback, but with an output of 50,000,000 per annum a railroad is justified. Logging railroads are operated for greater distances than that from Waldport to Yaquina with a similar output per annum. The cost of the timber is less than \$1 per thousand feet, and at such a price transportation charges can be higher than if the price were \$2 per thousand feet. I believe that the cost of construction can be kept below \$1 per thousand feet for the entire railroad development necessary, main line and spurs. In the general run of similar operations this cost is between 40 cents and 60 cents per thousand feet. The cost of operation, maintenance, depreciation and interest on investment can be met with a freight rate of from \$1.25 and \$1.50 per thousand feet on the main line. Operation and maintenance on logging spurs will not exceed 50 cents per thousand feet. It is estimated that logs can be delivered at Alsea Bay at a cost of \$8 per thousand feet, without stumpage.

RIVED-STOCK OPERATIONS.

The possibilities of an economic operation depend upon the supply and cost of timber, cost of developing transportation, operating costs, and the market value of the product. The supply of timber suitable for riving is but a small percentage of the total stand, and if the cost of developing transportation must be carried by this small percentage, the cost per thousand feet of output will be excessive in comparison with the cost per thousand feet if carried by all of the timber tributary to the development. The same is true in a measure with operating costs; the cost of moving equipment from one setting to another is the same if a large or small amount of timber is removed, but the cost per

thousand feet is greater for the lesser amount. This obtains throughout each step of the operation.

The market value being sufficiently high to warrant high operating costs, the operation would naturally be feasible.

To carry on a riving operation in the Alsea tract would necessitate the construction of a railroad from Waldport to and into the timber as outlined under

Railroads—"Logging road."—Shipment of the rived stock from Waldport to the cut-up plant at Vancouver would be by barges either at Yaquina or Astoria and from these points by rail. Shipment could be made by barge from Waldport to the cut-up plant at Vancouver. Barge transportation would be possible during the summer months and during short periods during the remainder of the year. The movement would be very irregular, due to poor harbor conditions. The alternative shipping possibility is to construct a railroad from Waldport to Yaquina, connecting with the Southern Pacific Railway at the latter point. This appears to me the logical solution, but the small amount of rived stock that would come out does not justify the large expenditure.

If the Southern Pacific Railway could be induced to construct this railroad and transport the rived stock at a reasonable cost, the transportation problem would be solved. It appears to me that any railroad construction from Waldport to Yaquina should be private or corporation enterprise. Such a road has a future as a carrier of forest and farm products, fish, and other sea foods, and the commodities commonly used in community.

This railroad from Yaquina to Waldport will cost about \$300,000 without equipment. Under normal conditions this cost would be materially lower, the high price of labor and supplies making construction heavy and rails are nearly double in price. Based upon the 800,000,000 feet of timber in the tract, the cost would be 37.5 cents per thousand feet b. m. and less if all tributary timber was taken out over the road.

Based upon the 12,000,000 feet of rived stock that can possibly be obtained by taking practically all of the trees on the area suitable for riving, the cost would be \$25 per thousand feet. From Waldport the railroad development to log the timber will cost approximately \$350,000, or 44 cents per thousand feet b. m. based upon the 800,000,000 feet in the tract. Based upon the 12,000,000 feet the cost will be \$29.16 per thousand feet b. m. The entire cost of \$650,000 prorated over the 800,000,000 feet makes a charge of \$0.81, and over the 12,000,000 is \$54.16 per thousand feet b. m. From these calculations it is evident that the construction of the railroad for the rived stock alone would be too high to justify an operation. The railroad would open up the tract so that practically all of the timber can be logged without any further construction. All of the timber on the tract should bear its share of the cost of development. If in cutting the rived stock 7.5 per cent, or 60,000,000 feet, of the total stand is cut, it should stand 7.5 per cent of the cost of the railroad cost. The share then is 7.5 per cent of \$650,000, or \$48,750, or \$0.81 per thousand feet based upon 60,000,000 feet cut—or \$4.06 per thousand based upon 12,000,000 feet of rived stock produced. The method of payment for the timber remaining is a different problem to solve.

METHOD OF OPERATION.

There are two ways of skidding the rived stock to the railroad—one by sled roads using horses for hauling, and the other by skidding direct to railroad by donkey engines. Wherever the timber is scattered and the volume to be rived is small, horses will be the best method of moving it to the railroad or bunching for roading by donkey engine. A donkey engine mounted on a car will be the quickest and the cheapest way of making settings as it is easily moved from place to place. It can be set at any point on the track, guys set, and lines run to the rived stock in the woods. This can be decked along the track and loaded on cars with a locomotive crane of the Ohio or American type.

P. S. Brumby, Lumbermen's Building, Portland, Oreg., representative of J. W. Blodgett, owner of the area known as the Alsea tract, said that the company had contracted to sell the timber for \$575,000, the option expiring February 9, 1918. The tract contains about 690,000,000 feet—240,000,000 of which is spruce. The owner was willing to sell to any operator who would begin operations at once, but would not sell to anyone who wanted to buy to hold

for an advance in value. He believed that the owners were not averse to a riving operation at the price set—\$7.50 per thousand feet. On the base of 20 per cent of the timber being suitable for riving, 48,000,000 of the 240,000,000 on the tract will be cut for obtaining the rived stock. The company would receive \$360,000 for the timber cut. The timber left on the tract would be about 642,000,000, and although the best spruce had been removed would have a greater value per thousand feet as the railroad development put in to take out the rived stock can be used for removing the remainder of the timber. The price for the whole tract is \$575,000 and the amount that will be received if 48,000,000 is cut is \$360,000, leaving \$215,000 for the 642,000,000 feet remaining. Summed up, for 7 per cent of the stand they will receive 63 per cent of the price asked for the total stand at this time.

During the interview, Mr. Brumby, on ownership and estimates, the following statement was made. A representative of the Warren Spruce Co. called and presented an agreement to purchase the timber suitable for riving. Mr. Brumby would not sign or transmit it for signature, as he objected to certain wording about the timber becoming the property of the Warren Spruce Co. He requested a copy of the contract with the War Department and a copy of the articles of incorporation, and a statement of financial resources of the company which so far had not been furnished him for transmittal to Mr. Blodgett. Further, he said that he asked what the capital stock was and how much was paid in, the reply being capital stock now paid in \$200,000, and that the Government would finance the operation.

WARREN SPRUCE CO.

While at Waldport I met a representative of the above company who said that he was looking up railroad possibilities from Yaquina to Waldport. During our conversation I asked if they had looked over the timber as to quality and amount that would split, to which he replied that they had not. In so far as I could determine the company had not had any one look the tract over and their information must have come from others who had looked the proposition over from a logging standpoint. In conversation with the same man at Portland on February 2, he said that on Monday he was to start four survey crews on locating the railroad.

CONCLUSIONS.

The large amount of railroad development necessary to reach and open up the timber from present common carrier railroad makes a cost per thousand feet of rived stock produced that appears excessive and therefore not an economical operation. If the railroad was in as far as Waldport, it would be a different matter. A riving operation shipping from Waldport by barges would require less investment. The difficulties of crossing the bar at all times is a drawback. The tract as a whole can stand the cost of railroad development and would make a good logging and milling operation; if some plan could be evolved by which the timber on the tract would bear a portion of the railroad construction costs the operation would be more attractive.

In logging operation the No. 3 logs could be stored in booms and only those would produce airplane lumber shipped to the mills.

Mr. DISQUE. Mr. Blodgett came to Portland finally, I think, after some correspondence, and I only had an opportunity to have one conference with him, as I was leaving that night for the East, had some engagements there that had already been arranged. He carried on his negotiations with Col. Hitchcock, in our office, and it was apparent that they did not get anywhere.

Mr. MAGEE. When was this?

Mr. DISQUE. Sometime in the early summer of 1918, as I recall; maybe it was late spring. I think it was in May. We wanted to have some kind of a mutual agreement up there that would leave the timber and the railroad in the possession of the timber owner eventually, because the railroad unquestionably increased the value of the timber very materially, and we thought there was a means

through that method to reduce the cost to the Government, and that is why we endeavored to get him interested in bringing out his own timber; but it failed, and he offered us that timber, primarily, I think, I am sure—he voluntarily offered it to us in the early spring, and it was reported to me he offered it to some one else for even a figure less than we paid for it; but I think Mr. Blodgett misunderstood the motives of our office and became somewhat obstinate, and it became necessary for us to advise him that unless a mutual agreement could be made we would take advantage of the law which had passed that summer and condemn it in the Federal courts. It was then that he gave us an option for the timber, which was in August or September that he gave that option, and we took advantage of it in December, probably, after the armistice. The delay was only occasioned by the fact that we were rushed with business, were not quite ready to operate, and we were just converting from the Spruce Production Division into a corporation, and it was advisable to let those matters come out as corporate activities; and, in addition to that, the titles and abstracts that he furnished the corporation or division were such that we required time to check and verify and have them corrected. Had they been in such shape as to be acceptable by the corporation or the Government that purchase probably would have been made a month before the armistice, and it was made as soon as the deed was in such shape that we could accept it.

Mr. LEA. When did you start the construction of the railroad?

Mr. DISQUE. I would say we started some time in June.

Mr. LEA. And so this was eventually connected by the railroad with—

Mr. DISQUE. We were going toward it all the time while we were negotiating with Mr. Blodgett.

Mr. LEA. How long is that railroad?

Mr. DISQUE. Here is one of the official charts of it; 23.42 miles.

Mr. LEA. How much did it cost?

Mr. DISQUE. The cost of that road was \$2,086,160.98.

Mr. LEA. How much is that per mile?

Mr. DISQUE. That is a mileage cost of \$80,267.83. Now, it is only proper to say right here that in figuring the mileage cost of both this road and the road north we are including terminal facilities and a considerable amount of grading, in the way of logging spurs, that was done in preparation for logging operations which never were undertaken, because the armistice chopped off—there was several miles on both roads graded, ready for the track. That cost is included in here, and when we go to arrive at a mileage basis, it is a little bit unreasonable to mention the mileage cost without referring to the extra item of expenditure that is included there.

Mr. MAGEE. Can't you give the mileage cost?

Mr. DISQUE. I don't think that is possible, Mr. Magee. These spurs were being built at the same time of the other road; it is all included in the labor charge.

Mr. MAGEE. Approximately?

Mr. DISQUE. I think that you would get an approximation of those spurs' value.

Mr. MAGEE. Can you supply it?

Mr. DISQUE. It will be supplied.

Mr. LEA. Who built that railroad?

Mr. DISQUE. That was built by the Warren Spruce Co.

Mr. LEA. And on a cost-plus contract?

Mr. DISQUE. A cost-plus contract.

Mr. LEA. How long did it take to construct it?

Mr. DISQUE. Well, I don't know when it was started or when it was finished. It was done in a remarkable time I know, but the dates are matters that I have not any direct recollection of. We were carrying on too many activities for me to retain that.

Mr. LEA. Was that spruce intended to meet the immediate need, or at a more remote period?

Mr. DISQUE. That spruce was figured in as a part of the production that we depended upon, absolutely, without fail, commencing with December, 1918.

Mr. LEA. When you determined upon this plan of expansion by railroads, what was the demand according to the program of the Allies, for spruce?

Mr. DISQUE. Thirty million feet.

Mr. LEA. When did that demand come?

Mr. DISQUE. It came along in April or May.

Mr. LEA. April, 1918?

Mr. DISQUE. Yes, about the first of April.

Mr. LEA. What had been the program before that?

Mr. DISQUE. Ten million feet.

Mr. LEA. And what if any surplus was recommended for you to work on?

Mr. DISQUE. A factor of safety of 25 to 33 per cent was recommended by the Director of Aircraft Production.

Mr. LEA. That you procure 25 to 30 per cent in addition to the 30,000,000 feet a month?

Mr. DISQUE. Be ready to meet that increased demand.

Mr. LEA. That is, that means 30,000,000 feet of aircraft lumber?

Mr. DISQUE. Aircraft lumber.

Mr. LEA. What had been your total production per month prior to embarking on the railroad expansion?

Mr. DISQUE. We had just about got up to the 10,000,000 feet when this increased demand came on us, and it was then that we converted our rivers into selective logging contractors and railroad producers—builders. That demand was for spruce and not spruce and fir.

Mr. LEA. There is one other feature I wanted to find out about and that is about what necessity and justification was there, according to your information, for the construction of the Toledo mill? In the first place, when did you determine upon its construction?

Mr. DISQUE. I have a complete file on that here.

Mr. LEA. Before we get onto that subject there is a matter here to-day in which Mr. Magee and myself are both interested in getting a report of the disposition of the total number of troops in the Spruce Production Division, and, if I understand it, this is the report now. We will ask the reporter to insert this in the record.

(The report above referred to was marked "Exhibit 14, Disque, Sept. 5, 1919.")

Mr. LEA. Can you tell us the total number of soldiers employed in these operations?

Mr. DISQUE. Approximately 28,000 men, 28,121.

Mr. LEA. And how many were employed at the cut-up plant?

Mr. DISQUE. Four thousand three hundred and twenty-one. That is on August 19, 19—, or no, that is on November 1, 1918.

Mr. LEA. And how many in the logging and milling companies?

Mr. DISQUE. Logging and milling companies, 17,571; transportation, 349; medical department, 607; quartermaster corps, 46; disbursing quartermaster, 9; and in headquarters, Portland, 333, which included all those detached for inspection purposes over the entire district.

Mr. LEA. These soldiers were divided into what divisions?

Mr. DISQUE. We called them squadrons and detachments.

Mr. LEA. Of what did a squadron consist?

Mr. DISQUE. They had a variable number, depending upon the number required for a given operation. We had special authority to make those squadrons of any size.

Mr. LEA. How large were they in practice?

Mr. DISQUE. They average, I would say, in the neighborhood of 200 or 250 men.

Mr. LEA. And of what did a detachment consist?

Mr. DISQUE. Anywhere from three men up.

Mr. LEA. Up to what would probably be the limit of a detachment?

Mr. DISQUE. Up to what would become a squadron.

Mr. LEA. Now, going back to the question of the Toledo plant or sawmill, about when did you conclude to construct that mill?

Mr. DISQUE. My diary will show that exactly. I think it was about the middle of June somewhere. Approximately July 1. I think that would answer it, to save time.

Mr. LEA. What was its relation to these two railroads, the railroads No. 11 and 12?

Mr. DISQUE. It was to be what we considered a sort of a neck of the funnel there from the two railway lines running to the north and south, at a logical point to receive all logs from both operations.

Mr. LEA. In fact, it was the receiving point for all these three railroads that have been discussed here this afternoon?

Mr. DISQUE. For all three.

Mr. LEA. And what were the small establishments on Yaquina Bay at the time you determined upon constructing this mill?

Mr. DISQUE. Well, there were none there worthy of consideration. There was a little old mill with a possibility of cutting 50,000 a day, but it was not worth considering at all in connection with our operation.

Mr. LEA. What was the established transportation from Yaquina Bay to the market here, or to sawmills?

Mr. DISQUE. To the Portland market?

Mr. LEA. Yes.

Mr. DISQUE. There was a branch of the Southern Pacific Line, I think, built with 56-pound rails, several tunnels, and I believe 143 trestles, which the railway officials themselves said that could not handle any heavy traffic and if we contemplated bringing logs over that line they told us they would have to rebuild their line and bolster it up in many places.

Mr. LEA. About what distance did you say that is from Portland?

Mr. DISQUE. About 165 miles.

Mr. LEA. And what was the cost of this mill, that is, what is the estimated cost?

Mr. DISQUE. Of the Toledo mill?

Mr. LEA. Yes.

Mr. DISQUE. Approximately a million dollars.

Mr. LEA. And to what extent was it completed at the time of the armistice?

Mr. DISQUE. To what extent was it completed?

Mr. LEA. Yes.

Mr. DISQUE. I think about 90 per cent completed.

Mr. LEA. Was the machinery there for the mill?

Mr. DISQUE. Most of it; practically all of it was there.

Mr. LEA. As I understand it, this was to be a sawmill and cut-up plant combined?

Mr. DISQUE. Sawmill and cut-up plant.

Mr. LEA. And was it intended to handle the entire product of this timber area?

Mr. DISQUE. It had a capacity of from six hundred to seven hundred and fifty thousand a day, and according to our chartered plan of operations that would have handled the production from both areas.

Mr. LEA. That is on an eight-hour shift basis?

Mr. DISQUE. On three 8-hour shifts.

Mr. LEA. Three shifts?

Mr. DISQUE. Three shifts working. I would like to correct the statement about that being 90 per cent. It was 70 per cent completed.

Mr. LEA. Seventy per cent completed. Do you know whether or not Toledo has terminal freight rates?

Mr. DISQUE. I was told so by the Southern Pacific officials, that Toledo was a point that granted terminal freight rates across the continent.

Mr. LEA. In other words, the cost of transcontinental shipments was the same from Toledo as it would be from Portland?

Mr. DISQUE. Exactly.

Mr. LEA. Now, if you hadn't built any mill and had shipped the logs out to a valley mill or a Portland mill, what would have been the additional cost of freight, per thousand?

Mr. DISQUE. I might say that the board, which was advising me, and myself, spent about a month deciding—coming to a decision as to whether to build at Toledo or not, and the final result of our investigation was to the effect that we would save \$3.11 on every thousand feet of lumber by having the mill at Toledo.

Mr. MAGEE. How much was that?

Mr. DISQUE. \$3.11 freight, as against bringing logs to Portland and having them sawed by the mills here; and basing the operation of that mill on a cut of 600,000 a day, which is a conservative estimate, we would save \$1,866 a day by having the mill at Toledo, which we figured was the economic thing to do, if there were no other reasons. But there were other reasons for putting the mill at Toledo. One was that the branch railway, in order to haul logs, which, as I said this morning, is the most strenuous work that is given to railroads, would have had to have been rebuilt. The railway officials really were working on it all the time and would have changed all the rails and bolstered up the bridges if we had found

it necessary to bring logs. Another point that they brought out was that in loading these larger logs we would not be able to get a full capacity load on cars, frequently, because the customary method of loading two logs on the bed on the car and then a third on top of those two, could not be carried out, due to the size of the tunnels that they had to come through, and frequently logs would have to come only two on a car, sometimes only one—a haul of 165 miles.

Another point was that the mills wanted \$12 a thousand just to saw those logs up. We took all those figures, and the result—the net result—meant a saving of \$1,866 a day by putting the mill at Toledo.

Mr. LEA. That is on a basis of how many thousand feet of lumber?

Mr. DISQUE. Six hundred thousand a day.

Mr. LEA. Now, I understood that a little different from what you state. Your estimate is on the basis of the finished lumber?

Mr. DISQUE. Yes.

Mr. LEA. And how many thousand per car do you ship of finished lumber?

Mr. DISQUE. Approximately, of finished lumber, airplane lumber, where we strip it, we get around 17,000 on a car; commercial lumber not stripped you can get as high as 22,000 on a car.

Mr. LEA. Now, how many thousand feet of logs can you ship on a car?

Mr. DISQUE. An ordinary car loaded with logs, without regard to tunnels or bridges, ought to carry between seven and nine thousand feet.

Mr. LEA. In other words, you can carry two and a half times as much lumber on a car as you can of logs?

Mr. DISQUE. Is that about right, Mr. Reed, between seven and nine thousand, or is it less?

Mr. REED. On the transcontinental roads it is the general rule, 7,000 minimum; some roads 6,000 minimum.

Mr. DISQUE. We would have had to have paid for 7,000 minimum on this line. That fact was established.

Mr. MAGEE. Where would the market be from Toledo?

Mr. DISQUE. We would have brought them here and have dumped them just below Portland.

Mr. MAGEE. I mean, using your mill there, would the product pass through Portland on its way East?

Mr. DISQUE. It would have gone through Portland, or down to ward San Francisco.

Mr. MAGEE. What I mean to say is, you were speaking of freight from Toledo to Portland, if the lumber went through Portland, of course, there would be freight on that?

Mr. DISQUE. There is no additional charge for bringing lumber from Toledo to Portland if you sent the lumber straight through to Chicago.

Mr. MAGEE. That is what I was asking you.

Mr. DISQUE. It is the same rate as I have been given to understand.

Mr. MAGEE. They would ship from Portland or Toledo at the same rate?

Mr. DISQUE. Yes.

Mr. LEA. To follow up what I was driving at, I may be mistaken about this, but whatever freight you paid to bring either logs or lumber from there to here would be lost, provided you could ship from there instead?

Mr. DISQUE. Yes; because if you brought logs here that was a freight lost entirely, because the rate again on the lumber became the same.

Mr. LEA. Now, didn't it cost you just as much to bring a carload of logs from Toledo to Portland as it did a carload of lumber, or do you know?

Mr. DISQUE. I don't think so. I could not answer that off-hand now, but I don't think so. I will look here and see. I have got some of the figures that were made at that time.

Mr. LEA. I think I am mistaken about that, as Mr. Reed informs me, and so we won't go any further with it. Well, it was a difference then of a little over \$3 a thousand?

Mr. DISQUE. Three dollars eleven cents a thousand would be the difference in the cost to us to get it to Portland.

Mr. LEA. Then on the basis of your estimated production how long would it take to gain the price of the mill?

Mr. DISQUE. May I ask just one question? [Mr. Disque consults with Mr. Campbell.] That mill was only to have cost, and I don't think it would have cost a dollar more than \$750,000. There is a machine shop put in there that was intended to take care of the locomotives and rolling stock of both those railways, and if the mill had not cost more than we had allowed, and I don't think it would, we would have had seven hundred fifty thousand—roughly 400 days would have paid for the mill. Four hundred days' operation would have paid the entire cost on that mill.

Mr. MAGEE. Could you have had lumber enough to run 400 days?

Mr. DISQUE. Oh, yes.

Mr. MAGEE. I mean spruce enough.

Mr. DISQUE. Yes. We could have run there a thousand days on the spruce tributary to those railroads.

Mr. LEA. Do you know anything about the life of sawmill machinery?

Mr. DISQUE. I don't know much about that.

Mr. LEA. Perhaps I had better ask somebody else about that.

Mr. DISQUE. I have seen sawmill machinery around here, though, that looked like it had been in operation for a good many years—15 or 20. I don't know whether that is right or not, but the saw is about the only thing that wears out on that machinery, and you are replacing those every three or four hours by sending them into the filing room to have them sharpened up.

Mr. REED. Some of them have been running 50 years.

Mr. LEA. Fifteen hours?

Mr. REED. I say, some of them have been running 50 years.

Mr. LEA. Oh. Now, I believe that you started in to open up the Blodgett tract through the Warren Spruce Co., didn't you?

Mr. DISQUE. They built the railroad down there.

Mr. LEA. Did they have experience as road construction men before this?

Mr. DISQUE. That is their principal job or business, I think—road construction.

Mr. MAGEE. You don't mean railroad construction?

Mr. DISQUE. I don't mean railroad, although I think they have done some.

Mr. MAGEE. They are paving contractors, are they not—highway people?

Mr. DISQUE. Highway people, highway constructors.

Mr. MAGEE. I did know them before. They have laid some pavements in my home city.

Mr. DISQUE. Yes.

Mr. LEA. Did they engage in any logging down there?

Mr. LEA. They had been doing selective logging down there?

Mr. DISQUE. They had been doing selective logging from along about April, I think, when we converted their riving into logging operations.

Mr. LEA. What I really meant is, did they engage in any logging in the Blodgett tract?

Mr. DISQUE. None at all; and they never would have engaged in any logging there, because it was in connection with that Blodgett tract that I made the proposition to the Puget Sound loggers, who were becoming rather nonessential, to go down there with their machinery and equipment, and finally Mr. Frost did get together a few of those loggers in that area who had agreed to go down and put in the necessary number of sides to log the Blodgett tract on the basis, as I stated this morning, of a depreciation on their equipment of 15 per cent and a rental of 10 per cent, and a thousand dollars a month to the manager, Mr. Frost, which really was a very good contract for any man to make and a profitable one.

Mr. LEA. About what time was that contract made?

Mr. DISQUE. That was made I think in August.

Mr. LEA. And what equipment did they supply for that? Or had any of these spurs been constructed before they went down there?

Mr. DISQUE. The spurs?

Mr. LEA. Yes.

Mr. DISQUE. Yes; I think practically all the logging spurs had been laid out and graded by the Warren Spruce Co.

Mr. LEA. Were there a good many soldiers working there for the Warren Spruce?

Mr. DISQUE. Practically that entire personnel was soldier labor.

Mr. LEA. And were they turned over to—what is this—the Airplane or Aircraft Lumber Co., was it?

Mr. DISQUE. They were to have been. I don't think the actual turnover ever came.

Mr. LEA. Well, were any logs cut down there?

Mr. DISQUE. Not that I know of.

Mr. LEA. In the Blodgett tract?

Mr. DISQUE. Is Mr. Holland here?

Mr. H. H. HOLLAND. There was about 4,000,000 feet that was felled and bucked in various phases of the operations; that is, at least in seven or eight different places. We only saw one spur. There were four other spurs besides that opened up.

Mr. LEA. Did this Aircraft Lumber Co. do any of that logging?

Mr. HOLLAND. Just a little bit with men that—I think their men were all carried on the Warren Spruce pay roll, however, with the exception of very few heads of the departments.

Mr. LEA. About what per cent was done with the Airplane Lumber Co., or Aircraft Lumber Co., if that is the name?

Mr. MAGEE. Airplane Spruce Co., isn't it?

Mr. HOLLAND. No.

Mr. LEA. It is Aircraft Lumber Co.

Mr. MAGEE. What is it called?

Mr. LEA. There are two; there is an Airplane Spruce Lumber Co. and Aircraft Lumber Co.

Mr. MAGEE. Oh, yes.

Mr. LEA. Now, about what percentage was done by the Aircraft Lumber Co.?

Mr. HOLLAND. As I remember, about 25 per cent perhaps of the felling and bucking, and about—not over 10 per cent of the spur-construction work; but most of that spur-construction work was carried on the Warren Spruce pay roll. This division point, as I attempted to explain to Mr. Frear the other day, had never been made; this point where it was to be turned from the Warren Spruce over to the Aircraft Lumber Co., because the Aircraft Lumber Co. were not ready to take the accounts over. So the actual transfer had never been made.

Mr. LEA. So out of the 4,000,000 feet logged the Aircraft Lumber Co. probably cut 1,000,000 feet?

Mr. HOLLAND. Well, it was the same men that did the work.

Mr. LEA. Yes.

Mr. HOLLAND. Whether or not it was carried on the books of the Aircraft Lumber Co. or Warren Spruce, I am unable to say.

Mr. MAGEE. Well, it was connected with the Warren Spruce operation?

Mr. HOLLAND. Yes; it was connected, because it would have been taken over by the Aircraft Lumber Co. had that taking-over day arrived, but it did not.

Mr. LEA. What percentage, or what equipment, did this aircraft company furnish for this work?

Mr. HOLLAND. Well, they had a certain amount, but they would have required, I think, fully 80 per cent of equipment from the Spruce Production Division. That is, they had a certain amount of equipment, and a good deal of it was stuff that could not have been used down there. From talks I had with Mr. Frost I think fully 80 per cent would have had to have been furnished.

Mr. LEA. By the Government?

Mr. HOLLAND. By the Government. Is that right, Colonel?

Mr. DISQUE. I think the point is there that their equipment used up on the Sound, logging small fir trees, was not satisfactory or suitable for logging these tremendous spruce logs that are found in the Blodgett tract.

Mr. MAGEE. Is this the company that Mr. Frost was made manager of?

Mr. DISQUE. That is the Frost Company; yes.

Mr. LEA. Well, that equipment, I suppose, is largely sides, isn't it?

Mr. DISQUE. That makes up the logging sides: the donkey engines and the yarders that load and yard in the logs. That is the principal part of the equipment, and also, of course, the wire cable. The cable would be worn out and replaced. The donkey engines had to be of a certain capacity to handle those logs.

Mr. LEA. What was the plan for equipping these roads with rolling stock?

Mr. DISQUE. We had placed orders for logging trucks, and, if I am not mistaken, this Aircraft Lumber Co. were to bring in as many of their trucks as they could from their operations up in the Puget Sound district on a rental basis—depreciation basis.

Mr. LEA. That is, 15 per cent depreciation, 10 per cent rental?

Mr. DISQUE. Yes.

Mr. LEA. Is there anything else now you think of that you want to say about those operations down there?

Mr. DISQUE. One more point only, and that point is that the mill at Toledo gave us another point at which we were making aircraft lumber and was insurance against complete suspension of our production and shipments in case one or the other burnt down, and since the matter has been presented so many times that the Puget Sound loggers were equipped and ready to take over Siems-Carey's operations, I will say that this statement that Mr. Frost's company, which included the same loggers up there, was not even ready to furnish the 40 or 50 sides in the Blodgett tract, because their equipment is not the kind that is necessary, and our division would have and did prepare to furnish him approximately 80 per cent of what he would have needed down there to carry on that one operation.

Mr. LEA. Was this company, the Aircraft Lumber Co., composed of the same people that made the proposition to take over the Siems-Carey Co. contract?

Mr. DISQUE. It is the same group of loggers.

Mr. LEA. Proceed.

Mr. DISQUE. Some of them quit after they got started. They promised Mr. Frost they would do this thing, and he told me one day that about half of them reneged on him and failed to make good. I know he counted on several who did not eventually join him. May I, while we are referring to these Puget Sound loggers, state that it has come up here that one of their objections to the Siems-Carey-Kerbaugh operation was that Siems-Carey-Kerbaugh would have a monopoly and control over that timber out on the peninsula. I don't know whether they knew it in the Puget Sound district or not, but it never was contemplated nor agreed that the Siems-Carey-Kerbaugh Corporation should control or operate that railway line, and definite provisions had been made in our office for us to operate it ourselves, and it would have been available, and always was considered available, for any logger who wanted to go in there. There was no limit to the opportunity for any loggers who wanted to go in there, on the same kind of a flitch contract that Siems-Carey-Kerbaugh had. The railroad would have been just as available for them as it was for Siems-Carey-Kerbaugh, and was deliberately planned and contemplated that its operation would be in our hands, because I had repeatedly insisted that it should be a common carrier, and there never was any thought in the minds of our organization that the Siems-Carey-Kerbaugh Corporation should ever control that railroad, and they never suggested a desire or intention of purchasing it. I really thought the Milwaukee some day would buy it.

Mr. MAGEE. There is not any other buyer, is there, General?

Mr. DISQUE. What?

Mr. MAGEE. There is not any other buyer, is there?

Mr. DISQUE. Well, I am pretty sure there were four or five other possible buyers.

Mr. MAGEE. Well, it is an extension of the Milwaukee line. I think, you know, to be frank about the proposition, of course—

Mr. DISQUE (interrupting). Rates would have been the same whether it is an independent line or a branch of the Milwaukee.

Mr. MAGEE. But what I mean is, you can't get out over the line without using the Milwaukee to Port Angeles?

Mr. DISQUE. No.

Mr. LEA. Not without the physical severance of the connection with the Milwaukee and an extension in the line—

Mr. MAGEE (interrupting). What is that?

Mr. LEA. I say, not without the physical severance of the connection with the Milwaukee.

Mr. MAGEE. Yes. I don't see how it could be physically severed, unless they would build a parallel road, extending it, building a parallel road to Port Angeles. I don't know the other way. They might extend it down the other way, toward Grays Harbor. I don't know how that would be, whether they could get any connection out there or not.

Mr. LEA. Now, were there any further reasons—you are through with that subject, are you?

Mr. DISQUE. Yes.

Mr. LEA. Were there any further reasons that you cared to give for the civilian pay of soldiers? You spoke at some length on that yesterday.

Mr. DISQUE. Well, it was a matter of absolute necessity from every angle. I haven't heard anybody who knew the situation, who was familiar with it, that had any reason against it. There is not a man in the United States who regretted, or would regret such a measure more than I, and it was only through sheer necessity, in view of all the circumstances, that that was ever done.

Mr. MAGEE. Now, how do we—I don't see how we get the sheer necessity. If there were men in this locality, or along the coast, who were familiar with logging and getting out lumber, and they volunteered and went into the service—in fact, they were drafted into the service; not dependent upon what you did; but the Government had abundant means of getting them back into the work in which they were familiar; just as the English and French found they had made a mistake at first in sending their machinists to the front and afterwards recalled them, and I think in certain instances our Government did the same. In other words, I must admit I don't see the force of permitting men who were familiar with logging and lumbering to go from the States of Oregon and Washington to the front and then replacing them with doctors and lawyers and dentists and clerks. It seems to me the Government, if it had realized the condition of affairs, the War Department certainly had the power to remedy that, it would seem to me.

Mr. DISQUE. There was a great big problem, Mr. Magee.

Mr. MAGEE. Yes, I understand it was. For instance, take the case of young Pendleton. I understand he was an experienced man in the logging business and wanted to perform service here, but he was not permitted to. I must admit—

Mr. DISQUE (interrupting). Of course, young Pendleton's father had him working in Canada until he was due to be drafted; then he wanted him to get into the United States Army where it was not going abroad, and we didn't want that kind of man for any kind of a job.

Mr. MAGEE. Well, what I mean is that he was a good logger.

Mr. DISQUE. We don't know that.

Mr. MAGEE. And understood the industry.

Mr. DISQUE. We had no evidence of that.

Mr. MAGEE. Why he would be much more efficient than a dentist here forced to do logging.

Mr. DISQUE. I had been in the Army for eighteen years then. I had seen the general staff, year after year, beg Congress to lay the groundwork for a real efficient preparation for war. Year after year I had seen Congress ignore those recommendations of the military experts of this country. From the time of the Philippine insurrection up until the day this war was declared constructive measures were turned down repeatedly. Had the Congress of the United States listened to the experts who were recommending year after year, we would not have had a situation that confronted us when this war was declared.

Mr. MAGEE. I used to have that same view, too, and I made one or two speeches in the House along that line; but I must say, from my observation and knowledge gained since, that I was mistaken, and that in my opinion the safety of this country depended, and will depend in the future, where it has always depended, upon the citizen soldiery of this Nation.

Mr. DISQUE. Well, you were talking about something that I didn't refer to.

Mr. MAGEE. I thought you were telling the part of these military experts.

Mr. DISQUE. I never urged a big Army.

Mr. MAGEE. I think you know—well, I guess I won't say.

Mr. DISQUE. I am merely talking about the fundamental preparation. I don't believe we need a big standing Army.

Mr. MAGEE. Well, I would not advice anybody to follow the military expert too far, although I have great respect for the military expert. A great many of them are my very warm friends, and whom I respect most highly. Have you anything further there?

Mr. LEA. I am looking over my notes here to see if I have anything. Did you give us the number of contracts to furnish logs with mill men or loggers?

Mr. MAGEE. I think you got that.

Mr. DISQUE. That went in this morning. I have forgotten what the number was now.

Mr. MAGEE. Yes. I think you said 417 or 419, something like that.

Mr. LEA. Did the members of the Loyal Legion pay any dues?

Mr. DISQUE. Not during the war, unless it was merely locally in their own locals. I don't know but what maybe an impression got into this record that the Loyal Legion included those soldiers, or was these soldiers. The Loyal Legion of Loggers and Lumbermen was primarily the civilians scattered throughout the State here.

Mr. MAGEE. I think in all the States. I think the evidence is it went into the State of Idaho, even, I think.

Mr. DISQUE. Yes; that was at their own request; they came over here and asked for it.

Mr. LEA. Can you tell us the weight of fir as compared with spruce?

Mr. DISQUE. Roughly, I think it is about one-seventh heavier.

Mr. LEA. Have you got the figures of the weights per board foot?

Mr. DISQUE. We have that in detail. It depends on the degree to which it has been dried, of course. You can dry it down to any per cent. Well, the inspection officer here tells me that the specific gravity of fir is 52, and spruce 41. That gives you an idea of the relative weight at the same condition or degree of dryness.

Mr. LEA. Approximately one-fifth difference?

Mr. DISQUE. Approximately 25 per cent heavier.

Mr. MAGEE. That is, the fir is.

Mr. DISQUE. The fir over the spruce on that. But it all depends on how they are dried and how far it is dried, whether the log is a new tree or a dead one.

Mr. MAGEE. It doesn't need any comparison; I suppose the lumber of each would be practically in the same condition.

Mr. DISQUE. Exactly the same condition. You could dry them down to a certain percentage of moisture, but fir is considerably heavier.

Mr. LEA. Wasn't there a form of contract to be presented here this afternoon?

Mr. MAGEE. Yes.

Mr. DISQUE. That is a selective logging contract. It is not prepared yet. We will bring it in to-morrow morning.

Mr. LEA. Do you think of anything else now that you want to say?

Mr. DISQUE. I have one or two things here that I think ought to appear here. In October, 1917, the *Timberman*, a magazine published in the interests of the logging industry here on the coast, and the editor of which had been giving this subject a lot of consideration at that time, carried these remarks somewhat as an editorial. I would like to read them into the record as showing the condition and the frame of mind at that time.

Mr. MAGEE. October, 1917?

Mr. DISQUE. 1917.

Mr. MAGEE. Is it long?

Mr. DISQUE. Not very; one paragraph.

Mr. MAGEE. Go ahead.

Mr. DISQUE (reading):

The problem facing the United States Government in providing necessary spruce for the building of a great airplane fleet for itself and its allies has become acute. Despite all assertions to the contrary, the bald, naked truth is that not enough spruce logs are being put in the water. With the advent of winter the prospect for increasing the supply becomes appreciably less.

There has been both miscalculation and misinformation circulated regarding the physical ability to secure the necessary spruce logs. Flamboyant speeches in opera houses do not get out logs. It requires organization and men. The individual logging camp operator, combatting strikes and inefficient labor supply, is powerless to make much headway against the tide of unrelenting opposition which in some instances expresses itself in sabotage. The Government should step in at once and commandeer all the available spruce timber and conscript the necessary labor. It may be found that the men now enlisted in the forestry regiments for service in France could accomplish more real good for the Nation by being enlisted in a spruce regiment at home and producing spruce logs. One hundred million feet of airplane spruce, which is

the estimated requirements for 12 months, will demand the production of approximately 1,000,000,000 feet of logs. When we stop to consider that there are very few pure stands of spruce lumber adapted to airplane production, the problem of providing the Government with its estimated requirements of 100,000,000 feet within the time limit proves a task that is an utter impossibility under the conditions now obtaining, and the sooner the issue is faced the better for all concerned. This problem should be looked at squarely. The necessity for airplanes to win the war is conceded. Victory must come through supremacy in the air, and it is up to the United States Government to supply the needed spruce.

I would like also to read the remarks of Gen. Carmack, an officer in Washington representing the British high commission in the purchase of munitions, made at a dinner given in Washington December 21, 1918. [Reading:]

Gen. Carmack stated frankly that at times it appeared that they would be overwhelmed through lack of sufficient lumber; that through your resourcefulness, courage, perseverance, intelligence, and farsightedness you had developed a supply of material of a character unequalled heretofore; and that during the past two months of war you had actually shipped more material than the Allies and ourselves could use, which had resulted in a growing predominance of plane power.

Mr. LEA. Can you think of anything else that you want to say?

Mr. DISQUE. Am I to appear before the committee again or not?

Mr. MAGEE. Are you through with the examination?

Mr. LEA. I think I am.

Mr. MAGEE. I do not know as to that, except if there are any errors you want to correct or anything of that kind you will be given an opportunity to do so.

Mr. DISQUE. Mr. Frear yesterday, I think, told me I would have an opportunity to come back after some of these other witnesses that might be called had been heard.

Mr. MAGEE. He is chairman of the committee, and as far as I am concerned, speaking only personally, I think it is the desire of everybody that the fullest opportunity be given for a hearing. Of course we could not stay here a year.

Mr. DISQUE. If you will call the five or six gentlemen whom I have named this morning, who are here in Portland—you can finish in two hours—and I am not saying anything yet about Maj. Sligh's personal reference to me. I leave that to Maj. Eamon, whom the chairman said would be called.

Mr. MAGEE. He will be called. I will turn that over to Mr. Lea and he can arrange with the chairman to call them himself. I think we have a pretty good grasp of the situation here and we would like to get through as soon as we can reasonably, but we do not want to leave without every one having full opportunity to have his say. I only desire to ask the General a few questions, so that we will get through very shortly in the morning, and then we can go on with other witnesses. I do not expect to take up much time; there are just one or two questions that occurred to me.

Mr. DISQUE. I would like to put into your record as an exhibit a map similar to this which is before me showing the road into the Alsea Bay.

Mr. MAGEE. Yes, I would like to have you put that in.

(The map above referred to "Exhibit 15, Disque, Sept. 5, 1919.")

(Thereupon, at 5.50 o'clock p. m. an adjournment was taken until to-morrow, Saturday, Sept. 6, 1919, at 10 o'clock a. m.)

WAR EXPENDITURES.

SUBCOMMITTEE No. 1 (AVIATION)
OF THE SELECT COMMITTEE ON
EXPENDITURES IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES,
Saturday, September 6, 1919.

The subcommittee met at 10 o'clock a. m., pursuant to adjournment, at the courthouse, Portland, Oreg., Hon. James A. Frear (chairman) presiding. Also present: Hon. Walter F. Magee and Clarence F. Lea.

TESTIMONY OF BRICE P. DISQUE—Continued.

Mr. MAGEE. I wanted to ask you a few questions, General. Can you give me the figures this morning of the cost per mile of the railroad from Yaquina north up along the coast?

Mr. DISQUE. I turned those in for the record last night.

Mr. MAGEE. As I recall, you were not in a position to give them last night but they were to be furnished; that is, what the cost was including the terminals, wharves, trestles, etc., and I wanted to see if you could get the items separated.

Mr. DISQUE. I do not think on that north line it is going to make a very great, material difference in the mile cost. I am informed that they are still working on those figures and will have them ready by noon and they can be put in.

Mr. MAGEE. As I understand, you stated you had 40,000,000 feet of logs in the waters of the Yaquina Bay?

Mr. DISQUE. No; that is throughout the entire operations of the cost-plus contractors, in Willapa Harbor, in the Lewis and Clark River and Yaquina Bay, Enumclaw and other places where cost-plus operators were working.

Mr. MAGEE. Whatever logs were cut were put in the waters of the Yaquina Bay?

Mr. DISQUE. I assume they are there now.

Mr. MAGEE. Was it your intention to take these logs to the Toledo mill by Yaquina Bay, or by connection with the Southern Pacific at Yaquina?

Mr. DISQUE. It had been my understanding all the time that they were to go over by rail. Mr. Holland, who is supervisor out there, however, had full control of that and would have acted in his own best judgment as to how to do it. It could have been done either way.

Mr. MAGEE. Would there have been any need of providing for both ways?

Mr. DISQUE. I do not know of any reason why there should be two ways.

Mr. MAGEE. And by rail would be much quicker than by water, would it not?

Mr. DISQUE. By Rail?

Mr. MAGEE. Yes.

Mr. DISQUE. The actual time consumed from Yaquina to Toledo would have been quicker by rail, but in an operation of that sort I should say that there would be no actual delay in the sawmill operation to have dumped them in the water. They would have been towed up, probably, by night.

Mr. MAGEE. If it was intended to take them by rail, the building of the terminals and wharves and that big pier out into Yaquina Bay would be a waste of public funds?

Mr. DISQUE. That was built primarily and almost entirely for the purpose of getting connection with the southern line that ran down to the Alsea tract.

Mr. MAGEE. That is on the other side of the bay?

Mr. DISQUE. On both sides. We had one out from the north side to get into water deep enough for the ferry, and also from the south, so that we had to run out to get into water that would take care of the ferry.

Mr. MAGEE. I understand that, but the building of the trestle on the north side would not have anything to do with the getting of logs from the Blodgett tract on the other side, would it?

Mr. DISQUE. I do not believe I know what trestle you refer to.

Mr. MAGEE. There were two independent operations, getting the logs from the Blodgett tract and from the Siletz Reservation?

Mr. DISQUE. Yes.

Mr. MAGEE. Either operation could be carried on independent of the other?

Mr. DISQUE. Exactly.

Mr. MAGEE. So that if it was the intention to make a physical junction with the Southern Pacific at Yaquina, then there would be no necessity for the creation of terminals and wharves and this trestle at Yaquina?

Mr. DISQUE. Is there a trestle at Yaquina that was unnecessary to the northern operation?

Mr. MAGEE. That is what I am trying to find out. In other words, I would like to know what your plan was; whether it was to take these logs to the Toledo mill from Yaquina by the Southern Pacific, or to take them down the river by rafting and towing?

Mr. DISQUE. Well, as I say, in the plan of the thing as it was understood in my office, they could have been taken over by rail and there was that physical connection made.

Mr. MAGEE. Then if that plan had been carried out there would have been no necessity for any additional construction at Yaquina?

Mr. DISQUE. None of any importance at all. I do not think there was.

Mr. MAGEE. That was the reason I wanted to know what the cost was of those terminals, and wharves, and trestles, and other connections referred to as a part of that operation, and that information, I understand, will be supplied?

Mr. DISQUE. That will be supplied.

Mr. MAGEE. Do you know how many trestles there are in the road from Yaquina up along the coast?

Mr. DISQUE. No; I do not know offhand.

Mr. MAGEE. Who would know about that—the character of that road?

Mr. DISQUE. Maj. Harrington; he would have complete information on that.

Mr. MAGEE. And would he have the same information with reference to the road from Toledo south into the Blodgett tract?

Mr. DISQUE. Yes, sir; I can refer to our report on that.

Mr. MAGEE. We would like to have a report as to the character of the construction, the length of the trestles, the depth of the ravines—or whatever you may call them—the grade, and all those things, and the spur extending out from up near Otter Rock into the logging camp. In other words, show the general construction and character of this road.

Mr. DISQUE. I will have the details inserted.

Mr. LEA. I think that is already in the table furnished to the committee, but if we can get any other paper, all right.

Mr. DISQUE. If it is not in the record we will give you a complete statistical chart to put in.

Mr. MAGEE. I think we ought to have in the record a statement showing the character and construction of the road and tunnels and trestles, etc., and Maj. Harrington knew the same facts in regard to the Blodgett tract?

Mr. DISQUE. All of them.

Mr. MAGEE. Then he can furnish a similar statement in reference to that. When was the road into the Blodgett tract started?

Mr. DISQUE. I would say in June, 1918.

Mr. MAGEE. Do you remember what time in June?

Mr. DISQUE. I can not tell you offhand what time.

Mr. MAGEE. When was the contract made with Mr. Blodgett for the purchase of the timber?

Mr. DISQUE. We received his offer; I think the first offer from Mr. Blodgett was probably in April.

Mr. MAGEE. And when was the time you said you had a contract with him?

Mr. DISQUE. Later on; it was in August or September that this thing came to a real document in which he offered to sell to the Spruce Corporation his property there, reserving the mineral and oil rights.

Mr. MAGEE. That is, you began to build your railroad before you got your contract?

Mr. DISQUE. Yes.

Mr. MAGEE. Perhaps two months before?

Mr. DISQUE. We had been negotiating with Mr. Blodgett from April on. He came out here in May.

Mr. MAGEE. What I was getting at was that there would be no purpose in building the railroad unless you could get the timber?

Mr. DISQUE. No.

Mr. MAGEE. So that the building of the railroad was clear notice to him that you intended to take the timber?

Mr. DISQUE. Oh, yes.

Mr. MAGEE. And every mile that the railroad came nearer to his tract was stronger notice to him of the intention to do so?

Mr. DISQUE. Yes.

Mr. MAGEE. Now, did he want to sell?

Mr. DISQUE. I could not say whether he was anxious to sell or not. He had offered it to us without any pressure.

Mr. MAGEE. Was any purchaser suggested to him, or any purchaser in sight for the property?

Mr. DISQUE. There was one possible purchaser who tried to buy in a private deal with Mr. Blodgett.

Mr. MAGEE. Who was that.

Mr. DISQUE. Mr. N. S. Potter, of Jackson, Mich., president of the City Bank, who had an interest in an abandoned logging railway in Washington and wanted to move it down there. He heard of this Blodgett timber and he desired to get it and came out here and tried to put his railway down there, put it into use, and was unable to make any agreement with us and went back and tried to make one with Mr. Blodgett whereby they could in combination put in the railway and open the timber jointly.

Mr. MAGEE. Had you talked with this party to know if he would buy it?

Mr. DISQUE. Yes. He was here about three weeks, as I recollect, two or three weeks, and we could not come to any terms with him and recommended that he confer with Mr. Blodgett and see if they could get together and make some terms.

Mr. MAGEE. At the time of the armistice the sale had not been completed?

Mr. DISQUE. No, it had not.

Mr. MAGEE. Do you know how long after the armistice it was that it was completed?

Mr. DISQUE. It was two weeks or more.

Mr. MAGEE. If he was not anxious to sell what was the object of the Government in buying the property after the armistice was signed?

Mr. DISQUE. Well, it was, first having built a railroad down there, just good business, in the minds of the entire organization to give that railroad the value that it had created through its construction in that timber, and we had an offer which was given us in August or September and which we were continually trying to make into a purchase, the delay being caused through errors in the abstract of title which were being cleared up, and that would have been purchased in September had the abstract been satisfactory to our legal officers.

Mr. MAGEE. After the armistice was signed of course the Government had no further need of getting spruce or fir out of the tract?

Mr. DISQUE. There was another reason in there. The military authorities in Washington at that time had a feeling that it would be in the interest of the War Department to have a fine stand of spruce to hold as a reserve for future use. Gen. Mencher, I think it was, and also Mr. Ryan, talked to me about that in Washington in November, and suggested that we keep that thought in mind.

Mr. MAGEE. Was that the purpose?

Mr. DISQUE. Not entirely. I say, it was one of the things.

Mr. MAGEE. Was it the main purpose?

Mr. DISQUE. No; I do not think it was.

Mr. MAGEE. I would like to know what the main purpose was.

Mr. DISQUE. The main purpose was to insure the value of the railway.

Mr. MAGEE. That is, you bought the land to sell the railroad. Is that what you mean?

Mr. DISQUE. No. Putting that railroad down there increased the value of that timber materially. We had paid for that increase. Mr. Blodgett had given us an option; and as a business proposition it seemed proper that we should take advantage of it in the interest of the Government.

Mr. MAGEE. Who was responsible for buying it after the armistice; who determined that?

Mr. DISQUE. Well, it was determined before the Board before the armistice, and never revoked.

Mr. MAGEE. The Spruce Production Board?

Mr. DISQUE. Exactly.

Mr. MAGEE. Did they take action on it after the armistice was signed?

Mr. DISQUE. I do not recall whether they did or not.

Mr. MAGEE. If they did, will you supply it?

Mr. DISQUE. We will look through the minutes and if there is anything there I will do so.

Mr. MAGEE. Well, now, this property was advertised for sale on September 2, 1919?

Mr. DISQUE. I understand so.

Mr. MAGEE. Then, what object would there be in the Government buying this property as a spruce reservoir and then immediately putting it up for sale on September 2?

Mr. DISQUE. I have been away from the corporation for six months, I do not know what directed their policy since I left.

Mr. MAGEE. There has been a change of policy?

Mr. DISQUE. There may have been. I have not been in touch with them at all.

Mr. MAGEE. Was there any talk about buying the spruce at Pleasant Lake reservation for future needs of the Government?

Mr. DISQUE. No; the spruce up there was owned by several interests, and it was an area entirely too large to consider for that purpose.

Mr. MAGEE. How much spruce did you estimate to be in the Blodgett tract?

Mr. DISQUE. In the neighborhood of 275,000,000 feet.

Mr. MAGEE. You built this mill at Toledo and, as I understand, you testified you built the railroad line up the coast to get at the 150,000,000 feet on the west side of the ridge?

Mr. DISQUE. And south of Otter Rock.

Mr. MAGEE. Taking in 150,000,000?

Mr. DISQUE. That was our judgment of what we would get out of there.

Mr. MAGEE. Then there was 275,000,000 in the Blodgett tract?

Mr. DISQUE. That was the total cruise of spruce.

Mr. MAGEE. That would make a total of something like 425,000,000.

Mr. DISQUE. The Blodgett spruce, 275,000,000, would not all be aircraft lumber.

Mr. MAGEE. Well, how much would be?

Mr. DISQUE. I would have to consult our records to find what we considered aircraft lumber in that tract.

Mr. MAGEE. What was the capacity of the Toledo plant?

Mr. DISQUE. Between 600,000 and 750,000 feet a day.

Mr. MAGEE. About how much aircraft lumber goes into an airplane?

Mr. DISQUE. I have never been able to find out. The actual lumber in weight in a one-seated fighting plane, they tell me, is around 300 or 400 feet; but, of course, that is after it has been routed out and webbed, and probably represents only half of the planks put into the machine. I think a bombing plane has as high as 5,000 feet, and I have never been able to get anybody, even in the factories, to tell me exactly what it takes to make any of these machines, Frenchmen, or Englishmen, or anyone else; they do not know.

Mr. MAGEE. Would you have any idea of how many airplanes could be manufactured from a day's output of this plant?

Mr. DISQUE. Well, the 600,000 feet through the plant would become 50 per cent fitches, which would become 180,000 feet of the material that we shipped East and was called aircraft lumber. That would make about 30 to 35 airplanes.

Mr. MAGEE. A day?

Mr. DISQUE. That is based on all the information I have ever been able to get on the amount that goes into one. I will say that is very crude.

Mr. MAGEE. How much have you figured on going into an airplane?

Mr. DISQUE. I figured here on the basis of 5,000 feet.

Mr. MAGEE. To an airplane?

Mr. DISQUE. Yes. It is anybody's guess.

Mr. MAGEE. Suppose you figured on a basis of 500 feet?

Mr. DISQUE. I do not believe they ever made one for that.

Mr. MAGEE. Will you figure out what they would amount to on that combination?

Mr. DISQUE. Capt. Walter gives me a statement from the Washington office which says the rough, the lumber that we shipped to make a D. H. Four took 1,600 feet of lumber that we shipped.

Mr. MAGEE. That is, you shipped 1,600 feet and those were the largest machines made by the American Government?

Mr. DISQUE. I do not know. I think our Government made some Handley-Pages that took 4,200 feet, according to this statement, and the Caproni took 3,600 feet.

Mr. MAGEE. That was the Italian plane?

Mr. DISQUE. Yes. We supplied, of course, the lumber for all these machines.

Mr. MAGEE. Sixteen hundred feet of lumber such as you shipped. You say you were turning out 600,000 feet a day?

Mr. DISQUE. That would make somewhere around 90 if they were of that size.

Mr. MAGEE. Ninety planes a day; that would be about 3,000 planes a month.

Mr. DISQUE. Yes, sir.

Mr. MAGEE. How long would this spruce have kept this mill going?

Mr. DISQUE. Estimating that 200,000,000 feet of the Blodgett tract was airplane material and 150,000,000 up north, we have 350,000,000, and a cut of 600,000 a day; that would be nearly 600 days. Of course there was a great deal of spruce reported north of Otter Rock which we were not interested in at this time, but which preliminary cruises had indicated would be available by the extension of our line.

Mr. MAGEE. Up in the Siletz Reservation?

Mr. DISQUE. In the Siletz Reservation. Perhaps I can get that airplane production thought a little clearer here by saying that in 1918 the first nine months of that year the French Government, using our spruce and fir, made 34,219 machines.

Mr. MAGEE. In what time?

Mr. DISQUE. In the first nine months of 1918, and at that rate they were building around 3,700 a month themselves. That is just one Government.

Mr. MAGEE. Well, you had a very large plant there at Toledo, did you not?

Mr. DISQUE. Yes; that was a good sized plant.

Mr. MAGEE. That is, as you planned it, it was the biggest plant, probably, of its kind in the country?

Mr. DISQUE. There is no plant of its kind anywhere else.

Mr. MAGEE. And is it too large a plant now for any firm or person ordinarily to operate?

Mr. DISQUE. I do not think so; I think it is a good property.

Mr. MAGEE. You think you could find someone who would develop sufficient capacity to keep this mill going?

Mr. DISQUE. I think so.

Mr. MAGEE. Did you get any bid on it?

Mr. DISQUE. No; but a plant of that sort there that would refine lumber built in connection with it ought to be a very good commercial proposition.

Mr. MAGEE. It would absorb all the lumber in that locality in a short time, a plant of that capacity?

Mr. DISQUE. I do not think so. I think the Forestry Department show enough lumber in that vicinity to keep a plant going for 30 or 40 years. That would be my guess from what I have heard of the timber in that vicinity. There is a tremendous lot of it around there.

Mr. MAGEE. The capacity was sufficient to supply planes enough, probably that plant alone, to meet the needs of the Government?

Mr. DISQUE. Oh, no.

Mr. MAGEE. You do not think 3,000 a month would be enough?

Mr. DISQUE. That would not do any more than meet the American Government requirements after their production got under way. And another thing, Mr. Magee, that plant—we are talking now about a three-shift run?

Mr. MAGEE. Yes.

Mr. DISQUE. A commercial operator would only run that one shift, and if he went in there today to reduce the timber that is immediately available to these railways it would take him, instead of, as I said, six hundred days, it would take him eighteen hundred days, which is in the neighborhood of six or seven years, just for the

timber that is right on our railway, and that does not include the fir, which is at least two or three times the amount of spruce that we have been figuring on. Yes, more than that; it is four or five times the amount of spruce.

Mr. MAGEE. Then there was some evidence here that the capacity of the plant was so large for ordinary operations——

Mr. DISQUE. No; I do not think, as a sawmill, that it is a plant of excessive capacity.

Mr. MAGEE. Of course, the English were getting a good deal of spruce from British Columbia.

Mr. DISQUE. Well, I have a telegram from Gen. Menoher this morning. He has checked up the British records, and I would like to read that, if you will permit.

Mr. MAGEE. Certainly.

Mr. DISQUE. In connection with the amount of spruce that came from British Columbia. This is actual shipments from the Vancouver cut-up plant.

Cut-up plant produced 36,159,143 feet airplane spruce, 37,504,851 feet airplane fir——

Mr. FREAR. Will you give those figures again, please. Spruce, how much?

Mr. DISQUE. 36,159,143 feet airplane spruce, 37,504,851 feet of airplane fir——

and 3,355,466 feet airplane cedar. Canadian Government produced in British Columbia 18,175,000 feet airplane spruce and 8,182,000 feet airplane fir. Approximately 98 per cent of cut-up plant airplane lumber consigned to factories in United States passed inspection at factories. No figures available as to per cent found usable abroad nor per cent of Canadian Government output found usable. England received 12,770,038 feet spruce, 11,597,630 feet fir, 2,100,695 feet cedar. Italy received 2,320,398 feet of spruce, 4,510,957 feet of fir. France received 9,722,025 feet spruce, 9,787,925 feet fir. Gen. Charlton has asked Capt. Hope of Royal Air Force stationed in New York to wire direct record of quality airplane stock produced at cut-up plant and furnished to the British Government. Menoher, director of air service.

Mr. MAGEE. Mr. Pendleton, as I understand, held the same position for the British Government in British Columbia that you held here for the United States?

Mr. DISQUE. I do not think so. A Maj. Taylor up there has a position similar to the one I had here. Mr. Pendleton, as I understand it, was assisting him in some way.

Mr. FREAR. Just in that connection may I ask you to read the telegram you got from British Columbia into the record there. Would that be a fair thing to do?

Mr. DISQUE. I think you read that yesterday.

Mr. FREAR. I did, but I want to see if it is accurate.

Mr. DISQUE. The one you read was accurate, all right.

Mr. FREAR. That is the only question.

Mr. DISQUE. Mine is practically the same, or is the same.

Mr. FREAR. That is all.

Mr. MAGEE. Well, Mr. Pendleton was the main man there?

Mr. DISQUE. I think so.

Mr. MAGEE. There is no question about that.

Mr. DISQUE. I think so, in the spruce.

Mr. MAGEE. Maj. Taylor, I think, lived in Toronto.

Mr. DISQUE. No; I think he was in Vancouver. He was stationed out there all the time. I had messages from him frequently.

Mr. MAGEE. The director of aircraft here was your superior officer, wasn't he?

Mr. DISQUE. In Washington, yes.

Mr. MAGEE. And Maj. Taylor was superior officer to Mr. Pendleton?

Mr. DISQUE. Well, Mr. Taylor had a man similar to the director of aircraft back in Toronto.

Mr. MAGEE. Well, perhaps I had better read the communication here from Maj. Taylor. It is already in evidence. There is no question about it.

Mr. DISQUE. I think those amounts that I read from the telegram, I am sure they are intended to be the amounts that these Governments received of the cut-up plant product, which is referred to in the first part of the message. The totals check on that.

Mr. MAGEE. Maj. Taylor writes to Mr. Pendleton under date of August 18, 1919:

MY DEAR MR. PENDLETON: The conclusion of settlement of contracts as an aftermath of our production campaign brings to a final termination the activities of this department, and the consequent dissolution of our organization.

Will you, therefore, permit me to record the deep appreciation I share with the chairman and officers of the Imperial Munition Board in your excellent contribution of service, to which is largely due the gratifying results obtained by this department.

In the early stages of formulating the best mode of procedure to obtain a rapid airplane spruce production your intimate knowledge of coast lumbering conditions allowed me to lean heavily on your judgment, my admiration and respect for which has grown greater as succeeding production and settlement difficulties were supervised by you.

I am sure you will always be able to look back with gratification on your intimate association with the work of producing airplane lumber to meet a national crisis. My regret at this, the termination of our daily personal association, is tempered with the pleasurable memory I shall always hold of the privilege of having you associated with the board in the production of this essential war material, and I am also deeply sensible of the sacrifice of your own business interests and home comforts to gratuitously devote your time and energy to important national work in the production of this essential war material. Assuring you of the board's and my own personal sense of deep obligation for a signal service well and faithfully performed by you.

Most sincerely,

AUSTIN C. TAYLOR,
Director.

So I assume from that there is no question that Mr. Pendleton was in charge of the spruce operations in British Columbia.

Mr. DISQUE. Well, I do not know a thing about it. I do not know about Mr. Pendleton's relations there at all.

Mr. MAGEE. Now, there is a small matter I wanted to ask you about. There was a young man in the service who has seen me once or twice and I told him that I would try and ascertain whether there was anything in the fact that he contends that 15 per cent of their wages was deducted semimonthly or monthly, for mess expenses, or something of that sort. Do you know anything about it, or what there is to it, or would anybody connected with the corporation know?

Mr. DISQUE. All I know about that is that Col. Reardon, who had command of the troops working in the cut-up plant, told me that they had a mutual agreement out there with all the men that they were going to do something of that nature.

Mr. MAGEE. What would the deduction be made for, do you know?

Mr. DISQUE. My recollection is that it was a deduction in the interests of the mess and the few men around the messrooms who were not drawing civilian wages, a thing that is done in nearly every regular army unit.

Mr. MAGEE. Do you know just exactly what it was?

Mr. DISQUE. I do not know the details of it, Mr. Magee.

Mr. MAGEE. Who connected with the corporation would know all about it, or just what was done, and why?

Mr. DISQUE. Capt. Walker here seems to know more about it than anyone.

Mr. MAGEE. I will ask Capt. Walker now, while he is here, if he will state.

Mr. WALKER. The cooks and men working in the kitchen police in the company administration, also the company clerks and the men who worked in the cut-up plant office in clerical capacities, they only got the regular army pay, and these other men, out of their wages, made this pot which was prorated among these men to equalize the amount they received to some extent with those who worked directly in the plant.

Mr. MAGEE. Was there any authority for deducting the 15 per cent from their wages?

Mr. WALKER. It was purely a voluntary matter on their part. As stated by Mr. French, a list was passed around for those who were in accord with it, and, furthermore, Mr. Mitchell told me personally that many of those checks were cashed by men direct at the bank and no contribution given to this pot that I speak of. If they wanted to they could go to any bank and get it cashed, but those that were cashed at the post exchange, when they had facilities for cashing checks, in most cases they contributed to this pot.

Mr. MAGEE. This complaint of this young man was that moneys were deducted against their will, that is, deducted and they had no redress.

Mr. WALKER. Here is the actual way it was worked out; these men were given their checks there and then 10 per cent was written—

Mr. MAGEE. Fifteen, he said.

Mr. WALKER. Well, whatever the percentage was, written on in pencil on the check, and the National Bank there at Vancouver advanced \$10,000 at the post exchange, and Capt. Nesbitt Col. Beardon's adjutant, I believe took ten per cent from the men when the check was cashed and put it in this pot, and that was handled by the officers there and distributed to the men.

Mr. MAGEE. Then I take it that if 15 per cent or 10 per cent was deducted from the wages of any man without his consent that he still has that amount coming to him from the Government.

Mr. WALKER. But do not miss the point, Mr. Magee. These men were not compelled to cash these checks there, but could go to the banks in Vancouver and cash them and get the full amount, which many did.

Mr. MAGEE. The claim is that the amount was deducted and they were told that it had been deducted and that they were entitled to only the balance.

Mr. WALKER. That was the general policy, and I believe if you interview the bulk of the men you would find it was voluntary on their part.

Mr. FREAR. May I ask a question; the difficulty of interviewing the bulk of the men—we have had that complaint come from a number of the boys, that they had no voice in regard to this deduction of 15 per cent of their wages. That was the amount, was it?

Mr. WALKER. Yes.

Mr. FREAR. Fifteen per cent. Now, as I understand you to state, the clerical men in Vancouver were given full pay, the same as civilians.

Mr. WALKER. No sir.

Mr. FREAR. Well, that is what I was going to ask, whether I understood that correctly.

Mr. WALKER. No, they only received, Mr. Frear, both those at work in the office of the cut-up plant and in the company administration, the company clerks, etc., they received only their regular army pay. This was a measure on the part of the bulk of the men who did receive civilian pay to give them some benefit, extra money.

Mr. FREAR. I was going to say, before I got through, that the men who were working in the Vancouver barracks, or the Vancouver cut-up plant, and getting the same pay as civilians, had this 15 per cent deduction made to in part bring up the pay of the clerks to full civilian wages, is that right?

Mr. WALKER. Well, it did not bring it up to full civilian wages, but it gave them more than their actual army pay.

Mr. FREAR. What was the amount of the increase?

Mr. WALKER. All I can say about that is that I was in the cut-up plant office one day when they were passing this around, and I noticed one sergeant by the name of—I can not recall his name right now, he was keeping commercial lumber books—I remember he got \$20 one month.

Mr. FREAR. Now, you had 9052 men, according to the summary, at Vancouver Barracks?

Mr. WALKER. Yes, but understand that these were only men stationed at the cut-up plant, Mr. Frear. There were a number of squadrons stationed right at the cut-up plant to supply men for the plant itself.

Mr. FREAR. This 15 per cent deduction, did that occur with everyone?

Mr. WALKER. No, no; only there in the plant, and, as I say, it was not a deduction that we had anything to do with as a corporation, or the disbursing officer as division disbursing officer.

Mr. MAGEE. I understood this young man was in a logging camp.

Mr. WALKER. He was later, but he was at this time stationed—

Mr. MAGEE. I mean at the time the deduction was made.

Mr. WALKER. No; I believe you misunderstood him. He was stationed at Vancouver Barracks, at the cut-up plant.

Mr. FREAR. How many men did you have in the cut-up plant about?

Mr. WALKER. I think about four thousand were stationed there all the time. I can determine that from the pay roll.

Mr. DISQUE. That is approximately right.

Mr. FREAR. That is close enough.

Mr. WALKER. It was a deduction made there at the post exchange. As I say, in many cases it might have been a personal misunderstanding on the part of the men.

Mr. FREAR. Could you give the approximate amount that would be deducted from the wages of the 4,000 men at 15 per cent?

Mr. WALKER. Well, I could determine that from the pay roll.

Mr. FREAR. Couldn't you give it approximately, knowing in a general way the amount that was paid to the men on the average?

Mr. WALKER. I do not think, Mr. Frear, that it was 15 per cent. I think it was 10 per cent. In fact I am positive of that. I could get some of those checks with those deductions marked on them for the committee, and I will get also some of those checks where they cashed them directly at the bank and no deduction was made, if you care to have them.

Mr. FREAR. That brings up the question of why the condition was made that they could not cash their checks over at Vancouver Barracks unless they made the deduction of 15 per cent. Who was authority for that, that they would not give them the full amount if they demanded it?

Mr. WALKER. As far as the convenience of cashing them was concerned, those men were willing to have it done and the checks cashed there, but they could walk down to the bank in 15 minutes and get them cashed.

Mr. FREAR. Down town?

Mr. WALKER. Yes.

Mr. FREAR. But why didn't you up there have an arrangement that they could get their money if they didn't want to make the deduction, that is what I was asking; why didn't you have such an arrangement at Vancouver Barracks where these deductions were made and where these checks were cashed? I am just asking as a matter of practice.

Mr. WALKER. As a matter of fact, the facilities for cashing those checks right at the barracks—this was entirely a matter of convenience that we arranged for the men. Many of them were cashed over here at Portland at the hotels, anywhere where any checks would be cashed.

Mr. MAGEE. I think this young man stated that there were some instances where they were cashed at banks, and he said the men who did that were sharp enough to take a lead pencil and erase the "deduct 15 per cent" so that the check they presented did not have any deduction on it.

Mr. WALKER. I do not know whether Mr. French was there at first when this list was passing around setting forth the facts.

Mr. FREAR. Several of the boys have spoken to me on the side that we have not put on the witness stand.

Mr. WALKER. I have had letters from men that have gone away that had money coming out of this pot too, and I have arranged to get it for them.

Mr. MAGEE. I think it should be stated here that if there was any young man whose pay was deducted without his consent thereto that he has a claim against the Government now for whatever the deduction was. That is right, isn't it?

Mr. WALKER. No, sir.

Mr. MAGEE. You do not think he has a claim?

Mr. WALKER. No, sir. He has endorsed his check. He might have a claim against the regimental fund.

Mr. FREAR. That would be much like the claim of Blodgett, it was rather commandeered.

Mr. MAGEE. I do not think I will modify the statement, because I think that he has a valid claim for that amount against the Government, and I assume that in any event the Government would be fair enough and equitable enough to pay it. Thank you very much, Mr. Walker. Now General, do you know whether the Milwaukee railroad is affiliated in any way with the Union Pacific?

Mr. DISQUE. I have not the slightest knowledge of it. I never heard that they were and I never heard that they were not.

Mr. MAGEE. Do you know whether they have the same terminals in any city?

Mr. DISQUE. I do not know a thing about it.

Mr. MAGEE. Or any interdependent contracts or railways.

Mr. DISQUE. No.

Mr. MAGEE. Do you know whether they occupy the same terminals in Seattle.

Mr. DISQUE. No, I do not.

Mr. MAGEE. You do not know anything about that?

Mr. DISQUE. Not a thing.

Mr. MAGEE. Now, in this Siems-Carey-Kerbaugh contract, who was sent out here as manager, who was the first manager here?

Mr. DISQUE. I think Mr. Carey managed the thing from the beginning.

Mr. MAGEE. Was there a man by the name of Donlin out here as manager at any time?

Mr. DISQUE. They had a Mr. Donlin with them who was in charge of some part of their operations I think he was connected with the spruce contract.

Mr. MAGEE. Was he manager of that, do you know?

Mr. DISQUE. I believe he was for a while.

Mr. MAGEE. Was he the first manager?

Mr. DISQUE. I think so.

Mr. MAGEE. Do you know where he was from?

Mr. DISQUE. Only in a general way; I understood he came from Montana.

Mr. MAGEE. Missoula?

Mr. DISQUE. I do not know what town.

Mr. MAGEE. How long was he here?

Mr. DISQUE. I do not know, but I would guess about two or three months, maybe.

Mr. MAGEE. Do you know who succeeded him?

Mr. DISQUE. I do not.

Mr. MAGEE. Now, I think you stated that Mr. Ryan did not sign the railroad contract, he refused to sign that?

Mr. DISQUE. That is my understanding of it.

Mr. MAGEE. Do you think his refusal to sign was the proper thing for him to do under the circumstances?

Mr. DISQUE. Well, I do not know that I could say he refused. He asked the Secretary of War to be excused from taking any part.

Mr. MAGEE. He did not sign it, there is no question about that.

Mr. DISQUE. That is my recollection of the way it turned out.

Mr. MAGEE. Do you think that was a proper action for him to take?

Mr. DISQUE. Well, I imagine it was, I would think so.

Mr. MAGEE. Now, he still continued as director of aircraft?

Mr. DISQUE. Yes.

Mr. MAGEE. He carried out the execution of the contract?

Mr. DISQUE. Yes, that really was executed under his——

Mr. MAGEE. To all intents and purposes the results were just the same as if he had signed it.

Mr. DISQUE. I would not say that, because the contract provisions were carried out to the letter and he did not make those terms. The execution of it became a mere matter of complying with conditions that had been set down without his control, and he could not control the execution of it, beyond seeing that it was carried out in accordance with its terms.

Mr. MAGEE. It would not make any difference, would it, so far as the contract was concerned, the execution of it, whether he signed it, or whether he did not. The contract was signed and executed in accordance with its terms and was signed and executed in accordance with the terms and conditions.

Mr. DISQUE. Yes. It would not have made any difference if Mr. Ryan had signed that after it had been drawn and he approved of its provisions. May I refer to Mr. Donlin, since you brought his name in?

Mr. MAGEE. Yes, for any statement you want to make.

Mr. DISQUE. I heard before I left New York that it had been said that Mr. Donlin was put in with the Siems-Carey-Kerbaugh Corporation from the Anaconda company's operations. I asked Mr. Ryan if he knew Donlin and he said yes, that he had been with his company some years ago.

Mr. MAGEE. When was this that you saw Mr. Ryan?

Mr. DISQUE. Just before I came out here.

Mr. MAGEE. You mean this year?

Mr. DISQUE. Just about two weeks ago.

Mr. MAGEE. Where did you see him?

Mr. DISQUE. In New York.

Mr. MAGEE. Where in New York?

Mr. DISQUE. In his office.

Mr. MAGEE. Do you know where his office is located?

Mr. DISQUE. 43 Broadway. He told me that Mr. Donlin had left their employ some years ago under circumstances which rendered it impossible for him to go back into their employ, and that when he heard that Donlin was employed by the Siems-Carey-Kerbaugh Corporation he had intended to bring this to the attention of Mr. Carey for reasons which he did not give to me, and apparently something that had occurred in the relations that they had had. He said that Mr. Donlin had ceased to be in the employ of the Kerbaugh Co. and he had never since returned to either one of them.

Mr. FREAR. Can you explain to the committee why it was that Mr. Kerbaugh, in the statement that he made while testifying in the Ray hearing, shortly after his talk with Pliny Fisk in New York City, stated that Mr. Donlin had been a Missoula, Mont., man, I

think it was, and was recommended to them and that they joined with him in coming out here. Have you any reason for that statement? That is Mr. Kerbaugh's statement, in substance, as I recollect.

Mr. DISQUE. I do not know a thing about it, Mr. Chairman.

Mr. FREAR. That is all.

Mr. MAGEE. The first you heard of the Siems-Carey-Kerbaugh Co., as I recall, was through Pliny Fisk.

Mr. DISQUE. Telegrams that came from both themselves and Pliny Fisk.

Mr. MAGEE. Now, did you think it was proper for Mr. Ryan to sign the spruce contract?

Mr. DISQUE. Perfectly.

Mr. MAGEE. You did not think it was proper for him to sign the railroad contract, but it was proper for him to sign the spruce contract?

Mr. DISQUE. I can readily see why he did not care to take part in the railroad contract. I think that was a conscientious effort on his part to refrain from allowing his interests to affect in any way his Government duties.

Mr. MAGEE. The spruce contract, I understood you to testify, was a twin sister of the railroad contract?

Mr. DISQUE. I never said that.

Mr. MAGEE. Well, it was, wasn't it?

Mr. DISQUE. No.

Mr. MAGEE. One was dependent upon the other?

Mr. DISQUE. Not in any way that made them twin contracts.

Mr. MAGEE. Was one dependent upon the other?

Mr. DISQUE. Not in any manner that you have in mind, I am sure.

Mr. MAGEE. What I mean is, could the spruce contract be carried out without the execution of the railroad contract?

Mr. DISQUE. Yes; it could.

Mr. MAGEE. Haven't you testified that you would not sign the spruce contract until the railroad contract had been executed?

Mr. DISQUE. Until a railroad had been arranged for, I said.

Mr. MAGEE. Well, that would be a contract, wouldn't it?

Mr. DISQUE. Not absolutely necessary. The Milwaukee could have extended their line without our interference in any way.

Mr. MAGEE. Well, if you testified that you refused to sign this spruce contract drawn up originally by you on or about the 12th day of April, 1918, until a railroad had been provided for by contract—

Mr. DISQUE. That is what I said.

Mr. MAGEE. You would not sign the spruce contract until the railroad contract had been provided for?

Mr. DISQUE. Not until the railroad had been provided for, but until a railroad had been arranged for.

Mr. MAGEE. Could that be arranged for in any way except by contract?

Mr. DISQUE. I think so.

Mr. MAGEE. Well, it wasn't, was it?

Mr. DISQUE. Not in this case.

Mr. MAGEE. It was arranged by a contract between the Government and the Siems-Carey Co., that is right, is it not?

Mr. DISQUE. That is how it turned out.

Mr. MAGEE. You would not think that a railroad could be provided in any other way except by contract, would, you, General?

Mr. DISQUE. Well, as I said before, the Milwaukee could have extended their line without any contract with the Government.

Mr. MAGEE. That was the only sensible, feasible, and safe way to do it, wasn't it?

Mr. DISQUE. How was that?

Mr. MAGEE. To have the Milwaukee extend its line.

Mr. DISQUE. That is the way it appealed to me.

Mr. MAGEE. And that was your decision?

Mr. DISQUE. We tried awfully hard to get them to.

Mr. MAGEE. Well, had the Government at this time taken over the Milwaukee?

Mr. DISQUE. At what time?

Mr. MAGEE. Oh, at this time.

Mr. DISQUE. They had not taken it over when I first asked them to consider an extension of their line.

Mr. MAGEE. Is it now under Governmental control?

Mr. DISQUE. I think so.

Mr. MAGEE. And it could have been placed under Governmental control by the mere scratch of a pen by the director of railways from the time the Government took control of them, couldn't it?

Mr. DISQUE. I guess it was.

Mr. MAGEE. Well, that was before this time, wasn't it?

Mr. DISQUE. That was before what time?

Mr. MAGEE. The spring of 1918.

Mr. DISQUE. Oh yes, they took them over, I think, in January.

Mr. MAGEE. Yes, long before that. So the Milwaukee was under the control of the Government, and so the Milwaukee could not dictate to the Government what it would do.

Mr. DISQUE. No, and the War Department could not dictate to the Railroad Administration what it would do. If they could, we would have had them extend that line.

Mr. MAGEE. I am assuming that the Railroad Administration is the Government?

Mr. DISQUE. Well, of course, that is an entirely separate department from the War Department.

Mr. MAGEE. If you had recommended the extension of the Milwaukee it would have been extended, wouldn't it?

Mr. DISQUE. No sir. I did recommend it and urged it for several months, and the final result was a refusal on the part of the Railway Administration to make the extension.

Mr. MAGEE. Haven't you testified here that you changed your mind, and by a change of your mind determined on the Lake Crescent-Lake Pleasant route, and that you took full responsibility for it?

Mr. DISQUE. Exactly.

Mr. MAGEE. Now, if you had not changed your mind, some other road would have been built?

Mr. DISQUE. Well, I do not know about that.

Mr. MAGEE. Well, you had to have a railroad to get into the tract?

Mr. DISQUE. There was a lapse of several months, and a radical change of conditions in everything surrounding that.

Mr. MAGEE. I understand, we have gone over that. What I mean to say is this, General, that the Government could have built a line of railroad from Deep Creek into this tract.

Mr. DISQUE. They could not have possibly done it after the Railway Administration refused to extend the line and get it there in time to accomplish our purpose, according to every report I received.

Mr. MAGEE. I am talking about the War Department. The War Department could build this railroad anywhere it chose, provided it had the money to pay for it.

Mr. DISQUE. I guess that is perfectly right.

Mr. MAGEE. It could have built the road from Deep Creek into this timber tract just as well as it could have built the road from Joyce Junction to Lake Pleasant.

Mr. DISQUE. Not to serve the purpose we wanted the road for.

Mr. MAGEE. I am talking about the power of the department.

Mr. DISQUE. As an abstract proposition, they could build the road anywhere that there is sufficient soil and——

Mr. MAGEE. As a practical, concrete proposition.

Mr. DISQUE. It was not practical in this case.

Mr. MAGEE. You thought it was at one time.

Mr. DISQUE. Never thought so at the time when the decision had to be made.

Mr. MAGEE. You changed your mind overnight, I believe you testified.

Mr. DISQUE. No; I never testified to that.

Mr. MAGEE. You had this meeting over here somewhere with the Milwaukee officials.

Mr. DISQUE. I changed my mind over a period of two weeks, after the most careful——

Mr. MAGEE. Well, you changed your mind.

Mr. DISQUE. Yes.

Mr. MAGEE. If you hadn't changed your mind, the road would have been built the other way?

Mr. DISQUE. Yes.

Mr. MAGEE. There is no question about that.

Mr. DISQUE. That is right.

Mr. MAGEE. That is all the facts I want, because members of the House are likely to quiz us. I am asking for information.

Mr. DISQUE. If I hadn't changed my mind, we would have built the road, or tried to have built it, from Deep Creek on.

Mr. MAGEE. And Mr. Roberts, the engineer of the Union Pacific, gave you figures as to probable cost of construction over that line. I think he placed it something like a million six hundred thousand dollars.

Mr. DISQUE. He stated definitely that those figures were not at all reliable.

Mr. MAGEE. Well, he gave an estimate.

Mr. DISQUE. Only for the purpose of comparing the two lines.

Mr. MAGEE. Well, I say he gave an estimate, didn't he?

Mr. DISQUE. As I stated, he gave the estimate for the purpose of comparison only.

Mr. MAGEE. Well, I will ask you whether or not he gave an estimate of probable cost of construction of this road from Deep Creek into the tract?

Mr. DISQUE. That can't be answered except by saying that his estimate was the most crude sort and merely for purposes of comparison.

Mr. MAGEE. He hadn't been down there much, had he?

Mr. DISQUE. He states that he spent three days there over the two roads, and I have been down and back over them in one day, so that he had a little time on the job.

Mr. MAGEE. That is, from Joyce Junction to Lake Pleasant is how many miles?

Mr. DISQUE. Thirty-six, I believe.

Mr. MAGEE. And to go over this line of road it would be necessary to go on foot before the road was built?

Mr. DISQUE. No; not in making a preliminary investigation. You would go by road and have your maps; you would take a ferry for 12 miles, looking at the character of the ground on the sides of the lake, and follow in an auto along the other roads, and, with a map, know just about what you were doing. An experienced engineer would be able to do that.

Mr. MAGEE. Now, this line of road from Lake Crescent to Lake Pleasant didn't follow the crest of the mountain?

Mr. DISQUE. There is not any mountain along that, except off to the flanks of it.

Mr. MAGEE. You have a rise of 1,100 feet, as I understand?

Mr. DISQUE. No; I don't believe that is right.

Mr. MAGEE. Well, whatever it is, it is in the evidence; a 3 per cent grade.

Mr. DISQUE. No; there is no 3 per cent grade on that road.

Mr. MAGEE. Well, whatever the grade is, it is in evidence, and the rise is there.

Mr. DISQUE. There is a summit on that line; it was not any 1,100 feet; nowhere near it.

Mr. MAGEE. Whatever the summit is, they went over it with the grade.

Mr. DISQUE. That summit was 1,100 feet above sea level, but nothing like 1,100 feet from where that road started to rise.

Mr. MAGEE. Whatever the summit is, it went over?

Mr. DISQUE. Yes.

Mr. MAGEE. And they didn't go along the base of the mountain; that is, along the shore of the lake?

Mr. DISQUE. Well, they went along the shore of the lake as close as good engineering would indicate that they should go.

Mr. MAGEE. It is some hundred feet, isn't it, from the shore of the lake up the side of the mountain?

Mr. DISQUE. Well, that is, of course, the natural grade adopted to reached the summit west of Lake Crescent.

Mr. MAGEE. What I meant is this: That they didn't go over the crest of the mountain—they didn't go along the shore, down around by the shore of the lake, at the base of the mountain, but they blazed a trail right across the side of the mountain, cut the timber down, excavated it, built a table-land, and built the road right across the side of the mountain, didn't they?

Mr. DISQUE. I don't know just what you mean. They certainly began to rise at the east end of Lake Crescent and gradually went higher toward the west side.

Mr. MAGEE. Along the side of the mountain?

Mr. DISQUE. Well, they followed the route that an engineer would take to put a road along there.

Mr. MAGEE. I am not talking about what he would take; I am talking about what they did do. They went along the side of the mountain. First they took down——

Mr. DISQUE. They were pretty close to the base of it.

Mr. MAGEE. How far from the lake shore?

Mr. DISQUE. I don't know.

Mr. MAGEE. You have been over the road?

Mr. DISQUE. Yes.

Mr. MAGEE. Isn't it several hundred feet from the water in the lake?

Mr. DISQUE. Up to the railroad?

Mr. MAGEE. Yes.

Mr. DISQUE. I think it is, in the west end of it. On the east end, I don't think it is even 25 feet.

Mr. MAGEE. This runs along the north side of the lake, doesn't it?

Mr. DISQUE. Yes, but runs from east to west and——

Mr. MAGEE. In the north side of the lake?

Mr. DISQUE. The first few miles of the lake, the railroad is right there as close down to the water as you can get it, and it gradually rises, as it had to do, to get over the summit west of the lake.

Mr. MAGEE. It could not rise until it reached the mountain, could it?

Mr. DISQUE. It would not have to unless there was a mountain there.

Mr. MAGEE. So that it would not rise until it reached that?

Mr. DISQUE. It didn't go over the mountain.

Mr. MAGEE. It didn't go over the crest, nor it didn't go along the base of it, but they blazed a pathway right along the side of the mountain, cut down the forest, then excavated, built a tableland, and then built the road on that.

Mr. DISQUE. Let me say that the cutting down of the forest was in compliance with regulations of the Forestry Department, which required us to clear a right-of-way 200 feet wide.

Mr. MAGEE. I am not complaining of that. You could not build the railroad until you got the way cleared, could you?

Mr. DISQUE. That is right.

Mr. MAGEE. So am just talking about the fact, what they did. They cut down the timbers there, 200 feet wide, along the side of this mountain. Of course, that necessitated excavations, throwing over the dirt, building up a tableland, and then they built the road; that is right, isn't it?

Mr. DISQUE. They did all the things that they had to do to put that road there.

Mr. MAGEE. Take in Lyre Canyon there, they cut through considerable rock there, didn't they?

Mr. DISQUE. I don't know. I didn't think so with the two trips I made over the road, I didn't think there was a great deal of cutting in that canyon.

Mr. MAGEE. It appeared to me when I went over the road there; we were estimating, giving different estimates. Some estimated 200 feet and some 250.

Mr. DISQUE. Are you an engineer, Mr. Magee?

Mr. MAGEE. No, I am not an engineer. It is only an estimate. I was wondering if you had anybody who could give us the depth of the rock there that they cut through in Lyre Canyon.

Mr. DISQUE. I think that can be furnished.

Mr. MAGEE. All right; I wish you would. Do you know how Brother Roberts went on this three-day tour in looking over the ground there for this 36-mile road?

Mr. DISQUE. No; but he is in the city. He can come in and tell you about that.

Mr. MAGEE. You don't know how he went?

Mr. DISQUE. No.

Mr. MAGEE. You don't know whether he tried it afoot, or whether he went by automobile, or otherwise?

Mr. DISQUE. No, I don't.

Mr. MAGEE. Now, what distance would he have to travel if he went over the other route there, from Deep Creek up into this timber?

Mr. DISQUE. How did he do it?

Mr. MAGEE. I said, what route would he have to travel, or what distance?

Mr. DISQUE. Well, I would say that about all he would have to do there would be to go into the difficult part of it, which is up the Pysht River canyon.

Mr. MAGEE. Well, how many miles?

Mr. DISQUE. That is probably 10 or 11 miles.

Mr. MAGEE. He would have 36 miles from Lake Crescent to Lake Pleasant, and you have 12 or 14 miles on the other route?

Mr. DISQUE. I don't believe he would necessarily go back over that part of the Milwaukee's proposed extension that was west of Deep Creek to the Pysht, because that, in there, was a known problem to everybody. The unknown part of it was up the canyon of the Pysht River, just like the unknown part of this other problem was probably four or five miles, and I doubt if he spent any time on the flat open areas that were simple problems to everybody.

Mr. MAGEE. How far would it have been necessary to have extended the road from Deep Creek up to the edge of this tract?

Mr. DISQUE. A total of 25 miles, I think.

Mr. MAGEE. That would be 11 miles less than the other route?

Mr. DISQUE. Yes.

Mr. MAGEE. Well, to make a survey to be worth anything, he would need to go over that 25 miles, wouldn't he?

Mr. DISQUE. To make a survey that would be worth anything, from the standpoint of estimates of cost, it would take a long time.

Mr. MAGEE. Yes.

Mr. DISQUE. But, for a locating engineer of experience and ability, with maps and information, it would not take any great time, in my opinion, to get information sufficient to make a broad recommendation as to choice of roads.

Mr. MAGEE. I think I absolutely agree with you. In other words, it seems to me that Mr. Roberts, sitting in his office, wherever he is,

could just as well have written that report as to have written the report after he was down there for two or three days.

Mr. DISQUE. Well, I don't think he felt that way.

Mr. MAGEE. Now, was Mr. Ryan out here at any time in the summer of 1918?

Mr. DISQUE. He came out here in the latter part of July, 1918.

Mr. MAGEE. After these operations were under way?

Mr. DISQUE. Yes.

Mr. MAGEE. And did he go over the ground?

Mr. DISQUE. He went over several of our operations, including the one in Clallam County.

Mr. MAGEE. Railroad operations?

Mr. DISQUE. Yes, sir.

Mr. MAGEE. And did he go over the spruce contract operations?

Mr. DISQUE. Yes.

Mr. MAGEE. Did you go with him?

Mr. DISQUE. Yes.

Mr. MAGEE. And how long was he here?

Mr. DISQUE. About a week. He also went over the Merrill & Ring operations out there; and there was no railroad in existence when he came; of course, we went over the routes in automobiles and went down into Grays Harbor and did the same thing, passed through our operations at different places.

Mr. MAGEE. These operations were carried on, under his directions, until the armistice was signed?

Mr. DISQUE. Yes.

Mr. MAGEE. When you decided to extend the railroad from Deep Creek up into this tract, if you had stuck by your decision, got busy and went right to work, how long would it have taken you to have extended that road up to the tract?

Mr. DISQUE. Well, the Milwaukee officers told us that if we could get—

Mr. MAGEE. I don't care anything about what they told you.

Mr. DISQUE. I don't know. I am frank to say that that is something I only act on on the recommendation of engineers.

Mr. MAGEE. What I want to know is how long it would have taken.

Mr. DISQUE. I know how long they told me it would take.

Mr. MAGEE. Well, you had 11 miles of railroad less to build.

Mr. DISQUE. Yes.

Mr. MAGEE. And when did you begin to build the Lake Crescent-Lake Pleasant route?

Mr. DISQUE. Pretty well onto the first of July when we started. I will tell you about that—

Mr. MAGEE. How much earlier could you have begun operations on the Deep Creek route, if you hadn't begun to wobble about your judgment on the matter, or decision on the matter?

Mr. DISQUE. I never wobbled on the decision.

Mr. MAGEE. Well, before you changed your decision.

Mr. DISQUE. Now, I will tell you—let me get you clear on this—

Mr. MAGEE. No; I want to get you clear.

Mr. DISQUE. No, sir. Well, I am perfectly clear; there is no doubt in my mind at all.

Mr. MAGEE. I have just asked a plain question—as to how long it would have taken you to have done it if you had stood on your first decision and gone to work?

Mr. DISQUE. Well, if we had stood on our first decision a road would never have been completed, in my judgment.

Mr. MAGEE. That answers it. I think that is all.

Mr. DISQUE. If you are really interested, I will tell you that the engineers of the Milwaukee said that they could not complete it unless we started in April.

Mr. MAGEE. Yes; I understand about the engineers of the Milwaukee; they are a lot of good fellows, and all that sort of thing, but they can't dupe everybody, you know.

Mr. FREAR. Did you tell them you were going to put 4,000 soldiers in the Siems-Carey-Kerbaugh road, and would do the same on their road if they wanted to start it?

Mr. DISQUE. I told them we would give them every help in the world that they wanted.

Mr. FREAR. Did you tell them you would give them 4,000 soldiers?

Mr. DISQUE. We never told any party how many we would give.

Mr. FREAR. So they had no way of estimating what unusual help they could secure; is that right?

Mr. DISQUE. Oh, I think they did. I think they knew that they could have everything that was useful.

Mr. FREAR. You mean to say that with 4,000 soldiers, in addition to what other help the Milwaukee could get, they assured you that they could not build the 25 miles, which you say is the line, in less than six months?

Mr. DISQUE. No. They told me it could not be finished before the winter rains of 1918-19 unless we got started immediately; that the dry weather came on in the spring.

Mr. FREAR. That would be about nine months, wouldn't it; or about six months?

Mr. DISQUE. About seven months.

Mr. FREAR. That they could not build it in seven months, then?

Mr. DISQUE. The point was, Mr. Chairman, they could not get gangs spotted along that route like you could on the other route; you could not start simultaneously operations in several places.

Mr. FREAR. But they could have gotten into Pysht Creek, and that would have been a place for general unloading, wouldn't it, in addition to Deep Creek and whatever places they chose, until they went up the hill?

Mr. DISQUE. They could not have moved supplies in to the road until you had moved it forward to certain points.

Mr. FREAR. As I understand you—and let me say this: As I understand, some comment occurred because I could not be here yesterday. I regret it very much, because I was interviewing a great many witnesses yesterday, and it is an absolute necessity for members to do that. We have been engaged Sundays and every other day, up to yesterday, and had no opportunity, excepting evenings, and we have as far as possible tried to eliminate many witnesses that it would seem to be useless to call. We have to interview many of those, and that was one of the reasons for my absence yesterday, and I trust that that is a fair explanation to those who are interested.

The Canadian production was twenty-six million and odd thousand feet according to your statement here from Menoher. That was from some time in the spring, I believe Mr. Pendleton testified that they started operations. The American production at your plant was something like 73,000,000; that is right?

Mr. DISQUE. At the cut-up plant.

Mr. FREAR. Was there other production?

Mr. DISQUE. We shipped 143,000,000 feet.

Mr. FREAR. There is no statement as to that, or no estimate as to that by Menoher.

Mr. DISQUE. Well, he is only referring to the cut-up plant, in the telegram.

Mr. FREAR. How did he know more about what was done by this cut-up plant than you people here in Portland knew?

Mr. DISQUE. Our orders passed through this office in Washington and them made the distribution to the Allies.

Mr. FREAR. So that they had better information there. Now, the English allotment was 12,000,000 feet of spruce, in round numbers, and 11,797,000 feet of fir, according to Menoher's statement. That would be approximately half and half of spruce and fir?

Mr. DISQUE. From the cut-up plant.

Mr. FREAR. From the cut-up plant. Italy, the spruce was 2,320,000, of fir 4,510,000, almost twice as much fir that went to Italy, according to Menoher's telegram.

Mr. DISQUE. The Italians favored that for the Caproni machine.

Mr. FREAR. Yes. The French had 9,722,000 feet of spruce and 9,787,000 feet of fir, which is practically half and half. That is the statement according to Menoher's telegram.

Mr. DISQUE. Yes.

Mr. FREAR. In other words, there was more fir shipped from your cut-up plant, during this period, than of spruce, counting the 73,000,000 feet. I am just quoting from Menoher's figures that you gave me.

Mr. DISQUE. He has not given you the figures to the American factories.

Mr. FREAR. No, no. Well, let's settle this, and then I will take the American factories afterwards. I am asking whether it is true, from the telegram you have in your office. Let's decide one thing at a time, and then we can take up American factories.

Mr. WALKER. We can check them right here.

Mr. FREAR. The spruce that went from Canada——

Mr. DISQUE. Do you want to——

Mr. FREAR. We will follow this back; you need not fear. I am going to go back. The spruce that went from Canada was 18,175,000, according to Menoher's telegram.

Mr. DISQUE. Yes, sir.

Mr. FREAR. And the fir was 8,182,000, making a total of twenty-six million and some odd thousand; that is true, is it?

Mr. DISQUE. That is correct.

Mr. FREAR. In other words, over two-thirds of the shipment of Canadian airplane finished product was spruce, whereas, with your shipments abroad, over one-half, or just slightly over one-half, was fir?

Mr. DISQUE. From the cut-up plant.

Mr. FREAR. From the cut-up plant. Now, as to the American shipments, have you anything there?

Mr. DISQUE. I have that.

Mr. FREAR. Now, let us know that, so as to complete the statement.

Mr. DISQUE. The American shipments from the cut-up plant to American factories, 11,129,534 feet of spruce, 11,480,479 feet of fir, 1,227,773 feet of Port Orford cedar.

Mr. FREAR. Well, according to that, more fir was shipped from your cut-up plant to American factories than of spruce; is that right?

Mr. DISQUE. That is correct.

Mr. FREAR. So that, counting all the fir and the spruce shipped to both the foreign governments and the American factories, there was more fir than spruce went out from the cut-up plant?

Mr. DISQUE. That is correct.

Mr. FREAR. And in the case of Canada, they shipped more than two-thirds, or 18,000,000 feet, of spruce compared with eight million and some odd thousand feet of fir; in other words, they were devoting their attention more particularly to spruce. That is true?

Mr. DISQUE. Of course, you are speaking of one part of our operations and all of theirs.

Mr. FREAR. Yes.

Mr. DISQUE. Now, if you take all of our operations, it will be a different picture.

Mr. FREAR. Let us get this settled first.

Mr. DISQUE. I would like to say, Mr. Frear, that the Port Orford cedar was considered by us and by the airplane factories as the equal of spruce and just as desirable.

Mr. FREAR. That was only 2 to 3 per cent, wasn't it?

Mr. DISQUE. There was a very small per cent of it.

Mr. FREAR. That is conceded, of course. The time of operation was no longer in Canada, at least, possibly shorter than it was here; is that true?

Mr. DISQUE. Well, I don't know when they started.

Mr. FREAR. Mr. Pendleton stated, I think, that they began about March, wasn't it, that is, to really begin producing. That is my recollection of his testimony.

Mr. DISQUE. I don't recall. They were under way, as I understood, for several months before that, and got into production about March, and of course we never did get into production as we had prepared for under our operations. They had about four years start on us.

Mr. FREAR. Well, they didn't have any four years start, because he said in the last month of operations, November or October, they produced, as I recollect the testimony, over 8,000,000 feet out of the 26,000,000 feet of finished product, so that shows nearly one-third was produced in that last month by them; that is his testimony.

Mr. DISQUE. I think you will find that his production included November, and ours does not. We didn't take figures for the month of November, and they continued right on through the month and included figures of shipments during that month.

Mr. FREAR. That may possibly be so. I don't remember.

Mr. DISQUE. And we stopped our operations, and bur reports include up to October 31.

Mr. FREAR. And then it shows this, that in the last month of their operations, if they produced over 8,000,000 feet of finished airplane stock, they produced nearly one-third of all the airplane—finished airplane stock that is mentioned in this 26,000,000; that is true, of course?

Mr. DISQUE. If they did that, that would be all right.

Mr. FREAR. That is the statement and that is the figures here. That showed the rapid increase that they were performing. The testimony of Mr. Pendleton is that they went 500 miles from Vancouver, off to Queen Charlotte Islands, to get this timber, and that the shipments by water, by rafting, were in the neighborhood of 175 miles, and that they had no Government cut-up plant, that it was performed by private operators, and, according to his statement, that they had not more than, as I recollect, over 10 per cent of the facilities that were had in this part of our country—Oregon and Washington. Is that right, as you understand it?

Mr. DISQUE. Well, I don't know a thing about that country up there, Mr. Chairman. I think it would be necessary, though, to a fair understanding of that, to have some American lumbermen who do know that country comment on it. I don't know it.

Mr. FREAR. But Mr. Pendleton gives you a full account, and you, in order to check him up, sent a telegram, and they replied in the exact statement that he furnished you, and presumably he is an American lumberman, well recognized in this part of the country, and I am just asking if those are the facts, if it was not doing pretty good work by the Canadian Government, with the ordinary facilities that were had? You can answer that, can't you?

Mr. DISQUE. Why, I am perfectly willing to concede that that was pretty good, but I think that it would not have been a spot on the map compared to what we would have been doing when we got under way, with the same time that they had had to prepare.

Mr. FREAR. Yes.

Mr. DISQUE. Another thing that should appear, Mr. Chairman, is that they were logging where all you had to do was cut a tree and snake it into the water with a donkey engine, around the edges of this island; and, according to reports I have, their spruce, I think, is a very high quality, and if you don't have to build railroads into isolated stands and merely fall them into the water and raft them, it is a comparatively small operation, and they were fortunate in having that.

Mr. FREAR. But they had to ship by water 175 miles, according to his statement, and he did build some railways in there, only a limited number, or limited mileage.

Mr. DISQUE. We had about 5 or 6 miles of a little logging road. We have instances where spruce logs were pulled 5 miles by donkey engines, in our own operations; we have instances, by the dozen, where spruce rafts were hauled 100 miles and more, and they can do it where the water will permit it.

Mr. FREAR. I was going to bring my next question almost to what you have anticipated, that with the amount, or even more railroad, a short road down to Clallam Bay, as you have suggested, you could have had rafting operations very speedily, or with a 6 to 10 mile

railroad up to the Toledo railroad you could have gotten right into active spruce operations there?

Mr. DISQUE. No; I don't agree with either one of those propositions.

Mr. FREAR. I know, but we are going to try to throw more light upon that before we get through. Now, it is true, isn't it, that Pendleton, according to his testimony, didn't have 30,000 soldiers to help him, or even 500, according to his statement?

Mr. DISQUE. I don't know what he had.

Mr. FREAR. Well, he stated that he didn't have any soldiers.

Mr. DISQUE. But he had a law up there which was so much more severe on the timber owners than what we asked our Congress to give us and which they refused to give us, that it was a great big help to him.

Mr. FREAR. What was that?

Mr. DISQUE. His law.

Mr. FREAR. And that we refused to give you?

Mr. DISQUE. We asked Congress and the Senate passed the bill; the House turned it down.

Mr. FREAR. What was that?

Mr. DISQUE. To give us permission to commandeer stands of timber, logging railway equipment, mills, and other things necessary to produce spruce. The Senate passed that bill and it went to the House and died. I was in to see Chairman Dent with Congressman Fordney one day several months after the Senate had passed the bill. Chairman Dent of the Military Committee told me that they could not get such a bill through the House.

Mr. FREAR. What power of commandeering did you have?

Mr. DISQUE. I didn't have any.

Mr. FREAR. Well, didn't the War Department commandeer?

Mr. DISQUE. Some things that were authorized in a bill in connection with the Ordnance Department.

Mr. FREAR. Then what was the meaning of the threats that you were sending to Blodgett, if this is the case, that you were going to commandeer his timber?

Mr. DISQUE. Later on Congress passed a bill which authorized us to condemn. That was the thing that we told Mr. Blodgett would be done.

Mr. FREAR. The term "commandeer" was used in the correspondence, though.

Mr. DISQUE. That didn't happen, though, until along in July.

Mr. FREAR. Until July?

Mr. DISQUE. I think that was about when the bill was passed. But in Canada, to show you the difference, the bill passed up there fixed the price of the stumpage and said that this price shall include everything—damage to timber, injuries to individuals working on the job; in fact, the only thing that the logger had to pay was a low price of stumpage. He only paid for the logs that he took out. He could knock down all the trees he wanted to and never pay a nickel on them unless he hauled the logs out. If we had asked for such a bill down here, why they would have laughed at us.

Mr. FREAR. You didn't need such a bill, did you, when, as you stated here on the first day of your examination, all the lumbermen and others agreed to the scale of prices that should be paid?

Mr. DISQUE. We had very little difficulty on that point.

Mr. FREAR. That is what I understand. So that that wasn't really a very great cause of difference between the conditions which confronted them in Canada and those that you had here?

Mr. DISQUE. Well, it would have helped us a great deal. I can tell you that we would have been under way a good deal sooner if we had had such a bill.

Mr. FREAR. I was just trying to make some comparison of the conditions. Now, the other lumber that was cut outside of your cut-up plant in this country, do you know what the division of that was between spruce and fir? And I speak of this because I don't think any member of the committee has had any information on this subject before; at least, it is all new to me.

Mr. DISQUE. The percentage of spruce and fir from outside operations?

Mr. FREAR. Yes; this about 143,000,000 feet.

Mr. DISQUE. Yes.

Mr. LEA. That is in the record already.

Mr. FREAR. What it has gone, and the amount of production?

Mr. STEARNS. That is all in the record.

Mr. LEA. You mean the distribution?

Mr. FREAR. No; I don't care about the distribution. I just want to know the amount and character of production.

Mr. DISQUE. I might as well state again, for I have it here.

Mr. LEA. It is in the record.

Mr. FREAR. I don't know. I never heard of it. When was it put in?

Mr. DISQUE. Well, I can give it to you right here.

Mr. FREAR. Yes; that is better.

Mr. DISQUE. And it is only fair to say that this includes shipments for several months prior to the time the cut-up plant was built.

Mr. FREAR. Oh, yes; unquestionably.

Mr. DISQUE. And they continued throughout the time of the cut-up plant's operation. Spruce, 43,481,976 feet; fir, 22,501,271 feet; Port Orford cedar. 372,285 feet.

Mr. FREAR. In other words, they were maintaining about the same average spruce production outside of your cut-up plant that was being maintained in Canada? That is, about two to one?

Mr. DISQUE. Pretty much the same.

Mr. FREAR. Yes.

Mr. DISQUE. You understand, Mr. Chairman, how the cut-up plant received its raw material?

Mr. FREAR. I was going to ask that as the next question. Whereabouts did all this product come from that went through the cut-up plant?

Mr. DISQUE. Originally it was intended that only spruce should go in there. We thought we would get enough cants from the different spruce sawmills to keep that plant busy. We found that the supply of logs did not provide enough, and the capacity of the cut-up plant was able to take on more work, and we then started a campaign through the fir mills through the Fir Board here, and added to our spruce receipts enough to keep the plant going to full capacity with fir cants. So that it was a fluctuating thing. Whenever we

would get the spruce, we would slow down on the amount of fir. They came from all the mills that handled the quality of logs that seemed to produce aircraft lumber.

Mr. FREAR. Well, this cup-up plant was cutting cants that came from all of the mills in this section?

Mr. DISQUE. Most all.

Mr. FREAR. Yes; so they were all shipping in there?

Mr. DISQUE. Yes.

Mr. FREAR. And the cut-up plant was simply doing what would have ordinarily been done by the various mills if it had not been shipped in here for the purpose, and, as you believe, with better results?

Mr. DISQUE. Well, the ordinary mill could never have done what the cut-up plant was doing, because they didn't have the equipment.

Mr. FREAR. Well, not many single mills; but do you mean to say it would have been very difficult or expensive to have improved the mills generally—the large mills?

Mr. DISQUE. It would have been quite a job. We asked one mill to do it, and the cost that they went to was out of all proportion to our cost of the cut-up plant.

Mr. FREAR. Then, why did Pendleton—why was he able, with just the ordinary lumbering conditions there, to provide practically over a third of what you were doing here—finished airplane product.

Mr. DISQUE. Well, to consider that properly, you would have to know what kind of material they were producing, and there is no limit to the variety, no limit to the kind of inspection. I don't know what kind they were shipping. I can't believe that an ordinary mill was shipping the quality that we were. I don't believe an ordinary lumberman who had seen our operations would believe that possible.

Mr. FREAR. That is, you people, who were not familiar with the lumber business, and Pendleton had been all of his life, or many years—you don't think it was possible to do it?

Mr. DISQUE. Well, I would be glad to read you forty or fifty letters of lumber manufacturers on the subject of our cut-up plant product.

Mr. FREAR. I am not questioning what your cut-up plant was doing.

Mr. DISQUE. I am only basing my opinion—

Mr. FREAR (interrupting). But the question is as to Pendleton.

Mr. DISQUE. I am only basing my opinion on what experienced lumbermen have told me.

Mr. FREAR. Well, that is his statement in the record, and of course we will have to let it stand as that, unless there is something further. Did you have anything that you wanted to offer? I didn't know but that something was handed to you that you wanted to offer.

Mr. DISQUE. Well, I would like to offer a couple of telegrams that I have asked for.

Mr. FREAR. Having a bearing on this question?

Mr. DISQUE. Not on this particular question.

Mr. FREAR. Well, on what question?

Mr. DISQUE. On the question of the Siems-Carey Co.'s connections in New York.

Mr. FREAR. Well, I don't know whether—signed by whom?

Mr. DISQUE. One of them is signed by Mr. Ryan, and the other one is signed by Charles A. Stone, president of the American International Corporation.

Mr. FREAR. Shall we let this go in?

Mr. MAGEE. Yes, anything he has.

Mr. FREAR. All right; put it in.

Mr. DISQUE. I want to get it clearly into the record just the relationship that existed. I wired Mr. Ryan September 4:

Important you wire me at once if you ever had any interest, personally or as director of American International Corporation, in any firms of Siems-Carey Co. or Siems-Carey-H. S. Kerbaugh Corporation.

Mr. FREAR. Did you mention Siems-Carey Canal Co.?

Mr. DISQUE. No, sir. That will be mentioned later here.

Mr. FREAR. All right.

Mr. DISQUE. I received a reply back, addressed to me at Portland: "I have not and never have had, directly or indirectly, any interest in any of the firms mentioned," and signed John D. Ryan.

This other will come up in just a minute.

Another telegram to Mr. Charles A. Stone, president American International Corporation, 150 Broadway:

Important you wire me at once has your corporation or did it ever have any interest in contracting firms of Siems-Carey Co., or Siems-Carey-H. S. Kerbaugh Corporation?

His reply, dated September 6, addressed to me at Portland, is complete:

American International Corporation is not nor has it ever had any interest of any description whatever in Siems-Carey Co. or Siems-Carey-H. S. Kerbaugh Corporation. In 1916 American International Corporation purchased stock in two American corporations doing business in China, namely, Siems-Carey Railway & Canal Co., and China Corporation, in which Siems and Carey were likewise stockholders.

Signed, Charles A. Stone.

Mr. FREAR. Yes.

Mr. DISQUE. The point that I thought ought to be cleared was that the connection of the American International with Siems and Carey was not in their regular permanent concern, but it was in a separate enterprise that they had joined together for just that one purpose in China.

Mr. FREAR. I believe that was the testimony, wasn't it, of—

Mr. DISQUE (interrupting). I don't think so, Mr. Chairman.

Mr. MAGEE. I think that is the same, or substantially so.

Mr. FREAR. Well, it is all right to clear it up, but, as I understand it, the American International Corporation to-day holds 50 per cent of the stock of the Siems-Carey Canal Co.; is that right?

Mr. DISQUE. That is as he says.

Mr. FREAR. Yes.

Mr. DISQUE. Siems-Carey Railway & Canal Corporation.

Mr. FREAR. Yes; the Siems-Carey Railway & Canal Co.; and there is no question, is there, but what they hold 100 per cent of all the stock of the Amsinck Co., of which you are president?

Mr. DISQUE. They do now, but when I joined the Amsinck Corporation the American International did not own 100 per cent; they owned two-thirds of it.

Mr. FREAR. When did you join? When did you get your appointment?

Mr. DISQUE. In April; and it was in July that they took over the other.

Mr. FREAR. When did you resign here?

Mr. DISQUE. March 10.

Mr. FREAR. Just prior. Some matters have been brought up about the Blodgett tract, and a letter has just been placed before me, or has just arrived, that has a reference to it, and I want to ask, so that as we may call other witnesses we may get the full information in regard to it.

Mr. DISQUE. Yes.

Mr. FREAR. It says that—

After the signing of the armistice Mr. Blodgett wrote either Gen. Disque or the Spruce Corporation that he would release them from the obligation and consummation of the purchase of his tract of timber and the payment of \$635,000 therefor, but they did not choose to avail themselves of this opportunity offered by Mr. Blodgett, and insisted upon the consummation of the purchase.

I guess there is no question about that.

Mr. DISQUE. I think that is perfectly right.

Mr. FREAR. That is substantially correct.

Mr. DISQUE. Would you like to introduce now these profiles showing the detail of the railways that you talked about?

Mr. FREAR. Well, mark them as exhibits; yes.

Mr. DISQUE. This exhibit shows the railroad No. 1 in Clallam County.

(The blue print referred to and so offered was thereupon marked "Exhibit 19, Witness Disque, September 6, 1919.")

Mr. DISQUE. This is railroad No. 11, the north line out of Yaquina.

Mr. MAGEE. Does that show the details?

Mr. DISQUE. And this is the south line out of Yaquina, railroad No. 12. It shows all the details, Mr. Magee.

(Thereupon the blue print so offered, showing details of railroad No. 11, was marked "Exhibit 20, Witness Disque, September 6, 1919.")

(The blue print so offered, showing detail of railroad No. 12, was thereupon marked "Exhibit 21, Witness Disque, September 6, 1919.")

Mr. MAGEE. When was it apparent to you, General, that Germany would be whipped?

Mr. DISQUE. What is that, sir?

Mr. MAGEE. When was it apparent to you that Germany was beaten?

Mr. DISQUE. I think I can answer that very definitely. I was en route to Washington when the armistice, or a few days before, the armistice was signed. I think it was on November 7 that I felt that she was whipped, and I wired to Col. Stearns to suspend certain operations.

Mr. MAGEE. After the Argonne?

Mr. DISQUE. How?

Mr. MAGEE. After the Argonne? You mean after the Argonne?

Mr. DISQUE. I was in doubt all along before that. There had been a lot of correspondence carried on during this war that was for one purpose and another, and you can never tell.

Mr. MAGEE. Well, I simply asked it, because I heard so much talk that the crisis would come in the spring of 1918, and if Germany did not succeed in that drive, why her force would be broken——

Mr. DISQUE (interrupting). I think the General Staff expected——

Mr. MAGEE (continuing). And that the Allies would probably win.

Mr. DISQUE. Well, everybody I talked to in our own General Staff—and I am well acquainted there, and I am a graduate of the Staff College—and it was the general opinion among those who should have known that that crisis would come in the spring of 1919, and we felt that June, 1919, would about be the peak, and from that time on we would have it our own way.

Mr. MAGEE. Well, there appeared to be a different atmosphere in Washington. That is the reason I asked you. In other words, that it was the opinion of a great many who appeared to be competent that after Chateau Thierry and Belleau Woods that——

Mr. DISQUE (interrupting). Well, I will tell you why we didn't think that. I don't believe any military man had any such idea.

Mr. MAGEE. Well, I just asked you to see.

Mr. DISQUE. I will tell you why. We all felt and we understood that Germany's line on her own boundary was practically impregnable. We never thought for a minute that she would lay down and quit on enemy soil. We thought she would back up against that line and stand there until there wasn't anything left.

Mr. MAGEE. You didn't reach your conclusion until after the Argonne?

Mr. DISQUE. No; I didn't.

Mr. FREAR. Well, I have talked with various soldiers, individuals who were in the Battle of Chateau Thierry and the first battles on the Marne, when they were driven back and when they broke through, and they said that from that time on there was very little doubt in their minds when Germany was on the move but what they were going right through; and it was only a matter of a short time, as it resulted, and their reason given for that was that once moving, they were continually being driven back, and the American troops were coming in so rapidly—we had about 2,000,000 troops over in France at that time and the others were coming.

Mr. DISQUE. Yes.

Mr. FREAR. That there wasn't any possibility for her to meet our advance. Now, speaking about any soldiers, I am speaking about that as those who were engaged.

Mr. DISQUE. Yes.

Mr. FREAR. And whom I saw afterwards, who said that was the impression very largely there. In the paper this morning I saw something regarding some statement that was made by the witness in regard to Mr. Sligh, and I don't care, and the committee is not interested in any difference between the witness and Mr. Sligh; but I believe, in fairness to him, there should be put into the record just a brief statement that he filed of a short interview with Mr. Coffin, who at that time was the head of the Aircraft Board, and I will just read it. It is brief.

Mr. LEA. Mr. Chairman, isn't that a waste of time, to be reading into the record again evidence that is already there?

Mr. FREAR. It would be.

Mr. LEA. When a large number of witnesses are to be called yet?

Mr. FREAR. It would be, I concede, but the time that the gentlemen of the committee and I will spend in arguing this will take as much time as it will to cause me to read this brief statement, which I have stated is brief, which is simply to meet the statement regarding Mr. Sligh. I don't care to enter into the differences between the two gentlemen; but a man who is one, as I understand, of the leading men of his city, a man who is a very high-class man in appearance, however much his differences and bitterness may be manifested toward the witness or the witness's bitterness manifested toward him, the committee has no interest in it whatsoever; but it is in the interest of stating what his position is, and I think we are entitled to know how he was regarded by Mr. Coffin and those with whom he was intimately associated. Now, this is a statement that was given in Chicago on August 13, I believe—long ago—buried up in the files, and it seems to me a short statement like this would be of value to have placed in the record here in justification of Mr. Sligh's position in Grand Rapids and in the Aircraft Co.

Mr. LEA. Well, of course, my point was that I can't appreciate the necessity or the orderly method of developing facts by rereading into the record evidence that is already there.

Mr. FREAR. I presume that is true, but I desire to offer it again. It is very brief.

Mr. LEA. Of course, if you think it is necessary, I don't object.

Mr. FREAR. I don't think it is necessary. I think it is fair to Mr. Sligh. It reads as follows:

• DECEMBER 10, 1917.

DISTRICT OF COLUMBIA, ss:

Edward L. Wallace, being duly sworn, on oath deposes and says:

That he is a citizen of the United States and a resident of the District of Columbia.

That on or about September 12, 1917, he was in the employ of one Rexford L. Holmes, a public stenographer of the city of Washington; that in the course of his duties he was directed by the said Rexford L. Holmes to visit the rooms of the Old Colony Club, Raleigh Hotel, for the purpose of reporting in stenographic notes a meeting of the board of directors of the Aircraft Manufacturers' Association; that in accordance with the said directions he reported at the said rooms of the Old Colony Club for the purpose aforesaid; that in the course of the said meeting one Howard E. Coffin made an address in which the following facts were in effect brought out:

Mr. Coffin at first made an address pertaining, among other things, to the general existing conditions of aircraft manufacture, during the course of which the matter of the production of spruce lumber for aircraft manufacture and the Government's commandeering of the same was brought up and Mr. Coffin voluntarily made these statements:

That the responsibility for the state and manner in which the production of spruce lumber for aircraft manufacture was being handled at that time was vested in one Charles R. Sligh, who, he stated, had accomplished wonderful achievements in the way of transforming the production of spruce lumber for aircraft purposes from a state of absolute chaos and uncertainty to an orderly condition, from which the very best results could be expected. The tenor of his remarks were to the effect that the said Charles R. Sligh was a very efficient man in his mind.

EDWARD L. WALLACE.

"Subscribed and sworn to before me this blank day of December, 1917, notary public." I don't believe that was ever read in the record. It was introduced with some other correspondence, as I recall.

Mr. DISQUE. Is that an affidavit, Mr. Chairman?

Mr. FREAR. What is that? ,

Mr. DISQUE. Is that an affidavit put into the record?

Mr. FREAR. I understand so.

Mr. DISQUE. Will the committee take such affidavits as I will present and enter them in the record?

Mr. FREAR. Well, I am not sure, because there might be a thousand affidavits, but here is an affidavit in regard to Mr. Coffin, who was the director, the man in charge of all aircraft proceedings, and this is a statement that he makes in public, and it is not a statement of an ordinary individual, and we are not entering into any differences between the witness on the stand and Mr. Sligh, but that was in the record and it seemed to me proper to read it.

Mr. DISQUE. May I ask, Mr. Chairman, when Maj. Sligh was testifying in what you must have considered a very derogatory manner toward me, did the committee seek to put anything into the record that would substantiate my decent character?

Mr. FREAR. Frankly, between ourselves, the committee was not interested in that particular part of any contention—

Mr. DISQUE (interrupting). I didn't think so.

Mr. FREAR (continuing). Between you and Mr. Sligh. Anything that you have, if there is any question that has arisen, and I don't know as it has, with the committee, as regards your own character, I would think that the committee would willingly accept it; but that was his testimony. It was not for that purpose.

Mr. DISQUE. Mr. Sligh was—

Mr. MAGEE (interrupting). I think, General, in that connection the record will show that I suggested that he confine himself to the facts and not indulge in personalities.

Mr. FREAR. Well, we both talked that way—we all talked that way.

Mr. MAGEE. I think the record so shows.

Mr. DISQUE. I don't know Maj. Sligh at all. I think I attended one luncheon he attended, and saw him two or three minutes at another time. But it is only fair to me that statements such as he has made in this record be answered, and that the committee give me an opportunity to answer them fairly. There are some very—I consider them the worst statements that can be made about a man.

Mr. FREAR. Well, I understood Mr. Eamon was going to have an opportunity.

Mr. DISQUE. Yes, sir.

Mr. FREAR. Well, we will have him.

Mr. DISQUE. And I was going to say a thing that Mr. Eamon don't know. In a part of his testimony he refers to a letter I wrote to the governor of Michigan. The governor of Michigan is the best witness, of course, but I never addressed any letter to the governor of Michigan that I have the faintest recollection of, and I will say here, without the slightest question in my mind, that I never asked the governor of Michigan for anything in my life, except an assignment with the Michigan State troops when they went to war. That is all the communications I have ever had with any governor of Michigan.

Mr. FREAR. I think that will be accepted by the committee as fully explanatory.

Mr. DISQUE. And may I read right now a statement of the governor of Michigan?

Mr. FREAR. Have you a copy of the letter in which you asked that?

Mr. DISQUE. Yes, sir. I haven't got it here. Heavens! It is in my—

Mr. FREAR (interrupting). If you have any statement from the governor of Michigan surely produce it. It is only fair, and ought to be put in the record.

Mr. DISQUE. This was a statement made by Gov. Sleeper, who is to-day governor of Michigan, and was at that time. Albert E. Sleeper. He is the Republican governor of the State, was not the governor when I was appointed to the Michigan State Prison, and came into office after I got the commission.

Mr. FREAR. Well, but he is the man to whom Sligh said you wrote some letter?

Mr. DISQUE. I assume so. He says it was to the governor. I don't know what governor he refers to.

Mr. FREAR. I haven't read the record recently.

Mr. MAGEE. S-l-e-e-p-e-r, is it?

Mr. DISQUE. S-l-e-e-p-e-r; Gov. Sleeper attended the last meeting of the board of governors of the Michigan State Prison that I attended as warden prior to my resignation, and in an interview the next day the following is quoted from the Jackson City Patriot, a local paper of the city.

Mr. FREAR. Well, it is a letter, is it?

Mr. DISQUE. It is his statement to the paper.

Mr. FREAR. Let us see it, please. If it is a reporter's statement, I don't know whether we care to put anything like that in of any statement he has made. [Laughter.] No reflection on the reporters, let me say. But placing that in evidence—the other was a sworn affidavit. Placing that in evidence might be questionable, unless it directly affects this matter.

Mr. DISQUE. If you wish to wait I will wire Gov. Sleeper and ask him to verify that.

Mr. FREAR. No. I don't think there is any objection to that. I don't see any.

Mr. DISQUE. I don't like to read it myself, but I guess I will have to.

Mr. FREAR. Oh, yes; you can read it; or I will read it for you.

Mr. DISQUE (reading):

Asked whether the affairs of the prison were satisfactory, Gov. Sleeper said: "The board of control and I have inspected the prison thoroughly to-day and found everything in apple pie order."

Mr. FREAR. What date was that?

Mr. DISQUE. September 27.

Mr. FREAR. What year?

Mr. DISQUE. 1917. [Continuing reading:]

"More satisfactory conditions could not be desired. Warden Disque deserves great credit for the progressive innovations he has introduced and for the efficient manner in which he has carried out the complicated affairs of such an institution. We have decided to give Warden Disque leave of absence for

the duration of the war, so that he may accept the commission tendered him as lieutenant colonel of the aviation section of the Signal Corps. We shall, needless to say, be very sorry to lose his highly competent services, but he feels that it is his manifest duty to go where he can be of greatest service to his country in this hour of trial.

"I firmly believe Mr. Disque will succeed in his new position as he succeeded before during the 18 years he was in the Army, and as he has succeeded here as warden. I hope the time will not be long ere he is again in charge of this penal institution and we wish him Godspeed and the best of luck. We feel he will play a big part, a man's part, in toppling the Kaiser from his throne and restoring democracy to an autocracy-hardened world."

Mr. FREAR. There is nothing the matter with that eulogy; we will all concede.

Mr. DISQUE. I do not like to bring up a statement of that sort, but it has been questioned.

Mr. FREAR. If Mr. Sligh referred to any letter that was found in the files of Gov. Sleeper I think that that ought to go in. That was September, 1917, and when did you go in the service?

Mr. DISQUE. The next day; my commission came to me on the 22d of September, I think. It was dated August 15.

Mr. FREAR. You left immediately?

Mr. DISQUE. I left right after this meeting. It took a few days to turn that prison over; it is a tremendous institution.

Mr. FREAR. Another statement as to the record—I was not here yesterday and might have asked one or two questions regarding the matter if I had been here. Was Mr. Frost given a contract for the logging of the Blodgett tract?

Mr. DISQUE. He was, with others.

Mr. FREAR. With Mr. Butler; and you approved this contract?

Mr. DISQUE. Several of those that promised to go in dropped out afterwards.

Mr. FREAR. He stated that Mr. Butler was one of those, and Mr. Butler so stated; and that was a contract approaching nearly \$5,000,000, and for only \$20 profit, or a voluntary contract. Was that all the amount stated that they were to get?

Mr. DISQUE. Mr. Frost, I think, was to draw \$1,000 or \$1,200 a month and all the parties participating in this contract were those who were to furnish equipment and get 15 per cent depreciation and 10 per cent rental, which made it a profitable contract.

Mr. FREAR. You considered it was no cost-plus contract, or anything of that kind, but that it was a contract substantially as good or better than many of the contracts that were made?

Mr. DISQUE. It would have cost us as much as any cost-plus contract.

Mr. FREAR. But you entered into it?

Mr. DISQUE. Oh, yes.

Mr. FREAR. I wish to ask in reference to another statement in the record [reading]:

Mr. LEA. They presented what was evidently a profiteering contract, and condemned you for not giving it?

Mr. DISQUE. It was the worst I ever saw in my life.

Mr. MAGEE. Mr. Butler is a brother of Dr. Butler, who is president of Columbia University, in my State.

Mr. DISQUE. The brothers of a lot of prominent men are the worst crooks that you meet.

That is testimony, I take it, which is undisputed?

Mr. DISQUE. I have not checked it over.

Mr. FREAR. That is the testimony as it appears in the record. During Mr. Butler's testimony his brother, Nicholas Murray Butler, one of the leading men of the United States, known as such, sat in our hearings. Mr. Butler is president of the First National Bank; he is a man connected with a good many operations, according to his testimony before our committee, and so far as we could learn he occupied a very high position as a citizen there. Would you care to have that statement of yours stand?

Mr. DISQUE. I will withdraw it; I do not know him.

Mr. FREAR. I think that is well, and I wanted to give you the opportunity.

Mr. DISQUE. I would prefer not to have that in there.

Mr. FREAR. A map was just handed me this morning, wherein it appears that the Spruce Production Division of the Army shows its assignments and the various places, and unless it has been put in the record I just want to ask one or two questions in reference to it. I am told it has already been introduced in evidence. There is a statement here gotten out by the Spruce Production of the Army showing that the total division here reached 1,222 officers and 27,661 men, and then it gives the various assignments at the different places of these officers and men, showing that in the Puget Sound district there were 140 officers and 4,736 men. Those were largely engaged in the Siems-Carey-Kerbaugh operations, were they?

Mr. DISQUE. Of course the larger part of those were the Siems-Carey; what the number was I do not know. That district included a great many operations.

Mr. FREAR. What other operations were there up in Puget Sound, Many?

Mr. DISQUE. I do not know off-hand. We furnished the committee a statement yesterday, showing that in detail.

Mr. MAGEE. He put in a detailed statement as to the entire number.

Mr. FREAR. The reason I asked this was that the statement of Col. Stearns was to the effect that 4,000 men were up here in those operations.

Mr. DISQUE. That was the peak, I suppose. It will clear up, Mr. Chairman, to say that the Siems-Carey-Kerbaugh Corporation got these men by our forcing them to take them from time to time. They would have employed civilian labor if we had not continually forced soldiers to them, to save that part of the industry being interfered with. That is why they had soldiers; it was not because they asked for them at all.

Mr. FREAR. I am just trying to get that into the record, as to the situation that developed. Grays Harbor included the Polson operations and others that were there of the Airplane Co.?

Mr. DISQUE. Yes, sir.

Mr. FREAR. They had 173 officers and 5,251 men.

Mr. DISQUE. Of course that was of some given date. The numbers were fluctuating and changing very materially throughout the period.

Mr. FREAR. The Clatsop district, which represents the northern part of Oregon north of the Lincoln County operations, had 90 officers and 3,252 soldiers. The Yaquina Bay operations had 72 officers and 3,298 soldiers. The Coos Bay operations were small

and had 31 officers and 839 men. Then in the summary it appears that the Portland headquarters had 132 officers and 404 men. Just a question as to what this body of men was doing at the Portland headquarters; what was the character of their duties generally?

Mr. DISQUE. Will you permit Col. Stearns to answer that?

Mr. FREAR. Yes.

Mr. STEARNS. The heads of departments, their assistants and their second assistants and, depending on the size of the department how far down it ran, were officers. The clerks, stenographers and others, messengers, etc., were enlisted men. The Portland headquarters were the division headquarters for the military headquarters, and the production headquarters of all our activities.

Mr. FREAR. Over 500 officers and men were kept at the Portland headquarters, according to the statement.

Mr. STEARNS. Yes, sir.

Mr. FREAR. That was approximately the number of men on duty there?

Mr. STEARNS. Yes; toward the end.

Mr. DISQUE. I think that included the auditors with the cost-plus contractors, and there were also a number of men who were traveling out back and forth as inspectors and sanitary officers.

• Mr. FREAR. These men reported at headquarters?

Mr. DISQUE. Yes.

Mr. FREAR. Then it shows that at Vancouver Barracks there were men. What were they doing?

Mr. STEARNS. You have a list here showing exactly where all those men were.

Mr. DISQUE. Approximately 4,000 men were working three shifts at the cut-up plant.

Mr. FREAR. Over in Vancouver?

Mr. DISQUE. Yes, sir. There was a regiment of troops which we kept constantly for any emergency, and they were also guards over the operations. They were about 2,000 men. Then there was a constant influx of new limited-service men which we were trying to get to replace our men who were satisfactory for overseas duty constantly coming in, and it took about a month to get through their typhoid and prophylactic treatments and vaccination.

Mr. FREAR. A sort of receiving camp?

Mr. DISQUE. A sort of receiving camp, and also the central hospital for the entire division.

Mr. FREAR. And they were sent out from Vancouver Barracks?

Mr. DISQUE. From Vancouver, and they all came into Vancouver when there were any transfers made.

Mr. FREAR. There was a recommendation, as I remember, that I want to inquire about briefly, but the first question has been asked, and I think it is just as well that you should place in the record for any explanation you desire, as to any relatives you had out here, officers or men in other positions. There have been statements made that out here there were relatives of yours out here.

Mr. DISQUE. There were four relatives of mine in this division. One of them was a brother, who was taken into the Army before I got back into it. He came here as a first lieutenant and, as the division was organized, really was one of the 8 or 10 senior first lieu-

tenants out of some 200 or 300. He went through the operations of this division. I do not know where he served, except incidentally, and he left it as a first lieutenant, having had probably a hundred of his juniors promoted over him.

Another officer was a fourth or fifth cousin whom I have not seen for 25 years, who was subject to rejection in his division, as I understood, because of physical condition, and applied for transfer here by telegraph, and I wired him that I would approve if his division commander approved. He eventually came and, according to the reports, performed very good service.

Mr. FREAR. What was his position?

Mr. DISQUE. He was a major when he came, and he died as a major here.

Mr. FREAR. He was a major when he came here?

Mr. DISQUE. Yes, sir.

Mr. FREAR. In the Regular Army?

Mr. DISQUE. No; he had been a National Guard officer in Pennsylvania, and went into the service as a major.

Mr. FREAR. How long was he major before he came here?

Mr. DISQUE. I do not know. He was commissioned a major for this war from the National Guard.

Mr. FREAR. Was he performing any other service before he was made major and sent here?

Mr. DISQUE. Oh, yes; he was attached to one of the divisions in Georgia, I think.

Mr. FREAR. Who else?

Mr. DISQUE. Another was a young fellow about 20 years old who applied for enlistment twice and was rejected because of flat feet, and after several applications I asked the draft board to accept him and send him here as a limited-service man. He came here as a private, and all I heard of his operations was from his mother, who complained that he was shoveling mud out of the bottom of a river somewhere here to make a roadway. I do not know where he served, or why the orders were issued. Eventually he was promoted, due to recommendations that came through from officers who were immediately over him, but did not know, as far as I am concerned, that he was any relative of mine.

Mr. FREAR. To what position was he promoted?

Mr. DISQUE. He ended up as a second lieutenant.

Mr. FREAR. You made a report recommending distinguished-service medals for some of the officers with you?

Mr. DISQUE. Yes, sir.

Mr. FREAR. Can you give us the names of some of the officers, as you remember them?

Mr. DISQUE. Have you got that report there?

Mr. FREAR. No; I have just got a statement handed me, from the "West Coast Lumbermen." This only mentions one officer, Lieut. Col. Bull. Can you state generally? You need not name them all.

Mr. DISQUE. I think the report included Col. Stearns, Col. Bull, Col. Reardon, and Col. R. C. Hill. Also, Capt. Harmon. I would have to get that list; some of them were recommended and some were not, and I do not want to name some that I did not recommend. That was several months ago, and I had a tremendous organization.

Mr. FREAR. Were Hitchcock and men like that recommended; was Morley?

Mr. DISQUE. I do not know. I think Morley was. We can get the list.

Mr. FREAR. Was Mr. Eaman?

Mr. DISQUE. I think so; yes, sir.

Mr. FREAR. Was Maj. Leadbetter?

Mr. DISQUE. I do not think so.

Mr. FREAR. Will you just file the list?

Mr. DISQUE. I will file that.

Mr. FREAR. What was the theory on which they were recommended for distinguished-service medals, and when was the recommendation made?

Mr. DISQUE. That recommendation was made, to the best of my recollection, sometime in February; possibly before that.

Mr. FREAR. February?

Mr. DISQUE. February, 1919.

Mr. FREAR. That is after the armistice?

Mr. DISQUE. And the basis of the recommendation is this: Congress provided that distinguished-service medal as a little token of appreciation on the part of the Government for especially meritorious services rendered by citizens of the country, either in the Army or out, but only away from the fighting line. They have the distinguished-service cross for marked bravery and conduct in actual battle. This distinguished-service medal is the only thing of its kind that the American Government awards to distinguish those who do something unusual and more than the average citizen, directly connected with the Government's war operations. Every person whom I recommended for this distinguished-service medal had during the war period made tremendous personal sacrifices, had given their entire self to the Government service, and to my mind did render a service to this Government that stood out as against that usually rendered by the average citizen as specially helpful and meritorious, as provided in the law which authorized the award of the medal. I have in mind several gentlemen who, enjoying prosperity with comfortable surroundings, could have remained just as the great bulk of our citizens did at their homes and continued in their ordinary way to make their business successful, to reap profits, who dropped them overnight and came here to help, and did help in the most unselfish, most efficient, and patriotic manner that I have ever seen. I appreciated it and I felt the Government could only do that little in showing appreciation.

Mr. FREAR. Well, it was true in a way that men certainly sacrificed their private business, and in fact every citizen of the country had to sacrifice in helping to maintain the war; but there were thousands of soldiers who were fighting in France who never received any crosses or distinguished-service medals or any other evidence, and yet they were giving the supreme sacrifice. Some did, it is true, but they were not given to all who were fighting, and, of course, I am speaking about both sides of the proposition of which you spoke. I am reading now from a quotation in the West Coast Lumberman of May 15, which is as follows:

The above service was rendered at a time when the division was being organized from raw recruits and untrained officers, for the purpose of securing a

1,500 per cent increase in production of airplane lumber. The operations of the division involved constant and intimate relations with 150,000 civilian lumbermen and over 500 lumber mill and logging-camp operations, over a mountainous country 500 miles long, in which the division was scattered in 234 different camps and stations, constructing railways, mills, etc., in a climate with an annual rainfall averaging over 8 feet. Through the exceptional and conspicuously meritorious service of such men the war period was passed without a single case of friction with civilian or civil authority and the mission of the division was accomplished in spite of continuous I. W. W. agitation and pro-enemy propaganda.

I have had approximately 30,000 officers and men under my command during the past 15 months and of them am recommending a total of 20 for this recognition of service. I sincerely believe in their award and regard it as a necessary mark of appreciation from our Government if in its next emergency we are to look for the same quality of service in the rear of active operations as we have had in this one, and a service which is so vital and to my own knowledge more heartbreaking than anything man is called upon to endure.

That was the reason, substantially, that you made the recommendations?

Mr. DISQUE. Yes, sir.

Mr. FREAR. Were they awarded?

Mr. DISQUE. I have not heard.

Mr. FREAR. When did you say Mr. Ryan was out here—about what time?

Mr. DISQUE. The latter part of July, 1918.

Mr. FREAR. When he was out here did he in the city of Portland attend a banquet given by the officers of your division?

Mr. DISQUE. Yes, sir.

Mr. FREAR. At that banquet did Mr. Ryan say, in substance, that he would do what he could, when he got back to Washington, to secure you a brigadier-generalship?

Mr. DISQUE. I think so; yes; he did. He was the natural man to make such recommendations; he was my next superior.

Mr. FREAR. And, pursuant to that, a short time afterward you were made a brigadier general—or state the fact.

Mr. DISQUE. Yes, sir; shortly after.

Mr. FREAR. I think that is all. There are some questions that can be taken up with other officers of the corporation themselves, direct, so far as computations are concerned. So we will not put you to trouble any longer.

Mr. LEA. One of your relatives died in the service here?

Mr. DISQUE. That major I was referring to.

Mr. LEA. What relation was he to you?

Mr. DISQUE. Well, let me see; I never figured it out. His mother is a second or third cousin of my mother.

Mr. FREAR. I thought it was well to put in the record your statement as to that, as it was fair to give you an opportunity to put it in.

Mr. DISQUE. I never took a bit of interest in any of those men while they were here.

Mr. LEA. Were any of those men drafted in the service?

Mr. DISQUE. Not one of them; all volunteers. In my old regiment, the Third Cavalry, we had three brothers from one family. It often happens in the service, but it was not brought about here through any plan, and I do not think anybody has ever accused me of favoring any of those men.

(Witness excused.)

(Thereupon, at 12.30 o'clock p. m., the committee took a recess until 2 o'clock p. m.)

AFTER RECESS.

TESTIMONY OF HENRY E. WALKER.

The witness was sworn by Mr. Frear.

Mr. FREAR. Your full name, Mr. Walker?

Mr. WALKER. Henry E. Walker.

Mr. FREAR. What is your position with the Spruce Corporation?

Mr. WALKER. I am now assistant treasurer of the corporation, and formerly had charge of the accounts in connection with our milling operations.

Mr. FREAR. The committee desires to obtain all the information that it can in regard to the distribution of aircraft materials, sent either through the Vancouver cut-up plant or outside sources, excepting that we do not care to enter into too much detail. What can you give us in totals?

Mr. WALKER. Well, briefly, I can give you the total spruce, fir, and cedar from both sources, or analyze it from the cut-up plant and the outside mills, to our Allies and the United States.

Mr. FREAR. If that is not too long you may begin reading it into the record, if you will, please.

Mr. WALKER. The total shipments to the factories in the United States: Spruce, 21,907,540 feet.

Mr. FREAR. Now, that was cut where?

Mr. WALKER. Well, I am giving the analysis. Of that amount, 11,129,534 feet came from the Vancouver Barracks cut-up plant.

Mr. FREAR. That is all the spruce that was allotted to this Government?

Mr. WALKER. Yes, sir.

Mr. FREAR. All right, now we understand it.

Mr. WALKER. Thirty-three million thirty-seven thousand and seventy-four came from the outside mills.

Mr. LEA. See if we have got that right; is that all that went to the United States, or is it simply the amount that went from the cut-up plant?

Mr. WALKER. I gave first the total, and then the amount from the cut-up plant and the amount from outside mills.

Mr. LEA. I understand.

Mr. WALKER. Fir shipped to the United States, 6,269,664 feet, of which 11,480,479 feet came from the cut-up plant.

Mr. MAGEE. What was your first item?

Mr. FREAR. You gave it as 6,000,000.

Mr. WALKER. Oh, I beg your pardon, I was reading them in reverse order—6,269,664 feet came from outside mills, 11,480,479 feet came from the cut-up plant, 17,750,143 feet came from both sources.

Mr. FREAR. That is, the fir was nearly twice as much as the spruce that came from the cut-up plant. The fir from the cut-up plant reached 11,000,000?

Mr. WALKER. Yes, sir.

Mr. FREAR. And the fir from the outside sources reached 6,000,000?

Mr. WALKER. Yes, sir.

Mr. FREAR. So that it was almost double the amount of fir that went into our local airplane factories, compared with that that came from outside?

Mr. WALKER. Yes, sir.

Mr. MAGEE. Just a minute, Mr. Walker—

Mr. WALKER. I made the same mistake in regard to the spruce. I will correct that. The spruce from the outside mills amounted to 21,907,540 feet, the spruce from the cut-up plant amounted to 11,129,534 feet, and the spruce from both sources amounted to 33,037,074 feet.

Of cedar there was 330,369 feet shipped from the outside mills, 1,227,733 feet from the cut-up plant, and 1,558,102 feet from both sources. As a matter of check the total aircraft lumber shipped to the United States from all sources and of all varieties, amounted to 52,345,319 feet.

Mr. FREAR. That is, out of the 143,000,000?

Mr. WALKER. Yes, sir. I might add that there were certain reinstated orders of which we have just a mere record. Of shipments to the French there was 8,761,210 feet of spruce from the outside mills, 9,683,236 feet from the cut-up plant, and 18,444,446 feet of spruce from both sources.

Mr. FREAR. Was that put in the record this morning?

Mr. WALKER. Not this distribution.

Mr. FREAR. Oh, we put it in from Menoher's telegram, which differs slightly from the figures you have given.

Mr. WALKER. I might state in that connection that this is compiled upon the individual tallies of the cafs shipped, and we have never reconciled with Washington yet, so there is some slight difference between the two figures.

Of the fir shipped to the French there was 6,261,839 feet from the outside mills, 9,889,416 from the cut-up plant, and 16,151,355 feet from all sources.

Mr. FREAR. In other words, about 50 per cent more of the fir was shipped from the cut-up plant than from the outside mills to France?

Mr. WALKER. Approximately; yes, sir. There was no cedar shipped to the French.

The shipments to the Italians of spruce from the outside mills amounted to 4,340,111 feet, spruce from the cut-up plant amounted to 2,284,277 feet, and the total spruce amounted to 6,624,388 feet. The fir to the Italians from the outside mills amounted to 3,537,697 feet, the fir from the cut-up plant amounted to 4,468,809 feet, the fir from all sources amounting to 8,006,506 feet. The total shipments to the Italians amounted to 14,630,894 feet. The Italians received no cedar.

Of the shipments to the British the spruce from the outside mills amounted to 8,473,115 feet, the spruce from the cut-up plant amounted to 12,787,485 feet, the spruce from both sources amounting to 21,260,600 feet. The fir to the British from outside mills amounted to 6,432,071 feet, the fir from the cut-up plant amounted to 11,566,709 feet. The fir from both sources amounted to 17,998,780 feet.

Mr. FREAR. Again the fir from the cup-up plant nearly doubled that that came from the outside sources?

Mr. WALKER. Approximately. The cedar to the British—

Mr. FREAR. I do not think we care for that.

Mr. WALKER. There are just three more figures to complete it, Mr. Frear.

Mr. FREAR. All right.

Mr. WALKER. The cedar from the outside mills to the British amounted to 41,816 feet, the cedar from the cut-up plant 2,135,751 feet, the cedar from both sources amounting to 2,177,667 feet. The total footage shipped to the British under our direction amounted to 41,437,047 feet.

Mr. FREAR. Was there received from the mills in the East and North any spruce and fir for shipment?

Mr. WALKER. I understand, Mr. Frear, that there was a small amount of spruce received. I believe some from Maine and also down South. I believe I have a photostat showing that.

Mr. FREAR. This includes all the spruce?

Mr. WALKER. From the Northwest.

Mr. FREAR. This does not include that?

Mr. WALKER. This is only the shipments we purchased from the outside mills, and also the shipment from our cut-up plant.

Mr. FREAR. This is from what time?

Mr. WALKER. From the outside mills it runs from August, 1917, to the signing of the armistice, and from the cut-up plant from February, 1918, to the signing of the armistice.

Mr. FREAR. This Government, of course—that is, by its individuals—was furnished with spruce and fir to the foreign Governments long before this date; that is, by private individuals?

Mr. WALKER. Yes, sir.

Mr. FREAR. They had contracts and were furnishing it under a different system?

Mr. WALKER. I might mention that during this period extending down as late as March there were some of those orders which they were allowed to complete, and the aggregate of them amounted to about 9,000,000 feet of spruce. However, that was old specification No. 1 and "G" list.

Mr. FREAR. Those were orders that were made prior to the beginning of the statement that you have here?

Mr. WALKER. Yes, sir. That appears in the complete shipment.

Mr. MAGEE. Probably contracts made prior to our entry into the war.

Mr. WALKER. A large part of them, Mr. Magee, were orders placed through Mr. Sligh and other sources. I would not say definitely.

Mr. MAGEE. Do you know anything about the deposit of moneys, about the moneys on hand and where they are deposited?

Mr. WALKER. I have not got the statement here. I will get it from the office, Mr. Magee.

Mr. MAGEE. That was going to be furnished. Do you know what the present monthly expenses of the Spruce Production Co. are, approximately?

Mr. WALKER. I do not know what that is right now.

Mr. MAGEE. Can you get that for me and put it in the record?

Mr. WALKER. We can get that.

(Witness excused.)

TESTIMONY OF WALTER E. BALL.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. What is your full name, Mr. Ball?

Mr. BALL. Walter E. Ball.

Mr. FREAR. Where is your home, Mr. Ball?

Mr. BALL. Toledo, Oreg.

Mr. FREAR. How long have you lived there?

Mr. BALL. Thirteen years in Toledo.

Mr. FREAR. How long in the county of Lincoln?

Mr. BALL. Twenty-one years last April.

Mr. FREAR. What has been your business?

Mr. BALL. Well, I have a homestead on the Siletz.

Mr. FREAR. In the Siletz Reservation?

Mr. BALL. Yes; down near Siletz Bay. I have it yet. I was there eight years and I went to Toledo. I moved to Toledo as deputy sheriff of the county, and I was deputy sheriff two years. Then I was elected assessor, and I served as assessor of Lincoln County for nine years.

Mr. FREAR. Nine years?

Mr. BALL. Yes, sir.

Mr. FREAR. Do you hold any official position now?

Mr. BALL. No, sir.

Mr. FREAR. I desire to read into the record at this time some figures, to make clear a statement that appeared in the record yesterday on page 3335. Mr. Magee was asking in regard to the road leading north from Yaquina up to what is known as Otter Rock. Mr. Magee asks:

Mr. MAGEE. How many miles of road were constructed and what was the cost?

Mr. DISQUE. Do you want me to read that?

Mr. LEA. Yes; if you will give the facts there. What is the number of this railroad, to begin with?

Mr. DISQUE. No. 11.

Mr. LEA. How long, including all the spurs that were run off to the east, off up the various creeks?

Mr. DISQUE. 15.66 miles; the construction cost was \$1,443,931.29.

Mr. MAGEE. What does that figure per mile?

Mr. DISQUE. \$99,212. That includes, of course, the entire terminal facilities there at Yaquina.

The reason I refer to that is that while there may be sidetracks and spurs and other matter connected with this road or other branches, that this road No. 11 is given in the report of possibilities of utilizing properties of the United States Spruce Production Corporation, States of Washington and Oregon, under the head of "Properties of the United States Spruce Production Corporation" as 10.83 miles, and the spurs are given as 2.09 miles. In the report of the United States Spruce Production Corporation, issued by this company for the sale of September 2, 1919, appears the statement, on page 38, in relation to railroad No. 11:

This line, as shown on attached map and profile, starts from the end of Southern Pacific rails at Yaquina, running thence along the northerly shore of Yaquina Bay, and reaches in its present length 10.8 miles north, passing through Newport en route, thence along the coast; 1.7 miles additional grade is constructed with bridges to complete; 2.75 miles of sidings are completed; 2.9 miles of logging spurs are completed.

The amount of road as suggested here of 10.83 or 11 miles for the main track, at \$130,000 a mile, aggregates \$1,407,900, leaving a balance of \$36,000 for the additional amount. In other words, these spurs, of course, are separate from the main track and, I suppose, occur in every road, the Blodgett tract and all other tracts, and have been included in the statement of Mr. Disque, whereas the main line of road, if divided into the total, with a margin of \$36,000 for the spurs and the other tracks, makes the total \$130,000 a mile for this road. Now, I will say that is a subject of analysis for anyone as to which is the proper method of computation, but I believe that this method of computation should also be entered, and I will state further that when the committee endeavored to get to Otter Rock that we were unable to get the full length because of a slide, but we went down 6 or 7 miles, and I understand that the road ran in the neighborhood of a little over 10 miles from Yaquina Bay, and it is admitted that there are some sidings at Yaquina Bay, and there is a spur that is mentioned here.

Have you any knowledge of the Siletz Basin from any personal investigations in the past?

Mr. BALL. Yes, sir.

Mr. FREAR. Of the timber that grows there?

Mr. BALL. Yes, sir.

Mr. FREAR. Of the rights of way that are possible, and the surveys that have been made?

Mr. BALL. Yes, sir.

Mr. FREAR. Just tell the committee briefly, Mr. Ball, in your own way, as to those facts.

Mr. BALL. Shall I go to the start?

Mr. FREAR. Yes; I think that would be the shortest way to get at it.

Mr. BALL. In the beginning of the spruce operations in Lincoln County, I think everyone felt the same way, that they would like to be of service to the Government in their spruce operations. If I remember correctly, it was—well, it was early in the spring when they came down there.

Mr. FREAR. Of 1917 or 1918? —

Mr. BALL. 1918. And they started in their operations and, of course, so far as I know, the citizens down there were not very generally consulted.

Mr. FREAR. Just state what occurred, so far as you know; put it in concise form.

Mr. BALL. What I was going to say, we took no action, the citizens took no action until a time came when there was a change in the policy of procedure down there.

Mr. FREAR. By whom?

Mr. BALL. By the Spruce Division people.

Mr. FREAR. What was the change?

Mr. BALL. The change was that in the building of their roads into the timber it was suspended and we understood—that was the first intimation we had—we understood they were contemplating an entire change in railroad construction into the spruce. Also we understood they were contemplating building a road south into the Blodgett tract and north along the coast.

Mr. FREAR. Instead of saying what you understood, if there is anyone that told you, or anything like that, make it so that it will be testimony that will be admissible. Who told you that?

Mr. BALL. Well, that I can not say, but we understood that and from the movements it bore it out. The port district of Toledo—the Toledo port district comprises quite a territory there, all of the east end of the county.

Mr. FREAR. The east end of Lincoln County?

Mr. BALL. Yes, sir; and quite a bit of the north part. Through the representation of the citizens there the port commissioners, of which I was at that time one—

Mr. FREAR. Who were the others?

Mr. BALL. Mr. Lee Wade, Mr. R. S. Van Cleve—they have changed a good deal since then—Mr. Wiley Parish—

Mr. FREAR. That is sufficient.

Mr. BALL. And myself.

Mr. FREAR. What did you do?

Mr. BALL. We sent a committee. This committee was appointed by the port commission upon request of the citizens of that country.

Mr. FREAR. To do what?

Mr. BALL. To lay before the Spruce Division people our ideas about the proper proceedings in getting out this spruce and to try to show them that by building the road as proposed, if it was proposed, and to find out if it was—that they were making a mistake.

Mr. FREAR. What did you do?

Mr. BALL. A mistake both in time and money.

Mr. FREAR. What did you do?

Mr. BALL. We came to Portland. I prepared a map of all the timber cruises I could get hold of, and those cruises had been made in 1910 and 1911, long before this question ever came up. I prepared a plat so it could be laid before them, and we visited Portland. We were referred to Maj. Hitchcock as having charge of that district. We interviewed Maj. Hitchcock and told him what we came for and asked him if it was true that they were contemplating building up the coast and also down the coast, and he said they had that under advisement then.

Mr. FREAR. Who referred you to Maj. Hitchcock, if anyone?

Mr. BALL. The sergeant, I think, in charge, I think so—anyway, we inquired of who had charge of that district and were referred to Maj. Hitchcock. Maj. Hitchcock told us that he had charge of the district, but that the locating of the railroads—these proposed railroads—was under the direct direction or supervision of Amos Benson, of Portland.

Mr. FREAR. He lived here in Portland?

Mr. BALL. Yes, sir. Mr. Benson was called and, together with Maj. Hitchcock, we went over it.

Mr. FREAR. Over where?

Mr. BALL. We went over the situation there in the office.

Mr. FREAR. In Portland?

Mr. BALL. In Portland. It was agreed that in a few days—I think it was three days after that—the agreement was that Mr. Benson was to come down and go over this road that we proposed.

Mr. FREAR. When was that?

Mr. BALL. This was in about the 1st of June. I do not exactly remember the date.

Mr. FREAR. 1918?

Mr. BALL. 1918. He came down there—

Mr. FREAR. Who?

Mr. BALL. Mr. Benson, and Maj. Hitchcock was with him.

Mr. FREAR. Was Hitchcock with him?

Mr. BALL. Hitchcock was there at Toledo. I saw him in Toledo and talked with him. He was at Newport. Part of the committee—I did not go with the committee—Mr. Hall was on that committee—

Mr. FREAR. Mr. Hall, of Siletz?

Mr. BALL. Mr. Hall, of Siletz—Walter Hall, of Siletz—and Mr. Lee Wade; Mr. Jack Morgan, who was formerly a resident of Lincoln County, now of Portland; and our county surveyor, formerly county surveyor, Jim Derrick. Those three went with Mr. Benson into the woods, and I only know what they reported.

Mr. FREAR. Well, what was it, briefly?

Mr. BALL. The report was that so far as they went Mr. Benson expressed himself as well pleased with the situation.

Mr. FREAR. Do you know how far they did go?

Mr. BALL. Well, they went quite a ways, but they did not get all the way through.

Mr. FREAR. Well, how far—1 mile or 10?

Mr. BALL. I suppose they must have shown him over 3 or 4 miles, or maybe more.

Mr. FREAR. That is, north of Toledo or where?

Mr. BALL. All the difficult places, you know, that was all. There is quite a lot of that that there is no question of.

Mr. FREAR. What were they looking for?

Mr. BALL. For both timber and a location for a route.

Mr. FREAR. A route over the Divide or what?

Mr. BALL. A route from Toledo over the Divide into the Siletz.

Mr. FREAR. That is what I wanted to get.

Mr. BALL. Now, there was a part of this road that he had told me they had never quite located the proper way to go, but they knew about it, but they did not exactly know where to find it. He did not want to take up time, but they would find that spot and place, and a way to it, so they could take him over the rest of the way. He agreed, and they left it to me to find him.

Mr. FREAR. Find what?

Mr. BALL. Find Mr. Benson and notify him that we were ready. I endeavored to find him several days by telephone.

Mr. FREAR. That was for a second trip, was it, or what?

Mr. BALL. Yes; for a second trip that they had agreed upon. I failed to find him. This was on a Monday they made the trip, if I remember correctly, and on Saturday evening I met Mr. Benson in Newport, just accidentally. He told me he had been very busy.

Mr. FREAR. What did he say about going up there?

Mr. BALL. He said that he was willing to go any time, and my understanding was at that time that we made arrangements to go the next day, which was Sunday. And Saturday evening late I met

Mr. Benson between Toledo and Chitwood in a jitney coming to Portland. So we could not go Sunday; he was in Portland, and he never did go over the road, as far as I know.

Mr. FREAR. Did you ever have any communication from him afterwards?

Mr. BALL. Not on that point, but the first of the week the committee came to Portland to see about it, and while we were here we were informed that the road was settled, the location of the road was settled, up the coast.

Mr. FREAR. Where it now runs?

Mr. BALL. Where it now is.

Mr. FREAR. Who informed you?

Mr. BALL. Mr. Benson, Mr. Hitchcock, and Mr. Disque.

Mr. FREAR. Did you have any talk at that time?

Mr. BALL. We had several.

Mr. FREAR. Anything that relates to this subject?

Mr. BALL. Yes, sir.

Mr. FREAR. Just say what it was, briefly.

Mr. BALL. Maj. Hitchcock told us that while he directly did not decide the question, Mr. Benson decided it, and he was convinced that that was the proper route.

Mr. FREAR. That what was the proper route?

Mr. BALL. Where they located it.

Mr. FREAR. Where they located it on the coast?

Mr. FREAR. That what was the proper route?

Mr. FREAR. Yes.

Mr. BALL. Gen. Disque told me that he had sent seven different men in there, and that six of the seven reported in favor of the coast route.

Mr. FREAR. Yes. Well, what else?

Mr. BALL. Now, this map will show the location of the timber.

Mr. FREAR. Yes. What I am getting at is, what else occurred there as to the talks, anything? I don't know that there was, but I am just trying to find out.

Mr. BALL. I don't think so—in regard to the railroad; I don't think so.

Mr. FREAR. Well——

Mr. BALL. My statement to them was on that point at that time—both of them—was, I representing the people there, that if they built this road out on the coast for the purpose of getting spruce, for quick action, less cost, they were making a mistake.

Mr. FREAR. Why, did you tell them so?

Mr. BALL. Yes.

Mr. FREAR. Why?

Mr. BALL. Because the route was longer, the construction was greater—construction cost—and the result to them very materially less; also, that the value of the road would be less when it was done.

Mr. FREAR. Did you discuss with them the amount of timber they could get, or anything like that?

Mr. BALL. Yes.

Mr. FREAR. What did you say, or what did they say?

Mr. BALL. They claimed we didn't know anything about it; that they knew.

Mr. FREAR. They were up here in Portland; they ought to know. What was the rest of the conversation? Did they say what amount of timber there was there?

Mr. BALL. Mr. Benson claimed there was 150,000,000 feet on the coast side, where they would reach with this road.

Mr. FREAR. How much in the other part of the Siletz, where the Miller road ran?

Mr. BALL. And as to the other part of the Siletz, they didn't know what there was—Mr. Benson said they didn't. However, this committee—I might say, this committee that went with Mr. Benson—he had told them, so they told me—he made the remark several times that he never had seen that part of the country; didn't know the spruce was there that was there. He made that remark to them, I understand.

Mr. FREAR. That is when he made the first trip?

Mr. BALL. Yes. So I don't think he was ever over in there before.

Mr. FREAR. That was the conclusion of your discussion, was it?

Mr. BALL. Yes, sir; we represented to them that there was by the Miller road or the Depot route, as we call it.

Mr. FREAR. That is the Depot Slough route?

Mr. BALL. The Depot Slough route; that by building to the Siletz River, a distance from Toledo of 20 miles, they would have secured 550,000,000 feet of spruce, and the best spruce there is in Lincoln County is in there.

Mr. FREAR. Was there any discussion—you told them that at that time?

Mr. BALL. Yes, sir.

Mr. FREAR. Was there any discussion as to a route over the Divide to get over on the coast side? I don't know whether there was or not. I am asking you.

Mr. BALL. They claimed that the route was good, they had investigated it; it was good.

Mr. FREAR. That is, that you could go over there and get that additional amount?

Mr. BALL. Yes.

Mr. FREAR. And that is conceded to be how much over there?

Mr. BALL. On the coast side?

Mr. FREAR. Yes.

Mr. BALL. One hundred and fifty million feet is what they stated, and I think it is there.

Mr. FREAR. So that makes a total of how much spruce in there, if they built a road for 20 miles to the Siletz—along the Siletz.

Mr. BALL. Well, 550,000,000 we determined by the cruise—

Mr. FREAR. Yes.

Mr. BALL (continuing). Was there, and by securing this—

Mr. FREAR. Five hundred and fifty million inside, east of the Divide, and 150,000,000 west of the Divide?

Mr. BALL. Yes.

Mr. FREAR. That is 700,000,000 feet of spruce?

Mr. BALL. Yes, sir. Now, they can build over to this route just as easy as they can build here, if they need it, and a good deal easier, for the reason that they have got all, probably, they want in 550,000,000, which would be all they would want. There is 7,000,000,000 feet of timber to come out of there besides this.

Mr. FREAR. What kind of timber?

Mr. BALL. Spruce, hemlock, cedar, and fir; principally fir.

Mr. FREAR. Do you know anything about the subject of assembling and the opportunity for assembling on that route?

Mr. BALL. A wagon road.

Mr. FREAR. I have reference more particularly to the Siletz River. Was it ever discussed by you?

Mr. BALL. The Siletz River?

Mr. FREAR. Yes.

Mr. BALL. Yes, by building 20 miles of road, they would have had at least 40 miles of logging surface; some say 50, but at least 40, the year round. Wintertimes, the Siletz River—loggers tell me, and I think so, I have been all up and down it—there can be 60 or 70 miles of the Siletz River used easily—of the Siletz, wintertimes, logging.

Mr. FREAR. Will you get the map and just show where this is, and I will ask you afterwards if there was a route laid out up into the Siletz country from Toledo.

Mr. BALL. This is the property map. [Producing.] A map of what we call the Porter survey.

Mr. FREAR. Tell us what was the Porter survey?

Mr. BALL. This survey was made after this time.

Mr. FREAR. What time?

Mr. BALL. This survey was made in October and November, 1918.

Mr. FREAR. 1918?

Mr. BALL. Yes.

Mr. FREAR. What was the purpose of the survey?

Mr. BALL. To build a railroad.

Mr. FREAR. To build an independent road, or what, or to get the Government to build a road, or what?

Mr. BALL. The purpose was, the man who owned that timber in there—

Mr. FREAR. In the Siletz Valley?

Mr. BALL. In the Siletz country, requested to have a survey made. War was still going on then.

Mr. FREAR. And they requested that a survey be made by the people of Toledo?

Mr. BALL. By the port of Toledo, and if the Government did not build a railroad, they would; that was our agreement with them at that time.

Mr. FREAR. Tell us what was done.

Mr. BALL. The Porter survey shows two routes from Toledo. It does not go all the way to Toledo, because from here up to this point it is a water grade.

Mr. FREAR. What place is that? You say "From here to here"?

Mr. BALL. That is up the Olalla Slough; from Toledo up to this point is a water grade.

Mr. MAGEE. You will have to designate this point.

Mr. BALL. Section 21-10-10.

Mr. FREAR. How far is that, about 5 or 6 miles?

Mr. BALL. About 5 miles from Toledo, north.

Mr. FREAR. Then what?

Mr. BALL. This one made a connection—these two made a connection here in section 8.

Mr. FREAR. Connection with what?

Mr. BALL. The two routes made a connection there.

Mr. FREAR. What is the other route?

Mr. BALL. The other survey starts on Depot Slough—

Mr. FREAR. Wait a moment. There is another route running from Toledo north, known as the Miller Road.

Mr. BALL. Yes, sir.

Mr. FREAR. Now, you connect this second survey on this Miller Road at what section?

Mr. BALL. Our survey commenced in section 30 in 10-10.

Mr. FREAR. In township 10, range 10?

Mr. BALL. Yes.

Mr. FREAR. Then where?

Mr. BALL. And runs north—northerly direction over into section 8, making a junction with the Olalla route.

Mr. FREAR. Whereabout do both surveys, the Porter survey and this second survey of which you speak—whereabouts do they cross what is known as the Divide; about where?

Mr. BALL. In section 17, right at the corner there between 17—well, it is the center there; it is the center between 17 and 18, somewhere right here.

Mr. FREAR. On the west side of section 17 and the east side of section 18, what town and range—10-10?

Mr. BALL. Ten-ten.

Mr. FREAR. In 10-10 this second route of which you have spoken, crosses the Divide?

Mr. BALL. Yes, sir.

Mr. FREAR. Now, where does the first route that you spoke of, up there on Olalla Creek—where does that cross the divide?

Mr. BALL. That crosses the divide on the north line of section 21.

Mr. FREAR. Town 10, range 10?

Mr. BALL. Town 10, range 10.

Mr. FREAR. In other words, there were two routes provided over the divide?

Mr. BALL. Yes, sir.

Mr. FREAR. That were surveyed?

Mr. BALL. Yes, sir.

Mr. FREAR. And then where did the survey go?

Mr. BALL. Followed down Siletz River.

Mr. FREAR. In a northerly direction?

Mr. BALL. In a northerly direction. This is the Jaybird Creek country they are talking about. This is the pass between the Siletz—there is a hill there; that is where they found the pass through there.

Mr. FREAR. You say this is the place. Whereabouts, to make it a matter of record—about where?

Mr. BALL. Section 20, in 10-9.

Mr. FREAR. In section 20, in town 10, range 9?

Mr. BALL. Town 9, range 10, I mean.

Mr. FREAR. Now, that is what distance from Toledo—about?

Mr. BALL. That is about 12 miles from Toledo.

Mr. FREAR. About 12 miles.

Mr. BALL. Yes, sir.

Mr. FREAR. Was there timber along that route?

Mr. BALL. Yes, sir.

Mr. FREAR. How much, about, generally speaking?

Mr. BALL. Well, in here is a nice body of spruce.

Mr. FREAR. "In here" don't get it on the record. What sections are those?

Mr. BALL. Sections 20, 21, part of 29, there is a nice body of spruce. That is in 9-10.

Mr. FREAR. That is around the Siletz River?

Mr. BALL. Yes; which this road cuts through.

Mr. FREAR. Was that the road that you say you strike 570,000,000 feet of spruce in running up how far?

Mr. BALL. Twenty miles.

Mr. FREAR. Running up 20 miles.

Mr. BALL. Of course, it is not alone; they would have to build spurs. This is the main route.

Mr. MAGEE. Would there be any spruce before you reached the junction of the two surveys?

Mr. BALL. On this side of this side of the route there is very little.

Mr. FREAR. You say "this route"; you mean the Olalla survey?

Mr. BALL. On the Olalla survey; there is very little over to the junction.

Mr. MAGEE. Before reaching the junction of the two roads?

Mr. BALL. On the Depot Road.

Mr. FREAR. That is the present route?

Mr. BALL. That is the present route. There is spruce timber in the head of Mill Creek and Dewey Creek; which would be in section 7-6 and 7 and 18.

Mr. FREAR. Have you the cruises of those sections?

Mr. BALL. Well, the map that I have here was only what we could gather; it is not complete.

Mr. FREAR. Well, I mean—

Mr. BALL. And we explained to them at that time that that is all that we could get on that quick notice.

Mr. FREAR. As assessor of the county, you had occasion to levy the taxes?

Mr. BALL. Yes, sir.

Mr. FREAR. And in that way you had become somewhat familiar with the general cruisers in that county, I assume?

Mr. BALL. Yes.

Mr. FREAR. Now, what can you help the committee with in advising us about the amount of spruce that is in there, and whereabouts it is to be found?

Mr. BALL. With the exception of a space after we get to the Divide here—

Mr. FREAR. After you get to the Divide?

Mr. BALL. Yes.

Mr. FREAR. About 5 miles or 6 miles—5 miles north of Toledo, or 6 miles?

Mr. BALL. Five or 6 miles; about $5\frac{1}{2}$, I think. With the exception of the distance from the south boundary of section 5-10-10 to the west boundary of section 28 in 9-10, a distance of 4 miles, practically—with the exception of that distance, the entire route runs through timber, spruce timber.

Mr. FREAR. What kind of timber?

Mr. BALL. Spruce and fir and hemlock.

Mr. FREAR. Heavy timber or light timber?

Mr. BALL. Yes, sir; it is good timber most all the way; heavy timber.

Mr. FREAR. What is that timber, so far as the quantity is concerned, compared with the average timber on the west side of the Divide, where the road was constructed, if you know?

Mr. BALL. Well, along the road, the route on the coast side, there is practically no timber along the route.

Mr. FREAR. Yes.

Mr. BALL. Practically no merchantable timber.

Mr. FREAR. You say they have no timber along that line as it has been built up to Otter Rock?

Mr. BALL. By building spurs into the timber—

Mr. FREAR. Spurs in an easterly direction?

Mr. BALL. Yes, easterly or northeasterly direction.

Mr. FREAR. Up over the Divide?

Mr. BALL. Up the creek.

Mr. FREAR. We went up one of those spurs, that they said, I think, averaged 6 or 7 per cent?

Mr. BALL. Yes, sir.

Mr. FREAR. With a Shay engine? Now, what else is there that you have in mind there, Mr. Ball?

Mr. BALL. I am not an engineer—

Mr. FREAR. Have you the surveys here?

Mr. BALL. I have the surveys.

Mr. FREAR. Where is that?

Mr. BALL. I can show you what that shows. This survey was made for the port district.

Mr. MAGEE. Better put that map in evidence.

Mr. FREAR. Yes; I think so.

Mr. BALL. This was simply the profile. I didn't get—this is a property map, and this is the profile of the survey.

Mr. FREAR. I wish to ask you generally, and then we will refer to that. Do you know the elevations over the divides at these various places, and the amount of grades?

Mr. BALL. I only know what this profile shows.

Mr. FREAR. What does that profile show?

Mr. MAGEE. Who made that?

Mr. FREAR. Yes; who made that profile?

Mr. BALL. Mr. A. L. Porter.

Mr. FREAR. This man who made the survey?

Mr. BALL. Yes.

Mr. FREAR. Who is he?

Mr. BALL. A. L. Porter.

Mr. FREAR. I understand, but what is his position, or what has he done?

Mr. BALL. He is an engineer. He is a logging-railroad engineer.

Mr. FREAR. Where does he live?

Mr. BALL. He is now working, I think, for Hammond Lumber Co.

Mr. FREAR. Where does he live, Portland?

Mr. BALL. He lives in Albany.

Mr. FREAR. Albany, Oreg.?

Mr. BALL. Yes, sir.

Mr. MAGEE. Is he experienced?

Mr. BALL. He has had probably twenty-five or thirty years' experience.

Mr. FREAR. He builds roads down in that country, or makes surveys?

Mr. BALL. Yes.

Mr. FREAR. And the profiles for them?

Mr. BALL. Yes, sir.

Mr. FREAR. Estimates, and so on? Now, tell us, if you can, briefly about where that road extends, the elevations, etc.

Mr. BALL. On the Olalla route?

Mr. FREAR. That is the eastern route——

Mr. BALL. The eastern route.

Mr. FREAR. Running north; yes.

Mr. BALL. The beginning of his survey on the Toledo side showed an elevation of 220 feet above sea level.

Mr. FREAR. At what point is that, about?

Mr. BALL. That is in section 21, right here.

Mr. FREAR. That is where it crosses the Divide, is it?

Mr. BALL. No; that is at the beginning of his survey.

Mr. FREAR. The beginning of the elevation?

Mr. BALL. Where it began to climb.

Mr. FREAR. All right.

Mr. BALL. At the summit he shows an elevation of 325 feet.

Mr. FREAR. That is about 100 feet rise?

Mr. BALL. Yes; just about; 105-foot rise.

Mr. FREAR. One hundred and five feet rise in that distance?

Mr. BALL. Five thousand three hundred feet.

Mr. FREAR. That is 100 feet rise in a mile?

Mr. BALL. Yes, sir.

Mr. FREAR. What percentage do you call that?

Mr. BALL. He says it is 2 per cent.

Mr. FREAR. That would be going up the——

Mr. BALL. On the Toledo side.

Mr. FREAR. Going up from Toledo with empty cars——

Mr. BALL. Yes.

Mr. FREAR (continuing). If one is engaged in logging?

Mr. BALL. Yes, sir. And on the other side, going down hill on the Olalla route——

Mr. FREAR. That is, on the other side of this same route, running——still running north over the Divide?

Mr. BALL. Yes.

Mr. FREAR. Yes.

Mr. BALL. You find 1.66 per cent grade.

Mr. FREAR. One and sixty-six hundredths going south with a load?

Mr. BALL. Going north——yes; going south.

Mr. FREAR. Yes; going south with logs.

Mr. BALL. This note here says:

This profile is made on trial projection and can be materially bettered.

Mr. FREAR. Well, the trial showed that going from the south up to the Divide it would be 2 per cent, or thereabouts?

Mr. BALL. Yes, sir.

Mr. FREAR. And going on the south side it would be one and what?

Mr. BALL. One and sixty-six hundredths—

Mr. FREAR. One and sixty-six hundredths or $1\frac{2}{3}$?

Mr. BALL. Yes, sir. Now, the Depot route—

Mr. FREAR. Yes; let's go on with that. Were there any other heavy grades on that line north?

Mr. BALL. It doesn't show any heavy grading.

Mr. FREAR. Well, look further beyond here.

Mr. BALL. Oh, north.

Mr. FREAR. Going north.

Mr. BALL. To the junction, it shows—when we get down the hill it shows level.

Mr. FREAR. That is, to the junction of these two surveys?

Mr. BALL. Yes; shows level, and then it shows 0.85 per cent grade from the junction.

Mr. FREAR. Does it show over 2 per cent anywhere along the line?

Mr. BALL. It doesn't show any—

Mr. FREAR. What is this away over here?

Mr. BALL. That is the Depot route.

Mr. FREAR. Oh, that is the Depot. All right.

Mr. BALL. That is the Depot.

Mr. FREAR. Now, go back to the other route, that you call the Depot Slough route.

Mr. BALL. The Depot Slough route?

Mr. FREAR. Yes.

Mr. BALL. Beginning—the initial part of this where it began to climb is 132 feet above sea level.

Mr. FREAR. How far is that from Toledo?

Mr. BALL. That is about 4 miles, I should judge.

Mr. FREAR. About 4 miles it begins 132 feet. Now, where does it go and how?

Mr. BALL. Running north to the summit of the hill there, or divide, he has a 340-foot elevation.

Mr. FREAR. And what was the other?

Mr. BALL. One hundred and thirty-two.

Mr. FREAR. One hundred and thirty-two and three hundred and forty?

Mr. BALL. Yes, sir.

Mr. FREAR. Which is about 200 feet or a few feet over?

Mr. BALL. A few feet over.

Mr. FREAR. In what distance is that?

Mr. BALL. Eleven thousand feet.

Mr. FREAR. That is 11,000 feet, nearly 2 miles; it is over 2 miles, yes.

Mr. BALL. Over 2 miles.

Mr. FREAR. And that is a rise of a little over 200 feet?

Mr. BALL. A little over 200 feet.

Mr. FREAR. What grade is that?

Mr. BALL. His figures here are 2 per cent.

Mr. FREAR. Two per cent, approximately?

Mr. BALL. Two per cent.

Mr. FREAR. What is it over on the other side of the Divide there?

Mr. BALL. Going down on the north side of this Divide, he finds 1.21 per cent grade.

Mr. FREAR. Yes. This is the same Porter surveying this side on the Depot Slough.

Mr. BALL. The Depot Slough route.

Mr. FREAR. In other words, it would be going up there with empty cars on a 2 per cent grade.

Mr. BALL. Yes, sir.

Mr. FREAR. Going down on the north side, or coming south with loaded cars, it would be only a——

Mr. BALL. One and twenty-one hundredths. He also makes the same notation here, that this profile is a trial projection and it can be very materially bettered, he says here in his note.

Mr. FREAR. What kind of cuts—or do you know anything about in a general way what kind of construction that would require; would that be done with a logging road?

Mr. BALL. Well, not being an engineer, I can't tell you——

Mr. FREAR. I mean do you know anything about that question as to the amount of——

Mr. BALL. There has been estimates as low as \$15,000 a mile.

Mr. FREAR. On this road?

Mr. BALL. On this road.

Mr. FREAR. Well, then that would be a logging road, of course.

Mr. BALL. That is a logging road.

Mr. FREAR. Look north and along this same line of survey beyond where the junction comes; let us know if there are any other elevations that would require heavy grades? What is that grade you have your finger on?

Mr. BALL. One and a half.

Mr. FREAR. Whereabouts is that, how far north?

Mr. BALL. This is in section 33.

Mr. FREAR. That is one and a half grade?

Mr. BALL. That is one and a half, going down.

Mr. FREAR. That is going——

Mr. BALL. North.

Mr. FREAR. Going north, with empty cars?

Mr. BALL. Yes.

Mr. FREAR. That would be about 10 miles or 12 miles north of Toledo?

Mr. BALL. About 11 miles.

Mr. FREAR. Eleven miles.

Mr. BALL. Yes, about 11 miles.

Mr. FREAR. What is that grade there——

Mr. BALL. In section 28-9-10——

Mr. FREAR. What do you find there?

Mr. BALL. I find 1.25 per cent coming out of the Siletz.

Mr. FREAR. That is running south with loaded cars, it would reach 1.25 per cent grade.

Mr. BALL. Yes, and in section 29-20 and 29, going north empty, we find 1.93 per cent.

Mr. FREAR. 1.93 per cent. That would be about 13 or 14 miles by way of the survey, apparently?

Mr. BALL. About 14 miles, I should say.

Mr. FREAR. That is 1.93 going up with empty cars?

Mr. BALL. The same divide in section 17 and 20, we find 1.70 per cent grade.

Mr. FREAR. Going which way?

Mr. BALL. Going south.

Mr. FREAR. That would be with loaded cars?

Mr. BALL. Yes.

Mr. FREAR. Yes; all right. What is that grade there where you have your finger?

Mr. BALL. This is 2 per cent.

Mr. FREAR. Two per cent. What section is that?

Mr. BALL. Sections 16 and 17, one of the two, right on the line.

Mr. FREAR. Sections 16 and 17. That would be about 16 or 17 miles north of Toledo of this survey, would it?

Mr. BALL. Yes, sir.

Mr. FREAR. What is the grade there?

Mr. BALL. Two per cent.

Mr. FREAR. That would be 2 per cent going south with loaded cars?

Mr. BALL. Yes, sir.

Mr. FREAR. This last?

Mr. BALL. Further on than that there are no heavy grades, 1.12 to 1.56, just after crossing—

Mr. FREAR. That is with empties?

Mr. BALL. That is empties.

Mr. FREAR. So that the largest grade with loaded cars, on this whole line, is under two per cent, except at this one place?

Mr. BALL. This one place. This is where it comes down into the river. I had a talk with him about that when he filed his plat. He says "This grade here can be very materially lowered, because here is a small cut here on top, you see." That can be very—it is not very far, it is 4,000 feet.

Mr. FREAR. Now, this survey was made for your port there at Toledo?

Mr. BALL. Yes.

Mr. FREAR. That is, for the people of the county?

Mr. BALL. Yes, sir; this belongs to the port district.

Mr. FREAR. And how far was the survey made, for 30 miles, you say?

Mr. BALL. Twenty miles from Toledo, I think is what I said it would be.

Mr. FREAR. Twenty miles, and that covered this whole territory with the spurs.

Mr. BALL. Yes.

Mr. FREAR. Whereby you could bring out—it was estimated you could bring out the full 550,000,000.

Mr. BALL. Well, no; the spurs would be extra from that.

Mr. FREAR. I say, with the spurs you could bring it out?

Mr. BALL. Yes.

Mr. FREAR. And that would reach this fir timber as well, of which you speak?

Mr. BALL. Yes, sir.

Mr. FREAR. And what would be the amount of fir in there?

Mr. BALL. Estimated as 9,000,000,000 feet of fir.

Mr. FREAR. Nine billion feet of fir. The heaviest growth that is to be got anywhere between Marshfield and, probably Clallam County.

Mr. BALL. I think so.

Mr. FREAR. So far as is known.

Mr. BALL. I understood so.

Mr. FREAR. I will introduce both of these as exhibits.

(The maps above offered in evidence were marked, respectively, "Exhibits No. 23, Ball, Sept. 6, 1919," and "Exhibit No. 24, Ball, Sept. 6, 1919.")

Mr. MAGEE. It was testified yesterday by Gen. Disque, as I recollect, and if I don't state it correctly the record will show—but I understand it that Mr. Benson claimed to him that in his examination of this route which you have described, that he ran up against a perpendicular mountain. Is there any—

Mr. BALL. I was not with this party. Mr. Hall is here. He was.

Mr. FREAR. Mr. Hall is in the room?

Mr. BALL. Yes; he is in the room. He can tell better than me about that.

Mr. MAGEE. What elevation or hill projection along this route—you have been over the route, haven't you?

Mr. BALL. Yes; I have been—

Mr. MAGEE (continuing). Would be regarded or described as perpendicular mountain.

Mr. BALL. Oh, we have in that country brakes where—you can find them, you know—breaks where it is practically straight up and down for a ways.

Mr. MAGEE. I mean where they proposed to run the route for the railroad?

Mr. BALL. I don't know of any where they proposed to run the route along; I do not.

Mr. MAGEE. None that you know of?

Mr. BALL. None that I know of.

Mr. MAGEE. Even way up into the vicinity of the Jaybird River.

Mr. BALL. None that I know of, where a person would contemplate building a road. You can find them up in there, yes, sir.

Mr. MAGEE. I suppose you can find those perpendicular places anywhere in the mountains here?

Mr. BALL. Yes, sir.

Mr. MAGEE. But no such place along either of these routes which are shown on these maps?

Mr. BALL. No, sir; there is no such place along these roads.

Mr. FREAR. What is the name of the road that runs north of Toledo? That is, have you any name for it down there?

Mr. BALL. We now call it the Fisher-Storey road.

Mr. FREAR. The Fisher-Storey road. How far was that completed when you were having these negotiations?

Mr. BALL. Well, it is in the neighborhood of 5 miles, I should think.

Mr. FREAR. Running north?

Mr. BALL. Yes.

Mr. FREAR. Was that before the Wessels Creek branch was put in?

Mr. BALL. No, sir. They had put that in and was working there considerable time before we knew they were going to change it.

Mr. FREAR. They added that themselves?

Mr. BALL. Yes, sir.

Mr. FREAR. About what section is that?

Mr. BALL. Section 24, in 10-11. It is not on here [indicating blue print]. I can show you here [indicating another blue print].

Mr. FREAR. Whereabouts?

Mr. BALL. I will show you [producing blue print]. This is a map we will introduce. The Wessel place is here [indicating], where they built their road.

Mr. FREAR. The Wessel place is in 24; and about how far north of Toledo?

Mr. BALL. Well, it is north about 4 miles and west about 1 mile; about 5 miles from Toledo, I should say.

Mr. FREAR. That is in town 10 or range 10?

Mr. BALL. No; in town 10, range 11.

Mr. FREAR. Yes; in town 10, range 11. And the junction with the north branch occurs in section 30?

Mr. BALL. In section 30.

Mr. FREAR. Now, that was extended out by the Government how far?

Mr. BALL. Well, there were two branches up there. I should say there were, probably, altogether 3 miles of road up there.

Mr. FREAR. On the Wessels?

Mr. BALL. On the Wessels; yes.

Mr. FREAR. That is running in a westerly direction?

Mr. BALL. Yes, sir.

Mr. FREAR. And running in a northerly direction what was done? How far did that go? They started that at the same junction, didn't they?

Mr. BALL. I think not. The road wasn't completed from Toledo up 2 miles; the road wasn't completed when the Government started operations. They built the road from Toledo to this junction.

Mr. FREAR. Who did?

Mr. BALL. The Government; the Spruce Division.

Mr. FREAR. Oh, they built up from Toledo?

Mr. BALL. Up to the junction; yes.

Mr. FREAR. And the reason for that was what?

Mr. BALL. So they could operate this road to go into the Wessel place.

Mr. FREAR. Yes; and so that they could carry the logs down to Toledo, whereas formerly they were dumped—

Mr. BALL (interrupting). Into the slough.

Mr. FREAR. Into Depot Slough?

Mr. BALL. Yes.

Mr. FREAR. And they put in a construction there?

Mr. BALL. Yes, sir.

Mr. FREAR. A trestle work?

Mr. BALL. Yes, sir. The end of the road was about here, in the center of section 6 [indicating on blue print].

Mr. FREAR. Do you know, either from your own knowledge or from what has been stated to you, whether or not there were any bridges, or any very heavy or any very high bridges, or anything like that, that made any difficult construction, so far as was discussed there by your port commissioners, after this Porter survey was had?

Mr. BALL. No, sir. The only one bridge of any moment at all is right across the Siletz River at the mouth of Cedar Creek.

Mr. FREAR. That is the only bridge, and that comes at a distance of about 20 miles, or thereabouts—

Mr. BALL (interrupting). No; about 15 or 16 miles.

Mr. FREAR. Well, we had it before. About 16 miles?

Mr. BALL. Yes, sir; I think so.

Mr. FREAR. About 16 miles north of Toledo?

Mr. BALL. Yes, sir.

Mr. FREAR. Then that is the only bridge there is?

Mr. BALL. That is the only one that amounts to anything.

Mr. FREAR. How far would you have extended this Fisher and Storey road—that is the road running north, or known as the Miller Road?

Mr. BALL. Yes.

Mr. FREAR. How far would you extend that before you get over into the heavy spruce, do you know?

Mr. BALL. Before you get into heavy spruce you would have to go down in here [indicating on blue print].

Mr. FREAR. How far?

Mr. BALL. About 5 or 6 miles.

Mr. FREAR. Well, were they cutting spruce in there [indicating].

Mr. BALL. Oh, here?

Mr. FREAR. No; where they were.

Mr. BALL. Yes; there was some spruce there, and quite a little spruce over here.

Mr. LEA. Five or six miles from where?

Mr. FREAR. From the junction.

Mr. BALL. Before you get into the heavy spruce.

Mr. LEA. What section is that you get into heavy spruce?

Mr. BALL. Section 20 and 21, and some in 29.

Mr. FREAR. Now, what do you call heavy spruce, so that the committee will know?

Mr. BALL. Well, spruce that will run five or six million to the quarter.

Mr. MAGEE. Then, as I understand it, by extending what you call the Storey-Fisher road 5 or 6 miles they could have got into the Siletz country where there was a supply of 550,000,000 feet of spruce lumber?

Mr. BALL. Yes, sir; then you begin to get into it; they would come to it.

Mr. MAGEE. Yes.

Mr. BALL. Yes, sir.

Mr. FREAR. Have you any cruises with the amount of spruce and fir marked on the maps with you?

Mr. BALL. Yes, sir. But this is a very incomplete map. There is a better one. The Government had a better one furnished to them by the same people. This is the first one, and is not as good as the one they have already got.

Mr. FREAR. Did you furnish any of these estimates for the Government? I don't know whether you did or not.

Mr. BALL. No, I didn't, only as I gathered them from timbermen or timber cruisers.

- Mr. FREAR. Well, the spruce and fir appears upon about—
- Mr. BALL (interrupting). About every quarter.
- Mr. FREAR. About every quarter there, does it not?
- Mr. BALL. Yes, sir.
- Mr. FREAR. Running north from the junction; is that right?
- Mr. BALL. Yes, sir.
- Mr. FREAR. According to this map?
- Mr. BALL. Yes, sir. There is some spruce all the way.
- Mr. FREAR. Yes.
- Mr. BALL. But back there, talking about the heavy body of spruce, there is some spruce in here [indicating], in section 7 and section 6—some spruce.
- Mr. FREAR. Now here, for instance, is 13—what is that?
- Mr. BALL. Three million eight hundred thirty thousand fir.
- Mr. FREAR. Oh, yes.
- Mr. BALL. One million one hundred and seventy thousand spruce. That is in section 7.
- Mr. FREAR. What is this up here?
- Mr. BALL. That is fir; 1,600,000; and that is spruce 200,000.
- Mr. FREAR. Now in what sort of a tract is that? That all appears there in the same 40?
- Mr. BALL. That is two cruises.
- Mr. FREAR. Oh, two different cruises of the same 40?
- Mr. BALL. Yes.
- Mr. FREAR. Now that is right at the junction?
- Mr. BALL. Right at the junction.
- Mr. FREAR. Well, I guess that is all that we can show by this, and mark this as Exhibit 23. You have marked this already.
- Mr. MAGEE. Be sure and mark this, too.
- (The previous blue print referred to by Mr. Magee had theretofore been marked "Exhibit 23"; and the blue print referred to by Mr. Magee was thereupon marked "Exhibit 24, Witness Ball, September 6, 1919.")
- Mr. FREAR. No railroad was built except what was added there by the Miller road, and that was built by them—
- Mr. BALL (interrupting). The last of 1918 the Miller people extended their road; I don't know just how far, but they did make an extension on their road.
- Mr. FREAR. That is running north?
- Mr. BALL. Yes, sir.
- Mr. FREAR. And do you know how near they reached the divide? I think that is in the testimony as about—
- Mr. BALL (interrupting). It is not very far. I don't exactly know the distance.
- Mr. FREAR. What is it? A thousand feet? I think it was a thousand feet, wasn't it, or a quarter of a mile?
- Mr. LEA. I have forgotten.
- Mr. FREAR. Well, we can get that by somebody who knows the road. All right. Is there anything else you think of, Mr. Ball, to testify in regard to this information regarding this subject?
- Mr. BALL. No, sir; I don't remember anything else.
- Mr. FREAR. That covers the subject generally, does it?
- Mr. BALL. Yes.
- Mr. FREAR. And you say Mr. Hall was with that party?

Mr. BALL. I would like to state that Mr. Morgan, while I was assessor of Lincoln County——

Mr. LEA (interrupting). Mr. Morgan, who was before our committee?

Mr. BALL. Yes, sir.

Mr. FREAR. The other day?

Mr. BALL. Yes. He did considerable work for me in helping adjust the assessment of timber. I remember sending him down into the Blodgett tract to ascertain some information that was in dispute, and he furnished information on a great portion of the county.

Mr. FREAR. That is, you mean information by cruises that he made?

Mr. BALL. Yes; by actual knowledge and by the knowledge of others.

Mr. FREAR. Well, he was a cruiser, was he?

Mr. BALL. He was a cruiser; yes, sir.

Mr. FREAR. And were his cruises accepted by your people down there?

Mr. BALL. Yes, sir.

Mr. FREAR. As a basis?

Mr. BALL. Yes, sir. Only the county had no public cruise and this was simply about the amount of timber; the value of the land including the timber was what we were after.

Mr. FREAR. Yes; in your assessments?

Mr. BALL. Yes. And I handled those several years and naturally know where the timber lies.

Mr. FREAR. Yes. Anything further that you have in mind?

Mr. BALL. I might say that while we were before Maj. Hitchcock and Mr. Benson in our committee, one of the objections of Mr. Benson's building the road, extending the road through from the Wessel place, where the Government was all ready to operate to the coast, providing they wanted to go up the coast, was that he had an estimate of one mile of road, the first mile of road of extension would cost the Government \$58,000. That was one of his main objections for building that road.

Mr. FREAR. Now, let us make it as a matter of record.

Mr. MAGEE. Building what road?

Mr. FREAR. Building an extension of 1 mile beyond the terminus of the Wessel road?

Mr. BALL. Yes, sir.

Mr. FREAR. Now, the Wessel road runs about 2 miles, you said, from the junction of the two surveys?

Mr. BALL. I think it is about that; including the spurs they probably built 3 miles, but a straight line it would be about 2 mile probably, or a little better.

Mr. FREAR. And what have you to say about that?

Mr. BALL. And I understand, and I am a little surprised, too, that the road built from Yaquina, which was proposed or said to be easy of construction, has cost \$99,000; I mean an average.

Mr. FREAR. Yes. That was the statement given by Mr. Disque, and if you took out the spurs and figured on the main line, leaving \$32,000 for the spurs, it makes it \$130,000 a mile. Now, his figures were what?

Mr. BALL. Fifty-eight thousand dollars. He stated that he had information that is what it would cost to build that 1 mile.

Mr. FREAR. That 1 mile?

Mr. BALL. Yes, sir.

Mr. FREAR. And that was startling to him?

Mr. BALL. Yes, sir.

Mr. FREAR. So that he could not consider the matter?

Mr. BALL. Yes, sir.

Mr. FREAR. What was it; heavy grades, or what did he say?

Mr. BALL. Yes, sir.

Mr. FREAR. That was going from the Wessel road over across the divide toward the west?

Mr. BALL. Instead of abandoning their operations they already had; that is another phase of the question.

Mr. FREAR. Yes.

Mr. MAGEE. You haven't shown that.

Mr. BALL. He said abandoning that, if they wanted to go to the coast, then build the Wessel road instead of going to Yaquina.

Mr. FREAR. You would get the same results, would you? That is, in your judgment, you would have got the same results by going right over?

Mr. BALL. You could not help but get better results.

Mr. FREAR. Yes. Now, the cut up plant which they were building, which cost in the neighborhood of \$1,000,000, that was at Toledo?

Mr. BALL. Yes, sir.

Mr. FREAR. Well, that would make a direct route right out of Toledo?

Mr. BALL. Yes, sir.

Mr. FREAR. And even if you went the full 20 miles you would then reach the 550,000,000 feet of which you have spoken, of the spruce. As it is, when they got up to Otter Rock, on the road that is built, they have first nearly 11 miles of road construction, and they then have 12 miles more of rafting?

Mr. BALL. Yes, sir.

Mr. FREAR. That is right, isn't it?

Mr. BALL. Yes.

Mr. FREAR. To get around to Toledo?

[Mr. Ball nods his head.]

Mr. FREAR. Practically the same distance.

Mr. MAGEE. The stenographer can't get his nod on the record; unless he gives his answer so it can be understood you haven't got anything on the record.

Mr. FREAR. I am stating for him. What did you say about that?

Mr. BALL. It is about 12 miles. It might not be quite 12 miles from Yaquina to Otter Rock and it is 9 miles from Yaquina by rail to Toledo.

Mr. FREAR. No. This is taking it by water.

Mr. BALL. By water? Well, it is farther by water; probably 10 or 11 miles by water.

Mr. FREAR. Well, it is over 20 miles?

Mr. BALL. It is over 20 miles.

Mr. FREAR. Yes; by both roads?

Mr. BALL. Yes, sir.

Mr. FREAR. Whereas here you strike it, you say, within 5 miles of the end of this road you would have struck large timber?

Mr. BALL. It would have been 10 miles, practically, from Toledo.

Mr. FREAR. It would have been 10 miles from Toledo?

Mr. BALL. Ten or 11 miles from Toledo.

Mr. FREAR. And that would have been directly north and could have been brought right down to Toledo?

Mr. BALL. Yes, sir.

Mr. FREAR. I think that is all.

Mr. LEA. Do you know what curves were figured on for that road? You can sit down, if you like.

Mr. BALL. I do not.

Mr. LEA. I say you can have a chair there.

Mr. BALL. I do not, Mr. Lea. The map showing the curves is a large concern. I didn't bring it along, and not being an engineer I don't know about the curves. But his report was very favorable on the road, the whole construction.

Mr. LEA. What was the nature of this survey? Was it an exhaustive survey, or what they call a preliminary survey?

Mr. BALL. Preliminary.

Mr. LEA. Do you remember about how much it cost?

Mr. BALL. About \$3,000. I don't exactly remember the amount.

Mr. LEA. They paid the total cost, did they?

Mr. BALL. Yes, sir; they paid the total cost.

Mr. LEA. Now, you spoke about the timber, sections 20, 21, and part of 29; what township is that in, do you recall?

Mr. BALL. In 9, 10; township 9, range 10.

Mr. LEA. Was it that location known as? Is that Dewey Creek?

Mr. BALL. No. That is local, in what we call Alsea Prairie country. It is just south of Alsea Prairie.

Mr. LEA. That is on the north side of the river or the west side of the river?

Mr. BALL. It is on the south side of the river. The river bends there.

Mr. FREAR. The river bends there?

Mr. LEA. Yes.

Mr. BALL. It is on the south side.

Mr. LEA. About how far does tidewater come up the Siletz River?

Mr. BALL. It comes up to section 7, section 7 in 9-10.

Mr. LEA. About how many miles would that be?

Mr. BALL. From the mouth?

Mr. LEA. Yes.

Mr. BALL. By the river 30 miles, I should say; about 30 miles.

Mr. LEA. Did this railroad that you speak of reach tidewater?

Mr. BALL. It goes quite a ways below the head of tide. It goes down to where there is good water.

Mr. LEA. That is, practical logging water?

Mr. BALL. Practical logging and practical shipping.

Mr. FREAR. That is, you mean shipping on the Siletz?

Mr. BALL. Yes, sir.

Mr. LEA. At what point—I understood you to say that you could go over the Siletz River side to the west slope. I may have misunderstood you.

Mr. BALL. Yes.

Mr. LEA. At what point could you do that?

Mr. BALL. I should say that that would take the same point as they intended to take coming in.

Mr. LEA. That at the head of the Jaybird?

Mr. BALL. If it is practical coming in, it would be practical coming out.

Mr. LEA. Are you personally familiar with that country up there?

Mr. BALL. No; I am not. Well, I have been through the country, but not the survey, or not the elevation.

Mr. LEA. Did you go with Mr. Benson on the trip that day he went up there?

Mr. BALL. Yes, sir.

Mr. LEA. So you saw him after he returned, did you?

Mr. BALL. Yes; I got to see him a few minutes Saturday evening. This was a Monday.

Mr. LEA. Do you know why it was these men who went with him didn't find this pass when they went up there the first time?

Mr. BALL. Mr. Lea, if you have been in a country like that, you know that it is hard to locate yourselves right away; you know, in a definite way, just running through the country. These men knew of the pass, but they didn't find it in time. You see, they had made quite a travel in that day and they didn't have time to find it; but they assured Mr. Benson if he would come back, which he agreed to do, I understand through them, they would find it shortly, and they did find it, and they can probably tell you the elevations there.

Mr. LEA. Well, what I was getting at, were they men familiar with the country there or not?

Mr. BALL. Yes, sir; they are.

Mr. LEA. About how much timber is supposed to be tributary to Toledo as matters stand there now? That is, assuming that this country could be developed, as you have suggested?

Mr. BALL. We estimate in the county there is 18,000,000,000 feet of timber.

Mr. FREAR. Eighteen billion?

Mr. BALL. Eighteen billion in the county. Now, just how much of that would be tributary, or could be made tributary to Toledo, I don't know, but I should say considerably more than half of it.

Mr. LEA. There is enough there to occupy all the mills there for many years?

Mr. BALL. For many years; yes, sir.

Mr. LEA. Did you have any part in the endeavor of the Toledo people to get this mill located there?

Mr. BALL. I as a citizen there, yes; as a port commissioner I did.

Mr. LEA. Just, in substance, what did you have to do with that?

Mr. BALL. Well, I had really nothing to do with it, only this: If the Government decided to build a mill there we would do everything we could to help them get located.

Mr. LEA. Is Toledo an incorporated town?

Mr. BALL. Yes, sir. I think I signed a telegram to Maj. Hitchcock, myself and another one or two there, assuring them of a location; that is, ground and also water, if they wanted to locate their mill there, which they did.

Mr. LEA. You are not an officer of the port commission at present?

Mr. BALL. No, sir.

Mr. LEA. Are you living at Toledo now?

Mr. BALL. Yes, sir.

Mr. LEA. What is your occupation?

Mr. BALL. Well, just now I am not doing much of anything. I have been on the jetty construction work down there, but just now I am not there. I am not doing anything just now; nothing particular.

Mr. LEA. Do you have any property interests down there?

Mr. BALL. In Toledo?

Mr. LEA. Yes.

Mr. BALL. I have a house I live in, and that is all.

Mr. LEA. Or have you got any timber?

Mr. BALL. Why, I have a place, but it is down at the mouth of the Siletz River, all the way down to the mouth to the bay.

Mr. LEA. How far from Toledo is sections 20 and 21 that you speak of?

Mr. BALL. About 12 miles; 11 or 12 miles.

Mr. LEA. In an air line, you mean?

Mr. BALL. By this route?

Mr. LEA. Yes.

Mr. BALL. Yes, sir.

Mr. LEA. The spruce along that Miller route has been worked out, hasn't it?

Mr. BALL. Yes, sir.

Mr. LEA. Do you know anything about the timber above Otter Rock on the coast side?

Mr. BALL. Well, yes; there is some spruce there; principally spruce.

Mr. LEA. Have you any figures in reference to that, or do you recall about what there is of it?

Mr. BALL. Above Otter Rock?

Mr. LEA. Yes; on the coast slope.

Mr. BALL. Well, no; I haven't. I failed to get any cruises on that. That is, in from the coast, you know, it is an inferior grade in a way along from the coast, and the main dividing ridge narrows up toward the coast going north from Otter Rock, so there is not as great a territory between the ridge and the coast above Otter rock as there is below Otter Rock.

Mr. LEA. Which way do you get into your timber?

Mr. BALL. The road goes down the coast. I go down there.

Mr. LEA. You come north, then, to your property?

Mr. BALL. Yes, sir.

Mr. LEA. Are you personally familiar, then, with this country in between the Siletz River and Otter Rock on the coast?

Mr. BALL. Between the Siletz River and Otter Rock?

Mr. LEA. Yes.

Mr. FREAR. You mean the mouth of the Siletz?

Mr. BALL. Well, I have been through there.

Mr. LEA. The mouth of the Siletz between there and Otter Rock?

Mr. BALL. Yes; I have been up and down it a good many times, but not so much in the timber.

Mr. LEA. I see. Now, where is the main body of timber in the Siletz River basin?

Mr. BALL. You mean as a whole?

Mr. LEA. Yes.

Mr. BALL. Well, it has been computed, or it has been said, that township 8, range 8—range 9—was the heaviest timbered township in the county. That is principally fir.

Mr. LEA. Now, where is that located, in a general way?

Mr. FREAR. In reference to Toledo, for instance—

Mr. BALL. In reference to Toledo? Well, that is up the Siletz River, in what we term there the Sunshine country.

Mr. LEA. South of tidewater or not?

Mr. BALL. No, sir; way above tidewater.

Mr. LEA. How far from tidewater?

Mr. BALL. By the river, I should say 60 miles. Of course, straight through it is only a short distance. The river is very crooked there.

Mr. LEA. Which side of the river does that lay on?

Mr. BALL. The river runs through the township corner.

Mr. LEA. You mean it is 60 miles from the mouth of the river by the river?

Mr. BALL. I think it would be farther than that. I think it would be 60 miles from tidewater.

Mr. LEA. How far would that be from Toledo?

Mr. BALL. From Toledo by the road it is 25 to 30 miles. I don't know exactly. It is something like that from Toledo by the road.

Mr. LEA. You lived down in that country a good while, did you?

Mr. BALL. Yes, sir.

Mr. LEA. You are not a logger, though, I understand?

Mr. BALL. No; I am not.

Mr. LEA. That is all.

Mr. FREAR. Would it be any nearer to this Otter Rock, of which they speak—Otter Rock is way over west, isn't it?

Mr. BALL. Yes, sir.

Mr. FREAR. So that is over on the coast?

Mr. BALL. Yes, sir.

Mr. FREAR. So that is farther away—this is directly east of that, or northeast?

Mr. BALL. This township?

Mr. FREAR. This township 8 you speak of.

Mr. BALL. It is northeast; yes.

Mr. FREAR. Yes; it is northeast. What did your people do down there in regard to this mill? You say you offered the site?

Mr. BALL. Yes.

Mr. FREAR. Free?

Mr. BALL. Yes, sir.

Mr. FREAR. Was it given free?

Mr. BALL. Yes, sir.

Mr. FREAR. What about the water? I have forgotten about that.

Mr. BALL. The water was also free.

Mr. FREAR. What was the cost of that, do you know?

Mr. BALL. The cost of the water system was \$50,000; about that.

Mr. FREAR. Did your people make that provision for that?

Mr. BALL. Yes, sir.

Mr. FREAR. How?

Mr. BALL. Sold bonds. The city put in the waterworks.

Mr. FREAR. The city bonded itself for \$50,000 to provide the water?

Mr. BALL. Yes, sir.

Mr. FREAR. For the Toledo mill?

Mr. BALL. Well, they was to have 400,000 gallons a day, was the contract.

Mr. FREAR. The Toledo mill?

Mr. BALL. For 25 years free. That was the contract, as I understand it, between the city and the Spruce Production Corporation.

Mr. FREAR. That is, for 25 years the water was to be free?

Mr. BALL. Twenty-five years.

Mr. FREAR. For 25 years the water was to be furnished free?

Mr. BALL. Yes, sir.

Mr. FREAR. And the city put in the pipes—the mains?

Mr. BALL. Yes, sir.

Mr. FREAR. And what did you have; a pumping plant there, or what?

Mr. BALL. No; we got the water from Mill Creek, with a 12-inch main we put in. It is a low-water pressure system, supposed to supply 1,000,000 gallons a day.

Mr. FREAR. What was the expense of the location where they put the mill, the site?

Mr. BALL. Between sixteen and seventeen thousand dollars. I don't exactly remember.

Mr. FREAR. So that it was between sixty and seventy thousand dollars that Toledo was assuming in order to help?

Mr. BALL. Yes, sir.

Mr. FREAR. To help the conditions there of the mill, and so on?

Mr. BALL. Yes, sir.

Mr. FREAR. Was the plant put in? Was the water put in?

Mr. BALL. The water is there; yes, sir. The water supply is there.

Mr. FREAR. And the site has been taken for the mill?

Mr. BALL. Yes, sir. The mill has been constructed—well, not finished but nearly completed.

Mr. FREAR. All right.

Mr. LEA. Let's see. Is the city supplied by the same water source?

Mr. BALL. The city had a separate water system before. Of course, the city intended to use some of the water, as she needed it. Of course, we hoped she would.

Mr. LEA. That is, from a different source?

Mr. BALL. Well, it is from the same creek, but it is a different system altogether.

Mr. FREAR. That is all.

Mr. MAGEE. Wait a minute. Now, the old mill was burned up, wasn't it?

Mr. BALL. Yes, sir.

Mr. MAGEE. The other mill; that was called the Fisher mill?

Mr. BALL. Yes, sir.

Mr. MAGEE. The Miller-Fisher mill?

Mr. BALL. The Fisher-Storey mill is what it was known as at the time it was burned up.

Mr. MAGEE. Now, there is a mill being rebuilt there now, isn't there?

Mr. BALL. Yes, sir.

Mr. MAGEE. Where this mill burned up?

Mr. BALL. On the same property, only a little farther up.

Mr. MAGEE. That is being constructed now?

Mr. BALL. Yes, sir.

Mr. MAGEE. Do you know what would be the capacity of that mill?

Mr. BALL. They claim, they told me, 150,000 feet in eight hours.

Mr. MAGEE. Eight hours?

Mr. BALL. Yes, sir. That is the way I understand it.

Mr. MAGEE. That would be, on three shifts a day, 450,000 feet a day.

Mr. BALL. That is the way I understand it; yes, sir.

Mr. FREAR. The cut-up plant is only 600,000.

Mr. MAGEE. Well, that mill going up, being put in operation, what will become of the Government mill, this big Government mill there?

Mr. BALL. Well, we hope it will run; that somebody will get it and run it, but I don't know whether they will or not.

Mr. MAGEE. You don't see any prospect of it now?

Mr. BALL. Well, just now I don't.

Mr. MAGEE. Well, if it is not operated where does the city come in with its large obligations?

Mr. BALL. We lose heavily.

Mr. MAGEE. You put in how much there; seventy or seventy-five thousand dollars?

Mr. BALL. Yes, sir; something like that; about seventy thousand, I think.

Mr. MAGEE. There is some talk of dismantling the mill, isn't there, and selling the machinery?

Mr. BALL. Yes, sir; and I am wondering what will become of the land; if they will give it back to the port; when they take the machinery, if they should do that, I am wondering if that would not be the proper thing to do.

Mr. MAGEE. In whom is the title to the land, do you know?

Mr. BALL. The Spruce Division Corporation.

Mr. MAGEE. It has not been a very profitable investment to the city, up to date?

Mr. BALL. Well, Mr. Magee, we didn't really enter into it for profit. They proposed to build a mill somewhere on the bay for the purpose of getting out airplane spruce.

Mr. MAGEE. Well, by profit I mean to advance the interests of the Government as well as the growing needs of your city?

Mr. BALL. We think yet—I think that if the war had continued it would have been a profitable business for the Government.

Mr. MAGEE. If the war had continued how long?

Mr. BALL. Well, the man who had it under construction, or the foreman there, Lieut. Schaff, told me a short time after the armistice was signed that in three weeks it would have been ready to run and operate.

Mr. MAGEE. Yes; but I say how long would the war have to continue for the mill to become a permanent advantage to the city?

Mr. BALL. Well, that I don't know. As I say, we didn't think so much of it as a profit to the city. I never did, anyway, but as a means to help.

Mr. MAGEE. Has the city, do you know, made any claim for return of moneys, or amount invested, or anything of that sort?

Mr. BALL. No; I do not. I have heard some talk of it, but I do not know whether they have or not. I have not been favorable to that, myself.

Mr. MAGEE. What have you been favorable to?

Mr. BALL. To just letting it go.

Mr. MAGEE. Let it stay as a loss.

Mr. BALL. We put up our money and let it go.

Mr. FREAR. That is your contribution?

Mr. BALL. Yes, sir; that is the way I figure it.

Mr. MAGEE. How was it planned, if you know, to get logs from this coast road down to the Toledo mill?

Mr. BALL. I do not know. I have understood always that they were intending to raft it.

Mr. FREAR. You are familiar with that location there?

Mr. BALL. Yes, sir.

Mr. FREAR. You live at Toledo?

Mr. BALL. Yes.

Mr. MAGEE. Go on and tell us what works have been constructed at Yaquina which would apparently indicate that it was planned to raft logs from Yaquina to Toledo.

Mr. BALL. They built bunkers—they call them bunkers—to dump logs, and with all indications, so far as I can see, of dumping the logs into the bay, the same as they did on the other side.

Mr. MAGEE. Did they build a trestle out into the bay?

Mr. BALL. Yes, sir.

Mr. MAGEE. How far do you think that trestle extends into the bay?

Mr. BALL. I should say four or five hundred feet; I don't exactly know.

Mr. MAGEE. Have they built wharves there?

Mr. BALL. Yes, sir.

Mr. MAGEE. Have they created a terminal there?

Mr. BALL. I could not say just what preparation they made. They had a warehouse and such things as that there. I don't think there is any machine shops. I think those were to be at Toledo.

Mr. MAGEE. Is there any connection there or junction with the Southern Pacific up to date?

Mr. BALL. Yes, sir; the tracks going right in—the Southern Pacific.

Mr. MAGEE. There is a junction there?

Mr. BALL. Yes, sir.

Mr. MAGEE. Are there any logs there now?

Mr. BALL. Well, they have been logging; I think there are. I have not been to Yaquina for quite a while. I think probably there are.

Mr. MAGEE. Logs in the boom?

Mr. BALL. In the boom, yes.

Mr. MAGEE. Towed down to Toledo?

Mr. BALL. Yes, sir.

Mr. MAGEE. There is every evidence that they planned to get them to Toledo by rafting from Yaquina?

Mr. BALL. Yes, sir; that is my understanding and the understanding of everyone down there that that was the idea. We did not know anything different.

Mr. MAGEE. You never heard anything different?

Mr. BALL. Never heard of anything different.

Mr. MAGEE. In getting the logs down from the coast road they would bring them down for how many miles to Toledo?

Mr. BALL. It is about 12 miles from Yaquina to Otter Rock.

Mr. MAGEE. To get the logs they have to build spurs?

Mr. BALL. Yes, sir.

Mr. MAGEE. That would be approximately 12 miles?

Mr. BALL. Yes; at least.

Mr. MAGEE. How many miles of rafting or towing?

Mr. BALL. Probably 10 or 11 miles; probably 11 miles.

Mr. MAGEE. As I understand, over this Miller-Fischer route which you have described, if that had been built they could have transported the logs by railroad directly to the mill. Is that right?

Mr. BALL. Yes, sir.

Mr. MAGEE. What necessity existed for building these 24 miles of road into the Blodgett tract with 550,000,000 of spruce lumber up in that Siletz country available?

Mr. BALL. Well, I never would have done it, but I felt, and I have not and I did not at that time say anything in regard to that while we was before them, for the reason that I did not want to interfere with their plan, so far as I was concerned. If they wanted to build that road and had money enough to build it, I did not want to interfere, and the subject never came up to me personally.

Mr. MAGEE. But can you see any necessity for building the railroad?

Mr. BALL. I can not; no, sir.

Mr. MAGEE. Particularly until the supply of spruce in the Siletz country had been exhausted?

Mr. BALL. I think it was the wrong thing to do, from my standpoint.

Mr. MAGEE. A useless thing?

Mr. BALL. Yes, sir; useless.

Mr. MAGEE. And it would have taken more material and length of time to get out the 550,000,000 feet of spruce lumber than in the Siletz country?

Mr. BALL. Yes, sir.

Mr. MAGEE. How much fir did you say was up in the Siletz country?

Mr. BALL. That is estimated at 9,000,000,000 feet.

Mr. MAGEE. I think that is all.

Mr. FREAR. Both roads, the one that was built and the one projected, brought the logs to Toledo—that is, with about 12 miles of rafting from Yaquina Bay?

Mr. BALL. Yes, sir.

Mr. FREAR. The purpose was to bring them all to this cut-up plant?

Mr. BALL. Yes, sir.

Mr. FREAR. So there was no choice, so far as the people of Toledo were concerned?

Mr. BALL. I believe not.

Mr. FREAR. What have you to say about the road that ran 23 miles up to Otter Rock as a feasible or easy way to get the logs down there, compared with this road running north?

Mr. BALL. There is no comparison between the roads, so far as business was concerned, and so far as time saving would be concerned, with the situation as it was.

Mr. FREAR. Under any circumstances?

Mr. BALL. Under any circumstances.

Mr. FREAR. Which would be the better?

Mr. BALL. The route over from Toledo to Siletz.

Mr. FREAR. That is, running north?

Mr. BALL. Running north.

Mr. FREAR. What was the cost of this new mill, or about, if you know?

Mr. BALL. I do not know.

Mr. FREAR. Who would know?

Mr. BALL. Mr. Story, one of the owners.

Mr. MAGEE. That mill when in operation will meet all the needs of of the locality, you think, so far as taking care of the lumber is concerned?

Mr. BALL. Well, there is two other small mills there, I know. Yes; I think they will take care of it for some time to come.

Mr. FREAR. The situation is this: If they cut 150,000 in an eight-hour day that would be 450,000 feet for three shifts?

Mr. BALL. Yes, sir; that is the way I understand it.

Mr. FREAR. If the cut-up plant had been built at a cost of approximately a million dollars, that was for 600,000 feet a day?

Mr. BALL. Yes, sir.

Mr. FREAR. With three shifts. That was to reach just a third more than this?

Mr. BALL. That might be more difficult cutting; I do not know.

Mr. FREAR. You do not know what the Story mill cost?

Mr. BALL. No.

Mr. FREAR. That is all.

Mr. LEA. Mr. Ball, practical millmen do not figure they can cut three times as much with three shifts as they can with one shift in daylight?

Mr. BALL. I do not really know, but I do not think they could. I am not a millman.

Mr. FREAR. That is conceded.

Mr. LEA. I wish you would state the reasons why you think if the war had continued the mill would have been profitable to the Government?

Mr. BALL. That is a fine mill for the purpose, I think. I have been so informed. I had very much confidence in the men who were overseeing this mill.

Mr. LEA. Who was overseeing it?

Mr. BALL. Lieut. Schaff was overseeing it. I got well acquainted with him, and we used to talk about it. There is very fine machinery in that mill, they claimed, and, for the purpose, very well constructed. That is what he claimed.

Mr. LEA. Where was he from?

Mr. BALL. He was from the Canal Zone, I think. He used to be an engineer down there on construction.

Mr. FREAR. It would have been a better proposition to have built two small mills with a total cut of 300,000 feet a day than to have built one mill for 200,000 feet a day on an eight-hour shift, for

speed or economy, or for any other purpose of that kind; do you know?

Mr. BALL. I could not say.

Mr. FREAR. You are not putting yourself as an expert; but this is conceded, I think, that lots more could be cut in an eight-hour day than could be cut in proportion in a mill with three shifts. That applies equally to a mill of 200,000 cut a day as well as it does to a mill of 300,000?

That is all.

(Witness excused.)

TESTIMONY OF WALTER S. HALL.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Do you live in the Siletz country?

Mr. HALL. Yes, sir.

Mr. FREAR. Whereabouts in the Siletz country?

Mr. HALL. At the agency.

Mr. FREAR. How long have you lived there?

Mr. HALL. 18 years.

Mr. FREAR. What is your business?

Mr. HALL. General merchandise.

Mr. FREAR. I will not go into the examination of the map and the general conditions, excepting to ask if you heard the description that has been given by the last witness?

Mr. HALL. Yes, sir.

Mr. FREAR. Have you any particular corrections to make to that statement?

Mr. HALL. A few.

Mr. FREAR. In what respect?

Mr. HALL. There was a point on the railroad survey. We had a survey in there and we got approximately 2 per cent going in and 2½ per cent coming out.

Mr. FREAR. That is what he stated, as I understood. You had another survey?

Mr. HALL. Well, part of it was over the same route.

Mr. FREAR. That is Porter's survey?

Mr. HALL. We had an individual survey.

Mr. FREAR. And your survey over the divide was 2 per cent going north and 1½ per cent going south; to carry out logs loaded there is 1½ per cent. That is practically the same as the Porter survey?

Mr. HALL. Yes, sir.

Mr. FREAR. Is there any other correction that you have?

Mr. MAGEE. Is that all the same route?

Mr. HALL. No; over the Olalla route.

Mr. FREAR. Was not that the easterly route he described?

Mr. HALL. Yes. I think Mr. Porter formed a junction with the Olalla route on one survey, and the other went up from Miller's road.

Mr. FREAR. That led up into the Siletz country and down into Toledo?

Mr. HALL. Yes, sir.

Mr. FREAR. And it was on nearly the same survey, I assume?

Mr. HALL. Yes, sir.

Mr. FREAR. As to the stand of timber up there; you have lived there for a great many years?

Mr. HALL. It is very good. I was guide there for two years for the inspectors and went over the country with them.

Mr. FREAR. What would you say as to the stand of timber, spruce and fir, in that immediate section?

Mr. HALL. At this road that tapped the Siletz River at tidewater, it would tap 700,000,000 feet of the best spruce in the West.

Mr. FREAR. At what distance?

Mr. HALL. Fourteen miles from the end of Miller's logging road.

Mr. FREAR. Twenty miles from Toledo to the logging spur?

Mr. HALL. Yes.

Mr. FREAR. That takes the spruce west of the divide?

Mr. HALL. Yes, sir.

Mr. FREAR. And do you know whether that fir could be accessible by railway?

Mr. HALL. Very easy.

Mr. FREAR. You are familiar with that country?

Mr. HALL. The easiest route in that country is into the Siletz timber, and the best grades to be obtained, and only 3 or 4 small bridges.

Mr. FREAR. That is, you mean this route you speak of is an extension of the Miller road?

Mr. HALL. The same.

Mr. FREAR. They run up for a mile on each other's surveys.

Mr. HALL. Yes, sir; to come at the Siletz River.

Mr. FREAR. The stand of fir amounts to about what?

Mr. HALL. It is conceded to be 18,000,000,000 feet north of Yaquina there, and in that section there is about 10,000,000,000 feet of fir, I think. That entire route is a logging road, because they could use the Siletz River for 30 miles as a feeder.

Mr. FREAR. Could it be reached by way of the Pysht and Otter Rock?

Mr. HALL. No, sir. In going up to Otter Rock you run up against a bluff of 550 feet.

Mr. FREAR. They contemplated building a tunnel there?

Mr. HALL. Yes, sir; about 4,000 feet of tunnel.

Mr. FREAR. To go north?

Mr. HALL. Yes, sir.

Mr. FREAR. You were with a party that came up from Toledo to see Mr. Hitchcock?

Mr. HALL. Yes, sir.

Mr. FREAR. Please tell the committee just briefly what occurred on that trip.

Mr. HALL. Some time in April I was appointed on the committee from the port of Toledo to come into Portland and bring all the data we could get and explain to the Spruce Division the most feasible way we thought of getting spruce in the shortest time for airplane stock, and we went to the Yeon Building and met a Mr. Flannigan, I think, an officer inside the door, and we asked to see Col. Disque, and he sent us up to Maj. Hitchcock's office, and we asked for Col. Disque, and Maj. Hitchcock informed us that he was the man who handled that part of the proceedings, and that Col.

Disque was busy, but he would take the matter up with us. So we explained the situation in that country and our ideas about the railroad, and I made the offer of our survey and the line of the route, if they wanted it for the Government, for what it had cost us, up the Olalla into the Siletz country, and we did not have any cruises with us at that time, just approximately the amount of spruce that could be adjacent to this road. But they did not seem very enthused about building it, although they had soldiers in the Siletz and was building plank roads down the Siletz River.

Mr. FREAR. For what purpose?

Mr. HALL. To haul out rived spruce.

Mr. FREAR. With what kind of conveyances, what means?

Mr. HALL. Auto trucks, they was supposed to be.

Mr. FREAR. How many soldiers did they have up there?

Mr. HALL. 150 men. And then we explained this route from Miller's logging road and told him about how much spruce they could get out by building 14 miles of road, and how they would have the Siletz River to log on for 15 miles above this junction and use the tide coming up from Siletz bay for 15 miles to float the logs down to the railroad. Maj. Hitchcock said for us to go home and get detailed cruises or survey cruises of this spruce in that country and they might think it over, but, he said, all the information he had indicated there was no spruce in Siletz.

Mr. FREAR. No spruce in Siletz?

Mr. HALL. Yes.

Mr. FREAR. Where did Maj. Hitchcock come from, do you know?

Mr. HALL. I do not know; prairie country, I guess. He and Col. Disque came down to Toledo and hired an auto from Graham's livery barn and drove over the Siletz, down the Siletz River to Maury's place. They went along the banks of the Siletz River in the scrubby spruce where the road was and never got out of the auto to go into the timber, and they came out and reported there was no spruce here. We came home and Mr. Ball and Mr. Wade and I was on the committee, and we got busy with the timber owners on the cruises and got survey cruises and make a map which I think Mr. Ball showed a few minutes ago and then we returned to Mr. Hitchcock's office. He evidently had forgotten about us and when we came in he turned around and said, "What are you fellows doing here?"

Mr. FREAR. You were sort of interlopers?

Mr. HALL. Yes, sir; we were interfering with plans, it seemed like; and we took and showed him the map, and showed him the survey cruises. Meanwhile, he had sent Mr. Benson down to the Siletz, and I was on the committee that was out with Mr. Benson, and we showed him the route into Jaybird Creek, and we was out with him one day, and advised him to build the road around the Siletz River at a water grade, but he thought it was better to go up Jaybird Creek; but we had not investigated that route yet, and he left us, and said if we would investigate that the next day he would come back and go over it with us, and to report to him at Newport. Mr. Morgan and Jim Derrick and I went out the next day and ran levels over that, and found a pass of 450 feet with a cut through that shortened the road, where we could get about a 2

per cent grade. We went to Newport to find Mr. Benson, but we could not find him; he was not around the hotel there, and nobody knew where he was, and in a day or two we went down again to Newport and could not find him there, and he never called us up, or never said anything about it. We never saw anything more of Benson in that country.

Mr. FREAR. What was done then?

Mr. HALL. We came back to Portland, then, with our cruises and Mr. Benson, and took him before Col. Disque and asked him what decision they would make. We told him about our pass and what we had found there, and he said they could do nothing for us. He said they had decided to build that road from Yaquina Bay to Otter Rock.

Mr. FREAR. By Newport?

Mr. HALL. Yes, sir.

Mr. FREAR. Did he give reasons?

Mr. HALL. They told us their cruises had talked of 150,000,000 feet of spruce in there, and I said, "What is the reason of building 15 miles for 150,000,000 feet when you can build 14 miles and get 7,000,000,000, and you can use the Siletz River, and it is a hand job; you can set your donkeys on the edge, and you can put them in the water every way. Maj. Hitchcock said the people of Newport would wire the President if they did not have the road up to Otter Rock; that they had to build that road.

Mr. FREAR. That would be a pretty serious proposition, to wire the President.

Mr. HALL. I told him the people of Toledo and Siletz would wire the President, too; but that did not have any effect upon him. They said they had come to that decision, and there was no use arguing; that that was what Amos Benson had decided upon, and they had left it practically all to him.

Mr. FREAR. Was that country new to Benson, or had he been there frequently?

Mr. HALL. He had never been in the Siletz, to my knowledge.

Mr. FREAR. Had never been in the Siletz woods?

Mr. HALL. No, sir.

Mr. FREAR. And they sent him down on one trip to decide?

Mr. HALL. Yes, sir. He had been over on the coast side, for Otter Rock, but never in the Siletz, to my knowledge.

Mr. FREAR. Around the Newport side, where they were going to send a telegram to the President?

Mr. HALL. Yes, sir. Then this last trip was about the 1st of May, 1918, and in August, while I was at home, one day there was a big Cadillac eight drove up full of Army Officers, and a major jumped out and came over and wanted to know if my name was Hall, and I told him it was, and he said he wanted to interview me. In the meantime they had sent a private by the name of Davis to investigate the proceedings of the Warren Spruce Co., and it seemed like Davis had told so much truth that they could not stand for it and they wanted to check him up to see if he was lying or telling the truth, and they spoke with me an hour and a half on what Davis had done down there, and then he said he was from the Intelligence Office and wanted to find out what spruce there was in the country.

Mr. FREAR. Who was that?

Mr. HALL. Maj. Reardon, and I told him I would take him into the spruce tomorrow morning and stay with him as many days as he wanted to, that I was familiar with every section in that country and I have been over the four townships and every section in each township, and he said that Maj. Hitchcock and Col. Disque had went down to Mowery's but they came back and reported there was no spruce. So the next day my brother took Maj. Reardon and myself in the car and we went down the Siletz River, to what was known as the Chitwood camp, where the spruce division had built a big camp and brought the lumber down and built 25 houses and abandoned them. We got off at Chitwood camp, and I had Maj. Reardon back in the timber for a mile on the bench where that spruce grew, and showed him some nice spruce and took him down 2 miles and then brought him up the river about a mile this side of Mowrey's, where A. J. Johnson was logging with a donkey engine, and I took him out in the woods and they had two trees they had just felled, spruce trees, 8 feet through at the butt, and 200 feet to the first limb, and they had it sawed into 20 foot logs, a donkey engine was rolling them out, and Maj. Reardon got down and tried to count the rings, and they were so fine that he could not count them, and he said, "I wish we had such spruce as that at Vancouver to make airplane spruce out of it."

Then we hired a man with a boat and took him around the big bend in the Siletz River, and every mile I took him out of the boat and took him up in the timber and showed him spruce that stood as thick as any timber could stand, and ranged from 4½ feet in diameter to 14 feet. I brought him up as far as the Misc place and showed him along the river three or four different places each side that stand of spruce. Then we took the old mail carrier's trail from the Misc place out to Ojalla, out near Camas Prairie, as they call it, on a farm. We got out there about dusk and Maj. Reardon was all in.

Mr. FREAR. Were you walking?

Mr. HALL. Yes, sir. He said we would have to phone in town and get a car to come out and get him, he could go no further. So I phoned into town and my brother came out there and got us. Maj. Reardon said, "Hall, I have seen more spruce in this one day than any other Army officer that has ever been in the woods." He said, "You never told half the truth, as it appears to me." We went to the hotel and I ate supper with him that night, and he says, "Now, I don't know anything about what they will do here, I am under Col. Disque, but I am going to put in a report, and if they pay any attention to it they will be building a railroad in here before October to get some of this spruce out. That was Maj. Reardon's decision when he got through with me.

Mr. LEA. What date was that, do you recall?

Mr. HALL. That was in August sometime, I do not know the exact date. About the first of August, though.

Mr. FREAR. Did they ever build a road in there?

Mr. HALL. No, sir.

Mr. FREAR. What else have you in mind, Mr. Hall, if anything, along the same line? Was that the last you saw of any officer down there?

Mr. HALL. Yes, sir.

Mr. FREAR. You spoke about Davis, that he had made some report in the Intelligence Department about conditions that he found down there, and you say he did not—I did not quite get your reply—that he did not state it all.

Mr. HALL. Well, he stated so much truth that they wanted to investigate to see whether he was telling the truth.

Mr. FREAR. If he was telling the truth what is there that you have observed down there in regard to this operation by the Warren Spruce Co. or any other companies doing business down there in trying to get out spruce for the Government?

Mr. HALL. I observed that it was the most extravagant way they could possibly handle it.

Mr. FREAR. Just explain to the committee in what respect.

Mr. HALL. Well, in several respects. First, the first was when they first brought the boys in there to get out spruce they brought in 150 soldiers and encamped them near our store, about a mile from our store.

Mr. FREAR. Your store is at Siletz?

Mr. HALL. Our store is at Siletz, and they camped near the steel bridge on the bank of the Siletz River. They came and bought some tools there and started these fellows out to cut out trails. They was going west of Siletz over in 10-11 and put in a headquarters camp. That was Capt. Millar.

Mr. FREAR. How did they expect to get that timber out at that time without a railroad?

Mr. HALL. This was an engineering crew. That was the first bunch that came in there. They wanted to investigate our railroad proposition, so my brother and I went out and showed them the right of way, and that is how we became familiar with it.

Mr. FREAR. That is this survey of which you have spoken?

Mr. HALL. Yes, sir. We went over to the camp and the engineer from Portland, Capt. Millar, and us, we got out from camp about 200 yards and Capt. Millar wanted one of these small cruiser's axes that he had forgotten, and he yelled to a soldier there to bring him a hand ax. The soldier went into the tent and brought out a mattock and came half way out to where we was, and Capt. Millar says, "Say, that is not a hand ax; go back and get me a hand ax." He went into the tent again and brought out a double-bitted ax and started out with that, and then Capt. Millar yelled to the cook there to give that fellow a hand ax and send him out with it. So the cook gave him a hand ax and sent him out there. When he came up where we was this surveyor from Portland says, "You don't seem to know what a hand ax is." He says, "No; I do not." He says, "Where are you from?" and he says, "Philadelphia." That was the class of men they had, from South Dakota and the Middle West in there to survey—they did not know what a hand ax was. We had some of them stay with us overnight, and one of them was from Worcester, Mass., and one from Philadelphia, and one from Kentucky, and one from South Dakota.

Mr. FREAR. That is, there were not very many logs to be found in either one of those particular places; in South Dakota you have got to travel quite a good many miles for lumbering operations.

Mr. HALL. Exactly. The next day they started out with three crosscut saws to cut logs out of the trails, windfalls that fell over

the trails in the winter time, and at 10 o'clock McDonald, the cruiser, came into the store swearing and said they had every saw stuck in the logs and couldn't get them out, and he wanted to know if he could help hire some Indians to cut trails. We got about 10 boys to go and sent them out there and they cut all the rest of the trails and helped pack up to camp. Those fellows didn't know how to pack. We helped them secure 15 pack ponies and put Indian boys there that knew how to pack, and they packed the stuff out to camp. They packed oranges and everything else out there to feed those fellows on, cases and cases of oranges, and cases of eggs, etc. Well, I have been in the logging business since I was 18 years old, and I have never seen any oranges in a logging camp yet, and not very many eggs, where you have to pack them in on a pack horse.

Mr. FREAR. You were not used to the innovations that were brought about by a company that was working on a cost-plus basis?

Mr. HALL. No; I had to sell a lot of thrift stamps and war-savings stamps through the post office to help pay the bills.

Mr. FREAR. I think you are right about that. How about the road north from Miller's; how far would it have had to have gone to have reached a good supply of spruce and fir?

Mr. HALL. Well, if I had that map here I could show you.

Mr. FREAR. I can give you the map.

Mr. HALL (indicating on map). They would get in the spruce at the end of Miller's logging road, get some good spruce there, but it was not as thick a growth as stood farther down. If they went over the ridge three-quarters of a mile from the end of that road they would have got a good body of spruce.

Mr. FREAR. That is right beyond the end of where the Miller's road had been extended up near the top of the divide?

Mr. HALL. Yes, sir.

Mr. FREAR. Just give me the section there, mention the section, township, and range where they would have struck the place. I think that was in 17, the divide.

Mr. HALL. Yes; and section 17 is where they are now, I think, and if they just went over the divide into section 8 and right down Mill Creek to the Siletz River there is a million feet of spruce stands in on Mill Creek, and a million and a half on Dewey Creek. We showed Maj. Hitchcock this when we were up before and told him he could be logging spruce every day after he got over the divide clear down to Siletz River, until he struck the head of the tide. We showed him by our cruises of every one of these creeks, that by running short branches up the creek he would get a million and a half feet of spruce.

Mr. FREAR. How far is that from the Miller road extension?

Mr. HALL. About a mile and a half.

Mr. FREAR. About a mile and a half from the extension of the Miller road, and how much fir would you get in there?

Mr. HALL. Well, in that country about one-third of it is spruce and the other two-thirds is fir and a little hemlock mixed in with it.

Mr. FREAR. So that you would get a million and a half—how much spruce did you say you would get?

Mr. HALL. Two million and a half on these two creeks and about 10,000,000 feet of fir.

Mr. FREAR. Right there, within a mile and a half?

Mr. HALL. Right there, within a mile and a half; yes, sir.

Mr. FREAR. And then the spruce continues north?

Mr. HALL. Yes. There is a place here, by going up Dewey Creek. That was the road we tried to look out when Mr. Benson was there. If we followed the Siletz River around it would be about 2 miles and we wouldn't strike any spruce at all, but we would cross into Jaybird Creek, and we would strike several million feet in there. That was the contention when we went to look out this road, this lower pass, when Mr. Benson left us. If we could go up Dewey Creek we would get spruce and then follow in on this fork of Jaybird. We would have a continuous string of spruce all the way down there.

Mr. FREAR. I think you testified generally to the amount of spruce and fir up in the Siletz.

Mr. HALL. Yes.

Mr. FREAR. I thought I had asked you that. That is something like 700,000,000, counting that over on the divide.

Mr. HALL. Well, 700,000,000 feet is a low estimate. I claim, through cruising all through here and running compass, there is over a billion feet of spruce that can be brought out over that railroad from the Siletz River Valley, without counting this at Otter Rock at all.

Mr. FREAR. You have lived in there, as you say, a good many years?

Mr. HALL. Since 1901.

Mr. FREAR. That is practically the center of the spruce country, is it not?

Mr. HALL. Yes.

Mr. FREAR. And the fir is—

Mr. HALL. I ran compass in there for the different cruisers, and I led four different inspectors all through the woods.

Mr. FREAR. You made a statement in regard to the first party that came out there to your place. Did you observe other parties who came out there—what they were doing?

Mr. HALL. They were building plank roads there.

Mr. FREAR. For what?

Mr. HALL. They were going to haul this spruce out by truck—the rived spruce—and they came into Siletz and took over the sawmill and sawed out three or four million of plank and laid it down, and then they shipped stuff, thousands of feet of lumber, floated it, rafted it, down the Siletz River to the Chitwood camp, and made a big camp there, and sent 20 boys down that line to Chitwood camp to get things ready to move in there. And that night they got a telegram from somewhere, and they pulled them all out of there and took them out of Siletz and took them to Yaquina. They said they were going to start building a road from Yaquina.

Mr. FREAR. Did they ever use this plank road?

Mr. HALL. No, sir; they never hauled a truck over it that I know of.

Mr. FREAR. What was the general character of the work there—that is, I mean, was it constructive? Just explain to the committee what they were doing there, the Warren Spruce Co., and their operations around the Siletz that you observed.

Mr. HALL. Well, they did not do very much of anything for the amount of men they had in there.

Mr. FREAR. How many men did they have?

Mr. HALL. They had 150 men in there.

Mr. FREAR. At that time?

Mr. HALL. Yes.

Mr. FREAR. Did they have more later, or did you observe anything?

Mr. HALL. They planked a little road there; worked in the mud and planked it, and had men working in the sawmill.

Mr. FREAR. Where was the sawmill?

Mr. HALL. At the agency there on the Siletz River.

Mr. FREAR. They used that for making these planks?

Mr. HALL. Yes, sir; and then they had a sort of a logging camp there, as they logged about 500,000 feet, I guess.

Mr. FREAR. What did they do with that; saw it?

Mr. HALL. They sawed it into planks and built roads with it, and then they had a small crew of men there most all that summer sawing and logging and hauling it out to Miller's logging camp and shipping it to Yaquina for construction work on those other roads.

Mr. FREAR. This last summer; 1918?

Mr. HALL. 1918.

Mr. FREAR. Oh, during the war?

Mr. HALL. Yes.

Mr. FREAR. Did you ever see any other operations of these people up there; that is, as to the question of whether they were managing things right, in accordance with the ordinary business methods?

Mr. HALL. No; I did not. I did not get out in the woods and investigate anything.

Mr. FREAR. What would you say about the building of this road around by way of Otter Rock to have gotten into this spruce country, as a practical proposition?

Mr. HALL. It is the most impractical proposition you could imagine or could have figured out in that country. When we were in there before with Maj. Hitchcock we showed him where if he built a spur up from Wessels, the South Creek on Wessels's place, he could reach this same bunch of timber.

Mr. FREAR. You mean the same bunch of timber that they could reach from the coast line?

Mr. HALL. Yes.

Mr. FREAR. Over the Divide?

Mr. HALL. Over the Divide, running up over the Divide, and haul that up on top of the ridge there, within 2½ miles. He said that that was impracticable, because the first mile of road up that bluff would cost thirty-eight or forty thousand dollars. We offered, if he would go in there—he was on the wrong creek when he was talking that way—we offered to put a man in there, Jim Derrick, ex-county surveyor, and show him a road up the creek south of there where he would get in on a much lower grade and a much easier place to build, but I don't know as they ever investigated that.

Mr. FREAR. Forty thousand dollars a mile was enough to startle almost anyone who wanted to build a logging road up there, apparently, even to Col. Hitchcock?

Mr. HALL. Well, it seemed at that time it was.

Mr. FREAR. That was before they got the report on this road as built?

Mr. HALL. Yes, sir.

Mr. FREAR. I think that is all.

Mr. LEA. Were you ever engaged in the logging business?

Mr. HALL. Yes, sir.

Mr. LEA. Down in this section?

Mr. HALL. We had a Government sawmill at Siletz for five years, and we logged our own timber and run the mill. We had the first shingle mill in Lincoln County. Then my brother and I worked for Alexander & Edgar Logging Co., of Iron River, Wis., for three years before we came West.

Mr. LEA. Was your object in getting this survey with a view of trying to get a road into this timber?

Mr. HALL. No; not a particle. My main object was to come down here and tell these men——

Mr. LEA. I say, this survey that you spoke of.

Mr. HALL. The right of way we had in there?

Mr. LEA. Yes. I may have misunderstood you. I understood you to say you had a survey made in the Siletz Country.

Mr. HALL. Yes, we had; from Toledo into Klamath Creek on the Siletz River.

Mr. LEA. That was a railroad grade, wasn't it?

Mr. HALL. Yes.

Mr. LEA. What I meant was, what was the object of that survey; did you expect to build a railroad?

Mr. HALL. No, sir.

Mr. LEA. Or get somebody to do it?

Mr. HALL. We had a power dam at Klamath Creek on the Siletz River, and we were figuring on putting in electric power there and running a road out to Toledo.

Mr. LEA. Making an electric road?

Mr. HALL. Yes.

Mr. LEA. Rather a good many people live over there in Siletz?

Mr. HALL. Yes; that is a dairy valley and surrounded by timber.

Mr. LEA. A farming country in there, too?

Mr. HALL. Yes, sir.

Mr. LEA. Do you own any timber over there?

Mr. HALL. Yes.

Mr. LEA. How much?

Mr. HALL. We homesteaded in there, and altogether we own about 700 acres, my brother and I.

Mr. LEA. Is that in a timbered section?

Mr. HALL. Yes.

Mr. LEA. Approximately how much timber do you own?

Mr. HALL. I own about 27,000,000 feet in there.

Mr. LEA. That is, of various kinds, is it?

Mr. HALL. Yes.

Mr. LEA. How large was this Chitwood camp?

Mr. HALL. Well, it was built for 150 or 200 men, I think. There were about 20 buildings put up there.

Mr. LEA. What kind of buildings were they?

Mr. HALL. Made out of rough lumber.

Mr. LEA. Were they entirely of wood or did they have canvas tops?

Mr. HALL. Some of them had canvas tops. They were made of wood frames, and the cook house and dining room were made entirely of wood.

Mr. LEA. Ordinary logging cabins?

Mr. HALL. Yes.

Mr. LEA. What was the way of getting in there, was there a wagon road to this camp?

Mr. HALL. Yes, sir. There was a mail road that runs down to Maury. There was a star mail route down the Siletz.

Mr. LEA. They had to haul out by track or wagon?

Mr. HALL. Yes.

Mr. LEA. This was a riving operation, supposed to be?

Mr. HALL. That is what it was to be; yes.

Mr. LEA. That is all.

Mr. MAGEE. Were there any unusual difficulties in getting into the Siletz Reservation from Toledo, either over the Olalla route or the Miller route?

Mr. HALL. No, sir; nothing at all. Over the old Olalla route the divide was very sharp, and with a 60-foot cut there we would get in there on a 220-foot raise. That is the lowest pass in the Siletz Valley.

Mr. MAGEE. Now, are you speaking of your own observation and knowledge?

Mr. HALL. Yes, sir; of our own engineer's notes, and I was there when they were made.

Mr. MAGEE. I mean, you have gone over the country?

Mr. HALL. Yes; both routes.

Mr. MAGEE. You know just what you are talking about?

Mr. HALL. Yes, sir.

Mr. MAGEE. You have lived in that vicinity how long?

Mr. HALL. Eighteen years.

Mr. MAGEE. How far is Siletz from Toledo?

Mr. HALL. About 10½ miles north.

Mr. MAGEE. I think that is all.

Mr. LEA. Where does that main body of spruce begin, with reference to Siletz?

Mr. HALL. It begins in these two creeks here, the Dewey Creek and Mill Creek, right straight south of Siletz. They flow into the Siletz River.

Mr. LEA. How near to Siletz is that?

Mr. HALL. That is about a mile and a half south of Siletz, and from that on clear down the river.

Mr. MAGEE. You have estimated here a billion beet of spruce lumber?

Mr. HALL. Yes.

Mr. MAGEE. Do you think that is a high estimate?

Mr. HALL. No; I do not.

Mr. MAGEE. Others have estimated it here at 550,000,000 feet.

Mr. FREAR. Seven hundred million altogether.

Mr. MAGEE. On the east side. Are you speaking of the east side, or the total?

Mr. HALL. That is a billion feet the Siletz River would control, flowing down the Siletz River to this railroad junction up the river. They do not take any of this timber in here north of the Siletz River. They take in this square bunch in here, but there is lots of good spruce up Cedar Creek and Eucher Creek that they do not consider in all that.

Mr. MAGEE. You estimate a billion feet; do you take into consideration the 150,000,000 feet on the coast?

Mr. HALL. No.

Mr. MAGEE. Or within reach of the coast road?

Mr. HALL. No, sir; I do not consider that at all.

Mr. MAGEE. You think that is a fair and reasonable estimate?

Mr. HALL. I do.

Mr. MAGEE. Based on your own observation and knowledge?

Mr. HALL. Yes, sir. And another thing, these estimates, that is on these maps, was made by people that was buying timber, and they were made very low, because they was not giving the full value of the timber.

Mr. MAGEE. Have you been through this country yourself?

Mr. HALL. Yes.

Mr. MAGEE. You have seen the timber?

Mr. HALL. I homesteaded in there and I worked in there for two years with special agents that were investigating the homestead proposition in there, and I know every trail in there.

Mr. MAGEE. You have been over the whole ground?

Mr. HALL. Yes.

Mr. MAGEE. That is all.

(Witness excused.)

TESTIMONY OF B. GILDNER.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Your full name, please.

Mr. GILDNER. B. Gildner.

Mr. FREAR. Where do you live?

Mr. GILDNER. Portland.

Mr. FREAR. What is your business?

Mr. GILDNER. Well, I am in the timber business.

Mr. FREAR. How long have you been in the timber business?

Mr. GILDNER. About 20 years, or more.

Mr. FREAR. Have you lived here all that time?

Mr. GILDNER. Yes; all the time.

Mr. FREAR. You are familiar with the Siletz country, Toledo, and conditions down there?

Mr. GILDNER. I am.

Mr. FREAR. You have done business down there?

Mr. GILDNER. Yes; for about 20 years.

Mr. FREAR. Whereabouts?

Mr. GILDNER. Well, practically in the basin; that is, what we call the lower basin.

Mr. FREAR. You are familiar with this railroad known as the Miller road?

Mr. GILDNER. Yes.

Mr. FREAR. That runs north?

Mr. GILDNER. Yes.

Mr. FREAR. And with the condition of the timber north of that place?

Mr. GILDNER. Oh, yes.

Mr. FREAR. It has been described as a road running north about 5 miles, or thereabouts, to its northerly extension, 5 or 6 miles.

Mr. GILDNER. Yes.

Mr. FREAR. That is about right?

Mr. GILDNER. Yes.

Mr. FREAR. Then the Wessel line branches off a short distance above the north terminal; branches off to the left, about a mile or so?

Mr. GILDNER. Yes; it runs off. It was an old spur that run in there. They were logging in there and pulled out part of it.

Mr. FREAR. That was the Wessel spur?

Mr. GILDNER. That was the Wessel spur.

Mr. FREAR. The north line is extended up almost to the divide?

Mr. GILDNER. Yes.

Mr. FREAR. You are familiar with that; are you?

Mr. GILDNER. Yes.

Mr. FREAR. Are you familiar with the surveys?

Mr. GILDNER. Yes; I am quite familiar with them.

Mr. FREAR. What do you know about it; go on and describe in your own way your knowledge, and where you got it.

Mr. GILDNER. Well, in January, the latter part of January, or February, when the Warren Spruce Co. took the contract I was asked by them to act as kind of—to give them advice and information that I had regarding the Siletz and the conditions of getting things out of there, and advise them about what to do; what would be the best way.

Mr. FREAR. 1918?

Mr. GILDNER. 1918; about the latter part of January, I think. I think that is about the time it was. So I went in there and I asked a man to go along with me who was also very familiar in there, familiar with the locations, and that was Mr. Morgan.

Mr. FREAR. Mr. Morgan, who has testified before this committee?

Mr. GILDNER. A. W. Morgan; yes; he testified here. And the Warren Spruce Co.'s man, Dunkhill—he was their road man—he went with us. We went in there in regard to a road, so they could get out this timber, and I went to advise them. I advised also with Mr. Kumpe, their engineer; he was their head engineer; he had charge of the Warren Spruce Co.'s business. The Warren Spruce Co. was anxious then to make a report to the Spruce Production Board, to Mr. Hitchcock and Mr. Disque. So I gave my information regarding the quantity of timber and also the different routes that I had myself personally, and with the knowledge of other people, knowing how to get there—we were figuring on a railroad coming out of there. I was purchasing timber, I bought timber for a great many people, and it was one of the things that was in my line to know how we were going to get out of there. So I pointed out the different locations and how to get this spruce out, and if they wanted it immediately what to do. Then Mr. Kumpe made a full report of that, I think, to Col. Disque at that time.

Mr. FREAR. This was about January, you say?

Mr. GILDNER. The latter part of January, probably the 1st of February. So I gave him all this information, and a good deal of this information he put in this report, and, of course, it was—they were to build a road, that is, my plan was this, to go over from the Wessel spur, which was then, the rails were laid down, I should judge, half a mile, and then it was a very level road and they could have built a spur in there for an additional mile. That would have taken them right into the spruce.

Mr. FREAR. The Wessel route?

Mr. GILDNER. In the Wessel route. I figured that in 20 days we could be supplying any ordinary quantity of spruce from that place.

Mr. FREAR. What do you mean by any ordinary quantity of spruce?

Mr. GILDNER. I would judge it could have been coming out fifty, seventy-five thousand feet a day, because it was an easy matter; it was a simple proposition; the land was perfectly level—the road; there had been a road in there.

Mr. FREAR. That is, along Wessel's road?

Mr. GILDNER. Yes; and then extend that spur in there for another half mile, and then extend it on, extend it on for another mile, as you are getting the spruce out, and then go up to the divide, which runs then north and south; here is the main divide that divides between the coast and the east and west side; and there is a grade running up there—it is quite a little sharp grade—but they extended the spur up there to the top of the divide.

Mr. FREAR. Of Wessel's?

Mr. GILDNER. Yes; what we call the Wessel spur; yes. They logged up in section 23, and then over—well, I was over there a short time ago and I saw where they logged over on the other side of the divide, where they are building that road up the coast to get that, and they are getting it ahead of that; they are in there now.

Mr. FREAR. That is, this spur that runs 6 or 7 per cent—is that the spur you mean; comes from the coast line?

Mr. GILDNER. No. I mean the spur that runs through the Wessel's and runs right up there. It is quite a steep grade, too. I would judge it would go about 7 per cent.

Mr. FREAR. That is, going west there?

Mr. GILDNER. That is going west, and it goes right to the top of the divide, within, say, 50 yards.

Mr. FREAR. That is just a spur track?

Mr. GILDNER. That is a spur track; yes; and they logged then, pulling their logs up—which is the natural way for them to pull the logs—pull them up hill and then load them and bring them down.

Mr. FREAR. What about the north line; that is, that Fisher or Miller line? How far would that have to go through to strike spruce?

Mr. GILDNER. Of course, the Miller people would get us the spruce, but the quality on the lower part of this spur, starting out there in section 17 and so on, the spruce as a rule was not a good quality.

Mr. FREAR. But if they had run it—how far would they have had to run it to get good spruce?

Mr. GILDNER. They would run into 8.

Mr. FREAR. That was just suggested by Mr. Hall.

Mr. GILDNER. Well, I would say they could get quite a little quantity of spruce in 31 and 30, in the next township.

Mr. FREAR. How far would that be?

Mr. GILDNER. That would be about a mile and a half or 2 miles.

Mr. FREAR. That is, an extension of a mile and a half or 2 miles would have got it into good spruce.

Mr. GILDNER. That is tolerable good spruce, and then to take on further—would take another $2\frac{1}{2}$ miles, which would get them in, I presume, as fine spruce as grows. I think it was the highest percentage of spruce that was cruised by the Spruce Division, I think it was the highest percentage of riving spruce that was cruised.

Mr. FREAR. If they had extended the road up the Porter survey, with which you are familiar, I assume?

Mr. GILDNER. Oh, yes.

Mr. FREAR (continuing). Or other surveys that were brought up there, how far would they have had to have gone to get into this heavy spruce?

Mr. GILDNER. Well, I would judge they would have about 6 miles.

Mr. FREAR. About 6 miles?

Mr. GILDNER. I think so.

Mr. FREAR. Beyond the end of the Miller road.

Mr. GILDNER. Yes. Maybe 7, 6, or 7, I don't know. The curvature would have something to do with it; would be about 6 or 7 miles, would get them into sections 20 and 17 and 18, which is the very highest grade of spruce I think that there is—that you will find anywheres, that is down there, runs, I think, about 25 per cent—25 per cent of airplane stock.

Mr. LEA. Where is that, you say?

Mr. GILDNER. That is in sections 17, 18, and 20, up here in 9-10. You see it is right in here. The railroad survey, the Jaybird Creek runs right through that.

Mr. LEA. Is that a part of the Jaybird section that you refer to?

Mr. GILDNER. Yes; the Jaybird runs right through section 18.

Mr. FREAR. What is the amount of spruce, in your judgment of course, we have had other men that have testified, but what is your judgment of that, that could be reached by a 20-mile road from Toledo, of which 5 miles already has been constructed—a 20-mile line road up the Siletz, as has been pointed out here, as planned by Porter's survey and others?

Mr. GILDNER. Well, I am under the impression—the cruises that I have made on this line over here on this side of the divide—

Mr. FREAR. That is on the west side?

Mr. GILDNER. That is on the west side of the divide, which can be reached easily by this Wessel spur, that is an easy matter of two miles more, or a few miles, at the end of this Wessel spur, would have taken all this timber out.

Mr. MAGEE. That Wessel spur what is the source of it, where does it start off?

Mr. GILDNER. It starts in at the spur of the Miller-Storey Railroad as you go up about 4 miles, and then you come to a Y, and one goes to the Wessel spur and one goes—one goes to the right and one to the left, and that timber there could have been taken out there; I would imagine it would be about 150,000,000, possibly 175,000,000.

Mr. FREAR. That is on the westerly part of the divide?

Mr. GILDNER. Yes.

Mr. FREAR. And that would be near Otter Rock?

Mr. GILDNER. Well—

Mr. FREAR. Or up toward Otter Rock?

Mr. GILDNER. Now, the stuff that is near the coast, until you get over the first and second divide from the coast, you understand, is not merchantable spruce.

Mr. FREAR. Not for airplane purposes.

Mr. GILDNER. Well, for practically anything.

Mr. FREAR. They say they don't like the tidewater—that spruce.

Mr. GILDNER. No, it isn't tidewater in there; it is high. But the elements of the ocean have simply deteriorated the timber to such an extent, it is so spikey and limby that it is really not much merchantable stuff in it. Until you get back away from the wind and away from the elements of the ocean—you have got to get 2 miles or a mile and a half to 2 miles back before you really get good material, you see; that is, what I could call good spruce. All that spruce in there that this road taps—they don't tap spruce until they get back about a mile and a half.

Mr. FREAR. You are speaking about this road. You mean—

Mr. GILDNER. The road running up to Otter Rock and runs around Newport and comes up—comes in. They have got to build clear up to the divide. That was their intention, to build and log it up, you understand.

Mr. FREAR. That is, westerly across the divide?

Mr. GILDNER. Yes.

Mr. FREAR. I mean easterly.

Mr. GILDNER. No; logging easterly, and then log it and put it on the train and bring it down. They never had much serious intention of logging—pulling the logs down themselves, because that is not a very profitable way of logging it. The natural way would have been to log it right up to the divide and load it and take it out to the railroad, which is $4\frac{1}{2}$ or 5 miles.

Mr. FREAR. Four and a half or five miles?

Mr. GILDNER. It is a little more than that; it is about 4 miles to the spur, and it is out from there going up into 23, I would judge that would be $2\frac{1}{2}$, you see, and then run along the divide, which would be—well, running up to section about 11, 2 miles each way, that would have taken practically every foot of merchantable spruce out of that place.

Mr. FREAR. That is, within that territory—immediate territory?

Mr. GILDNER. Well, that is the only territory that is in there; it is kind of a—it all comes there into kind of a pocket.

Mr. FREAR. You have been familiar with this for how many years?

Mr. GILDNER. Well, something like 18 or 20 years.

Mr. FREAR. And you have been over there frequently?

Mr. GILDNER. Oh, yes.

Mr. FREAR. What would you say, as either a business proposition, from the standpoint of speed, economy, or any other idea, of building around by way of from Yaquina and Newport and then north to get at this timber that is to be found there?

Mr. GILDNER. Well, I will tell you what I would think it was: I think that it was a criminal waste of time, lives, and money.

Mr. FREAR. By lives you mean—

Mr. GILDNER. They were claiming that they needed that spruce, they claimed they needed the spruce immediately, and I say that it was a criminal waste of time and money in going into that thing, or whether it was needed or not, or that it was afterwards needed, but I say that the building of that line, instead of taking that spruce out as they could have taken it out, was a criminal waste of time and money.

Mr. FREAR. You said before that they could have gotten into spruce there within 20 or 30 days, I understood you, if they had gone north or gone over on the Wessel branch?

Mr. GILDNER. That is, if the Warren spruce had ever been given leeway to do things, you know. I think they tried to do things, too, but they were simply given orders, and then that would take two or three or four or five weeks to get them together, and then they were revoked.

Mr. FREAR. By whom, do you know?

Mr. GILDNER. Well, I think Maj. Hitchcock had the most of the charge of that.

Mr. FREAR. Have you ever met Hitchcock?

Mr. GILDNER. Oh, yes, yes.

Mr. FREAR. Now, go on and tell in your own way, if you will, please. I don't suppose we can get through to-night, but you can be here Monday, can't you?

Mr. GILDNER. Well, now, I don't know.

Mr. FREAR. It is to accommodate the other members.

Mr. LEA. I think we can get through here.

Mr. FREAR. All right.

Mr. GILDNER. What time do you have to leave?

Mr. FREAR. We will go on for a while, anyhow.

Mr. LEA. I thought maybe you could get through in a few minutes.

Mr. GILDNER. The people—of course the supposition was that the Warren spruce people got their contract—got the contract from Col. Disque to work in the Siletz, and of course they did work in the Siletz, of course; nobody ever had any other idea what it meant. The Siletz was the Siletz Basin, and that is when you go north from Toledo, and in that district, that is what is called the Siletz. And so that there was this time of delay and delay and delay, and there was a great deal of stirring—things stirring about building a line 25 miles down the beach.

Mr. FREAR. Oh, that is down—you mean down to the Blodgett—

Mr. GILDNER. Yes.

Mr. FREAR. Tell anything you know about that.

Mr. GILDNER. The committee from Toledo came over here, but they were not very successful.

Mr. FREAR. Came over to Portland?

Mr. GILDNER. Came to Portland. They had interviews over there with some of them, but they came over here with the data and one thing another, wanted to see about a coming conclusion, and, as I say that the word had been passed around that there was going to be no railroad into the Siletz, that that had been abandoned; so they came over here and they went at it kind of strong; they stayed here four or five days and called on Col. Disque and Maj. Hitchcock, but

the final upshot of it was that there was nothing doing. So then they came to me and I went——

Mr. FREAR. What were you doing at that time—did you have some business there?

Mr. GILDNER. Oh, yes. You know, in the first place I was asked to aid the Warren spruce, you understand, to go in there and give them this advice, and so they kind of thought I might bring this to the proper people's attention, to see if there could not be something in there, from my knowledge of the Siletz, the timber, and its resources, and this way of getting at that, I might put that into a report or keep a light of some kind that would receive its proper attention.

Mr. FREAR. I want to ask you, did you run a mill down there?

Mr. GILDNER. Yes; I did.

Mr. FREAR. At this time?

Mr. GILDNER. No; not just at this time, it was a little later than this. So I got this up and I went to Maj. Hitchcock and I took the matter up with him pretty thoroughly. And so I told him about this spruce and I talked to him on generally, and he, of course, told me that he and Col. Disque had gone down there, you see, and they had made an inspection of that, and they came to the conclusion that there was not sufficient spruce in that country to justify them building a railroad.

Mr. FREAR. That is, he meant—what country did he mean?

Mr. GILDNER. He meant this country north, you see.

Mr. FREAR. This Siletz country?

Mr. GILDNER. The Siletz country from the continuation of the Miller road, or the road that was going up in there. Well, I couldn't hardly believe it, and I told him that—I said "It looks to me—it sounds to me like a joke," I said, "I know, personally, this timber is there. If you haven't found it, you haven't looked for it; that is all I can say; you might think that you are right, or you might have got information from people, but it is not a truthful statement. I don't think that it is right," and I said, "it is not right to not give a country that is so available, so accessible for what they need, to ignore that and pass it up something that is, in my judgment—that you couldn't think of hauling a log over it for at least 8 months and possibly 12 months."

Mr. FREAR. What did you mean by that?

Mr. GILDNER. I meant that the road—that the fact was that they were building down to the Blodgett tract.

Mr. FREAR. You were then referring to the Blodgett tract?

Mr. GILDNER. Yes. So he said, "If you have anything about it." I said, "I have, I will get it up for you. I will get the cruises from the big owners that are in my territory"—a great many big owners, probably 20,000 acres. I got all the cruises, the detailed cruises that them people bought their lands on, and I brought them to——

Mr. FREAR. In the Siletz country?

Mr. GILDNER. Yes, sir; in the Siletz country, and practically everything that was cruised. So he looked over it, and he told me that he—he says, "That property is of no importance, because," he says, "you have many pieces of land there that there is no spruce on it." I says, "That is not right." I said, "The only difference in

that—of the accuracy of that cruise is this, that there is many of these cruises I have given you are of long standing, and those days we didn't cruise timber up to its actual amount that was there, nor at that time did we consider spruce much more than hemlock; consequently, if anything showed a defect of any kind, we simply threw it out, and that would bring the standing of the spruce up a little, probably—not much more than half what, if it was actually cruised, that would represent, as the cruises will show there that the land had been cruised in the last two years also almost double what they did before."

Mr. FREAR. Because spruce was not considered as being of exceptional value at that time?

Mr. GILDNER. No.

Mr. FREAR. You were all cruising for fir.

Mr. GILDNER. Well, we were cruising very moderately, understand, that it didn't have so much value, and so the cruise is light; that is all. So this is what he told me, and I didn't get anywhere with him. And about three or four days after that he was figuring on commandeering some timber over there, and he asked me to step in the breach and see if I could make a settlement between the Spruce Board and Mr. Whitmore, who was the Chautauqua Lumber Co. He was a man that lived in Santa Barbara.

Mr. FREAR. When was this?

Mr. GILDNER. On the Wessel spur, over there. So I suggested to Mr. Whitmore what to do—that is, I suggested to him, and he accepted the proposition that they made to go in there and cut the timber, and they could not agree on a price, leave it up to the war-fixing board to take the timber and go ahead, and if the two can't agree on a price—that is, both said that they let it go to the price-fixing board. So that that was all right to Hitchcock, and then he commenced telling me that he had got later reports on this spruce in there and that there was a lot of spruce in there, he says, "There is a great deal more spruce than possibly I had thought, but," he says, "it is absolutely eliminated, as far as building a railroad is concerned." He says, "We have run all kinds of surveys, and our engineers have been in the field, and I don't know how many crews we have had running up and down in that timber, and the best grade that they ever possibly could find was 7 per cent coming out against the load." I told major that I was not an engineer, but I had an aneroid, and we ran some levels, gears in there, and we found there that was less than 2 per cent grade. I said, "It might be two and it might be two and a half, but even if it was four," I said, "it would still be good enough grade to bring it out." And I said, "I am sure my eye is not as good as when you put on an instrument, but I know that such a thing could not be unless they were just trying to run their head right into a mountain." "Now," I said, "they might have to do it, but," I said, "at all events I am going to report this to the people that asked me to come here and intercede for them; I am going to report that to the port of Toledo, and I will suggest to them that they take up a practical man, a man that is known all over the country." I was the man that suggested Andy Porter to them, who was then working building railroads for the Hammond people. He was known all over this Pacific coast as a practical railroad engineer.

Mr. FREAR. That is, Porter?

Mr. GILDNER. Yes, as good as others; and they finally got him and he made the survey, and fortunately he came out a little better than what I told Maj. Hitchcock.

Mr. FREAR. That is the survey we have been discussing here?

Mr. GILDNER. Yes; that is the route.

Mr. FREAR. Not exceeding 2 per cent.

Mr. GILDNER. That is the one that goes up on Jaybird and comes out—

Mr. FREAR. The testimony here shows that that road only reaches a 2 per cent grade in one place.

Mr. GILDNER. A 1.66 coming against the loads and 2 per cent against the empties, which makes it exceptional, and very small curvature, and the expenditure; that is, I mean the expense of the building, it was a very, very cheap building.

Mr. FREAR. You are familiar with what they pay for logging roads?

Mr. GILDNER. Well, I know that the people down there building in that part of the country, it was not expensive building. Of course, I have seen a great many roads built, and when you are getting up to \$20,000 a mile, of course you are building a tolerably good road. Of course, you can go into bad places and sometimes you get a little short stretch, but after you get in over this divide, there are so many places that you can go that you are only coming out expensive if you want to come out so.

Mr. FREAR. Miller testified before the committee, I think, that his road, the spur of the road that he built in 1918, up toward the top of the divide, cost under \$15,000.

Mr. GILDNER. That was expensive because that was, I believe, about the most expensive part of their road that they built.

Mr. FREAR. He testified, as I recollect, twelve or fifteen thousand dollars.

Mr. GILDNER. I saw him build it; I was there when they were building it. I rather think it was pretty expensive.

Mr. FREAR. Did you have talks with Hitchcock again?

Mr. GILDNER. Oh, yes; yes.

Mr. FREAR. Was there anything more in regard to this matter?

Mr. GILDNER. When this proposition came up he simply told me that he would not recommend it, and he would not; that they had practically made up their mind to get their spruce somewhere else, but that he had now associated on this board Mr. Benson and I don't know who else; I thought it was Mr. Yeon, but I might be mistaken; but Mr. Benson anyway. But he says, "Now, I will get Mr. Benson so that he will go over there, and if he reports on that, and if they can show just where this route goes up there, we will build the road—we will build it." So I said, "Well, that is pretty good." So I did immediately—and I communicated with those people, and they got hot after Benson.

Mr. FREAR. By that you mean the Toledo people?

Mr. GILDNER. Yes; and they got him and they took him over there, but they couldn't tie him; that is, he stayed there for part of the day and then he got away from them, and they never could lasso him again, and so, of course, that settled that part of the road.

Mr. FREAR. That was all that you know about that particular part?

Mr. GILDNER. Yes, sir.

Mr. FREAR. That is, I mean that that covers approximately—

Mr. GILDNER. Yes; that covers that; yes.

Mr. FREAR. What do you know about the Blodgett tract?

Mr. GILDNER. Well, the Blodgett tract, of course, I knew that we have been in fact familiar to some extent—some very good timber down there.

Mr. FREAR. What do you know about the negotiation leading up to the Blodgett tract, and what was done?

Mr. GILDNER. Well, as I understand that, in the first place, several people here were figuring on buying it.

Mr. FREAR. Here in Portland?

Mr. GILDNER. Yes; who were, I believe—I don't know; they were employed or connected, I think, with the Warren spruce people.

Mr. LEA. Buying what?

Mr. FREAR. That is the Blodgett tract.

Mr. LEA. Oh, yes.

Mr. GILDNER. And they had, I think, a short option on it, as I understood it, and they were figuring on building a road in there.

Mr. FREAR. Into the Blodgett tract?

Mr. GILDNER. Yes.

Mr. FREAR. If they were connected with the Warren spruce people, who were they?

Mr. GILDNER. Well, do you mean who the people were that had the option?

Mr. FREAR. Yes.

Mr. GILDNER. Well, I think Mr. Monory, I think Jim Monory, and I don't know whether Mr. Davis—Harry Davis—had the option or not; I don't know whether Mr. Davis's name was in the option from Mr. Blodgett or not. I think Mr. Monory's name was, and I also think Mr. Davis was connected with it.

Mr. FREAR. Now, what was the situation with regard to this, so far as you understood it, in regard to this negotiation for the purpose of the Blodgett tract—who were the parties in interest?

Mr. GILDNER. Well, the parties in interest was Mr. Monory had the option.

Mr. FREAR. For whom?

Mr. GILDNER. And Mr. Davis; I think they were together. Well, they had it; I don't know as they had it for anybody.

Mr. FREAR. Were they connected with the Warren Spruce Co.?

Mr. GILDNER. Well, Mr. Monory was the superintendent down there at that time.

Mr. FREAR. Of what?

Mr. GILDNER. Of the construction and of the affairs in the Siletz country.

Mr. FREAR. Was Mr. Davis connected with the Warren Spruce Co.?

Mr. GILDNER. Well, he was the office—he was the head of—he had charge of the office, of all this cruising, and so on—of its timber contracts.

Mr. FREAR. They had an option for the purchase of this tract?

Mr. GILDNER. Yes, sir.

Mr. FREAR. What was done with regard to it?

Mr. GILDNER. Well, I think there was not anything done. I think that the option was allowed to lapse.

Mr. FREAR. For what reason?

Mr. GILDNER. Well, I don't think they could finance it.

Mr. FREAR. They were connected with the Warren Spruce people, you say?

Mr. GILDNER. Yes.

Mr. FREAR. And they were trying to put it over. Then that was allowed to go, and then what happened in regard to the line down there, if you know?

Mr. GILDNER. The line was built.

Mr. FREAR. By whom?

Mr. GILDNER. By the Warren Spruce Co.

Mr. FREAR. What did they build it for? They didn't have any option, did they?

Mr. GILDNER. Well, I think that the negotiations went on between the Government and Mr. Blodgett. Mr. Blodgett came out here and they made some kind of a deal, but they still—the great amount of spruce and so on was an incentive, and they had got orders to go ahead, and they put the road through just the same. The road was put through there just the same.

Mr. FREAR. The road was put through there before they had any timber?

Mr. GILDNER. Yes; yes. Well, they started the road when they had the option.

Mr. FREAR. Oh, when the Warren Spruce Co. had the option, then they started to build the road?

Mr. GILDNER. Well, I don't know as the Warren Spruce Co. had the option, as that was when Mr. Monory, at this time—

Mr. FREAR. When Monory and Davis had.

Mr. GILDNER. Yes.

Mr. FREAR. They had instructions to put the road down there, didn't they, from the spruce company here?

Mr. GILDNER. Oh, yes.

Mr. FREAR. That is, I mean the—

Mr. GILDNER. Mr. Disque and Mr. Hitchcock?

Mr. FREAR. Yes.

Mr. GILDNER. Yes.

Mr. FREAR. And what they depended upon, or do you know—the people here—in reference to the Blodgett tract, how were they going to—they were building a road down there.

Mr. GILDNER. Of course they had a right to commandeer this timber, and then Mr. Blodgett, too, I think was perfectly willing that the Government should build it; in fact I think Mr. Brundy was perfectly willing to sell it to them for 70 cents a thousand; that is, when the separate proposition came on that, I think—or 75 cents—I think Mr. Brundy was willing to let the government go down there and build the road and give it to them for 75 cents a thousand, the spruce that they wanted to take.

Mr. FREAR. But they changed their mind afterwards?

Mr. GILDNER. Well, then the proposition, I think was made to them that if the Blodgett people would build the road that they would buy the timber, and Mr. Blodgett came out here. The road

was built and Mr. Blodgett—and the Government now owns the land.

Mr. FREAR. The Government owns the land, because they threatened to commandeer Blodgett's interest?

Mr. GILDNER. Yes.

Mr. FREAR. According to correspondence, and I guess that is agreed upon. What else do you know about the Blodgett tract, if anything—anything that is important to the committee?

Mr. GILDNER. No.

Mr. FREAR. Well, now, what would you say as to the policy of building this 22 or 24 mile method of conveyance of the timber around by the way of the water route, and the rail—by water route I mean from Yaquina up to Toledo by rafting, and then this Otter Rock branch, compared with building from the Miller road right directly north?

Mr. GILDNER. Well, of course, there is a good deal to contend with; that is, now, from the lower road they have got a long trestle out there, and they have got a slip there for a ferryboat; that is, for a barge, that holds, I would judge, three cars, maybe four cars.

Mr. FREAR. You mean from the—

Mr. GILDNER. From the south road, that connects Yaquina to the south road.

Mr. FREAR. Well, you mean the Blodgett road?

Mr. GILDNER. Yes.

Mr. FREAR. The 24-mile road that runs north from the Blodgett land to the Yaquina Bay?

Mr. GILDNER. Yes. Well, now, if there is a tide running—if you were going to convey the logs on the railroad, on the cars, and then send them up by the railroad, as I understood here yesterday that such was the intention, why, the capacity of that road would be so insufficient, you understand, that it would not pay.

Mr. FREAR. Now you are referring to the Otter Rock?

Mr. GILDNER. No; I mean now putting it to the Blodgett tract as I—

Mr. FREAR. You still are talking about the Blodgett?

Mr. GILDNER. Yes. That this barge could not certainly make more than one trip in two or three hours, and I have seen it there when every tug in the bay was trying to fetch it in there, and no storm on either, perfectly calm. It is a serious matter down there; there is a big tide running.

Mr. FREAR. You are referring to the cars?

Mr. GILDNER. Yes.

Mr. FREAR. But it could be rafted there, I suppose?

Mr. GILDNER. Oh, yes. The proper way, of course, was to bring them up, and I think that really was the intention, and rafted them, and had their boats bring them up; and the same way with the Otter Rock road, they would have brought that down there. The trouble was their principal booming ground was—in a great measure it is a question whether it would ever stand; they started to drive the piling and they struck the soapstone, and they had nothing to hold them, and it is likely to go out any time.

Mr. FREAR. What would you say about the road when they left Miller's road into the Siletz, which has been spoken of, of the idea of constructing this over to Newport and then north?

Mr. GILDNER. I think the construction was—I say that I think that to think of taking it out the other way was a crime.

Mr. FREAR. That is, to take it out over this coast route?

Mr. GILDNER. This very piece here on the Wessel spur that they built, after they had built this road around here and had it all under construction, they went right up here on the divide, which Hitchcock said was impossible, and not only were figuring on logging it, but they actually did log it—they logged over the divide, and took them out of the very place—

Mr. FREAR. Their timber is over near the river, isn't it?

Mr. GILDNER. No; I am speaking about the Wessel.

Mr. FREAR. But I am trying to get at this great bunch of timber up here, which means upward of a billion feet, they tell us.

Mr. GILDNER. Well, I don't know as there is that much. Of course, estimating timber is a great deal what way that people look at it.

Mr. FREAR. Mr. Hall, who lived there a great many years, has estimated upward of a billion feet.

Mr. GILDNER. He may be right.

Mr. FREAR. But the other estimates run about 700,000,000, counting the coast—

Mr. GILDNER. I would think 550,000,000 or 600,000,000 in here would be good, and I think 150,000,000 or 175,000,000 here, I would judge.

Mr. FREAR. You figure that all that timber—you say that is the average?

Mr. GILDNER. Yes; this is a heavy stand of timber in here, in 9 and 11; the east part of that there will run 80,000 to 85,000 to the acre—that timber.

Mr. FREAR. Tell me what was the reason for building this coast road?

Mr. GILDNER. Well, I don't know; I couldn't—I think it was a sad mistake, I think it was an awful mistake. I don't know why they done it. Absolutely, you know, you come down to the thing in here, the only proper way to log this big timber is to log it up hill. The idea of logging it down on yourself when you are already up here, ready to log it—

Mr. FREAR. Tell me how much airplane stuff you cut at your mill?

Mr. GILDNER. We didn't cut no airplane stuff.

Mr. FREAR. Why?

Mr. GILDNER. I was cutting the stringers and the ties, etc., and that kind, for lumber to construct these railroads.

Mr. FREAR. Instead of cutting airplane stuff, you were building railroads, or cutting stuff to build railroads for these people?

Mr. GILDNER. Well, all the mills in that part of the country were cutting and shipping lumber in there.

Mr. FREAR. Some of them were building the big mill, weren't they?

Mr. GILDNER. Yes.

Mr. FREAR. They were using all small mills around there, that ought to have been cutting airplane stuff, to build—

Mr. GILDNER. The Storey mill was principally occupied with cutting lumber for that big mill at Toledo.

Mr. FREAR. The big mill at Toledo; the cost of that, I understand was approximately a million dollars, or thereabouts?

Mr. GILDNER. Yes.

Mr. FREAR. Finished. What would be the cost of, say, this Storey mill, if you know?

Mr. GILDNER. You know, the cost of building mills at this time, they vary so much that it is pretty hard to tell. Of course, as far as the mill—the big mill—I have gone through it, and hundreds of others have, and they are practically all of the same opinion, and I think the mill will be there until it is dismantled.

Mr. FREAR. What do you think of the nerve of a man who will build a 150,000-foot mill right at the side of that big mill, with the fear that he may be in competition with the big mill: do you think he runs any danger?

Mr. GILDNER. Oh, no. No; there is no chance of it.

Mr. FREAR. What would be the cost of building it; would it be up to two or three hundred thousand dollars? What would be the cost of this 150,000—

Mr. GILDNER. We went over the plans before they began. He was figuring on building a mill, as you know. We went over it. In fact, I was figuring on going in with him, and we went over those plans, and it was very good, and I think it would cost a hundred thousand dollars.

Mr. FREAR. Well, it would cost \$200,000 to have built two mills down there that would give 300,000 feet on one shift.

Mr. GILDNER. Well, yes.

Mr. FREAR. Well, they spent nearly a million dollars to build a mill that will cut 200,000 feet in one shift.

Mr. GILDNER. Yes; but you see, a great deal of the cost of that occurred from the—the big cost of those things runs up in a way like this: They had men there working at night. They delayed these things until it got to a rush order, you see, and then they worked them there Sundays, holidays, and nights. Some of those boys there made fifteen to eighteen dollars a day; you must remember that; that is the cost.

Mr. FREAR. What caused delay?

Mr. GILDNER. Well, they could not get together. These people had to have orders. The Warren Spruce were perfectly willing to do things, I am satisfied.

Mr. FREAR. If Hitchcock could have know that there was some timber in this Siletz region that has upward of 9,000,000,000 feet—and they were sawing fir over here; two-thirds of it was fir that was hauled—

Mr. GILDNER. Hitchcock had a report on that country—the first report he had—before he had this down here.

Mr. FREAR. But he didn't know it, did he; he didn't know until Benson went down there?

Mr. GILDNER. Well, I guess—I don't know that, but maybe Hitchcock was furnished this report with the stuff that I gave him and that Kumpe—Mr. Kumpe—wrote me a report and asked me what I thought of it.

Mr. FREAR. Benson was an old-time logger, who knew the conditions down there in the Siletz, or what was the reason that an intel-

ligent board up here at Portland turned all this matter over to Benson, have you any idea?

Mr. GILDNER. Well, Mr.—well, of course, Mr. Benson is a son of Mr. Amos Benson. Mr. Amos Benson, the old gentleman, has been a very successful logger for years, and made a fortune in it.

Mr. FREAR. But he didn't make his money down in the Siletz?

Mr. GILDNER. No, the Columbia.

Mr. FREAR. Hitchcock says, "Benson is going down there, and what he says when he comes back is going to determine it"?

Mr. GILDNER. Yes.

Mr. FREAR. That is the substance of it?

Mr. GILDNER. That is what I understood.

Mr. FREAR. And that was while this Government was needing airplane stuff and soldiers were needing airplanes over in Europe, they were waiting for Benson to go down there?

Mr. GILDNER. Yes.

Mr. FREAR. And make this investigation. Never had been there in his life before at all, I mean for the purpose of inspection?

Mr. GILDNER. Oh, no. He told me that he hadn't been, and he went over this road, and, as I say, he went over one day and they didn't finish the work, and they were to send for him when they got this pass, and when they established and found the place that he was to come back, and they were after him I think for two weeks or more, and then finally they came up here with a complaint to Col. Disque. I think they brought their trouble back here, and that is as far as—

Mr. FREAR. What further do you know about it?

Mr. GILDNER. Well, I don't know of anything particularly.

Mr. FREAR. Do you think you have given the committee the benefit of—

Mr. GILDNER (interrupting). Well, I think I have. I have tried to give it to you.

(Whereupon, at 5.20 o'clock p. m., the committee adjourned until 10 o'clock a. m. Monday, September 8, 1919.)

SUBCOMMITTEE No. 1 (AVIATION)
OF THE SELECT COMMITTEE ON EXPENDITURES
IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES,

Monday, September 8, 1919.

The subcommittee met at 10 o'clock a. m., pursuant to adjournment, at the courthouse, Portland, Oreg., Hon. James A. Frear (chairman) presiding. Also present, Hon. Walter W. Magee and Clarence F. Lea.

TESTIMONY OF WALTER S. HALL—Recalled.

Mr. FREAR. You have already been sworn?

Mr. HALL. Yes, sir.

Mr. FREAR. I wish to ask you just one or two questions that occurred to me since you were on the stand in regard to the conditions that existed down there. You were discussing the question of waste and referred to the Chitwood Camp. What other matters do you remember that ought to be of interest to the committee in reference to waste?

Mr. HALL. Each camp had what they called its "graveyard" and they buried stuff that was spoiled in it. I know of one instance where a crate of hams came in and were spoiled, and they buried the whole crate. They bought a hog from Mr. Olson at Toledo, and hauled it out to the dump. It weighed 350 or 400 pounds. It laid on the dump for about two days before the train came down to take it up to camp 3-A, and when they got it up there the cook would not accept it. I saw it lying on the dump there and the flyblows were in it so bad you could pick them out with your hands. They hauled that back to the dump and sent it into the office at Toledo, and it was after closing time and the man that hauled it in was trying to make Olson take it back. He left it over at the railroad, so two men at the camp went to the dump and got it and hauled it back and told Olson his hog was spoiled.

Mr. FREAR. What things, in general, do you know in regard to what is called mismanagement that occurred down there?

Mr. HALL. These are two instances that I know.

Mr. FREAR. You spoke about a long plank road, about the Chitwood Camp, and some other matters; is there anything else that occurs to you now?

Mr. HALL. These are two instances that I have seen, and I have heard of a lot of others.

Mr. FREAR. Is there anything else that occurs to you along that line?

Mr. HALL. I do not think so.

Mr. FREAR. You said each camp had a graveyard where they buried things?

Mr. HALL. Yes, sir.

Mr. FREAR. Did you have any talk with Hitchcock about the reason why they put the road up the beach?

Mr. HALL. He said they could not get grub in to the soldiers to build that road down to the Siletz River; he said it was impossible. I told him he did not know what he was talking about; that he had already spent \$12,000 to build roads along this right of way and there was no place on the right of way where they had to go more than a mile and a half with the grub, and he came to me next morning and apologized and said he was mistaken about that, but he said in building the road from Newport up to Otter Rock they had a good hotel they could stay at and get in autos and go along the beach, and see the men working up the whole length of the beach.

Mr. FREAR. Was he up to Siletz?

Mr. HALL. He came twice, so far as I know.

Mr. FREAR. And you were there all the time?

Mr. HALL. Yes, sir.

Mr. FREAR. Is there anything else you think of that you care to present to the committee?

Mr. HALL. Not that I know of.

Mr. LEA. The graveyards you speak of were simply a sanitary arrangement to dispose of the waste and slops and spoiled food, were they not?

Mr. HALL. No, sir; not that I would call them that. The place where they hauled quarters of beef that would lay out in the sun before they would be taken to camp, and when they got up there the cook would refuse to use them and then they would take them out and bury them.

Mr. LEA. Did not every camp have what you call a graveyard for the purpose of disposing of insanitary things?

Mr. HALL. I do not know as to that; I suppose they did.

Mr. LEA. The refuse from the camps was all buried?

Mr. HALL. No, sir. The people around the camps went there and got it for their pigs and took it away. All the slop and things they gave to the people.

Mr. LEA. Whose fault was it that this hog laid out so long on the dump?

Mr. HALL. The man hauled it out there one day, and they did not come down from camp to get it until the next day.

Mr. LEA. That went out on the train?

Mr. HALL. Yes; from camp 3-A down to the dump, where they used to dump the logs at tidewater.

Mr. LEA. Do you know what time in the day it was taken out there?

Mr. HALL. In the morning, and it laid there all that day and the next day until the next evening.

Mr. LEA. What time did you see it there?

Mr. HALL. I saw it there about 3 o'clock in the afternoon of the first day.

Mr. LEA. Do you know who was in charge of camp 3-A at that time?

Mr. HALL. No; I do not.

Mr. LEA. And this man to whom they returned it was the man that sold the hog, was it?

Mr. HALL. Yes, sir.

Mr. LEA. I think that is all.

(Witness excused.)

TESTIMONY OF HON. OSWALD WEST.

(The witness was sworn by the chairman.)

Mr. FREAR. Governor, you were asked to appear before the committee, and we desire to accommodate you as to time. In reference to testimony you gave before the Military Committee of the Senate when this matter of aircraft spruce production was before the Senate a year and a half ago you gave reasons to the committee, very strong reasons, as appears from the record, why Mr. Long, representing the Weyerhaeuser interests, ought not to be left in a position of authority or control, which was then believed by you to be the case, and as I now recollect a change rapidly did occur in the method of administrating the Spruce Production Division. Will you please state just in substance what you did then give to the Senate committee and your reasons in regard to Mr. Long's position at that time?

Mr. WEST. Mr. Chairman, I will be glad to do that, and will; but in order that it might be better understood and that other matters that I am absolutely familiar with that I have seen by the papers you are trying to develop that I think you ought to know about, if you will let me go ahead and tell you how I came to take an interest in this and my connection with this, I can perhaps throw light upon this situation.

Mr. FREAR. Will you state now what you said before about Mr. Long?

Mr. WEST. In order to lead up to that it will be necessary—

Mr. FREAR. You can do that afterwards. The reason for that is Mr. Long's statement in which he has had an interview indorsing substantially everything that we are trying to investigate and anticipating the action of this committee, and we desire to know what you stated as to Mr. Long. Have you got a copy of the record here?

Mr. WEST. No; I have not.

Mr. FREAR. Then just state it briefly.

Mr. WEST. And afterwards I may be permitted to go on? I want that to be understood, because I do not want to be put in a false position here or have any misconception placed on my statement. I do not want to do an injustice to anybody, and there are things that have been charged to individuals here, directly and indirectly, that I know they had nothing to do with and I myself was responsible, and I want to go into the record and fix that responsibility on myself.

Mr. FREAR. The committee can not take any action until they know what the answer is to the question that is propounded, which was a request from you as to your previous attitude, when you made

a statement to the Military Committee in regard to Mr. Long. That is the statement we would like to have repeated. We ask if you will please make the same statement in substance that you made before the Military Committee of the Senate in regard to Mr. Long's activities and the reason why he ought not to be permitted to remain on that board.

Mr. WEST. Mr. Chairman, while I do not recollect and have not read my testimony that was given there——

Mr. FREAR. I mean just in substance.

Mr. WEST. I will say frankly that I can not recall now any change that I would make in the testimony that I would give if I were called upon to do it again; so why not let that go into the record as I stated it then?

Mr. FREAR. Because we have not that record before us, and we want to know what you said.

Mr. WEST. I can get that for you and send it over.

Mr. FREAR. Your statement was this, if I recollect, and correct me if I am not stating it correctly, that you objected as one of the citizens here interested in the production of spruce at reasonable prices, and that reasonable prices would depend on whether Mr. Long was continued on that board, on the ground that he was the secretary of the Weyerhaeuser interests, and in that position he had a large interest in determining the price of timber generally and, as you expressed it then, if I remember correctly, the Government in dealing with lumbermen of that type was like taking candy from a baby. That was your statement?

Mr. WEST. Won't you let me testify?

Mr. FREAR. That is your statement?

Mr. WEST. You are not going to testify for me.

Mr. FREAR. I am not going to testify.

Mr. WEST. Then, for God's sake, give me a chance to testify.

Mr. FREAR. You were subpoenaed to testify in regard to Mr. Long.

Mr. WEST. This is a matter of public interest. I know things that you are trying to develop, and I insist upon being given an opportunity to tell the people what I know about this.

Mr. FREAR. I do not think there is any question about that; you will be given an opportunity, but in order to save time——

Mr. WEST. But it seems to me a saving of time——

Mr. MAGEE. It seems to me the governor and the chairman do not understand each other. I understand you will have full opportunity to state anything you want.

Mr. WEST. But I want to do my own testifying.

Mr. FREAR. You can not in any court or any investigation determine the order of procedure.

Mr. WEST. But in no court does the judge testify for you; he gives you a chance to testify.

Mr. FREAR. I have several times asked you to state that, and I have attempted to state what your testimony was before the Military Committee and asked you if that was correct. You say I am trying to testify.

Mr. MAGEE. If the governor can furnish this statement, and he says he can, why not defer the examination until the statement is produced and then let the governor go on?

Mr. FREAR. You will furnish that today?

Mr. WEST. Certainly.

Mr. LEA. I presume it is agreed that when the governor furnishes this statement the reporter can set it forth in the record?

Mr. FREAR. That is quite long?

Mr. WEST. Not very long. I do not know whether it will be of interest. I want to say that your investigator called at my office and talked to Mr. McColloch, my partner, and outlined to him certain matters that had been brought to his attention—I do not know by whom—as to my connection with the spruce division, and Mr. McColloch's connection, and spoke of certain things that were brought to his attention. Undoubtedly they had been brought to your attention.

Mr. FREAR. I will be glad to have you make any statement in regard to this you wish.

Mr. WEST. I think it would be well for all concerned to know it. I have memoranda here and telegrams that will refresh my memory on things, and there are a lot of things that you folks should have and I know they would be of interest, and I want to tell you how I came to meet Disque and how I came to take an interest in this thing in Washington.

Mr. FREAR. The committee will be glad to extend you that opportunity.

Mr. WEST. I will do it briefly, and as I testify it will bring to your minds things that you want. The first time I met Col. Disque was along about the 23d or 24th of December, 1917. I heard—I did not know who Disque was, or anything about his past and where he came from—just knew there was such a man in town, and I heard he was having untold difficulties in the organization of his spruce division and in getting results, and I was going to Washington on a matter connected with the Pacific States Telephone, and knowing Senator Chamberlain quite well I felt it my duty to go over and introduce myself to Mr. Disque and inquire if there was anything that I might do at the Washington end to give him assistance. I dropped in there, I think it was, on a Saturday before Christmas, as I recall, and met Disque in his office with one of his assistants, Captain somebody, and told him why I was there. Well, Disque did not know me and naturally stalled for time to find out who I was, thinking perhaps I was trying to put something over on him, and the next day was Sunday, and I received a call from him and he told me that I could be of assistance to him, and his grief was this, and he had taken charge here and had made his wants known to Washington and he could not get any action whatever upon the requests he was making.

Mr. FREAR. Did he tell you what the requests were?

Mr. WEST. Yes; I am coming to that. He pointed out to me that there was a large number of men who were detailed for work in the woods, as I recall, about 9,000, over at Camp Lewis, and he could not get those men here. At that time I think perhaps a couple of thousand, or maybe 3,000, had just been detailed, and they had come over here, as I recollect, to Vancouver. The men were not properly equipped for the woods. Some were in quarantine, and the clothing that they were using in ordinary service was not adapted to the work in the woods in the rain at that time of the year, and the colonel

seemed to be having a great deal of trouble in getting quick action on the equipment necessary for them, the clothing; there was no much red tape. So that, and the necessity of having funds to carry on the work in some way, everything having to be submitted to Washington, resulted in not getting action on it; and then there was a question of commandeering the timber and trying to get into the woods with their railroad and other activities that were being held up on all sides by profiteers who were taking advantage of the situation, and he was afraid that they were going to be held up and the work in that direction would be blocked. Then I went over all these things with him and before I left town a lumberman—it was Mr. Hawkins, a lumberman of experience——

Mr. FREAR. Russell Hawkins?

Mr. WEST. Russell Hawkins, and it seemed that Hawkins had not yet been commissioned.

Mr. MAGEE. That was before you left Washington?

Mr. WEST. Before I left for Washington. Mr. Disque asked me if I was in a position to do something to hurry it along, and if I would not do it. I did not tell him what I would do. I asked him if he knew Hawkins and his connections, and he said he did not know a great deal about him; that he was on the job, and just so the thing would not be up in the air he ought to have his commission.

Mr. FREAR. Hawkins at that time was in authority here?

Mr. WEST. He was with Disque. He was East at the time, I think, but he had not received his commission. Now, I went on to Washington and got in there on the 31st day of December.

Mr. FREAR. 1917?

Mr. WEST. Yes. I brought these things to the attention of Senator Chamberlain. By the way, the colonel told me he had submitted to the War Department a detailed list of the things that he needed and he hesitated about taking them up with me. He said only the urgency of the thing and the great importance of it would cause him to do it, because those things were supposed to go through regular channels and he was really subject to court-martial if he would take action in other directions, but he felt these things were not reaching the proper authorities, and some one who did not realize the importance of them, probably some underling, was holding things up and they were not getting to Gen. Squier and the Secretary of War. So the first thing I did was to take up with Senator Chamberlain these matters, and the Senator said, "Now, I have had occasion to take a fall out of the War Department, and I do not want them to think I am petty in these things, and I think the fair thing to do would be to bring it to the attention of Gen. Squier and the Secretary of War and give them every opportunity to straighten this out." The Senator did not know Disque, did not know anything about him and had never heard of him until I took this matter up with him. So the Senator telephoned to Gen. Squier, or at least a little later the Senator telephoned to me and told me that Gen. Squier and Maj. Leadbetter were coming over to see me.

Mr. FREAR. Maj. Leadbetter was there, then?

Mr. WEST. Yes. That gets back into the politics of this State. He was supposed to be connected with the Oregonian crowd, and we were not on the best of terms, and I did not think very well of Leadbetter.

Mr. FREAR. You did not appoint Leadbetter?

Mr. WEST. No.

Mr. FREAR. By whom was he appointed?

Mr. WEST. Leadbetter was appointed by the governor of this State in connection with the National Guard, commissioned as major; then when the National Guard went to the front, Leadbetter was transferred into some other department and went in the spruce division at Washington. I do not know just how it came about, but when the Senator called up and told me that Maj. Leadbetter and Gen Squier wanted to see me I said, "I will not see Leadbetter. I will talk it over with Gen. Squier, but I do not want to talk to Leadbetter." So Gen. Squier came over and we sat in Senator Chamberlain's office and went over this whole situation, and I outlined to him the situation, and he seemed to be entirely ignorant of Disque's needs here.

Mr. FREAR. Leadbetter had been there some time as what they called the officer representing Disque, hadn't he?

Mr. WEST. No; not at that time. I do not know as there was any connection; he just happened in. But for some reason this stuff could never get up to him.

Mr. FREAR. Up to Squier?

Mr. WEST. At that time it did not. I found out afterwards it did not go to Leadbetter; it went to some other official. Gen. Squier did not seem to realize the importance of it, and I went over the whole ground and told him that he should, as I saw it, he should get in direct touch with that office and be in a position to have the requests that came from Col. Disque come direct to him in order that they would not get sidetracked. At first he thought the matters could be taken care of promptly by wire, and I insisted on telling him the story, telling him all about the situation. Then when we got through we sat there in the office and the general dictated this telegram. Would you like to have it read?

Mr. FREAR. I am perfectly willing.

Mr. WEST. This is on December 31. He dictated this telegram to Col. Disque.

Mr. FREAR. That is, Squier dictated it?

Mr. WEST. Squier, yes. [Reading:]

At the beginning of the New Year the responsibility for the allied airplane program is forcibly brought to attention. The production of spruce for ourselves and our Allies is absolutely vital to this program. Telegraph me direct without delay what further authority, means and measures, including personnel and material, not already provided which are necessary to insure the spruce program without fail. If any of your enlisted men are without clothing which is procurable in your vicinity, you will be authorized immediately to purchase the same in open market.

Now, that telegram was sent, and the next day a reply was received from Col. Dique, by him, outlining his needs and calling his attention to a letter that Col Disque had written, as I remember the date, on the 21st day of November, which was about five weeks prior to that, setting out what was necessary for the department to do in order to enable him to carry on successful operations here.

Mr. FREAR. Do you know whether Squier had seen that letter?

Mr. WEST. I think not. I think not. Now then, after getting rid of him I got to think about the Leadbetter matter—no; I am getting

ahead of my story. I went over the next morning, I think it was New Year's Day, and had an appointment—by appointment with the Secretary of War, and told him the story, and much of it was new to him. So he told me that he would call a meeting of this aircraft committee, made up of Squier, I think, was the chairman, and Saulsman, Mr. Howe. Mr. Coffin—Coffin was the chairman—and a man by the name of Montgomery, a bond—a fellow in the bond business from New York.

Mr. FREAR. Philadelphia.

Mr. WEST. He knew everything in the world except something about spruce. Well, this meeting was held. Now, at that time I might say—oh, after my conference with Squier I immediately wired out here to people in whom I had confidence. Among them was Mr. Cornwall, the editor of the *Timberman*. And as I recall it I wired to Mr. S. S. Gordon, of the First National Bank of Astoria, who is in close touch with the lumber situation.

Mr. MAGEE. Where is the *Timberman*; here?

Mr. WEST. The *Timberman* is here.

Mr. MAGEE. In Portland?

Mr. WEST. Yes. Mr. Cornwall, the editor, is probably better informed on this question than anyone; that is, in a general way, because he comes in contact with all the timbermen and knows their history. I had confidence in him, and I knew anything he would tell me could be relied on. I said, "Please wire me at once, care of Senator Chamberlain, names of several men peculiarly fitted to act in advisory capacity to Col. Disque, matter of obtaining spruce for airplanes. Must be men of highest type and not engaged in business in the line affected." I wired before I went over to see the Secretary of War, because I had discovered that there was a little hesitancy in giving Col. Disque the funds he needed, because there was a fear that he, not being an experienced lumberman, that he might get off into ventures that would be unwise. So I saw where it was leading, and it occurred to me that if he had associated with him men who knew something about the game, and had no selfish interest, that would meet the objection that they had back there. I felt that he had to have ample funds, almost without restriction, in order to carry out successfully his operations.

Mr. FREAR. Just by way of explanation to the committee, because I am not clear on it, was this before or after you appeared before the Senate committee?

Mr. WEST. Before. I am leading up to that now.

Mr. FREAR. I understand.

Mr. WEST. I want to tell you why I appeared before the Senate committee. So when I went over to the Secretary of War's office—it was on New Year's morning—we spent the entire morning together, and I outlined to him the situation, and talked about giving Disque additional authority and the funds that he needed, and this question of commandeering spruce. He raised that question, as I recall it, about the danger of placing too much authority and too much money at the disposal of any one individual. He asked me a good deal about Disque, which I was unable to tell, because I did not know anything about Col. Disque, absolutely nothing; I never saw the man before that time.

Mr. FREAR. He had just come out here?

Mr. WEST. Yes. I gave him a list of men that I had picked from the telegrams that I received. I probably received a half a dozen telegrams from men to whom I had wired, the same telegram I read to you. I eliminated some and selected some. I knew most of them myself, and I eliminated those that I thought their interests would prevent their being taken, and I submitted to the Secretary of War a list of 12. I can not recall them all. Some of them were interested and some of them were not.

Mr. FREAR. That is, you mean interested in the business, the logging business or lumber business?

Mr. WEST. Yes. It was almost impossible to find some who were not interested. Among them were Amos Benson——

Mr. FREAR. That is the old gentleman?

Mr. WEST. No; Amos is the young man. The old gentleman felt too old to go into the game. They had no interest and yet had wide experience. And J. B. Yeon, and James Bremner, who had just retired from the logging business, a very high class man who was mayor of Astoria at the time. I remember having on the list R. D. Inman—there was no politics in this. I called the attention of the Secretary of War to the fact that 11 of them were Republicans, not that I would not have selected more Democrats if the opportunity presented itself, but because in thinking of these men it just turned out that they were Republicans. So there was no politics in it. S. B. Cobb, a very high class man here in town, who was engaged in a box factory and lumbering here in the city of Portland, but he was not directly or to any great extent interested in that phase of it that would be affected by his work for the spruce division. I can not give you the rest of the names, but there were 12 of them. Well, the Secretary of War asked me, he says, "Why don't you accept an appointment on that?" I said, "Well, I will not accept appointment because I am not fitted for the place. I have told you a good deal about this and you folks think I know a good deal about it, but that is because you don't know anything about it yourself. And if I was appointed they would say it was politics." And furthermore, I told him, "If you would give me \$4,000,000 and a sawmill I would be broke in two years, because I do not know anything about the game, but there are men there who do know it, and who would be glad to help and without pay, and render you good service." Well, either on that day or a few days after—I am not just clear on that, but it seems to me it was that day, New Year's Day—well, I might be mistaken, it may have been a few days later—he told me that Mr. Hawkins and Senator McNary were in the outer room.

Mr. FREAR. Who is Senator McNary?

Mr. WEST. McNary is from Oregon.

Mr. FREAR. United States Senator?

Mr. WEST. Yes. He said the matter was coming up about Hawkins's commission. Now, it has been intimated that Col. Disque had something to do with the displacement of Hawkins. Now, Disque did not have any more to do with it than the Saviour of man. It has been intimated that Senator Chamberlain—there are parties here in town that seem to think Chamberlain had a hand in that; some of

the local politicians around here. I want to say at this time, for their benefit, that he didn't have any more to do with it than you had. The only thing that was mentioned by Senator Chamberlain, as I recall it, he said, "I have just got a telegram here from a friend, John Ainsworth, of the United States National Bank, asking me to do something for Russ Hawkins." He said, "What do you think about it?" I said, "You had better keep your hands off and let somebody else do that, because there are liable to be breakers ahead." So that is all the hand he had in it—was to tell me he had received a telegram. I am quite sure I am right in the party he received it from. So the Secretary of War asked me about Hawkins. I told him that Hawkins represented the Whitney Lumber Co., and that he was quite familiar with the lumber business. I said, "I do not know whether he is a practical lumberman himself, but the Whitney Lumber Co. has something to sell to the Government, and it would be unwise—I am not questioning his integrity, his ability, or anything of that kind; that is not necessary, and I could not if it was necessary—but he is a director in the Whitney Lumber Co., and he is manager for the Whitney Lumber Co., and I have here in my pocket a clipping that I have picked up which says that he has been in conference with his people in the East, agreeing upon the timber they are going to sell to the Government and the price they will accept for it. Now, in his capacity as advisor to Disque, being supposed to be an experienced lumberman, he would largely dictate the price that was paid, because Col. Disque would have to rely upon those who were familiar with the situation to advise me in that direction." The Secretary of War agreed with me that it would be unwise, because it would be pretty hard for a man to serve two masters, and he would be constantly open to criticism and his acts would be under suspicion. I said, "It is not necessary to go to any trouble to make an investigation of this; when Mr. Hawkins comes in you ask him about these things, and he is a truthful man and he will tell you frankly whether he is or not, and then you can decide whether it would be wise to appoint him."

So, after my going away on one of those occasions, I do not know which one it was, Mr. Hawkins came in and talked it over with the Secretary of War, and the Secretary of War told him he doubted the wisdom of making the appointment and could not make it.

So, on the day following New Year's Day this committee was called together, and the Secretary of War—

Mr. FREAR. That is, this committee you had suggested?

Mr. WEST. No, the Aircraft Board.

Mr. FREAR. Down there in Washington?

Mr. WEST. Yes, in Washington. They were called in to consider these things that I had taken up with the Secretary of war and Gen. Squier. And in the meantime I got to thinking over the Leadbetter proposition. There was a little feeling there and I thought it mighty small on my part, in a crisis of that kind, when I had discovered that there wasn't anybody back there that knew anything about this situation, and that Leadbetter was the only one—I knew he would know all about it, because he is a man of wide experience and has been successful in the lumber business. So I got in touch with him and told him what I had in mind, and I said that we ought to be big enough and broad enough to forget all these little

differences, that there was a crisis on and Disque was howling for help, and that the people back there did not understand the situation. I said, "You are on a job and the only one that knows anything about it, and we ought to work together." I want to say this in reference to Leadbetter. As I explained to you before, my feeling toward him was not the best in the world——

Mr. FREAR. That is all news to the members of the committee, I assume. It is to me.

Mr. WEST. All the time I was back there I had my eyes open. I did not know a great deal about Leadbetter, didn't know what he was trying to slip over and what his interest was in serving there. I can tell you frankly that I never missed an opportunity to get a line on him, and as far as my investigation went he came clean. I have absolutely no interest in him, but it is due to him for me to tell you that. I went back there hostile to him, and if when I arrived there I could have found something that would have scuttled him I would have done it in a minute.

Mr. FREAR. Are you attorney for him in any matters at the present time?

Mr. WEST. None whatever; absolutely not. I never represented him in anything, directly or indirectly, and never asked a favor from him in my life nor he of me.

So this Aircraft Board met the next day and this man Montgomery that I was telling you about, that knew everything in the world except something about spruce and who appeared to do all the talking at those meetings, got his oar in and decided that it should be done in another way.

Mr. MAGEE. Was he a member of this aircraft committee?

Mr. WEST. This board in Washington.

Mr. FREAR. He is from Philadelphia, isn't he? As I recall it, he is a bond dealer in Philadelphia.

Mr. WEST. He seemed to want to have control of those finances himself back there. That is what I figured out. I was not interested in that and I did not care who handled it.

Mr. FREAR. Was he on the finance board, or do you know?

Mr. WEST. I think he was. Anyway, he had a great deal to do about these expenditures, and he was an aristocrat of the first water. When they had this meeting he upset the program, and it was decided to send Gen. Saulsman and Mr. Howe. Mr. Howe was a member of that board. Mr. Howe was connected with the Harvester Trust; I think one of the directors of the Harvester Trust, wasn't he? He was a very charming man, who seemed to be afraid of hurting somebody's feelings. I had a talk with him about the men that ought to be selected. I discussed these 12 men I had spoken about to the Secretary of War. I was not present at this meeting. Mr. Howe kept bringing up all the time Mr. Long, Mr. Long.

Mr. FREAR. Of the Weyerhaeusers? Let me ask, Was Long down there at that time?

Mr. WEST. I never saw Long; I don't think I ever saw him in my life.

Mr. FREAR. Was he at that time connected with the Weyerhaeusers; he was in some capacity, wasn't he?

Mr. WEST. I think not.

Mr. FREAR. I supposed that he was.

Mr. WEST. No; he was in no capacity whatever, as I understand it. I don't know whether at that time Disque had ever heard of him, or had seen him. He could tell you.

Mr. FREAR. I do not mean with Disque, but wasn't he connected with this production of spruce?

Mr. WEST. No; I am leading up to that, to tell you how he got onto that. So Mr. Howe in that conference kept bringing up Long. When he first mentioned Long I did not know who Long was, but I saw what he had in the back of his head, and evidently he wanted him on the job. So I made it a point to find out who Long was. I really knew who he was, but had forgotten. Finally I got his connection with the Weyerhaeuser people, and it occurred to me that it would be most unwise, because it would be like the Hawkins situation, because the Government was going to be called upon to purchase, undoubtedly, if the war continued, large bodies of timber upon the Weyerhaeuser people, and Mr. Long was the manager. I think he is a high type of citizen, and no doubt would try to be fair, but, as you understand, Mr. Chairman, his interest would be under suspicion from the start, and it would be a most unwise thing to do.

Mr. FREAR. He was secretary of the Weyerhaeuser Co.?

Mr. WEST. I think he was manager, or secretary.

Mr. FREAR. You said he was with them.

Mr. WEST. Gen. Saulsman and Mr. Howe left for Oregon—I am getting ahead of my story—I saw Mr. Howe again and told him why I thought it would be unwise. I said, "I can not say a word against his honesty or his ability," but I pointed out why it was unwise. Now, I kind of think that probably there was friendly relations, probably with some people in the Harvester Trust—just friendly acquaintances, I suppose—and the Weyerhaeuser people, and I thought naturally that would suggest itself to Mr. Howe. I think Mr. Howe himself is a very high-class, honorable gentleman, and that he was making an earnest effort to get some results, which was impossible the way they had that board organized. Well, they came out here to Oregon—

Mr. FREAR. Saulsman and Howe?

Mr. WEST. They came out here to Oregon, and there happened just what I thought would happen. They wound up by selecting Mr. Long and Mr. Bloodell, both of Seattle.

Mr. FREAR. Of the Donovan-Bloedell Co.?

Mr. WEST. Yes. And it seemed to me at that time that Mr. W. M. Ladd, a banker here in Portland, was elected. The lumbermen looked on the situation as this, that those two men, who knew the game, living in Seattle, would dominate the situation, that Mr. Ladd at this end of the game, not knowing the business, would be helpless to protect the interests of Portland.

Mr. FREAR. They were to be named as an advisory committee?

Mr. WEST. As an advisory committee to Disque. The plan was, I think, that these men were to also take over the control of the fir production that was to come later. There was to be all of these committees in Washington brought together that had to do with the lumber situation in any way, and they were to select a chairman and then they were to operate, and these three men would practically have charge of all the activities. Well, after I came back I saw Mr. Howe and talked to several of them. I said, "You are making two

mistakes; the first is that you are not giving Oregon representation on that board through a lumberman, and, second, because of Long's connection with the Weyerhaeusers." I talked to some of my Democratic friends back there, and I said, "We are all interested in the success of this administration, and I think that it is asinine to select a man of that connection and put him on there; that nobody with a bit of political sense would do it from a political standpoint." Well, I could not get any action. This man Montgomery seemed to be running the show, and I thought that he would just need a little dynamiting. I did not go to Senator Chamberlain, I went to other members of the committee. I said, "I want to tell you something about this spruce situation, and I will be up there at your next meeting." Senator Chamberlain did not have any idea that I was going to appear before the committee at all, because on account of our relations I did not want to bring him into it. I told the story there, and while it had the effect—

Mr. FREAR. That is the testimony that I spoke about this morning?

Mr. WEST. Yes. I will get you a copy of that, and I can not recall any change that I would make in that testimony to-day.

Mr. FREAR. This explains why that appeared in the Military Committee record. It was a little hard to understand at the time. Your explanation brings it out clearly.

Mr. WEST. Now, understand there is one thing I forgot to mention. At the first time I met Col. Disque they were supposed to be getting out 11 to 14 million feet of spruce, and for the six months—

Mr. FREAR. That is, of lumber or logs?

Mr. WEST. No; this was spruce airplane stuff, and for the six months preceding my first visit to Disque they had only gotten out about 12,000,000 feet altogether.

Mr. FREAR. You are testifying, of course, to what you have heard. I do not know what the figures are.

Mr. WEST. Yes; at that time. I am testifying to what was brought to my attention at the time. Of course I have not seen the books, and those figures may be wrong, but that is in line with my testimony at Washington. There was urgent demand—now, understand that at that time I was there, as I told you, on the telephone business and not representing anybody directly or indirectly. The extra money that I spent outside of my actual expenses in connection with the telephone business I spent myself, or my firm spent it. I took the precaution at that time, while I was engaged in those activities, not to be connected in any way with anybody, because I knew it would be open to criticism. I had been there on a trip prior to that early in the month of December, and there was a good deal of agitation here in connection with having the aircraft parts, the wood parts, manufactured out here.

Understand, Mr. Chairman, that years ago all of the indoor finishings in houses used to be done in the East, but later on the West got into the game, and that is all done here now—sashes and doors—and shipped east, so that the mills here were all well equipped. When the war came on and building operations were stopped these mills were practically all idle. They were all splendidly equipped, and a great many of them had driers, and the people out here considered it foolish to send airplane stock in the rough east, particularly when there was such a car shortage and congestion of traffic,

and only a small part of it would eventually go into those parts, and in many places they have put in improvised dry kilns, and much of it was not properly dried, and this department out here got blamed for a lot of rejects which should not have been rejected—would not have been rejected if properly cared for at these different airplane plants. So the people out here were very anxious to have that work done, and while I was there on some other mission I took it on myself to bring it to the attention of Senator McNary and Senator Chamberlain. They had received word from people out here with reference to it, and Senator McNary and Senator Chamberlain and I, as I recall it, went over and had a conference with Col. Deeds and some of the authorities and brought to their attention the ability of the people out here to do these things. When I went on this second trip—

Mr. FREAR. Which trip was that and what time?

Mr. WEST. This second trip was the time that I met Gen. Squier, but when I took up this aircraft parts business that was early in December. This second trip was December 3. Before I left it was being talked of in the papers. Mr. Charles K. Spaulding, a lumberman and a very high-class man, who had a little side issue of—I do not think he has a box factory, but a planing mill—he dropped in on me and discussed the matter with Mr. McCulloch and me; that if anything was done in that line that his concern would be glad to participate.

Mr. FREAR. That was while you were back here in Portland?

Mr. WEST. It was while I was here, just about Christmas time. So I wired on December 31—when I got there I wired to Mr. McCulloch, my partner. I said, "Forgot to advise you Spaulding is business associate of Leadbetter. Please be careful not to get tangled up in any business transaction with anyone which would in any manner impair my usefulness here in speeding up spruce production." That was sent on December 31.

Mr. FREAR. To whom?

Mr. WEST. To my partner, and I am just reading that—

Mr. FREAR. That was sent from Washington?

Mr. WEST. That was sent from Washington.

Mr. FREAR. To him?

Mr. WEST. Yes; to him. When this matter of aircraft parts came up, why, they naturally called in Leadbetter, and we had not been talking very long until Mr. Leadbetter spoke up and said, "Now, I have a slight interest in a mill in the Charles K. Spaulding Logging Co., and they manufacture sashes and doors in a small way and would undoubtedly be one of the mills that would ask to manufacture these parts, and in view of that I do not feel free to participate in anything of this kind, and I want you gentlemen to know that, and all negotiations of that kind will have to be carried on with somebody else." Neither of them had any hand in it whatever.

Mr. FREAR. What was Leadbetter's connection with Spaulding, if you know?

Mr. WEST. I think a small stockholder.

Mr. FREAR. A director or officer of the company?

Mr. WEST. I do not know whether he is, but Spaulding did not participate in any of it. He just came in to say that if anything was done in that line his mill was equipped to handle it, but I do not

think he ever asked for any business after that, and I am sure he never got any, because it was only a small amount that was let. But I am stating that to show Leadbetter's attitude.

Mr. FREAR. In regard to that mill?

Mr. WEST. With regard to it. Now, Col. Disque wired me the outline of a bill that was needed to commandeer timber, and presented a draft of it, and I used it as a basis to draft a bill which was introduced by Senator Chamberlain, and he introduced it. Well, I came back here and went back on a second trip, and at that time I talked with some planing-mill people here and told them if they got anywhere they would have to send a representative there—somebody who could talk to those people and explain to them about the facilities and meet any objections they might raise.

So Mr. McIntyre, of the Oregon Planing Mills Association, went back, and wanted me to go back, and, as I recall it, they paid my expenses going back that time, and when we got back there I introduced Mr. McIntyre to them, and it was first suggested that until he would have an opportunity to go over these things with people that they give him a desk there somewhere where he could work, and they had a lot of papers, and these people were coming in, and that was about to be carried out, and then I think Mr. McIntyre said that it might be misunderstood what he was doing there, and he did not avail himself of it; but the purpose was because he had a lot of papers and many men that he was to meet who were coming in from the factories would come there, and he would have a chance to meet them during the two or three days that he expected to stay there.

So after that the matter was largely handled between the representative of the millmen themselves. If I was ever there in Washington, I used to go around occasionally and see if I could help jar some one loose. So that from that time on, in my activities there, it could be said I was representing the planing-mill men—not any particular ones, because it was supposed to be for everybody connected with the business.

Well, now, I drafted this bill which was introduced, and it was like a bastard child there, it had nobody to look after it. Senator Chamberlain was the only one who took any interest in it, and it seemed to me that it was absolutely essential that that bill pass, because the Government was being held up on every side, and when you are building a railroad through a country, unless you could get the right of way and had some authority for it—and I don't think they ever had any authority under the law for going out and taking that right of way—but Disque got by with it some way, I don't know how he did it, in the absence of the passage of this law. When the bill came up before the committee Senator Chamberlain was ill in the hospital, being operated on for appendicitis, so that left no one on the committee that was familiar with the situation. But he had a hearing, and I was the only one there to speak for this baby. It was of no more interest to me than it was to any other citizen, and there were a lot of men there in Washington that should have taken a hand in it; why they didn't I don't know. So I went before the committee and explained the necessity for it and finally they decided to report it out favorably. Senator Fletcher, of Florida, was

the acting chairman of the committee. And, of course, when it came to writing a report, he didn't know anything about the situation.

Mr. FREAR. That was the Committee on Commerce?

Mr. WEST. Oh, no; the Military Committee. And Senator Chamberlain, as I say, had been operated on and was in the hospital. So I got a telephone call from the clerk of the Senate Military Committee, a new man who had just come in there, because the old clerk had left and voluntarily gone into the service, and this man had only been on there a few days, and the committee instructed Senator Fletcher to write this report for the committee, and the Senator was up against it and he shoved the "buck" to the clerk. The clerk knew less about it than anybody, so he called me on the telephone, told me what he was up against. So I went up in my room and wrote the report on the bill, and I knew it would not be changed, because there was not anybody there who knew anything about it, and would not know how to change it if they wanted to.

Mr. FREAR. What did that bill provide, briefly? Just briefly give us the substance of it.

Mr. WEST. Well, it provided for giving the Secretary of War, or giving the President or Secretary of War, or any designated agent, power to condemn right of way, logging outfits, mills, or any other equipment necessary to enable the Government to carry on spruce production.

Mr. FREAR. Did not the Secretary of War or the President have any powers of commandeering or condemnation prior to that time. in any way?

Mr. WEST. Oh, yes; they did.

Mr. FREAR. I was wondering.

Mr. WEST. Yes.

Mr. FREAR. That was confusing to the committee.

Mr. WEST. Under the defense of the realm act, I think, or what do they call it? That is what the English call theirs.

Mr. FREAR. That was general power.

Mr. WEST. National defense act.

Mr. FREAR. That was general power.

Mr. WEST. General power; but it did not cover this situation. So when this bill—this bill, I think, passed or got through the Senate, but it became held up. To meet the emergency, I think, they got an opinion out of the Attorney General or Judge Advocate General, or some other general back there, that I think was founded on hot air, in order to give Disque a semblance of authority—

Mr. FREAR. Lawyers agree on that subject.

Mr. WEST. In order to give Disque a semblance of authority to get away with this, because he had to have it.

Mr. MAGEE. Didn't it seem to you, Gov. West, really, that probably under the sovereign power it could go on, in case of a great crisis, the emergency of war?

Mr. WEST. And then you passed an act, the national defense act.

Mr. MAGEE. Yes.

Mr. WEST. And it set out specific powers, gave specific powers to the President, but it did not make any provision for condemnation of this property and making provisions for paying for it.

Mr. MAGEE. What I mean is this, that if there were any question as to the power of the Government to do it, if the Government did

it—that is, the Government's sovereign power in case of war was absolutely justified in taking any steps—I am not criticizing anybody—but if the Government had decided to do it, it was justified in taking any steps for the protection of the country.

Mr. WEST. I agree with you, and that was Gen. Disque's attitude, exactly; and those are the steps that he took. As I recall his view of it, it was "I have got to go ahead with this, and if I don't get this authority I have got to 'bull' it through, so far as I can, in order to meet the situation."

Mr. MAGEE. I know of several instances where they have gotten particular acts finally, perhaps some time afterwards, not caring to take responsibility, wanted specific authority.

Mr. WEST. Well, there is no question about it being lacking in this; but they got by with it.

Mr. FREAR. The Judge Advocate supported that, didn't he, in an opinion that he rendered?

Mr. WEST. I think he did.

Mr. FREAR. That has been read into the record here.

Mr. WEST. I am not certain about that, but some one—and I think that Gen. Disque could tell you—rendered an opinion back there which—

Mr. FREAR. He rendered an opinion, didn't he? That is right, isn't it?

Mr. LEA. That is also in September—well, no; that is not the decision, either. There was a law finally passed—a modified law passed in the summer of 1918—that went further than what existed before that time.

Mr. WEST. Yes; but that never got through the House.

Mr. LEA. Yes.

Mr. WEST. The Chamberlain bill was killed.

Mr. LEA. Yes.

Mr. WEST. Somebody up in your neck of the woods got busy on it—Fordney, he put a crimp in it.

Mr. FREAR. Fordney is over in another State.

Mr. WEST. He was there at the behest of certain of the lumbermen that wanted it killed, and some of our Democratic brethren down in the South.

Mr. MAGEE. Well, I will have to say that brother Fordney is a very fine man.

Mr. WEST. Yes.

Mr. MAGEE. A very able and conscientious man. Of, course, he is firm in his convictions, but I don't think we have a better and more useful member of the House than Fordney.

Mr. WEST. Nevertheless, he killed the bill; and he killed the bill, as he said, because it was pointed out to him, by some of the people who had timber, that it was unfair; but he was the boy that did the job.

Mr. MAGEE. He is very practical, and always impressed me as a man who always wanted to do justice and equity with everybody.

Mr. WEST. Yes.

Mr. FREAR. I thank my colleague for stating my opinion of the gentleman who is chairman of the committee on which I am serving in the House.

Mr. WEST. I think Mr. Fordney will tell you, himself, that he killed the bill.

Mr. LEA. I do not take this to be any criticism of the integrity of Mr. Fordney.

Mr. WEST. No; I agree with you that he is a high-class man.

Mr. LEA. I regard him that way, myself.

Mr. FREAR. It is accepted that way.

Mr. WEST. But bills have been defeated by even high-class men. That is enough of that.

I have explained to you about the Hawkins matter. Nobody, outside of myself, had anything to do with the discharge of Hawkins. I brought that to the attention of the Secretary of War, and it happened right on the stand.

And about Mr. Long: Now, there were a number of—I received a number of telegrams just at the time Long was appointed, that got me active in it, and I was not representing any of these people. I received a telegram from St. Johns Lumber Co., saying that the appointments were unfair, and I received one from N. E. Ayer & Co., and one from Dant & Russell (Inc.).

Mr. FREAR. They are here in the city?

Mr. WEST. Yes; they are all here.

Mr. FREAR. Long acted for what period, about what period, in this position?

Mr. WEST. Oh, I don't think he ever got on the job.

Mr. FREAR. Wasn't he engaged, or was he engaged in fixing any prices for the airplane people?

Mr. WEST. He may have been connected with some of these lumber associations that were cooperating with the Government.

Mr. FREAR. I gathered that from your statement before the committee.

Mr. WEST. But he never got on this job. He was just told he was taking it and before he got ready he sent in his resignation.

Mr. LEA. Who was that?

Mr. WEST. Long.

Mr. FREAR. And then Allen succeeded him, did he not?

Mr. WEST. No. The committee was divided. Mr. Benson and—Mr. Ladd was retained on the committee, and Mr. Benson was put there with him, to handle or to advise with Disque as to the spruce situation. Mr. Bloedel was on the committee—a man from Seattle was retained on the committee, and, at my suggestion, Mr. H. B. Van Duzer, of this city, was put on there with him.

Mr. FREAR. Was not Allen connected in some way at that time; that is, following along? That is my recollection. I am just trying to get the thing clear in my mind as to the various committees that had charge.

Mr. WEST. Allen was on there about the time that Sligh was on there.

Mr. FREAR. That is prior to this time?

Mr. WEST. Yes, prior to that time. You see, there was one time that Mr. Sligh had—

Mr. FREAR. Was not Long connected with it prior to Allen's time?

Mr. WEST. Well, now—

Mr. FREAR. That is what I was inquiring about when I spoke to you first.

Mr. WEST. Probably in an advisory capacity, but there are others, I think, who could give you a better line on that.

Mr. FREAR. That is what I had in my mind when I asked you the question originally. It was my recollection that he was, as far as the record shows.

Mr. WEST. I remember seeing a letter from Long, written to some of the authorities back there, outlining a plan for their operations, and making certain suggestions, but I don't recall just in what capacity that was written, whether as a private individual or whether acting on some of these many advisory boards.

Understand that these committees were divided. Van Duzer and Bloedel were on the fir committee and Benson and Ladd on the spruce committee. Col. Disque was on both; he acted as chairman, as I understand, of those committees. I am not certain about that. But the purpose was to put Col. Disque on there because the activities of both branches were so interlaced—

Mr. FREAR. He was responsible.

Mr. WEST. He was responsible, and that would simplify that matter.

I want to say that when I took these matters up with the Secretary of War, I was fortunate in getting in touch with the people who were engaged in making investigation and got a pretty good line on the situation, so that I could talk intelligently to these people. For instance, on my way east—and this card is dated December 26—I ran onto President Suzzallo, of the Washington University, with whom I had had an acquaintance for a good many years, and he was on the Council of Defense over in Washington—

Mr. FREAR. Chairman.

Mr. WEST. Chairman; and he made an investigation of the spruce situation.

Mr. FREAR. That has been introduced in the record by him.

Mr. WEST. So I had a chance then to go over the whole matter, and I think Mr. Frankfurter, from the War Department, was out here.

Mr. FREAR. And Suzzallo's report was to Frankfurter.

Mr. WEST. Yes; it was to Frankfurter. Well, I had a copy of that report, and it seems to me that I had it with me, and, as I recall it, I gave it to Col. Squier; in other words, it got to him, through me, two weeks sooner than it did through his own department.

Now, here is another thing, just before I close. In talking with an investigator—who is it, Mr. —

Mr. FREAR. Gabrielson; he is one of our accountants from New York.

Mr. WEST. Gabrielson; he dropped over to see me when I was away, and he intimated that somebody had brought it to his attention that I was back there securing contracts for some of these logging outfits that were engaged in the logging of spruce.

Mr. FREAR. Let me say that hadn't been brought to the attention of this committee, so far as I know.

Mr. WEST. Well, it was brought to my attention.

Mr. FREAR. Yes.

Mr. WEST. And, while I didn't see Mr. Gabrielson, some one, I don't know who it was, said that that had been brought to their attention. So I think, in fairness to me, that that ought to be de-

veloped now; if anything has been brought to the attention of you gentlemen, it ought to be cleared up.

I never represented any concern in the securing of a contract of that sort. The only thing I did back there was in connection with this planing mill proposition, and later on these people took care of my expenses on the other trip.

Now, I was wired to by Mr. J. B. Kerr—I think it was J. B. Kerr, calling my attention to Porter Bros., contract that was made, said that it was—oh, he wired to Senator Chamberlain—I think he wired to Senator Chamberlain and called his attention to the importance of having this contract approved; and when I dropped into Senator Chamberlain's office, he showed me the telegram, and he said, "I am not in a position to go and recommend something that I don't know anything about," he says, "I don't know anything about this. I wish you would get a line on it and see what it is." I had never seen the contract. I had heard gossip around here that Porter Bros. were about to enter into a contract, and I also talked with Col. Disque about it, and a man, Polson, was discussed also; also the Warren Spruce Co.

Mr. FREAR. What is his name?

Mr. WEST. Polson, in Washington. But it seemed at that time the only contract that was up for signature was the Porter Bros. So I made inquiry over there about that contract, because I wanted to see just what was in it, and I learned that it had been approved. Well, later on, as I recollect, I got a copy of it? I don't remember the provision, but I just read it for my own satisfaction, and that is the only one of those contracts I have ever seen.

Now, as to the other two and the matter of getting the contracts. I had absolutely no hand in it, and that was all done here and none of it done in Washington, and I was not directly or indirectly—never talked with anybody connected with Porter Bros., did nothing for them, received no pay from anybody in connection with it, and the part that I took in it was just to gather certain information for Senator Chamberlain so that he might dispose of the request; and of course when they found it had been approved, he was relieved of advising the people that he was not in a position to take a hand in it.

Mr. FREAR. I will say to you, Governor, that every member of this committee is an experienced attorney, and we all realize that you, or anyone else, in a proper position of an attorney, has a right to act in the capacity of an attorney for any company, either in times of war or peace, as long as it is in a proper way, and that suggestion has been impressed upon everyone connected with the committee by the individual members and by the chairman, that no criticism could possibly arise from that. Having that said in connection with your testimony just here, I wanted to ask you if any member of your firm was connected with the Warren Spruce Co.?

Mr. WEST. In this way: Mr. McCulloch, long in—I don't just know the date, but he could tell you—did some work for the Warren Spruce Co. I was not in touch with it, but he was a member of the firm, and anything that he did, of course, I would have to assume responsibility for, I would not be in a position to say that I didn't know anything about it, because I knew that—this was along in 1918—that he was doing something for them—the examination of some papers; he made a trip over in the spruce country, and just

the nature of it—I was away most of the time—just the nature of it I do not know, but I know that he didn't do anything that he would not do to-day, because whatever he did was legitimate business. But there was no occasion, nothing in connection with their work, that called for any activity on my part there in Washington; there was no occasion for it; I was never called upon. But Mr. McCulloch, I don't think that—for services rendered, I don't think that they have ever been settled for. I do not know just the nature of the service, because I was handling the telephone business and certain other things that took me away. But all my earnings were divided with Mr. McCulloch, and anything that he would earn should go into the firm and I should share in it, and I just know that I have not, as yet, shared in anything for any work that he may have done for the Warren Spruce, and if he has done anything, I earnestly hope that he will get paid, and I earnestly hope that I will get what is coming to me.

Mr. FREAR. You certainly ought to, and that is one of the principles of business that actuates most men.

Mr. WEST. Yes.

Mr. FREAR. And I will say, of course, you understand that the relations of attorney and client are privileged, and, naturally, we are prevented, if we so desired, from making any inquiry into what occurred.

Mr. WEST. You need not hesitate, if there is anything that will throw any light about the activities of our firm, I want to lay that aside and tell you frankly that I know Mr. McCulloch would come over and tell you anything you want to know, so you don't need to stand on that at all.

Mr. FREAR. The reason why is that the suggestion is made that when the representative of this committee went to Mr. McCulloch, I understand that he did not show that spirit. There may have been a misunderstanding somewhere along the line. He certainly had a right, under the principles of law, to reserve any information that he desired.

Mr. WEST. I suppose that, my being absent, Mr. McCulloch was not fully advised as to my activities in it, and probably he thought it advisable to wait until I got home and he would inform me—

Mr. FREAR. You say you are not acquainted with any particular activities on his part, so that you would not be in a position—

Mr. WEST. No, and when the matter came up where he was going over some stuff, I dropped over and told Col. Disque, I said "Colonel, up to this time nobody connected with our firm has been representing anybody, directly or indirectly, in anything that I have discussed with you, and I just want to tell you that I find Mr. McCulloch is taking up a small amount of work for those people, and that you ought to be advised so that you will know how to catalogue our office," as a matter of protection to him. And all of that was handled by Mr. McCulloch, and I know that he would be glad to tell you anything, and it may be that I might be in a position to throw a little light on something that you have in mind.

Mr. FREAR. There are several matters we have in mind but of course we do not know how far they will be developed yet, and until we do have them, of course it is—

Mr. WEST. I want you to feel free to call him, and the question of attorney will be waived—rights of attorney will be waived, and I will tell you anything I know.

Mr. FREAR. I thank you very much. I think the committee is under obligations for your statement, and assure you, as I said at the start, that that has been the attitude of the committee from the start; that you certainly had a right to proceed in any legitimate way, as an attorney, in regard to advising the different people, clients who were employing you, and that statement has been made to the individual employees and this committee in advance.

Mr. WEST. And I want to tell you this: When this Long matter came up, I was detained there in Washington, I stayed on quite a while. I paid all my own expenses. I just got into it and hung on. And when I got home, some of those expenses were taken care of by lumbermen here, I don't know who—

Mr. FREAR. You claim at that time you were acting for them as a class, not for individuals?

Mr. WEST. Well, yes; but I never had any pay for that service. But at another trip—I made several trips back there—some lumbermen here, they made up a pot, I think took up a collection among themselves, and took care of the expense.

Mr. FREAR. What was the character of the service performed there, that is, in general?

Mr. WEST. Well, that is the lumbermen that were wiring back there to get Oregon representation on this board. You see, it was Long and—

Mr. FREAR. In reference to that?

Mr. WEST. Yes. But at that time that I first took up the activities, I never knew that anybody was going to take care of my expenses.

Mr. FREAR. As I recollect, you said that Long was placed there by Montgomery?

Mr. WEST. Mr. Howe, I will say.

Mr. FREAR. Or Mr. Howe, and that Montgomery was rather directing the actions. Long was displaced afterwards, I understand.

Mr. WEST. Yes.

Mr. FREAR. And succeeded as you have stated.

Mr. WEST. I will be in the city here all week, and any time that you gentlemen want me I will—

Mr. FREAR. We will try to accommodate you to-day.

Mr. LEA. Mr. West, I would like to ask you one or two questions. How long were you in Washington when you went there the first trip, that is, on December 31, 1917?

Mr. WEST. I can give you the exact date, but it seems to me that my first trip I was there probably a couple of weeks and—well, probably the greater part of January, and then I came home, and I went back, and I stayed about six weeks.

Mr. LEA. I see.

Mr. WEST. I have all of the dates. In nearly every instance I kept my berth slips and have that, probably.

Mr. LEA. I want to know the approximate length of time.

Mr. WEST. I made eight trips back there in 1918.

Mr. LEA. Where were these kilns which improperly dried the lumber—were they located in the West or in the East?

Mr. WEST. In the East.

Mr. LEA. And they were conducted by whom?

Mr. WEST. They were conducted largely by—I think some of them were by the companies that were manufacturing airplanes, and then small contractors who had the stuff farmed out to them—this work farmed out to them by the airplane factories; for instance the Curtiss people and the Wright concern.

Mr. LEA. None of them were under the charge of the Spruce Production Corporation?

Mr. WEST. Oh, none whatever; none whatever. And I would say, Mr. Congressman, that while I was there I was fortunate enough to come into possession of a most exhaustive report that was made by the Forestry Service. They sent out men to examine all of these dry kilns throughout the country and find out just how we were equipped to handle the situation, and there was a splendid report prepared by the Forestry Department that told just the situation, and that report was largely in harmony with what I had picked up from the side lines.

Mr. FREAR. Who signed the report, or do you know anything about it? I don't know whether we have seen that or not.

Mr. WEST. Some one in connection with the Forestry Department, but you could undoubtedly get a copy of the report.

Mr. FREAR. That is in relation to dry kilns?

Mr. WEST. Yes. I thought I had it in my file and was going to bring it over to you, but it occurs to me now that—I believe I know what I did with it; I think I loaned it to that man that created the furore back there about the aircraft work. What was that artist's name?

Mr. FREAR. Borglund?

Mr. WEST. Yes.

Mr. MAGEE. Borg, isn't it?

Mr. WEST. Borg; yes.

Mr. MAGEE. B-o-r-g.

Mr. WEST. Borg; yes. He came to me and asked me about the dry-kiln situation, and I didn't have the time to go into detail, and I had that report and that covered the ground and I loaned it to him, and I don't think I ever got it back.

Mr. LEA. Was that in Washington or here?

Mr. WEST. In Washington.

Mr. LEA. Now, as I understand, you recommended Mr. Yeon, Mr. Bremer, and Mr. Benson, and Mr. Cobb, among others?

Mr. WEST. Mr. Amos Benson; and how many have you down there?

Mr. LEA. Well, I only have—and I believe Mr. Van Duzer.

Mr. WEST. No; Van Duzer wasn't on that list. This is for spruce production only, you know. This was for spruce production. The question of fir production had not come up, but there were 12 on that list, and I just can't recall the others.

Mr. LEA. Well, as I get it, among those you recommended were Mr. Yeon, Mr. Bremner, and Mr. Benson?

Mr. WEST. Amos Benson.

Mr. LEA. S. P. Inman?

Mr. WEST. Yes.

Mr. LEA. And Mr. Cobb?

Mr. WEST. Yes. And did you get S. B. Cobb?

Mr. LEA. Were there more than one Cobb?

Mr. WEST. Yes; there was more than one Cobb. I want you to get the right Cobb.

Mr. LEA. There were two Cobbs. S. B. Cobb?

Mr. WEST. That is the one I recommended.

Mr. LEA. I wish you would tell the committee about the experience and qualifications of these men in reference to the lumber and logging industry?

Mr. WEST. Every man on that list had devoted almost his entire life right in this field, to logging and lumbering. That is, there is not a man on there but what had had from 30 to 40 years' experience, and they had all been successful and most of them had, after being successful, retired. There were some of them that were still engaged in business.

Mr. LEA. Were you more or less familiar with the activities of the Spruce Production Corporation here at Portland?

Mr. WEST. Yes, sir.

Mr. LEA. And Col. Disque?

Mr. WEST. Yes.

Mr. LEA. Now, the charge has been repeatedly made, and insisted upon, that Mr. Disque refused to hear or take the advice of lumbermen and loggers who were experienced, and refused to avail himself of the knowledge and experience of lumbermen and loggers in this section, and went ahead willfully and ignorantly to carry on this work. What, if any, information can you give the committee as to whether or not that is the fact?

Mr. WEST. Well, there was in Washington the representative of most of the lumbermen out here in this neck of the woods; these lumber associations had their representatives there, and I was in touch with them constantly, had lunch together, had daily consultations, and these people requested me to take a hand in keeping Disque on the job and getting him additional authority in order that this labor situation might be handled. It seemed that the lumbermen were all up in the air, and they were fearful of I. W. W. troubles and strikes, and for some reason Disque seemed to be able to meet the situation, and they were very—they urged me very strongly that if I was in position, to aid in getting him additional authority. In other words, in the settling of the troubles out here and their leaving it to Disque it was just a voluntary arrangement, but somehow he got by with it and settled it, but there was nothing binding upon the lumbermen, and a vast majority of them were in favor of the arrangement, but there were a few who appeared to want to get Disque's goat for some reason or other and who were about to kick over the traces; so they wanted to get definite authority for Disque. I have forgotten now just how they proposed to do it, but through the President and Secretary of War giving him additional authority as a war necessity to make this arrangement permanent. I don't think anything ever came of it, but I am merely stating that to show the feeling of the lumbermen.

I may have a telegram here that would give you a little light on that. [After looking through papers.] I don't seem to have it. If I can find that I have it I will be glad to bring it over. But some lumbermen here—I think it referred to a conference that they had here, and then there were men in Washington, there was a large num-

ber of Washington lumbermen in Washington about that time in connection with price fixing of both spruce and fir, and they were there at the Willard and Raleigh Hotels; I stopped down at the Continental, but I was in daily touch with them and I know their feelings in that direction.

Mr. LEA. Well, to what extent was he affiliated with these lumbermen that you have mentioned in conducting the operations in Portland?

Mr. WEST. You mean as to his cooperation with them?

Mr. LEA. Yes.

Mr. WEST. Well, he was in close touch with them all along, through the man that they had on the Fir Production Board, Mr. Van Duzer; and the appointment of Mr. Van Duzer seemed to meet with almost unanimous approval—there may have been some objection to it—of the lumbermen out here. He seemed to be the man that they wanted on it. And I know from my talks with Van Duzer that he was very strong for Disque. I don't know whether he ever came in contact with Disque before that. And their cooperation was of the best.

Mr. LEA. Do you know Mr. J. J. Donovan?

Mr. WEST. I know of him. That is Donovan over in Washington?

Mr. LEA. Yes; and Mr. Grammar?

Mr. WEST. Who?

Mr. LEA. Mr. Grammar?

Mr. WEST. I don't know Grammar.

Mr. LEA. Were you acquainted with the members of the board of directors of the Spruce Production Corporation at that time?

Mr. WEST. Could you give me their names?

Mr. LEA. Mr. Donovan, Mr. Grammar and Mr. Benson and Mr. Yeon.

Mr. WEST. Benson; I know Yeon and Benson.

Mr. LEA. Now, what do you know about the experience of those men as to the lumber industry?

Mr. WEST. Well, Yeon's first experience was driving a bull team for old man Callendar, who was manager of the Simpson Lumber Co., down the Columbia River, and he was first staked to a little outfit by my old employer, Mr. S. S. Gordon, down in Astoria. I suppose that was along about 30 years ago; and he had a little logging outfit of his own, and out of that he created his fortune and has been actively in the business for probably 30 years, I guess.

Mr. LEA. I believe Mr. Cobb was also on the board of directors?

Mr. WEST. Yes.

Mr. LEA. In what way was he associated with the lumber industry?

Mr. WEST. Cobb was a Republican member of our legislature here. He and his associates own a mill down here on the water front, and I consider Cobb one of the best citizens, one of the best men we have in the city of Portland, a very high class of man, and I don't know anything but good of him. He was a man that I would pick if I was selecting a board, and if I was doing it I would put Yeon on it.

Mr. LEA. I believe Mr. Yeon was on it?

Mr. WEST. Yes. And I would put Benson on. Now, I don't know so much about Donovan. Donovan is a man of years of experience and a very successful lumberman and has a big interest over on the

Sound, but I am not personally acquainted with him, so that I could not testify as to his integrity, but he unquestionably has ability, because he has been successful in the lumbering business.

Mr. LEA. Now, is there anything else that you think of at this time?

Mr. WEST. Yes. There is one thing.

Mr. LEA. Which you think the committee should know?

Mr. WEST. That I overlooked, that you ought to know. When I first met—this is just a little about this Clallam County matter.

Mr. FREAR. Yes.

Mr. WEST. When I first met Col. Disque, when he was talking about the necessities of the Government, the demands that were being made upon him for spruce; and I want to say at this time that I came in touch with that end of it when I got in Washington, because there I met some of the Italian representatives and the French representatives and the English representatives who were over here urging the speeding up of spruce production, and I had it brought home to me then the urgent need of that being done, because it appeared from their talks that the whole success of the war depended upon their ability to get airplanes over there.

Well, that seems to have been pounded into Col. Disque here, and he talked to me about this Clallam County situation. I have never been over there, am not familiar with it, never have seen the railroad; nor have I seen any of the railroads. I haven't been in Lincoln County in recent years, not since the Government undertook its activities, and so I don't know anything, except in a general way, about what they did down there, and I have not seen it and I have never been over in Clallam County. So I am ignorant of the activities over there. I have learned more about it since reading these reports in the newspapers of your investigation. And Col. Disque had gone into it and he told me that if the war continued any great length of time that from his viewpoint that was about the only salvation. There was an immense big body of timber over there; it would cost a lot of money to get it out; and he told me in a general way about it.

Now, I want to say I have no interest in Ryan. I met him on a couple of occasions, but have absolutely no interest in him. I guess he is able to take care of himself. His troubles are not mine. But at that time I don't think that Ryan was ever thought of, and I think that Col. Disque told the absolute truth when he said that that project over there was his baby and that he assumed the responsibility for it.

Mr. LEA. When was that, Mr. West?

Mr. WEST. That was—I think the first time that I met him it was talked of. That was in December, about the 23d or 24th of December, 1917. I think that on the first time that I met him that Col. Disque mentioned that to me, and the necessity of doing something over there, and I talked it over with lumbermen here who were familiar with it, and some of them thought it unwise, because they didn't think that the war would last that long and that it would be unwise to put that amount of money in it; and others thought that the project was a proper one, that you could not sit down and figure on the length of the war and you could not afford to take the chances; that eventually they would have to go there if the war continued any length of time.

While on one of my trips East, after Ryan got on the job, I met him, and sitting in his office talking it over, he said, "What do you know about that Clallam County situation?" I said, "I don't know anything about it." "Well," he said, "the people out there in your State, the Aircraft or Spruce Corporation have been urging strongly the construction of that road, and others"; and he said, "I am just on the job and that has come up to me for approval, but," he says, "I am not going to have anything to do with it." I said, "Why?" As I recall it, I think he told me that he was in some way connected with the Milwaukee road. I don't recall whether he said he was a stockholder or a director; if he was a director, he would have to be a stockholder; and I mentioned the fact that those that I talked with said that if the war continued any time that that road, that tract, would have to be opened up. Well, he said, "If it was opened up and it could be proved to the satisfaction of most everybody that the war was won by opening up that tract, why," he said, "I would come in for the damndest roast that a man ever got." He said, "Everybody who would want to take a fall out of me would find some way of connecting me up with it. Now," he says, "I am not going to have a hand in approving that tract." And he said, "They can take it some place else; and," he said, "I don't care whether it is done by the President or the cook in the White House, or somebody else in the War Department"; he said, "They will have to take it somewhere else to approve it." He said, "I am not going to do it." So he asked me considerable about Disque. Some time after that I dropped into Senator Chamberlain's office and Mr. Ryan was there. I told him—I had before told him what I knew about Disque. I knew nothing of his past history.

Mr. LEA. Now do you recall about when these conversations occurred?

Mr. WEST. Well, shortly after the—the first one a short time after Ryan went in—oh, by the way—

Mr. LEA (interrupting). Do you remember when he was appointed?

Mr. WEST. No. But then you can get that date.

Mr. LEA. I understand it was in April, wasn't it?

Mr. WEST. I was back there in April.

Mr. LEA. So this Clallam County proposition came up with Disque four months before Ryan was appointed?

Mr. WEST. No; longer than that. Let me see. No, it was in 1918. I talked with Disque, oh, months before I ever heard of Ryan. I didn't know who Ryan was, and Ryan's name wasn't brought into it at all. Well, Ryan said to me, when that came up, he said, "I felt that that was a matter that might with propriety be taken care of with the Railroad Administration. I thought that was one way of getting it off of my hands; and I see no reason why they should not take care of it. It was put up to them and they turned it down; so it has come back here and has got to be taken care of." He says, "I am not going to take a hand in it."

So then I met Mr. Ryan over in Senator Chamberlain's office a short time before he came to Oregon, and he said in his talk about Disque, he said, "I didn't know much about him;" and he said that they had made an investigation, made a pretty careful investigation. He said, "I wanted to get a line on him, because I believe in

giving him pretty wide powers." And he said, "I think we have made a pretty careful investigation." And he said, "He has come clean." And he said, "I am going to play his game." Now he told me that in confidence. It don't do any harm to tell it now, and I think the committee ought to be given the benefit of it.

Now, in saying I don't know anything about Disque's past, and I don't know anything about whether money has been wasted over there, or whether anything has been stolen. I don't know anything about it. That is a matter for accountants. But I am telling you now of my contact with it, and I will tell you frankly that I never saw anything in my dealings with Disque or any inquiry that I made into that department, that did not show, as far as his honesty and integrity are concerned, that he was as clean as a whistle.

And in closing I want to say this: That I think there are very few men in the country that came into that job, knowing absolutely nothing about the spruce game—and there is where I always contended the wrong was done. These matters should have been in the beginning turned over to men who knew something about the business. But Disque was picked, and, fortunately, he was a man of capacity, but they surrounded him, outside of the few men that he was able to select himself, they shipped in here—I don't know who was responsible for it, whether it was just accident—counter jumpers, and bond salesmen, and God knows what, from all over the country. It seems that they picked a lot of people who knew the least about lumbering. Now it was that that Disque had to work with, and how he ever got by is a mystery to me. Nobody but God knows. But I was in close touch with the situation, and I knew what a heartbreaking proposition he had. And I want to say to you that, knowing the situation as I do, I believe that that man did the best that was possible to bring order out of chaos and to perform the service that he was sent out here to perform.

And about Disque not going overseas. I know that the only favor he ever asked of me, the only personal favor—the first of it all had to do with the business of his office. The only personal favor he ever asked me, he said, "There is just one thing I want you to do for me, if you are in position to do it. It is this: That as soon as this thing is organized it will take care of itself. I want to get overseas." He says, "I don't want to stay here."

And I tried to horn in back there and do something, and they said, "We need Disque out here."

Mr. LEA. You did try to help him get overseas?

Mr. WEST. I felt out some of my friends over there, and talked to some of them that I thought might help, and they said, "We need him on the job out here."

Mr. LEA. That is all.

Mr. FREAR. When did you try to get Disque overseas, and whom did you ask about it?

Mr. WEST. Oh, let me see. I dropped it to quite a number of those that I came in contact with that I thought might lend me a hand in it.

Mr. FREAR. Whom, among others? The Secretary of War?

Mr. WEST. I don't remember whether I brought it to his attention or not, but it seems to me that I did tell the Secretary, in talking of Disque, that he was anxious to get overseas.

Mr. FREAR. When was that?

Mr. WEST. During one of these conversations.

Mr. FREAR. That is when he was colonel, or what position did he occupy then?

Mr. WEST. He was a colonel then. He was a colonel.

Mr. FREAR. When was it that Mr. Ryan said to you, "I am going to play Disque's game"?

Mr. WEST. That was just before he went out.

Mr. FREAR. Before Ryan went out?

Mr. WEST. No; just before Ryan came out here. Now, I might just add a word. What he said was that he was going to—there had been some criticism of him, and lots of words of praise, but they had made this investigation, that he had come clean, and he was going to stand by him, or words to that effect.

Mr. FREAR. When do you mean that Ryan came out; that is, in July or thereabouts?

Mr. WEST. He only came out here once. He came out here to look over the situation.

Mr. FREAR. Just before that time, then?

Mr. WEST. Yes. I would say it was probably two weeks before he arrived here.

Mr. FREAR. And at that time he told you he was going to play Disque's game?

Mr. WEST. Well, I won't put it in those words.

Mr. FREAR. That is your words?

Mr. WEST. Well, that he was going to stand—that he had investigated him and he had come clean in their investigation; therefore he was going to stand by him.

Mr. FREAR. That was before he had come out here?

Mr. WEST. Yes.

Mr. FREAR. That he had come to that conclusion?

Mr. WEST. I should not have said—I was using my own lingo when I said "he was going to play his game."

Mr. FREAR. He said he wasn't going to take a hand in this railroad matter?

Mr. WEST. That he wasn't in position to do it, because it would lead to embarrassments; might be misunderstood; that he was in an unfortunate situation that he could not help.

Mr. FREAR. When did he say that, as nearly as you can remember?

Mr. WEST. That was not long after he went on the job. Very shortly after.

Mr. FREAR. Did he say to you then that at that time he had already approved the contract for getting out between fifteen and twenty-five million dollars' worth of spruce, and it required the building of some railroad in there?

Mr. WEST. No, no; that wasn't discussed at all.

Mr. FREAR. His approval shows upon the contract of May 12 that he had approved it?

Mr. WEST. Let's see. When did he go on the job?

Mr. FREAR. Some time in May, but his approval shows, on the contract of May 12, that he approves a contract of from fifteen to twenty-five million dollars' worth of logs, depending upon the amount of the various grades that had to be shipped.

Mr. LEA. But in that connection that contract of May 12 was dated here and was not seen by Ryan until some time later?

Mr. WEST. Well, I could not say anything about that. I don't know anything about that at all—any contract.

Mr. FREAR. The contract may have been dated here, but it was made in Washington, D. C., according to the testimony, as far as the testimony is concerned.

Mr. LEA. The final contract. There were two.

Mr. FREAR. This is the contract of May 12, the one signed and approved by Ryan. That is the one that I mean. You don't know anything about that, I assume?

Mr. WEST. No; absolutely not.

Mr. FREAR. It is a rather remarkable fact, is it not, that at that time that Ryan should be discussing with you the fact of his connection with the Milwaukee road and the situation it left him in, providing he had approved that contract between fifteen to twenty million dollars, or \$25,000,000, for getting out spruce which required a railroad.

Mr. WEST. Well, as the matter came up it was led to by matters that I was discussing with Mr. Ryan, giving him some general information as to the situation out here, and it naturally led into all of their activities out here. It was not—

Mr. FREAR (interrupting). Did you have any particular work with Mr. Ryan? You say you had never met him before, I understood.

Mr. WEST. No; I never saw him before.

Mr. FREAR. Did you have any particular duties to perform with him?

Mr. WEST. No.

Mr. FREAR. This wasn't in Oregon; it was up in northern Washington?

Mr. WEST. Yes; but we were talking about Oregon matters, and we just drifted over onto this, and he asked—I suppose he thought that I might know something about the situation, and asked me what I thought of it, and I told him I didn't know anything about it, only I was just—that I had talked it over with Col. Disque to a small extent, but I didn't know anything of the merits of it, didn't know where the railroad ought to go, where it ought to be built, or anything about it.

Mr. FREAR. Of course, you didn't know what kind of a railroad was contemplated being built?

Mr. WEST. No; nothing whatever.

Mr. FREAR. That wasn't discussed at that time?

Mr. WEST. No, no, no. I was in total ignorance of that.

Mr. FREAR. The question has been asked of you about Mr. Benson whether or not he is an experienced logger and lumberman, and I understood you to say that he was. If the testimony here shows that Benson was given by Disque the determination of where a railroad should go that cost nearly a million and a half dollars, in order to get spruce out of the Siletz reservation, and that Benson made one trip to ascertain the situation, and the determination was based upon that one trip, notwithstanding five witnesses have already testified that a railroad could have been put in there running 6 miles, at \$15,000 a mile, would you say that Mr. Benson or Mr.

Disque exercised the ordinary business judgment that should be called upon in determining the location of that road?

Mr. WEST. Well, now, I will tell you. Before I could answer that question I would want to find out whether those gentlemen who testified here from Lincoln County had a piece of timber that they wanted to tap, or that they had a piece of railroad that they wanted to sell to the Government, and any other selfish things, because there is a little selfishness in this world and a man might be sore because he could not shake the Government down for something. But Mr. Benson might go over there in one trip; whether he would be able to locate that road and select the road would depend upon what previous investigations had been made by engineers and how carefully the investigations had been made. There is no question about Amos Benson's ability to locate a logging road, because from the time he was able to walk the old man had him "punching the bulls" down in the woods, and when it came his day for logging he was in the backwoods building logging roads. He is no high-brow logger, but a real logger, and I would not trade his opinion for a tribe of those birds that were in here testifying from Lincoln County, and I know them all, and I know some of their interest, and I know what they have got in their nest.

Mr. FREAR. You think he is a high-class man, and you think they are "birds" because they testified to facts and know the facts, and Amos Benson went out and found by an examination of one day that a road could not be built there, and you would think that from that examination he would know more than these "birds" who have presented facts, who you say can not be relied upon?

Mr. WEST. Somebody would have to convince me that he did not know more than those men. That territory looks flat on a map, and I would want to find out. I know Mr. Ball down there who testified. He is a fine fellow; he was assessor of that county, and they sat around the hotel down there. They do not have very much to do, and they gossiped about this, and everybody who had a timber claim over in that country feels that just over the ridge they might put in a road to get to the 160 acres that he owned. I do not know whether Ball has any timber over there or not; but in a community of that kind that is an ideal place for a lot of gossip. I do not know, Mr. Chairman, but I think you will find that if Amos Benson recommended that the railroad should be placed in any particular place he did it only after securing the data upon which to base his decision.

Mr. FREAR. You have brought Mr. Ball into the question. Mr. Ball, I believe, had no timber anywhere around where this railroad was to be located; I do not remember whether he has any.

Mr. WEST. I will say that he is an honorable man.

Mr. FREAR. Mr. Ball represents a community which raised between \$60,000 and \$75,000 in bonds to put water there, to put an establishment there, for the benefit of the Government, and he has testified that they asked for nothing back. So that shows a pretty good spirit of patriotism where people will buy liberty bonds in order to help finance the Government.

Mr. WEST. There is no question about it.

Mr. FREAR. If Mr. Ball, who is experienced as an assessor, says that practically 700,000,000 feet of spruce were to be found there and

Disque testifies that he knows nothing about spruce that was merchantable there, would you take Ball's statement in preference to Disque's on that proposition?

Mr. WEST. I will answer that in this way: In the first place, Ball was assessor over there. I do not know whether that county had a cruiser in that field to go out and cruise this timber, and that is the only way you can find out.

Mr. LEA. He said they did not have a county cruise.

Mr. FREAR. He said they had cruises, but they had not had county cruises.

Mr. LEA. He said they had no county cruise.

Mr. WEST. Then Ball would not know anything about it, except from people who had been out in the timber, and he would only have had general knowledge as to the actual merchantable timber they had on this quarter, how much of it was spruce, what percentage of the spruce was adapted to aircraft lumber, instead of the knowledge from a cruise that would be required to determine where that road ought to go, because, Mr. Chairman, you understand in those sections there is only a certain amount of spruce. The spruce belt follows the coast. A certain per cent is spruce, and then there is a certain per cent of that spruce that is fit for aircraft lumber. You might go into a spruce section and it might be of such a type that a very small percentage of it would be available, and you might think it was "a peach of a tract; here is where the railroad ought to be." But men who understand the business would go in there and make their cruise and find that it was the wrong place. So when these gentlemen come in and testify, I would rather believe the judgment of Amos Benson.

Mr. FREAR. He never made any cruise. His work was altogether with reference to the location of the road.

Mr. WEST. Amos Benson has not testified?

Mr. FREAR. No. We would be glad to have him do so.

Mr. WEST. Mr. Ball and this other gentleman, who had a little jerk-water road he wanted to get extended—and I suppose those gentlemen may have a grievance—I know them, and they are good fellows.

Mr. FREAR. They are "birds"?

Mr. WEST. But, as I say, some of these might have a selfish interest.

Mr. FREAR. Of course it is not possible that Amos Benson could have had any selfish interest? Is not human nature much the same the world over?

Mr. WEST. Absolutely.

Mr. FREAR. When both men come in and testify—we will take the case of Hall after passing Ball, who had no selfish interest; he was assessor and had lived there 18 years and certainly had as much information regarding that tract as Mr. Benson. You will concede that. Mr. Hall testifies he had some timber up near the mouth of the Siletz that was not touched by this road. Now, Hall says that in his judgment—and he is familiar with that because he has lived there for years at Siletz—he testifies before the committee that the approach to a billion feet on beyond this road that was contemplated could be reached, and he testifies that is as fine spruce as could be

had, and would you take his word as against Mr. Benson's word, who was up there only one day?

Mr. WEST. I will answer that in this way. Understand me, I do not know whether the railroad is built in the right place or not, because I have never seen it.

Mr. FREAR. I am just testing Mr. Benson.

Mr. WEST. But I want to say to you in answer to your question, that if I had money to put into logging, and you should go and bring in a flock—

Mr. FREAR. Of birds?

Mr. WEST. Yes, of birds of that type; bring in a flock and put their judgment up against the judgment of Amos Benson on placing a logging road I would say, "Amos, I will put my money on you."

Mr. FREAR. If another man, Morgan, who has cruised up there for years and is recognized as one of the best cruisers so far as logging goes, testifies that in the immediate vicinity that may be reached by this logging road over 550,000,000 feet of spruce is located of as fine spruce as any that could be had anywhere along the coast, and he has no personal interest, would you say that he is a man, one of the birds, whose judgment could be accepted equal with the judgment of one man who had only made one trip over that country?

Mr. WEST. I would say to Amos, "This man, Morgan, thinks you know nothing about it, but I have got confidence in your judgment."

Mr. FREAR. You would follow his judgment if he did not think there was any spruce in there?

Mr. WEST. Yes; because I know Amos Benson knows spruce and fir, and he knows how to locate a road, and he knows how to build logging roads, and he knows the quality of timber, and he has no selfish interest in this, and I would be very much surprised if his judgment was wrong. He might have been wrong. There may be a billion feet of that over there, and these fellows may be right and they may be giving you what is the truth; but I am telling you what my judgment is about Amos Benson.

Mr. FREAR. I am trying to ascertain your judgment about Benson.

Mr. WEST. You could add to them a few more Morgans and Balls, and I would still believe in Benson.

Mr. FREAR. If it was brought out in the testimony that Benson's road cost in 10.8 miles \$1,440,000, or approximately \$130,000 a mile, for bringing out a small percentage of logs on the western slope, would you still believe that that was a right judgment?

Mr. WEST. How much a mile?

Mr. FREAR. In the neighborhood of \$130,000 a mile; \$36,000 for the spurs.

Mr. WEST. I would not think that possible, but if that railroad cost \$130,000 a mile, well, I would say: "Amos, you are fired." [Laughter.]

Mr. MAGEE. You would say he had not carefully investigated the proposition?

Mr. WEST. Do you mean to tell me that careful investigation shows that line of railroad cost \$131,000.

Mr. FREAR. He means to tell you that Disque testified on the stand—we have not seen the figures and we have to depend upon what we get from the corporation—he has testified in the examination of Mr. Lea that the railroad cost \$1,440,000.

Mr. WEST. That is the 25 miles of road that runs from Yaquina down to the Blodgett tract?

Mr. FREAR. Unfortunately, it is not; it is for a short road of 10.8 miles and a spur of 2 miles, and then, he claims, I think, there are some terminals. He did not know anything about the terminals. That is right down in Yaquina Bay.

Mr. WEST. Well, I do not see where the cost would go for \$131,000 a mile.

Mr. FREAR. I have allowed something for the spurs. I allow \$80,000 for the spurs.

Mr. WEST. I do not just see where the cost would come in. I do not believe that road going to the Blodgett tract cost over \$50,000 a mile.

Mr. FREAR. Yes; that cost nearly \$90,000.

Mr. WEST. I think you will find they have got a long spur on that.

Mr. FREAR. And there would be slides on that road.

Mr. WEST. But you can not blame Disque for the slides.

Mr. FREAR. I am not trying to blame anyone; I am trying to ascertain the judgment you formed about it.

Mr. WEST. I had known of some people who were thinking of purchasing this property for a paper mill.

Mr. FREAR. Which was that?

Mr. WEST. The Blodgett tract, and the railroad to the Toledo mill, and I understood that was to go in, and they asked me to make an investigation for them and I did not go over there myself; I had not seen it, but sent some one to look into the water power end of it and found it was not available, and the information I got was that it cost the Government \$50,000 a mile.

Mr. FREAR. I am afraid you have not acquired the information that comes to the committee. Let me hand you a report that was given to the committee. It is the Spruce Corporation's report that they have gotten on this matter. I refer more particularly to the railroads in the first part. No. 11 is the logging road that Disque testifies cost \$1,440,000 [indicating].

Mr. WEST. Over here?

Mr. FREAR. That is a publication they have gotten out and handed to us.

Mr. WEST. It says, "Page 3337, Disque, 550 miles." If you divide that up you get \$90,000 a mile.

Mr. FREAR. There are sidings, and they would not cost as much as the main road.

Mr. WEST. In that type of railroad it would not make any difference whether it was a siding or not. In ordinary railroad building they would use old relayers.

Mr. FREAR. You are familiar with railroad construction, are you, Governor? Would you say that railroad construction of sidings cost as much as the main track; do you want to be understood as saying that?

Mr. WEST. In that territory over there?

Mr. FREAR. Any territory, excepting where you have cuts and bridges.

Mr. WEST. What I understand about that kind of sidings is that as they were put in there there would be very little difference in the cost.

Mr. FREAR. Who told you about the kind of sidings? Let us see what your understanding is.

Mr. WEST. Judging from the way the Government carries on work of that kind, they generally put in a pretty good class of construction. You know more about that than I do; I have not been over the road.

Mr. FREAR. I have been all over the road.

Mr. WEST. But you could not spend \$90,000 on a railroad per mile if you did not do some work on a siding, and I do not see where that money would go?

Mr. FREAR. This is \$130,000, not \$90,000.

Mr. WEST. Of course, you have got to allow for your sidings on a road of that kind. There would not be as much as on the main line in the case of a road like the Southern Pacific, putting a siding into a warehouse.

Mr. MAGEE. Make a computation there, even putting sidings on the same basis as the railroad bed proper. I think, then, the figures, Gen. Disque testified, were 99,000.

Mr. WEST. I can see at a glance that it would run something like 90,000.

Mr. FREAR. \$90,000 was the Blodgett road.

Mr. WEST. But not being familiar with that, and just at a glance, I just do not see where they would get \$100,000 in a road of that kind.

Mr. MAGEE. I think your revision is pretty good.

Mr. FREAR. Here is the testimony, I think, which is unquestioned, that this railroad was built up there to reach in the neighborhood of 150,000,000 feet of spruce that grew along the road and was near the ocean. The timber on the other road, according to several witnesses, is 550,000,000 feet, and could have been reached by this "jerkwater" road of which you spoke, with the addition of 6 miles at a cost of \$15,000 a mile. As a business proposition, if you were going to act for the Government and get spruce and wanted to get spruce at the best figure for the Government, what would have been your judgment as to which road you would build?

Mr. WEST. My judgment would have been to make a careful investigation of the timber that was in there and get the most feasible road that could be obtained, taking into consideration the cost of construction and the grades, because it costs money to build over mountains, and while I was doing that I would not have paid a bit of attention to anybody who was sitting around a stove in Lincoln County, whether he had been assessor, or expected to be assessor, or anybody else; I would not have paid any attention to them, because when you do the chances are they have an axe to grind; but I would have made a careful investigation and then built the road where I thought it should have been built.

Mr. FREAR. You at least would have made a careful investigation?

Mr. WEST. Absolutely.

Mr. FREAR. Because you represented the Government and it was Government money you were using and money that was raised to carry on the war?

Mr. WEST. Yes; I would have made a careful investigation; but don't understand me to believe that these people did not make an investigation. If they did not I am very much surprised. I have great faith in what Benson would have done.

Mr. FREAR. Would it have affected your great faith in Disque if he said there was no spruce available there for airplane purposes, in this particular instance?

Mr. WEST. Well, I think, from what I know of it, that Disque had men in this field. Of course he could not go out himself with a pack on his back and go around and cruise all that timber; but I happened to know the head man in the field was getting the information, and that everybody who wanted to take advantage of the situation and get a railroad built in their tract was advising Disque that there was splendid timber near here, and saying, "If you get this railroad in here we will win the war." He had that to come up against—a lot of these so-called patriots talking about doing their bit for the Government, and yet they were touching the Government, and their advice was for the purpose of favoring their own ends.

Mr. FREAR. Several of the cost-plus contractors that had control of the railroad might come under that classification.

Mr. WEST. It might reach anybody.

Mr. FREAR. So, in reaching human nature everywhere you are liable to run across the same conditions. Now, here is an illustration of what the Government was paying for a road along the edge of the ocean to reach approximately 150,000,000 feet, at the outside, of spruce that was there lying near the ocean, some of which it has been testified was not usable. In order to reach that it required the construction of spurs, one of which we went up into, with an elevation which practically was a 7 per cent grade, whereas the Story road, or the Wessels road, or the Miller road, or the Porter survey, that would have been put through there, according to the survey that has been placed before the committee, at an elevation of not to exceed 2 per cent, in carrying out the loaded cars. Now, would that influence your judgment in determining the location of the road?

Mr. WEST. That road might be in the worst possible location; I do not know.

Mr. FREAR. Would that influence your judgment in determining the location of the road?

Mr. WEST. The only thing that would influence my judgment is what was stated before. I would not put men in the field unless I had absolute confidence in them, and in that way I would have found out where the spruce was, in the first place.

Mr. FREAR. That is important.

Mr. WEST. That is the first thing, and I would not take anybody else's word for where the spruce was, either. I would put cruisers in there in whom I had confidence, and when they told me so much spruce was in there the best plan would be taken up to get where the spruce was, and the next move would be how to get in there with the least possible expense, and then when I had disposed of that and one of these fellows told me I was doing wrong I would pay no attention to him.

Mr. FREAR. Whether they were birds or not?

Mr. WEST. Whether they were birds or lumbermen, or engineers.

Mr. MAGEE. That is what any reasonably practical man would have done, is it not—just what you have described here?

Mr. WEST. There could not be but one answer to that.

Mr. MAGEE. And if they did not do that, you would call them inefficient and incompetent?

Mr. WEST. I will put it this way: If that railroad was put up there without proper investigation of the territory——

Mr. MAGEE. For the determination of the facts?

Mr. WEST. If it was just thrown in there and the money expended, undoubtedly those people are open to censure, but I would have to be shown that those were the facts, because somebody who might have had a grouch might come in and say so. He might be right, but I would want to satisfy myself before I would feel that either Disque or Benson—because what would it buy them? Nothing but grief, if the railroad was not to do anything—but good. It didn't make a particle of difference to Benson where the railroad was located; he does not have to work for a living.

Mr. MAGEE. I think Gen. Disque testified that if 550,000,000 feet of spruce was the amount that would be reached if it were feasible to get over the divide on the Miller-Fischer railroad; that it was the only feasible means and the only sensible way to get at it, but he said that the spruce was not there and you could not get over the divide. So it is a question of fact.

Mr. WEST. If the railroad is in the wrong place, I do not know. If they have thrown away money, they are open to censure, and if they have gotten the right place, they are to be commended.

Mr. FREAR. We all agree as to that.

Mr. WEST. I have been up there, but not for two or three years, and I have not seen any of these lines and can not discuss that question intelligently.

Mr. FREAR. My only reason for asking the question was because on the inquiry of Mr. Lea you testified regarding Mr. Benson's experience as a logger, which I assume to be correct, and I was stating the facts as presented before the committee, which I have tried to do so that we could understand them. If Mr. Donovan testified in effect that he did not feel the mill up at Port Angeles was necessary—did he say——

Mr. LEA. He said he did not at the time it was built, but after it was built he did.

Mr. FREAR. Would you take the judgment of a man like Donovan as to that?

Mr. WEST. I would not take the judgment of anybody outside of the Saviour himself who I had not been in close contact with and knew all about and unless I had an opportunity to find out what he had based his statement upon. That is the only individual on earth, outside of my wife, until I had an opportunity to find out. Of course, there are men that I have had an opportunity to learn about and their word would go with me.

Mr. FREAR. You spoke very highly of Disque, and there is no criticism of that; but I am speaking about his judgment in this particular case.

Mr. WEST. I will say this, that Mr. Donovan is undoubtedly a man of ability because he has been engaged in big operations, but what his motives would be I do not know, and so I would not know whether to take his word or not.

Mr. FREAR. Mr. Van Duzer had charge of the fir. Was there not some controversy before Van Duzer was given control of the fir?

Mr. WEST. Up to that time?

Mr. FREAR. Yes.

Mr. WEST. Yes; because of the fixing of authority at opposite ends. I do not know just what it was. It was all brought to my attention at the time, but the question of priority in shipments and the furnishing of cars and all those things, and there was a contract between the two sides, the two committees, and the purpose of getting Col. Disque on both committees was that he met with both of them and could get them together and iron out their differences and there would be more harmonious action.

Mr. FREAR. Mr. Van Duzer was given charge of the fir?

Mr. WEST. I do not know whether he was with Mr. Bloedel or not.

Mr. FREAR. And is it a fact—it has not appeared in the testimony, but it has been stated and I do not know where we can get the figures—that when Van Duzer took hold of operations the production was about 3,000,000 feet of fir a month, and that within three months or thereabouts it had increased to about 18,000,000 feet of logs?

Mr. WEST. I understand there was quite a large increase; they speeded it up.

Mr. FREAR. He apparently was a very capable man when he was finally put in charge?

Mr. WEST. I heard nothing but words of commendation for him, the way he handled that end of it.

Mr. LEA. There is just one question I want to ask. I understand that when you used the words attributed to Ryan that he would play Disque's game, you were using your own words?

Mr. WEST. They were my words. He said in substance, not to make any misinterpretation of that, that in coming into this work he was suddenly called upon to give wide authority to Disque, for which he in the end had to assume a large responsibility, and that they had made a pretty careful investigation and that Disque had come clean and that he was going to stand by him.

Mr. FREAR. Who made the investigation that he spoke of?

Mr. WEST. I do not recall who made it; I do not know whether it was the intelligence department or the War Department, or whether Ryan did it himself.

Mr. FREAR. That is all.

Mr. WEST. You expect me to get a copy of that testimony?

Mr. FREAR. Yes.

Mr. WEST. I am quite sure I have a copy and will give it to you for the record.

Mr. FREAR. When it is received we can insert it to be included in the printed record.

(The statement above referred to is copied in the record as follows:)

Mr. WEST. The Government has paid a high price for Col. Disque's education, but he is getting it and, I think, making much progress. I do not think

that it could improve the situation by making a change. I have come in contact with the members of the board here in my endeavor to explain to them the situation out there, and while I find them—Col. Montgomery, Col. Deeds, and others—earnestly endeavoring to get results the seriousness of the situation out there forces me to say that the people here don't know anything about the situation out there on the coast, and thus the trouble. They are trying to carry on logging operations from Washington. To succeed in your airplane program you must have at least 11,000,000 feet of spruce per month, and I understand it is also claimed that you must have as much as 14,000,000 feet.

A committee from the Aircraft Board has just recently returned from Oregon and Washington, where it was looking into the situation. It seems they have provided Col. Disque with an advisory board. One man, a Mr. Long, is manager of the Weyerhaeuser Lumber Co., the largest single timber owner in the world. They own an acreage of timber as great as the acreage of some of your Eastern States—yes, two or three of them. Mr. Long is the manager for that concern and is selling large amounts of spruce to the Government. Contracts have recently been entered into by the Government with large logging outfits—outfits well able to produce results—and the territory has been divided between them. One outfit, I understand, will be told to log here, another there, and another over there; so there will be no overlapping. One outfit, or perhaps two of them, will work largely in the Weyerhaeuser timber. Mr. Long is, therefore, in the position of serving two masters, and he can not do it.

Now, if Col. Disque is given the authority that he needs, these gentlemen back here who are holding the purse strings may wish him surrounded by men who will protect him against our own people out there, because it is like taking candy from a baby when you are dealing with the Government on this timber proposition. The Government does not know the game, and they do. The prices which have been paid through the mix up in the past have been unfair to the Government.

Mr. WEST. I have seen Secretary of War Baker; I have seen Gen. Squier; I have seen Col. Montgomery; I have seen Col. Deeds; I have seen Maj. Shepler, Maj. Horner, Maj. Leadbetter—everybody, clear down to the colored elevator man.

Senator HITCHCOCK. Have you been unable to get anyone who would decide the question you put up to them?

Mr. WEST. Nobody.

Senator HITCHCOCK. They could not decide it?

Mr. WEST. No.

Senator HITCHCOCK. What did Secretary of War Baker say?

Mr. WEST. Why, Secretary Baker could not say anything, because he did not understand the situation.

Senator HITCHCOCK. Did he refer you to some one?

Mr. WEST. He made an honest effort to straighten the matter out, and I think gave me all the cooperation that was probably in his power to do.

Senator WEEKS. Would you call Mr. Long a practical logger?

Mr. WEST. I do not know that he is. He is a high-class lumberman, but he has got timber to sell to the Government. If the Savior himself came down here I would not approve of his going on the Advisory Board if I learned he had timber to sell.

Senator WEEKS. We have a good many instances of that kind that are under consideration. How about the third man—the Seattle man who is on the board?

Mr. WEST. You understand there are just two men on that board, on the spruce section of it. That is Mr. Long and Mr. Ladd. Now, Mr. Ladd is all right. It is all right to put Mr. Ladd on there, but in Mr. Long's place, coming from Seattle, put another Seattle man on there, either a practical logger or a practical lumberman, and then go to Portland, or go somewhere else, and get another practical man. The other man that you mentioned, Mr. Blodell is a personal friend of Mr. Long's. Now, he has charge of the fir section. He will tell the Oregon Mills what they shall saw in the way of fir and what orders they shall get. There is an intense rivalry between the mills of those two States. It is hard to explain the situation to you people, but anything that a

Portland man does is under suspicion by the Seattle crowd, and anything that a Seattle man does is under suspicion by the Portland crowd. Now, the Portland lumber people are up in arms over the appointment of this man, who will have control over their industries. All of that control should go into the hands of a board, so that each State may be fairly represented, and no one with timber or lumber to sell should be permitted to go on that board.

Senator McKELLAR. What do you conceive to be the duties of this board?

Mr. WEST. Unless they can carry to Col. Disque some practical knowledge that will be helpful to him, and will protect the Government from being robbed, it is absolutely useless. You had far better turn him loose.

Senator McKELLAR. Do they recommend the persons from whom the Government buys material?

Mr. WEST. Oh, the Government does not care from whom it buys material. It is willing to take all it can get.

Senator McKELLAR. Do they recommend the price at which the Government shall buy?

Mr. WEST. They would have to do with the price that the Government would pay. Col. Disque would no doubt consult with them as to what is the proper price. What is the proper price depends on logging problems. Col. Disque must have authority to expend money for logging railroads, open up new sections. It might be proper to go into some tracts, whereas if he went into others it would be very poor business. Here is where his advisors would be helpful.

Senator McKELLAR. What is the extent of Mr. Long's holdings out there that would be involved in this matter if you were to sell to the Government?

Mr. WEST. As I stated before, there are Eastern States which could be dropped down in the Weyerhauser timber and lost. Mr. Long's interests are the Weyerhauser interests, and they are very extensive.

Senator McKELLAR. Is he selling to the Government now?

Mr. WEST. Yes, sir.

Senator McKELLAR. And they are interested in present contracts?

Senator WEEKS. Did they ask for a hearing? Did these men that you introduced to Mr. Howe ask for a hearing?

Mr. WEST. They are selling timber to concerns logging for the Government.

Senator McKELLAR. And then he is selected upon the board to pass upon the prices to be paid.

Mr. WEST. The Government is going into Mr. Long's timber—into the Weyerhauser timber—and saying that it needs this and it needs that, and that it is going to pay them so much for it. Now, Mr. Long is the man who will advise Col. Disque how much he will pay Mr. Long for his timber * * *

(Witness excused.)

(Thereupon, at 12.30 o'clock p. m., the committee took a recess until 2 o'clock p. m.)

AFTER RECESS.

TESTIMONY OF JOHN PATTERSON.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. State your name, please?

Mr. PATTERSON. John Patterson.

Mr. FREAR. Where do you live, Mr. Patterson?

Mr. PATTERSON. Portland.

Mr. FREAR. How long have you lived here?

Mr. PATTERSON. About 15 years.

Mr. FREAR. What is your business?

Mr. PATTERSON. Manufacturing, selling, and dealing in logs and lumber.

Mr. FREAR. And that has been your business throughout that period?

Mr. PATTERSON. Yes; and previous to that time in Michigan.

Mr. FREAR. How long were you engaged in that business there in Michigan?

Mr. PATTERSON. About 15 years.

Mr. FREAR. Have you ever had any work in Lincoln County, that is, either in logging and lumbering and manufacturing, and if so, what; please go on and state your experience there.

Mr. PATTERSON. I went down there in 1918 for the Thorsen, Hendricksen Lumber Co., with the understanding that we were to make airplane lumber. We had had a number of interviews with Capt. Marvin, who seemed to be the guiding wheel at that time. There was a tract of timber down there known as the Wessel tract, section 24, about a mile from the Miller railroad that the Thorsen, Hendricksen people had contracted for at \$20 a thousand.

Mr. FREAR. The Miller road is the road that runs north from Toledo?

Mr. PATTERSON. Yes; the road out of Toledo into the Siletz country. They had tied up the quarter section by an agreement with the owner, Wessel. They had not paid the money on it, and they had a contract with the Government to cut the selected trees and to receive \$7 per thousand for those trees, the logs. While they were getting around there and getting ready to start the Warren Spruce showed up.

Mr. FREAR. About what time was this?

Mr. PATTERSON. That was in January.

Mr. FREAR. 1918?

Mr. PATTERSON. Yes; or the first part of February. And Wessel decided that he would not take the \$20,000 from Thorsen, Hendricksen. I interviewed him and he said he had been offered more money from the Warren Spruce, therefore, he would not sell to Thorsen & Hendricksen.

Mr. FREAR. Thorsen, Hendricksen were trying to buy for the purpose of developing aircraft material, you say?

Mr. PATTERSON. At that time they owned the Miller Road and sawmill at Toledo, and they were going to manufacture airplane as well as other stuff.

Mr. FREAR. Now, what happened?

Mr. PATTERSON. Well, we were promised then, when we did not get the timber, that we would get all the logs we wanted to cut airplane stock. I commenced operating in February.

Mr. FREAR. Where?

Mr. PATTERSON. At Toledo. We did not have very many logs on hand, and it was understood that we would get the logs from the Wessel tract at once. Therefore, we let up on logging with the Miller outfit and was promised from day to day that the logs would be coming from the Wessel tract, before we were ready.

Mr. FREAR. Now, from whom were they to come?

Mr. PATTERSON. The Warren Spruce were to do the logging. I would occasionally get a wire from Disque's office, from some one, or from Disque, asking me to hurry the airplane.

Mr. FREAR. In Portland?

Mr. PATTERSON. In Portland. I wired back that we had no spruce, it was all turned over to the Warren Spruce people and that we had no spruce logs to cut.

Mr. FREAR. Did the Warren Spruce buy or contract—in what form, do you know anything about that?

Mr. PATTERSON. I do not know. I don't know how they got it, but I found out from Maj. Hitchcock that they had cut everything on the section, or the quarter section, and that the cost to the Government was some \$38,000 for the timber.

Mr. FREAR. That is, quarter section 24?

Mr. PATTERSON. The quarter section we had bought for \$20,000.

Mr. FREAR. That was on section 24?

Mr. PATTERSON. Yes.

Mr. FREAR. And it would cost how much?

Mr. PATTERSON. He said they figured on \$38,000. They had not yet paid anybody, but that is what it amounted to. I told him that was robbery, that the timber was really worth about \$10,000, that Torsen-Hendricksen were paying too much for it, because in the tract there was probably from two and one-half to three million feet—

Mr. FREAR. Of all kinds?

Mr. PATTERSON (continuing). That you would dare to take out and figure that it was selective logging.

Mr. FREAR. That is all kinds of timber, you mean?

Mr. PATTERSON. No; the whole stand was some five or six million feet, but we were only to take the best logs to cut for airplane and do what we liked with the rest afterwards.

Mr. FREAR. Was this to be spruce entirely?

Mr. PATTERSON. Spruce was the only thing talked about then. There was a little fir there that was afterwards logged. All the low grade logs were to be left as far as we were concerned, and we were only to take the good ones and get the \$7 for them.

Mr. FREAR. That was the price fixed by the Government?

Mr. PATTERSON. That was the price fixed. Maj. Hitchcock came down there in the meantime and howled around about getting no airplane. I told him it did not look as though they wanted any airplane; we had been there some time and had not had any logs yet, and wouldn't be allowed to cut any. We offered to turn the Miller outfit over to the Wessel tract and commence logging that spruce at whatever it would cost. Miller was then logging at about \$8 a thousand in fir, this same ground. I left there the 1st of May and there had been no logs come in yet. They had built a city of tents up there, and I went up one day to look at the timber and I found a lot of nice trees down, with five or six or eight or ten soldiers on them busting them up with wedges and axes.

Mr. FREAR. That is, riving them?

Mr. PATTERSON. It was what they called riving; I called it butchery.

Mr. FREAR. When was that?

Mr. PATTERSON. That was along, oh, it must have been in March, I think.

Mr. FREAR. 1918?

Mr. PATTERSON. Yes. I said to Hitchcock that it was a disgrace and an outrage to butcher timber that was within a stone's throw of a mill. I told him that we could have had the mills in and part of them in France if they had let us go when I came down there.

He thought I was a fine fellow, from his remarks that day, but I never could get anywhere near Hitchcock any more.

Mr. FREAR. Hitchcock was the only man you met in these negotiations?

Mr. PATTERSON. Except Capt. Marvin. Marvin did not stay very long, and he really acted like a fellow that wanted to do something. They have from that tract now, I believe, some 8,000,000 feet that is in the water at Depot Slough.

Mr. FREAR. That was from Wessel's?

Mr. PATTERSON. From Wessel's, and a little of the surroundings, and probably half of them are logs that would produce some airplanes. The others are box logs, of low grade.

Mr. FREAR. Now, what would you say about the proportion of airplane stuff, or what have you to say in regard to that?

Mr. PATTERSON. From the stand of the timber as I saw it, and from the report on the scale it would be probably 50 per cent that you would take a chance on getting aircraft out of. There would be a small portion out of some, and some of it was better, of course. They hauled a few here to Portland.

Mr. FREAR. What about the other half, first.

Mr. PATTERSON. Oh, that is box logs, what we call box logs, low grade, full of knots, it could be cut up into small pieces.

Mr. FREAR. That was the timber that was supposed to be selected. That was on the Wessel tract.

Mr. PATTERSON. That was on the Wessel tract that we were to cut as selected when we had the proposed contract.

Mr. FREAR. Have you seen the grades,

Mr. PATTERSON. No, but I know about the scale.

Mr. FREAR. I mean the scale. Who scaled them?

Mr. PATTERSON. My son scaled them for the bureau. The bureau has the scale here in detail. It is on exhibition at any time.

Mr. FREAR. What were you saying about some that were brought to Portland?

Mr. PATTERSON. They brought some up here that was selected. They hauled it some 150 miles and dumped them in as selected logs, and they were culled by the scaler, part of them.

Mr. FREAR. How many cars were brought up here?

Mr. PATTERSON. They did not bring very many. I think they brought a couple of rafts, and they got tired of that and quit it.

Mr. FREAR. A couple of rafts?

Mr. PATTERSON. A couple of rafts. A raft would hold maybe 300,000 feet.

Mr. FREAR. How did they come up?

Mr. PATTERSON. They would haul them up here on cars and dump them in the river, and then tow them to some mill.

Mr. FREAR. You mean they were hauled from Toledo here?

Mr. PATTERSON. Yes.

Mr. FREAR. That is, down this railroad?

Mr. PATTERSON. They came on the Southern Pacific.

Mr. FREAR. But they came down on the Miller Road, I mean?

Mr. PATTERSON. Yes.

Mr. FREAR. They were pulled out from the Wessel tract on the Miller Road?

Mr. PATTERSON. Yes.

Mr. FREAR. Now, they were put in and hauled how far?

Mr. PATTERSON. It is about 150 miles, I think, from here to Toledo, by Albany and down through there.

Mr. FREAR. What was done?

Mr. PATTERSON. They dumped them in the river here.

Mr. FREAR. You mean at Portland?

Mr. PATTERSON. Yes; and they were sent to some mill. They seemed to arrive at that decision after they had been there a while. They built a trestle to connect with the Southern Pacific, and the only need of building that trestle was to connect with the Southern Pacific to haul logs from that country, and that was the expensive part, as I say, of going onto the Miller Road was building this trestle. This trestle was not needed, as far as logging to Toledo was concerned, because we brought them down and dumped them into Depot Slough, and that slough brought them to the mill.

Mr. FREAR. That had been done for years, had it?

Mr. PATTERSON. Yes. The trestle was not a necessity only to connect with the Southern Pacific. There was a piece of track from the Miller Road into the Wessel tract. There was about a mile of grade that had an old road there and they had abandoned the spruce because there wasn't any demand for it. All they had to do was lay a track in there, and it looked to me as though they could get logs in a very few days. In fact, I thought 30 days would be the outside. the time we would get logs into the mill.

Mr. FREAR. What position did you have there?

Mr. PATTERSON. I was manager for Thorsen-Hendrickson.

Mr. FREAR. Where was their mill?

Mr. PATTERSON. At Toledo.

Mr. FREAR. Was that the mill that was afterwards owned by Mr. Storey?

Mr. PATTERSON. Yes.

Mr. FREAR. And formerly the Miller mill?

Mr. PATTERSON. Yes; the same mill.

Mr. FREAR. You are familiar with the timber up there in the Siletz region?

Mr. PATTERSON. Well, I did not go very far back of what they call the elephant to get over into the Siletz. I went over that region a number of times with Miller and other people into the Siletz country.

Mr. FREAR. For what purpose?

Mr. PATTERSON. To look at timber.

Mr. FREAR. What would you say as to the timber over—the stand of timber?

Mr. PATTERSON. Well, as far as I went, I found very nice timber. It was a mixture of spruce and very fine fir, and we were being pressed for fir at that time as well as spruce. There was timber all the way as far as I went. They did not have to go any distance.

Mr. FREAR. You have been up the Siletz, haven't you, or have you?

Mr. PATTERSON. I was over in the Siletz Basin.

Mr. FREAR. I mean, up to the village of Siletz?

Mr. PATTERSON. No; I never went that far. No; I was more interested in manufacturing the logs than in getting them.

Mr. FREAR. What were you sawing there while you were there?

Mr. PATTERSON. Well, while I was there I sawed a great deal of lumber for the trestle for the Government. I suppose it was for the Government.

Mr. FREAR. That was to complete the road over to the Wessel tract?

Mr. PATTERSON. That was to build the road over to the Wessel tract, and I also furnished lumber to go to the south tract, as they called it.

Mr. FREAR. Is that a railroad?

Mr. PATTERSON. South Bay, I think, is what they call it. It was across from Yaquina where they landed the lumber to go to the Blodgett tract.

Mr. FREAR. Did you saw any lumber for this big mill?

Mr. PATTERSON. No; I was out of there before that.

Mr. FREAR. How much sawing did you do for airplane stock?

Mr. PATTERSON. Well, I sawed everything that would make airplanes. I had a few spruce that we got along with the fir.

Mr. FREAR. What proportion of your work was sawing for airplane stock, after this experience of which you speak with Mr. Hitchcock?

Mr. PATTERSON. Well, in all the time I was there I do not think I got over five or six cars of airplane, out of a cut of sixty or seventy thousand on it.

Mr. FREAR. All the rest was commercial sawing?

Mr. PATTERSON. Yes. The specifications were so strict that it was hard to get any lumber. There wasn't any cants.

Mr. FREAR. You cut it up into airplane stock, did you?

Mr. PATTERSON. Yes.

Mr. FREAR. You did not stop at the cants?

Mr. PATTERSON. No, I did not get to cutting any cants.

Mr. FREAR. Was that inspected up here, sent up here and inspected?

Mr. PATTERSON. No, the inspector came down there and passed on it, and took what he wanted and left the rest there.

Mr. FREAR. I mean that it was taken?

Mr. PATTERSON. Oh, yes.

Mr. FREAR. How many cars?

Mr. PATTERSON. I think about five cars was all I got.

Mr. FREAR. In what period?

Mr. PATTERSON. Three months.

Mr. FREAR. What proportion had been cut before, can you say?

Mr. PATTERSON. That was the only airplane I cut.

Mr. FREAR. Did you have anything to do with another mill there, the proposed other mill?

Mr. PATTERSON. Well, I was called on a conference there at the request of Amos Benson, I think—I do not know of any other man that would call me; I know Hitchcock wouldn't call me—and his aim was to build the mill at Yaquina. Yaquina was very near Newport.

Mr. FREAR. What kind if a mill?

Mr. PATTERSON. Well, the first proposal was a mill that would cost about \$250,000 to \$350,000. It was to be what was called a bust-up mill more than a real merchantable mill.

Mr. FREAR. What do you mean by that?

Mr. PATTERSON. Well, their talk was to take the big logs in particular and cut off all the good lumber in cants, or some dimension—they had not arrived at the dimension; in fact, they did not until

Mr. Breeze arrived here. They were to take that lumber and bring it up to the cut-up plant. They already had the cut-up plant here.

Mr. FREAR. That was at Vancouver?

Mr. PATTERSON. Yes. All they wanted was to bust it up, and then they proposed to sell the low grade to the pulp mill. I think the pulp mill was at Oregon City, or Camas, Wash. Hitchcock said that that could be disposed of. I told him I knew it could because they had been down there trying to buy slabs for pulp, and if he cared I would take it up with the officials and see what we could get for the heart of the logs and what was not good for airplane. He seemed to sanction it all right, but in a few minutes he called again and said that "I think I had better take that up with Mr. Leadbetter, because I am well acquainted with him, and you had better not interfere." I said "All right." Mr. Hitchcock knew so much about sawmilling that it was a joke to talk to him. Going across Yaquina Bay one day we were talking about steaming a sawmill there, and I told him they would have to have some hogs to grind up the fuel to steam the spruce for cutting with a band. "My God," he says, "I hope we don't have to ship any coal here to fire a sawmill, because it is very scarce." I said, "My God, they don't steam a sawmill with coal." Another joke along there was Capt. Brown. He was a fellow I had to deal with.

The water question came up and he decided they would get a condensing plant to take care of the water, condensing the steam, instead of going over the hills into a stream of water and getting water. So to a man that had followed lumbering any time to talk to two men like that, he became disgusted.

Mr. FREAR. They were the men that were put between you and Mr. Disque to negotiate, were they, in regard to the production of airplane stock?

Mr. PATTERSON. I never got next to Mr. Disque only once, on the auditorium steps. I ran across him there one night accidentally, and being interested in his work I talked to him a few minutes. I told him that his organization was rotten, as far as manufacturing spruce in Lincoln County was concerned. Of course, I do not think it sat very well, and I didn't know but what I might be in the jug.

Mr. FREAR. That was during the war?

Mr. PATTERSON. Yes; that was during the war. I tried to get him to permit us to run 10 hours a day. We were cutting the lumber for the trestle and Mr. Yeon was down there and crowding us very hard for lumber. I told him I couldn't do any more than I was doing in 8 hours, and I was not allowed to run 10, so his clerk wrote me a permit to run 10 hours a day.

Mr. FREAR. Whose clerk?

Mr. PATTERSON. Well, he was the Warren Spruce clerk at that time, or an official of that concern. I thought to be sure about it I would wire Disque, and I did, and I asked him—I told him it was an emergency case and that the men were satisfied to run 10 hours on a flat per hour pay, if it was all right with him; that we would be glad to do it as it was an emergency case in war time. I got a very tart reply that I could not run anything over eight hours without paying time and a half, so I gave that up.

Mr. FREAR. What was the capacity of the mill that was sawing there?

Mr. PATTERSON. Well, in 10 hours we got up to 70,000 or 75,000. It depended on the logs. Sawing spruce is a little slower. Then we got down to eight hours and we only got about 50,000.

Mr. FREAR. In three shifts that would be 150,000?

Mr. PATTERSON. In three shifts you would get 150,000, and with the proposed contracts containing cants we could have got a good deal more timber than that. I told Maj. Hitchcock we would run the mill three shifts there if he would furnish the logs, that we would cut the airplane for \$15 a thousand and the box lumber for \$9, and they could do what they liked with it afterwards, and if that did not suit and they found we were making too much money, or more than anything reasonable, we would let them set the price. All we wanted was what was fair. He thought I was too high, but they afterwards let a contract to the mill at about the reverse of that.

Mr. FREAR. How?

Mr. PATTERSON. They paid \$9 for airplane and about \$13 for box, giving the mill an advantage on cutting box instead of airplane.

Mr. FREAR. How did that come about?

Mr. PATTERSON. I don't know; I can not explain.

Mr. FREAR. Who was that contract made with?

Mr. PATTERSON. That was made with the people I was working for when I left there—the Fischer-Storey or the Yaquina Bay Lumber Co.

Mr. FREAR. Did the Spruce Production Corporation make that?

Mr. PATTERSON. Some official, I understand, made that.

Mr. FREAR. What was the purpose of making a higher price for box?

Mr. PATTERSON. I could not see any purpose. It came about in a peculiar way. They paid them \$9 for the whole log for sawing. They took away what airplane they wanted and left the rest there with the mill. The mill was to sell the lumber then and give them \$3 stumpage, as it were. The box lumber was bringing about \$16 at that time, so it left the mill about \$13 for the box.

Mr. FREAR. Did you have anything to do with another mill proposition there? I do not remember whether you had or not—another proposed mill.

Mr. PATTERSON. That was a band-saw mill.

Mr. FREAR. Was that during your time?

Mr. PATTERSON. I made an offer to Maj. Hitchcock for the company the day he was there on the bank of Depoe Slough that if they would extend to the company a credit, or some means, of about \$50,000 that we could set up a band mill to take care of the large logs. Some of them were too big for the circular mill. They could have their hand on the throttle all the time, and the money could not get away. I told him that would take care of all the logs that were coming off the Wessel tract. At this time they had about abandoned the Miller Road. After they got the trestle built, for some reason or other they quit it.

Mr. FREAR. What would have been the capacity of that band saw?

Mr. PATTERSON. Oh, that mill would bust up 100,000 a day. It was to be a bust-up mill.

Mr. FREAR. That is, on eight hours?

Mr. PATTERSON. Yes.

Mr. FREAR. How much on 24 hours?

Mr. PATTERSON. It would be three times that.

Mr. FREAR. What would have been the cost of that mill, approximately?

Mr. PATTERSON. Well, we estimated that that mill could be put up there for \$50,000. They had an electric plant there where they claimed they could furnish electric power enough to run a band mill without any commercial department to it.

Mr. FREAR. Then the mill that you were operating—about what was the value of that mill?

Mr. PATTERSON. Well, that was not a valuable mill. It was an old mill, and probably was not worth over twenty-five or thirty thousand dollars, maybe \$35,000.

Mr. FREAR. So that with an investment of approximately \$100,000 you could have had a production on three shifts of how much—600,000?

Mr. PATTERSON. No; I would not figure to get away with that much, and I never saw the necessity for getting that much.

Mr. FREAR. How much would you say? One mill would produce 150,000.

Mr. PATTERSON. Well, it would have produced about an equal amount. Of course, as I say, in cutting cants they would get away with more lumber, because they were going to send the heart of the log to the pulp mill.

Mr. FREAR. What would have been the lumber cut of this sawmill at eight hours?

Mr. PATTERSON. Well, that band-saw mill would cut as much lumber as either one of the band mills that they have now set up.

Mr. FREAR. I know; but how much—let us get it definite—how many thousand feet a day?

Mr. PATTERSON. I would figure it would bust up 100,000 feet, easily.

Mr. FREAR. That is, in eight hours.

Mr. PATTERSON. Yes.

Mr. FREAR. Then if it would do that in 8 hours it would do three times that amount in 24 hours?

Mr. PATTERSON. Yes, sir.

Mr. FREAR. And three times that would be 300,000, which, added to the 150,000, would make about 450,000 feet. Is that right?

Mr. PATTERSON. That is right. The time they were out there they only got 800,000,000 feet of logs into the water.

Mr. FREAR. So you had about enough there to have kept them busy for a couple of weeks or so?

Mr. PATTERSON. They could not have kept us in logs at all at the way they were logging.

Mr. FREAR. Now, they were building a mill there to cost about a million dollars, were they not?

Mr. PATTERSON. I understand that is what it stands at now, but the proposed cost was about \$350,000.

Mr. FREAR. That was the original cost.

Mr. PATTERSON. I have been with them a number of times, and I remember one meeting Mr. Leadbetter was there and he was very

much against the building of a mill. He told them they had mills enough now, to take the logs to the mills.

Mr. FREAR. That is, he was opposed to the mill down there, the building of it?

Mr. PATTERSON. Yes.

Mr. FREAR. Were you present then?

Mr. PATTERSON. Yes.

Mr. FREAR. But they went on and built it, seemingly?

Mr. PATTERSON. Yes, they started to build it.

Mr. FREAR. What were they going to do with the mill, what is its commercial use at the present time?

Mr. PATTERSON. I do not think it is a commercial mill, that it has any value more than the machinery which could be taken out and set up somewhere else. The harbor is not a harbor that would take care of a large cut of lumber. It would be rail shipping mostly.

Mr. FREAR. Have you been over that coast line road?

Mr. PATTERSON. No, I have not been over the road. I was over the proposed road before it was started.

Mr. FREAR. Along the coast. You have no interest in the Siletz country, have you?

Mr. PATTERSON. Not a penny.

Mr. FREAR. You have none direct or indirect?

Mr. PATTERSON. I never had any.

Mr. FREAR. Do you know anything about the locality of the timber, that is, where the timber stands, and the cruises; have you examined maps or anything of that kind?

Mr. PATTERSON. I looked over a great many cruises, connecting with the Miller Road. At that time there was a man there every day to dispose of a tract of timber, and they brought cruises, and of course on paper they looked very good. I never saw any of them, only a short distance from the end of the Miller Road into the Siletz country.

Mr. FREAR. Well, if, as has been testified here—can you give any opinion yourself in regard to the comparative stand of spruce on the east and the west sides of the divide?

Mr. PATTERSON. Only what I saw at the end of the Miller Road, and what I saw on the Otter Rock road.

Mr. FREAR. What was your judgment, so far as you saw?

Mr. PATTERSON. So far as I saw I thought that the Miller Road was the only road to go, and I never could see why they abandoned it after building the trestle that they had to go in there. They sure intended to go in there when they built the trestle, because that was the extensive part.

Mr. FREAR. What would you think of their building a road from Yaquina Bay around to Otter Rock?

Mr. PATTERSON. Well, it did not look good to me the day I went over it.

Mr. FREAR. That is, I mean as an expeditious way of getting the spruce down for use.

Mr. PATTERSON. Well, that is the only way they could get on that shore, was to go around Yaquina Bay, unless they took it over the ridge to the Miller Road, which I understand was the first proposition. was to take that that was on the west side of the hill and take it over to the other side and bring it down the Miller Road.

Mr. FREAR. Was there very much there, comparatively?

Mr. PATTERSON. The best estimate that I ever heard on it, and that was from parties that wanted to build the road, was 150,000 of all kinds of spruce. I do not think there was any fir in that country to speak of. It was too near the ocean.

Mr. FREAR. That is, all kinds of spruce?

Mr. PATTERSON. There was a great deal of that that was box spruce, small brushy stuff.

Mr. FREAR. What was the estimate, if you know, on the other side of the divide?

Mr. PATTERSON. Well, I had estimates into the billions on that side. Of course, I could not say they were correct.

Mr. FREAR. I mean spruce.

Mr. PATTERSON. Spruce and fir—well, I have had people talk about about a billion feet of spruce on the east side. I could not say that that is correct.

Mr. FREAR. You do not know?

Mr. PATTERSON. No; I do not know.

Mr. FREAR. And when your people sold out they sold out to Storey, did they?

Mr. PATTERSON. Well, there was a continuation of part of the company at that time. Some of them remained and some of them went out.

Mr. FREAR. What else is there that you have in mind, Mr. Patterson, that would be of interest to the committee?

Mr. PATTERSON. I think the cost-plus operations in Lincoln County were outrageous.

Mr. FREAR. In what way?

Mr. PATTERSON. It looked to me like a bunch of men down there, with a few exceptions, that were there to spend money and not to get spruce. I questioned myself, sometimes, as to whether they wanted any spruce or not. A strong evidence of that was the fact that this quarter section, with a mile of track leading to it, could have been put in in from 30 to 60 days, and lumber could have been cut or taken out and moved somewhere.

Mr. FREAR. Are you speaking of section 24?

Mr. PATTERSON. Section 24. To-day it is laying in the Depoe Slough, and probably would bring \$10 or \$11 a thousand.

Mr. FREAR. What did it cost?

Mr. PATTERSON. I have no doubt it cost \$100 a thousand feet, from the amount of men that I saw there, and the way they were handling it. I am not giving these as correct figures, because they can be verified by real figures.

Mr. FREAR. How far would they have had to go to have constructed the Miller line over the divide, as has been testified, or do you know about getting spruce there; airplane spruce?

Mr. PATTERSON. We would have got spruce all the way from where the Miller Road started; there was a continuation if scattered spruce among the fir, and the fir was exceptionally good.

Mr. FREAR. Criticism came this morning from the ex-governor of the State to the effect that there were, as I recollect, profiteers down there. What profiteers do you know about?

Mr. PATTERSON. I never saw a man that wanted to profiteer. I know that the Miller Road was offered to the Government on any

terms they wanted it. I heard it offered that they could take it and if it was worth anything the Government could pay it when they got through with it.

Mr. FREAR. You do not come to the same conclusion regarding profiteering that he did; that those people around Toledo were profiteering?

Mr. PATTERSON. I never saw a man there but what was patriotic and for the good of the Government. Several of them showed that by their offers in helping to get a mill there.

Mr. FREAR. That is all.

Mr. LEA. How far up the Otter Rock Road did you go?

Mr. PATTERSON. Well, I went very close to Otter Rock, as I remember it.

Mr. LEA. That was before there was any construction work?

Mr. PATTERSON. They were just talking about it at that time.

Mr. LEA. You were simply going over the route of the proposed railroad; is that the idea?

Mr. PATTERSON. We were taken out in an automobile and horse teams on one Sunday.

Mr. LEA. Who did you go with?

Mr. PATTERSON. I went with Maj. Hitchcock, Capt. Brown, Amos Benson and two or three cruisers and engineers.

Mr. LEA. Was that up the beach?

Mr. PATTERSON. We went on the beach part of the way where we could get on the beach, and part of the way on the land.

Mr. LEA. Was there a wagon road along there or not?

Mr. PATTERSON. Well, as I remember it, there was a wagon road part of the way. The last end of the road we had to go by wagon, it was too rough for automobiles.

Mr. LEA. What I mean is, whether you were trying to locate the road for the railroad?

Mr. PATTERSON. We went out to find timber, in particular. Of course we saw the route, part of it, as we went over it, the part that was pointed out. In fact, there were some stakes there.

Mr. LEA. Now, in estimating the quantity, or the production of a mill, do you figure that the capacity of three shifts, 24 hours, would equal three times the capacity of an 8-hour shift?

Mr. PATTERSON. Well, there is a question about that. That will depend on your crew, whether you have as good a crew on one shift as you have on another. There is no reason why they would not get as much on the second shift as on the first one, if they have crews that are equal.

Mr. LEA. Do you think they can accomplish as much at night as they can in the day time?

Mr. PATTERSON. I would not say that to be a fact; no.

Mr. LEA. Ordinarily mill men figure otherwise, do they not?

Mr. PATTERSON. Well, they do not always operate the same at night as they do in the daytime. For instance, they do not use as many men in the yard, and they get their cut at night ready to take care of the next day, to a certain extent.

Mr. LEA. How far from Toledo did you go toward the Siletz country—how many miles?

Mr. PATTERSON. Oh, I probably went 8 miles from Toledo.

Mr. LEA. That was up this Miller Road, and beyond?

Mr. PATTERSON. Beyond past the Miller Road and into the Siletz country. Over into what they call the hill.

Mr. LEA. What was the name of this company that you were interested in?

Mr. PATTERSON. I went down there for Thorsen-Hendrickson.

Mr. LEA. In what capacity?

Mr. PATTERSON. Manager.

Mr. LEA. You didn't have any interest in that company?

Mr. PATTERSON. Not any.

Mr. LEA. Or the mill down there?

Mr. PATTERSON. Not a bit.

Mr. LEA. You were not associated with Mr. Miller at any time, were you?

Mr. PATTERSON. Not at all.

Mr. LEA. While you were down there they kept logging for this mill?

Mr. PATTERSON. Miller was logging. He was part of the concern.

Mr. LEA. What was your capacity a day at that mill at that time?

Mr. PATTERSON. When we first started the 10-hour shift, we got around 70,000.

Mr. LEA. Mr. Miller testified here that he got out 80,000 feet a day of logs.

Mr. PATTERSON. Yes, sir.

Mr. LEA. Wasn't that sufficient to meet your capacity?

Mr. PATTERSON. That was sufficient, and if there had been no Warren spruce down there Miller would have continued to supply the mill, but with the understanding that the Warren spruce would furnish the logs for the mill and that they were to be spruce largely. Miller let up on logging and he let his logs run back to the extent—

Mr. LEA. Didn't he continue to log?

Mr. PATTERSON. He continued to log until he got all the timber cut he had. He decided all the while that he was going to be through logging for a time until the Government got through with cutting their spruce, so he let up on logging.

Mr. LEA. How long after you went down there were you provided with plenty of logs?

Mr. PATTERSON. Until I left there, but was always ready to start one or two more shift when we got more logs.

Mr. LEA. Do you recall what date you went down there?

Mr. PATTERSON. I went down there in January, commenced getting the mill ready for operation in February.

Mr. LEA. And came back when?

Mr. PATTERSON. I came back the fore part of May.

Mr. LEA. What are your initials?

Mr. PATTERSON. John Patterson.

Mr. LEA. Now, there were a good many people in that country trying to sell their timber when it became known that the Government was going to operate there?

Mr. PATTERSON. Yes, sir; there were people there trying to sell their timber.

Mr. LEA. Do you know of any people who made a special effort to get options up ahead of this Miller road?

Mr. PATTERSON. No; I don't, but there was timber on that road that I could have options on myself, if I had wanted it.

Mr. LEA. Do you know whether or not Mr. Gildner was trying to get options for parties, ahead of this Siletz road?

Mr. PATTERSON. I don't know that. I know I was offered good stands of timber for two to three dollars a thousand.

Mr. LEA. Was Mr. Gildner at work in that country at that time?

Mr. PATTERSON. I think he was over somewhere in the Siletz. I saw him there occasionally, but I was not acquainted with him, nor I didn't talk to him.

Mr. LEA. The location of the Government's activities there started a kind of boom of interest, didn't it?

Mr. PATTERSON. Oh, yes; people were interested, and they were interested in furnishing spruce. Mr. Dant over here had a section up there that he offered very reasonable, and I told him that he had better sell it, that the Government would take it. He said, "All right, if the Government wants it, they can have it."

Mr. LEA. At what rate did the Government pay for the timber in section 24, do you know?

Mr. PATTERSON. They were to pay the Thorsen-Hendricksen Lumber Co. \$7 per thousand for the selected trees. In time, the other officials changed that so you cut that tree out up as near—stump, top and all, at \$7 a thousand.

Mr. LEA. And they took other timber. Do you know what they were paying?

Mr. PATTERSON. There was a lower price for other timber, if they destroyed it, but if in felling a tree you destroyed a good tree, it was to be paid \$3.

Mr. LEA. It was to be paid on a thousand basis?

Mr. PATTERSON. On a thousand basis. That was the first arrangement.

Mr. MAGEE. What has this trestle that you have described—where is it?

Mr. PATTERSON. The trestle connects the Southern Pacific out of Toledo with the Miller road; the Miller logging road goes over into the Siletz.

Mr. MAGEE. That was built by the—

Mr. PATTERSON. Warren—

Mr. MAGEE. Spruce production division?

Mr. PATTERSON. The Warren Spruce built that.

Mr. MAGEE. I mean under the supervision of the spruce production division; that is, built by the Government.

Mr. PATTERSON. That is the understanding; they were working for the Government and building this trestle.

Mr. MAGEE. Where does this trestle begin, as compared with the location of the mill?

Mr. PATTERSON. Well, it is not near the mill. You still have to dump into Depot Slough to get any logs to the old mill. I don't know what provision they have made for taking logs on to the new mill—

Mr. MAGEE. Does this trestle connect with the land upon which the mill is located?

Mr. PATTERSON. Well, it could be connected by going across the slough, passing on the other side of the slough, and could be bridged

across and go on over to the new mill. I don't know that that was the intention, because figured on taking the logs from Yaquina up in rafts to Toledo for the mill.

Mr. MAGEE. How long was this trestle?

Mr. PATTERSON. I would say a mile and a half or two miles.

Mr. MAGEE. That is really made a part of this Storey & Miller Railroad which you have described?

Mr. PATTERSON. It is now a part of that road; yes.

Mr. MAGEE. That is all.

(Witness excused.)

TESTIMONY OF J. O. STOREY.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Where do you live, Mr. Storey?

Mr. STOREY. I live at Toledo for the present.

Mr. FREAR. How long have you lived there?

Mr. STOREY. Why, a year last April.

Mr. FREAR. What is your business?

Mr. STOREY. I am the manager of the Fisher-Storey Lumber Co.

Mr. FREAR. Where did you live before that?

Mr. STOREY. I lived at Tacoma.

Mr. FREAR. And engaged in what business?

Mr. STOREY. Lumber business.

Mr. FREAR. And before you came out to this country where did you live.

Mr. STOREY. La Crosse, Wis.

Mr. FREAR. And engaged in what business?

Mr. STOREY. Lumber business.

Mr. FREAR. So you have been engaged in the lumber business for how many years?

Mr. STOREY. Forty years.

Mr. FREAR. You are now engaged in a mill down in Toledo?

Mr. STOREY. Toledo; yes.

Mr. FREAR. You are engaged with whom in that business?

Mr. STOREY. Mr. Fisher.

Mr. FREAR. Fisher and you own the mill, do you?

Mr. STOREY. At the present time.

Mr. FREAR. And the mill has been burned and you are building a new mill; is that it?

Mr. STOREY. Yes.

Mr. FREAR. Did you own the old mill?

Mr. STOREY. Yes.

Mr. FREAR. What was the capacity of the old mill?

Mr. STOREY. About 60,000 in eight hours.

Mr. FREAR. And that would make, with three shifts, about 175,000 or 180,000?

Mr. STOREY. Yes.

Mr. FREAR. And you are building another mill now?

Mr. STOREY. Yes.

Mr. FREAR. Of about what capacity?

Mr. STOREY. One hundred and fifty thousand.

Mr. FREAR. On an eight-hour shift?

Mr. STOREY. Yes, sir.

Mr. FREAR. About what will be the cost of building that mill?

Mr. STOREY. We are building an up-to-date electric-driven mill that will cost about \$150,000.

Mr. FREAR. \$150,000; and 150,000, or that would be 450,000 cut on three shifts?

Mr. STOREY. Yes.

Mr. FREAR. You are building right near the cut-up mill there, are you, or the big sawmill that was constructed there?

Mr. STOREY. Yes.

Mr. FREAR. How far distant?

Mr. STOREY. About 1,000 feet apart.

Mr. FREAR. About 1,000 feet apart. Well, with that mill there in existence, are you afraid it will interfere with your operations?

Mr. STOREY. No; I am not.

Mr. FREAR. That mill cost nearly \$1,000,000, according to the evidence, and on three shifts was to be a 600,000 cut. That is slightly more, or a little more, than the mill you are putting up—150,000; is that right?

Mr. STOREY. Well, they have got a good deal bigger mill than ours.

Mr. FREAR. But it was not much different in its capacity; if so, what?

Mr. STOREY. That depends upon what you figure—what they have there now or what they had, or what they intended to have. You see, they have taken away a part of the machinery of this mill.

Mr. FREAR. Yes.

Mr. STOREY. They had laid it out for a great big plant; but I think now, with the size mill they have got now and the size mill we are building, that we will cut equally as much lumber.

Mr. FREAR. You will cut practically as much lumber with your mill at the price that this cost you? What will be done with that mill, in your judgment as a business man in the community and a logger lumberman?

Mr. STOREY. I advised with Maj. Hitchcock at the time of the signing of the armistice, before they had unloaded any of the machinery or placed any of the machinery in the mill. He asked me what I thought they had better do with it. I said, "You will get more money for it right now if you stop right where you are. The machinery is all new, not unpacked, and sell the machinery," because at that time there hadn't been any machinery installed.

Mr. FREAR. That was when?

Mr. STOREY. That was the signing of the armistice—a day or two after that.

Mr. FREAR. It was installed, was it, some of it?

Mr. STOREY. No; not at that time.

Mr. FREAR. Or was it afterwards?

Mr. STOREY. They worked about two months afterwards, and I think installed possibly 60 per cent.

Mr. FREAR. And what time was the fire?

Mr. STOREY. At our mill?

Mr. FREAR. Yes.

Mr. STOREY. The 18th of June.

Mr. FREAR. 18th of June, 1919?

Mr. STOREY. 1919.

Mr. FREAR. You continued in business right along with your mill. You are starting to build a much larger mill now?

Mr. STOREY. Yes.

Mr. FREAR. Without any reference to the big mill which stands over a thousand feet distant?

Mr. STOREY. Yes.

Mr. FREAR. You own the road, that is, your company owns the road that has been spoken of as the Miller Road at that time?

Mr. STOREY. Yes.

Mr. FREAR. And that road now connects with the Southern Pacific, due to the trestle that has been built by the Government; is that right?

Mr. STOREY. Yes, sir.

Mr. FREAR. That road has been extended up, according to the testimony, to section 17, which is close to the ridge, and how far is it from the peak of the ridge, so far as you know?

Mr. STOREY. About a half a mile, probably not that far. I would rather say I think 1,500 feet to the peak of the hill.

Mr. FREAR. Have you looked at the surveys and studied this country?

Mr. STOREY. Yes, sir.

Mr. FREAR. You were the ones who were to put up the money for this mill—

Mr. STOREY. We were the ones.

Mr. FREAR. Or for this railroad?

Mr. STOREY. Yes.

Mr. FREAR. So that you are financially and otherwise interested in this operation?

Mr. STOREY. I am; yes, sir.

Mr. FREAR. Do you know what the percentage of grade is?

Mr. STOREY. The steepest grade that we have is the grade that we have now built. For about three-quarters of a mile we have a 3 per cent grade—

Mr. FREAR. As the road is now built?

Mr. STOREY. As the road is now built.

Mr. FREAR. Running which way?

Mr. STOREY. Running north.

Mr. FREAR. What?

Mr. STOREY. Running north.

Mr. FREAR. That would be empty cars?

Mr. STOREY. Empty cars, yes. When we get over the top of the hill, we have from $1\frac{1}{4}$ to $1\frac{1}{2}$ per cent. You see, the tidewater on the Depot Slough side is about 100 or 150 feet lower than the water on the Siletz River side, and we climb a hill there of 235 feet above tidewater.

Mr. FREAR. That is the divide that they speak of that you get over?

Mr. STOREY. Yes, sir.

Mr. FREAR. What is the grade, with loaded cars, coming up from the north, running south on that river?

Mr. STOREY. Our survey we get by—one survey we had was $1\frac{1}{2}$ per cent, and one could shave it down to about $1\frac{1}{10}$ per cent.

Mr. FREAR. That is, bringing down loaded cars from the Siletz region down into the—

Mr. STOREY. Toledo mill.

Mr. FREAR. Down to the mill. How far has your survey gone, or do you know?

Mr. STOREY. We have gone about $3\frac{1}{2}$ miles beyond where we have built now—about $3\frac{1}{2}$ miles.

Mr. FREAR. Are you familiar with the cruises of the timber up in the Siletz region, right north of you?

Mr. STOREY. Yes.

Mr. FREAR. What do you know about it, generally speaking?

Mr. STOREY. Well, I have heard the testimony of the gentlemen here as regards to 550,000,000 to 700,000,000, but I have taken some of them to task. I have looked over that timber two or three different times, and I consider it a great deal more timber in there than they claim; and I asked some of them, and they said they left out two or three of the creeks; so that they didn't figure much timber in which ought to have been. I figure there is a billion feet of spruce in there if there was any.

Mr. FREAR. A billion feet of spruce in this Siletz region?

Mr. STOREY. Yes, sir.

Mr. FREAR. Running up to what distance would that be?

Mr. STOREY. That would run it up to probably 15 miles.

Mr. FREAR. Fifteen miles beyond what?

Mr. STOREY. Our road.

Mr. FREAR. Beyond your road?

Mr. STOREY. Yes, sir.

Mr. FREAR. That would make it about 20 miles from Toledo?

Mr. STOREY. Well, probably 24 or 25 miles.

Mr. FREAR. Well, how far is your road now?

Mr. STOREY. We are about 6 or 7 miles.

Mr. FREAR. Oh, are you? Where would you strike spruce first—going north on your road, how far?

Mr. STOREY. We strike the first spruce in Mill Creek. That is about a mile and a quarter from our road now—strike the first good spruce in there.

Mr. FREAR. And then it continues on?

Mr. STOREY. We have some spruce right where our camp is now, but not of high quality; the same quality of spruce as is found on the Wessel tract; not high-quality spruce.

Mr. FREAR. That is where you are working now?

Mr. STOREY. Yes; right where our camp is now.

Mr. FREAR. And this other spruce you speak of—

Mr. STOREY. The high-grade spruce is about a mile and a quarter.

Mr. FREAR. And from that up how does it run?

Mr. STOREY. It is continuous; makes good spruce all the way.

Mr. FREAR. What of the fir in that valley?

Mr. STOREY. Of course, there is a tremendous body of fir in there; very high-grade fir.

Mr. FREAR. Where does it run—into what figures?

Mr. STOREY. Oh, ten or twelve billion feet.

Mr. FREAR. Up in that same region?

Mr. STOREY. Up in that region.

Mr. FREAR. How far does it extend, I mean—would you say that it reached 10,000,000,000 feet up within 20 miles?

Mr. STOREY. Oh, yes; 20 or 30 miles, probably 30 miles.

Mr. FREAR. So that there was an inexhaustible supply of fir, providing it was being used for airplanes, to have been brought down; is that right?

Mr. STOREY. I think that is one of the best stands of good timber, uncut, in the State of Oregon to-day, without a doubt.

Mr. FREAR. What would you say compared with any other State?

Mr. STOREY. Any other State?

Mr. FREAR. What do you say compared with anything in British Columbia, so far as you know?

Mr. STOREY. There is nothing in British Columbia that is any better.

Mr. FREAR. Now, tell the committee, please, what you think of the place where the British were cutting their airplane stuff at the time of the signing of the armistice, on Queen Charlotte Island, if you know anything about it?

Mr. STOREY. I examined the Queen Charlotte Island timber six or seven years ago for some people who were interested there and have a sawmill at Skidegute, about halfway up the island, and I found a very good stand of spruce, of very high quality, and hemlock; not any fir; and I reported to the people who wanted me to become interested that I would not have anything to do with it, on account of the condition of getting to the mainland. The island is out from the mainland about 80 miles, and it is quite shallow, the ocean water in there; and it is about the roughest piece of water between Puget Sound and Alaska. So that the difficulty that they were having was to get logs to the mill. Now, I heard it stated that they could put logs into the ocean there, or set their machinery out there and log right into the ocean. It is a physical impossibility.

Mr. FREAR. Who stated it?

Mr. STOREY. I heard Col. Disque state that the other day.

Mr. FREAR. You say it is physically impossible?

Mr. STOREY. A physical impossibility.

Mr. FREAR. Go on as to the method of logging that must be pursued.

Mr. STOREY. They have to put the logs into the bay there just the same as we have to put them in the bays here.

Mr. FREAR. How?

Mr. STOREY. And they have to build ocean rafts to tow them over to Prince Rupert to cut into lumber there, or wherever they could cut them. But it is a very difficult piece of water, and I refused to go into the proposition on account of that.

Mr. FREAR. How would you have to log up there on the island to get the logs into the water?

Mr. STOREY. Have to use railroads and donkey engines.

Mr. FREAR. The same as any other place?

Mr. STOREY. The same as any other place.

Mr. FREAR. Were there railroads built in there?

Mr. STOREY. Not at that time they weren't.

Mr. FREAR. Did you ever discuss this matter with Mr. Pendleton later on, who built in there?

Mr. STOREY. Yes; I have talked with Mr. Pendleton three different times about the progress up there and about other timber. He asked me about certain tracts of timber there that he wanted to become familiar with, and discussed about getting in there and getting the

timber out, and I said, "How are you getting along on Queen Charlotte Island?" "Well," he said, "we are getting along very well." Then he got to talking about prices, etc., and I said, "Well, we ought to be able to get logs out to our mill for one-half what you can get them there," and he described the method of getting them out.

Mr. FREAR. And what was the method—rafting, etc.?

Mr. STOREY. He told me they had to build rafts and so on and have very good ocean-going boats, but they were fairly successful in getting over to the mainland.

Mr. FREAR. Did he say anything about his experience on this side of the line in endeavoring to help?

Mr. LEA. Well—

Mr. FREAR. I don't know that that is really admissible in evidence, if there is any question about it.

Mr. LEA. He has gone over that.

Mr. FREAR. Yes; I think Pendleton stated that fully himself. You have talked with him about the general subject?

Mr. STOREY. Yes.

Mr. FREAR. How far is it, generally speaking, from Queen Charlotte Island down to Vancouver?

Mr. STOREY. Oh, it must be six or seven hundred miles.

Mr. FREAR. How far did they carry—well, how far would you have taken logs in order to have gotten them to the mills, if you know, there?

Mr. STOREY. The nearest point they could cut them is about 80 miles—Prince Rupert.

Mr. FREAR. That would have been right across?

Mr. STOREY. Right across, right straight across.

Mr. FREAR. There were some mills there, were there?

Mr. STOREY. He told me there was a mill. I didn't know at the time. He said they were taking some of them there, and some to Port Essington.

Mr. FREAR. His testimony was, I understand, that there was 175 miles they were brought, on an average, to get to the mills.

Mr. STOREY. Well, they brought them to Vancouver.

Mr. FREAR. No; Vancouver is over 175 miles, isn't it?

Mr. STOREY. Oh, yes; 600 miles; must be five or six hundred; but there may be other mills around the mainland, I don't know.

Mr. FREAR. You say they only had spruce and hemlock there?

Mr. STOREY. Yes.

Mr. FREAR. And there was no fir to speak of?

Mr. STOREY. No.

Mr. FREAR. About how large a stand of spruce did they have.

Mr. STOREY. I haven't any idea.

Mr. FREAR. Was it as large as that in the States?

Mr. STOREY. It was not as large trees, but it was rather tall, cleaner timber.

Mr. FREAR. What portion, as to amount, so far as you knew, or do you know anything about it? Did you make sufficient investigation? I mean, would it run into a hundred million or five hundred million?

Mr. STOREY. Oh, yes; they had more than that. I would rather say they had billions of it there.

Mr. FREAR. So they had a sufficient supply when they once got into it?

Mr. STOREY. They had a sufficient supply.

Mr. FREAR. But they would have to log it just the same as you would down here?

Mr. STOREY. Oh, yes.

Mr. FREAR. Did you make any effort to assist down here in getting—at your place in Toledo, in getting out spruce for airplane stuff?

Mr. STOREY. Why, yes.

Mr. FREAR. What did you do?

Mr. STOREY. I first came out there about the middle of April. Capt. Brown came to me and suggested he was green at the lumber business and wanted to know if I could not assist him in some manner in getting out airplane spruce and fir, and I told him I was at his service any time, and I told him we had previously been negotiating with Maj. Hitchcock; they were going to take over the railroad and take the mill and operate it themselves. And he said, "Well, we seem to be getting along rather slow. I wish you could some way kind of get in with me and give me what advice you can and help me as much as you can," and I told him I certainly would do that. And we had previous to that entered into a tangible contract with Maj. Hitchcock. They wanted to take our railroad over. And I want to say a word in going into that: It has been stated that a good deal of this business was profiteering, so I want to kind of nip that in the bud right here. We owned the railroad, and I bought the road rights of way for all of the railroad which they built this trestle on, and was agreeing to furnish our rights of way. We offered to turn the railroad over to them for the price of \$100 a month, which would be just about half of the taxes that it would cost us to carry it.

Mr. FREAR. What is the cost of the railway generally?

Mr. STOREY. We valued the railroad at \$100,000, what was there. We offered to let the Government have it for \$100 a month. We had a logging outfit that was capable of putting in 150,000 a day; offered to let them have that in any way they wanted it.

Mr. FREAR. Were you one of those men described as a "profiteering bird," or something like that, down there?

Mr. STOREY. Yes; I am one of the "profiteering birds."

Mr. FREAR. Here is what purports to be a railroad lease, entered into the blank "day of April, 1918, by and between the Toledo & Siletz Railroad Co., an Oregon corporation, and the Yaquina Bay Railway & Lumber Co., an Oregon corporation, parties of the first part, hereinafter referred to as the 'lessors,' and the United States of America, party of the second part, hereinafter referred to as the 'Government,' represented by J. Van D. Crisp, captain, Signal Corps, U. S. A., hereinafter referred to as the 'contracting officer,' witnesseth." And then it goes on and described that you are the owners of a certain railroad located in Lincoln County, Oreg.; that said line "owned by the lessor is hereinafter referred to as the 'Old Line' * * *; it is the desire of the parties hereto that the Government shall lease said Old Line and it is contemplated that the Government will make certain improvements on said Old Line and will, in addition thereto, probably make extensions," and so on. "It is, there-

fore, agreed by and between the parties hereto as follows: The lessors hereby lease, let, and rent unto the Government all the right of way, fixtures, and improvements located on or which are a part of the Old Line Railroad above described and the right of way on the new line as well. * * *

5. The Government agrees to pay for the use of the property included in this agreement the sum of \$100 per month. If the use of this property shall start in the middle of any calendar month, a pro rate of any payment shall be made to cover the use of the balance of said month, and thereafter the rent due for any one month shall be paid on or before the 15th day of the next succeeding month.

6. This lease shall terminate on the 30th day of June, 1918.

7. The Government shall have the option of renewing this lease from year to year, by giving the lessors 30 days' written notice of its election to do so, such renewals to be made upon the same terms and subject to the same conditions as set forth herein.

Now, that lease purports to be an agreement offered by your company to the United States Government to lease a railroad owned by your company for \$100 a month. What did you state was the value of your road, as nearly as you could estimate?

Mr. STOREY. Well, there were 5 miles of road at that time, and we had bought about 3 miles of right of way. Probably at that time it was about \$125,000.

Mr. FREAR. \$125,000 of railway you were offering to the Government for \$100 a month, which you say was about one-half of the taxes?

Mr. STOREY. Yes, sir.

Mr. FREAR. That was one of the profiteering propositions that came from your people down there, did it, these "birds" that they speak about down in Toledo?

Mr. STOREY. Yes; I am one of the "profiteering birds" in Toledo.

Mr. FREAR. Now, what was the reason that you made such an agreement with the Government?

Mr. STOREY. Well, we were all more or less interested in getting out spruce. They were making the greatest effort of not getting out any spruce that I have ever seen attempted by anybody.

Mr. FREAR. In what respect?

Mr. STOREY. That they had an opportunity to have gone in there, and any logger could have gone in there, after 15 days of arriving on the ground, and had spruce logs coming in, fit for airplane stock; and the people were more or less disgusted, more or less disappointed. Capt. Brown came to me one day and he said, "Storey, we are in such a deuce of a mess here, we are not accomplishing anything, and we are getting into a bad way. We have decided we are going to take your mill here and railroad here and operate them ourselves." He said—

Mr. FREAR. When was that, about?

Mr. STOREY. That was about the latter part of April.

Mr. FREAR. 1918?

Mr. STOREY. 1918. And he said, "We don't want you to do any more with your road, or do any more with your logging companies; we are going to take your logging outfit." "Well," I said, "we have a few logs in the water; what are you going to do with them? Will you let us saw them up?" "No," he said, "I will buy the logs from you. What are they worth?" And I said, "The logs are worth

about \$10 or \$12 a thousand." "How many have you got?" I said, "About a million feet." "Well \$10 or \$12 a thousand is a fair price?" "Yes." "We have to use the logs; we might just as well buy them of you, but we have got to get some spruce. Now, I am telephoning a contract to Maj. Hitchcock."

Mr. FREAR. That is, Brown said that?

Mr. STOREY. Capt. Brown. He said, "I am telephoning a contract to Maj. Hitchcock, and I am sending it to him in writing to-morrow. I want you to go to Portland and enter into this contract and fix it so that we can commence to get this spruce, get it converted into airplane stock." And I told him I could not go—I could not do it—and he said, "Well you will have to go, there is no way out of it, you have got to go." I came to Portland, and I stayed here five days. Maj. Hitchcock telephoned me every day for five days that he was ready to see me each one of the days, but he didn't see me, and finally—

Mr. FREAR. Why?

Mr. STOREY. They were busy. He asked me to go away until he saw me. I stayed five days, and on the sixth day he finally told me to come in, and I told him I came down at the request of Capt. Brown to enter into that contract. "Well," he said, "Capt. Brown is getting entirely too fast. I am not ready to enter into any kind of a contract of that kind at all. So you go back and run your own mill and get along as best you can. We are getting all the airplane stock we want, anyhow." And I started back to Toledo. I met Capt. Brown, and he said, "Well, that is the way it goes," he said, "if you try to do anything they won't let you, and the great petty jealousy among the officials is such that you can't accomplish anything that you want to."

Mr. FREAR. Then what did you do after that?

Mr. STOREY. We kept right on operating our mill. We got back into the work again.

Mr. FREAR. Did you get any airplane stock?

Mr. STOREY. Then Maj. Griggs came down there. He came down there along in June, I think it was.

Mr. FREAR. Mr. Griggs was connected with the spruce production?

Mr. STOREY. Mr. Griggs was connected with the spruce production division. He is president of the St. Paul & Tacoma Lumber Co., and a man that I knew very well. He came down there one time and visited for a couple of days. He said, "Say, I came down here quietly to have a talk with you. What is wrong with this outfit down here?" "Well," I said, "I don't know"—

Mr. FREAR. What was he referring to when he spoke of "this outfit?"

Mr. STOREY. Well, getting out the spruce. He said—I made the statement to him that "If Kaiser Bill had been getting out this spruce, he couldn't beat these fellows a bit."

Mr. FREAR. What?

Mr. STOREY. If Kaiser Bill had been getting out this spruce, he couldn't have beat those fellows a bit—he would not have gotten any spruce; these fellows hadn't either. He says, "Can't we do something about this? What was wrong?" He says, "Will you go with me to-morrow and look this thing over?" I said, "Yes." He says,

"I will be back to-morrow morning, and I want your time and attention." "I will be, sir, altogether at your service."

We went over our logging works and all through the country, stopped and looked at our logs. We had men back into the woods again. This was after they had commandeered our plant, and they let us go back to work. So we were starting to build our road, and we had about 1,000,000 feet of fir, and he stopped and looked at the fir, and he said, "Well, what magnificent fir stock that is for airplane stock; why can't we have it?" I said "We can, but they have headed us off here." "Well," he says, "what is there about this idea that you can't get into the Siletz Basin with this railroad?" "Well, I will sell it to you." So we got into his automobile and we went over the pass.

Mr. FREAR. Who is this?

Mr. STOREY. Maj. Griggs.

Mr. FREAR. With Maj. Griggs?

Mr. STOREY. Yes. He was a practical lumberman and a very good man. And we went over the pass, and so he said, "What is the obstacle here?" "Why, I don't know; this is the only obstacle there is here." "What is the height of this hill?" I said, "235 feet. Here is where our survey runs. We have a survey mark right on the road. Here is where our road will run, and this is the worst obstacle that you have got." "Well," he said, "you know where we are logging up there at Capowsin," he said "no such country as this at all; we would think this was a picnic."

Mr. FREAR. Up at what?

Mr. STOREY. Capowsin is where the St. Paul & Tacoma Lumber Co. operate. Then we went over into the Siletz Basin and looked that over, and I showed him about where the timber was, as far as we could see, looked at it there for 20 or 25 miles, and he was rather disappointed, and so he went back.

Mr. FREAR. Disappointed in what respect?

Mr. STOREY. That they had made an adverse report as to going in and cutting that timber.

Mr. FREAR. Yes.

Mr. STOREY. And he was surprised about having heard about the obstacle in getting in to get this timber—the spruce and fir. He was as much interested in the fir as the spruce. And he saw fir logs cut in our camp which he thought was the nicest fir logs he had ever seen, and on the way back he said, "What would you fellows put these logs in for? Can't we make some deal with you to log this?" "Why, I don't know." "What is your logs costing you?" I told him they cost us—that the month before they cost us—\$6.61 a thousand outside of the stumpage. Well, he said, "Wouldn't you enter into a contract with the Government to put out logs?" I said, "Why, yes; we will do anything." Well, he said, "What do you figure it would cost to put out these logs?" Well, we talked about selective logging—to pick out airplane logs; No. 2 and No. 1 logs. I thought probably about \$12.50 a thousand. And he said, "Isn't that pretty steep if you can put yours out at \$6.61?" I said, "Well, they put so many obstacles in the way now—probably so many inspectors—that you would have to get that." Well, he said, "What would you want to saw this lumber?" I told him we would put the

logs out at \$12.50 and saw the airplane lumber for another \$12.50, making it \$25. Well, he thought that was too high, and he went away, and he said, "Now, I want to keep in touch with you from day to day." I said, "I am mighty glad of that—to have a lumberman on the job; somebody I can talk to." He said, "I want you to wire or phone me every day they don't get spruce here. I want to know what their trouble is."

Mr. FREAR. Where was he to be when he asked you to wire him?

Mr. STOREY. He was to go back to Portland that night.

Mr. FREAR. I see.

Mr. STOREY. I wired him from day to day about the spruce. There was none coming. Then he came down there, he and several officers, and he said, "We are about ready to get spruce. Now, you have got to put this mill of yours cutting spruce." "Well, all right. Do you want to operate it or do you want us to operate it?" "No; we want you to operate it. What will you cut this spruce for?" We figured around and I told him I had asked him 12½, but we figured around and we finally made a contract to cut the airplane spruce, to cut the spruce for \$9.50 a thousand. "Now, then," he said, "I want you to get off of your own work right away and get to cutting this spruce." "Well," I said, "We will never get any logs. We don't get any logs." "We will furnish you the logs. We will furnish you the logs, if I have got to come down here and stay here." He went back to Portland and we were to get logs in two days. They had been in there then six or seven months. There were no logs. We reported each day, "No logs." I don't know how many days, six or seven days we reported that. Finally I reported to him and he said, "I am coming down, and if I don't warm up somebody it is because I haven't the authority."

Mr. FREAR. You said they had been down there six or seven months and no logs; what did you mean?

Mr. STOREY. Well, that was the people getting out the spruce.

Mr. FREAR. Who were they?

Mr. STOREY. The Warren Spruce Co.

Mr. FREAR. And who were they employing; who were working for them?

Mr. STOREY. Who were working for them?

Mr. FREAR. Yes; soldiers or what?

Mr. STOREY. Oh, they had soldiers and they had civilians. They picked up everybody.

Mr. FREAR. Were they working up there in the woods?

Mr. STOREY. Yes, yes; there was an army of men.

Mr. FREAR. But no logs, you mean, had been brought down to the mill?

Mr. STOREY. None had been brought down. Finally it was reported Maj. Griggs was coming down, so they finally succeeded in getting two logs down. They brought them down and tied them up to the dump so everybody could see them. He got there the day before, and he said, "How are they getting along?" I said, "They finally have got some spruce. We have got two logs in the boom. I will take you up and show them to you." And we went up and looked at the logs. Then it ran along—

Mr. FREAR (interrupting). How long would that keep your saw-mill going?

Mr. STOREY. About two hours. Then they came back again and wanted to know how we were equipped about getting out this airplane stock, and I showed him through the mill. Finally, after we could get some logs, we finally got to cutting airplane stock. We cut about 2,500,000 feet. Then they told us to quit cutting spruce. They wanted to build this sawmill and wanted to build a railroad up the north bank, or north of Newport, and wanted us to get into our own logs and furnish them with lumber. Then in the meantime they got to talking about the mill, and Maj. Griggs came to me then and he said, "Storey, they want to build a big sawmill down here. Now, I am not in favor of a big sawmill. Now, isn't there some way you fellows can get into some kind of a contract with us and build a sawmill?" I told him yes; we had already made a proposition to Maj. Hitchcock, but we would build a sawmill of a hundred thousand capacity.

Mr. FREAR. That is, an eight-hour shift?

Mr. STOREY. An eight-hour shift; yes. Speaking about capacity we always figure on one shift.

Mr. FREAR. Yes.

Mr. STOREY. Providing they would advance us \$75,000, and we would return that \$75,000 by allowing \$5 back on lumber as we got it; that we would build the mill on ground that belonged to us, but they could own the mill until such time as we paid for it. And that seemed to please him very much. So he asked me then to come over to Newport, that all the officers were going to be there who had had charge of this; and I went over to Newport at 6 o'clock in the evening and went in consultation with Col. Disque, Maj. Hitchcock, Maj. Griggs, Capt. Grant—oh, I think there were five or six more; and we went into a discussion of this sawmill, and they said, "Now, we want a bigger mill built than that. Won't you enter into an agreement to build a bigger mill?" I said, "No, we don't want to enter into an agreement for a bigger mill, because we don't want a bigger mill. If we build a mill we will have to buy it back at the end of the time, and we could not use a larger one."

Mr. FREAR. That was in addition to the mill you were then operating?

Mr. STOREY. Yes; that was in addition to the mill we were then operating. I told him we had a power plant there with a 450-horsepower engine, which Maj. Griggs looked at, and he figured that was capacity enough to drive this mill for the time being, and we could have that running in 30 days. They said they could have got the saw machinery by express and we could have it running in 30 days, and he was determined that we should start on that. Then they asked me to come over there and we went into a discussion of these mills, and so Col. Disque said, "Now, we want a mill of larger capacity;" and he outlined the capacity of the mill. "What in your opinion would that kind of a mill cost?" And I said, "A mill of that kind would cost a million dollars." "You think it would cost a million dollars?" "Yes, sir." "What makes you think so?" Well, I gave my reasons for it in various ways. "Well," he said, "supposing now that the war is over; what could we do with that mill?" "Why, you would have to junk it."

Mr. FREAR. That was your answer?

Mr. STOREY. That was my answer. "Well," he said, "what do you mean by junking it?" "Well, you would have to sell it or let the people take the machinery out of it and build a mill, because that kind of a mill you are talking about now does not fit this territory. The unit is too large. It is absolutely fatal." He said: "What do you think that kind of a mill would bring? Supposing, now, your contention is all right and we built that mill, what could we get for it at that time?" "Well, if you would get 10 per cent for that mill, Colonel, you would be doing mighty well."

Mr. FREAR. You said this to whom?

Mr. STOREY. To Col. Disque.

Mr. FREAR. Col. Disque?

Mr. STOREY. All of these men; they were all sitting in a circle. He said, "You mean to tell me we could get only 10 cents on a dollar for an operation of that kind?" I said, "Yes; because no sane lumberman would ever tackle that to operate that as a commercial mill. The unit is too large for this country." I said, "Now, don't think of that kind of a mill. You build mills of a size that you can operate, and if you want more capacity add more mills, and they are commercial mills as fast as you leave them. You can get men or people like we are, little one-horse lumbermen, and each one of them will build a mill and go on and operate it for you." "Well," he said, "can you operate a 300,000-capacity mill for us, or something of that kind?" I said, "No; we can not. We don't want a mill any larger than a hundred or a hundred and fifty thousand capacity, because," I said, "they are burdensome to handle." Then they came back over to Toledo——

Mr. FREAR (interrupting). Let me just ask this: With this mill, with 100,000 capacity and the mill that you had of 50,000 capacity and three shifts it would average about——

Mr. STOREY (interrupting). Four hundred and fifty.

Mr. FREAR. Four hundred and fifty thousand capacity a day?

Mr. STOREY. Yes. Now, I heard Mr. Lea ask about, "Could you cut as much lumber in the night as you can in the daytime?" I want to say that the largest cuts that we had—we run night and day last summer—was night cuts. You can usually get more cut out of the machinery nights. All machinery runs better nights than daytimes. Our biggest cuts were night cuts.

Mr. FREAR. I interrupted you there as you were talking, as you were discussing the thing.

Mr. STOREY. Well, the officers went back. Then they were discussing about the various kinds of logs. I said, "Colonel, you can't get logs to that mill to stock it the way you are talking about, if you are going to have select logging." Why, he said, "We are going to use"—he said, "What do you mean?" I said, "You get such a percentage of No. 3 logs." "But," he said, "we are going to cut our No. 3 logs." "You are going to cut your No. 3 spruce logs?" "Yes." "Well, what for?" "Why," he said, "into airplane stock." I said, "Do you mean to tell me you are going to cut airplane stock out of No. 3 spruce logs?" Well, he said, "Isn't it airplane stock in a No. 3 log?" I said, "Absolutely not. I will refer you to Maj. Griggs," I said, "here. The reason that a log is a No. 3 log is because there is not a foot of airplane stock in it."

If you are going to cut No. 3 logs you are going into the lumber business, not into the airplane business, Colonel." And at that, it was getting along midnight, so I left and went home. They went back to Portland. They came, that is, a committee, again, consisting of Maj. Bresse; I don't think Col. Hitchcock or Col. Disque was along; but Maj. Hitchcock, Maj. Griggs, and several others came there, and they called on us again, and they said, "Now supposing we let you have \$75,000, you take us out here and show us where you would build that kind of a mill that you are talking about." All right. I took them out and showed them the piece of ground where I would build that kind of a mill. It fitted right into our boom, just about where we are building this new mill now. And they asked about our buying it after it was done, and all these things. Well, he said, "We have had a committee look over a mill site here for a long time. Now," he said, "supposing that you—supposing we could make some kind of a dicker with you that you would build a big mill, couldn't you make some kind of a dicker of that kind?" I said, "Not with me, absolutely; I don't want anything to do with it." Well, he said, "Supposing we are going to put in 300,000 or a 500,000 capacity mill, where would you build that mill?" I said, "Gentlemen, if you have got a half an hour's time I will walk you right over to the spot where I would build that mill." And we walked over the bridge, went right over to the spot where this present mill is located at the present time, and I showed how I would build that mill, load the stuff into the water, and the kind of a mill I would build. And they asked about how we would make some kind of a combination to build a mill that might suit us in some manner, and in some manner they might help us out; but we could not agree. I refused to have anything to do with a mill of any larger capacity than we could handle after the war was over, because I didn't think I was in the profiteering business and I expected to buy the mill afterwards, or buy it then. About 4 o'clock in the afternoon there was the naptha launch drew up, a gasoline boat; they got into the boat, went to Newport, and announced that night that that mill would be built at that exact spot the following day.

Mr. FREAR. They determined to build it at once?

Mr. STOREY. Yes; and they proceeded.

Mr. FREAR. I have here the letter of transmittal, dated April 3, 1918, to Maj. Reuben P. Hitchcock, United States Signal Corps, Yeon Building, City, signed by Thorsen Hendricksen Lumber Co., Siletz Logging Co. and Siletz Railroad Co., with the offer to rent your road for \$100 a month. What was the answer received to that by Mr. Hitchcock?

Mr. STOREY. Why, they had that under consideration for a month and they didn't do anything with it.

Mr. FREAR. Did you ever get any response to it?

Mr. STOREY. No; none that was direct.

Mr. FREAR. Well, they never accepted the proposition?

Mr. STOREY. No.

Mr. FREAR. In view of the fact that your people have—here is another letter of April 17 in relation to the same matter, which is addressed to Maj. Reuben P. Hitchcock, United States Signal Corps, Portland, Oreg., signed Yqauina Bay Railroad & Lumber Co., by the

secretary. This is mentioning the last proposition: "Our proposal is that you take over the railroad and equipment on a lease at \$100 a month, you to maintain and operate it, delivering our logs at the pond or Depot Slough for \$1 per thousand, furnishing all the equipment for transporting the logs. We will further agree that one year after the war is over, at that time we will purchase all permanent betterments added to the railroad at an appraised valuation, and we will pay you one-fourth the appraised value as soon as the property is appraised," and giving the particular terms. Did you get any response to that letter?

Mr. STOREY. Not to that; no. We did afterwards enter into a contract with them where they paid us \$250 a month for the use of the road.

Mr. FREAR. How did that come about that this proposition wasn't accepted, or what was the basis?

Mr. STOREY. Well, they were abandoning that entirely, that one road then. They wanted to operate it just temporarily, and I met Major Hitchcock one day and he said, "Well, we will have to give you a little something for running over that road;" and we decided he would pay us \$250 a month; he may want it a month or two, or three; and so we entered into a contract at \$250 a month and entered into a contract we would buy the road, whatever was left of it outside of our own, at the expiration of that time.

Mr. FREAR. Would that have more than paid the taxes, and if so how much?

Mr. STOREY. No. We figured that would about pay the taxes.

Mr. FREAR. Now, as long as you people down there, it has been suggested that you were profiteering birds, it seems to me that these things ought to be entered into the record as a matter to show the disposition you were disclosing to the people here and the country at large, of your desire to help. These are all offered to be copied into the record. They are not very long.

(The two letters referred to, together with copy of proposed "Railroad lease" were thereupon, pursuant to directions of the chairman, set out in full as follows:)

PORTLAND, OREG., April 3, 1918.

Maj. REUBEN P. HITCHCOCK,

United States Signal Corps, Yeon Building, City.

SIR: The Toledo & Siletz Railroad Co., in Lincoln County, Oreg., is an Oregon corporation capitalized for \$300,000. All of its capital stock has been issued and is owned by the Thorsen Hendricksen Lumber Co., also an Oregon corporation.

The Thorsen-Hendricksen Lumber Co. owns all of the capital stock of the Bade Lumber Co. and of the Siletz Logging Co. This proposal is made in the name and behalf of all three of the said companies which, therefore, makes it the proposal, not only of the corporations themselves, but of all their stockholders as well.

The Siletz Logging Co. owns the logging equipment which supplies the logs for the said mill, the said equipment to be more particularly referred to hereafter.

The railroad is carried at a book value of \$96,000 and its owners would not be disposed to sell this property at the present time for less than \$100,000. Upon this value a reasonable rental of the road would be \$6,000 per year, or \$500 per month; but, in order to dispose of any question of value that should be placed on the road for purposes of Government use, we are willing to consent to the use of the road by the Government at purely a nominal rental of \$100 per month.

Our proposal: (a) That we will lease the railroad, including right of way not built upon and inclusive of motive equipment, should paragraphs C' and D hereinafter to be accepted or without the motive equipment should such paragraphs not be accepted, to the Government for the period of the war and one year thereafter, at the rental of \$100 per month; but, that, for any improvements to the road or the right of way not now built on, we will reimburse the Government at the conclusion of its lease, the sum to be paid by us by way of such reimbursement to be fixed by appraisal, one appraiser to be chosen by us, one by the Government, and if they are unable to agree, the two to choose a third.

(c) That we will want to use the road with our own motive equipment during the period of its use by the Government, to the extent required to haul our own logs to our mill at Toledo or such other mills as may be constructed there by us.

(C') In the event that it is more satisfactory to the Government (which we suppose that it will be) that the Government during the period of its lease shall have exclusive use of the road, that the Government will haul our logs to our mill or mills now maintained or to be hereafter constructed at Toledo, Oreg., at the rate of \$1 per thousand, and,

(D) In the latter event, it would be to our advantage to discontinue all logging operations in connection with our mill and to concentrate solely on milling, and we would want the Government to take over our logging and railway equipment at a price to be agreed upon (schedule of said attached with tentative values) and to log for us from our own stumpage, in connection with its other logging operations, we to reimburse the Government for its said services at the rate of \$7 per thousand.

Respectfully submitted.

THORSEN-HENDRICKSEN LUMBER Co.,
SILETZ LOGGING Co.,
SILETZ RAILROAD Co.,

By _____,
Secretary.

SIGNAL CORPS, UNITED STATES OF AMERICA.

RAILROAD LEASE.

These articles of agreement, made and entered into at Portland, Oreg., this _____ day of April, 1918, by and between the TOLEDO & SILETZ RAILROAD Co., an Oregon corporation, and the YAQUINA BAY RAILWAY & LUMBER Co., an Oregon corporation, parties of the first part, hereinafter referred to as the "Lessors," and the UNITED STATES OF AMERICA, party of the second part, hereinafter referred to as the "Government," represented by J. Van D. Crisp, captain, Signal Corps, United States Army, hereinafter referred to as the "Contracting officer," witnesseth:

1. The lessors are the owners of a certain railroad located in Lincoln County, Oreg., and running from a point near the center of section 7, township 11 south, range 10 west, west meridian, in a northerly direction to a point near the north line of section 30, township 10 south, range 10 west, west meridian, from which latter point the railroad branches in a northwesterly and in a northeasterly direction for a distance of about a mile in each direction.

2. Said railroad, owned by the lessor, is hereinafter referred to as the "old line," and its location is more particularly shown on a blue-print map attached hereto and made a part hereof.

3. It is the desire of the parties hereto that the Government shall lease said old line, and it is contemplated that the Government will make certain improvements on said old line and will, in addition thereto, probably make extensions connecting the southern terminal of the old line with Toledo, Oreg., along a right of way laid out and now being acquired by the lessors, such extension being hereinafter referred to as the new line.

4. It is, therefore, agreed by and between the parties hereto as follows:
The lessors hereby lease, let, and rent unto the Government all the right of way, fixtures, and improvements located on or which are a part of the old line railroad above described and the right of way on the new line as well.

4a. The lessors will forthwith acquire a right of way on the new line.

5. The Government agrees to pay for the use of the property included in this agreement the sum of \$100 per month. If the use of this property shall start

in the middle of any calendar month, a pro rate of any payments shall be made to cover the use of the balance of said month, and thereafter the rent due for any one month shall be paid on or before the 15th day of the next succeeding month.

6. This lease shall terminate on the 30th day of June, 1918.

7. The Government shall have the option of renewing this lease from year to year by giving the lessors 30 days' written notice of its election to do so; such renewals to be upon the same terms and subject to the same conditions as set forth herein: *Provided, however*, That this lease shall not extend for a longer period than one year after the termination of the present war between the United States of America and Germany.

8. Within one year after the expiration of the present war between the United States of America and Germany the value of the improvements made by the Government to the old line and the extensions, if any, made on the new line shall be fixed by appraisement of the board, one to be named by the Government, one by the lessors; the two, in case they are unable to agree, to choose a third.

9. The lessors shall pay the Government the value so appraised as follows:

One-eighth of the said amount within 30 days after the appraisal has been completed and the balance in seven equal installments, payable every three months. Interest at the rate of 5 per cent shall be charged on all deferred installments, payable semiannually.

10. If the lessors shall fail to make any payment on account of said purchase price when due, then the Government may sell the entire system, including the old line, the new line, and all improvements and extensions for such figure as can best be obtained. The proceeds received from such sale shall be applied, first, to pay the cost and expenses of the sale; second, to repayment of the Government of its actual expenditure by way of the improvements and extensions described in paragraph 8 and 1, the surplus, if any, to be paid to the lessors.

11. During the life of this lease the lessors shall have the right to use the railroad tracks and right of way for hauling their own logs and logging supplies with their own equipment, and they shall operate their trains over the road under Government orders at all times.

PORTLAND, OREG., April 17, 1918.

Maj. REUREN P. HITCHCOCK,

United States Army, Signal Corps, Portland, Oreg.

SIR: The Toledo & Siletz Railroad Co., in Lincoln County, Oreg., is an Oregon corporation, capitalized for \$300,000; all of its capital stock has been issued and is owned by the Thorsen-Hendricksen Lumber Co., also an Oregon corporation.

The Yaquina Bay Railway & Lumber Co. owns all of the capital stock of the Bade Lumber Co. and the Siletz Logging Co. This proposal is made in the name and behalf of all three of the above companies, which therefore make the proposal not only of the corporations themselves, but of all their stockholders as well.

The Siletz Logging Co. owns the logging equipment, which supplies the logs for the mill, said equipment to be more particularly referred to hereafter.

The railroad is carried at a book value of \$96,000, and its owners would not be disposed to sell this property at the present time for less than \$100,000. Upon this value a reasonable rental of the road would be \$6,000 per year, or \$500 per month, but in order to dispose of any question of value that should be placed on the road for purposes of Government use, we are willing to consent to the use of the road by the Government at purely a nominal rental of \$100 per month until the war is over with Germany.

Our proposal is that you take over the railroad and equipment on a lease at \$100 a month, you to maintain and operate it, delivering our logs at the pond or Depot Slough for \$1 per thousand, furnishing all the equipment for transporting the logs. We will further agree that one year after the war is over, at that time we will purchase all permanent betterments added to the railroad at an appraised valuation, and we will pay you one-fourth the appraised value as soon as the property is appraised, one-fourth in 6 months, one-fourth in 12 months, and the balance in 18 months, and if we fail to comply with the payments, then, and in that event, we will join in an appraisal of all the property and take our portion in a sale that you may make to other people. We will also want a clause that you are to deliver

our logs without delay; and failing to do so, we will have the right to use the road jointly with you in operating our trains for the purpose of getting logs to our mills.

Yours, truly,

YAQUINA BAY RAILWAY & LUMBER Co.,
By _____ Secretary.

Mr. FREAR. You were familiar with the timber in the Siletz country north of section 17 where your road stops at the present time?

Mr. STOREY. Well, I am quite familiar. I haven't gone and made a detail cruise of anything.

Mr. FREAR. You have seen the cruises, have you?

Mr. STOREY. Oh, yes.

Mr. FREAR. I mean the maps?

Mr. STOREY. Yes.

Mr. FREAR. And cruises that have been shown on the maps?

Mr. STOREY. Yes.

Mr. FREAR. And so on?

Mr. STOREY. Yes, sir.

Mr. FREAR. I don't remember whether you testified to the amount of timber there or not; did you?

Mr. STOREY. Yes.

Mr. FREAR. I think you did.

Mr. STOREY. I figured there was more timber than they got.

Mr. FREAR. Yes; and did you state to the committee the amount of grade that would be encountered?

Mr. STOREY. Yes.

Mr. FREAR. You stated that, too?

Mr. STOREY. Yes; already.

Mr. FREAR. Now, do you know where that road has been built up on the coast line from Yaquina Bay around by Newport, that road that has cost the Government, 11 miles or a little less, with its sidings, it has cost now \$1,440,000. What have you to say about that road as being a proper way in which to get into this Siletz timber?

Mr. STOREY. Well, when they started to talk about that road I didn't want to say much about it. There was several came and asked me to go around and have a talk with Benson, and have a talk with Maj. Hitchcock. I talked with Maj. Hitchcock two or three times about it, but inasmuch as if you would mention anything of that kind they would tell you immediately you had an ax to grind, why I kept away from them entirely.

Mr. FREAR. That is, that you were a profiteer?

Mr. STOREY. I was a profiteer. I am a little bit talkative anyhow, and I generally got into trouble when I get to talking down there. So the least said the better. I will make the statement, now that the thing is over, that the man that located that railroad to get that timber out that way was either grossly incompetent, or had an ax to grind, or was intoxicated.

Mr. FREAR. How much timber is adjacent to that road on the westerly slope of the divide?

Mr. STOREY. Well, I only went up there twice. Before the road was built in I went up with an automobile; that is, I went up as far as the river and went back the river up as far as Mowrey's and worked

back to the Siletz in that way; and one time I started from Newport and went north and kept up the ridge. But I was rather surprised there was as much timber, good spruce, as they spoke about on that side. I didn't figure there was as much spruce as they claim there was.

Mr. FREAR. What kind of spruce was it?

Mr. STOREY. Oh, it was pretty good quality, what I saw. I saw it from the ridges.

Mr. FREAR. Well, would it reach 50,000,000, or 150,000,000, or what, as has been testified? Would you say those figures are substantially correct?

Mr. STOREY. Well, I don't know. I rather figure probably 10 to 15 per cent as much on that side as there was on the other.

Mr. FREAR. Ten to 15 per cent on the west side of the divide, as much as on the other?

Mr. STOREY. As was on the east side.

Mr. FREAR. As was on the east side of the divide?

Mr. STOREY. Yes.

Mr. FREAR. Which was the region that would have been tapped by a road running north from Toledo?

Mr. STOREY. Yes, sir. That was merely guesswork largely.

Mr. FREAR. Have you anything further to say?

Mr. STOREY. I want to say a little further, before I get off of that subject, the building of that road became quite a subject, and they all got rather tired of it, and as it appeared from time to time that it was not the proper thing to have done they all wanted to shirk the responsibility. Maj. Hitchcock came to me one day and he said, "Say, Storey, we have got to take that damned railroad of yours off of your hands yet and go up that way." He says, "This Benson Road, I am afraid, is not going to do the business." He said, "I don't know; Benson located it and we call it the Benson Road." We found that after they all got along with that road they discovered that they had made quite a mistake, and they all wanted to lay it on somebody, so they finally called it the Benson Road.

Mr. FREAR. What mistake was there in it, so far as you gathered from his statement?

Mr. STOREY. Well, I don't know.

Mr. FREAR. That is, as far as his judgment, he didn't say beyond that?

Mr. STOREY. He didn't say; no. They were going to take our road over about the time the armistice was signed. They figured on going back there again.

Mr. FREAR. You people were acting in accordance with the correspondence here on that subject?

Mr. STOREY. Absolutely. The road was at their disposal at any time.

Mr. FREAR. And how about the mill?

Mr. STOREY. The mill was at their disposal. There wasn't a thing at Toledo that wasn't at the disposal of this Government—not one thing. We furnished the electric lights, the machine shop, and everything that they wanted. The orders were that there wasn't a thing there we had that they could not have.

Mr. FREAR. I believe that is all.

Mr. LEA. What are your initials, Mr. Storey?

Mr. STOREY. J. O.

Mr. LEA. J. O.?

Mr. STOREY. Yes.

Mr. LEA. And how long have you resided at Toledo?

Mr. STOREY. A year last April. It will be about a year and a half.

Mr. LEA. That is April, 1918?

Mr. STOREY. Yes.

Mr. LEA. That is when you began to operate at Toledo, is it?

Mr. STOREY. Yes; yes.

Mr. LEA. And just what was your connection with this mill?

Mr. STOREY. Well, I was a part owner and the general manager.

Mr. LEA. Was that a corporation?

Mr. STOREY. Yes.

Mr. LEA. Or a partnership?

Mr. STOREY. No; a corporation.

Mr. LEA. You were president and part owner?

Mr. STOREY. No; I was vice president and general manager.

Mr. LEA. You were vice president. Now, at that time you took a contract for cutting timber for the Government, did you, or shortly after that?

Mr. STOREY. Yes.

Mr. LEA. Now, did you have any objections to doing that work for the Government?

Mr. STOREY. No.

Mr. LEA. I understood there was some suggestion here that you took work that you didn't want?

Mr. STOREY. Oh, no.

Mr. LEA. There is nothing to that?

Mr. STOREY. No; no.

Mr. LEA. Is your knowledge of the timber up in the Siletz based on personal knowledge or on your inspecting these cruises?

Mr. STOREY. Why, I didn't inspect cruises, but I have personally gone over clear as far as Taft; that is, at the extreme end of the Siletz River; and I worked back again the other way. I have gone through it two or three times, but not as a cruiser.

Mr. LEA. Is Taft on the tidewater?

Mr. STOREY. Yes, sir; Taft is at the mouth of the river.

Mr. LEA. And have you been up the river to its mouth?

Mr. STOREY. Yes.

Mr. LEA. Been up the Siletz River?

Mr. STOREY. Yes. I made one trip from Newport, went right down the backbone and worked back through this big body of timber they were telling about. I was looking over the Pendleton & Gilkey timber. They had a thousand acres in there.

Mr. LEA. That is on the south?

Mr. STOREY. They are on both sides.

Mr. LEA. Or the east slope of the mountain, is it?

Mr. STOREY. Principally on the east slope of the mountain.

Mr. LEA. You went up Jaybird Creek, did you?

Mr. STOREY. Yes; yes; and Dewey Creek, and Mill Creek; but I didn't go into the cruises, you understand; I just gave it a general look.

Mr. LEA. Now, your knowledge as to amounts is based principally on the cruises, is it—the totals?

Mr. STOREY. Well, largely; and my observation in general. I made another trip that I went clear across the county and came clear out to Willamina, clear north.

Mr. LEA. Did your company own the timber up there, or did it just buy stumpage?

Mr. STOREY. No; it just bought the stumpage. We have some little timber, where we have about 40,000,000 right where our railroad is now.

Mr. LEA. Is the timber up there mostly in small holdings?

Mr. STOREY. Why no—yes; there is quite a lot of small holdings, and I think about the largest block is held by Pendleton & Gilkey; that is, about 800,000,000.

Mr. LEA. That is, Mr. Pendleton who was a witness here?

Mr. STOREY. Yes, sir. That is the largest holding.

Mr. LEA. Did you see him while he was down there?

Mr. STOREY. Yes—when he was down there, no; I did not.

Mr. LEA. Did you know of his coming to your mill?

Mr. STOREY. At that time?

Mr. LEA. Yes.

Mr. STOREY. This last time?

Mr. LEA. Yes; some time ago.

Mr. STOREY. No.

Mr. LEA. Now, about this British Columbia spruce, do you know how much railroad was built to get out the spruce they did get out in British Columbia?

Mr. STOREY. No, I don't know anything about it.

Mr. LEA. There are streams that run into the island similar to the streams here from the ocean, aren't there?

Mr. STOREY. Not many streams there. No. There is a stream right through the middle of the island, and there is a stream runs north down in this manner [illustrating], taking that as the island. But I didn't go down through this stream, but I went out through this one [illustrating]. But there are small harbors all along, and you have to put the logs in them similar to what we do down here, excepting the harbors are smaller.

Mr. LEA. Do you know how much railroad they had to build to carry on the operations up there?

Mr. STOREY. I do not.

Mr. LEA. Now, this contract, or proposed contract that was put in evidence was never entered into, was it?

Mr. STOREY. No.

Mr. LEA. And what are those companies, the railroad companies, referred to? Is one the company that owned this road that you had?

Mr. STOREY. Well, when I went in there they had them all in various companies. They had a railroad company and then they had a timber, a logging company, and a sawmill company. We have combined them all into one company.

Mr. LEA. The only railroad was known as the Storey road?

Mr. STOREY. Yes.

Mr. LEA. And the Miller Road?

Mr. STOREY. Yes. We bought it from Mr. Miller.

Mr. LEA. Well, that contract refers to the improvements that were to be made in the road for the Government, in case the Government took it?

Mr. STOREY. Yes.

Mr. LEA. What were those improvements?

Mr. STOREY. Well, there was two ways of going into that. If they had improved upon the Wessel spur we would not have been interested; if it went the other way we would have been interested. Now, supposing that they had gone on to reach this body of timber on this main line, why we would have had to buy that part of the road from the Government when they were through with it.

Mr. LEA. Well, but what were the improvements to be? Any difference in the rails?

Mr. STOREY. No. Well, they were to extend the railroad; that is all.

Mr. LEA. The Government did extend the railroad?

Mr. STOREY. Yes.

Mr. LEA. About how far?

Mr. STOREY. Well, they just built their own line up to Wessel spur. That didn't interest us. We ran up the Wessel spur about a mile and they attached onto us and went up there.

Mr. LEA. Were there any rails to be placed on your road?

Mr. STOREY. Yes, sir.

Mr. LEA. What sizes were substituted?

Mr. STOREY. Fifty-six pounds.

Mr. LEA. What were those that were there?

Mr. STOREY. Forty and forty-five.

Mr. LEA. Was there any change in the ties?

Mr. STOREY. Well, they may have put in some ties. I don't know. I guess they did.

Mr. LEA. They prepared the road for heavier rolling stock, didn't they?

Mr. STOREY. Well, they used that heavier rail. They took our rail—I don't know why they did it; they were to put on 56 to 60 pound new rail, but their own tally of it is that they put on about a dozen different kinds of rail. They took rail off of about 3 miles of our line and put their own rail back and took our rail on the Wessel spur and used it up there.

Mr. LEA. Your expansion there depended on extensions of this road, didn't it?

Mr. STOREY. Yes, sir.

Mr. LEA. So whatever improvement was made in the road you would have gotten the benefit of it?

Mr. STOREY. Yes.

Mr. LEA. And there was to be an appraisalment of how much you were to pay for that?

Mr. STOREY. Yes.

Mr. LEA. But was there any settlement of that kind finally?

Mr. STOREY. We have a settlement now in vogue. Of course, they didn't build onto the end of the line that we wanted. We wanted to go on up. We didn't want the connection between our log dump and the Southern Pacific, because we reached tidewater with our road and we didn't want to have to maintain that extra road to get logs in there.

Mr. LEA. So there is a difference between you and the Spruce Production Corporation at this time about the settlement for the railroad?

Mr. STOREY. No; we have come to a conclusion as to the settlement of the railroad.

Mr. LEA. You have agreed on the terms?

Mr. STOREY. Yes, we have agreed on the terms. We have been ready to sign up a contract on it.

Mr. LEA. Now there has been some difference between you about the payment for soldier labor, hasn't there?

Mr. STOREY. No, not that I know of.

Mr. LEA. Don't your company still owe the Government about \$1,600 for soldier labor?

Mr. STOREY. I don't know. That is the old company. I don't know. Mr. Wehrung, a member of our company, has that under settlement. I don't know about that.

Mr. LEA. That was before your connection, wasn't it?

Mr. STOREY. No; it was during my connection, but the old company—Mr. Fisher and I went in and bought up the old stockholders. The Fisher-Storey Lumber Co. is a separate corporation. The settlement of that whole affair remained with one of the directors of the company, which is Mr. Wehrung, of the Hillsboro National Bank. I don't know whether that has been settled up or not.

Mr. LEA. Is your present company liable for whatever amount is due on that?

Mr. STOREY. No; not this present company.

Mr. LEA. You have been a stockholder in both corporations, though?

Mr. STOREY. Yes.

Mr. LEA. I see. So it is really up to the stockholders of the other corporation to settle that debt?

Mr. STOREY. Yes.

Mr. LEA. Well, how long has that matter of adjusting been up?

Mr. STOREY. I don't know. Probably six months or three months.

Mr. LEA. The time that you spoke of seeing Breese down there, was that the first time you ever saw him?

Mr. STOREY. I think it was.

Mr. LEA. Do you remember what month that was?

Mr. STOREY. Why, I would rather guess in June. I could not say.

Mr. LEA. Was Mr. Holland down there at that time?

Mr. STOREY. No; he wasn't there at that time.

Mr. LEA. Do you know when Mr. Holland came there?

Mr. STOREY. I don't think Holland came on until some time in July. That is my recollection.

Mr. LEA. Is this road by Yaquina the proper way to reach that spruce on the coast below Otter Rock?

Mr. STOREY. Sir?

Mr. LEA. Is this road that runs up the coast the proper way, in your judgment, to reach the spruce along the coast?

Mr. STOREY. No; I never thought so.

Mr. LEA. How did you think that should be reached?

Mr. STOREY. When you were up on the ridge going from the Wessel tract, you go northwesterly and you keep getting closer to the ocean. When you are at the Wessel tract you are within 3 miles of

the ocean, and by following along that ridge there is no timber down to the ocean; it is only timber a mile or a mile and a half.

Mr. LEA. Then you thought what was known as the high-line road would be the preferable way?

Mr. STOREY. They were already up there, and keep on going they could have reached all the timber on that as well as the other.

Mr. LEA. I believe that is all.

Mr. FREAR. I didn't notice this letter dated April 17 from the Yaquina Bay Railway & Lumber Co. to Reuben P. Hitchcock, Portland, Oreg. You say, "Sir: As per our conversation, we will lease you our present mill at Toledo and furnish all the machinery for the second mill, including the 9-foot new band saw, you to furnish the money to set it up with, and lease you the use of both mills for the period of the war, for \$9,000 a month, or we will furnish the mills and cut cants under your instructions for \$15 per thousand, and you own all the lumber that the mills cut. Yours truly, Yaquina Bay Ry. & Lumber Co., by the Secretary."

Mr. LEA. Let me see that.

Mr. FREAR. I just saw that. What was done with that, and what kind of an offer was that to Hitchcock? Just explain to the committee.

Mr. STOREY. We had a power plant there that we could put that band mill in and they were anxious to have this increased output, so we made that proposition. But they never entered into that. When Maj. Griggs came on the scene why he took that matter up and we did enter into a contract with Maj. Griggs that we would cut all of this. They were to furnish the logs and we were to use the old mill.

Mr. FREAR. Just the old mill?

Mr. STOREY. At that time. At that time he was in hopes that we would build the new mill. He wanted us to build the new mill, and they disagreed on that, and when they were up there Maj. Breese and Maj. Hitchcock and Maj. Griggs—Maj. Griggs wanted us to build that mill at that time, and the termination of the whole contract was that they would build their own mill and we could go on and cut spruce for \$9.50 a thousand, which we did, and we bought the side cuts off the mill.

Mr. FREAR. This at \$9,000, what would you say as to that as a reasonable price, or what was there to it? It was not accepted, I understand?

Mr. STOREY. No; it was not accepted. We figured by furnishing the power and everything that was a quite reasonable figure.

Mr. FREAR. Oh, I see. You were to furnish power and all?

Mr. STOREY. To furnish power and all.

Mr. FREAR. I neglected to ask you, did you build part of the railway? I think Mr. Miller testified they built part of the railway up there in 1918. Did you build any of the railway up there at that time?

Mr. STOREY. Well, on our own line?

Mr. FREAR. Yes.

Mr. STOREY. We built 1 mile and 100 feet.

Mr. FREAR. At about what cost?

Mr. STOREY. It cost a trifle over \$16,000. It was about the worst railroad building that we will have on the entire line, excepting the

next mile. Building this mile there wasn't a foot of ground it was built on that wasn't either a cut or a fill, and one of the cuts was solid rock 350 feet long and 35 feet deep, and that cost us a trifle over \$16,000. The next mile we have to build will have a big cut that we call it going through the pass. That will be probably 500 feet long and probably 35 feet deep. That next mile we figure on will cost us \$25,000. Now, these 2 miles will be the most expensive miles of railroad we have if we keep on going for 40 miles.

Mr. FREAR. Then what would be the cost of the next few miles, so far as you can judge, of logging road, as it is ordinarily built?

Mr. STOREY. At the present prices?

Mr. FREAR. At the prices that were in vogue at that time.

Mr. STOREY. We figured at from \$12,000 to \$15,000 a mile.

Mr. FREAR. And that would be the average cost, you believe, even at that time?

Mr. STOREY. After we passed the next mile.

Mr. FREAR. After you passed these 2 miles, one at \$16,000—

Mr. STOREY. I figured the next one at \$25,000; there was a big cut.

Mr. FREAR. Did you have an logging road in mind that in your judgment would cost up to \$100,000 or \$130,000 a mile?

Mr. STOREY. No.

Mr. FREAR. What would you say of the proposition of building a road that would require logging 12 miles from Yaquina Bay to Toledo, and the building of a logging road from Otter Creek to Yaquina Bay, approximately 10 or 11 or 12 miles of railway, we will say, on the north road of your road?

Mr. STOREY. It looks to me that building our road should cost naturally just as much money; our territory is just as bad to build in.

Mr. FREAR. You could have built a dozen miles of road, say, up into the heart of the Siletz region, for how much?

Mr. STOREY. I would be glad to take a contract for \$15,000 a mile to-day.

Mr. FREAR. For building 12 miles north?

Mr. STOREY. Yes, sir; about 20 miles north.

Mr. FREAR. And that was how far from Toledo; I mean, the extent of your road?

Mr. STOREY. The extension of our road runs up 6 or 7 miles, and we could build that 15 or 20 miles, 25 to 35 miles.

Mr. FREAR. And that would run up directly to Toledo without rafting?

Mr. STOREY. Yes, sir. What we figured was this: When we got to tidewater on the Siletz you have about 27 miles of tidewater and you could put the logs into tidewater from both sides and you could bring logs from there to Toledo, and I do not think you would have over 9 or 10 miles to reach tidewater.

Mr. FREAR. Would that condition exist over on the coast road?

Mr. STOREY. No; they would have to cross the mountain.

Mr. FREAR. So that you could build 8 or 10 miles of railway for the cost of building 1 mile of the other road?

Mr. STOREY. If that is what it cost them.

Mr. FREAR. Well, all we know is the testimony here. I think that is all.

Mr. LEA. What was that point where you constructed a railroad 15 to 20 miles; what road; where was that road?

Mr. STOREY. That would reach pretty well past where Maurey's is; just about tidewater; a little below tidewater.

Mr. LEA. On a good floating tide, is it?

Mr. STOREY. Yes; but we had that railroad laid out not entirely for a logging railroad, but to make a commercial railroad. We are working on that now, and we had this survey run clear on through to Willamina. We could construct a railroad cheaper for logging purposes temporarily.

Mr. LEA. Where is Willamina?

Mr. STOREY. North of Siletz about 50 miles.

Mr. LEA. On the bay?

Mr. STOREY. No; inland; it connects up with the Southern Pacific and makes a short cut into Portland.

Mr. LEA. That is all.

Mr. FREAR. That is a short cut from Portland down to Yaquina Bay?

Mr. STOREY. Yes, sir.

Mr. FREAR. And you have a survey up there?

Mr. STOREY. We have a survey.

Mr. FREAR. From Willamina down?

Mr. STOREY. Yes. We also have a survey as you get down in our road, running down to Toledo, and there is a kind of slough that runs down toward Yaquina. We also have a survey running from our road here that connects up with the Yaquina Road, also connecting the south beach; we had a survey there.

Mr. FREAR. If any railroad wanted to connect from Portland down to this Blodgett tract, that road could be used?

Mr. STOREY. It would be a short cut.

Mr. FREAR. And that would run through the Coos Bay country?

Mr. STOREY. Yes.

Mr. FREAR. You say you are building your line in a substantial way, so that it could eventually be a part of such a system as you contemplated?

Mr. STOREY. Yes.

Mr. FREAR. The testimony, I believe, is that at Otter Rock, the north extremity of the road that has been built, there would be required a tunnel of 400 feet in that grade. Do you know anything about that?

Mr. STOREY. I have heard one man say 4,000 feet.

Mr. FREAR. That is nearly a mile.

Mr. STOREY. But I know nothing about that. There are some bad obstacles; it is pretty mountainous.

Mr. FREAR. That is the north extremity of the road that was built up along the coast instead of this road into the Siletz?

Mr. STOREY. Yes.

Mr. MAGEE. Is that the survey which has been put in evidence here, Mr. Storey, that you mentioned?

Mr. STOREY. Well, we have a survey, but it is practically the same; they come out within 24 or 26 feet of our road with their survey, but we made one ourselves.

Mr. MAGEE. Did you find any difficulty in getting over the divide into the Siletz reservation?

Mr. STOREY. No.

Mr. MAGEE. What is the steepest grade under your survey?

Mr. STOREY. Our steepest grade is $1\frac{1}{2}$ per cent, but if we went a little farther we could get up in $1\frac{1}{10}$ per cent, but we would have to go a little farther with the road.

Mr. MAGEE. As I understand, Gen. Disque testified that it was impossible to get up from your road over the Siletz country, over this divide. Have you gone over that ground yourself, so that you know?

Mr. STOREY. I have probably been over it 50 times.

Mr. MAGEE. Is there any question about it?

Mr. STOREY. No. I was up there with Maj. Griggs and he says "That is all there is to it." I said, "Here is the summit, 275 feet high."

Mr. MAGEE. You are testifying from your own knowledge and observation?

Mr. STOREY. Yes, sir; my own observation. I saw the measurements on the trees and went through while the fellows were running the surveys.

Mr. MAGEE. You spoke about being afraid of competition from the Government mill. What did you mean by that?

Mr. STOREY. I do not know what was meant by asking the question.

Mr. MAGEE. You were asked the question and said you did not fear any competition. What did you have in mind, that the Government mill would not be operated, or what?

Mr. STOREY. I do not know whether the Government mill would be operated. I have made the statement to the officers of the Government mill that if they will take half of the machinery out of it, it will cut more lumber than with all the machinery, because the machinery is so constructed from a commercial standpoint that it can not be operated. I will prove that mill will cut more with half that machinery out. I could take that mill and tear out part of it and make a good mill.

Mr. MAGEE. It is too unwieldly for commercial purposes?

Mr. STOREY. To a certain extent it is too unwieldly, too large.

Mr. MAGEE. When do you expect to get your mill completed?

Mr. STOREY. Within two months or two and a half months.

Mr. FREAR. I did not think to ask if you have any timber up there?

Mr. STOREY. Yes; we have about 40,000,000 where our road is now.

Mr. FREAR. And that is the timber that you are going to cut for this mill?

Mr. STOREY. Yes, sir.

Mr. FREAR. And bought other timber around there to keep the mill going?

Mr. STOREY. Yes. There is timber offered to us every day. I suppose there are four or five hundred million feet of timber surrounding, that we could buy. I have an agreement with one concern that every time we get to a forty, I pay \$2 a thousand.

Mr. FREAR. How long would that keep you running?

Mr. STOREY. A couple of years.

Mr. FREAR. Is there anything more you have in mind, Mr. Storey?

Mr. STOREY. Not that I can think of now.

(The witness was excused.)

TESTIMONY OF MR. LEE WADE.

(The witness was sworn by Mr. Frear.

Mr. FREAR. Where is your home, Mr. Wade?

Mr. WADE. Toledo, Oreg.

Mr. FREAR. That place has been under some criticism here today. Do you live there?

Mr. WADE. Yes, sir.

Mr. FREAR. Is that the town that put up between \$60,000 and \$70,000 in order to supply water and a site for a Government mill?

Mr. WADE. Yes, sir; it is.

Mr. FREAR. And bonded itself for that purpose?

Mr. WADE. It did.

Mr. FREAR. That is the kind of place that is occupied by what a distinguished governor called "birds"?

Mr. WADE. Yes, sir.

Mr. FREAR. Will you please tell the committee whether you are familiar with this Siletz—or, first, what has been your occupation?

Mr. WADE. Logging and cruising timber.

Mr. FREAR. For how many years?

Mr. WADE. I have been in the logging business 30 years, and cruising for 15 years.

Mr. FREAR. Are you familiar with the Siletz region north, what is known as the Siletz Basin, running up to the village of Siletz and beyond?

Mr. WADE. Yes, sir; I have cruised in every township.

Mr. FREAR. Have you examined the cruises that have been made by other cruisers and made comparisons with your own after your cruises were made?

Mr. WADE. Yes, sir.

Mr. FREAR. What has been your observation as to the comparative cruises which you have made with those of previous cruisers?

Mr. WADE. They appeared very well. Probably there would be a difference in some pieces of 10 per cent.

Mr. FREAR. That would be about the average difference?

Mr. WADE. Yes, sir.

Mr. FREAR. So you can estimate fairly that not more than that would be the average difference of the cruise as it goes through the district there?

Mr. WADE. Yes, sir.

Mr. FREAR. About what is the estimate of spruce up in that country east of the divide?

Mr. WADE. I should judge there is 750,000,000 feet.

Mr. FREAR. Of spruce?

Mr. WADE. Yes.

Mr. FREAR. And what amount of fir, generally?

Mr. WADE. There would probably be better than 10,000,000,000 feet.

Mr. FREAR. It appears in evidence here that over at the Newport plant they were cutting more fir than spruce, so that in territory, if that region had been developed, there would have been possibly two or three billion feet of spruce and fir, in any event, that could have been used up there for airplane stuff. Is that right?

Mr. WADE. Yes.

Mr. FREAR. You know about their trying to get clear stuff for airplane purposes?

Mr. WADE. Yes, sir.

Mr. FREAR. You have been an estimator and cruiser sufficient to know the difference between No. 3 and No. 1 stock?

Mr. WADE. Yes, sir.

Mr. FREAR. You are familiar with the railroad that Mr. Storey has testified to?

Mr. WADE. Yes, sir.

Mr. FREAR. Just give a brief statement as to that road.

Mr. WADE. It is a very good logging road all the way up to what is called the divide between Depoe and Siletz. The survey over the divide shows that loaded cars coming out would have about a 2½ per cent grade and empties going up about a 3 per cent grade.

Mr. FREAR. That is the highest grade, as far as you know?

Mr. WADE. The highest as far as I know.

Mr. FREAR. Have you made an examination of the surveys?

Mr. WADE. I have gone over two surveys very thoroughly. The one I paid the most attention to was made by Andrew Porter.

Mr. FREAR. That is not the Miller survey?

Mr. WADE. No.

Mr. FREAR. What did the Porter survey show?

Mr. WADE. It showed 2½ per cent for loaded cars and 3 per cent for empties.

Mr. FREAR. The testimony of Mr. Storey, who was just on the stand, in regard to his own road is that it will take less than 2 per cent with loaded cars. Is that testimony right?

Mr. WADE. I do not know; I have not seen the survey.

Mr. FREAR. But you say the Porter survey would bring it in on a 2½ per cent grade with loaded cars. That would be running south toward Toledo beyond the basin, and how long a road would be necessary to build north of the Miller road to reach this quantity of timber which you have spoken about?

Mr. WADE. Between 11 and 12 miles.

Mr. FREAR. An ordinary logging road?

Mr. WADE. An ordinary logging road.

Mr. FREAR. Are you familiar with the road over on the coast?

Mr. WADE. Yes; I have been over it a hundred times.

Mr. FREAR. Over it a hundred times?

Mr. WADE. Yes; I went over it twice a day for three months last winter.

Mr. FREAR. What were you doing?

Mr. WADE. Working for the Government, cleaning up camps, putting in fire protection, working there with a crew of men.

Mr. FREAR. What about that road being a proper means of getting into the Siletz timber?

Mr. WADE. I do not think it is the proper road to touch the Siletz timber.

Mr. FREAR. Why?

Mr. WADE. There is not enough timber on the road to the coast to pay for its construction.

Mr. FREAR. You have cruised in there?

Mr. WADE. Yes.

Mr. FREAR. About what amount of timber would you say was over there that can be used for airplanes stock?

Mr. WADE. I should judge on that road running from where they first strike timber to Otter Rock, although the road is not completed, they probably would get a hundred million of spruce, but it would most of it be back a mile from the coast and they would have to put spurs in to get to it.

Mr. FREAR. In an easterly direction up the divide?

Mr. WADE. Yes, sir.

Mr. FREAR. The testimony here is that estimates place it at nearly a hundred and fifty million.

Mr. WADE. Possibly they might be able to get that much.

Mr. FREAR. They did not estimate that it was airplane stock, but what was the general character of the spruce along the coast there; is it different from what it is inland?

Mr. WADE. Oh, yes; that is what we call box spruce.

Mr. FREAR. What is the difference between box spruce and airplane spruce?

Mr. WADE. Well, the box spruce is full of black knots.

Mr. FREAR. And there is what proportion, would you say, there of spruce on the westerly divide of that box spruce?

Mr. WADE. It would be possibly 75 per cent of it.

Mr. FREAR. A large per cent of it?

Mr. WADE. Yes; a large proportion of it.

Mr. FREAR. Have you any maps?

Mr. WADE. No; I have no maps with me.

Mr. FREAR. You live in Toledo?

Mr. WADE. Yes, sir.

Mr. FREAR. You people, as you say, provided the water and the site for the mill?

Mr. WADE. They did.

Mr. FREAR. What else are you acquainted with down there as to the general conditions regarding the building of the road and the mill that will enlighten the committee?

Mr. WADE. Well, I don't know as there is anything more in particular that I could state to throw any more light upon this subject.

Mr. FREAR. Have you talked with any of these officers here at any time?

Mr. WADE. Yes; I made three trips down here and talked with them.

Mr. FREAR. Tell the committee, please, what your experience was.

Mr. WADE. I came down here three different times.

Mr. FREAR. To Portland from Toledo?

Mr. WADE. There was a committee of us up there that came down and tried to persuade them to build in near the Miller Road, and we furnished copies of maps and cruises showing the road, the amount of spruce, and that in building the road they could have got more or less spruce all the way building it; every mile of the road would

have more or less spruce in it; if they went up the coast they would have to build 12 miles before they got into any spruce.

Mr. FREAR. They would have to haul the logs 12 miles?

Mr. WADE. We talked to them and they said we would have to talk to Mr. Benson.

Mr. FREAR. What Mr. Benson?

Mr. WADE. Mr. Amos Benson. We talked to Mr. Benson and he told us he did not believe we had any spruce east of Toledo.

Mr. FREAR. Had he ever been up there?

Mr. WADE. Once we got him to go up there.

Mr. FREAR. Had he ever been there prior to that time?

Mr. WADE. He had not been up in the Siletz country prior to that time, but he did promise and he went down once later on.

Mr. FREAR. With whom did he go down there?

Mr. WADE. Mr. Hall, who testified here, and Mr. Morgan, and our county surveyor, Mr. Derrick.

They went into that country and saw the spruce and he only spent one day. He said if they would go next day and locate a route for the railroad that he would give them another hearing, and he came back to Toledo, and after we had located the route we found Mr. Benson at Newport, but he was always busy and we could not get to talk with him.

Mr. FREAR. Did he ever go through that section again?

Mr. WADE. Not that I ever heard of.

Mr. FREAR. What of Mr. Morgan's standing as a cruiser?

Mr. WADE. He is a cruiser.

Mr. FREAR. He has testified before the committee?

Mr. WADE. Yes, sir; he is a cruiser, and we never did get a hearing with Mr. Benson after that.

Mr. FREAR. Did you ever get a hearing with Mr. Disque?

Mr. WADE. No; I never could get to Mr. Disque; I always went before Mr. Hitchcock.

Mr. FREAR. He was the man to whom you were referred?

Mr. WADE. Yes.

Mr. FREAR. What else have you in mind regarding the situation down there, if anything, with reference to this railroad or the building of the mill?

Mr. WADE. I do not know that there is anything else. I might state that I learned my logging the same way Mr. Benson did, by punching bulls. I worked from the ground up.

Mr. FREAR. In other words, you do not think there is any difference or improvement because a man lives in the atmosphere of Portland than there is in a man living down in Toledo, where they are spoken of as "birds"?

Mr. WADE. I understood the witness, Mr. West, to say that Mr. Benson was a good man, because his father had taught him to punch bulls.

Mr. FREAR. What does that mean?

Mr. WADE. Oxen for hauling logs.

Mr. MAGEE. That is the way you began?

Mr. WADE. I began that way 30 years ago.

Mr. FREAR. You have been engaged in the business since?

Mr. WADE. I have more or less ever since.

Mr. FREAR. Up to what time?

Mr. WADE. Well, I was a logger for about 10 years, and after that I done some clerical work in an office, and the last 15 years I have been cruising out more or less all the time.

Mr. FREAR. Whereabouts?

Mr. WADE. In the Siletz country, almost all the time.

Mr. FREAR. And your judgment is based upon your experience there and what you have done in that section as well as elsewhere?

Mr. WADE. Yes, sir.

Mr. FREAR. That is all.

Mr. LEA. You are a cruiser now; that is your business now?

Mr. WADE. Yes, whenever there is anything to do. There is not very much cruising in that country, but whenever there is any to do.

Mr. LEA. Do you hold an official position at Toledo or not?

Mr. WADE. I am a member of the board of commissioners at the port there.

Mr. LEA. You authorized the Porter survey; were you a member of the commission then?

Mr. WADE. Yes, I was one of the commissioners.

Mr. LEA. And what other business have you besides cruising?

Mr. WADE. I have been operating a logging camp for the last two years.

Mr. LEA. Where is that?

Mr. WADE. Down below Toledo, on the Yaquina River.

Mr. LEA. On the Yaquina?

Mr. WADE. On the river, going down to Newport.

Mr. LEA. Where do you log from?

Mr. WADE. I get out piling for the building of that south jetty, and logs for those tie mills.

Mr. LEA. You do not own any timber in that country, do you?

Mr. WADE. No.

Mr. LEA. Do you know how long the Porter survey is?

Mr. WADE. No; I do not remember, but I think it is in the neighborhood of 11 or 12 miles. He started from the end of the Miller Road.

Mr. LEA. How many miles from Toledo?

Mr. WADE. Possibly 6 or 7 miles.

Mr. LEA. That would be 16 or 17 miles from Toledo then?

Mr. WADE. Yes, sir.

Mr. LEA. And at what point does it terminate?

Mr. WADE. It terminates down on what is called good tidewater on the Siletz River. It is about township 8, range 10.

Mr. LEA. That is all.

Mr. MAGEE. Do you know how it happened that they built this road around by Newport and up the coast?

Mr. WADE. No, sir; it has always been a mystery to me. I do not know why it happened.

Mr. MAGEE. Just how far is Toledo from Newport?

Mr. WADE. By wagon road it is about 8 miles, and by way of the river and railroad it is 12.

Mr. MAGEE. Was there any rivalry between Toledo and Newport with reference to the building of this railroad?

Mr. WADE. None that I knew of.

Mr. MAGEE. There was not any arrangement by which Newport was to get the railroad and Toledo the mill?

Mr. WADE. No; no such thing.

Mr. MAGEE. There was no such discussion or anything of that kind?

Mr. WADE. No, sir, not that I know of.

Mr. MAGEE. You do not know of any? There was not anything in the way of rivalry between the two places that had anything to do with the construction of the road, so far as you know?

Mr. WADE. No.

(Witness excused.)

TESTIMONY OF ALEXANDER JAMES McMILLAN.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. What is your business?

Mr. McMILLAN. Civil engineer.

Mr. FREAR. How long have you been a civil engineer?

Mr. McMILLAN. About 12 years.

Mr. FREAR. Where do you live?

Mr. McMILLAN. At Toledo.

Mr. FREAR. Where have you been during the past year?

Mr. McMILLAN. Well, I was discharged from the Army June 26. Before that I was in France.

Mr. FREAR. You were in France?

Mr. McMILLAN. Yes, sir.

Mr. FREAR. How long?

Mr. McMILLAN. About a year.

Mr. FREAR. What division were you with?

Mr. McMILLAN. The 32d Engineers, unattached.

Mr. FREAR. You were with the 32d Division?

Mr. McMILLAN. No, sir; they were unattached.

Mr. FREAR. And you returned when?

Mr. McMILLAN. I was discharged June 26.

Mr. MAGEE. This year?

Mr. McMILLAN. Yes, sir.

Mr. FREAR. What has been your experience in engineering?

Mr. McMILLAN. I had six years in railroad work and location and construction in Canada, and since then I have put in the time on highway work and river and harbor work for the Government, and bridge work, and also some construction work.

Mr. FREAR. You are familiar with the district north of Toledo, running into the Siletz country, and have made surveys in there?

Mr. McMILLAN. Yes, sir.

Mr. FREAR. Have you your maps with you?

Mr. McMILLAN. I have an alignment map. This runs from Toledo to the Siletz River.

Mr. FREAR. That runs from Toledo north of Siletz?

Mr. McMILLAN. Yes, sir; showing the actual road as located [indicating on map].

Mr. FREAR. That is the actual logging road that now exists, known as the Miller Road?

Mr. McMILLAN. Yes, sir.

Mr. FREAR. And the survey runs on how many miles from Toledo?

Mr. McMILLAN. About 8 miles, I believe.

Mr. FREAR. That would be how far beyond the end of the road that now exists?

Mr. McMILLAN. Well, at the time the survey was made it would run about $2\frac{1}{2}$ miles.

Mr. FREAR. Would that take it over the divide?

Mr. McMILLAN. Yes, sir; that takes it to the river.

Mr. MAGEE. Over this divide or ridge that has been spoken of here as being impracticable to build a railroad over; is that what you mean?

Mr. McMILLAN. Yes, sir.

Mr. FREAR. That is the only obstacle, there, I assume, in the further extension of the road?

Mr. McMILLAN. Yes, sir.

Mr. FREAR. Will you briefly explain to the committee in general terms, that we can have placed in the record this survey that exists there to the end of the Miller Road and also, generally, the character of road that leads up from Toledo to the Siletz.

(The map above referred to was marked "Exhibit No. 25," for identification; blue print to be furnished for the record.)

Mr. McMILLAN. At the time the survey was made, why, the logging road was at the head of tidewater.

Mr. FREAR. On Depoe Slough?

Mr. McMILLAN. On Depoe Slough.

Mr. FREAR. How far was that from Toledo at the time the survey was made—what section, can you tell?

Mr. McMILLAN. It was about 6,500 feet from the connection with the Southern Pacific Railroad.

Mr. FREAR. That is following this trestle work.

Mr. McMILLAN. Yes, sir; following this trestle work. Then from there on the roadbed up to section—to within a quarter of a mile of the reservation line, up to this point in here [indicating].

Mr. FREAR. That is, you constructed to a point in the southwest quarter of section 19?

Mr. McMILLAN. That would be in the northeast quarter of section 19.

Mr. FREAR. Yes; that is right.

Mr. McMILLAN. Then the preliminary line extended all over the summit.

Mr. FREAR. The summit is in what?

Mr. McMILLAN. The summit is in section 17.

Mr. FREAR. In the northwest quarter of 17?

Mr. McMILLAN. Yes.

Mr. LEA. In what township?

Mr. McMILLAN. In 10-11.

Mr. FREAR. When was this survey made?

Mr. McMILLAN. In May, 1917.

Mr. FREAR. And for what purpose?

Mr. McMILLAN. For the J. B. Miller Logging Co.

Mr. FREAR. For the purpose of an extension of this railway and showing them the conditions that have to be met in extending the road?

Mr. McMILLAN. Yes.

Mr. FREAR. Now, what is the rise or the grade of this road, up to the top of the divide?

Mr. McMILLAN. That is located on a 3 per cent grade.

Mr. FREAR. From which way?

Mr. McMILLAN. Going north.

Mr. FREAR. Three per cent going north.

Mr. McMILLAN. And $1\frac{1}{2}$ per cent down on the other side of the mountain.

Mr. FREAR. That is, $1\frac{1}{2}$ per cent would be the grade at which the logs would be brought from the Siletz down to Toledo.

Mr. McMILLAN. Yes, sir. That was a preliminary survey to find out what the actual conditions were there, and it can be changed to slightly over 2 per cent.

Mr. FREAR. That is, going north.

Mr. McMILLAN. Yes; going north, and slightly over 1 per cent going south.

Mr. FREAR. Going south slightly over 1 per cent with loaded cars?

Mr. McMILLAN. Yes.

Mr. FREAR. Now, have you anything to show the amount of curvature of the road? In a general way, what is it, so far as you saw on the survey?

Mr. McMILLAN. I judge that the largest degree of curvature would be some place near 12 per cent in one place.

Mr. FREAR. And that would be only in one place?

Mr. McMILLAN. In one place.

Mr. FREAR. And that would be where?

Mr. McMILLAN. That would be right in section 17, on the north-west quarter.

Mr. FREAR. Where you say that the elevation would be between 1 and one-half per cent?

Mr. McMILLAN. Yes.

Mr. FREAR. On the corrected survey; that is, you say it can be improved?

Mr. McMILLAN. Yes, sir.

Mr. FREAR. Now, is there any other elevation above those?

Mr. McMILLAN. No, sir; not that I know of.

Mr. FREAR. What have you to say as to its being a practical route for a logging road? You have done other surveying and engineering.

Mr. McMILLAN. That is perfectly practical in every way.

Mr. FREAR. It is perfectly practical for a road for that purpose?

Mr. McMILLAN. Yes.

Mr. FREAR. For commercial purposes?

Mr. McMILLAN. Yes.

Mr. FREAR. And it could be extended up beyond the Siletz River to have joined on with any other commercial road, and with proper equipment and proper building, it could have been used for any road, the same as the Southern Pacific?

Mr. McMILLAN. Yes.

Mr. FREAR. I mean, so far as the elevation or grades go?

Mr. McMILLAN. Yes, sir. There is also this way here; there is another way in here.

Mr. FREAR. What is the other way that you speak of?

Mr. McMILLAN. Up through the Olalla.

Mr. FREAR. What about that? State briefly.

Mr. McMILLAN. I have never made any actual surveys through there, but positive statements of two or three different engineers—one of them was my father.

Mr. FREAR. One of them was your father?

Mr. McMILLAN. Yes, sir. They say that there is a way into the Siletz Basin from up the Olalla, running from above Toledo, and that would join in the Siletz about somewhere in section 8.

Mr. FREAR. What was the character of that survey? That survey was east of this, was it not?

Mr. McMILLAN. Yes.

Mr. FREAR. And about what distance across, or between the two railroads—how far east?

Mr. McMILLAN. That I could not say—just what the distance would be.

Mr. FREAR. Of course, it varied, I understand, but I mean it started out from Toledo and ran in a northerly direction and joined the Miller Road where?

Mr. McMILLAN. It would join the Miller Road in the southeast quarter of section 8.

Mr. FREAR. In the southeast quarter of section 8 of this survey and then extended on north?

Mr. McMILLAN. Yes, sir; it extends on north.

Mr. FREAR. I was going to ask you about the elevations of that road.

Mr. McMILLAN. I understand that the elevation on that road, the grade, would be slightly heavier than on this here.

Mr. FREAR. What would you mean by slightly heavier?

Mr. McMILLAN. It would run some places—in some places they have to go up about 35 feet higher, I believe, in that hill; and they have a little harder place to climb.

Mr. FREAR. What would be the difference in bringing down the loaded cars, what would it approach?

Mr. McMILLAN. The grade coming down, there would be very little difference.

Mr. FREAR. That is, it would be under 2 per cent, would it?

Mr. McMILLAN. Yes, sir.

Mr. FREAR. On the Porter survey?

Mr. McMILLAN. Yes, sir.

Mr. FREAR. That is all.

Mr. LEA. You made this survey yourself, did you?

Mr. McMILLAN. Yes, sir.

Mr. LEA. For whom did you make it?

Mr. McMILLAN. J. B. Miller Logging Co.

Mr. LEA. That was in May, 1917?

Mr. McMILLAN. Yes, sir.

Mr. LEA. How old are you?

Mr. McMILLAN. Twenty-six.

Mr. LEA. How many miles is this road from Toledo?

Mr. McMILLAN. About eight miles and a half, I believe. It has been two years since I have had the absolute distances on that.

Mr. LEA. At what point did you say your survey terminates?

Mr. McMILLAN. In section 18.

Mr. FREAR. How far beyond the divide, to identify it?

Mr. McMILLAN. Eight thousand six hundred and twelve feet.

Mr. FREAR. Beyond the divide?

Mr. McMILLAN. Beyond the divide.

Mr. FREAR. That is a little over a mile, a mile and a half?

Mr. McMILLAN. Yes, sir; a mile and a half.

Mr. FREAR. That is all.

(Witness excused.)

TESTIMONY OF JOHN PATTERSON—Recalled.

Mr. FREAR. Do you know anything about any rejected lumber, Mr. Patterson, which came from selected logging?

Mr. PATTERSON. Well, they sold what wouldn't make aeroplanes from the cut-up plant from time to time, and after they got tired selling they sold about 27,000,000 feet, I think, in a lump.

Mr. FREAR. Twenty-seven million feet of rejected airplane lumber?

Mr. PATTERSON. It was not good enough for airplanes.

Mr. FREAR. Had it been taken from selected trees, or what?

Mr. PATTERSON. It had been taken from the cants and stuff that was shipped to the cut-up plant.

Mr. FREAR. That was sold here at the cut-up plant, was it?

Mr. PATTERSON. It was sold at the cut-up plant for \$17.10 a thousand.

Mr. FREAR. To whom, or do you know?

Mr. PATTERSON. I think to the Willapa Lumber Co.; I think they bought it.

Mr. FREAR. About what time was that?

Mr. PATTERSON. Oh, that was after the armistice was signed.

Mr. FREAR. But it was from the selective logging that had been done?

Mr. PATTERSON. Yes.

Mr. FREAR. That is all.

(Witness excused.)

TESTIMONY OF FRANK D. EAMAN.

(The witness was sworn by Mr. Frear.)

Mr. LEA. State your full name.

Mr. EAMAN. Frank D. Eaman.

Mr. LEA. Where do you reside, Mr. Eaman?

Mr. EAMAN. Detroit, Mich.

Mr. LEA. What is your occupation?

Mr. EAMAN. I am a lawyer by profession. In the last four years I have also been interested quite largely in manufacturing. Two years before I came here I was operating the Reliance Engineering plant at Lansing, Mich.

Mr. LEA. For what purpose did you come to Portland?

Mr. EAMAN. Why, I came here because I received a letter from Gen. Disque stating that he expected to lose some of his officers. Mr. Ryan had promised to release those that had had military training for service overseas. I had known the general there through his work with me in Jackson, Mich., and he knew that if there was something here that he felt I could do to help that all he had to do was to say so. I got a letter from him in August, and took my examination in Chicago, and shortly afterwards I came out here.

Mr. LEA. That was in August, 1918?

Mr. EAMAN. Yes, sir.

Mr. LEA. How long did you remain here?

Mr. EAMAN. A little over six months.

Mr. LEA. What was your work while here?

Mr. EAMAN. My first assignment was as assistant to the president. The general was president of the corporation and I was an assistant to the president, a sort of floating aide, I suppose, to do such things as I was told or asked to do.

Mr. LEA. How long did you remain in that position?

Mr. EAMAN. Why, that virtually describes my duties, as far as they can be described. Under their organization chart, they had provided for an assistant general manager, and I think just prior to the armistice that an order had been issued and I was designated as such.

Mr. LEA. You are acquainted with Gen. Disque, are you?

Mr. EAMAN. I am.

Mr. LEA. When did you become acquainted with him?

Mr. EAMAN. The first time I saw Gen. Disque was—I have forgotten the exact date, but I should say the 20th of December, 1916—when he got off the train in Jackson, Mich.

Mr. LEA. What, if any, official position did you hold in Michigan at that time?

Mr. EAMAN. I was a member of the board of control of the Michigan State prison, at Jackson, Mich.

Mr. LEA. For how long had you been a member of the board of control?

Mr. EAMAN. In 1916, you mean?

Mr. LEA. Yes.

Mr. EAMAN. I had been a member about a year and a half.

Mr. LEA. What is the method of selection of the board of control in Michigan?

Mr. EAMAN. Appointed by the governor, a nonpartisan board, no salary.

Mr. LEA. Were you on the board at the time Mr. Disque was selected as warden of the penitentiary?

Mr. EAMAN. I was.

Mr. LEA. I wish you would tell the committee what information you have as to his selection, the manner of his selection, and why.

Mr. EAMAN. The former warden of the prison, Mr. Nathan E. Simpson, who had been there then, I think, about five years, and had made a very great record and done a lot of good in building up the industries, and in other ways, announced that he was to leave to engage in private business. There was some controversy about the matter of salary. We voted Mr. Simpson, after his showing year in and year out of the large earnings, we raised his salary. The auditor general contended that under one construction of the law we had no such power. We had to take the matter before the supreme court and in the meantime Mr. Simpson left. The supreme court later determined that we had the power. The board consisted of three men—Mr. Edward Frensdorf, of Hudson, Mich.; Mr. O. H. L. Wernicke, formerly of the Globe-Wernicke Co., then living in Grand Rapids; and myself. We discussed several men. Those that we wanted we could not get, and finally we asked the

papers if they would announce the fact that we were looking for a warden. The appointment could not be made on political grounds, of course, because we had a business then of approximately \$3,000,000 a year. We had about nine separate industries, and of course, the man we had to have was a man of organizing ability and some business experience. Of course, along with that was the problem of discipline. So a friend of Gen. Disque came into my office, a man that I had met, but did not know, and he had a copy of then Capt. Disque's military record from the time he enlisted in the Army as a private, together with every letter of commendation from all of his superior officers from 1899 on to the final letter that Gen. Leonard Wood had. In that record it appeared that he had been assigned, usually, by his officers to not only military duties, but in the construction of camps, and had run the factory at Manila, where they made military supplies, a considerable sized factory. He had had some experience in the military prison at San Isidro, or some place over there. He was a man of about the right age. We found that he had had an application with the Ford Motor Co., and others had looked him up. My next door neighbor had known him, and Mr. Booth, of the Detroit Graphite Paint Co., knew him very well. We made an inquiry among others that had known him or known of him, and we sent him a cablegram asking if he would consider the position. He sent back an answer, "Is it a political job?" We sent back an answer, "It is not. It is a life appointment; depends entirely on yourself. You can only be removed under the law for cause." He then said he would come, but he had not resigned and would not resign until he came and looked into it.

Why, he reached Jackson—I have forgotten the exact date—along the latter part of December, and asked the permission to get a leave of absence from the Army. He said that that would give him an opportunity to find out whether he wanted to stay in the position and whether we wanted him. I told him that, if he had in mind the idea of taking this position, it was my judgment that he should resign, but I didn't want him to have any strings out; take plenty of time to look into the position and what it offered, and if he wanted it to burn his bridges and start in, because it was a tremendous—it is the biggest job, to my mind—that is, requires more varied qualifications of a man than any other public position that I know of in Michigan—not that there are not others just as responsible. It is a big prison; and with the things that Simpson had inaugurated there and work that we had attempted, to say nothing about the business problems, I didn't want any man feeling that he could take the position and step out.

Mr. LEA. At that point, will you briefly explain what was the nature of these operations carried on in that penitentiary in Michigan?

Mr. EAMAN. The biggest industry, in dollars and cents, is the twine factory—not in numbers employed. Most are employed in the chair shop. It had a farm of, I think, a thousand acres, a cannery, and stock raising, dairying, all the allied agricultural industries, bee-keeping, etc.; has a stone shop where they make monuments. They had at that time a tannery, which was discontinued, however, and a very large brick and tile plant.

Mr. LEA. That was all conducted by the penitentiary?

Mr. EAMAN. All conducted by the Michigan State prison, on State account. The contract labor was abolished and the State runs the industries.

Mr. LEA. About what is the average number of inmates of the penitentiary in Michigan?

Mr. EAMAN. Well, this is only one of—there are two other prisons in Michigan. This is the large prison.

Mr. LEA. How many are there there?

Mr. EAMAN. The average during the year, I would say, would be about 1,100; there was when I left. Of course, I resigned when I came out here. Sometimes would be as low as 900, again as high as 1,400 inmates.

Mr. LEA. What did you learn as to Mr. Disque's work in the Army, of a civilian character, before his appointment as warden?

Mr. EAMAN. The assignments that he had had, particularly of that nature, were what interested us instantly. I may say that Warden Simpson had had Army training—had been in the Army in the Philippines, had been a captain in the Army—and, I suppose, as much as anything, it was our thought that a man's military training would be, on the disciplinary end, of great help; if you could find such a man that possessed organizing ability and business judgment besides; and this seemed to us to be a man that had those qualifications.

Mr. LEA. What was the nature of this plant in Manila?

Mr. EAMAN. Why, it is so long ago I have forgotten. As I remember, it was a general repair shop, and they made a lot of military supplies; I think they made harness, saddlery. The general can tell you in detail. I have forgotten. It was a manufacturing plant; not a large one, of course, like an eastern factory, or anything of that kind, but was a plant in which things were made and manufactured, and he could get on to manufacturing methods and processes, etc.

Mr. LEA. Well, return to his appointment.

Mr. EAMAN. So at that meeting each member of the board expresses their opinion on the subject of his resignation from the Army, and upon our urging he resigned. He remained as warden of that prison until he accepted his commission, in September, I think it was, the following year, 1917.

Mr. LEA. At the time you cabled Mr. Disque offering this position were you personally acquainted with him, or had you had any previous connection with him?

Mr. EAMAN. No; not at all. Never heard his name within—well, within a comparatively few hours before the cable was sent. That is, I mean by a comparatively few—a day or so, giving us time to check up on the man and find out those that did know him. Incidentally I may say that Gov. Ferris was then governor of Michigan. He had appointed me on the board, and strenuously objected to our—although he didn't assume to have any voice in the appointment of a warden, felt that that was the obligation of the board—it so happened that Disque had been an inspector for the Regular Army in Michigan, and a few years back had rated the Cavalry troop at Detroit, I think, as 2 per cent efficient and unless they came up to a certain grade recommended that the Government allowance be cut off. That report, of course, made him some enemies, including the then

highest military officer of the State. That gentleman happened to be a friend of—he is a friend of mine, personally—but he told Gov. Ferris that Disque was a martinet, and the governor was afraid that our methods down there of the honor system and other things that we were trying to put in might be harmed. I may say that later he was criticized for being too lax in his discipline, but not by us.

Mr. Disque was not appointed through any political reason or any personal reason or anything else.

Mr. LEA. When did he assume his duties at the prison?

Mr. EAMAN. He qualified at once, took the oath, filed his bond.

Mr. LEA. And how long did he remain warden?

Mr. EAMAN. Until September of the following year, I think it was, or latter part of August. The exact date of his going I do not remember.

Mr. LEA. And what, if any, information can you give the committee as to whether or not Gen. Disque sought to enter the military service of the United States?

Mr. EAMAN. He did everything that a man could possibly do to get into the service. I felt a personal responsibility in having been the first one to suggest his resigning. If he had taken his leave of absence, as he had asked, he would automatically have gone back to his rank as captain in the Cavalry. He wrote a letter tendering his services. I saw the letter at the time. I have forgotten the date—shortly after war was declared. Senator Townsend, whose home was in Jackson, introduced a bill in Congress to restore him to his former grade, and I personally went to Washington to see Mr. Doremus, who was Congressman from my district, asking him to introduce a similar bill. They got word—I think in the meantime Senator Townsend said that the matter had been referred to the War Department and they were not in favor of it and could not see—and, of course, upon their stating that, it was withdrawn.

Mr. LEA. He asked to go back with the rank of captain?

Mr. EAMAN. That is all.

Mr. LEA. On which he had retired?

Mr. EAMAN. That is all. I think the suggestion was made by somebody in the War Department, while he was there, that he go over to Fort Sheridan, as they asked some other Army officers to do, in a civilian training camp, and work for a commission. He asked myself and other members of the board about that, and I told him not to do it; that a man that had been an officer in the Army for 17 years and was so lately out of it, was a graduate of the War College and the college of the line, I didn't think that really they wanted him to go to a civilian training camp to see whether he could qualify as a second lieutenant. That worried him a little bit. I told him that. In the meantime he was bombarded with letters—Gen. Wood. Gen. Bell, a lot of colonels that I don't know—and each time he would get one, of course, he—finally he almost was frantic, that is the truth of the matter. And finally then over—I think there was some—he had been in Ohio at one time, I think there was some talk of making him a colonel of a colored regiment, but I think that never materialized, because the draft law came along and they didn't have volunteer regiments.

Mr. LEA. And when he finally resigned, it was for what purpose?

Mr. EAMAN. From the prison?

Mr. LEA. Yes.

Mr. EAMAN. To accept his commission as an officer in the Army.

Mr. LEA. Was he in any way urged or requested to resign by the board of control?

Mr. EAMAN. He was not. He was voted a leave of absence. When, of course, it was—the war was going on for a considerable period of time, after he got out here and got in his duties, I think it was May of the following year, he wrote us a letter and said that, which was true, we needed a warden. It is hard to run a prison without a permanent head. We could not do anything else, however, but give him a leave of absence, and then when we got his letter, I think it was May of the following year, we began our search for another.

Mr. LEA. How familiar were you with the management of the prison during his administration of it?

Mr. EAMAN. Very familiar.

Mr. LEA. And I wish you would tell us about his administration, what you know about it.

Mr. EAMAN. Warden Disque, as would be expected, had some things to learn by way of adapting himself to the industry. The first thing he did—I think the problem that was before us was that the State of Michigan only gave us \$160,000 revolving fund, as they called it; in other words, the capital account of the prison was only \$160,000. There had been some legal question as to our right to borrow money. We were at once confronted, in the buying season of 1917, with the price of sisal going up from 6 cents to 16, 17, and 18 cents. That is the raw material out of which binder twine is made. We had a credit in New York, for instance, of about \$300,000, but our first purchases that year ran 986, and so the general's immediate problem was to extend that credit. He made several trips to New York—I went with him once—with the result that he secured for Jackson prison, with some question of its legality—I mean raised by the attorneys of the bank, not that there was any question—a credit that year, I think, of \$1,500,000. He reorganized the twine shop. I may say that it is not all through the general's year, because it went into—the selling season went into the next year, but, in a general way, during the months the general was there, plus the three or four months following. That prison not only paid us all its expenses, but showed a net profit, as our auditor said, of \$300,000. There was some question about that for a time when they had the legislative committee looking into the affairs of the prison, but, as perhaps you gentlemen know already here, when the auditor of the Detroit Trust Co. went on the stand, he admitted he had overlooked what was due us of \$260,000, so that now the audit of that prison shows an accumulated surplus, in a little over five years, of a little over \$2,000,000.

Mr. LEA. I wish you would state to the committee how the report of a shortage originally came and how it was subsequently dispelled.

Mr. EAMAN. I only know of that from what I have heard and read. The Detroit Trust Co.—unfortunately Mr. Frensdorf became a candidate for governor while he was acting warden of the prison, after Gen. Disque left. Of course, that threw the institution into politics for the first time in seven years. I don't mean unfortunately for him or for the State, but I mean for the institution, as I viewed it. Mr. Simpson, the former warden, was also considered a farmers'

candidate for governor. He was then head of the Gleaners and, of course, immediately the prison became involved in some of the political controversies of our State. They had an investigating committee that rendered some adverse criticism. Then, simultaneously with that, the Detroit Trust Co. reported that there was an apparent shortage of \$750,000. The State accountant went down, by the way, after that, and in less than half a day found that there was not any shortage at all, but instead of that they had given us less credit than we were entitled to, and the Trust Co. very frankly and in a manly way admitted their mistaken audit. So that part was cleared up, I guess, to the satisfaction of everybody in our State.

Mr. LEA. Now, what was this alleged shortage, in whose administration?

Mr. EAMAN. In the administration of Mr. Simpson, former warden. The only thing that in any way, in any part of the testimony, as I remember it, or even in the legislative report, was that some thought that the general's discipline had been too lax. Of course, that was not the general's fault. That is the board's fault. We were trying to run a prison where a man don't have to cringe every time an officer comes around. The general also has the same idea of a guard's duty that he has of an officer on duty, that he has no right to take advantage of an inmate and curse him, swear at him, and yet he had as hard a punch as any man when the inmate was unruly. And that is the way that prison has been run. Extending now over a considerable period of time, we have a good number of our men out on the farms. I say "our men"; I am not on the board any more. We have some escapes, but most of them don't.

Mr. LEA. You are familiar with the finances of that prison. Is there anything in the history of Mr. Disque's administration of that penitentiary that in any way reflects upon his financial management of the institution or upon his integrity?

Mr. EAMAN. Not at all, nor has he ever been charged with it by anyone. There was some talk, I think, at the time that legislative committee was on that one of the farms had been bought too high. That was part of a program, however, on the part of some of the gentlemen to force the prison to sell this farm. There are people in Michigan who do not believe that men should be punished by having them go out on farms; their idea of prison punishment is to be in a cell. That is for them to settle, but Jackson has figured the other way, as practically all other States, buying more and more and more farm land, instead of having all the work done under the contract system inside of a prison.

Mr. LEA. Have they continued to expand in the purchase of farms since that time?

Mr. EAMAN. Yes, sir. The legislative report on that subject, when it was finally given, was that you not only do not sell the farms but buy more.

Mr. LEA. That is all, I think. Is there anything else that you think of that you want to say?

Mr. EAMAN. There was some statement—I don't think Mr. Sligh intentionally made it—he said something about my being warden of the prison. Of course, I never was warden of the prison.

Oh, there was another thing: I never knew or heard of any—this letter that was spoken of in the testimony, having been sent by the

general to the governor. I don't know about that. I certainly do know that no governor of Michigan, either Gov. Sleeper or Gov. Ferris, ever handed me any letter that had been written him by Gen. Disque. A statement to that effect is mistaken.

Mr. LEA. Do you know any reason on earth to justify any witness for making such a statement?

Mr. EAMAN. I do not.

Mr. LEA. You never made any such statement to anybody?

Mr. EAMAN. No, sir. I suppose I am the gentleman who is referred to. It is quoted in the testimony as Heyman, but I suppose that is merely because the stenographer didn't understand my right name. It must have been me that was referred to, because the other two gentlemen were Mr. Wernicke and Mr. Frensdorf. Mr. Frensdorf was the acting warden.

Mr. LEA. But you never knew or heard of such a letter as was stated was handed to you?

Mr. EAMAN. No, sir; and it never was.

Mr. LEA. That is all.

Mr. FREAR. When were you appointed a member of the board of control of that State?

Mr. EAMAN. 1914, I think.

Mr. FREAR. So that you had been in about a year and a half?

Mr. EAMAN. Yes, sir.

Mr. FREAR. Before Mr. Disque came what was Simpson's salary?

Mr. EAMAN. Mr. Simpson's salary was \$5,000 a year, until we raised it to \$7,500, which the court finally said was proper. In addition to that, under the law he got a home, all of his living expenses for himself and family, machine and other things that go with the job—servants and all that.

Mr. FREAR. What was the salary paid Disque when he went in?

Mr. EAMAN. The salary paid Disque was \$5,000, because that lawsuit was pending, but with the understanding that if our powers were held to be proper by the supreme court, that it would be increased.

Mr. FREAR. And did you ever pay him more?

Mr. EAMAN. No, sir; he left.

Mr. FREAR. So that he received \$5,000?

Mr. EAMAN. Plus all of his living expenses and everything of that kind; yes, sir.

Mr. FREAR. What were those estimated to be?

Mr. EAMAN. Well—

Mr. FREAR. I mean by your board. Of course, you had an accounting system there.

Mr. EAMAN. I suppose a man drawing \$5,000 salary would not live in as large a place as such a man may live in. Of course, a home such as he got, with the servants, and everything that goes with it, and automobile, would cost him money, possibly six or eight thousand dollars.

Mr. FREAR. Would you say his living expenses were six or eight thousand dollars?

Mr. EAMAN. I would not say that; no, sir.

Mr. FREAR. How much, two or three, three or four?

Mr. EAMAN. I would figure—I can only figure for myself in my own family, which is a little larger than the general's—that I

would figure easily I would be saving five or six thousand dollars a year, that is with everything, laundry and machine, the use of it for himself and family. The depreciation, and upkeep, and cost alone of that is eleven or twelve hundred dollars a year, and there is no getting away from it. Of course, it was also used in the business of the prison. I don't say that he merely had a machine to run around in, but that is worth something to a man. Maybe that figure is too high, Mr. Frear; I don't know.

Mr. FREAR. When did you come out here?

Mr. EAMAN. I came out here—I took my examination in August. I think my commission was dated the early part of September, and I left a week after that.

Mr. FREAR. September of what year?

Mr. EAMAN. 1918.

Mr. FREAR. September, 1918?

Mr. EAMAN. Yes, sir.

Mr. FREAR. What time in September?

Mr. EAMAN. I think I got here the 20th.

Mr. FREAR. And the armistice was signed November 11?

Mr. EAMAN. November 11, about six weeks after.

Mr. FREAR. So you were here about six weeks?

Mr. EAMAN. Six or seven weeks; yes, sir.

Mr. FREAR. Were you recommended for distinguished service by—

Mr. EAMAN. I don't know.

Mr. FREAR. I believe he testified you were.

Mr. EAMAN. I heard that testimony.

Mr. FREAR. Your six weeks' service here was not during the rainy season nor during the time when—

Mr. EAMAN. No, sir.

Mr. FREAR. Your six weeks' service here entitled you, in the opinion of Mr. Disque, and he was the officer—

Mr. EAMAN. You will have to ask him about that. I think my duty was an ordinary one. I think that I had some qualifications for the job. I know I left an income, sir, in an industrial employment, of pretty close to two or three thousand dollars a month, and I don't think that I was entitled to it, nor do I think I would have received it. I think probably that recommendation, not being a medal that is awarded men in the fighting line, I suppose it is to be explained largely by the feeling of loyalty of the general to his organization.

Mr. FREAR. And personal friendship for you?

Mr. EAMAN. Not at all. I don't think, sir, in my case, that Gen. Disque—that personal friendship ever influenced that man in one single act.

Mr. FREAR. Then you think in six weeks' time that you were there that he gave you this or he recommended you for a distinguished-service medal because of the record you made here?

Mr. EAMAN. You will have to ask him what his reasons were.

Mr. FREAR. But you say that it was not on account of any personal relations. You had known him before you had appointed him as warden, hadn't you?

Mr. EAMAN. No, sir.

Mr. FREAR. Your board didn't?

Mr. EAMAN. Our board did; yes, sir.

Mr. FREAR. There are three members of the board?

Mr. EAMAN. Three members of the board.

Mr. FREAR. Well, that is what I assumed; and, of course, you didn't think that had any connection with it at all?

Mr. EAMAN. I think it had nothing to do with it, sir.

Mr. FREAR. Do you know of any other officer in the United States that recommended for distinguished-service medals, unless some man was on the fighting line, a man who had been in service just six weeks?

Mr. EAMAN. I don't know, sir.

Mr. FREAR. Well.

Mr. EAMAN. Of course, I was here in a fairly responsible position. I don't think that had anything to do with the recommendation, and yet it may have had.

Mr. FREAR. What was the position?

Mr. EAMAN. I was chairman of the contract board—passed on some \$20,000,000 worth of claims. I don't understand—maybe my position—I asked nothing, I asked for no glory. I certainly have asked for no medals; wouldn't want any.

Mr. FREAR. This is the position that confronts us—

Mr. EAMAN. All right.

Mr. FREAR. When I asked him the names of those whom he recommended for distinguished service he stated your name, and I didn't know the length of service, so I could not have examined him on it, and when you said that you were in six weeks I asked what there was in your record that in your judgment—you say that you don't base it on your judgment, you leave it entirely to him.

Mr. EAMAN. I consider my duty an ordinary one, sir.

Mr. FREAR. You say he was bombarded with letters by Wood and Bell and others?

Mr. EAMAN. He showed me a series of letters—naturally other men that had been in the service with him wanted to know, and I think Gen. Foulois, with whom he was finally assigned. They had been lieutenants together down in Texas, I understand.

Mr. FREAR. Gen. Wood was bombarding this captain with letters; is that the fact? I don't quite get it—the suggestion that you make there. Gen. Wood and Gen. Bell, were they writing him to come back to the service?

Mr. EAMAN. Gen. Leonard Wood, sir, has made the statement in Michigan in several places—of course, his purpose was criticism of the War Department—that it was a consummate outrage to have taken a man of Gen. Disque's ability and with his standing in the Army and in the colleges and have sent him out here to get out spruce.

Mr. FREAR. Well, whereabouts is that letter to be found?

Mr. EAMAN. Probably the gentleman has it in his file. I, perhaps, should not even refer to it. These statements I am making can easily be verified as having been made to several people in our State.

Mr. FREAR. What was Wood's experience with him?

Mr. EAMAN. I don't know.

Mr. FREAR. Had he ever been intimately associated with Wood?

Mr. EAMAN. I don't know. I think they were acquainted.

Mr. FREAR. Where?

Mr. EAMAN. Some place in the Army. I don't know about that.

Mr. FREAR. Down in the Philippines—

Mr. EAMAN. Whether that or in the States, I don't know.

Mr. FREAR. It is rather an unusual statement. That is the reason I was inquiring.

Mr. EAMAN. I think if you are interested, sir, in Gen. Wood's estimate of this man's ability as a soldier, he would be very glad to give it to you.

Mr. FREAR. I don't know that I am, particularly.

Mr. EAMAN. I don't know.

Mr. FREAR. But when the recommendation comes in here that Disque was bombarded with this proposition—

Mr. EAMAN. When it is stated that that man in any way, even for a moment, as far as anything I could see, did other than try to get back and render service in the line of his profession, for which he had been in training for years, that statement, in my judgment, sir, ought never to be made against that man.

Mr. FREAR. Let me say I don't think the committee has taken that into consideration at all; and, frankly, in this examination we are not considering it.

Mr. EAMAN. Those things hurt, and I admit I am prejudiced on that; but I think it is due that man, sir, that left our State with not enough money to ship his furniture out here—that man has some rights. Maybe his judgment was wrong, all right, too, but his reputation and his honor and his ability as a man are there, and I think a man that was down in several engagements in the Philippine Islands and risked his life for our flag is entitled to some consideration.

Mr. FREAR. What was his record there? Perhaps you know.

Mr. EAMAN. The list of his engagements were in the military record, sir.

Mr. FREAR. Was he ever wounded?

Mr. EAMAN. I don't think he ever was.

Mr. FREAR. He never stated much about it. I don't know but what you might know.

Mr. EAMAN. In this military record that I have home in my office I know the list of his engagements are mentioned in there. They are small, I suppose.

Mr. FREAR. In the Philippines?

Mr. EAMAN. Yes, sir; it is a part of the insurrection. No large engagements.

Mr. FREAR. You came out from Michigan here?

Mr. EAMAN. Yes, sir.

Mr. FREAR. To testify in this case?

Mr. EAMAN. I did.

Mr. FREAR. Five thousand miles here and back?

Mr. EAMAN. Yes, sir.

Mr. FREAR. At your own expense?

Mr. EAMAN. Yes, sir.

Mr. FREAR. Well, that is an evidence of friendship, anyhow.

Mr. EAMAN. Yes, sir.

Mr. FREAR. We have got to concede that.

Mr. EAMAN. And I would have gone farther, if anything I could say would help clear the man's reputation as to honesty and honor in the time I have known him.

Mr. FREAR. Well, that is praiseworthy, surely. Simpson was in five years, you say?

Mr. EAMAN. No; about four, I think.

Mr. FREAR. You stated five. I was wondering.

Mr. EAMAN. Well, let's see, I was not on the board—it was between four and five years.

Mr. FREAR. And he made a good record, according to your statement?

Mr. EAMAN. He was a good warden.

Mr. FREAR. And then he went out?

Mr. EAMAN. Yes, sir.

Mr. FREAR. And Disque came on by reason of correspondence or cables between your warden——

Mr. EAMAN. Board.

Mr. FREAR. Between your board and Disque in Manila?

Mr. EAMAN. Yes, sir.

Mr. FREAR. And how long after you undertook this correspondence was it that he came on?

Mr. EAMAN. I think it was about—it took a whole month to get here, I know—my recollection is that he left about two or three weeks after the first cable was sent him, and it took him 30 days.

Mr. FREAR. Who was it that knew him?

Mr. EAMAN. Who was it?

Mr. FREAR. Yes; on the board or in connection with your board?

Mr. EAMAN. No member of our board had known him or ever heard his name.

Mr. FREAR. Who was it outside of the board?

Mr. EAMAN. A man named Kearney.

Mr. FREAR. Who was it, a friend?

Mr. EAMAN. He is a friend of the General's, and has been, I believe, for sometime. He was an officer in a Cavalry troop and had met the General when he was there in Michigan as an inspector.

Mr. FREAR. Originally; before he had gone to Manila?

Mr. EAMAN. Yes, sir.

Mr. FREAR. Or the Philippines. I speak of that because it is a rather unusual proceeding to send 9,000 miles for a man——

Mr. EAMAN. It is; very. I don't suppose it would be a part of the record on that, but in justice to the man—when he left—not that you want to cumber the record with what a lot of editors thought, but we thought it was a fine thing to do—we were very highly commended by practically every newspaper in Michigan—because it was a nonpartisan thing—and we picked the man on what his record seemed to us to be, and particularly was it pleasant to have them say that his record there for nine months had vindicated our judgment in him.

Mr. FREAR. You are acquainted, of course, with this investigation that was held in Michigan?

Mr. EAMAN. Yes, sir; in a very general way. I was not present in Michigan; I was out here.

Mr. FREAR. But you were a member of the board that appointed Mr. Disque?

Mr. EAMAN. Yes, sir.

Mr. FREAR. Who was appointed in your place?

Mr. EAMAN. Mr. Mark Merriman, I believe.

Mr. FREAR. There was a committee of the legislature which was appointed to make an investigation there, was there not?

Mr. EAMAN. Yes, sir.

Mr. FREAR. That reported to the Senate on April 1, 1919, and I hold a copy of the report which you mentioned a few moments ago.

Mr. EAMAN. Yes; I think I have seen the one that is inserted in the record.

Mr. FREAR. On page 895 of the report—let me see; you were there in 1914?

Mr. EAMAN. Yes.

Mr. FREAR. It says: "At the time this act became effective," referring to an act of the legislature in 1909, "the Jackson prison had a contract with the Michigan Seating Co. to furnish it inmate labor, which contract expired in 1915." That was after you came in?

Mr. EAMAN. Yes.

Mr. FREAR. "After its expiration the prison officials continued to furnish contract labor to the Michigan Seating Co. on a per diem and piecework basis. This was not only in violation of the express provisions of the statute but our investigation disclosed that there was no one representing the prison who knew or understood what the arrangement really meant. No investigation had ever been made to determine whether the rates paid were just or not, and there was absolutely no supervision of the work performed for this company by anyone connected with the prison. We found that the method employed in keeping track of the large amount of work performed for this company was the following: At the end of each month the company would submit its own statement of the amount due the State which was accepted without question." You were a member of the board during this period when this refers to?

Mr. EAMAN. I was; yes, sir. And they had no different system then, sir, than they have now; nor has it ever been held by any court—we were told over and over again that our acts were illegal; that we had no right to increase Warden Simpson's salary, and three different times we were told certain things we did were illegal, and the Supreme Court of our State in every instance yet has found that we were within our legal rights and that it was not an illegal contract.

Mr. FREAR. You are a lawyer?

Mr. EAMAN. Yes, sir.

Mr. FREAR. You are a business man, naturally?

Mr. EAMAN. I have been; yes, sir.

Mr. FREAR. Is it true that this statement of the legislative committee, which is signed by Charles O. Blynn, Fred B. Wells, Robert B. MacDonald, and George W. Millen, members of the special joint legislative committee to investigate the State prison at Jackson. Those were all senators, were they?

Mr. EAMAN. I think they were representatives. I am not sure.

Mr. FREAR. It appears in the Journal of the Senate?

Mr. EAMAN. Maybe there were some of both; I don't know.

Mr. FREAR. Yes. Is it true that at the end of each month the company would submit its own statement of the amount due the State, which was accepted without question?

Mr. EAMAN. No, sir.

Mr. FREAR. Well, that is their findings.

Mr. EAMAN. I can't help that, sir.

Mr. FREAR. That was under paragraph 8 of their report.

Mr. EAMAN. Why, just an illustration, Mr. Frear.

Mr. FREAR. Yes, make any statement. I will be glad to have you to.

Mr. EAMAN. And it bears upon the question of Gen. Disque. The record is absolutely plain that Disque—one of the first things he did was to take up the question as to the amount being paid by the Michigan Seating Co. That is a matter of record, and in the auditor general's office and the State treasurer's office and the books of the prison, that that man increased the amount that we received from the prison, and yet that report says nothing was done.

Mr. FREAR. I see. I am just reading from the report.

Mr. EAMAN. Yes, sir.

Mr. LEA. Well, this period covered by the report, isn't this before Gen. Disque?

Mr. EAMAN. This is before the Detroit Trust Co. made any audit—

Mr. LEA (interrupting). Wait a minute.

Mr. EAMAN. And what we are entitled to have in the record—I think it is already in the evidence.

Mr. FREAR. Of course, you were a member of this board at this time?

Mr. EAMAN. Yes, sir.

Mr. FREAR. Of course, it gives you an opportunity to justify yourself?

Mr. LEA. Wasn't this before Disque became warden?

Mr. FREAR. How is that?

Mr. LEA. Wasn't this before Disque became warden?

Mr. FREAR. It may have been.

Mr. EAMAN. Yes, sir.

Mr. FREAR. It says, "at the end of each month."

Mr. EAMAN. But apart from that, I am also interested in the prison. I claim nothing for myself—

Mr. FREAR (interrupting). When was this last contract to expire with the Michigan Seating Co.?

Mr. EAMAN. With the Michigan Seating Co.? Before I went on the board.

Mr. FREAR. What?

Mr. EAMAN. Before I went on the board.

Mr. FREAR. Why, no. It says here the contract expired in 1915, and it says after the expiration the prison officials continued to furnish contract labor to the Michigan Seating Co. on a per diem and piecework basis. You went in in 1914?

Mr. EAMAN. Yes, sir.

Mr. FREAR. So they continued on the same contract basis?

Mr. EAMAN. The contract, sir, I am telling you—you are asking me, and I am getting into the record, and I am on oath—

Mr. FREAR (interrupting). Yes.

Mr. EAMAN. There was a contract originally with the Michigan Seating Co.

Mr. FREAR. Yes.

Mr. EAMAN. That contract had expired.

Mr. FREAR. Yes.

Mr. EAMAN. One of the first matters that came up when I became a member of the board was a matter of renewal of that contract. I gave them a legal opinion; perhaps it was wrong as a matter of law; I still think it was right then, and until the court says otherwise I maintain it, that it is not an illegal contract to have a bailment relation where they bring in material. We have just as much right to charge them for fabricating it into a finished chair as they have, and they say there is no objection to that in the stone shop, and that a man can come in with a boulder out of the field and we can make a monument out of it and charge him for the time and labor that goes into it; that that is perfectly proper. Of course, you are not interested in Michigan politics; neither am I, because that happens, that I don't want to be interested except as a citizen. The real interest there was that a certain gentleman who had a contract over in Ionia prison was not quite friendly with some of the present Michigan officers.

Mr. FREAR. Well, the committee is not interested, I think——

Mr. EAMAN (interrupting). No; I don't think you ought to get into that.

Mr. FREAR. The committee is not interested in the local questions.

Mr. EAMAN. No, sir.

Mr. FREAR. None of us. But the point I had in mind is this last paragraph, which is very significant, while you were a member of this board.

Mr. EAMAN. What I am interested in here is when they go before the grand jury, before the circuit court of the county of Jackson, which lasted about an hour, and the judge's finding that there was absolutely no evidence of anything illegal or of anything wrong in that prison, then I don't care about a report of the legislative committee.

Mr. FREAR. Of course not; but here is the question that I desire to have a little light about.

Mr. EAMAN. Yes, sir.

Mr. FREAR. Because you were a member of the board at that time. It states here, "At the end of each month the company would submit its own statement of the amount due the State, which was accepted without question."

Mr. EAMAN. You have asked me, and I think I have already said that is not so.

Mr. FREAR. Yes. Now, was there any finding anywhere——

Mr. EAMAN (interrupting). They submitted a statement which was checked up.

Mr. FREAR. Then that statement of this legislative committee, you say, is not true.

Mr. EAMAN. But if you want to know our method and system, and why the prison could not possibly lose a cent under our system, I will be glad to explain that to you. I don't care whether they submit the bill or whether I submit the bill. Where it is figured under a system and an accounting method that can't determine but one thing, it is immaterial to me whether their stenographer writes out an estimate, or whether our men that were on the books checked them up; and in addition to that, every inmate that worked in the chair

shop was an auditor for the prison in this way. That every man in that institution is paid overtime, and the amount of his payment for overtime is determined, of course, upon the quantity of work that he does. So that every man working in that chair shop, independent of what the Michigan Seating Co.'s statement may make or show, if that is not correct it means that the inmate does not get as much as he is entitled to. The more the inmate gets the more we get, because even with the overtime the prison shares in it 20 per cent of the amount paid as overtime; the rest goes to the inmate.

Mr. FREAR. Then your statement is that there was a check kept upon that?

Mr. EAMAN. Yes, sir, indeed.

Mr. FREAR. Now the next statement under section 9, or paragraph 9, is, "About two years ago the A. W. Ehrman Co. was employed to devise a system at an expense of approximately \$2,500, but through lack of cooperation on the part of the prison management and laxity of method, that system was not kept up. In fact, the accounts could not be kept in a more lax, incorrect, and improper manner than they have been for years. This applies to all departments, and the loose methods employed are not only adverse to sound business principles, but would wreck any ordinary business in a very brief period." Was that true?

Mr. EAMAN. No, sir. I would like to state there—

Mr. FREAR (interrupting). Surely. Go on and make any statement.

Mr. EAMAN. A. W. Ehrman Co.—well, first, Warden Simpson had been a farmer. His problem was to establish industries under the State account system. All the State law of our State requires that institution to furnish its auditor general is a statement of the moneys received and merely a cash statement, the amount received, from whom received, for what purpose paid, etc., and a statement of all moneys spent, to whom paid, for what purpose, etc. Further than that the State law of Michigan did not require any system. One of the first things Disque did when he came there was to get A. W. Ehrman Co. to come out there and put in this system. We were interested in costs. We wanted to know how much to sell our monuments for, and we could not tell without knowing what they cost us. Further than that, he was finding what it would cost to maintain a man inmate in the prison. It is true that after the general left some of the men that he had appointed were removed, and shortly, I think—Mr. Le Claire had been his chief accountant, and they got another, and he had a different system; thought the Ehrman system wasn't good. Ehrman says it is. He is one of the leading expert accountants. The next man says it is not.

Mr. FREAR. This statement is made—in fact, the accounts could not be kept in a more lax, incorrect, improper manner than they have been for years, and this was in 1919?

Mr. EAMAN. I think, Mr. Frear, in fairness now, right while we are on that subject in the record—

Mr. FREAR. Yes.

Mr. EAMAN (continuing). That the legislative committee that went out of existence, of course, with the adjournment of the legislature, might be warranted in making a finding upon a report of a trust company that they were \$750,000 short, where they would not

make any such report when at the conclusion of their duty the trust company admits they are all wrong. Now, any auditing company that will overlook what is openly on the books of \$1,260,000, as they admit they did, can't pass for me upon any question of good or bad accounting.

Mr. FREAR. I understand. Let's admit, for the sake of argument, that they were misled by this committee.

Mr. EAMAN. All right.

Mr. FREAR. Which I presume is true from what you said.

Mr. EAMAN. Yes, sir.

Mr. FREAR. But when they state that through lack of cooperation on the part of the prison management and laxity of methods that system was not kept up—"In fact, the accounts could not be kept in a more lax, incorrect, and improper manner than they have been for years. This applies to all departments and the loose methods employed are not only adverse to sound business principles, but would wreck any ordinary business in a very brief period"—that, of course, is a very positive statement.

Mr. EAMAN. It is.

Mr. FREAR. Now take paragraph 10; that is on page 896 of the record. It says: "We regret exceedingly being obliged to report that the discipline of this institution is far from ideal. During the last few years it has steadily gotten worse. This has been the case since Warden Simpson resigned in December, 1916." That is since he resigned. He was Disque's predecessor?

Mr. EAMAN. Yes, sir.

Mr. FREAR. "And the responsibility therefor must be placed on those who have acted as wardens since that time. Among other things, we found that prize fighting between inmates was encouraged and approved, card playing and gambling a common practice, and crap games a pastime. Men with bad records both in and out of the prison were named as trustees and allowed unrestricted freedom." That is true or not true?

Mr. EAMAN. To say that boxing was not allowed in the institution—it was. Of course, boxing used to be tabooed in every State in the Union, but when the war came on it was encouraged, and now pretty near every State in the Union allows boxing and have boxing laws and allow them. To say boxing was allowed in Jackson prison, it was, when I was a member of the board, in a regular, orderly way. About once in two weeks they would have athletic stunts, and among other things they had boxing. That is true. Some of the gentlemen from up State objected to that. To say, I suppose there is crap shooting in the prison; not with the warden's knowledge, or with the knowledge of any of the guards. There are lots of things that take place in a prison. To say that was allowed or tolerated, or encouraged, is not true, either under Warden Simpson, Warden Disque, or Warden Hurlburt.

Mr. FREAR. They say this occurred after Warden Simpson resigned. They say it was "encouraged and approved, card playing and gambling a common practice and crap games a pastime."

Mr. EAMAN. Unfortunately, there is a lot of practices worse than that going on in Jackson prison; immoral practices. Does that mean that the management, because you could have testimony that it had occurred, that we encouraged it, or allowed it, or tolerated it?

Mr. FREAR. Well, I don't think—

Mr. EAMAN (interrupting). There is a lot of things that take place with 1,200 men, every one charged with crime; but the criticism is, if it is justified, as to whether any member of the board or the warden or guard allows it knowingly; and that is not so.

Mr. FREAR. Well, but it says it was approved, and, of course, if the legislative committee stated a falsehood, why that is the result of your statement.

Mr. EAMAN. People in Michigan, sir, don't believe that of Jackson prison.

Mr. MAGEE. Does that report say what kind of card playing?

Mr. FREAR. Crap shooting and card playing.

Mr. MAGEE. I know; but does it say what kind of card playing?

Mr. FREAR. No; that is all.

Mr. MAGEE. It may have been whist.

Mr. FREAR. Well, they usually play whist, I suppose.

Mr. LEA. Is there any law against playing cards?

Mr. EAMAN. There is no law in the State, I believe, that cards should not be played in my house.

Mr. FREAR. Card playing and gambling a common practice.

Mr. EAMAN. I have no doubt, sir, every colored man of the Jackson prison, if he could get hold of some bones, will shoot craps behind the brick pile, but that does not mean that Warden Disque, Warden Hurlburt, or any guard ever tolerated it. It exists in the Army in spite of an absolute regulation. I don't think that it ought to be held up against a State prison.

Mr. FREAR. Well, I am asking for an explanation and taking your explanation.

Mr. EAMAN. All right, sir.

Mr. FREAR. Well, under the same paragraph: "While there has been numerous escapes both from the prison itself and the farms, it is only fair to state that the inmates themselves deserve considerable commendation for observing the law against such practices and for not having availed themselves of the opportunities offered for leave-taking. We found bad feeling and petty jealousies existing among many officers and employees, which were permitted to continue with the knowledge of the warden in charge, and which in considerable measure accounted for the conditions recited.

Our investigation has met with the hearty cooperation of the present board of control and we feel confident that from now on there will be a great change for the better so far as prison discipline is concerned.

What is there about that statement?

Mr. EAMAN. I think undoubtedly the discipline wasn't as good for a time after Disque left. We appreciated that. That is not anybody's fault. I greatly regretted, not that we could not give Disque a leave of absence because he asked for it, and, of course, going back in the Army he was entitled to it. If there is anything bad around the prison it is not to have a permanent head. Unfortunately, there was an interregnum there of about 10 months; the inmates didn't know who was really boss. There was no warden, and finally we appointed a warden.

Mr. FREAR. Well, this suggests, since the resignation of Warden Simpson, as I recollect back there—I may have misread it.

Mr. EAMAN. I think some of the gentlemen from out in the State objected to some of the methods of discipline.

Mr. FREAR. Getting back, it says, "We regret exceedingly being obliged to report that the discipline of this institution is far from ideal. During the last few years it has steadily gotten worse. This has been the case since Warden Simpson resigned, in December, 1916, and the responsibility therefor must be placed on those who have acted as wardens since that time."

Mr. EAMAN. I don't think you ought to blame the warden, if the board will assume full responsibility for the methods of discipline, we do not, did not have—and, by the way, I suggested the name of Warden Hurlburt, a contractor of Detroit, who is present warden in the prison, who has the same methods. We believe that the old prison methods employed for 150 or 200 years, perhaps, can be improved upon. We believe in allowing men, after they have been lodged over in that institution, to go out on a farm. The average life, including all the lifers, of the men in the institution, their average period in prison, is only two years. The average age, even with all the old men in our prison, is steadily going down and down and down. We don't allow brutal conduct on the part of the guards if we can help it. Some of the gentlemen feel that if a man is convicted of a crime, and one of the attorney generals so stated, that it should be the obligation of a warden and a board of control to make a man feel punishment from the minute he enters our door. We may be wrong. If we are, we assume full responsibility for it. We don't believe that is the duty of a warden.

Mr. FREAR. That is not very different in some respects from that of the average institution throughout the country, is it?

Mr. EAMAN. No; there are a lot of prisons that—

Mr. FREAR (interrupting). That the average institution does let out its men?

Mr. EAMAN. Yes, sir.

Mr. FREAR. Have their trustees?

Mr. EAMAN. Yes, sir.

Mr. FREAR. They are employed on the farms surrounding. I know that; or some institutions, at least.

Mr. EAMAN. There are some prisons of that type.

Mr. FREAR. Yes. So your institution is largely managed on the same plan in that respect as others?

Mr. EAMAN. Yes. But in that same State, Mr. Frear, you will find a lot of people—for instance, farmers that are living near the farms—they object to it. They say, "We don't want a prison farm next to mine;" but they have got to be some place.

Mr. FREAR. Well, that same situation arises in every State.

Mr. EAMAN. That is true. And those people criticize the discipline of a prison. They say, "How is a man punished when you send him out on a farm and let him live in a farm house and sleep there at night?"

Mr. FREAR. When Hurlburt was appointed he took away the cards and the dice?

Mr. EAMAN. Who?

Mr. FREAR. Hurlburt, of whom you spoke?

Mr. EAMAN. Most of the trouble, unfortunately, seemed to come after poor Hurlburt got started. They demanded his resignation before he was there 24 hours; but he is there yet.

Mr. FREAR. They say here—that is, in the minority report, it says—“The former acting warden, Edward F. Frensdorf, encouraged prize fighting and tolerated card playing and gambling between inmates, and it is to the credit of Warden Hurlbut that he immediately upon assuming control eliminated, as far as possible, all gambling within the walls. No cards or dice are now allowed in the institution.” That is the minority report signed by Harvey.

Mr. EAMAN. Yes, sir.

Mr. FREAR. Another provision, paragraph 12: “Section 1720 of the C. L. of 1915 prohibits any member of the board of control from being directly or indirectly interested in any business carried on in the prisons of the State, or from being interested directly or indirectly in any contract, purchase, or sale for or on account of any such prison.

“We find that this statute was violated in a number of particulars by Mr. Edward Frensdorf, a member of the board of Jackson prison, as follows:

“(a) While a member of said board, he engaged in the binder twine business as a silent partner with John Hawkins, of Rollin, Mich., and also with Frank Bradstreet, of Rollin, Mich.; that such business was carried on in the names of the two last-mentioned parties, and that the moneys to finance the same were advanced by Mr. Frensdorf, and the profits derived from such transactions were divided equally between the parties forming the partnership.”

Is that a fact?

Mr. EAMAN. I don't know of Mr. Frensdorf doing that.

Mr. FREAR. You were a member of the board at that time, were you not?

Mr. EAMAN. I certainly know that there was never any contract entered into with any concern, to my knowledge, in which Mr. Frensdorf was interested. Mr. Frensdorf was criticized, I believe, because a bank in which he owned some stock loaned some money at one time to the prison. I didn't even know at the time the loan was made that he was. Mr. Frensdorf will have to answer these questions. I will certainly say never to the knowledge of the board, nor do I believe it is true. Mr. Frensdorf is a man of large business connections. He has been a member of that board, or was, eight or nine years, and never a breath against him until he assumed to run for the office of governor of Michigan. There has been no prosecution or no demand for return of anything. But what he did, Mr. Frear, he will have to answer for; I can't.

Mr. FREAR. That is the same kind of a charge under which Judge Hughes recommended a court-martial of Deeds, is it not?

Mr. EAMAN. If that is true; yes, sir.

Mr. FREAR. Yes; if that is true.

Mr. EAMAN. Yes. Frensdorf will have to answer that. I can't answer it for him.

Mr. FREAR. And there are provisions in here relating to Frensdorf where other charges were made.

Mr. EAMAN. Yes, sir.

Mr. FREAR. But as far as I can understand, they came subsequent to the time you were a member of the board.

Mr. EAMAN. I can only say about Mr. Frensdorf, although we have disagreed on many things, I know he is a clean, honest, able man; nor do I think he ever did otherwise than to render the State of Michigan services which you could not buy for hundreds of thousands of dollars.

Mr. FREAR. The statement made in the city of Washington by the National Council of Defense and others was that men ought not to be permitted to contract with their own companies, because it encouraged not only a lax system, but a man can't serve two masters, as has been repeated so frequently.

Mr. EAMAN. Yes; a very proper law.

Mr. FREAR. Yes. Now, if this condition did exist there, he was put in the dual position of carrying on business where he had contracts?

Mr. EAMAN. That is true.

Mr. FREAR. Where he exercised authority, or your board, or the warden of the penitentiary?

Mr. EAMAN. If he did.

Mr. FREAR. I don't believe these other questions you are familiar with. What was your work here?

Mr. EAMAN. Well, after the armistice, of course, in point of time most of my duty was as president of the contract board. Before that, one of the first things I was assigned to, I believe, was the matter of commercial sales. There had been some little question as to the moving of this large accumulated lot of side cut, and there were several problems there. Then there was this wing-beam contract over here, and they wanted an extension of that, and a whole lot of miscellaneous things. Did you want the detail of my duties?

Mr. FREAR. No. I was wondering of some matters I wanted to inquire about, and I don't believe that you had really the information, because you came in at such a late date; practically all the large contracts had been made.

Mr. EAMAN. Well, yes. And I think it ought to appear, Mr. Frear, in the record. I know it certainly is one of the first things I tried to become familiar with here in a general way; Col. Hitchcock, of course, was in direct charge of Government operations. I had occasion to go over some of them, and the contracts were then being classified and made up to see exactly where we stood on a lot of things. It always seemed to me that if contracts had been let out here on the basis—now, I am only speaking on the basis of the total claims as filed—if this work had been done here by guaranteeing to the industry, whether it was one or twenty, or a hundred or a thousand, the building of these roads would have to have been amortized, either by them or the Government. What difference does it make whether the Government conducted its operations where it could stop immediately or whether it entered into definite contracts with a lot of individual mills, to whom it would have to advance money, or to whom it would have certainly to repay if railroads were built and the war ended; and on the basis of the total amount of claims filed with the contract board if all the spruce lumber of the Northwest had been—if its production had been guaranteed by private contract, I think it is an absolutely truthful statement to say that I

think your claims would have been about sixty or seventy or eighty million dollars.

Mr. FREAR. Well, that is not the history of other countries, is it? And isn't this true—do you mean to say the claims as testified to have been adjusted?

Mr. EAMAN. Yes, sir. Take the Willapa Lumber Co., though, for illustration, the one large mill out here, which furnished more than any other one; I guess more than any other two or three—

Mr. FREAR (interrupting). Whereabouts is that located?

Mr. EAMAN. Over on the harbor, in the Grays Harbor district.

Mr. FREAR. Yes.

Mr. EAMAN. It furnished more, on an average at the last, with the two mills running night and day, I believe, of a million feet, on the basis Col. Breece was then producing aircraft lumber. About 600,000 of that went into finished airplane stock. Of course, the amount as finally paid was not as much as the gentlemen thought they lost. This question has never been determined yet, however. We did not allow profits in the industry very generously. In most instances waived it rather than have a lawsuit; but you have got a private corporation here; whether they are entitled to profits or not has never been determined by a court.

Mr. FREAR. Your cost-plus operations?

Mr. EAMAN. What?

Mr. FREAR. In your cost-plus operations; there were profits in those?

Mr. EAMAN. There was a profit paid to the contract; yes, sir; upon the amount expended. But what I am getting at is this: What difference does it make who builds the railroad, whether the Government or somebody else, if the private individual builds it, and it is there, and it is not needed, and is not an operation that he can work commercially—and certainly all the testimony before the contract board was that these big spruce operations were not needed commercially—the Government has got to pay them? That is all there is to that.

Mr. FREAR. That is, you don't see any difference between an individual building an ordinary logging road at \$15,000 a mile, as is done here generally, and the Government—

Mr. EAMAN (interrupting). Oh, no, Mr. Frear.

Mr. FREAR (continuing). And the Government under a cost-plus contract building a railroad at over \$100,000 a mile?

Mr. EAMAN. You say as was done generally?

Mr. FREAR. Yes.

Mr. EAMAN. I can only say this: Maj. Eastman was in charge of the logging operations. He is a man of very broad experience. He owns railroads himself. I know Maj. Eastman says that he has main line road that the Western Cooperage Co. owns that you could not possibly build to-day with the war over—

Mr. FREAR (interrupting). With what?

Mr. EAMAN (continuing). With the war over for less than \$90,000 a mile. Now, to say—

Mr. FREAR (interrupting). Now, we have put a great many witnesses on the stand already who say that logging roads ordinarily cost about \$15,000 a mile.

Mr. EAMAN. Well, sir; I would perhaps think they are true, but in the statement—

Mr. FREAR (interrupting). Yes. They are loggers.

Mr. EAMAN. Yes.

Mr. FREAR. They are men of knowledge, integrity, and reputation.

Mr. EAMAN. Yes. But does that mean that the operation here is to be criticized when men like Mark Reed and Watson Eastman, and certainly the big operators—certainly would the general be criticized if he picked as his advisers some of these men that have been before you? He would have been court-martialed if he had spent a million dollars on their advice, and you know it.

Mr. FREAR. I will say this—

Mr. EAMAN (continuing). And if you won't recognize the judgment of men like Reed, Benson, and Yeon, and these men that say it was the way to do it—

Mr. FREAR (interrupting). Yes; Benson says it was the way to do it, and he was only once in the Siletz country, and he built a road that cost in the neighborhood of \$130,000 a mile. Do you understand that the people who are contributing the money, by means of the sale of bonds and war stamps, expected their money was to go into such a railroad?

Mr. EAMAN. I think they expected their money to go into that kind of a railroad that the men of the biggest experience said was warranted, and in the place where they said it was warranted.

Mr. FREAR. And you approve of these expenditures, do you?

Mr. EAMAN. I am not familiar with all of them, sir. I won't say that. I do say this: Now, I have had a little experience in some ways. I know that 90 per cent, sir, of the men out here in this division hated to be here. I know that the men down there—

Mr. FREAR (interrupting). That has nothing to do with this question.

Mr. EAMAN. Yes; it does, sir.

Mr. FREAR. Well, let's see.

Mr. EAMAN. You are talking about costs. You are talking about costs.

Mr. FREAR. Yes.

Mr. EAMAN. You know, sir, and I am sure other gentlemen in Congress know, that a railroad, built as these railroads were built out here—where was there ever a railroad built as Siems-Carey built that railroad, in six months time? Where has it ever been built in the world?

Mr. FREAR. Well, do you want to say—

Mr. EAMAN (interrupting). Now, maybe it cost us too high.

Mr. FREAR. Of course, the committee can take that matter up for discussion.

Mr. EAMAN. Yes, sir; that is true.

Mr. FREAR. Knowing that a railroad is not built only in the regular course of business, and consider it so far as speed and so far as cost is concerned, if it so finds.

Mr. EAMAN. Yes, sir.

Mr. FREAR. Yes. There are a lot of questions involved.

Mr. EAMAN. But to hold up a railroad built exactly on the same theory that you build a railroad in France—what did it cost to

build the railroad back of the first or the second or the third line in France? It seems to me the test is: Was that road necessary?

Mr. FREAR. Yes.

Mr. EAMAN. If it were built in the wrong place, why, somebody is due to be criticized.

Mr. FREAR. Well, the further question—

Mr. EAMAN (interrupting). But to say that these roads could be built with such men as were available—

Mr. FREAR (interrupting). The question under a cost-plus contract of building a railroad out there at \$115,000 a mile, through tunnels and through big cuts, is a pretty large sum of money, apparently, for a logging road, no matter who sat on this board of conferees, is it not?

Mr. EAMAN. I am not an engineer, sir; and whether—

Mr. FREAR (interrupting). You are presuming to pass upon this question, as I understand it, which had not been carried in here at all, under your examination.

Mr. EAMAN (continuing). I do not pretend to be an engineer and be able to say which is the most practicable route, but I know that in this operation or anything else—you talk, for instance, about men drawing \$3,000 a year and suddenly getting \$30,000 a year. I put Jim Mulford at running the Reliance engineering plant at \$300 a month. I then paid him \$7,500 a year, and in less than two years' time the General Motors Co. took him away and put him in their plant at \$2,000 a month. Now, if he demonstrates his ability in knowing certain things—

Mr. FREAR (interrupting). Surely, if he is worth it.

Mr. EAMAN (continuing). I am not bound to do what Mulford—

Mr. FREAR (interrupting). If he is worth that to his contractor, unquestionably that is proper. The committee had simply stated the fact, and leaves the fact to stand for itself. That is all we have done. You are running from railroads to the salaries paid an individual. What we want to know is if you have had any railroad experience.

Mr. EAMAN. Two years' railroad experience in Arizona.

Mr. FREAR. What was your position there, and did you build any logging railroads?

Mr. EAMAN. I have not built any logging railroads.

Mr. FREAR. But this is a logging railroad.

Mr. EAMAN. I helped to build a series of five switchbacks into the Crown King mine.

Mr. FREAR. Those are expensive and are in rock.

Mr. EAMAN. They were in rock, and they had a little of it up there. I know this—

Mr. FREAR (interrupting). Have you ever been over the road there?

Mr. EAMAN. Yes, sir; I have.

Mr. FREAR. How many times?

Mr. EAMAN. I do not expect to qualify as an engineer and pass upon the wisdom of that road being built, but I do know, and that I know from the testimony that came up before the board in the matter of allowing some of those contractors, that haste and speed were demanded of them; that they had to shove those camps by pack trains in any way they could to get them in there when there was not a

wagon road. That is something that does not come in commercial operations.

Mr. FREAR. Oh, no, of course not.

Mr. EAMAN. The thing Disque was up against was to get the stuff and get it quick, and it always seemed to me——

Mr. MAGEE (interrupting). What did he get?

Mr. EAMAN. What is that?

Mr. MAGEE. What did he get?

Mr. EAMAN. The record shows that—143,000,000 feet, sir.

Mr. MAGEE. How much spruce?

Mr. EAMAN. About half of it.

Mr. FREAR. Did he get 143,000,000 feet?

Mr. EAMAN. The justification for most of those large expenditures, to my mind—I will state that one of the first things that interested me was why all these railroads, and why this mill and that mill. Why, at the very last month, with all of the shipments that were made, half of it was fir. Only 12,000,000 feet of spruce was actually produced in October, and yet Disque was told to get as high as 50,000,000 feet of spruce.

Mr. FREAR. Do you mean to say——

Mr. EAMAN (interrupting). And with all his railroads and all his mills, if he had been held to that 50,000,000 feet of spruce it would have taken all of them and more to get it.

Mr. FREAR. Just a minute; do you mean to say——

Mr. EAMAN (interrupting). Yes, sir.

Mr. FREAR. Just a minute, please. Do you mean to say that Disque produced 143,000,000 feet of spruce?

Mr. EAMAN. I do not mean to say that Disque produced it. I say——

Mr. FREAR (interrupting). I understood you to say that in the record.

Mr. EAMAN. No; half of it was fir.

Mr. MAGEE. Do you mean to say he produced it?

Mr. EAMAN. I do not mean to say he produced it.

Mr. FREAR. The mills produced it, as I understand it. The amount that was produced by the Government was about 7 per cent.

Mr. EAMAN. About how much?

Mr. FREAR. Seven per cent.

Mr. EAMAN. I think the figures went in here yesterday. I have forgotten them, but the figures were put in what the cut-up plant——

Mr. FREAR (interrupting). Oh, the cut-up plant was bringing it from private sources all around and cutting it up. They had the finished produce up here. The forms and cants came from all over, and they simply ran that through the mill.

Mr. EAMAN. Was that before Col. Breece came out here and before Disque's organization that they were doing otherwise than try to produce this stock. Do you know that the only mill in the Northwest, down here at Coos Bay, that was doing anything——

Mr. FREAR (interrupting). That is a different question, regarding the methods that were advocated later. The fact is, and if not I want you to correct me, because you have been here, the fact is that the cants were shipped in from the various mills that had taken the logs, where the logs had been cut by private parties, where the

mills cut these logs, and private individuals provided capital, and all that, and they shipped part of it into the cut-up plant and there it was finished, and you take the credit for all this work by the cut-up plant. The testimony, as I understand it, of Col. Disque, is that only about 7 per cent of the product was produced by the Government, and I think that is accurate and shown by the testimony.

Mr. MAGEE. 7.4 per cent.

Mr. FREAR. 7.4 per cent was produced by the Government, isn't that true?

Mr. EAMAN. 7.4 per cent of what?

Mr. FREAR. Of the product as it was gotten out by the mills.

Mr. LEA. That was only the rived stock.

Mr. FREAR. Oh, no.

Mr. EAMAN. These cost-plus contractors were not engaged to get out lumber. I know the figures show. This department certainly has those figures, and with all the impulse and all the drive and everything that was being done to urge the private loggers to extend their organizations, they did not get out any more in 1918 than they did in 1914 and 1915. If that be the fact, and the figures show it is, is that justification of these large operations on the part of the Government or not?

Mr. FREAR. Well, the situation is just this that confronts the committee, frankly—

Mr. EAMAN (interrupting). Yes, sir.

Mr. FREAR. That the complaint comes continually that men tried to get to Disque, and were always held off by Hitchcock, in their efforts to cut airplane material in the various mills, and there were many of them that were offering to do so, endeavoring to do so, and when their testimony is brought in here they are called sore-heads or profiteers by men who can not afford, it seems to me, to criticize others that way who were willing to do their best in a patriotic way.

Mr. EAMAN. I am willing to have any man disagree with my judgment, but I do not want him to question my honesty.

Mr. FREAR. That was the case here this morning with a very prominent witness on the stand.

Mr. EAMAN. Take, for instance, a sawmill man. If there is any sawmill man that is conceded to be a sawmill man—Howard Jayne, of the Willapa Lumber Co.—would Jayne say that Breece's method was wrong? You speak of testimony; of course, that means Col. Breece, and Griggs, head of the St. Paul & Tacoma Lumber Co., and all those other men. Maybe it was their suggestion and maybe it was suggested by somebody else.

Mr. FREAR. Breece did not suggest the building of the mill. He was opposed to it. Breece did not suggest the building of the railroad.

Mr. EAMAN. I don't know.

Mr. MAGEE. Take the evidence here this afternoon. There was a witness here who appeared to be a very substantial man, and he said he offered his road down there for \$100 a month, \$1,200 a year, which was half the taxes on the road, and it was turned down.

Mr. EAMAN. I guess the contract was finally entered into for \$250, which was much more than anything that he was getting.

Mr. FREAR. You shut him out.

Mr. LEA. I do not see that any good is coming from arguing these things.

Mr. FREAR. We are trying to find out from the officers who managed the company.

Mr. EAMAN. A lot of this talk we have been having is largely argument, I know that, but I am interested in some of these propositions out here as to whether they were properly done or not.

Mr. MAGEE. That is what we are interested in. We are interested only in the facts, and will be controlled only by evidence submitted at these hearings. We will go over the evidence and be controlled not by arguments or by opinions, but by evidence, and that is all.

Mr. EAMAN. Argument when it is made on the basis of known facts is not always impossible and becomes of some assistance. If it was not for my interest I would not enter into it at all.

Mr. FREAR. We haven't brought out these different questions, you have volunteered them, the running of railroads, and so forth.

Mr. EAMAN. The one proposition of the stabilization of the labor situation here—

Mr. FREAR (interrupting). We have not suggested that, either.

Mr. EAMAN. If you have not suggested it, yet it is part of the whole thing.

Mr. FREAR. That has been discussed by witness after witness here.

Mr. EAMAN. You say the spruce was not produced, and the Government—

Mr. FREAR (interrupting). You were not here, you did not come until August, way after the end of that time, and why should you argue that question here, when you had nothing more to do with it than you had to do with the building of the railroad?

Mr. MAGEE. Is there any further evidence; if there is, let us take it?

Mr. FREAR. I want to ask one question. I do not know whether you know in regard to this, but did you know Crisp, Capt. Crisp who was here?

Mr. EAMAN. No; I did not.

Mr. FREAR. He signed the contracts. He is from Detroit, I understood.

Mr. EAMAN. Is he?

Mr. FREAR. I have understood so. I wanted to enquire, because you said you were from Detroit.

Mr. EAMAN. He left a little early. He was the first contracting officer out here. I did not know him.

Mr. FREAR. Well, that is not important. All right.

(Witness excused.)

(Whereupon, at 5.55 p. m. the committee adjourned until tomorrow, Tuesday, September 9, 1919, at the hour of 10 o'clock a. m.)

SUBCOMMITTEE NO. 1 (AVIATION) OF THE
SELECT COMMITTEE ON EXPENDITURES IN THE
WAR DEPARTMENT, HOUSE OF REPRESENTATIVES,
Tuesday, September 9, 1919.

The subcommittee met at 10 o'clock a. m., pursuant to adjournment, at the courthouse, Portland, Oreg., Hon. James A. Frear (chairman) presiding. Also present Hon. Walter W. Magee and Hon. Clarence F. Lea.

TESTIMONY OF A. WELCH.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Where do you live, Mr. Welch?

Mr. WELCH. In Portland.

Mr. FREAR. You have lived here for how many years?

Mr. WELCH. About 12 years.

Mr. FREAR. What is your business?

Mr. WELCH. I am in the light and power business, operating electric light and power properties.

Mr. FREAR. Are you acquainted with Mr. Story?

Mr. WELCH. Yes, sir; I was associated with him in a mill at Toledo last year.

Mr. FREAR. You have been associated how long?

Mr. WELCH. About a year and a half, I guess; 18 months.

Mr. FREAR. Do you know where his mill was located before it was burned?

Mr. WELCH. Yes.

Mr. FREAR. And a new mill is being built?

Mr. WELCH. Yes, sir.

Mr. FREAR. Are you connected with that?

Mr. WELCH. No, sir; not directly.

Mr. FREAR. Are you interested in any of the timber in that section?

Mr. WELCH. No; not now. I was at the time of the spruce production.

Mr. FREAR. So you have no interest in the matter now?

Mr. WELCH. No.

Mr. FREAR. Do you know where the Miller Road, so called, is located?

Mr. WELCH. Yes, sir.

Mr. FREAR. That was the road you owned in part with Mr. Story?

Mr. WELCH. Yes, sir.

Mr. FREAR. You know in a general way about the conditions down there as to the timber, the amount of timber that was there?

Mr. WELCH. Yes, sir; I know approximately.

Mr. FREAR. Will you please tell the committee briefly as to your own knowledge of conditions down there, your meeting with any of the officers of this spruce corporation, or of the division before that, and anything that will serve to enlighten us about the conditions?

Mr. WELCH. When the war started I took options on that road and the sawmill and the logging equipment, and took a ten million contract with the Government for cutting spruce, and was getting started on it when they put in Disque and Hitchcock and that Spruce Board, and they came to see us and wanted to cut the spruce. We had a branch line running to the spruce belt, and the other line straight ahead part spruce and part fir—the biggest part fir. They took over the operation of the railroad and put a camp in there to rive spruce, which did not prove to be a success. We had about 60,000,000 of spruce in there ourselves.

Mr. FREAR. That is, of timber?

Mr. WELCH. Yes. A 20-mile road there will get fir and spruce, about 20,000,000,000 feet; that is, it will tap that. You would have to have branch lines.

Mr. FREAR. Did you have cruises?

Mr. WELCH. I have cruises on all the timber down there.

Mr. FREAR. Whom did you meet down there, any one of the officers of this spruce corporation?

Mr. WELCH. I was here in Portland; I did not have charge of the mill. Mr. Story had charge of the mill.

Mr. FREAR. Whom did you meet here?

Mr. WELCH. I had my business usually with Mr. Hitchcock.

Mr. FREAR. What was your experience with Mr. Hitchcock in regard to getting out spruce?

Mr. WELCH. He stopped us from sawing spruce to saw fir for the railroads.

Mr. FREAR. That is at the time you were sawing spruce?

Mr. WELCH. Yes, sir.

Mr. FREAR. And what railroad was that?

Mr. WELCH. That was one that was built south of Toledo and also north up the beach from Newport.

Mr. FREAR. What did you do with your mill?

Mr. WELCH. We cut fir.

Mr. FREAR. Fir for ties?

Mr. WELCH. Ties and stringers, and the like of that.

Mr. FREAR. How long did you engage in that?

Mr. WELCH. We were still engaged at it when the war ended.

Mr. FREAR. And had been for how long a period?

Mr. WELCH. We started in, as I remember, about November and were still cutting in August.

Mr. FREAR. The war closed in November.

Mr. WELCH. We cut up to that time, because the railroad was not finished.

Mr. FREAR. Do I understand that from April to November you were still cutting for the supplies for the railroads there?

Mr. WELCH. Yes, sir.

Mr. FREAR. And were taken off of the spruce at that time?

Mr. WELCH. Yes, sir.

Mr. FREAR. By whom?

Mr. WELCH. Hitchcock.

Mr. FREAR. He was in charge?

Mr. WELCH. Yes, sir. He was charged with milling and logging.

Mr. FREAR. What talks did you have with Hitchcock about things in general there, if anything; just briefly?

Mr. WELCH. Well, of course, we first had talks about leasing of the railroad; he wanted to lease the railroad and wanted to buy it at one time. I think we made him a price of a hundred thousand.

Mr. FREAR. That was to sell it?

Mr. WELCH. Yes. Afterwards he wanted to lease it and we asked him \$500 a month, and he said that was entirely too much; so we told him to take it for a dollar, and he did not want to do that, and I think we finally agreed on \$100 a month.

Mr. FREAR. What was the railroad worth?

Mr. WELCH. About a hundred thousand dollars.

Mr. FREAR. And you sent him a contract to that effect, did you not?

Mr. WELCH. Yes; we had two or three contracts. We finally had one signed after I got out of the company.

Mr. FREAR. Did you ever talk to him about the way the spruce business was being handled down there?

Mr. WELCH. Oh, yes; I had a great many talks with him about the spruce business. We tried to let him have that mill. We bought another mill, at a cost of \$40,000, and moved it down there, and did not have the money to set it up, and tried to get him to take the two mills, including a new band saw we had, and cut the spruce with that; but I think that at that time they leased the Monarch mill, in Portland, and shipped some logs down here and tried that.

Mr. FREAR. How many logs did they ship?

Mr. WELCH. I do not know, but about three carloads. He may have shipped more.

Mr. FREAR. Three carloads of logs were shipped from Toledo up here?

Mr. WELCH. Yes, sir; to the Monarch mill, and we offered at that time to give him the two mills, including the force we had there, for \$9,000 a month, running 24 hours a day, including the lighting plant for power.

Mr. FREAR. You furnished the power and the mill force for \$9,000 a month?

Mr. WELCH. The two mills.

Mr. FREAR. What would have been the ordinary cut of those two mills on an eight-hour shift?

Mr. WELCH. The one we had there was about 50,000, and the one we were building with the band saw would have been 125,000 for eight hours.

Mr. FREAR. That would be 175,000 feet for eight hours, and could have been tripled, of course, with three shifts?

Mr. WELCH. Yes, sir.

Mr. FREAR. What was done by him with reference to that, if anything.

Mr. WELCH. He finally built a mill there.

Mr. FREAR. What did he say about your proposition?

Mr. WELCH. He wanted it for about \$9 a thousand; I think it was \$9.

Mr. FREAR. He did not accept the proposition of the two mills?

Mr. WELCH. Oh, no.

Mr. FREAR. They started their own mill?

Mr. WELCH. Yes.

Mr. FREAR. Did you ever talk with him about building the mill?

Mr. WELCH. Yes, sir.

Mr. FREAR. What was the general character of the conversation?

Mr. WELCH. I thought he could have gotten the spruce a good deal faster with the two mills than he could by building the big mill, and they had lots of logs in that pond; they did get in finally about eight million.

Mr. FREAR. What kind of logs were those?

Mr. WELCH. Spruce; part of them first class and part of them box lumber.

Mr. FREAR. What proportion of each?

Mr. WELCH. Probably 40 per cent of airplane and 60 per cent box lumber.

Mr. FREAR. Do you know whether those were selected logs or not?

Mr. WELCH. No; they started in to cut the Wessel tract that we had bought on a selective scale, but I think afterwards they took everything clean.

Mr. FREAR. So that included all kinds of logs and they were taking them generally?

Mr. WELCH. Yes, sir.

Mr. FREAR. What about their logging operations down there, if you know, as to the comparative results that were produced on the Wessel tract and your own?

Mr. WELCH. I do not know anything except what the Warren Spruce Co. man told me what it was costing them to log, and he told me they were logging cheaper than anybody else that had a cost-plus contract. He said it cost about \$89 a thousand.

Mr. FREAR. Was that cheap?

Mr. WELCH. Well, I don't know; it would not have been considered so for a milling concern.

Mr. FREAR. What would have been a reasonable price?

Mr. WELCH. Well, I imagine we were logging at that time for about \$6. Of course that would not include the stumpage. Including the stumpage we would be about \$8.

Mr. FREAR. Who was it that told you that?

Mr. WELCH. A man by the name of Kumpies, a logging engineer.

Mr. FREAR. I have a memorandum in reference to something said about the Kaiser could not do more. What was that, in your talk with Mr. Hitchcock?

Mr. WELCH. He finally wanted to force us to saw for \$9 a thousand, and I told him we could not do that, that he should commandeer the mill, and that I thought the Kaiser could not do any better job than he was doing by not getting out spruce.

Mr. FREAR. That is, they were not proceeding in a way to get results from your mill?

Mr. WELCH. No, sir. When we bought the mill down there we had two carloads of airplane lumber on the yard. That was in December, and we never got an inspector and shipped out until sometime in April.

Mr. FREAR. What was the reason for that; do you know?

Mr. WELCH. They did not have an inspector; they did not get it inspected.

Mr. FREAR. Did anyone ask for an option on your railway?

Mr. WELCH. Well, of course, not the Government direct.

Mr. FREAR. What was the conversation, or what was done in regard to that question of an option; what was the proposal?

Mr. WELCH. I think we did give an option one time to a man by the name of McColloch, on the railroad.

Mr. FREAR. When was that?

Mr. WELCH. Sometime in June; maybe May.

Mr. FREAR. How did that come about?

Mr. WELCH. He came to me and asked me for an option on the railroad.

Mr. FREAR. Did that include the mill?

Mr. WELCH. No; just the railroad.

Mr. FREAR. What was the reason for giving the option at that time?

Mr. WELCH. He said they might want to make extensions there and wanted to get an option on it.

Mr. FREAR. Who did he represent, if you know?

Mr. WELCH. I do not know who he represented. He told me he represented Mr. Olmstead.

Mr. FREAR. Of where?

Mr. WELCH. Of Portland.

Mr. FREAR. What was the reason for his coming to you? What interest did Olmstead have?

Mr. WELCH. I do not know.

Mr. FREAR. How did you happen to give the option there?

Mr. WELCH. They were threatening to take the railroad anyway, Hitchcock was, and we thought that if there was any way to keep peace and keep the sawmill we would like to do it.

Mr. FREAR. They had closed your sawmill for commercial sawing?

Mr. WELCH. That is for spruce.

Mr. FREAR. Were you doing commercial sawing outside of that?

Mr. WELCH. No; nothing except what they could not use.

Mr. FREAR. What was the spruce bought for here, do you know; what was the price of the spruce, the lumber?

Mr. WELCH. Our contract, I think, averaged about \$105 for the three grades.

Mr. FREAR. That was the general price that was made?

Mr. WELCH. Yes.

Mr. FREAR. Do you know anything about what was billed out to factories?

Mr. WELCH. Nothing excepting what I heard. I heard it was billed out at \$625.

Mr. FREAR. That is what you heard from whom?

Mr. WELCH. I heard that from some of the people around the building connected with the spruce department. I do not remember the men, but some of the officers there.

Mr. FREAR. What would be the reason for buying it at \$105 from your people and billing it out for \$625, if you know, if that was the fact?

Mr. WELCH. I do not know.

Mr. FREAR. If that was true that would leave a profit of over \$500 per thousand to the Spruce Corporation?

Mr. WELCH. Yes, sir.

Mr. FREAR. Did you ever have a talk with Disque about what they could get it for?

Mr. WELCH. No; never with Disque; my business was always with Hitchcock.

Mr. FREAR. Did you have a talk with Hitchcock about what he could get this spruce for?

Mr. WELCH. Of course, when they first came out his idea was that they were going to rive spruce for about half what they would be able to saw it for; but then, of course, that failed; in fact, they made a great deal of expense down in that country to rive spruce. They broke a plank road for eight or nine miles.

Mr. FREAR. Do you know what it did cost the Government for the spruce down there?

Mr. WELCH. You mean, for what lumber they got?

Mr. FREAR. Yes.

Mr. WELCH. I would imagine all told, logs and lumber, they got about 11,000,000 feet.

Mr. FREAR. And about what did it cost, do you know? I have a memorandum here of \$267. I do not know what that refers to.

Mr. WELCH. I think the Warren Spruce Co. must have spent \$5,000,000.

Mr. FREAR. Do you know anything about the amount per thousand?

Mr. LEA. Does the witness know that? There is no use getting a lot of stuff in the record.

Mr. FREAR. I am trying to call his attention to something else. I have a memorandum of \$267 a thousand. Do you know what that refers to?

Mr. WELCH. I think that was what Mr. Disque claimed he was getting the spruce out for.

Mr. FREAR. That is the point. To whom did he claim that, or do you know?

Mr. WELCH. I have seen it in the newspapers, and I also heard Mr. Hitchcock say so.

Mr. FREAR. And what did it cost, as near as you could ascertain?

Mr. WELCH. I would say \$1,000 a thousand.

Mr. FREAR. Taking what matters into consideration?

Mr. WELCH. Taking into consideration the amount of money they got and the amount of lumber they produced.

Mr. FREAR. Money spent for mills and railways?

Mr. WELCH. I would not take that in; it would cost \$5,000 if you took that into consideration.

Mr. FREAR. For the actual amount they produced down there?

Mr. WELCH. Yes, sir; there was at least \$5,000,000 spent in that district, and they got 11,000,000 feet of spruce; 8,000,000 of the logs are in the pond right now; the rest was in lumber.

Mr. FREAR. A question that I have not touched and I think it may be of some importance is regarding that road that runs from Corvallis or Albany down to Toledo. Do you know the amount of grade there is on that; is it 3 per cent, or do you know as to that?

Mr. WELCH. Yes; there is some 3 per cent on that.

Mr. FREAR. Near the summit?

Mr. WELCH. Yes, sir.

Mr. FREAR. What about curvature?

Mr. WELCH. Well, I have had all of that information——

Mr. FREAR. I mean, does it have curves?

Mr. WELCH. Oh, yes; it has some very abrupt curves.

Mr. FREAR. Do you know anything about the railroad that was proposed above the Miller road, north of the Miller road?

Mr. WELCH. Well, we had preliminary surveys there for an extension of our road.

Mr. FREAR. Did you have surveys that would take over 2 per cent?

Mr. WELCH. No, sir.

Mr. FREAR. And here was 3 per cent upon what was called the main line that ran from Toledo over to Albany?

Mr. WELCH. Yes, sir.

Mr. FREAR. On a road that had been in existence for how many years?

Mr. WELCH. About 17 or 18.

Mr. FREAR. So that the road as you had it surveyed, this proposed logging road, if logs were to be brought down that to be sawed at Toledo, it would have been a much less task so far as grade and curvature were concerned than was on the main line?

Mr. WELCH. Yes, sir.

Mr. FREAR. That is something that was not brought out before. You know of the road that is built over on the coast line, that coast road?

Mr. WELCH. Yes, sir.

Mr. FREAR. It is in the testimony here that that road up to Otter Rock cost \$1,440,000, and I saw the figures, that it cost over a million and a half, this morning. I do not know what was considered there.

Mr. WELCH. I judge it did. It has got some very deep canyons and lots of grading.

Mr. FREAR. What would you say as to that being a proper road for getting out the timber in the Siletz?

Mr. WELCH. It is not a proper road at all. It only taps a little bit of wind-shaken spruce along the coast; I would say at the outside 300,000,000 feet.

Mr. FREAR. When you spoke about the amount of timber out in the Siletz you referred to all kinds of timber?

Mr. WELCH. Yes, sir; principally fir and spruce.

Mr. FREAR. Fir is being used; it is discovered that practically one-half of the airplane stuff that went out from this cut-up plant here was fir?

Mr. WELCH. Yes, sir.

Mr. FREAR. But down there the proposition to your people was entirely for spruce, was it?

Mr. WELCH. Yes, sir.

Mr. FREAR. You were not asked to figure on fir, or to cut fir?

Mr. WELCH. No; our contract was entirely for spruce.

Mr. FREAR. On the building of the road and things like that?

Mr. WELCH. We were not cutting fir on that, at their request.

Mr. FREAR. What about a big mill down there, as a practical proposition?

Mr. WELCH. I do not know as I want to pass upon the mill. I would say it was pretty large for that district. I do not believe it could be used commercially.

Mr. FREAR. And all you have to say about that is as to your conversation with Hitchcock about the two mills which would cut as much as the one mill, at what cost?

Mr. WELCH. We offered to furnish everything for \$9,000 a month.

Mr. FREAR. What would have been the expense of building those two mills?

Mr. WELCH. To set up that mill would have cost about \$70,000 or \$75,000.

Mr. FREAR. And what was the investment in the mill you had there?

Mr. WELCH. About \$50,000 or \$60,000.

Mr. FREAR. So it would have been less than \$150,000?

Mr. WELCH. Yes, sir.

Mr. FREAR. Whereas this large mill is reputed to have cost in the neighborhood of a million dollars?

Mr. WELCH. I judge it would cost all of that.

Mr. FREAR. You know where it is located and have seen it?

Mr. WELCH. Yes, sir.

Mr. FREAR. Is there anything else you think of that would be of help to the committee in giving them an understanding of the situation?

Mr. WELCH. I do not know.

Mr. FREAR. I think that is all.

Mr. LEA. What was your interest down there at the time you bought the options?

Mr. WELCH. I was interested in that mill and the logging road and some of the timber.

Mr. LEA. Did you own some timber?

Mr. WELCH. Yes; about 60,000,000.

Mr. LEA. Did you have options on more timber?

Mr. WELCH. Well, at one time we had a few other options, but I do not think after the Government came in with their outfit.

Mr. LEA. Where was your timber located?

Mr. WELCH. It was located right at the end of the line.

Mr. LEA. Of the Miller line?

Mr. WELCH. Yes, sir; well, we had two branches on that.

Mr. LEA. How far would that line have had to be extended to reach into your timber.

Mr. WELCH. We were in the timber at both ends then.

Mr. LEA. You had reached the edge of it?

Mr. WELCH. Yes, sir.

Mr. LEA. You were a stockholder in the mill, were you?

Mr. WELCH. Yes, sir.

Mr. LEA. That was the same mill Mr. Miller was interested in?

Mr. WELCH. Yes; Mr. Miller was interested in the railroad.

Mr. LEA. That is a mill which you say would cost about \$75,000, or your investment there was about \$75,000?

Mr. WELCH. No; about fifty or sixty thousand dollars in the present mill, but it would take about \$75,000 to set up the other mill.

Mr. LEA. You had been engaged in the milling business for some-time, had you?

Mr. WELCH. No; only a short time, a few months.

Mr. LEA. When did you first go into the lumber business as a miller or logger?

Mr. WELCH. I have been interested in a mill as a stockholder, but not as an operator.

Mr. LEA. What was your knowledge of the Siletz timber; has it been from personal observation, or based on reports?

Mr. WELCH. On personal investigation.

Mr. LEA. What part of the Siletz Valley have you personally investigated?

Mr. WELCH. I have investigated the entire Siletz country. At an earlier date than this I had options on nearly all the timber in there.

Mr. LEA. How big a country is that, the Siletz area?

Mr. WELCH. A railroad north about 14 or 15 miles would practically get into the timber in the Siletz Basin.

Mr. LEA. By reaching the river?

Mr. WELCH. Yes; by going north.

Mr. LEA. How big is that watershed?

Mr. WELCH. You mean square miles?

Mr. LEA. Yes; or, for instance, how many miles long, just to get a general idea?

Mr. WELCH. Eight miles wide and 14 miles long.

Mr. LEA. How long is the Siletz River?

Mr. WELCH. I don't know. That is so crooked I could not tell you. It is probably twice as long as that; more, too. Of course it runs back where there is very little timber on the far end of some of the streams.

Mr. LEA. Did you have anything to do with the Portland & West Railroad Co.?

Mr. WELCH. No, sir.

Mr. LEA. Now, that company in planning to drain this country of timber ran its line down the coast, as I understand it. Do you know who were the engineers of that company?

Mr. WELCH. Well, there was a man by the name of—there was a man named Haak interested in it, but he was not the engineer. I could not call the engineer's name now. I know him.

Mr. LEA. Did you have any personal knowledge of that enterprise?

Mr. WELCH. Yes. I had another survey to make in there, another road. Mine was on a different line, in a different place. Mine went down through the Siletz Basin, and his went over on the coast.

Mr. LEA. Was your road to run from Portland or up the other way?

Mr. WELCH. No; from Willamina to Toledo. His was from Newport to Willamina.

Mr. LEA. Yours was to terminate at the Siletz Basin?

Mr. WELCH. At Toledo.

Mr. LEA. And run into the Siletz from the north?

Mr. WELCH. Yes, sir.

Mr. LEA. To what stage of promotion did you get with that plan?

Mr. WELCH. Well, I raised \$400,000 for it. I tried to get the Government to let me build it to get out spruce and fir, but failed.

Mr. LEA. What length of road did you propose?

Mr. WELCH. The mileage?

Mr. LEA. Yes.

Mr. WELCH. Well, with the 10 miles that we had there, it would have been about 48 miles or more.

Mr. LEA. On what plan did you propose to build the road into the Siletz—by the Government financing the road or on the basis of so much timber at so much?

Mr. WELCH. We did not have any proposition with the Government at all. We just asked the Government to allow us to build it. We asked both the spruce and the fir board.

Mr. LEA. Did you ask any contract with the Government?

Mr. WELCH. I did not. I don't know what other people might have done.

Mr. LEA. You mean your company. I just wanted to get at it.

Mr. WELCH. I did not have any company.

Mr. LEA. You did not organize?

Mr. WELCH. No.

Mr. LEA. How much ties and timber did you saw for the Government in 1918 down there?

Mr. WELCH. I could not give you the exact amount. We sawed principally all the time on ties and timber, and stuff like that.

Mr. LEA. For what length of time?

Mr. WELCH. Well, as I say, I think we started sometime in March or April, and we were still sawing when the war was over, for some little time after the war was over, finishing up.

Mr. LEA. You sawed spruce cants, did you?

Mr. WELCH. I think we sawed for a while on a contract. I was East at that time. Mr. Storey, I think, sawed for the Government at so much a thousand for a while. It was a very short time.

Mr. LEA. Do you know about how much spruce lumber you sawed for the Government?

Mr. WELCH. Well, I would judge not to exceed 2,000,000, maybe less than that. I did not pay any attention to that part of it.

Mr. LEA. How much ties and other timber?

Mr. WELCH. Ties and other timber?

Mr. LEA. Yes.

Mr. WELCH. Oh, we sawed several million feet of ties and other timber.

Mr. LEA. That was used in the construction of these railroads and the mill?

Mr. WELCH. Yes, sir.

Mr. LEA. Are the logs on hand down there near Toledo better or poorer than the average spruce logs in this area?

Mr. WELCH. Well, I do not believe they are as good as the average. It was a good piece of timber, very large trees, and where you get overly large spruce you do not get as good spruce as you do in the others.

Mr. LEA. Is there any difference in the quality of those you did get and those north of there in the Siletz Basin?

Mr. WELCH. Yes; the timber north of there is better than it is right there. This is just the edge of the spruce timber.

Mr. LEA. Now, information about costs is largely guesswork on your part, isn't it?

Mr. WELCH. About what costs?

Mr. LEA. The cost of operating down there by the Spruce Co. and the Spruce Production Corporation?

Mr. WELCH. Well, one of the Warren Spruce Co. engineers told me what it was costing and said that that was less than any other camp that was producing that was working on a cost-plus contract.

Mr. LEA. What I mean is, you have not had access to the books?

Mr. WELCH. No.

Mr. LEA. And you haven't any information upon which a business man could rely about these matters?

Mr. WELCH. I have just as much information as you would have if you came in here and saw a man build a desk, you could guess what it was costing him if he had 40 men or 1 man working.

Mr. LEA. You would get an idea; but I mean, you haven't any information on which a business man would rely as to that actual cost?

Mr. WELCH. You could not get down to cents.

Mr. LEA. You might determine that there was a wasteful proceeding—

Mr. WELCH. Yes.

Mr. LEA. But as to the exact extent of it, you are not able to tell us of your own knowledge?

Mr. WELCH. Yes; I am able to tell you that it was a very wasteful operation.

Mr. LEA. Yes; but as to dollars and cents, you do not know, do you?

Mr. WELCH. Well, I know approximately; yes.

Mr. LEA. But it is your judgment from what you have seen, and not the actual figures, on which you give your information?

Mr. WELCH. I have not seen any figures at all. I am simply making my statement from what I know of costs.

Mr. LEA. Those figures are available, and there is no doubt about what it cost; but you are not able to give us those figures?

Mr. WELCH. Well, it is more than \$267 a thousand.

Mr. LEA. I do not dispute that; but I simply want you to admit what is manifestly true here, that so far as actual figures are concerned—

Mr. WELCH. I can't give you the exact figures; but if they spent \$5,000,000 down there, and they got about 11,000,000 feet of spruce, you can figure it out for yourself.

Mr. LEA. What is the source of your information as to the \$5,000,000?

Mr. WELCH. The Warren Spruce Co. have made statements that that was about the expenditure on what they done down in that district, and I can tell within \$100,000 of it, anyway, on the cost of building that much railroad and the amount of men they had in the district.

Mr. LEA. I think that is all.

Mr. FREAR. The facts show that the Warren Spruce Co. did receive over \$5,000,000, according to the reports that have been published or furnished the committee.

Mr. WELCH. Yes, sir.

Mr. FREAR. That is for all purposes, which includes railroads, and spruce, and everything?

Mr. WELCH. Yes.

Mr. FREAR. But I understand you took all that into consideration when you made this statement as to the costs, so far as the real production went?

Mr. WELCH. Well, I did not take into consideration the cost of the railroad and everything. If you did that it will run into more money than what I figured. I took the cost of the labor. You take \$5,000,000 for 11,000,000 feet of spruce, and you can figure out what it would be.

Mr. LEA. That \$5,000,000 covered operations in other locations besides, and besides these railroads. There is no use to argue about it, but I want to get the facts.

Mr. FREAR. I was going to ask this question: Is there any method known by which you can ascertain the exact cost of getting out timber under those circumstances? I call your attention to this because the question was asked here; here were railroads being built, here were spruce contracts being let, here were overhead charges up at Portland, so many different propositions, and cost-plus contracts, with various subcontractors; would it be possible, under the circumstances, to tell exactly what the cost of that timber was?

Mr. WELCH. No; it would not be possible, and I do not imagine they can tell themselves.

Mr. FREAR. It is doubtful if anyone could, under any circumstances, because it would be an arbitrary method of determining it, basing it upon what they chose to take for the overhead charges.

Mr. WELCH. Yes. They had enough men in their office here in Portland to get out all the spruce, if they had been loggers, that was gotten out.

Mr. FREAR. This Portland road that has been spoken about, that has been a project that has been up for a number of years, hasn't it; that was a line that was projected from Willamina?

Mr. WELCH. You mean the Haak road?

Mr. FREAR. Yes; the Haak proposition.

Mr. WELCH. Yes; they have been working on that for six or seven years.

Mr. FREAR. That was long before the war?

Mr. WELCH. Yes.

Mr. FREAR. That was a road to go down——

Mr. WELCH. It was a commercial road.

Mr. FREAR. A commercial road?

Mr. WELCH. What they wanted was a road from Newport to Portland.

Mr. FREAR. I do not know whether you know about it or not, but was that understood to be part of the road that was to be carried on down the coast?

Mr. WELCH. They claimed it. I do not know anything about what it was, but they claimed that was what it was.

Mr. FREAR. I think that is all.

Mr. MAGEE. What do you mean by more help here in Portland than was necessary to get out all the spruce produced there?

Mr. WELCH. I said if they had been loggers out in the woods they could have got all the spruce produced.

Mr. MAGEE. Describe what you saw to make the basis of that statement.

Mr. WELCH. Well; I don't know as I know the exact amount of men, but I would say—the amount of men connected with this office and going back and forth between here and Vancouver—but there was in the neighborhood of between 600 and 700 men. There might have been more. There was that many, anyway.

Mr. MAGEE. In the Portland office of the Warren Spruce Co.

Mr. WELCH. No; I mean of the Government—the Government's force.

Mr. MAGEE. The whole force?

Mr. WELCH. Yes. I don't know how many the Warren Spruce Co. had.

Mr. MAGEE. What do you mean when you say that you asked the Government to allow you permission to build the road up through the Siletz country?

Mr. WELCH. Well, you could not build any—you could not do any improvements without getting the consent of the Government.

Mr. MAGEE. Yes; but I mean were you going to build it yourself?

Mr. WELCH. Yes—well, I and my associates.

Mr. MAGEE. With capital raised by you?

Mr. WELCH. Yes, sir.

Mr. MAGEE. And without any expense to the Government?

Mr. WELCH. As far as I was concerned I never put anything up to the Government that way. When the option was out to the other people I don't know what they might have done.

Mr. MAGEE. I am getting at the proposition that you spoke of; you spoke of some proposition here in which you asked the Government to be allowed to build a road?

Mr. WELCH. Yes.

Mr. MAGEE. I want to know whether you were going to build the road with moneys raised by you and your associates, or whether you were to be financed by the Government?

Mr. WELCH. We had \$400,000 raised to put in the road.

Mr. MAGEE. That is, the road was to be built without any expense to the Government?

Mr. WELCH. Yes; but we could not get permission from the Government to make the expenditure.

Mr. MAGEE. That is the point I am getting at. Now, when did you make this proposition to the Government?

Mr. WELCH. I think that we took those committees out there some time in June or July—June, I guess it was.

Mr. MAGEE. What year?

Mr. WELCH. Last year.

Mr. MAGEE. Was that prior to the beginning of the construction of the coast road?

Mr. WELCH. You mean the one that they built up the coast?

Mr. MAGEE. Yes.

Mr. WELCH. No; it was after they had that started.

Mr. MAGEE. How far had they gotten along with that at this time?

Mr. WELCH. Well, they were grading in there; I was not on the ground at that time. I could not tell you exactly how far, but they were grading in that district.

Mr. MAGEE. Had they laid any rails yet?

Mr. WELCH. No.

Mr. MAGEE. Had they begun the construction of the road south into the Blodgett tract at this time?

Mr. WELCH. Oh, yes; that was begun long before that.

Mr. MAGEE. How far along had they got with that?

Mr. WELCH. Well, I could not tell you that. I was not in there to see. I could not tell you, but they had been working on it some little time.

Mr. MAGEE. Do you know whether they had laid any tracks there at that time or not?

Mr. WELCH. I do not think they had laid any real rails, because the rails were later, but I imagined there was some grading or trestle work done.

Mr. MAGEE. Had some committee representing the Spruce Production Division gone down there to look the ground over?

Mr. WELCH. Yes, sir; and also the Fir Division, too.

Mr. MAGEE. Who went down there?

Mr. WELCH. Mr. Van Duzer and a man by the name of Walsh, with the Government—there were three or four, a committee of three or four, with each crowd—the Spruce and the Fir Divisions.

Mr. MAGEE. What did they do?

Mr. WELCH. They looked over the timber and over the route.

Mr. MAGEE. What did they say as to your proposition?

Mr. WELCH. Well, they said that they did not consider it was necessary.

Mr. MAGEE. That is, the extension of what has been designated here as the Miller-Story Railroad?

Mr. WELCH. No; we go from the other end. It would eventually hook up with that road, but it would go from Willamina south.

Mr. MAGEE. You were going from the north toward the south?

Mr. WELCH. Yes, sir.

Mr. MAGEE. To join with that road?

Mr. WELCH. Yes, sir.

Mr. MAGEE. Nothing ever came of your effort?

Mr. WELCH. No, sir.

Mr. MAGEE. That is all.

Mr. FREAR. What is the cost of a logging road, on an average, according to your experience down there, if you know, like what would have been extended on the Miller road?

Mr. WELCH. Our extensions there now must have cost about \$12,000 a mile, I imagine.

Mr. FREAR. What would be the cost of a real commercial road running from Willamina down, would you estimate?

Mr. WELCH. About \$20,000.

Mr. FREAR. About \$20,000 for a commercial road?

Mr. WELCH. Yes, sir.

Mr. FREAR. What would you say of a road that cost from \$100,000 to \$130,000 a mile, as the figures are presented to the committee, depending upon the method of computation, a road that runs from Yaquina Bay up to Otter Rock?

Mr. WELCH. I would say that I would like to have the contract.

Mr. FREAR. Well, what would you say as to its being fair or reasonable cost?

Mr. WELCH. I would say it is out of all reason.

Mr. FREAR. In times of war?

Mr. WELCH. Any time.

Mr. FREAR. Do you know anything about the Blodgett road? That has just been suggested here.

Mr. WELCH. I know it is there, that is all. I have seen some of it.

Mr. FREAR. You have not been over the road?

Mr. WELCH. No, sir.

Mr. FREAR. So you do not know as to that?

Mr. WELCH. No, sir.

Mr. FREAR. That is all.

Mr. LEA. What would have been the increased value per thousand of the timber in the Siletz country if it could be tapped by a railroad, for instance, such as you projected?

Mr. WELCH. Why, I would imagine a dollar a thousand.

Mr. LEA. How many miles of railroad did you say your road would have been?

Mr. WELCH. Well, if you would hook up with the Story road it would have been at that time approximately 48 miles.

Mr. LEA. Now, did you have the capital to supply the additional amount of funds required to build the road?

Mr. WELCH. We were only going to build 20 miles, to start on. That was all we asked the Government for permission to build.

Mr. FREAR. That was from Willamina?

Mr. WELCH. Yes, sir.

Mr. LEA. That was all?

Mr. FREAR. That would not have tapped the timber, would it?

Mr. WELCH. Yes; it would not have tapped the timber that the Government did with the road on the outside there, but it would have tapped the district where there was spruce and fir.

Mr. FREAR. Where there was spruce?

Mr. WELCH. Yes.

Mr. FREAR. Were you actuated by selfish motives, as has been suggested by the question, in building this road, or by the fact that it would connect up—I mean so far as any spruce of your own was concerned, or by the fact that it would connect up and make a good business proposition?

Mr. WELCH. Not with any property of mine, no; that is, not with the timber I owned in there. The road was not built with that in view; no.

Mr. FREAR. That is the suggestion. If you had had a cost-plus contract given to you by the Government where you could build a road at \$100,000 a mile, there might be something in that suggestion.

Mr. WELCH. I think so; yes, sir.

Mr. FREAR. And yet you lived down there where people were designated as "birds" by an ex-governor of this State.

Mr. WELCH. He should not limit it to Toledo.

Mr. FREAR. Now, my point is, was there any profiteering proposition that you ever put up to the Government, in this respect, you offered your railroad down there far \$100 a mile?

Mr. WELCH. Yes, sir.

Mr. FREAR. That was a \$100,000 railroad?

Mr. WELCH. Yes, sir. It ought to have been; it was 10 miles.

Mr. FREAR. You tried to get an extension from Willamina down in a southerly direction for 20 miles?

Mr. WELCH. Yes.

Mr. FREAR. And you did not ask any help from the Government?

Mr. WELCH. I did not ask any help from the Government.

Mr. FREAR. Was there any profiteering suggestion there?

Mr. WELCH. No, sir.

Mr. FREAR. There might have been an incidental benefit, like any other man in a business proposition would assume might extend to this, but there was no ulterior motive, that is what I mean to say?

Mr. WELCH. No.

Mr. FREAR. That is all.

Mr. LEA. Now, your company still owes the Government \$1,600 for a refund on soldier pay that has never been paid to the Government.

Mr. WELCH. I do not know anything about what it was. When I quit there the books showed that the Government owed something like \$30,000, but I do not know how near a settlement they have got. I do not know about that at all.

Mr. LEA. And the Government in taking over that road largely rebuilt the road and put in heavier rails, didn't it?

Mr. WELCH. Mr. Miller and Mr. Story could tell you more about that. They put in some rails, but they built an extension, you know, on the end of it, about 2 or 3 miles. They built an extension at the lower end of, I would say, three-quarters of a mile.

Mr. LEA. Yes; and your company would have got the benefit of the connection at the lower end.

Mr. WELCH. They built the lower end; they built the lower connection.

Mr. LEA. You would have the connection of the lower end.

Mr. WELCH. It was no benefit to us at all.

Mr. LEA. You would have better rails and better ties.

Mr. WELCH. Anything that the Government did there was of absolutely no benefit to this company, because this company was logging and was not hampered before the Government came in there, and would have all the spruce that they have got there in France if they had stayed out of there.

Mr. LEA. Well, you would have got the benefit of any improvement of that road, wouldn't you, that the Government put in?

Mr. WELCH. They have not given us anything yet.

Mr. LEA. You use that road still, do you?

Mr. WELCH. It is not necessary, the logging around there now does not require the use of the Government's end of it; no.

Mr. LEA. Will that mill use that road in the future?

Mr. WELCH. It will if it goes up into that spruce district. That is, it will if it pays for it. The Government has taken up part of it already and piled the rails up there. Them rails that they used on those extensions, half of them belonged to the company and the company never was paid a cent for them, not even paid for the use of them.

Mr. LEA. Your company will use the line that the Government built, will it, if it goes up into the timber?

Mr. WELCH. We might use what they have left there if they leave it there, but they have taken half of what they built up.

Mr. LEA. I mean the grade, would you use the grade?

Mr. WELCH. No, because that grade has been logged off. We want to go some place where there is timber.

Mr. LEA. That is what I meant—that extension.

Mr. WELCH. That is not the main line.

Mr. LEA. That is all.

Mr. FREAR. That refers to the Wessel line.

Mr. WELCH. Yes.

Mr. FREAR. I understood yesterday they had removed some of those rails from the north line and put them over on the Wessel line.

Mr. WELCH. Yes.

Mr. FREAR. The Government did that so they simply replaced the rails—

Mr. WELCH. Yes; and as I said a moment ago, they took them rails up and piled them up there. They were our rails all the time, and they never paid anything for them.

Mr. FREAR. Maybe this will explain the situation; your system of logging operation, as we get it, was that you dumped the logs into this slough.

Mr. WELCH. This river.

Mr. FREAR. So that you did not use this extension.

Mr. WELCH. No; we did not use it.

Mr. FREAR. And that is what has just been referred to.

Mr. WELCH. We had a log dump and everything there, and of course they took that log dump and brought it further down afterwards.

Mr. FREAR. For years the company had always been using the slough?

Mr. WELCH. Yes, sir.

Mr. FREAR. Just to raft their logs down, because it was only a question of carrying them a mile or so, or how far was it?

Mr. WELCH. About a mile.

Mr. FREAR. So that is what you mean when you say that that extension was of no particular value, because you were using the slough?

Mr. WELCH. Yes, sir.

Mr. FREAR. And you always have?

Mr. WELCH. Yes, sir.

Mr. FREAR. That is what we understood when we saw it there.

Mr. MAGEE. How long have you been in business there?

Mr. WELCH. You mean how long had the mill been there?

Mr. MAGEE. Yes.

Mr. WELCH. Ten or fifteen years. I was not interested that long, I was only interested in it four or five months before the war started.

Mr. MAGEE. You were endeavoring to engage in the logging business during that period?

Mr. WELCH. Yes.

Mr. MAGEE. That is all.

(Witness excused.)

Mr. LEA. I would like to place in the record Articles II and III of a contract entered into the 25th day of May, 1918, between the Yaquina Bay Railway & Lumber Co., and the United States of America for spruce cants and lumber for the manufacture of airplanes, and the said articles read as follows:

ARTICLE II. The Government agrees to pay the mill for sawing such spruce logs the sum of \$9 per thousand feet sound scale in the log boom at the mill, such measurement to be made inspectors authorized by the Government.

ARTICLE III. All cants, rough or finished lumber or other output shall be inspected, upon the sawing of said logs, by inspectors authorized by the Government, as to compliance with the specifications furnished by the contracting officer, and such part of said cants, rough or finished lumber or other output as shall be accepted as complying with said specifications shall be delivered by the mill, f. o. b. cars, or dock, at the mill, in accordance with the direction of said contracting officer and consigned to parties designated by him. All material not so accepted by the Government shall be converted by the mill into the most profitable lumber possible and sold by the mill, which shall account therefor to the Government at the rate of \$12 per thousand board feet when said rejected material is sold. Until such material is sold by the mill, title thereto shall remain in the Government and the Government shall have the option at any time after 60 days after the sawing thereof of disposing of said material in any manner that it sees fit; but the mill shall be released from accountability for any material so disposed of by the Government. The amount of such rejected material shall be computed by deducting the total scale of the product accepted by the Government from the total scale of lumber sawed.

TESTIMONY OF H. E. WALKER—Recalled.

Mr. MAGEE. Will you go on and state, as of September 1, the amount of moneys on hand of the United States Spruce Production Corporation, and where those moneys are deposited?

Mr. WALKER. I have a statement here of the bank balances as of September 3, 1919.

Mr. MAGEE. I suppose they are substantially what they have been for some time prior to that time.

Mr. WALKER. Well, in that connection I have also a table here showing our monthly totals and the average bank balances in the Northwestern Bank, by months.

Mr. MAGEE. All right; just give us that.

Mr. WALKER. On September 3, 1919, our total bank balance was \$11,825,510.30. Of that amount, \$5,704,046.60 was deposited in the Northwestern National Bank of Portland; the First National Bank of Portland had \$1,532,062.51; the United States National Bank of Portland, \$1,817,441.90; the Ladd & Tilton Bank, of Portland, \$2,274,325.65; the Vancouver National Bank, of Vancouver, Wash., \$12,330.66; the Seattle National Bank, Seattle, Wash., \$101,194.07; the Dexter Horton National Bank, of Seattle, \$153,663.99; the First National Bank, Seattle, \$100,000; the National Bank of Commerce, Seattle, \$101,444.92; the American National Bank, Pendleton, Oreg., \$25,000; the Ladd & Tilton Bank—that is the pay-roll account—Portland, Oreg., \$4,000. The total bank balance was \$11,825,510.30.

Now, the statement giving the average daily bank balances, by months, the amount in the Northwestern National Bank: October, 1918, we had total deposits of \$14,988,126.08, of which \$8,628,061.93 was in the Northwestern Bank. November, the total deposits—

Mr. MAGEE. What year is this, 1918?

Mr. WALKER. 1918; yes, sir.

Mr. MAGEE. You see, this statement here is from the corporation account. Formerly it was a Government disbursing officer, and I have no record of his bank balances.

Mr. FREAR. That first item that you have is deposits in October?

Mr. WALKER. Of my own knowledge; but I might say, in that connection, that prior to this the disbursing officer's account was in most cases practically drawn out at all times. You see, this \$14,000,000 here was when we got the payment on the debenture bonds—that is, the bulk of it.

Mr. FREAR. What was the total amount received from the debenture bonds?

Mr. WALKER. I would have to have Mr. Campbell to give that.

Mr. FREAR. Just generally, if you know.

Mr. WALKER. Something over \$20,000,000. There was a balance that we owed there after severing the connection. There was an account between us and the bureau that reduces that amount somewhat. I do not know what it is.

Mr. FREAR. That is the amount you are referring to now, when you start out with the October statement?

Mr. WALKER. Yes, sir.

Mr. FREAR. As having added to the original assets.

Mr. WALKER. Yes, sir. November, 1918, \$12,380,025.99, of which \$4,764,017.04 was on deposit in the Northwestern National Bank; December, 1918, \$6,559,643.92, of which \$2,148,613.96 was on deposit in the Northwestern National Bank; January, 1919, \$7,298,633.01, of which \$4,721,483.34 was on deposit in the Northwestern National Bank; February, 1919, \$8,876,496.57, of which \$5,856,332.93 was on deposit in the Northwestern National Bank; March, 1919, \$10,293,966.48, of which \$4,146,528.52 was on deposit in the Northwestern National Bank; April, 1919, \$10,998,665.90, of which \$5,661,693.40 was on deposit in the Northwestern National Bank; May, 1919, \$10,793,634.44, of which \$5,309,069.63 was on deposit in the Northwestern National Bank; June, 1919, \$10,696,343.51, of which \$5,076,208.09 was on deposit in the Northwestern National Bank; July, 1919, \$10,541,142.07, of which \$4,855,652.50 was on deposit in the Northwestern National Bank. August is practically the same as the September 3 statement here. If you want me to tell how this fluctuated—you will notice that in December and January—

Mr. MAGEE. Do you know of any facts in connection with the deposits, any particular reason why more moneys were deposited in one bank, or a substantial portion of the moneys deposited in one bank rather than another bank?

Mr. WALKER. Yes. I may say this, Mr. Magee: You notice that in this daily statement the Northwestern Bank deposits fluctuated up and down considerable from month to month. Of course, lately we have not been drawing out so much money, but we have aimed to keep approximately 50 per cent of our deposits in the Northwestern Bank for the reason that that is our active account; that does all our checking. These other banks that I read off—these Seattle banks—their account has not been drawn on at all, and neither has the First National Bank of Portland, the United States National Bank, or the Ladd & Tilton Bank. We have one little account with the Ladd & Tilton account where they pay our pay-roll checks. That is a matter of convenience. We deposit the amount of the pay roll there

and the checks are drawn against it; but all these other deposits, outside of the Northwestern Bank, are stable accounts. They pay us 2 per cent interest on the daily balances, and the Northwestern Bank does the same, but the Northwestern Bank account was subject to large calls at any time when we had occasion to make payments.

Mr. LEA. Does the Northwestern Bank pay interest on a checking-account balance.

Mr. WALKER. On the whole amount; they pay it on the daily balance.

Mr. MAGEE. What per cent of interest do the banks allow you, Mr. Walker?

Mr. WALKER. Two per cent on all these accounts.

Mr. MAGEE. On monthly balances?

Mr. WALKER. No; on the average daily balance for the month.

Mr. FREAR. Have you the pay roll convenient?

Mr. WALKER. No, sir, I have not, Mr. Frear. Mr. Magee spoke about getting the present expenses; Mr. Gabrielson and Maj. Campbell are getting that up at the present time.

Mr. MAGEE. In addition to that, in reference to the present operating expenses, I would like to get evidence as to the title to the road leading into the Blodgett tract, and also the coast road, the condition of the title.

Mr. WALKER. All right, sir.

Mr. MAGEE. And the right of way.

Mr. WALKER. Yes, sir.

Mr. MAGEE. And I think we omitted also to show whether the railroad, Lake Crescent to Lake Pleasant, was authorized by the Railroad Administration. Do you know anything about that?

Mr. WALKER. I think the testimony has been that they did not authorize the Milwaukee to build it. It was purely one of our operations.

Mr. MAGEE. In other words, I do not think it appears clearly whether the Railroad Administration ever authorized the construction of that road?

Mr. WALKER. I do not think we have had any—it is brought out in the testimony, I believe, of Gen. Disque that he failed to get the approval of the extension by the Milwaukee Railroad.

Mr. MAGEE. That was about the Deep Creek route, as I understand.

Mr. WALKER. Yes.

Mr. MAGEE. The extension of the Deep Creek route; but I mean the road actually constructed, whether any authorization was ever obtained.

Mr. WALKER. That is something I am not competent to testify to.

Mr. LEA. I understand that the Railroad Administration did not exercise any jurisdiction over War Department construction.

Mr. MAGEE. Well, I think the fact ought to appear.

Mr. LEA. I do not think there is any doubt about it, that it was not approved. That is the way I understand it.

Mr. WALKER. I think the real truth of the matter is that it was neither approved or disapproved. I think when they refused to sanction the Milwaukee building it as part of the regular railroad construction they did no further on it.

Mr. MAGEE. That was not the request; the request, as I understand it, was to extend the Milwaukee from Deep Creek. That is an en-

tirely different proposition. I am talking about the Lake Crescent-Lake Pleasant road that was constructed.

Mr. WALKER. I see.

Mr. MAGEE. From Joyce Junction to Lake Pleasant, along the north side of Lake Crescent.

Mr. WALKER. I think when they disapproved that Deep Creek—

Mr. MAGEE. Well, you get the facts and put them in the record. I am only after the facts, because there are questions likely to be asked the committee by our colleagues, and unless we have the facts we can not answer those questions.

Mr. FREAR. In the testimony of Gov. West yesterday he said, as I now remember it, that in conversation with John D. Ryan he said the Milwaukee was not granted the extension by the Railroad Administration, and it did not define just where the extension was granted. I assumed, like my colleague, that it was to be the extension from Deep Creek that he had reference to.

Mr. LEA. Yes; I think there is no doubt about that.

(Witness excused.)

TESTIMONY OF COL. C. P. STEARNS—Recalled.

Mr. FREAR. There has been called to the attention of members of the committee a telegram apparently quoted in a newspaper, dated Portland, Oreg., August 6, 1919, addressed to Lieut. W. K. Patterson, Toledo, Oreg.

Please thank Mayor Jones and through him the Council and citizens of Newport for passage of our franchise last evening, and congratulate them upon the spirit of honor in their city which has manifested itself in this act. We trust this is only a step toward the realization of years of hope for industrial prosperity in the community which our railroad will undoubtedly foster and thereby having been constructed expedited by several years. United States Spruce Production Corporation, by Col. Stearns.

And attached to this was what purported to be an ordinance.
[Reading:]

The city of Newport does ordain as follows:

This telegram was dated August 6, 1919, and refers to a franchise given the day before. I don't understand whether this is the franchise passed, or not, because this apparently relates to some other term of years, but this franchise reads:

That a right-of-way is hereby granted to the United States Spruce Production Corporation for Spruce Production Railroad No. 11 (also called the Yaquina Northern Railroad) and to its successors and assigns, over and across the following named streets within the corporate limits of the city of Newport, Oreg., to wit: Ninth Street in Fredericksburg Addition to the city of Newport; B Street in Baker's Addition to the city of Newport; Glen Street, A Street and Royal Street in Baker's Second Addition to the city of Newport at the place where the said Spruce Production Railroad No. 11 now crosses said streets, and as said streets are laid out and shown on the recorded plats of said city of Newport and the additions thereto.

Sec. 2. This franchise is granted to United States Spruce Production Corporation, its successors and assigns, and shall remain in full force and effect for the period of 99 years from the date of its enactment.

Sec. 3. The franchise herein granted to United States Spruce Production Corporation, its successors and assigns, is conditioned upon the payment to the city of Newport of the annual sum of \$1, payable upon demand upon the first day of each year during the entire time of the franchise herein granted, and upon the further condition that United States Spruce Production Corporation,

its successors and assigns shall improve the streets where their railroad crosses the same between the two outer rails of its track and for a distance of one foot on each side of said outer rails in the same manner, and at their own expense, as the streets shall be improved by the city.

Following "Approved": "(Turned down by the council of Newport, Oreg.)" That is apparently some memorandum of some one else. Will you please tell the committee what that has reference to?

Col. STEARNS. Yes, sir. The railroad was built, but arrangements hadn't been entirely completed for the securing of the franchise over those city streets, although effort had been made, while under construction, I understand, to have that done, and this was the final winding up necessary to secure the franchise for the crossing of those streets, as you know, outside of the city.

Mr. FREAR. The road at present runs outside of the city from Yaquina.

Col. STEARNS. Yes.

Mr. FREAR. What was the purpose of securing the franchise?

Col. STEARNS. So that we would have complete title to that right of way.

Mr. FREAR. In the city, over the streets?

Col. STEARNS. Yes; where it crosses those streets.

Mr. FREAR. It is not up in the city?

Col. STEARNS. No.

Mr. FREAR. It is not up in the city of Newport?

Col. STEARNS. No. You know—if you remember the map, the road crosses—the railroad crosses the outskirts of the city and crosses those streets that are mentioned there, and it was necessary to get a franchise—

Mr. MAGEE. The road must go through the corporate limits to some extent, or otherwise—

Col. STEARNS. Yes; that is what I say. It is just what was along the outskirts of the city, it just crosses those streets, still within the city limits.

Mr. MAGEE. Within the corporate limits?

Col. STEARNS. Yes; still within the limits.

Mr. FREAR. Well, that is practically to fix the right of way.

Col. STEARNS. Yes.

Mr. FREAR. That is to practically secure to the Government the right of way as the road is at present constructed.

Col. STEARNS. That is right.

Mr. FREAR. That is all.

Col. STEARNS. That is right.

(Witness excused.)

TESTIMONY OF CAMERON SQUIRES.

(The witness was sworn by Mr. Frear.)

Mr. LEA. What is your name?

Mr. SQUIRES. Cameron Squires.

Mr. LEA. Where do you reside, Mr. Squires?

Mr. SQUIRES. In this city.

Mr. LEA. How long have you resided here?

Mr. SQUIRES. Nearly three years.

Mr. LEA. What is your occupation?

Mr. SQUIRES. Assistant cashier and director in the Ladd & Tilton Bank.

Mr. LEA. You are acquainted with Mr. Disque, are you?

Mr. SQUIRES. Yes, sir.

Mr. LEA. And what if any connection did you have with the Spruce Production Corporation during the war?

Mr. SQUIRES. I enlisted as a private in the Spruce Production Division, in December, 1917, and served with that division in various capacities until the signing of the armistice.

Mr. LEA. And did you have any promotion during your service?

Mr. SQUIRES. Yes, sir.

Mr. LEA. What was your rank at the time of your discharge from the service?

Mr. SQUIRES. Captain.

Mr. LEA. Were you here at the time Mr. Ryan visited Portland?

Mr. SQUIRES. Yer, sir.

Mr. LEA. Attended a banquet, did you?

Mr. SQUIRES. Yes, sir.

Mr. LEA. Did you hear Mr. Ryan make an announcement that he proposed to promote Col. Disque? I believe he was colonel at that time, was he?

Mr. SQUIRES. Yes, sir.

Mr. LEA. Now, what do you know as to what caused that, and whether or not Col. Disque had anything to do with that?

Mr. SQUIRES. Prior to Mr. Ryan's coming to Portland, Col. Stearns called me to his office one day and asked me to take the chairmanship of a committee to give a banquet for Mr. Ryan at the Arlington Club. The banquet was given in the form of a grid-iron up there, strictly informal, and any proposition with regard to rank and military discipline was to be obviated for the evening. The rest of the committee and myself got up a program, more or less taking raps at everybody concerned, creating good fun for the evening. And two or three days prior to the serving of the banquet it was suggested that we bring forth in our program some fact to put before Mr. Ryan that we would like—the officers of the division would like—to see Col. Disque made a brigadier general, the thought being that at the time there were upward of 28,000 men in the division and it was hardly in conformance with the usual military procedure for that many men to be under a colonel. The members of the committee were afraid to tackle it alone, because we didn't know whether we would get it over, and we consulted with some of the senior officers in the division—majors and lieutenant colonels—and there was a diversity of opinion at first, and then when we suggested how we would handle it, it was allowed that it would be all right.

So at that banquet that night one of the members of the committee got up and sang a song, in which there was a very delicate but pointed inference to Mr. Ryan to the fact that the officers of the division would appreciate it if Col. Disque was promoted. Col. Disque knew nothing about it. In fact, when the song was being sung I think he sort of—his jaw dropped, because I think he thought it was going pretty strong. But Mr. Ryan, being a good fellow and a good fellowship evidenced at the banquet that night, showed that there was no offense taken by him as a result of that song and that

request, which was made entirely without Col. Disque's knowledge or permission. Mr. Ryan got up and made the statement which you have just referred to.

Mr. FREAR. What was the statement?

Mr. SQUIRES. The statement was that he appreciated—in substance only, Mr. Chairman, I don't remember the exact words—but that he appreciated everything that Col. Disque had done; that he thought, too, that he was entitled to a promotion, and that he assured the officers at the banquet that he would do everything in his power to secure that promotion.

Mr. LEA. That is the substance of all there was about that, is it?

Mr. SQUIRES. Yes, sir.

Mr. LEA. That is all.

Mr. FREAR. Upon his return to Washington—that was his statement?

Mr. SQUIRES. Yes.

Mr. FREAR. Why were you all sworn to secrecy, or were you sworn to secrecy on that occasion, at the request of Col. Stearns; was that a fact—

Mr. SQUIRES. What secrecy?

Mr. FREAR. That Col. Stearns asked that that whole meeting be a matter of secrecy?

Mr. LEA. You must have misunderstood the witness.

Mr. FREAR. No; I am not misunderstanding the witness. I am speaking of further information that has come to me in regard to the meeting—some other matters. But I was just asking if Col. Stearns at that time asked that the members who were present should not communicate what had occurred there to anyone else?

Mr. SQUIRES. Yes, sir; obviously for the reason that in case that kind of information gets to Washington prior to the suggestion for promotion, it certainly will create sort of a commotion in Washington. You gentlemen who live in Washington know that just as well as I.

Mr. FREAR. I didn't know what the reason was, and I was asking you because I knew that was coupled in somewhere in the meeting.

Mr. SQUIRES. Yes, sir.

Mr. FREAR. That is all.

Mr. MAGEE. As I understand, you don't think that the general took offense at the suggestion in the song that he be promoted to be a general?

Mr. SQUIRES. Not offended at the suggestion of the song, but at the fact that some of the junior officers had the temerity to suggest that to his superior, Mr. Ryan.

Mr. MAGEE. I wanted to get clean, if I could, the suggestion. That is all.

Mr. FREAR. The full list of those recommended for distinguished service was not furnished us. Was your name among them, or do you know?

Mr. SQUIRES. No, sir. May I further answer that it has been recalled to my memory, which is a fact, that Col. Stearns didn't know anything about this particular song that we were going to sing? When I say the committee consulted some of the senior officers, we didn't go as high as Col. Stearns.

(Witness excused.)

TESTIMONY OF P. S. BRUMBY.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Where do you live?

Mr. BRUMBY. City.

Mr. FREAR. How long have you lived here?

Mr. BRUMBY. Seventeen years.

Mr. FREAR. And your business?

Mr. BRUMBY. Timber business.

Mr. FREAR. You have been representative of the Blodgett interests for how long?

Mr. BRUMBY. Going on 17 years; in the seventeenth year.

Mr. FREAR. Will you please state to the committee about this Blodgett tract, how it was acquired by Mr. Blodgett, and lead up then to the facts as they have been developed in the hearings?

Mr. BRUMBY. Mr. Blodgett acquired that tract, known as the Alsea Bay tract, with—

Mr. FREAR (interrupting). That is the tract about 20 miles or 25 miles below Yaquina Bay?

Mr. BRUMBY. Yes; the Alsea Bay tract, in Lincoln County. He acquired that with a larger tract of timber in California, from the C. A. Smith interests.

Mr. LEA. When?

Mr. BRUMBY. In 1917, the latter part of 1917.

Mr. FREAR. That came about by what means?

Mr. BRUMBY. He held bonds against the property and took this as part payment. These bonds that he held against the property—

Mr. FREAR. That is, he held bonds against the Smith Corporation?

Mr. BRUMBY. Corporation.

Mr. FREAR. And these lands were turned over to him—this land and other lands. Where were the other lands?

Mr. BRUMBY. In California.

Mr. FREAR. They were turned over to him as security for the bonds; is that right?

Mr. BRUMBY. He purchased them outright.

Mr. FREAR. He purchased them outright?

Mr. BRUMBY. Yes, sir.

Mr. FREAR. Well, now, when was that, as nearly as you can remember?

Mr. BRUMBY. Well, it was in 1917.

Mr. FREAR. What time?

Mr. BRUMBY. I believe in the latter part of 1917; in the summer of 1917, I believe it was.

Mr. FREAR. Were there any options discussed between you and other parties, in regard to the Blodgett tract?

Mr. BRUMBY. There was. We gave an option to C. H. Davis, January 9, 1918; we gave a 30-day option.

Mr. LEA. What year?

Mr. BRUMBY. 1918.

Mr. FREAR. Who is C. H. Davis?

Mr. BRUMBY. He is a Portland man, timber owner, timber operator. We gave this Mr. Davis a 30-day option on the timber only, the timber to be cut and removed from the land in 20 years, he to pay the taxes until the timber was removed and land surrendered.

We gave this option on the strength of Mr. Davis agreeing to operate the spruce and turn it over to the Government for war use.

Mr. FREAR. That was a condition that was made at the time?

Mr. BRUMBY. Yes, sir; that was the condition made at the time.

Mr. FREAR. How much was that option? Have you got the option there?

Mr. BRUMBY. No; I haven't; I haven't got the option.

Mr. FREAR. You haven't a copy of it?

Mr. BRUMBY. No; I haven't.

Mr. FREAR. Will you produce that, please? You have it in your files, have you?

Mr. BRUMBY. No; I think not. It was only just a letter.

Mr. FREAR. Then give the contents of it, as nearly as you remember it.

Mr. BRUMBY. Well, it was a 30-day option, given to C. H. Davis; the price was to be \$575,000 for the timber only, with 20 years to remove the timber, he to pay the taxes until the timber was removed and the land surrendered.

Mr. FREAR. How many acres of land?

Mr. BRUMBY. 10,985.64 acres.

Mr. FREAR. You have the plat there, have you?

Mr. BRUMBY. Yes, sir. I have a plainer map than that. It does not show it distinctly.

Mr. FREAR. Do you know the cruise that was on that timber?

Mr. BRUMBY. I know about the cruise. I haven't got an exact cruise here. That is a plat of the land. [Witness producing plat.] That red shows the Blodgett lands, and those figures there show the estimate of the spruce on these lands—the spruce alone. It doesn't show the other timbers. That was an estimate that was not made by—

Mr. FREAR. Have you totaled the amount of timber? You have not that, have you?

Mr. BRUMBY. I think I have got the total amount here, or about the amount, in round numbers. [Witness referring to paper.] In round numbers, 250,000,000 feet of spruce, 260,000,000 feet of fir, and about 160,000,000 of other mixed timber. That is not an exact estimate, it is round numbers.

Mr. FREAR. That option was for how long?

Mr. BRUMBY. Thirty days.

Mr. FREAR. Did Mr. Davis, so far as you know, take anyone else in with him in handling that option?

Mr. BRUMBY. He represented to us that he was—or to me, that he was going to have a partner who was a practical operator.

Mr. FREAR. Who was that party?

Mr. BRUMBY. James Manary.

Mr. FREAR. Was anything paid for the option?

Mr. BRUMBY. No, nothing.

Mr. FREAR. The option was in writing?

Mr. BRUMBY. Yes. It was just a—

Mr. FREAR. That option extended for how long a period?

Mr. BRUMBY. Thirty days.

Mr. FREAR. And what was done, if anything, before the conclusion of the 30 days?

Mr. BRUMBY. Well, Mr. Davis surrendered the option before the 30 days, but—now, this is information that I got away from Mr. Davis: That he, immediately after he got the option, assigned it to James Manary, and Manary assigned it to D. A. Donaldson, and D. A. Donaldson assigned it to a man named Rossman, and Rossman assigned it to the Western Spruce Co. I got this information from Mr. Rossman.

Mr. MAGEE. What was the Western Spruce Co.?

Mr. BRUMBY. The Western Spruce Co., as he told me, was a Chicago corporation, and they were to turn it over to the Warren Spruce Co. to operate, get the spruce for the government, But in doing this, after C. H. Davis had given the option to Manary and Manary to Donaldson, Donaldson—he got options on a 5,000 acres—added about 5,000 acres to our acreage, and tried to sell that to the—he gave an option on the whole tract to this Chicago corporation, to the Western Spruce Co.

Mr. FREAR. Now, this option was then in the hands, last, of this Chicago concern?

Mr. BRUMBY. That was what Mr. Rossman told me. In giving the option to Mr. Davis, I gave Mr. Davis an option for the timber only, and with 20 years to remove the timber. Mr. Davis gave to Mr. Manary an option for the entire property.

Mr. MAGEE. For the ownership of it?

Mr. BRUMBY. The ownership, land and, all. Before that I had agreed to—why we didn't give the option to Davis on the land, or wasn't selling the land, we had an application and I agreed to give—an application for an oil lease, and had agreed to give this oil lease to parties here who were going to drill for oil. That is why we were reserving the land—not selling it.

Mr. FREAR. When was this option released that you speak of?

Mr. BRUMBY. The Davis option released?

Mr. FREAR. Yes.

Mr. BRUMBY. It was released, my recollection is, the 27th day of January. I gave them the option the 9th for 30, and the 27th he wired Mr. Blodgett he would surrender the option, on account of taking up work with the Government.

Mr. MAGEE. Hadn't he assigned it prior to that time?

Mr. BRUMBY. Yes; he had.

Mr. MAGEE. So he hadn't anything to surrender?

Mr. FREAR. That is the inquiry. Did he have anything to surrender

Mr. BRUMBY. No; he didn't have anything—

Mr. FREAR. What work had he undertaken for the Government?

Mr. MAGEE. No; he didn't get that answer. You interrupted with another question and he didn't get the answer.

Mr. FREAR. Give the answer.

Mr. BRUMBY. He could not give what he did not have.

Mr. MAGEE. He didn't have anything to surrender, when he wired Mr. Blodgett that he would surrender the option; is that right?

Mr. BRUMBY. He surrendered the option to Mr. Blodgett, but, in giving this option to Mr. Manary, he gave an option that he could not—he had no right to give.

Mr. MAGEE. You mean he gave an option for the ownership to buy the land?

Mr. BRUMBY. On the land and all.

Mr. MAGEE. When he had only an option to remove the timber, and he must do that within 20 years.

Mr. BRUMBY. He gave an option that he could not deliver; he gave an option on property that he could not deliver.

Mr. FREAR. As a matter of fact, he had also assigned this option to Manary, and Manary to Donaldson, and Donaldson to Rossman, so that——

Mr. BRUMBY. Donaldson to Rossman.

Mr. FREAR. So that, as a matter of fact, he had no option, if that was a genuine assignment, at this time.

Mr. BRUMBY. No, no. But this is all information that I got from Mr. Rossman.

Mr. FREAR. Yes; I understand. Now, what position did he take—what position was he given, so far as you understand?

Mr. BRUMBY. Well, he was connected with the Warren Spruce Co. is my understanding.

Mr. FREAR. What position, do you know?

Mr. BRUMBY. I don't know what his work was.

Mr. MAGEE. At the time he got the option?

Mr. BRUMBY. No.

Mr. FREAR. No; at the time he said he surrendered it.

Mr. BRUMBY. At the time he surrendered the option he said he had taken up work for the Government, and he could not carry the option out.

Mr. MAGEE. He had taken up work for the Government?

Mr. BRUMBY. Yes.

Mr. MAGEE. I thought you said he was connected with the Warren Spruce Co.

Mr. BRUMBY. Well, he called Mr. Blodgett—he wired Mr. Blodgett that he had taken up work for the Government for to——

Mr. MAGEE. With the Government?

Mr. BRUMBY. With the Government——

Mr. MAGEE. He was not in the employ of the Government, was he?

Mr. BRUMBY. Only with the Warren Spruce Co.

Mr. MAGEE. You understand, then, to get the record clear, that between the time when he took this option and January 27, when he surrendered it, he entered into the employ of the Warren Spruce Co.?

Mr. BRUMBY. That was my understanding; yes, sir.

Mr. FREAR. Now, when this option was surrendered was a new option made with the Warren Spruce Co.?

Mr. BRUMBY. No.

Mr. FREAR. A new contract made?

Mr. BRUMBY. No.

Mr. FREAR. What offer did they make?

Mr. BRUMBY. They sent for me to come to their office.

Mr. MAGEE. The Warren Spruce Co.?

Mr. WARREN. The Warren Spruce Co.—a man named Tobias came to me and——

Mr. FREAR. When was this?

Mr. BRUMBY. That was in January.

Mr. FREAR. The same month?

Mr. BRUMBY. The same month. I have forgotten the date. It was in January, and they gave me an agreement—this was the agreement

that they gave me that they wanted that I should have my company sign.

Mr. MAGEE. When they what?

Mr. FREAR. They wanted them to sign—his company to sign.

Mr. BRUMBY. My company to sign.

Mr. MAGEE. Mr. Blodgett to sign?

Mr. BRUMBY. Yes; the Blodgett Co.; yes. This is the agreement.

Mr. FREAR. Let me see the agreement, will you, please?

Mr. BRUMBY. That writing was done in my office, or in our office. That is the original agreement. [Producing paper.]

Mr. FREAR. Who did you say came to you—Mr. Talbot?

Mr. BRUMBY. No; Mr. Tobias. And I went to the Warren Spruce Co. office and met—

Mr. FREAR. Mr. Tobias was in the employ of the Warren Spruce Co., was he?

Mr. BRUMBY. Mr. Tobias has been in the employ of Mr.—in fact, he was a partner of Mr. Manary prior to this.

Mr. FREAR. Of Mr. Manary?

Mr. BRUMBY. I was acquainted with Mr. Tobias; that is why he came to me.

Mr. FREAR. Was he connected with the Warren Spruce Co.?

Mr. BRUMBY. He told me he was going to be, or he was going to be associated with them through Mr. Manary.

Mr. FREAR. This proposed contract was handed to you by him—

Mr. BRUMBY. No; that was handed to me by Mr. Kumpie.

Mr. FREAR. Was Mr. Tobias there?

Mr. BRUMBY. Yes, sir.

Mr. FREAR. Mr. Tobias was present?

Mr. BRUMBY. Yes.

Mr. FREAR. And he called you over. Now, who is Mr. Kumpie?

Mr. BRUMBY. Mr. Kumpie was the—as I understood it—was the engineer, and was going to be the general manager of the field work for the Warren Spruce Co.

Mr. FREAR. What was Mr. Tobias's position later with the Warren Spruce; do you know?

Mr. BRUMBY. I never have heard that Mr. Tobias was employed by the Warren Spruce Co.

Mr. FREAR. What was Mr. Manary's position with the Warren Spruce Co.—Mr. James Manary's position?

Mr. BRUMBY. He went into the woods. He went over in Lincoln County and made a reconnoissance of the country there; didn't stay a great while. After that he went down to Clatsop County. I wasn't acquainted with his work.

Mr. FREAR. You don't know what his position was?

Mr. BRUMBY. No; I do not.

Mr. FREAR. Do you know what his salary was?

Mr. BRUMBY. No; I do not.

Mr. FREAR. He was connected with the Warren Spruce Co. Was he an officer?

Mr. BRUMBY. I could not say that.

Mr. FREAR. Now, this contract was not executed?

Mr. BRUMBY. No.

Mr. FREAR. It was brought to you in January, 1918?

Mr. BRUMBY. Yes.

Mr. FREAR. In brief, will you state to the committee—I haven't read it—what this contract provided?

Mr. BRUMBY. It gave us the prices; established the prices that they were to pay for the timber taken from the lands; but in the contract there was a clause that I have underlined there that I was not real satisfied with. It states there that the timber, when fallen—it is understood when the timber was fallen it would immediately become the property of the operator, and I didn't think that that should be in there, and we did not sign it.

Mr. FREAR. There have been written corrections in 10.

Mr. BRUMBY. That was done in our office.

Mr. FREAR. That was done in your office?

Mr. BRUMBY. Yes.

Mr. FREAR. With the thought of eventually entering into some contract—that it was among the possibilities?

Mr. BRUMBY. That was done because I had other contracts, a contract that was given by the Government in Washington and in Oregon, that I had compared and was just making these notations on that.

Mr. FREAR. Now, what negotiations occurred in regard to this contract, or what was said or done in regard to it, please, with the Warren Spruce Co. or its agents?

Mr. BRUMBY. There was nothing done with it. They told me that we would sign this contract; Mr. Kumpie told me that Col. Disque at that time had given him the contract, asked him to give it to the timber owners for their signature, and if they would not sign it that they would commandeer the timber and take it.

Mr. FREAR. That Col. Disque had taken this action?

Mr. BRUMBY. That the Government had; that he had got—this was given to him by Col. Disque or by the Government for to give to the timber owner for to sign, and if they would not sign it the timber would be commandeered.

Mr. FREAR. What did that relate to; to this Blodgett tract?

Mr. BRUMBY. Yes.

Mr. FREAR. What occurred after that in regard to this timber? Was Mr. Blodgett communicated with?

Mr. BRUMBY. Yes; I took it up with Mr. Blodgett. I first took it up—I was sent for by Maj. Hitchcock. This is Maj. Hitchcock's letter [passing letter to Mr. Frear].

Mr. FREAR. This is a letter dated March 27, 1918, from Maj. Hitchcock asking you, as the representative of the Blodgett tract, to call him up so that he could make an appointment?

Mr. BRUMBY. Yes.

Mr. FREAR. Yes. I offer it. Copy it in the record.

(Said letter, pursuant to the foregoing, is set out in full, as follows:)

WAR DEPARTMENT,
SPRUCE PRODUCTION DIVISION,
UNITED STATES SIGNAL CORPS,
Portland, Oreg., March 27, 1918.

From: Rived Spruce Department.

To: Mr. P. S. Brumby, Lumbermen's Building, Portland, Oreg.

Subject: Blodgett tract.

1. I am informed that you are the local representative of the Blodgett tract, and I wish you would be so kind as to call me up in the morning so that we can make an appointment.

By direction of Col. Disque:

REUBEN HITCHCOCK,
Major, S. C., A. S., U. S. A.

Mr. BRUMBY. I went and seen Maj. Hitchcock, and on the strength of the talk that I had with him I went East.

Mr. FREAR. What was the talk that you had with Maj. Hitchcock?

Mr. BRUMBY. They wanted to buy the stumpage. They had made plans for to put in a railroad and wanted to buy the stumpage, and I went to Grand Rapids and took the question up with Mr. Blodgett. They had made two propositions, or they asked for two propositions; one was on a selective-cutting basis and the other was for a straight purchase of all the timber, and I talked this over with Mr. Blodgett, and he wrote—

Mr. FREAR (interrupting). Could you make it a little more definite to the committee what Hitchcock's proposition was to you on Blodgett?

Mr. BRUMBY. He wanted to buy the tract of timber and made me an offer on it.

Mr. FREAR. Hitchcock did?

Mr. BRUMBY. Yes.

Mr. FREAR. Now, what was his offer?

Mr. BRUMBY. Four hundred and fifty thousand dollars.

Mr. FREAR. Four hundred and fifty thousand dollars?

Mr. BRUMBY. Yes.

Mr. FREAR. And how many million feet of timber did you say was on that?

Mr. BRUMBY. In the neighborhood of about 650,000,000, round numbers; between 650,000,000 and 675,000,000.

Mr. FREAR. And you had made previously a contract, or an option, with Davis for \$575,000?

Mr. BRUMBY. Yes; for the timber alone.

Mr. FREAR. For the timber alone. This was for timber, land, and all, or what?

Mr. BRUMBY. That is what he wanted to buy.

Mr. FREAR. That is what Hitchcock wanted?

Mr. BRUMBY. Yes.

Mr. FREAR. Now, what occurred?

Mr. BRUMBY. I went to Grand Rapids and took it up with Mr. Blodgett, and this is a copy of a letter that he wrote to Col. Disque. [Mr. Brumby here passed said letter to Mr. Frear.]

Mr. FREAR. That included the same area, did it, as the option that Hitchcock was talking to you about?

Mr. BRUMBY. That included all the Blodgett lands. It gives the acreage there, nearly 11,000 acres.

Mr. FREAR. This letter is dated April 11, 1918, to Col. Brice P. Disque, Signal Corps, United States Army, Portland, Oreg.:

MY DEAR SIR: Referring to your telegram to me of March 28 relative to the—

that was the day following your discussion with Hitchcock? Your letter from Hitchcock was of the 27th, and he asked you to call him up in the morning; that would be on the morning of the 28th?

Mr. BRUMBY. Yes.

Mr. FREAR. To discuss the Blodgett tract?

Mr. BRUMBY. Yes.

Mr. FREAR. Now, on the same day—oh, this other is April 11.

Mr. BRUMBY. I had been to Michigan.

Mr. FREAR. Yes. I was going to say Blodgett's letter refers to "your telegram to me of March 28"; that would be the same day on which you had your discussion with Hitchcock?

Mr. BRUMBY. Yes.

Mr. FREAR. Now, you can just please state what you did with Mr. Blodgett.

Mr. BRUMBY. I went over and took the question up with Mr. Blodgett, and that is the decision we arrived at in our talk over the property. I also had this agreement—

Mr. LEA (interrupting). Couldn't we just put that in the record?

Mr. FREAR. I am going to. I am just waiting until he finishes. You may go on.

Mr. BRUMBY. I had this agreement, that agreement that Mr. Kumpie gave me, with the prices established by the Government on timber on the coast country.

Mr. FREAR. Well, did you give Mr. Blodgett any advice in regard to the prices?

Mr. BRUMBY. I did.

Mr. FREAR. Yes. And you gave him your judgment, or your statement, in regard to your interviews with Hitchcock, and so on?

Mr. BRUMBY. Yes.

Mr. FREAR. This letter is to Col. Disque:

In reference to your telegram to me of March 28 relative to the 11,000-acre tract of timber south of Alsea Bay, owned by Blodgett Co. (Ltd.):

From your telegram and from Mr. Brumby's report of his conversation with Maj. Hitchcock, I infer that you want a proposition from the owner that will warrant the construction of a railroad from Toledo into this timber, so that the timber can be made available for governmental purposes.

This tract of timber was purchased for investment and has never been offered for sale by Blodgett Co. (Ltd.). An option, however, was given to a party with the understanding that the timber thereon was to be immediately operated for the purpose of aiding in supplying the needs of the United States Government. Except for this purpose, the property is now for sale.

Mr. BRUMBY (interrupting). Is not for sale.

Mr. FREAR. "Is not now for sale." Yes. That was the day of this option that was referred to?

Mr. BRUMBY. Yes.

Mr. FREAR. Yes.

In compliance with your telegraphic request, I herewith submit two propositions, under either of which the Government can acquire the timber on this tract suitable for its needs:

(1) In consideration of the Government beginning the construction of a common carrier railroad from Toledo into this tract on or before July 1, 1918, and its completion on or before July 1, 1919, the owner will sell to the United States

Government all or so much of the timber on this tract as the Government may desire to take at the following prices, namely :

	Per M feet.
Aeroplane spruce.....	\$5
Other spruce.....	3
Fir and cedar.....	2
Hemlock and all other woods.....	1

All according to Spaulding's log-scale rule; Columbia River log-scaling rules to govern in case of dispute.

These prices, however, are to be subject to the following changes:

If the United States at any time during its operations on the Blodgett Co. (Ltd.) lands under any contract based on this offer pays any other owner more than \$7.50 per thousand feet for spruce suitable for aeroplanes or more than \$4 per thousand feet for other spruce or more than \$3 per thousand feet for fir and cedar or more than \$1.50 per thousand feet for hemlock and other woods, then the United States Government shall pay the owner in addition to the prices offered above an additional proportionate price for the class of timber the price of which is raised.

In order to minimize the fire hazard and conserve the remaining timber, the timber shall be cut and all lumbering carried on by or under the direction of the Government according to the rules enforced by the United States Forestry Department for the cutting and lumbering of Government timber on forest reserves.

The prices named in this proposition are for the United States Government only, and not for any operating company.

The right of the Government to operate upon this timber shall terminate with the declaration of peace between the United States and Germany.

(2) The owner will sell to the United States only all the timber on this tract for \$635,000, with 20 years' time for the removal of the timber. Payment may be made either in cash, Liberty bonds, or Treasury certificates of indebtedness.

The price of \$635,000 is based upon the following:

Two independent timber estimates, made for former owners and for former mortgagees by expert timber cruisers well known in Oregon, show these lands to contain 250,000,000 feet of spruce of superior quality. I have priced this spruce at \$1.50 per thousand feet, or \$375,000. The same estimates show 260,000,000 feet of fir of fine quality suitable for ship timbers and aeroplane stock. I have priced this fir at \$1 per thousand feet, or \$260,000; making a total of \$635,000.

In addition to the spruce and fir timber, the estimates show 160,000,000 feet additional timber, of cedar, hemlock, and other woods. Upon this 160,000,000 feet I have placed no value in this proposition, as these woods are not extensively used by the Government, though valuable for lumber and wood pulp.

The owner has had no detailed estimates made, but checked the previous estimates before making the purchase.

Very truly, yours,

That was signed by Mr. Blodgett?

Mr. BRUMBY. Yes, sir.

Mr. FREAR. Could you come here this afternoon, Mr. Brumby? Would it be convenient for you to come this afternoon?

Mr. BRUMBY. I can come. I have got a very sick wife. She is very ill, and I don't want to be away from home longer than it is really necessary.

Mr. LEA. Would there be any other time that would be more convenient for you?

Mr. BRUMBY. Well, I try to stay at home as much as I can.

Mr. MAGEE. Why can't we finish with him?

Mr. FREAR. I think we can finish in just a minute. Mr. Brumby, what was done under this letter of Mr. Blodgett's?

Mr. BRUMBY. There was nothing done.

Mr. FREAR. Nothing followed. Mr. Disque did not send word—or did he reply? Do you know, did Disque reply to this letter of Blodgett's?

Mr. BRUMBY. I think that he replied to it.

Mr. FREAR. What?

Mr. BRUMBY. Yes, I believe that he—I don't recollect. They replied, but they claimed that the price was too high; they would not—

Mr. FREAR (interrupting.). Then what next occurred regarding this tract?

Mr. BRUMBY. Later on they said they would take the timber, paying the \$635,000 for it, and we gave them—I gave them an abstract of title to examine and placed a deed in the United States National Bank for them to take up.

Mr. FREAR. When was that, about?

Mr. BRUMBY. That was, I think, early in October of 1918.

Mr. FREAR. And when was the deal consummated, if at all? Did Mr. Blodgett write back to them anything in regard to it, that they need not take over this tract, or anything to that effect?

Mr. BRUMBY. No. I was on the lands when the armistice was signed, or when they discontinued cutting. They started cutting on the timber and cut about, probably, 4,000,000, or in the neighborhood of 4,000,000, right along in the front of this tract of timber, and I was there when they discontinued cutting. I came back to Portland—in fact, first I went to Newport, and I told Mr. Howard Holland, who was then general manager of the operations there for Gen. Disque, that as the armistice was signed I didn't suppose they were going to take over our timber. We were going to ask them to pay us for the timber cut, and for them to clean up the fire hazard that they had created in cutting, slashing in the front of our timber. And Mr. Holland said that he thought that was right, and he would so advise Gen. Disque. I came to Portland and I went to the office; I went to Lieut. Murphy. He was assistant to Maj. Morley, who had this deal in charge, and I asked Lieut. Murphy for the abstract. He says, "We are going to take the timber." Well, I says, "We want you to take the timber—we want the pay for our property or we want our property." I says, "We can take care of it. You have created a fire hazard there that we can wipe out, but you have got to do something to take care of it." And he took me to Maj. Morley, who stated that they were going to take over the property, which I believed was the best thing they could do.

Mr. FREAR. They did take it over eventually, and the deed was signed on December 2; is that right?

Mr. BRUMBY. Yes, sir.

Mr. FREAR. And the deal was closed then. When was the railroad begun?

Mr. BRUMBY. When was the railroad begun?

Mr. FREAR. Yes.

Mr. BRUMBY. Well, early in 1918. I could not—

Mr. FREAR (Interrupting). Early in 1918?

Mr. BRUMBY. Yes.

Mr. FREAR. Do you know about the time?

Mr. BRUMBY. I could not state the exact time from memory.

Mr. FREAR. I think that is all, for the present, anyhow, unless we recall you.

Mr. LEA. Is this Blodgett Co. (Ltd.) a corporation that owns this property?

Mr. BRUMBY. Yes, sir.

Mr. LEA. But Mr. Blodgett is the principal factor in it, is he?

Mr. BRUMBY. Yes; sir.

Mr. LEA. And Mr. Blodgett himself recommended that it would be better to sell it, or for them to take the whole thing, didn't he; that it would be better for the Government to buy?

Mr. BRUMBY. Yes; he thought it was better for the Government; I thought it was better for the Government. We thought they made a good trade. We thought it would help them sell the road.

Mr. LEA. And the price paid was \$635,000, was it?

Mr. BRUMBY. \$635,000.

Mr. LEA. That was \$60,000 more than the option that had been given in January?

Mr. BRUMBY. The option was given on timber only.

Mr. LEA. Yes. Well, this was for the whole tract. The price paid was reasonable, wasn't it?

Mr. BRUMBY. Yes; yes; the price paid was very reasonable.

Mr. FREAR. It was bought to sell the railroad?

Mr. BRUMBY. I was against Mr. Blodgett selling the property, unless it was really forced on him.

Mr. LEA. Yes. The construction of the railroad to that tract increased the value of all the timber on it, didn't it, by making it accessible to market?

Mr. BRUMBY. I would say yes, although we didn't care anything about the railroad. It was a good tract of timber, and on account of its inaccessibility it was one of the lightest fire hazards and the lightest carrying property that Mr. Blodgett owned. I had stated to Mr. Blodgett at different times that I thought \$600,000, the price that he asked, \$635,000, was a low price for it, and that if he held that 10 years that it would be worth \$2,000,000 to him.

Mr. LEA. What quality was this spruce?

Mr. BRUMBY. It was an excellent quality of spruce. There is no such stand of timber on the Pacific Coast country that I have ever seen, and I have seen a great deal of it; most of it.

Mr. LEA. Well, what was it?

Mr. BRUMBY. As the map will show you there, there were sections there that will cut more than 40,000,000 feet of spruce alone, all excellent quality.

Mr. LEA. How does the spruce down there compare with other sections in proportion to the amount of other timber? You see, as I understand it, ordinarily there is a small percentage of spruce and a larger percentage of fir.

Mr. BRUMBY. Yes.

Mr. LEA. And hemlock, etc. Now how does the spruce, where it is located, compare with the other quantities of timber?

Mr. BRUMBY. It was an excellent quality of spruce.

Mr. LEA. Much more available for selective logging purposes, wasn't it?

Mr. BRUMBY. Yes, sir.

Mr. LEA. Than the ordinary tract?

Mr. BRUMBY. Yes. Where you have got 40,000,000 to a section it is a much better logging chance, and could be operated at a good deal less expense or cost than if there was 8,000,000.

Mr. LEA. Yes.

Mr. BRUMBY. About 25 per cent of it.

Mr. LEA. Just one other question. Can you tell me whether James Manary is any kin to Robert Manary?

Mr. BRUMBY. I believe he is a brother.

Mr. LEA. I see. That is all.

Mr. FREAR. About when was that railroad—you said that he had to start in the spring; when did your negotiations begin with the Government for taking over, when it eventually resulted in a sale on December 2? About what time was that that they began, that they wrote that they wanted it, or threatened to commandeer, as I remember?

Mr. BRUMBY. Well, I believe they had the abstract. I gave them the abstract five or six weeks before the trade was consummated, and it probably was in—oh, probably in August, I would say.

Mr. FREAR. August?

Mr. BRUMBY. Yes; I would say about that time.

Mr. FREAR. That is the first that you started negotiations for this sale, this final sale?

Mr. BRUMBY. No. This letter gave them the price and it was up to them. They told us later, I would say in August, that they would take it, notified Blodgett Co. that they would take it.

Mr. FREAR. Yes; but the railroad had been building long before that?

Mr. BRUMBY. Yes.

Mr. FREAR. For the Warren Spruce Co.?

Mr. BRUMBY. Yes.

Mr. FREAR. Without any intimation to you as to what was to be done, or to Mr. Blodgett?

Mr. BRUMBY. Yes.

Mr. FREAR. All right.

Mr. MAGEE. As I understand, Mr. Brumby—

Mr. LEA (interrupting). Just a second.

Mr. MAGEE. Can't I ask a question?

Mr. LEA. Excuse me for going. I don't mean any discourtesy by it.

Mr. FREAR. Yes. Mr. Lea has an appointment. That is the reason I shortened my own examination.

Mr. MAGEE. The position of Mr. Blodgett was that he was not willing to sell this tract, or the timber on it, unless it was for the benefit of the Government?

Mr. BRUMBY. Yes.

Mr. MAGEE. And the Government got title to the timber?

Mr. BRUMBY. Yes.

Mr. MAGEE. Is that right?

Mr. BRUMBY. Yes, sir; that is right.

Mr. MAGEE. Now, when was this proposed contract given to you by the Warren Spruce Co.?

Mr. BRUMBY. In January.

Mr. MAGEE. After Mr. Davis had surrendered his right?

Mr. BRUMBY. No; during that time.

Mr. MAGEE. His right to the option?

Mr. BRUMBY. During the time that Mr. Davis had the option.

Mr. MAGEE. Now, did you understand that if he executed this contract that the title to the timber would be vested in the Warren Spruce Co.?

Mr. BRUMBY. No, no.

Mr. MAGEE. Here is section 5:

It is agreed that the title to all timber cut hereunder for aeroplane stock or in connection with the operations of the operator hereunder, for which payment is hereby agreed to be made, shall, as soon as cut, vest in the operator and its assigns, but no interest in such timber or timber products shall be transferred or assigned by the operator to any person except the United States until the same shall be removed from the lands covered hereby.

Mr. BRUMBY. It was for that clause that we didn't find in any other agreement that was given out, that we would not sign that agreement.

Mr. MAGEE. Well, I say it was because it would vest the title to the timber, as you understood it, in the Warren Spruce Co., wasn't it?

Mr. BRUMBY. Yes, yes.

Mr. MAGEE. And not in the Government of the United States?

Mr. BRUMBY. No.

Mr. MAGEE. And whatever you signed you were going to sign——

Mr. BRUMBY (interrupting). Going to sign to the Government.

Mr. MAGEE. To the Government?

Mr. BRUMBY. Yes.

Mr. MAGEE. For the benefit of the Government?

Mr. BRUMBY. Yes.

Mr. MAGEE. Is that right?

Mr. BRUMBY. Yes; that is right. That is correct. If it hadn't had that clause, it would have been as other contracts, and we would have accepted it.

Mr. MAGEE. I offer this proposed contract in evidence. Mark it as an exhibit for identification and copy it in the record. Copy the typewritten part and leave out the interlineations in ink, and return it to the witness.

(Pursuant to the foregoing the copy of proposed contract was thereupon marked "Exhibit 26 for identification, Witness Brumby, September 9, 1919," and is set out in full, as follows, said copy being returned to Mr. Brumby, to wit:)

This agreement, made this —— day of ——, 1918, between ——, hereinafter called the owner, and Warren Spruce Co., an Oregon corporation, hereinafter called the operator, witnesseth:

Whereas the operator is engaged in riving spruce splits for delivery to the United States for use in the manufacture of aeroplanes pursuant to a contract held by said operator from the United States, and the owner holds title to lands hereafter described, upon which are standing certain spruce trees suitable for such riving operations, and the operator desires authority to enter upon such lands and to carry on such riving operations and the owner is willing to grant such authority upon the terms hereinafter mentioned:

Now, therefore, in consideration of the mutual agreements herein contained, it is hereby agreed between the parties, as follows:

1. The owner hereby grants to the operator the right and privilege of entering on any of the lands described in Schedule A, hereunto attached and made a part hereof, and grants to the operator the right and privilege of fell-

ing and removing therefrom such spruce trees as may be designated by the United States or its authorized representative for aeroplane stock.

2. The owner hereby grants to the operator the right and privilege of constructing and maintaining all trails, wagon roads, tote roads, and logging railroads which the operator shall find necessary or convenient over and across said lands in carrying on operations hereunder, for the purpose of removing spruce trees cut for aeroplane stock; transporting men, equipment, and supplies; and removing spruce logs and rived spruce and other merchantable timber authorized herein to be cut from said lands.

31. The owner hereby grants to the operator the right and privilege of establishing and maintaining camps on said lands for the accommodation of men employed in the operations contemplated hereby.

The operator shall in building trails, wagon roads, tote roads, and logging camps select and cut down, so far as is reasonably practicable, only the poorer grades of timber, and in the construction of any logging railroad no merchantable timber other than spruce or hemlock shall be cut unless it is necessary to remove the same in order to construct the railroad grade.

4. The operator hereby agrees to pay to the owner for all spruce trees cut from said lands which shall have been designated for aeroplane stock by the United States or its authorized representatives, the sum of \$7.50 per thousand feet log scale.

The operator agrees to pay to the owner for all other timber cut from said lands for the purpose of carrying on the operations contemplated hereby, including the building of trails, roads, logging railroads, and camps, and for all merchantable timber destroyed, or broken in such operations, on the following basis:

For merchantable spruce, the sum of \$4 per thousand; for merchantable cedar, the sum of \$3 per thousand; for merchantable fir, the sum of \$3 per thousand; for merchantable hemlock, silver and white fir, the sum of \$1.50 per thousand; all according to log scale.

All spruce trees upon said lands desired to be cut for aeroplane stock shall be selected and marked by or under the direction of a representative of the United States Signal Corps and the owner shall be entitled to have a representative present when such trees are so marked, and no tree shall be cut for aeroplane stock unless it has been first so selected and marked.

All spruce trees felled by the operator shall be scaled in lengths not exceeding 32 feet by a scaler or scalers nominated by First Lieut. J. Van D. Crisp of the Signal Corps of the United States Army, or his successor in office. The owner may have a representative present when said scale is made, for the purpose of checking the same, but the scale made by the representative of said Crisp, or his successor in office, shall be in all events final.

In making said scale calipers shall be used to determine the diameter and a steel tape to determine the length, and Spaulding's log scale rule shall be used in computing the contents of each spruce tree. Immediately upon making the scale of any tree, such tree shall be suitably marked or stamped indicating that the same has been scaled and no tree shall be rived or split without having been so scaled and marked.

All trees, other than spruce, felled by said operator shall also be scaled in the manner hereinabove provided for, and the contents of all merchantable timber broken or destroyed not agreed upon between the parties hereto shall be determined by some disinterested third party.

Said operator shall furnish to said owner within five days after the receipt by it from the United States of any scale, made as herein provided, a copy of such scale.

In the event that any trees shall be felled by the operator and not removed from the said lands within one year from the expiration of this contract, said tree or such part thereof not so removed shall, one year after the expiration of this contract, revert to and become the property of the owner, but at any time within such period the operator may remove such timber, not, however, interfering with the logging operations of the owner.

Payments from the operator to the owner on account of timber cut, broken or destroyed and scaled or estimated as above provided, shall be due and payable on the 15th day of each calendar month for timber scaled or estimated during the proceeding calendar month, according to the quantity thereof determined by said scale or estimate made as hereinabove provided for.

5. It is agreed that the title to all timber cut hereunder for aeroplane stock or in connection with the operations of the operator hereunder, for which

payment is hereby agreed to be made, shall, as soon as cut, vest in the operator and its assigns, but no interest in such timber or timber products shall be transferred or assigned by the operator to any person except the United States until the same shall be removed from the lands covered hereby.

6. The operator shall, during the dry season of each year, where there is any danger of fire, at its own expense, maintain a fire patrol upon the above-described premises, and shall be liable to the owner for all damage to timber caused by fire resulting from the operator's carelessness or negligence, and said operator shall also be liable to the owner for all damage to any property of the owner resulting from the operator's carelessness or negligence in conducting its operations under this contract. The operator shall, at its own expense, take every reasonable care and precaution to prevent fires on any of the above-described premises.

The operator agrees to comply with all laws of the State of Oregon, and with all rules and regulations of the officers of the State of Oregon relating to the disposition of tree tops, limbs, debris, and other inflammable material necessarily accumulating in such operations, and shall clean up according to the Government regulations regulating the cutting of timber in national forests, excepting, however, that said tree tops, limbs, debris, etc., shall not be burned, unless required by law or lawful regulations.

7. It is further agreed that if the operator shall construct any logging railroad or railroads on, over, or across any of said lands under the authority hereby granted, no title to any of the rails or fastenings used in the construction of any such railroad shall vest, except as hereinafter provided, in the owner, and the operator shall be entitled to remove all such rails and fastenings at any time within 1 year from the expiration of the term hereof, but the operator in so doing shall not unnecessarily disturb the ties, grade, or roadbed of any such railroad, nor remove any culvert, trestle, or bridge forming a part thereof, and the ties, culverts, trestles, and bridges shall, at the expiration hereof, become the property of the owner. If said rails and fastenings shall not be removed from said owner's premises by said operator within one year from the expiration of the term hereof, all such rails and fastenings not so removed shall be and become the property of the owner.

8. It is further agreed that this contract and all rights granted hereby shall, unless sooner terminated by the completion of the work contemplated herein, continue during the period of the present war between the United States and the Imperial Government of Germany, and in any event until July 1, 1919. The owner shall have the right to carry on logging operations on the lands covered by this contract, but not in such a manner as shall interfere with the operations of the operator in getting out aeroplane stock. No rights granted to the operator hereby shall be assigned without the written consent of the owner.

9. It is further agreed that if the operator shall fail to comply with the conditions and obligations hereby imposed upon it shall fail to remove such default within 30 days from written notice of such default, the owner shall have the option forthwith of canceling this contract and excluding the operator from the lands covered hereby.

10. This contract shall not take effect or be binding upon either of the parties hereunto until the same shall have been approved by indorsement hereon on behalf of the United States by First Lieut. J. Van D. Crisp, Signal Corps, United States Army, or his successor in office.

In witness whereof, the parties hereto have executed this instrument the day and year first hereinabove written.

_____,
Owner.
By WARREN SPRUCE, Co.
_____,
President.
_____,
Secretary.

Attest:

The foregoing contract is approved:

_____,
First Lieutenant, Signal Corps, United States Army.

Mr. FREAR. We will adjourn until 2 o'clock.

(Thereupon, at 12.15 p. m., September 9, 1919, a recess was taken by the subcommittee until 2 o'clock p. m.)

AFTER RECESS.

The committee met, pursuant to the taking of recess, at 2 o'clock p. m.

Mr. LEA. Mr. Chairman, we have a cable showing the shipments of lumber to the Allies and the United States. It is simply a table of what is already in the record, and I would suggest that we put it in.

Mr. FREAR. All right.

(The statement above referred to is copied in the record, as follows:)

Statement showing shipments of lumber to the Allies and the United States.

TESTIMONY OF MAJ. F. W. LEADBETTER.

(The witness was sworn by Mr. Frear.)

Mr. LEA. Where do you reside, Mr. Leadbetter?

Mr. LEADBETTER. In Portland.

Mr. LEA. How long have you resided here?

Mr. LEADBETTER. About 30 years.

Mr. LEA. What is your business?

Mr. LEADBETTER. I am a manufacturer of lumber and of paper.

Mr. LEA. And where are your plants?

Mr. LEADBETTER. My original plant was at Camas, Wash., about 2 miles east of Vancouver, and by the process of consolidation this plant has gone into a very large concern, which operates mills all over the coast and in British Columbia.

Mr. LEA. You have had a business familiarity with the logging business?

Mr. LEADBETTER. I might say I have; yes, sir.

Mr. LEA. About how many years?

Mr. LEADBETTER. About 25 years.

Mr. LEA. Are you familiar with the timber conditions at Queen Charlotte Island, Canada?

Mr. LEADBETTER. Only in a general way. I have been up in that country. We have a large paper mill at Ocean Falls, 150 miles south of Prince Rupert.

Mr. LEA. On the mainland?

Mr. LEADBETTER. On the mainland. There are long inlets running in for miles, and so it is exposed there.

Mr. LEA. Here is what I want to know, and I do not care for you to answer unless you have a knowledge of the matter. What are the conditions in reference to the production of spruce on Queen Charlotte Island, as far as logging is concerned?

Mr. LEADBETTER. They are very different from what they are here.

Mr. LEA. Briefly state in what respect.

Mr. LEADBETTER. The timber in that British Columbia country up north grows very close to the water. It is very easily logged, and we operate up there in an entirely different way. We have an original method of logging in that country called hand logging. The shores are more or less precipitous, except where there is an occasional stream coming in, and the operators go along the shores and cut down their trees and just dump them into the water. It is a comparatively cheap method of logging and a rather, you might call it, scattered method of operating. We are probably the largest operators up in that country, because the mill we took over, a paper mill, was an enterprise that was projected by some Englishmen, and they built probably the largest sawmill in the world up there, but it never was operated as a sawmill, because the timber existed in the way I have described, and it could not be logged profitably with that mill, although this mill was largely, I think, through my own efforts, started up by the British Columbia people and the logging method I have described produced a very large proportion, I would safely say, more, perhaps, than they got from any other mill, following the methods, if you will allow me, that were shown to be so productive of results; in other words, selective logging. Prior to the time that Mr. Disque started selective logging operations here the British Columbia operations had been an absolute failure. The war had been on about three or four years, and they had produced practically nothing during all this time, the English and British Columbia people; but upon Col. Disque taking charge here and demonstrating the method by which this material could be obtained, they profited by his work and came down here and found out how he was operating, and followed largely his methods of selective logging.

Mr. LEA. Had selective logging been carried on there before?

Mr. LEADBETTER. They had never heard of it.

Mr. LEA. You were in Washington part of the time during the war, were you not?

Mr. LEADBETTER. Yes, sir

Mr. LEA. Will you state your relations to spruce production in Washington?

Mr. LEADBETTER. Well, I entered the Army as a captain of Cavalry, or, rather, as a private and was elected captain of Cavalry, and when the Cavalry were not needed for war purposes I was made a major and sent to Washington to get guns for the State here for their militia which had been organized to take the place of the National Guard which we were sending to the front.

Mr. LEA. When did you enter the service?

Mr. LEADBETTER. Immediately after the declaration of war my father-in-law, Mr. Pittock, and myself were at Santa Barbara and offered our services, and when we came north and saw the governor, he said to report to the adjutant general, Gen. White, as he had charge of that. I had never met Gen. White, but that was my initiation into the Army, and he said "We need here a Cavalry regiment," and I joined the Cavalry regiment, and when the Cavalry were not needed I was sent to Washington to get these guns, and I think Oregon was only one of two or three States that ever got any guns.

Mr. LEA. Had you ever had any connection with military affairs before that time?

Mr. LEADBETTER. No, sir.

Mr. LEA. How old were you?

Mr. LEADBETTER. I think when I went into the Cavalry I was entered on the records as 48.

Mr. LEA. Will you briefly relate your relation to the spruce-production section?

Mr. LEADBETTER. Well, in Washington, I ran across, purely by accident, Col. Thompson. Col. Thompson was a financial genius, the head of the finance department, and he said he wanted me to come into the aviation section, that he had been put in charge of all finances connected with the Aviation Service and wished me to go with him, and if I would he would have me commissioned a major in the Regular Army. I wanted active service, but he seemed to think my knowledge of the Northwest country might be of more service there, so I entered the service at his request; and some time after that, I think about the 1st of October, I entered the service, and some time after that I was told that there was great difficulty over the spruce situation, and having been in the business here in the Northwest practically all my life, they wished I would go down and talk to the man who had that in charge. I did this and found there an elderly man by the name of Sligh. I introduced myself to him and he said, "You don't need to introduce yourself to me, because I know you." He said, "Don't you remember me?" I said, "No, I don't." He said, "I bought \$200,000 worth of timber from you." I said, "I guess you are mistaken; I never sold you \$200,000 worth of timber." He said, "I bought it from Spaulding." I said, "You must be the man who bought that Lebanon tract of timber from the Spaulding Logging Co. I am very glad to meet you." I immediately thought here was a man who would be of assistance, possibly on account of knowing the conditions out there.

Mr. LEA. We would like to get at this as briefly as we can; yet we want the facts.

Mr. LEADBETTER. I notice in this testimony a statement——

Mr. LEA. Before we get to that point, you were in the finance department first?

Mr. LEADBETTER. I was in the finance department.

Mr. LEA. And subsequently in what department?

Mr. LEADBETTER. I was ordered—you know in military matters you are simply ordered; you get a notice on your desk to do something, and you do it, and you do not know where it came from and you do not know anything about it. You are ordered to do it and you do it. One day I received an order to report to Maj. Sligh's department and take charge of his work; that he was temporarily absent; and I went down there and found a lot of telegrams that were unanswered, and they had been bothering the chiefs of the department. Maj. Sligh was a man who trusted nobody; he had no organization whatever in his office. If he went away everything stopped, and I found everything in chaos down there, with these wires coming in. I was ordered to step in and handle them, just exactly as if I had been always there.

Mr. LEA. How long did he remain away?

Mr. LEADBETTER. He remained away. I should say, about a week. It was probably in the latter part of October. I straightened out affairs as best I could.

Mr. LEA. Did you have any trouble with him about that on his return?

Mr. LEADBETTER. Not at all. He thanked me for it, and I would like to introduce a letter from him, on the old theory that liars should have good memories, and he had forgotten that he ever wrote me this. I would like to read this letter if I may.

Mr. LEA. Yes; it is short, and you might just as well read it.

Mr. LEADBETTER. This is headed "Equipment Division, Woods Section, CRS-ELW," the stenographer's initials, dated November 5, 1917, from Maj. Charles R. Sligh, to Maj. Fred W. Leadbetter.

Mr. FREAR. What date was that?

Mr. LEADBETTER. November 5, 1917, just prior to his being relieved. The letter says:

MY DEAR MAJOR: I desire to express to you my appreciation and tender you my thanks for the work which you did during my absence from the city. Since I have had an opportunity to go over the correspondence, I find that your messages meet absolutely with my approval, and I desire to assure you of my appreciation. If an opportunity offers I shall be very glad to reciprocate.

He certainly is reciprocating.

Mr. LEA. I did not intend to get into this phase of it now, and I wish you would tell us briefly what if any knowledge you have about the demand of the Allies upon the United States for the production of spruce.

Mr. LEADBETTER. Well, it is almost impossible to tell you the chaos and the pressure that was brought to bear upon us there. The Allies were in such dire distress for materials that they not only came after us to furnish it to them, but had grabbed it wherever they could; they took it from each other; they simply were expecting at any time that all their factories would be closed down and it was only by most extraordinary efforts that we were able to satisfy them at all. They required a very large amount of material, running into the millions of feet per month. I might say in this con-

nection that the British were so frightened that they bought 11,000,000 of southern cypress, which had never been used for airplanes, not a stick of which could be used, and they simply sent it over there because they thought they might be forced to use it. They were after everything they could get their hands upon because they were afraid they could not get materials.

Mr. LEA. To what extent did your duties bring you in contact with foreign Governments on the spruce question?

Mr. LEADBETTER. That was entirely in my hands. I met with the representatives of the different Governments and attempted to satisfy them to the best of my ability. I found that the English were getting the major portion of the stuff, and the French, who were building our battle and fighting planes for us and repairing all the planes for all the Allies there on the field, were getting very little; they made an insistent demand for material, and I allotted them a larger proportion, whereupon the English took the matter right over my head to Col. Deeds, going to Col. Deeds, and he did not know anything about it, and then they took it to Gen. Squier, and the same thing happened with him, and then they took it up with the Aircraft Board, and in a general meeting of the Aircraft Board, in which I personally participated, representatives of Italy and France were present, and the thing was thrashed out, and they were made to take such an allotment as we could give them.

Mr. LEA. You finally agreed on a proportionate allotment to the Allies?

Mr. LEADBETTER. No, sir. I cabled Gen. Pershing abroad as to his idea regarding the proper allotment. He was there on the field, and I got back a cable telling us to send this material in certain percentages to each of our Allies, and we endeavored to follow that as closely as possible. But the distress was so great that at one time while I was here the English—Lord Reading, I think, himself, went with them—said that owing to the drive at Amiens so much of the material had been taken that unless they got a million feet of aircraft material immediately they would lose control of the air. On my return I found that this million feet had been taken away from the other Allies and even transferred in transit. I thereupon took the matter up—the French took the matter up with me, wrote me a letter saying that they had not received the replies. I had inaugurated a system of daily telegrams from here, sending the numbers of the cars shipped; it was so absolutely essential to have answers to them every day I sent the allied nations statements that such and such a car was shipped, and I furnished the statements whenever they asked for them in regard to conditions.

Mr. LEA. Have you figures to show the amount of demands on the different dates?

Mr. LEADBETTER. I suppose I might be able to pick up the figures, but I have it very well in my head.

Mr. LEA. Then just give us that.

Mr. LEADBETTER. Because we had many terrific battles and controversies over this matter. I remember distinctly Gen. Carmack coming into a meeting and insisting that the English requirements alone were 15,000,000 feet of airplane material per month, and I took issue with him on the matter and said, "General, that means so many planes per month. What is your present output of planes?"

And he explained to me at that time that my figures were incorrect because they needed to have a spare plane of wood for each complete plane they made. In other words, whenever they got out 7,500 planes it meant 15,000 complete wooden parts so that they would have duplicates.

Mr. FREAR. That is true of all the parts, engines as well?

Mr. LEADBETTER. I do not know as regards that. We found it took a great deal more lumber to make a plane than the ordinary man would figure. For example, I see in Maj. Sligh's testimony that he says 269 feet to a plane. That is nothing more nor less than ridiculous. I presume there is only 25 feet of wood in that chair [indicating], but you can readily see that in cutting the timber to the small dimensions that are necessary to make that chair five times that amount of material would be consumed; whereas literally he might have been correct, that in a plane there was only 269 feet of spruce in some particular plane.

Mr. LEA. So the amount of timber spoiled is one question and the amount of timber in the machine is another?

Mr. LEADBETTER. An altogether different question; yes, sir.

Mr. LEA. What have you in mind in reference to the totals demanded?

Mr. LEADBETTER. The English finally diminished their demands to 10,000,000 feet of our spruce and fir; that is, our airplane material, agreeing to get elsewhere, from British Columbia and other places, some additional places to get out their requirements. The French, as I remember it, required 5,000,000 a month, and the Italians about the same, making a total of 20,000,000 a month that our Allies alone needed; nor would they say that was all they needed. That was what they needed then and there.

Mr. LEA. About what period was that?

Mr. LEADBETTER. I should say that was quite early in the game, Mr. Lea; I do not recollect exactly. These meetings were occurring weekly, sometimes almost daily.

Mr. LEA. Do you remember what the demand was in the spring of 1918?

Mr. LEADBETTER. That was about the time they were making their demands.

Mr. LEA. Coming to the question of Mr. Sligh's testimony in Chicago, you have read over his testimony, have you?

Mr. LEADBETTER. Yes, sir; I have a copy of it here.

Mr. LEA. I understand there are certain matters there that you would like to testify to before this committee.

Mr. LEADBETTER. Yes; very much.

Mr. LEA. Now, referring to page 574 of the record, where the lumber committee is referred to as profiteers, what, if anything, is your reply to that?

Mr. LEADBETTER. Well, I never saw a harder working crowd of men in my life than those lumbermen. We had some from here, and they worked day and night. Mr. Ransom was on here, and Mr. Downman, the chairman of the committee supplying lumber for Government purposes, became sick entirely from his efforts. I rather think he is dead. He looked so sick I did not think he had long to live. And these men, as far as my association was concerned—and I want to tell you that my association went very far

with them before I left there, because my duties with Col. Disque were only a small portion of my work and got smaller and smaller as time went on.

Mr. LEA. Did you sell any lumber to the Government yourself?

Mr. LEADBETTER. Not at all; not a stick.

Mr. LEA. Did you make any profit whatever on any lumber sold to the Government while you were in the employ of the Government?

Mr. LEADBETTER. Not a dollar. I have an interest in the Spaulding Logging Co., which probably supplied some material for Government needs, but if it has I know nothing about it and it was just in the ordinary order of business.

Mr. LEA. What kind of lumber were they supplying?

Mr. LEADBETTER. They have no spruce whatever; they have not a stick of spruce in any of their holdings.

Mr. LEA. Were you in any way responsible for the discharge of Sligh, or the cause of his removal?

Mr. LEADBETTER. Not in the slightest degree.

Mr. LEA. What, if any, reason has he got for laboring under the impression that you caused his removal?

Mr. LEADBETTER. I will tell you if you wish to know just what my connection with Mr. Sligh was upon his removal. I never spoke to Col. Deeds nor to Col. Montgomery in regard to Sligh's position. Col. Thompson was my chief, and my relations in the finance division were very happy, and I presume the reason I was sent there was because I had taken charge of his office for a week in that way, and they were looking for somebody that knew something about the actual operations, and so it dropped upon me. Upon my receiving the order I went immediately to Maj. Sligh and said to the major, "Here is my order to take over the spruce and fir department of your business, leaving you the hardwoods, with which you are familiar; you are the hardwood man. I don't want it, and you are familiar with this work." He was an egotistical man; he liked to prowl around with gorgeously dressed foreigners, and I had seen him and knew that was the case, and he liked that work and I care nothing about it, and I said, "Major, I am willing to help all I can, and you put a little desk in the corner of the room and I will come down and help in this business, and I can fix it up some way." He says, "Major, would you do that?" I said, "I certainly would. You come and dine with me tonight, Major, and we will talk this whole thing over and we will get along very comfortably. All I wish to do is my little bit for the Government, and I am sure we can get along." He said, "All right, I will do that gladly, and I thank you very much."

He came to my house that night, and there were other friends invited. I had as guests Mr. and Mrs. Weatherwax. He seemed to be very friendly. We talked about things in general. Of course other guests were present and we could not talk privately about it; but I supposed everything was sweet, and the next morning I went in and he says, "Major, this job is not big enough for you and me, and I have written a letter to Col. Deeds asking him to relieve you of these duties." I said, "Let me see the letter." He showed me the letter, and there was nothing in it except a formal request, and I said, "Now, you will have a fine chance to get this back, because

I am going to the coast and I will be gone three or four weeks, so you will have no interference in any way in regard to getting your office back, because I don't care anything about it." At the end of three weeks I returned, and was peremptorily ordered to assume those duties.

Mr. LEA. Did he ever use any unkindly language to you at any time before his removal?

Mr. LEADBETTER. None the slightest. You can see his letter that is in evidence here. We had nothing but the friendliest relations.

Mr. LEA. I want to get at the substance of this as rapidly as we can. On page 577 Col. Sligh speaks slightly of—

Mr. LEADBETTER. Col. Harris.

Mr. LEA. Of Col. Harris.

Mr. LEADBETTER. Col. Harris was Mr. Coffin's representative, legal representative, on the Aircraft Board, a very able, exceedingly patriotic man, and one of the hardest working men in Washington. In several places here Mr. Sligh makes slighting references to him as delaying the work and impeding his progress. I found him just exactly the opposite. Col. Harris facilitated my work in every possible way, as did his offices, and it was always a pleasure for me to have any business relations with Col. Harris in the very arduous duties he was performing in Washington.

Mr. LEA. Now, on page 584, Mr. Sligh accuses Mr. Allen of being drunk most of the time. What do you know about that?

Mr. LEADBETTER. He accuses him of being drunk most of the time and incompetent all of the time. I saw Mr. Allen frequently in Washington, and I never saw him in the slightest degree under the influence of liquor. I never met him here and never saw him since. I thought him an exceedingly reasonable and competent man, and Mr. Coffin was of that opinion, and the letters written cover that situation.

Mr. LEA. At any time during your associations with Sligh before his removal did he ever intimate to you any unfriendliness toward Mr. Allen?

Mr. LEADBETTER. Well, I don't know; as regards that, I do not remember. I paid no attention to it, if he did. Mr. Sligh says here that the Italians were the only Government conducting their affairs intelligently. Well, that is so ridiculous that it goes without saying that these great Governments that had been in the war four years, and that the Italians were the only ones that knew anything about the business. The English had been in the timber business, and had been traders and traffickers since the year 1, and I found them not only conducting their affairs very intelligently but grabbing everything in sight. I had great difficulty in restraining them from taking our own stuff. In fact, the only trouble I had at all with the English was at the start, getting them to give us an opportunity to distribute this stuff fairly. I did not tell him that at all, because things were in such a chaotic condition, they were so frightened with the possibility of getting no material at all, that they were forced to do it; but after we got things adjusted and they found that Col. Disque's operations was going to give them the stuff, I found them very reasonable, and I became very friendly with them. I dined with Gen. Carmack.

Mr. LEA. What is the next item you want to take up?

Mr. LEADBETTER. On page 585, this miserable liar speaks of my father-in-law's will. Pittock and myself were close business partners for 25 years, and appraised in his will was over a million dollars worth of my property—I mean that we were jointly interested in. He left his money to his children. He never left me any \$500 or any other amount; that would be highly improper for him to have done so; and this man deliberately testifies under oath that in Mr. Pittock's will he left me \$500, and that I was now contesting his will. Well, I have no interest under his will, and, therefore, of course it would be foolish for me to say that I am contesting it in any way, shape, or manner. My wife was his daughter, and she owns a fifth of his estate. Now, why this man should just deliberately falsify under oath—

Mr. MAGEE. There is no contest of this will pending?

Mr. LEADBETTER. There may be a contest of the will, but I have nothing to do with it. I am not contesting the will in any way, shape, or manner.

Mr. MAGEE. Do you know whether there is any contest pending or threatened?

Mr. LEADBETTER. Oh, I would not be surprised if the will was contested. In fact, it will be contested; but he makes the statement here that I was a beneficiary of \$500 under the will and contesting it, with the evident intention of belittling me.

Mr. LEA. Are you a beneficiary under the will?

Mr. LEADBETTER. Not the slightest.

Mr. LEA. What is the next point? I would like to get along as fast as we can.

Mr. LEADBETTER. On page 586 he speaks of Disque's interview. I will say with regard to this interview that I met Col. Disque by accident, purely. I was introduced to him by Col. Seoane, a Cavalry officer. Being a horseman and coming in from the cavalry, a cavalryman who came in there, we always met each other; it is a habit they have, you know. One day Col. Seoane said, "Here is another cavalryman that has come in, Col. Disque." I met him and Seoane asked me afterwards "What do you think of that man?" I told him he did not impress me one way or the other. He says, "You want to have another interview with that chap, he has had one of the most remarkable careers in the Army." He said, "He was over in the Philippines, and caused—I do not know—several hundred Moros to surrender to 36 men after several days, tracking them day and night," and he said, "Then he was in charge of a great big Government plant there employing about 1,500 men. Being a long way from the base of supplies they make everything in the world. You can get them a few parts and they will make an automobile."

Mr. FREAR. Who said this?

Mr. LEADBETTER. Col. Seoane—C. A. Seoane.

Mr. FREAR. I thought you were referring to Sligh?

Mr. LEADBETTER. No. I met Col. Disque, and following Col. Seoane's advice, I questioned him about these enterprises, and was very much impressed with the man's business career in the Army, which was very unusual.

Mr. LEA. Now, on page 587 a reference is made to Disque's desire to get in the service, and the statement is made that he spent nights and days trying to get this appointment on the Pacific coast. What do you know about that?

Mr. LEADBETTER. The appointment came about in a very funny way. I do not think Col. Disque even knew that the appointment was up. I was summoned willy-nilly to the Aircraft Board; they were worried to death about the spruce situation and wished me to give them some ideas, make any suggestions that I could. I told them that I thought the only method to get spruce was to put the soldiers into the woods; that the draft had taken all the loggers out of the country. In addition to that the forestry regiments and the engineer regiments were actively recruiting these logging men to take them over to France, and it had taken out of the logging industry several thousand men. The only method by which this great industry could get started again was to put the men back in the woods, and I advocated taking them out of the encampments before they got overseas and slapping them back in the woods where they could do more work than they could abroad.

They asked me how many men it would take, and I told them I did not know exactly. They wanted to know who could do it, and I told them it took a military man. I could not do it, because I had no military training. It took a military man with a business training, if such a man could be obtained. They said, "Well, where can we find such a man?" I said, "Well, I don't know, gentlemen, but it seems to me that Providence has put such a man across our path." They said, "Who is that?" I said, "A chap by the name of Disque, Lieut. Col. Disque." Gen. Foulois was present at the meeting in place of Gen. Squier, who was absent that day, and he said, "Well, I can not spare him, he is one of my best men. I am going to take him overseas with me. He would not stay anyway." Whereupon they all said that if this man was essential that he would have to let him go. I said, "Well, I do not think he will go there. You will have to make it an object to him. General, if you will authorize me to tell him that you will give him a colonelcy, that you will recommend him for a colonelcy, and will take him overseas the minute he gets this work done, I will see what I can do with him." He says, "I will do that to-morrow, Major," and he did. I then went to Col. Disque, and he wanted to go overseas. All of his life he had been a soldier. He was a graduate of the Staff College, and he thought he had ideas that would assist materially in helping out the situation over there. He had come back into the service for that purpose, and it took all my persuasive powers to interest the colonel in this new departure.

Mr. LEA. Well, finally he was appointed to come here?

Mr. LEADBETTER. Yes. This luncheon at which Maj. Sligh makes these remarks in regard to Col. Disque occurred at my house. I got the different people together there—Col. Harris, principally—as representative of the Aircraft Board. I invited Maj. Sligh to the luncheon purely through courtesy. He had no interest at all in the matter. When I got these people at luncheon I endeavored to pull out from the general—he was always very close-mouthed—the work that he had been doing. The general never claimed to have inaugurated all these industries in the prison. He simply, as I would question him, stated the experiences he had in running these different things. There were a large number of them, a sisal factory, different canneries, a foundry, a stone-working plant, some sort of a little wood-working plant, very many things there, and the thing

that impressed us more than anything else was his ability to get along with those prisoners while there. We knew that the labor situation out here was a very, very ticklish situation, with sabotage and I. W. W. troubles out here. Those men were putting lime in workmen's shoes, so that when a man would go to work in the morning he would not know there was any lime in his shoes, don't you see, and he would be out of commission for a week or ten days, and there were all sorts of things that they were doing. We thought a man that was familiar with conditions and had succeeded so admirably in the administration of his prison would be a very good man for us.

Mr. LEA. Were such circumstances as you have just related common occurrence or isolated cases?

Mr. LEADBETTER. They were very common. They were making all sorts of trouble for the operators.

Mr. LEA. Now, on page 587, the testimony of Mr. Sligh states "Mr. Leadbetter came to me and asked me to recommend Col. Disque in place of Mr. Allen on the coast." Is that true or not?

Mr. LEADBETTER. Not at all. I would not go to Mr. Sligh; I had no authority to go to Mr. Sligh. I was in the Finance Division, and he did not have anything to do with Col. Disque's appointment. All those matters were handled by the Aircraft Board. Maj. Sligh eventually in some of these cases might have issued the actual order as representative of the board. I think he may possibly have done that in the case of Mr. Hawkins, but these appointments were made after threshing around with the Aircraft Board and various people, and they were generally handled by Col. Harris.

Mr. LEA. Now, on page 581, what is the point that you want to make there?

Mr. LEADBETTER. Well, the point that I want to make there is in regard to these charges of profiteering. I was in Washington for quite a period of time, and the only profiteering that I know of was the profiteering of Col. Sligh himself, according to his own testimony. According to his testimony he was ordered to purchase furniture for part of the Air Service, and he makes the silly plea that he gave an order—I think it was for a considerable amount of money—to his own furniture factory, because they wanted odd pieces and no other factory could supply the goods. This was a direct order to Maj. Sligh himself, according to his testimony. We have no testimony as to the amount of furniture that may have been sold to this Government while Maj. Sligh was in uniform there in Washington, and since reading this testimony that may account for the animus this man seems to display. He accuses everybody in Washington of being profiteers and being crooked except himself, and he seems to take great umbrage at being removed from duty. Anybody else would be glad to get away from such a duty if they felt their conscience would not allow them to remain.

Mr. FREAR. Isn't that going a little too far? I am perfectly willing to allow you to pass judgment upon him and all that, but these continual arguments in regard to him, his mental condition—

Mr. LEADBETTER. You have read his statement in regard to myself?

Mr. FREAR. They were very broad, comparatively, and you are making a summary of his whole record constantly as you go on and that is not necessary.

Mr. LEADBETTER. Don't you think it is necessary for me to show the motives by which this man might be actuated in making these accusations against myself?

Mr. FREAR. I think you should make your own statements to the committee and let the committee determine the motives, if any existed, and if the committee is interested, which I doubt very much if they are, in your accusations against him or his against you. That is rather a personal matter. You are endeavoring to pass upon his mental processes that determined his actions. That is not necessary; the committee can do that fully as well as you. You should state the facts.

Mr. LEADBETTER. How can the committee determine that if it does not allow me an opportunity—

Mr. FREAR. State the facts, that is what we are asking.

Mr. LEADBETTER. Is this not a fact, that he ordered this furniture?

Mr. FREAR. That is true. Now we know that. That is right here and we know it. That is your statement. You see, here is the difficulty that it brings up—it necessitates, if we attempted to take up every page that you have been discussing here about Harris and everything else, there would be an infinite amount of discussion in order to determine it, either in justice to you or Sligh. That is all I mean. Just hold it down to some reasonable extent. I do not object to you passing your opinion on Sligh or anything like that.

Mr. LEA. See if we can not get the facts here and get through as hurriedly as we can. On page 589, referring to you, Sligh says: "He said, 'Sligh, I have got an option to buy 4,100 acres of spruce land in the Siletz Basin,' and he said 'I want you to come in with me, and we will organize a company and take over Spalding's two mills, one at Newburg and one at Salem.' He said that Spalding was in the hospital," etc.

Mr. LEADBETTER. That is an absolute lie. I never had an option on 4,100 acres of timber in the Siletz Basin in my life. I never had any, I never owned any timber in the basin, and did anybody even come to me with a proposition, and Maj. Sligh never even—this was entirely an emanation of his own brain, and he never had these thoughts up to the time he was dismissed, because he wrote me this letter and he dined at my house after he was dismissed from the service. He never made the slightest recommendation along those lines to his superiors.

Mr. MAGEE. When was this letter written, Major? After his resignation?

Mr. LEADBETTER. No; this letter was written just before his resignation. His resignation, I think, was about the 8th, and this letter was about the 6th.

Mr. MAGEE. About the 8th of November, 1917?

Mr. LEADBETTER. The 8th of November, 1917.

Mr. LEA. I think I can straighten that out; his removal was on the 8th, but he actually turned in his resignation on the 22d of the following January. This was two days before he was ordered removed.

Mr. LEADBETTER. He dined with me after he was removed, at my house, as my guest, with my wife and family and my guests. He wrote this letter after he had been removed from the service, when I told him I would be glad to help him.

Mr. MAGEE. Do I understand that he was removed on November 8, 1917?

Mr. LEA. That is the way I remember the date.

Mr. FREAR. I do not remember.

Mr. MAGEE. And then afterwards that he resigned?

Mr. LEA. His resignation, technically, was turned in on the 22d day of January.

Mr. LEADBETTER. He had other duties, Mr. Magee; he had other duties in the hardwood section.

Mr. LEA. He was not actually removed; he remained in charge of the hardwood section.

Mr. LEADBETTER. He was removed from performing certain services, but remained for other services. As to those other services he sent in his resignation January 22, 1918.

Mr. LEA. Now, on page 590 he says:

His proposition was to organize a company, buy in the 4,100 acres, buy the mills owned by C. K. Spalding & Co., of which Leadbetter and his father-in-law had 51 per cent interest—

Mr. LEADBETTER. An absolute lie.

Mr. LEA (continuing):

And that we would cut spruce and sell it to the Government.

Mr. LEADBETTER. I never had a 51 per cent interest in the Spaulding Co., nor did my partner's interest and my own ever amount to 50 per cent.

Mr. LEA. Did you propose to him to organize a company?

Mr. LEADBETTER. I never did. The only conversation I had with Mr. Sligh along that line was when he was trying to find some method by which supplies could be increased, and I said—this was early in the game—"There is only one way, in my judgment"—he is a man of no vision at all, and when I told him that the only method was to put the men out in the woods he said, "You can not use soldiers." I said, "The Government has got to get in and log and do it." He said, "They can not do it, the Government can spend no money." I said, "The only other way I can figure out is to take some of these mills up the valley that are not sawing any spruce whatever and transport spruce logs to them from some other place and put them to work, the Booth-Kelly mill at Eugene, the Hammond mill at Mill City could get logs from the Siletz country, the Spaulding mills in which I am interested, at Salem and Newburg, and the Dallas mill could get logs from either the Siletz or Tillamook country, and the Silverton mills can be supplied—and the Charleton mill, which had been burned, but it was in a good location—could be supplied from the Tillamook country." He said, "Well, the operators will not do that." I said, "If they don't, take over the plant, organize a company, and get out this stuff for the Government." That is all the conversation I had with this malicious old liar.

Mr. LEA. He says, on page 590, referring to you, "I treated him rather brutally, and he never spoke of it afterwards."

Mr. LEADBETTER. There never was any mention of it, only in this casual way. He immediately said—as I say, he was a man of no vision, he was just—

Mr. LEA. "I characterized his efforts to me as nothing more or less than attempted bribing." Did he ever say anything of that kind?

Mr. LEADBETTER. Nothing whatever; nor did he ever say that until he was removed from his office, and I was trying to hold his job for him. He never even thought of that until some time afterwards, and then in searching his mind for some method to throw dirt upon somebody he evolved this purported interview out of his own mind and proceeded to spread it upon your records.

Mr. LEA. Upon page 591 he testifies about a copy of a letter that Mr. Leadbetter wrote to Mr. Howe, of the Aircraft Board, in which he made the statement that Col. Disque's appointment was made by the Secretary of War after Disque and Leadbetter had had a conference with Samuel Gompers, in which they had made satisfactory arrangements with him. What is there about that?

Mr. LEADBETTER. Well, there is this: When Col. Disque decided to take on this work, the matter of getting soldiers into the woods was the first consideration, getting somebody to help cut this material. I do not exactly remember who he went to first, probably the Secretary of War, but he was told to see Mr. Gompers and see if it would be a satisfactory proposition, could be worked out, to consult with him; that he was there as a labor representative and we were having a great deal of trouble with labor on the coast, and to get his advice and see what he thought about such a proposition. Col. Disque visited Mr. Gompers and I was with him. Mr. Gompers did not like the idea of it very much at first. Col. Disque explained to him his own ideas, that he was a poor man—he entered the Army as a news-boy, I think, or something in the first place, he entered the Army and worked his way up through the staff college. Mr. Gompers seemed to feel that if the soldiers went in there and the laborers did not like anything they might be lined up and shot. Col. Disque said there was nothing of that kind could take place; that they simply wanted to get this material out.

Mr. LEA. Now, on page 593 he states that it involved an investment; that is, referring to this—

Mr. LEADBETTER (interrupting). I can state, Mr. Lea, that there was no agreement with Mr. Gompers at all, no arrangement, no agreement whatever with Mr. Gompers in regard to the labor.

Mr. LEA. Passing on to this question about the investment referred to on page 593, "It involved an investment of several hundred thousand dollars, but he assured me it would not cost me a cent."

Mr. LEADBETTER. He is just simply a malicious malignant liar, safely ensconced 3,000 miles away from where we are talking to-day, and devoting his energies, after he was dismissed from the service, to impeding and hurting those of us who were doing our best to help the Government and get a lot of this wood.

Mr. LEA. I would suggest this: I do not blame you for calling him a liar, but I think we had better leave that out of the record. Just try to cut out the personalities and try to get at the facts. Now, was there something on page 597 that you wanted to refer to; a change of price, is that material?

Mr. LEADBETTER. Well, he said that Leadbetter changed the price on fir, aircraft material, from 55 to 65.

Mr. LEA. Did you have anything to do with that?

Mr. LEADBETTER. Not the slightest; no, nothing in the world. I was simply there in Washington; I made no contracts; I had no real authority; Col. Disque was the head of the Spruce Production De-

partment. His headquarters were here and I simply carried out his wishes in so far as I was able to do so. He changed the price from 55 to 65, and the first I knew of it was when I got the telegram that the price was changed.

Mr. LEA. What is the note you have there at the bottom of page 5?

Mr. LEADBETTER. That is in regard to the letter of the American export. That is immaterial.

Mr. MAGEE. The price was fixed here by Gen. Disque?

Mr. LEADBETTER. The price originally was fixed in Washington at a meeting of the manufacturers, Mr. Sligh, and the British and French representatives, and it was found so difficult—the contracts not being filled at all—it was found so difficult to get the material out that Gen. Disque raised the price, thinking that might help a bit.

Mr. MAGEE. He telegraphed you?

Mr. LEADBETTER. After it was raised he telegraphed me that the price of fir would be so much from now on. Whereupon I had to take the matter up with the foreign Governments and explain to them why it was raised. They were satisfied.

Mr. LEA. Do you know on what ground Sligh was removed from the service?

Mr. LEADBETTER. Only Col. Disque's statement that it was incompetency.

Mr. LEA. Do you know if that is on the records of the War Department?

Mr. LEADBETTER. I really don't know. He was not removed from the service, you understand, but he was removed—

Mr. LEA. From this particular branch?

Mr. LEADBETTER. He was removed from the duties as far as—

Mr. LEA. Now, unless there is something else you think of that is material, that is all.

Mr. LEADBETTER. This statement in regard to this Vancouver mill.

Mr. LEA. What is that?

Mr. LEADBETTER. Well, I think it is on page 590 that he says, "Yes; and the property upon which Col. Disque established this cutting-up plant." Of course, I think, that was an error on his part, I do not think he intended to say that, because I have no property on which Col. Disque established any cut-up plant. He says, "The old mill; it had been abandoned for 10 years, but as soon as Disque got in there Leadbetter attempted to sell it; he offered it for \$150,000."

Mr. MAGEE. What mill is this?

Mr. LEADBETTER. The Pittock & Leadbetter Lumber Co. at Vancouver, Wash. He testified on another page that he visited the mill himself, and the property over there was not worth over \$10,000. Now, the book value of the plant is over \$300,000.

Mr. FREAR. What page is that, do you know?

Mr. LEA. There is a reference to it on page 590, about the middle of the page.

Mr. FREAR. But I mean about it being worth \$10,000?

Mr. LEADBETTER. I think it is in the latter part. I will find it for you.

Mr. FREAR. Well, it is immaterial.

Mr. LEADBETTER. I have it right here, sir. Probably it is that place about that export.

Mr. LEA. Well, we need not wait.

Mr. LEADBETTER. Well, I will get that for you directly.

Mr. FREAR. I have not seen it. It may be in the record.

Mr. LEADBETTER. Well, if you will allow me a second, I will find it for you. [Examining papers.]

Mr. LEA. You mean the offer that you made?

Mr. LEADBETTER. Yes.

Mr. LEA. Well, that is on page 590:

The old mill had been abandoned for 10 years, and as soon as Disque got in there Leadbetter attempted to sell it. He offered it for \$150,000.

Mr. FREAR. Well, that part I saw, but I mean the part where it was not worth over \$10,000.

Mr. LEADBETTER. Yes; there is another place here. I will get it in a second. He testifies himself that he is a practical man. [Examining papers.] Yes; on page 688.

Mr. FREAR. 688?

Mr. LEADBETTER. Yes.

Mr. FREAR. That was in the afternoon. I was not there then.

Mr. LEADBETTER. Let me say, Mr. Chairman, in regard to this letter, that you will find here on page 687—

Mr. FREAR. I left earlier in the day.

Mr. LEADBETTER. This is a letter that Maj. Sligh offers in evidence as showing the charge of profiteering that I defy anybody to see anything in it other than a simple effort on my part to have this mill operated for the benefit of the great emergency existing for spruce and fir rather than to see it dismantled and sold for \$150,000, when I had here and have a telegram in my pocket offering me that sum of money. Now, you gentlemen have a legal trend of mind, and if you can find anything in that letter that inferentially even savors of profiteering I would like to know where it is. I wrote it in the office at Washington. It was a personal letter, kept in official files, and this rascally old fellow stole it, evidently; he couldn't get those letters out of the archives at Washington except by stealing them himself or having them stolen by somebody—

Mr. FREAR. Isn't that a violent accusation?

Mr. LEADBETTER. Yes, sir; it is.

Mr. FREAR. Those are public records, and you have charged this man with practical theft. I don't think this committee ought to sit and listen to it. Every Government record in Washington is a public record, and anyone has access to them.

Mr. LEADBETTER. How do you mean?

Mr. FREAR. Because this committee has letters of yours that they surely never stole.

Mr. LEADBETTER. Do you mean anybody can go into our office down there in Washington and get papers they kept under lock and key most of the time?

Mr. FREAR. They can secure access so far as copying.

Mr. LEADBETTER. I would like to have the chairman, if he wishes the facts in this case, send a telegram to Maj. Sligh, and I will answer—I will sign it.

Mr. FREAR. But I think the statement that this committee is guilty of stealing—

Mr. LEADBETTER. Not at all.

Mr. FREAR. You say these records could not be had or be found without stealing them?

Mr. LEADBETTER. I say he could not get them.

Mr. FREAR. Any man can get access to the records.

Mr. LEADBETTER. Do you mean to say any man can walk up there into my office in Washington and take my records out of my files and do with them as he pleases?

Mr. FREAR. That is not what is the matter.

Mr. LEADBETTER. That is what this man did. He has stolen—he has taken out records out of my files there.

Mr. FREAR. That is a question that you can't decide here or any other place. Maybe he had access to those records, which are public records. Your records, if they were left there in Washington, we have access to all those records there.

Mr. LEADBETTER. For that purpose?

Mr. FREAR. We certainly have.

Mr. LEADBETTER. My private letters left there, for the purpose——

Mr. FREAR. Wasn't it left there?

Mr. LEADBETTER. Not for the purpose of this man, to go up and put in evidence here as testimony——

Mr. FREAR. Strike out that part of that. I asked was it left there? Strike out the rest. Was your letter left there?

Mr. LEADBETTER. What do you mean?

Mr. FREAR. Just what I say. Was your letter left there in the records?

Mr. LEADBETTER. Certainly.

Mr. FREAR. You charge this man with stealing it.

Mr. LEADBETTER. I charge him with stealing all those papers.

Mr. FREAR. Was your letter left in the records?

Mr. LEADBETTER. Certainly it was left in the record.

Mr. FREAR. Well, that is all there is to it. It is a public record.

Mr. LEA. Well, to clear the air a little bit here——

Mr. FREAR. This personal abuse, either by you or Mr. Sligh, neither one is——

Mr. LEADBETTER. You told Mr. Sligh, when he was testifying against me, that you were interested in this Mr. Leadbetter, "Go on." You have it in his testimony, "I am interested in this man Leadbetter."

Mr. FREAR. This is all news.

Mr. LEADBETTER. It is right here. You were encouraging him to talk against me.

Mr. FREAR. No; I didn't have that idea in the world.

Mr. LEADBETTER. It is right there in your record: "I am interested in this man Leadbetter."

Mr. FREAR. I don't see what it is. Give me the page.

Mr. MAGEE. I want to get straightened in my mind this other matter and I want to see if I got this straight. What is it we have been talking about, some communication that has been lost?

Mr. LEADBETTER. Not lost at all, sir.

Mr. MAGEE. Or some communication——

Mr. LEADBETTER. There is nothing lost in our records. Stolen, I said. I make the charge, designedly and freely.

Mr. FREAR. But he had this back there.

Mr. LEADBETTER. That he could not have got it in any other way.

Mr. LEA. If you will allow me, I think I can explain this.

Mr. FREAR. Well, so far as that is explained——

Mr. MAGEE. I want to say——

Mr. LEA. It is in the testimony already. Sligh in effect confessed that he stole those letters from the files of the War Department.

Mr. FREAR. Where does he state it?

Mr. LEA. On page 687.

Mr. FREAR. That is another thing I didn't see.

Mr. LEA (reading):

Mr. LEA. From whom did you get this letter—from Mr. Johnson?

Mr. SLIGH. I would not dare to tell you who I got it from. I had several sources of information after I left there. I had several loyal friends, who were very much incensed at the action taken, not only one but several of them, and they gave me a great deal of information afterwards. They thought it might be useful at some time.

Mr. FREAR. Was this the original letter that he was reading from?

Mr. LEA. This is the letter.

Mr. FREAR. Is this a copy?

Mr. LEA. This is the letter inserted (reading):

Mr. MAGEE. We will put this letter in the testimony——

Mr. FREAR. I was not there.

Mr. MAGEE. It was something that was produced at the hearing.

Mr. LEA. Yes.

Mr. MAGEE. And it is in evidence.

Mr. LEADBETTER. And I deny any living——

Mr. FREAR. Here we have it. You should have read on beyond.

Mr. LEADBETTER. Undoubtedly handed to him by someone he paid to hand it to him.

Mr. FREAR. On page 688 (reading):

Mr. SLIGH. When I received a copy of that, I wrote to several friends of mine on the coast.

It was a copy of the original that was introduced. It was not the original letter. No original letter could have been taken from the file. I admit that there is a grave question against anyone who takes a letter from a public file, but he says a copy.

Mr. LEADBETTER. Do you mean a man can go into a public office and take a copy of it and not be equally guilty?

Mr. FREAR. Unquestionably, if he goes through the proper authority having charge of public records.

Mr. LEADBETTER. I say I was in charge. No one ever came up there. I was the man who had the letters in custody.

Mr. LEA. We are wasting time.

Mr. FREAR. I think decidedly so, but I object to a man being called a thief and having this language put in the record, when every member of this committee and every private individual who has any semblance of authority——

Mr. LEADBETTER. He is not a member of your committee.

Mr. FREAR (continuing). Who has any semblance of authority has a right to go to a public officer and ask for an inspection of records, which apparently was done here, because he states a copy.

Mr. LEADBETTER. Not at all. He never came to me. I was in charge of it.

Mr. FREAR. Don't keep using this language. We know your opinion of Mr. Sligh, and I presume anyone present around here does. I know nothing about this testimony at all.

Mr. MAGEE. Anything that was offered, I presume I suggested, as I do usually, state that any papers presented go in evidence, no matter what the paper is or what it is about.

Mr. LEADBETTER. My activities were only partly in connection with the spruce production department. I had other duties there. We found as many in the South as they already had here. Col. Disque had nothing to do with it. I had charge of all the southern mills. I had charge of the New England mills operated through the Navy, and I was chairman, before I left, of the lumber committee of the Army and Navy, furnishing all the lumber for this country, for all of the needs over there.

Mr. LEA. Well, now, is that in substance what you want to say?

Mr. LEADBETTER. I wish to say—yes—this man Sligh testified he is a practical man, and that he visited my Vancouver mill, and the property was not worth over \$10,000. Now, of course, you gentlemen are not practical millmen, but I will tell you that there is 1,200 horsepower of boilers there, 1,500 horsepower of engines, and an electrical plant of 350 horsepower, all in good shape, alone worth \$50,000. The real estate—according to his own testimony I was endeavoring to sell this real estate alone for \$150,000, and I have telegrams in my pocket which I would like to submit to you, in regard to the matter.

Mr. LEA. That is only an incidental question.

Mr. LEADBETTER. I want to say that that plant now is in operation, under lease, and is bringing in \$1,000 a month. This man who accused me of profiteering—Col. Disque wired me that he needed my trucks and my machinery out of the mill and to set a price upon it, and I wired him that I didn't wish him to use any of the machinery or my trucks at all. He then wired back that unless I would let him have them he would commandeer and set a price on it. I then wired him that if the Government needed them, to take them; that I would accept no rent for it; that he was to take it out of the mill and do as he pleased with it, and replace it when he was through with it, and I would not only accept no remuneration, but would not ask any remuneration and would not accept it. He took these trucks, 275 of them, and took my planers and stuff out of the mill. These same trucks, I will say, I have rented since they were returned to me—a portion of them, at least—for a dollar a month apiece; and he kept them during all the period of time that he was operating his plant.

This man testified this, further, that he is a practical man, and this property here is worth \$10,000, when I have given pretty indisputable evidence here that it is worth probably \$300,000.

Mr. LEA. Now, that is all.

Mr. FREAR. I have just looked over this testimony, much of which is due to me, and let us say that so far as your differences with Mr. Sligh are concerned, that the committee is not interested, excepting that each witness should have a fair opportunity of stating his own position, and without unnecessary abuse, so far as this record is concerned, because this is a public record that we are making here.

But I notice this is a statement. I just saw this by accident, looking over page 586, and it is in reference to what you have been saying: Sligh says: "Nearly all the statements that he made to me at that time were absolutely false."

Mr. LEADBETTER. Is he referring to me?

Mr. FREAR. Yes.

Mr. LEADBETTER. What statement is he referring to?

Mr. FREAR. I was just going to see. [Reading:]

Mr. FREAR. That is the statement made by Leadbetter?

Something he is discussing; I don't know what it is, but that the following may explain something. [Reading:]

Mr. SLIGH. Yes, sir; at that time I did not know anything of Disque's management there; he was over there about nine months and, of course, being a guest of Leadbetter's, I would not have been discourteous enough to accuse him of dishonesty at that time—

Mr. LEADBETTER. He is referring to Col. Disque.

Mr. FREAR. Well, I saw it there, and I suppose it was at your house.

Mr. LEADBETTER. Yes; at our house. He says that Col. Disque made these statements, and I was there and my guests were there. Col. Disque never claimed to have initiated these things there at all; he never claimed to have stated anything; he simply said—we asked him about the operation of them—I was anxious to bring out the facts that he had had unusual training—an Army man—and I enumerated the different plants, asked him how he handled the canning industry and the size of the industry.

Mr. LEA. We don't care about that. What the committee is interested is particularly is if there was any irregularity by you or Mr. Sligh or anyone else in their actions there. Those are matters of public moment, and only those.

Now, I notice here—and I don't care to discuss the other matters, because that is a matter between you and him—but I notice here a matter that is of very much moment, and in which he makes certain charges, and you are entitled to specifically deny those, and should do that, if they are not true. He says, on page 589—I recollect that testimony—he says:

Before Disque had gone to the coast Mr. Leadbetter came to me. He says, "Sligh"—

Mr. FREAR. About what month was that?

Mr. SLIGH. This was in October, 1917, he said, "Sligh, have got an option to buy 4,100 acres of spruce land in the Siletz Basin," and he said, "I want you to come in with me, and we will organize a company and take over Spaulding's two mills, one at Newberg and one at Salem." He said that Spaulding was in the hospital.

What is your answer to that?

Mr. LEADBETTER. Absolute falsehood. I never had an option on 4,100 acres of timber over there in my life. I don't know of any tract of 4,100 acres of timber. I don't know to what he refers.

Mr. FREAR. Tell me what option did you have over there, or on what land.

Mr. LEADBETTER. None whatever.

Mr. FREAR. You have never had any—

Mr. LEADBETTER. During the war I have had no options of any description upon any piece of property. I have been busy back there in Washington.

Mr. FREAR. Have you owned any property over there?

Mr. LEADBETTER. None whatever. I haven't any—

Mr. FREAR. None in the Siletz Basin?

Mr. LEADBETTER. None whatever—no timberlands of any description. The Spaulding Co. own no spruce whatever in any of their operations.

Mr. FREAR. Any other land?

Mr. LEADBETTER. Oh, well, they have some fir lands.

Mr. FREAR. Where is that fir land?

Mr. LEADBETTER. The fir land is situated in the Willamette Valley.

Mr. FREAR. Whereabouts is that?

Mr. LEADBETTER. Toward the coast line, up toward the—well, they have timber in Marys River country, they have timber at the headwaters of the Luckimute—the Big Luckimute and the Little Luckimute.

Mr. FREAR. Can't you think of anything further than—

Mr. LEADBETTER. They haven't bought any timber at all.

Mr. FREAR. Do they hold any? Were they holding any that you—

Mr. LEADBETTER. The Spaulding Lumber Co., as I say, I think has tracts of timber in the Marys River country, has tracts of timber on the Big Luckimute River and on the Little Luckimute River.

Mr. FREAR. Was there any tract of timber of approximately that amount?

Mr. LEADBETTER. None whatever; no, sir.

Mr. FREAR. None of that kind?

Mr. LEADBETTER. None whatever. Never heard of it before, and it is made out of whole cloth.

Mr. FREAR. Sligh says that it is within 40 or 50 miles of Portland. That identifies the distance, apparently, that he had in mind.

Mr. LEADBETTER. Pure imagination.

Mr. FREAR (reading): "He said: 'Poor old Spaulding is in the hospital, and we can buy those two mills awful cheap and we will organize a company and make a lot of money out of it.'" Your answer is that that is not true?

Mr. LEADBETTER. My answer is just exactly as I have stated heretofore, that the only conversations I had that described at all with reference to any of my own holdings up there was when he wanted to know how we were to increase the spruce supply, and I said "These valley mills," mentioning our own mills in connection with them.

Mr. MAGEE. What mills?

Mr. LEADBETTER. The valley mills. You see, the valley mills don't cut any spruce at all. They are mills here, mills operating in the valley.

Mr. MAGEE. What valley?

Mr. LEADBETTER. Willamette Valley. They have no spruce contiguous to them, but it was quite possible to bring this spruce in from the coast and put them to cutting spruce?

Mr. FREAR. And the next was: "And he was in charge of the wood section, but I was making the contracts." Was that true?

Mr. LEADBETTER. At that time he was, after—

Mr. FREAR. He was making the contracts?

Mr. LEADBETTER. He was in charge of the wood section. I had nothing to do with it.

Mr. FREAR. He said "he was in charge of the wood section"?

Mr. LEADBETTER. No; he meant himself.

Mr. FREAR (continuing reading): "But I was making the contracts."

Mr. LEADBETTER. No; he meant himself. I had nothing to do—

Mr. FREAR. Was he making any contracts at that time?

Mr. LEADBETTER. I think he was. He was in charge of the woods section and I was in the finance department.

Mr. FREAR. Trying to get—

Mr. LEADBETTER. Just making him a friendly visit.

Mr. FREAR. I am trying to find a point of agreement between you.

Mr. SLIGH. Maj. Leadbetter.

Mr. Lea asked "Who was this?"

Mr. SLIGH. Maj. Leadbetter. I said, "No, I am not doing that kind of business; I have acquired a competency, I don't need the money, and I am trying to be of some service," and passed it off. He came in a few days later and said "I have sent for the blue prints and will have them in a few days."

Did he make any such statement?

Mr. LEADBETTER. It is a tissue of lies, Mr. Chairman.

Mr. FREAR (reading):

Mr. FREAR. What was he referring to?

Mr. SLIGH. He was referring to buying Spaulding's tracts.

Mr. FREAR. The Siletz Basin is near Toledo?

Mr. SLIGH. It is southwest of Salem, and the timber in that region is tributary to Newberg and Salem. The basin extends over a territory east and west of there, I should say, probably 75 miles.

Mr. SLIGH. I was in that region 9 or 10 years ago. I turned him down in the same way, tried to be courteous about it; he came to me the third time and I became so incensed—

Mr. FREAR. He came to you the third time in regard to this Spaulding proposition of those mills and the timber in the Siletz Basin?

Mr. SLIGH. I did not know whether it was a scheme of his to trap me or get hold of something cheap in which there would be a large profit, but I became very much incensed, and I told him I was not a grafter, that I was trying to be of service, and I would not touch it with a 10-foot pole, and he said, "Well, it won't cost you a cent."

Your statement is that there is no truth to that?

Mr. LEADBETTER. After this, he wrote me this letter and dined at my house—after all this time, after having made these statements that he attributes to me—and does it look very reasonable that this arch liar would dine at my house and write a letter after I had, according to his theory, tried to bribe him?

Mr. FREAR. It would be very unusual for a man to do that.

Mr. LEADBETTER. Very unusual; yes, sir.

Mr. FREAR. The committee will admit that. Mr. Sligh says:

His proposition was to organize a company, buy in the 4,100 acres, buy the mills owned by C. K. Spaulding & Co., of which Leadbetter and his father-in-law had 51 per cent interests, and that we would cut spruce and sell it to the Government.

You say there is nothing to that at all?

Mr. LEADBETTER. We never had 51 per cent.

Mr. FREAR. How could he imagine all that? What occurs to you?

Mr. LEADBETTER. God only knows. He never imagined it until after he was dismissed, and he never thought of it until after—because he never mentioned it to my superior officers when he was trying to retain his position. And probably some night when he was worrying over his troubles—I have always thought the old man was crazy.

Mr. FREAR. He says, on page 587, at the bottom, speaking of Disque:

He had evidently impressed Leadbetter with the fact that he was a wonderful man. I said to Leadbetter—I had bought over \$200,000 worth of timber from him about two years before, and when I came to Washington—

And so on. He had bought some timber from you?

Mr. LEADBETTER. No, sir; he never bought any timber from me.

Mr. FREAR. What was it, then?

Mr. LEADBETTER. He had purchased—when I came to see Mr. Sligh, he said, “I bought some timber from you.” I said, “No; you never did.” “Well,” he said, “I bought it from Spaulding, from your people.” I didn’t remember him at all. I was not a party to that transaction, except to the extent that I was a holder of stock in the——

Mr. FREAR. Did he buy it from Spaulding?

Mr. LEADBETTER. He bought it from that company, through Spaulding.

Mr. FREAR. That was not entirely false?

Mr. LEADBETTER. No; only to the extent that he states there that he bought it from me, which he did not at all.

Mr. FREAR. He may assume, as long as you were connected with the concern——

Mr. LEADBETTER. No; he knew perfectly well.

Mr. FREAR. You think he had a motive in stating he bought it from you?

Mr. LEADBETTER. Yes.

Mr. FREAR. What could have been the motive?

Mr. LEADBETTER. God only knows. If I would attempt to find out what this man’s motives were in his malicious lies that he has circulated I——

Mr. FREAR. He did concede that there was money. Of course, you have read this record here—that he took up himself, in his own business there, certain money.

Mr. LEADBETTER. He showed a certain sum of money—I think it was \$1,200—that he admits having placed with his own company.

Mr. FREAR. Twelve hundred out of seventy-five to eighty thousand dollars?

Mr. LEADBETTER. Yes; but, mind you, this was on a direct order from his own superior officer—chiffoniers and odd pieces that could not be obtained elsewhere, I think, isn’t it?

Mr. FREAR. We will agree to this, that a man who does business with the Government——

Mr. LEADBETTER (interrupting). Should not purchase from his own concern.

Mr. FREAR. Yes; that is right.

Mr. LEADBETTER. And he testifies, himself, that he did, on his direct order.

Mr. FREAR. If it is any considerable sum, if it should amount to 200,000, Mr. Sligh would be entitled to be under considerable criticism, wouldn't he?

Mr. LEADBETTER. Do you mean to say that because it was \$1,200 he would not? Is not the principle the same?

Mr. FREAR. I say if it was \$200,000—

Mr. LEADBETTER. Not a particle. He is entitled to just as much, just exactly, if it was only 5 cents.

Mr. FREAR. What is your interest in the Crown Willamette Paper Co.?

Mr. LEADBETTER. Crown Willamette Paper Co?

Mr. FREAR. Yes.

Mr. LEADBETTER. Well I—what do you mean; my interest in it, the amount of stock I own?

Mr. FREAR. Financial interest?

Mr. LEADBETTER. Financial. Oh, probably a half a million dollars.

Mr. FREAR. What is the total interest?

Mr. LEADBETTER. The total interest—the total value of the paper company?

Mr. FREAR. Yes.

Mr. LEADBETTER. Oh, I think the property is worth about—I think the capital of the Crown Willamette is \$13,000,000, and they own the Ocean Falls, which has about \$10,000,000 of assets.

Mr. FREAR. What is the stock?

Mr. LEADBETTER. What do you mean, the stock, in stock—what stock?

Mr. FREAR. How much stock is there in the company?

Mr. LEADBETTER. For the Crown Willamette Co., there is \$13,-000,000 of stock issued.

Mr. FREAR. \$13,000,000?

Mr. LEADBETTER. \$13,000,000 of stock issued.

Mr. FREAR. There are two items here, one of \$29,119, and \$125,664, that were bought by your company—or sold by your company, was there not, to the Government?

Mr. LEADBETTER. I don't know anything about it.

Mr. FREAR. For stumpage. Well, that is in the neighborhood of about a hundred and between fifty and sixty thousand dollars. That is quite an item.

Mr. LEADBETTER. Not at all. All mills and all loggers were forced to sell their supplies.

Mr. FREAR. This is an item. Sligh presumably was connected with a company and there was \$1,200 that he says here that he sold. Now here is an item of between one hundred and fifty and one hundred and sixty thousand dollars to this company. The stumpage was sold. You would not feel but you were perfectly honorable because of that transaction?

Mr. LEADBETTER. Those materials, the lumber and logs, of all the different concerns in this western country, were sold to the Government because the Government insisted upon buying them, you had to sell them; they commandeered them, if you didn't. I know nothing

whatever of the transaction. My interest is very small in the company.

Mr. FREAR. Well, \$500,000 is a considerable interest, isn't it?

Mr. LEADBETTER. It is a small interest as compared with the total of \$23,000,000.

Mr. FREAR. What is your interest in the C. K. Spaulding Co.?

Mr. LEADBETTER. Well, I have an interest in the C. K. Spaulding Co. of less than a quarter in the concern.

Mr. FREAR. How much is that?

Mr. LEADBETTER. What do you mean; how much?

Mr. FREAR. In money?

Mr. LEADBETTER. Probably \$225,000.

Mr. FREAR. Two hundred and twenty-five thousand?

Mr. LEADBETTER. Yes.

Mr. FREAR. What is that capitalized at?

Mr. LEADBETTER. Oh, \$150,000.

Mr. FREAR. I don't understand. It is capitalized at 150 and you own 225?

Mr. LEADBETTER. Yes.

Mr. FREAR. What is your share of stock?

Mr. LEADBETTER. Less than one-quarter.

Mr. FREAR. Less than one-quarter. Well, according to this statement, the C. K. Spaulding Co., of which you are a member, owning a quarter of the stock, owning over \$200,000, was paid by this spruce company, according to the statement before me, \$29,094.98 in one item and \$16,609.60 in another item.

Mr. LEADBETTER. I don't doubt it at all. They were furnishing airplane material, as were all the other mills on the coast.

Mr. FREAR. I am not criticizing it, but I am saying in that respect that is quite a large amount of money, \$40,000 and over, or about—

Mr. LEADBETTER. I might add, if you will allow me, that the British Columbia mill was instrumental in getting the English to operate the mill so that they could help out the spruce situation also; a large amount of timber was cut for the English up there at the Ocean Falls mills owned by the Crown Willamette. You haven't been able to dig that item out. I will provide you with that.

Mr. FREAR. These items have been given me by the man who is looking after the records there and finds these contracts. And Governor Hughes recommended that a man who was in the military service and who was making contracts with himself, directly or indirectly, should be court-martialed, so that it is not entirely unusual that these items should be called attention to.

Mr. LEADBETTER. Very silly, because there is not a single man—lumberman connected with this whole institution—

Mr. FREAR. That is your answer. That is enough—it is “very silly.”

Mr. LEADBETTER. Not at all.

Mr. FREAR. No, no; but this committee can form its own judgment and it don't need to have you take up the legal question which is before us.

Mr. LEADBETTER. I am not trying to determine the legal question. I am saying that all lumbermen connected with the spruce production, in getting out this stuff—you would send a blacksmith to get lumber, would you, unless they sold their interest or gave it away—

are connected with institutions that furnish lumber to the Government.

Mr. FREAR. Are you interested in any townsite at Otter Rock?

Mr. LEADBETTER. Otter Rock. I believe that about 12 or 15 years ago I did buy an interest in 160 acres of land around there with a man named Jones. I didn't take a deed to it. The deed to it is in the name of a man who was formerly my secretary, Mr. Price.

Mr. FREAR. You both own half interest?

Mr. LEADBETTER. No; Jones owns a half interest and I own a half interest; yes, sir.

Mr. FREAR. Otter Rock is just at the north extremity of the 10-mile road that has recently been built from Newport up to Otter Rock, isn't it?

Mr. LEADBETTER. How extraordinary.

Mr. FREAR. Yes.

Mr. LEADBETTER. I suppose that road, that cost a million and a quarter, has been built there to benefit a tract of land that I paid \$3,000 for.

Mr. FREAR. I don't know the purpose. I am not arguing that. I am asking if it is true that you own that townsite there. Perhaps this railroad by pure accident came there from Newport.

Mr. LEADBETTER. I should think you would be ashamed to ask it, sir.

Mr. FREAR. I ask to have that stricken out.

Mr. LEADBETTER. I insist that it shall not be stricken out.

Mr. FREAR. Strike that out. Is it true that you own a half interest?

Mr. LEADBETTER. I have already told you it was true.

Mr. FREAR. That is sufficient. Do you own any timber anywhere around Otter Rock?

Mr. LEADBETTER. Not to my knowledge; not a cent, outside of maybe a few straggling trees that might be on that property.

Mr. FREAR. Are there any other lands around there that you own?

Mr. LEADBETTER. None whatever that I can think of right now. You may dig up something else that I had forgotten.

Mr. FREAR. Of course, you are a man of large property and you are very fortunate that you are in that position.

Mr. LEADBETTER. Never having visited the place since I bought it, I might be excused. The taxes have been paid by my agent. I never have taken title to it.

Mr. FREAR. The name that Sligh brought in question was the same man that appears here, Mr. C. K. Spaulding, isn't it?

Mr. LEADBETTER. Yes.

Mr. FREAR. Did your company—this mill company—have contracts with the Government?

Mr. LEADBETTER. I don't know a thing about it. I didn't have anything to do with the management of the company.

Mr. FREAR. Did they buy cars of spruce from the company?

Mr. LEADBETTER. I have nothing whatever to do with the management—haven't had for some time—don't know a thing about it. I presume, like all other mills on the coast that were patriotic, they tried to get out stuff for the Government. If they didn't, the Government would commandeer the plants and get it out themselves.

Mr. FREAR. But the Government never did commandeer your plant or any other plant, did it?

Mr. LEADBETTER. I don't know whether they did or not. Probably they did.

Mr. FREAR. There was no authority to do that, so far as you know, at the time?

Mr. LEADBETTER. I don't know. There was a good deal of talk about it—about commandeering these different plants—if they did not produce stuff enough for them. I don't doubt that they would have if they had to.

Mr. FREAR. I believe something was said about Mr. Gompers, and that letter was read in the record the other day, as I now remember, up in Seattle. I had forgotten about it until you called attention to it; just as a part of the record in regard to the bringing about of the labor situation here. Now, here is a letter. I don't believe it was stolen from the files. It is a copy.

Mr. LEADBETTER. I think you gentlemen had a right to take anything from the files that you wanted to.

Mr. FREAR. Well, that is a generous admission. This is a letter, I think, from Col. Disque to Maj. Leadbetter, dated December 10, 1917: "There is a persistent rumor here that Maj. Sligh is being considered for a position on the Aircraft Board. Possibly you already know of it." Now, I don't care as to the differences between you, but I am presenting this as a letter that appears in the record. "Possibly you already know of it. You will agree with me that it must not happen. I understand that he has been highly recommended by many organizations in many States." Which reminds me of a statement you made about his office being in chaos when you went there.

Mr. LEADBETTER. Well, I took it over. I ought to know.

Mr. FREAR. Yes; you ought to know; unquestionably so.

Mr. LEADBETTER. It took me weeks to straighten it out. I had a half dozen—let's see; I think, four or five clerks in there.

Mr. FREAR. Was Mr. Coffin your superior officer?

Mr. LEADBETTER. Yes; he was; and a very capable man.

Mr. FREAR. Yes; and this affidavit—

Mr. LEADBETTER (interrupting). Yes; I read that. That was before Mr. Sligh's activities.

Mr. FREAR. Yes; in which it was said, "And the manner in which the production of spruce lumber for aircraft manufacture was being handled at that time was vested in one Charles R. Sligh, who, he stated"—that is, Coffin stated—

Mr. LEADBETTER (interrupting). You are not reading the records again, are you? This is the third time.

Mr. FREAR. Yes. Just a moment. "Had accomplished wonderful achievements in the way of transforming the production of spruce lumber for aircraft purposes from a state of absolute chaos"—this is the word you used—"and uncertainty to an orderly condition, from which the very best results could be expected." Did Mr. Coffin state that?

Mr. LEADBETTER. That was before—what was the date of that?

Mr. FREAR. That is September 12, 1917.

Mr. LEADBETTER. Yes. That is about the time that they started in work there—in the spruce end of it.

Mr. FREAR. And he had brought order out of chaos, according to Mr. Coffin?

Mr. LEADBETTER. There was nothing to do. There was no office. He established it.

Mr. FREAR. Mr. Coffin, of course, must have been wrong?

Mr. LEADBETTER. Oh, I don't know. I read that thing with a great deal of interest, because this man Wallace evidently was this man Sligh's stenographer he had there, and he does not state that Mr. Coffin said that absolutely.

Mr. FREAR. Do you say that Mr. Coffin said it or did not say it, or do you know whether he did say it?

Mr. LEADBETTER. No. I say it says in that communication that "the sense of the language." You read it over carefully. I read it quite carefully.

Mr. FREAR. Yes; I have. I read it carefully.

Mr. LEADBETTER. But he would not say——

Mr. FREAR (interrupting). He established order out of chaos.

Mr. LEADBETTER. Well, I think he meant——

Mr. FREAR. We will have Mr. Coffin on the stand.

Mr. LEADBETTER. I hope you will, sir.

Mr. FREAR. To ascertain whether you are right or Sligh is right. That will be the best way to determine that.

Mr. LEADBETTER. I hope you will, sir.

Mr. FREAR. That will be the best and the easiest way, because I have more questions to ask.

Mr. LEA. Did you have some statements by Mr. Coffin about Maj. Sligh?

Mr. LEADBETTER. Maj. Sligh, when he was dismissed for incompetency from this section, consumed a great deal of time in writing to everybody, making all sorts of ridiculous charges.

Mr. FREAR. Well, what is the answer?

Mr. LEADBETTER. Well, I am going to say.

Mr. FREAR. Yes.

Mr. LEADBETTER. And among these people that he wrote to was Mr. Coffin, and Mr. Coffin would call me in and say, "Leadbetter, what is there to this fellow Sligh's talk?" Whereupon I would take the letter and make a memorandum on it.

Mr. LEA. Well, I didn't intend to interrupt.

Mr. LEADBETTER. Just a second, now.

Mr. FREAR. Just get to the answer, because I want to examine you some more.

Mr. LEADBETTER. I would show Mr. Coffin where Maj. Sligh's letter was a direct lie, and then those memorandums must be in the office. You can get them.

Mr. FREAR. Well, we don't care about them.

Mr. LEADBETTER. Well, you raised this question of Mr. Coffin.

Mr. FREAR. No; I didn't. Mr. Lea asked the question. I know nothing about Coffin and your correspondence. Answer, did you get such letter from Mr. Coffin?

Mr. LEADBETTER. I say I received a communication from Mr. Coffin to come down there.

Mr. FREAR. Did you get a letter from Coffin in regard to Sligh?

Mr. LEADBETTER. I got an order from Mr. Coffin to come down to the Aircraft Board.

Mr. FREAR. That had nothing to do with or regarding Sligh?

Mr. LEADBETTER. Yes; indeed.

Mr. FREAR. What was it?

Mr. LEADBETTER. In regard to Sligh's communications to Mr. Coffin and to look them over and make a memorandum on them, and I made a memorandum on them to show him where Maj. Sligh was lying in his communications, and they are a matter of record there, and these particular letters are in Mr. Coffin's office, you see; so Maj. Sligh wasn't able to get them from my files.

Mr. FREAR. Did Mr. Coffin write you in regard to Maj. Sligh?

Mr. LEADBETTER. I told you he ordered me to come down there.

Mr. FREAR. I understand. But I mean in regard to Sligh? That is what I assume Mr. Lea meant when he asked the question whether he wrote any opinion in regard to this matter.

Mr. LEADBETTER. I don't remember whether he ordered me in writing or telephoned me to come down there and attend to this matter.

Mr. FREAR. I understand. "There is another rumor"—getting back to the letter from Disque to Leadbetter—"There is another rumor that English brokers have been trying to arrange through diplomatic channels for a concession of spruce timber in Washington, and the papers say that a \$5,000,000 concern has been organized under five names to open mills in Puget Sound country. The story is that Douty is engineering the whole thing. I hope there is nothing to it, and if there is, it should not go on. We need all the spruce and English concerns should go into British Columbia, where they can get it off their own land. Douty's mill is butchering logs to such an extent that I am about to take away all they have in the river and send them to another mill."

Mr. LEADBETTER. I think he did do that afterwards.

Mr. FREAR. "He accumulates a large amount of rejects in this way which English brokers are willing to pay \$90 for and his game is to sugar rejects. I do not like his ways." Apparently you are not the only one in this country that has differences with some one else. "I sent you a wire in regard to Vancouver Barracks to-day"—

Mr. LEADBETTER (interrupting). I have no differences with Maj. Sligh, Mr. Frear.

Mr. FREAR (continuing reading). "And I am hopefully waiting result. I never got into such a mess of petty doings. We are just completing a plan for extensive logging on an extensive plan and promises over fifty million a year, and Washington must get out of the way with a red flag." Signed, "Yours, truly"; signed "Disque." That was a letter sent by Mr. Disque or Col. Disque, I suppose; that is right, isn't it?

Mr. LEADBETTER. You say it is. I was getting dozens of them every day, and telegrams.

Mr. FREAR. Well, I am questioning you.

Mr. LEADBETTER. Yes. I don't question it at all. If it is I have forgotten it.

Mr. FREAR. And here is another telegram, and just simply to make the record, not for anything beyond, which I think the committee ought to have:

PORTLAND, OREG., December 16, 1917.

MAJ. F. W. LEADBETTER: Regarding your telegram Saturday, I am not acting for the effect that may be produced in Washington. Troops are only arrived here Wednesday night and one-third still in Camp Lewis, because no quarters available here. All are quarantined until December 27; came here under same. I will not ruin my plans now by a spectacular rush into camps. Have begged for these men for six weeks. They were held that long after volunteering and the best material weeded out. Had my requests been heeded, the men would have been at work in November and effect actually felt in deliveries about February 1. Do not let us fool ourselves. Men going into camp now will not be felt until March. What you are now getting started from camps in September and I acknowledge absolutely no responsibility for it.

I assume that these stops have been improperly placed by the operator.

Paragraphs 4, 7, and 8 of my memorandum to you not complied with. Mediation commission contrary to Coffin's advice went into situation, failed and left things in very delicate shape. I would have had it solved by February 1. My letter to Chief Signal Officer November 27 in regard to labor situation unanswered. Clark was allowed eighteen thousand for inspection, and now that his expenses come in under general office, ten thousand is allotted for the whole and original authority curtailed by removing incidental expenses. Authority I asked for cut up plant November 16 granted only on December 5. Construction delayed by commanding officer, Vancouver Barracks, until December 12—

Mr. LEA. Why not just let the reporter put this in?

Mr. FREAR. Well, I want to get this. I am going to introduce them.

Secretary Wilson, Gov. Lister, lumbermen, State Council of Defense, labor heads, business men, and every one else out here who knows about this work have appealed in vain that this office be given money and absolute authority with no strings. Washington had better take immediate heed or failure is certain. By authority, I mean right to commandeer stumpage and logs, mills and machinery, as well as an absolute free hand at Vancouver Barracks, and an immediate supply of men and officers. By money, I mean all that I call for without qualifications as to how it must be expended. Please remember that I am an experienced officer and have handled Government funds for years. Am just as jealous of my reputation and the Government's interest as anyone at Washington.

My message regarding dry kilns not a misprint. Estimate may be 20 per cent over, but times and prices justify such margin. I have the best men in the United States on the job, and the entire resources of the University of Washington are behind me. My plan for kilns is the result of a composite idea gained from recommendations, experience of Curtiss, Wright, and other big manufacturers in the East; and Mr. Goss, who is assisting me, has spent time in all their factories, has their confidence, and that of scientific men and practical men in business more, as well as my own. It is considered very naturally by experienced men here that kilns should cost more than the mill. I agree that no one ever heard of kilns of such magnitude, but neither did we hear before of an order for 109,000,000 feet of straight-grain clear spruce at the rate of 11,000,000 feet a month. Won't attempt further explanation. I have recommended it and know what I am doing. Do not know anything about Keating's telegram. We control shipping from here, and it won't affect destination. Will see him and call him off now. We have arranged to place every man in our command in camps at work, and soon as their quarantine is over the 2,400 will be cutting logs. I could use 6,000 in addition if I had them. A man, Douty, has been at Washington for some time. He is generally considered here as questionable. His mill is up to some queer work, which I am investigating, and if my suspicions prove well founded I am going to take all his logs. There has been [blank] of cunning at work for months undermining spruce production. Sligh has either been fooled or is a party to it, and Douty knows that I will not spare him if I get the absolute evidence. I believe that both are trying to embarrass this office and am prepared for a show-down if it must come. I want this telegram read to the Aircraft Board and immediate assurance that there will be no more efforts or insinuations about the failure of this office until it has had a chance to fail.

Signed "Disque." I will not read the memorandum, unless you desire it, that was attached to that. He speaks of the memorandum here, but it is really a part of the condition as he found it or as he described it when he came here. That was a telegram received, was it not?

Mr. LEADBETTER. I used to get four or five of those a day.

Mr. FREAR. I mean, was this a telegram received by you?

Mr. LEADBETTER. I presume it was. You say so.

Mr. FREAR. Yes; it is familiar.

Mr. LEADBETTER. I was under instructions by the Chief Signal Officer to answer them all in 24 hours and get the matter settled; so my life wasn't a particularly happy one.

Mr. FREAR. Well, I will introduce this; and there is a memorandum here that is connected with it, as showing the record, to be copied in as part of the record.

(The memorandum attached to the copy of said letter and telegram last hereinbefore read by Mr. Frear, pursuant to the foregoing, is set out in full as follows:)

Memorandum from Col. Disque.

WAR DEPARTMENT,
SPRUCE PRODUCTION DIVISION,
UNITED STATES SIGNAL CORPS,
Portland, Oreg., November 29, 1917.

Memorandum for Maj. Leadbetter.

1. When I left Washington I was impressed with the seriousness of the aircraft lumber situation, and thought that it was the intention of all interested to cut this work off from Washington and hold this office responsible for results.

2. I had authority of the War Department to organize 60 construction squadrons and 6 supply squadrons. To date I have one enlisted man in Vancouver Barracks—he enlisted here. There are some 110 officers and 32 medical officers, all waiting for the soldiers. Two thousand men volunteered for transfer from Camp Lewis, but have not yet been ordered transferred.

3. I have tried in vain to get these men, and logging companies to whom I promised relief in the way of labor are daily calling on me.

4. I have also asked that cantonments be canvassed for 4,000 additional men, who are urgently needed for general labor work building roads and railroads. To date I have nothing on this.

5. We must have cooks and squadron clerks, and I have authority to hire them as civilians; but this can not be a permanent arrangement, because we must be protected against the possibility of such important men quitting us.

6. The depot quartermaster in Portland, Col. Wallace, is prepared and willing to issue on our requisition. He is in Portland with a complete office staff and should act directly upon my requisition calling upon San Francisco depot directly for which he can't supply.

7. I understand that Vancouver Barracks was vacated by the Fourteenth and Forty-fourth Infantry to accommodate my squadrons, and upon my arrival here I found the Fourth Engineers moving from their cantonment into the barracks.

8. We require every available building at post for our men and equipment, and the control of the post must be in my hands in order to expedite the details of supply of scattered squadrons and to build and operate cutting-up plant mentioned later.

9. If it is necessary to retain an Engineer force here, they should remain an independent unit in the cantonment previously occupied by them and which seemed to be large enough for their requirements.

10. Recruiting in this vicinity by Engineer Corps should be stopped at once. It is nothing short of the two branches of the Government competing, and is taking men away who must be replaced from some source. The people here question the sincerity of our efforts when they see one branch of the War Department taking away the very lumbermen and loggers required to produce spruce and fir, especially when there is a shortage of 15,000 laborers in these industries in the two States.

11. Maj. McCammon has been working in Washington as my assistant since October 12 trying to get officers. He has secured something like 50 very desirable men who have applied. We have carefully investigated every one of them and require all in this work. Practically all of them have gone to Washington at our request for examinations, etc., and all have made arrangements to leave their business. To date only one officer secured by Maj. McCammon has reported. The remainder should be appointed at once and sent to Portland. I have held all grades to a very low rank pending better knowledge of the men, and to leave incentive of possible promotion, and practically all were to be lieutenants.

12. By the very nature of things all Signal Corps officers in Portland must operate around one central authority. This is in accordance with Gen. Squier's instructions to me, but it seems difficult to convince the section heads in Washington that this must be so. I realize fully that in all matters pertaining to their own sections solely the officers should be in direct touch with the section heads in Washington, but in every matter that in any way is related to another section's work this office must be supreme. We have hourly examples of the necessity of this, and every officer here realizes it.

13. The task of securing the spruce and fir required is monumental. I fully appreciate it and realize probably better than anyone what heroic measures are necessary to accomplish what is required. I have visited logging camps and mills, and have come to very definite conclusions which I am happy to say are concurred in by practically all the loggers and mill men in our territory. In the light of my knowledge of the situation I am prepared to guarantee the output required if prompt action and compliance with my recommendations is forthcoming.

14. We have already lost a month because nothing seems to respond to our telegraphic requests. It can not be expected that busy Washington—3,000 miles away—can or will realize our requirements. This is too big and important to permit of delays.

15. The solution and only one is to grant me unlimited authority to carry on this work according to good business methods and allot funds as requested.

16. Railroad extensions are urgent and ordinary road building must be done.

17. Our force must be recruited to full strength, and then this office relieved from all minor Washington control.

18. A cut-up plant must be built to manufacture the dimensioned lumber. This will cost less than \$200,000, and I have learned it can be operating in 60 days. Through such plant we will save an amount of spruce equal to what is now obtained, but which is now lost through the butcher methods of the existing mills. Lumber mills here are not equipped to cut to grain and neither are they able to run at the careful speed required to follow grain in timber. We propose to have the mills cut the cants out of the logs and send them to our mill, where we will work them into straight-grained dimensioned pieces to fill orders as placed. Orders should then come for lumber in exact dimensions. We propose to dry this lumber before shipment and it will then only require a warming up at the factories. Airplane factories are all drying in different and very unsatisfactory ways. Some are trying to dry large timbers in the kilns containing small pieces.

19. This cut-up plant will open the way to our purchasing thousands of pieces of split or "rived" spruce which will come to us from small owners, farmers, etc., which we can not handle at present and which source is estimated will give us 2,000,000 to 3,000,000 feet per month during the winter season while farmers are not otherwise busy. The moment this plant is started we will send out the word and will begin accumulating rived pieces at the site of the plant.

20. I propose to locate the cut-up plant at Vancouver Barracks along the railroad siding in the drill grounds below the post. It is an ideal location, with ample room and handy to the barracks in which the men will live for three eight-hour shifts in the mill.

21. There will, of course, be a considerable byproduct from this plant. This can be sold at auction, or arrangements made to turn it all over to some local box company, or we can arrange to produce ammunition cases for Ordnance Department by adding the box-making machinery.

22. All orders for spruce and fir must be placed by this office. Everybody is confused now, and inefficiency is the result everywhere. In saying "all," I

mean fir, Signal Corps, Quartermaster, Shipping Board, Allied Governments, and Navy. This is very important.

23. All payments for aircraft stock must be made by this office for material supplied, except those already paid. To arrive at an accurate list of our accounts payable, a list must be prepared in Washington showing all shipments since August, noting the lines that have been paid and which are brokers' orders. All reinstated brokers' orders to be paid for direct by the Allies. The preparation of this statement should be expedited, as prompt payment by this office is vital and becoming critical. No payments should be made in Washington after statement is prepared.

24. It is very important that all lumber agents going to Washington from this section be referred to this office. We are in close touch with the situation and must be better equipped to handle their troubles than people 3,000 miles away. Too many schemers go to Washington, present a plausible story, and mislead the man in Washington. We have daily evidence of this.

25. Everyone here must know that there will not be any increase in price. If this is done, it will not only result in adding to an already very high profit but will cause a slowing down in production to await the next increase.

26. All manufacturers must be given definite instructions not to order direct from producers. I saw two orders yesterday—one from Fisher Body Co. and one from Dayton Wright Co.—for spruce at \$250 per thousand. I need not explain what this will lead to. Those companies, as I understand it, are working on a cost-plus basis, and their action in those cases is little less than original indifference to the Government's interests.

27. Changes in specifications should be few and not distributed till this office has a chance to look them over, and then only through this office.

28. Last Monday I had all the principal officers of the inspection bureau in for an all-day conference. We ironed out all annoying questions and printed an intelligible interpretation of specifications for use of the inspectors. To-day a new printed set of specifications arrived from Washington, and already there are a dozen interpretation of them by experts in this office. The inspectors and mills must not be further confused—some already muddled.

29. Priority of shipment should be determined by the central war council in France, and it is formed. This is the only way we can meet war requirements.

30. There should be a regular order blank for all fir and spruce ordered. Orders now come in all kinds of ways, as parts of telegrams and paragraphs of letters; some to us and some direct to the lumber associations and some direct to mills.

31. Finally permit me to say that in September about 2,000,000 feet of spruce left this section. There was 3,354,000 feet shipped in October. This month—November—we will ship close to 4,000,000 feet of spruce, and in December, January, and February you can not expect more than 2,000,000 feet per month as things are now geared up. Everything slows down in those months, due to weather conditions and lack of logs. We have already lost much time. If the items above covered are given immediate and complete approval, we will treble the output for January, and from then on give all that is required. This I will guarantee. But authority must come which will be equal to my responsibility.

32. I will hereafter address all my communications to you in Washington, and ask you to represent me in presenting them to the proper office, and depend upon you to secure immediate action. I will not telegraph you without the conviction that prompt action is necessary, and I hope that this won't be often.

BRICE P. DISQUE,
Colonel Signal Corps.

TILLAMOOK, OREG., December 23, 1917.

SECRETARY OF WAR BAKER,
Washington, D. C.:

I am told that spruce lumber for the manufacture of airplanes is to be one of the deciding factors in winning the war; that the present production of spruce is but 40 per cent of the amount required by the Government; and according to a public statement made on December 17 by Col. Disque on the spruce condition the above percentage is likely to be very much reduced. As a producer of spruce lumber I am prepared to say that the only obstacle in the way of you getting all the spruce you need for the manufacture of airplanes is a lack of spruce logs and not a lack of sawmill capacity for sawing them. There are enough sawmills operating in Tillamook County alone at the present time to increase the output of airplane spruce 2,000,000 feet per month if they could but get the logs.

There is plenty of spruce timber, and it is only a question of getting the logs; the delivery of from ten to twenty million feet of good spruce logs per month to the present mills should nearly double the present output of spruce lumber. If I can convince you of my ability to produce the above stated amount of logs, and will furnish to the Government a bond guaranteeing my part of the agreement, will the Government assist in financing this enterprise, and, if necessary, commandeer spruce stumpage, railroad iron, and equipment? As to my responsibility, I refer you to Senator Chas. McNary, Representatives C. N. McArthur and W. C. Hawley, or any other member of the Oregon delegation. If you are interested in this proposition, kindly take this matter up with me.

A. G. BEALS.

Mr. FREAR. You stated, as I understood, that Great Britain began producing airplane lumber spruce because they had an example set by Mr. Disque?

Mr. LEADBETTER. I said that that was my understanding—that is my understanding of the matter; yes, sir. The war had been on, I don't remember exactly how long; I have forgotten the exact time; it was three or four years. They had been able to produce nothing for themselves at all of any moment.

Mr. FREAR. Now, let us see. There was 143,000,000 feet, it is testified here, that had been furnished to the Allies and ourselves.

Mr. LEADBETTER. Yes.

Mr. FREAR. And of that amount 7 per cent had been furnished under the jurisdiction of Mr. Disque, or Col. Disque, about 7 per cent.

Mr. LEADBETTER. It was all under his jurisdiction; every bit of it.

Mr. FREAR. Oh, was it?

Mr. LEADBETTER. Yes; all this lumber from the mills was under Col. Disque's jurisdiction.

Mr. FREAR. Well, let us assume, then, that the mills which had been furnishing spruce and fir long before we were at war, and had continued to furnish it after the war—

Mr. LEADBETTER (interrupting). Up to the time Col. Disque took charge?

Mr. FREAR. Yes. Now the statement made by those in charge is that 7 per cent of the operations were due to the action here and not to private manufacturers, the 143,000,000 were credited here—

Mr. LEADBETTER (interrupting). And I say—

Mr. FREAR (continuing). Now you say definitely—

Mr. LEADBETTER (interrupting). I say Col. Disque's operation included all the mills in this district of Oregon and Washington.

Mr. FREAR. Oh, yes.

Mr. LEADBETTER. And he should be credited with every stick of lumber that came out of it.

Mr. FREAR. I understand you credit him with that, but it is not credited by those of the corporation who have given us the statement of the figures. Now let's leave that with your judgment and with theirs. Mr. Pendleton was taken as an American, and he went over to British Columbia—

Mr. LEADBETTER (interrupting). He came over here first, though, to get his ideas.

Mr. FREAR. Yes; that is right; and he is a very able lumberman, and a logger, as I understand?

Mr. LEADBETTER. I think so, possibly.

Mr. FREAR. Yes; I don't think there is a question about that. They came over to get a good American that was acquainted with logging, a man who could take charge of that work, and he did; and he produced, according to the telegram read by Mr. Disque, as well as his statement here before the committee, 26,500,000 feet of spruce.

Mr. LEADBETTER. I don't doubt it. We produced 23,000,000 ourselves in one month, the last month.

Mr. FREAR. I understand, but you don't give me a chance to make the statement.

Mr. LEADBETTER. No; but I say——

Mr. FREAR (interrupting). I ask to have that stricken out. I ask to have that stricken out until I ask you the question. I want to get this record straight and then you can make any statement that you choose. He produced that, did he?

Mr. LEADBETTER. I don't know anything about it. You say he did.

Mr. FREAR. Well, they say that he did.

Mr. LEADBETTER. I don't doubt it at all.

Mr. FREAR. If that is the sworn testimony here, we will assume that it is true.

Mr. LEADBETTER. I don't doubt it at all. He ought to.

Mr. FREAR. Yes. Now, he started in about March, or thereabouts; and that is about the time they started in here. He started in, as he states, with about 10 per cent of the mills and the logging facilities that were had on this side, and he produced 8,000,000 feet the last month, but produced 26,500,000 feet, bringing these logs 500 miles, or the timber 500 miles from Queen Charlotte Island, as he stated.

Mr. LEADBETTER. If he says that he took the timber 500 miles to the mills he lied, because——

Mr. FREAR (interrupting). There are a great many liars in this matter.

Mr. LEADBETTER. Not at all.

Mr. FREAR. Aren't there, Mr. Leadbetter

Mr. LEADBETTER. Because Ocean Falls mill is not 500 miles from Queen Charlotte, or half that distance.

Mr. FREAR. The quantity of timber and the logs he brought 500 miles to Vancouver, where it was shipped.

Mr. LEADBETTER. The lumber may have been brought to Vancouver where it was shipped, but the logs were not brought to Vancouver.

Mr. FREAR. Oh, no; the logs came 175 miles; that is what he said.

Mr. LEADBETTER. Then I will withdraw my statement that he was a liar.

Mr. FREAR. He said the logs and timber, but I put it all together.

Mr. LEADBETTER. You should not put them together, Mr. Frear; they should be separated.

Mr. FREAR. Strike that statement there as to what I should do.

Mr. LEA. I submit that you are not getting any place in this.

Mr. FREAR. No, but I am getting some place; but haven't got my answer. This witness continually interrupts, and I will strike out the answer until I get an answer to the question. Then he may make his own statement. Because this record is a permanent record to go before the House.

Mr. LEADBETTER. You want to make it all your way.

Mr. FREAR. No; but I want to get in the record what Pendleton accomplished, and you won't permit it to be done, if you have your way. He states to the committee that he produced 26,500,000 feet of finished airplane lumber. Your statement is that Great Britain learned from Disque, and I am trying to find out if the fact is as testified, not by you but by members of the corporation, that the corporation furnished 7 per cent of the 143,000,000 feet; if, then, it would be reasonable to believe that Mr. Pendleton had learned from Disque how to log, how to lumber, and how to get out this finished airplane stock? Now his testimony is—well, you can answer that, if you want to.

Mr. LEADBETTER. Now, Mr. Frear, you make statements that I can not agree—

Mr. FREAR (interrupting). Then we can disagree on them.

Mr. LEADBETTER. That I must disagree on. You say it was 7 per cent.

Mr. FREAR. Well, that is their statement.

Mr. LEADBETTER. Now just a second. What constitutes a man's handling property? Did Disque pay for only 7 per cent, or did he pay for all of it that was shipped? He paid for every stick of it.

Mr. FREAR. Disque never paid a dollar for it.

Mr. LEADBETTER. Oh, the Government paid for it; but Disque paid for it for the Government.

Mr. FREAR. The Government paid for it; they paid for it with bonds that were sold to the individuals, and they all contributed and it went into the fund. It wasn't Disque who paid for it.

Mr. LEADBETTER. Disque was handling the stuff.

Mr. FREAR. But you say Disque was the one who paid for it.

Mr. LEADBETTER. I say he handled it. He told the mills what to cut. They cut according to his directions. He took it and paid for it. I say he should not be credited with 7 per cent but with all that was sent out.

Mr. FREAR. Disque never had had any experience, it is agreed on, when he came here. He knew no more about logging than a child.

Mr. LEA. What is the use wasting time arguing on such matters as that?

Mr. FREAR. His statement is going into the record, brought out by yourself, and you accepted it as that—

Mr. LEADBETTER (interrupting). He is the greatest expert—

Mr. FREAR (interrupting). Keep still a moment and let me talk.

Mr. LEA. For Lord's sake, cut him off.

Mr. FREAR. I am answering. Between you two, between the witness and the counsel for the defense, it is very difficult to get this statement in the record, that the question was brought out by Mr. Lea that Great Britain learned from America. Now I am trying to find out on what you base the statement and on what he bases it, and I say it is very important to know if Great Britain did that.

Mr. LEADBETTER. And I am endeavoring, to the best of my ability, to give you the information.

Mr. FREAR. Now answer it.

Mr. LEADBETTER. I will try to give you all the information you want to get.

Mr. FREAR. I want it as an expert. You are a logger and lumberman; you acknowledge that. Now say—

Mr. LEADBETTER (interrupting). I was about to tell you, I consider Col. Disque the greatest expert in the world on spruce lumbering at the time, and I don't think any lumberman on the face of earth will deny it. He has had more experience in this space of time than any man that ever lived.

Mr. FREAR. Why, this mill over here was cutting—half of it was fir.

Mr. LEADBETTER. Well, of course temporarily until they could get the spruce. The spruce in British Columbia grows along the coast where they can dump it into the water. Here you have to build railroads for miles and miles at a time, and it takes time to do it.

Mr. FREAR. You have testified to all of that. Now let me suggest something that appears before the committee that Mr. Storey, who is a logger, who went up and looked over Queen Charlotte Island—

Mr. LEADBETTER (interrupting). Just a second.

Mr. FREAR. Now wait.

Mr. LEADBETTER (continuing). This British Columbia proposition—

Mr. FREAR (interrupting). Strike out anything he says there until I get my question in.

Mr. LEADBETTER. You are certainly strong on the strike, Mr. Chairman.

Mr. FREAR. I never saw a witness that was bound to interpolate and try to destroy the question like you are. Strike that out, too—my own question. Mr. Storey states that he went up to Vancouver Island for the purpose of logging, and to look over the ground, and he went over the logging grounds there and he found out that it was, according to his statement before the committee, no longer ago than yesterday, that it would cost about twice as much, as my recollection was of his testimony, to log up there, as it would to log here, or that it was twice as difficult, or something to that effect. Your statement is it would be a very simple proposition. He went up there for the purpose of logging, and he is a logger, in the business. Now apparently there is another difference—

Mr. LEADBETTER. Now let me explain to you, so even a lawyer can understand the situation.

Mr. FREAR. Yes; or even a logger sometimes can get it through his head.

Mr. LEADBETTER. Or even a logger.

Mr. FREAR. Yes. Go on.

Mr. LEADBETTER. Now an operation where the railroads are built, where your skid roads are already in, you might say, could be handled probably cheaper in this country than in that country.

Mr. FREAR. He spoke of that in connection with the conditions as he found them there, and he said it required railroads there. They have only put in a few roads, though.

Mr. LEADBETTER. No. I beg to differ with him. I have been logging up in that country, Mr. Chairman.

Mr. FREAR. Yes; so has he.

Mr. LEADBETTER. The Ocean Falls people have been logging up there, and have been logging for years.

Mr. FREAR. Are you on Queen Charlotte Island?

Mr. LEADBETTER. Right opposite, on the mainland, about 150 miles south of Prince Rupert.

Mr. FREAR. South of there?

Mr. LEADBETTER. About 150 miles south of Prince Rupert, not 150 miles south of Queen Charlotte; about 150 miles south of Prince Rupert.

Mr. FREAR. How far would that be from Queen Charlotte?

Mr. LEADBETTER. I don't know. About 250 miles.

Mr. FREAR. He went over Queen Charlotte Island, and he explained to us the situation of the rivers.

Mr. LEADBETTER. Yes; I understand.

Mr. FREAR. So he ought to have some understanding of it.

Mr. LEADBETTER. But I am logging up there.

Mr. FREAR. You are logging 250 miles away.

Mr. LEADBETTER. Logging all over.

Mr. FREAR. Are you logging in Queen Charlotte town?

Mr. LEADBETTER. I guess so. I don't know. But this logging country—

Mr. FREAR (interrupting). Have you ever been there?

Mr. LEADBETTER. No, I have never been there. But that country is all the same, Mr. Frear. There is no very great difference in the country.

Mr. FREAR. That is the difference between you and the witness?

Mr. LEADBETTER. Well, does he say that Queen Charlotte is different from the rest of the British Columbia country?

Mr. MAGEE. It does not seem to me you get very far on argument. It seems apparent that you have to credit Great Britain with having some sense, and if she was assured that she could get sufficient lumber in the United States, she would not very likely have started operations up there on her own hook.

Mr. LEADBETTER. But, Mr. Magee, it took three and a half years of the war, and they got nothing. After Col. Disque started his operations and showed them how to do it they got to work up there and operated along the lines he was operating, of selective logging, and got quick results.

Mr. MAGEE. If she was getting enough from the United States they would not have started up there in March, 1918.

Mr. LEADBETTER. Oh, there is no limit to the amount they needed.

Mr. FREAR. Selective logging up there took all the spruce logs, that is, the large stand of spruce; but they were cutting about a third fir when they were cutting a greater proportion here at Vancouver.

Mr. LEADBETTER. I don't know anything as regards that.

Mr. FREAR. Well, this is all in evidence. That is the statement.

Mr. MAGEE. I had always assumed, and have heard it generally stated, that Great Britain and France, having been at war three or four years, that we in the United States could learn a lot from their experience.

Mr. FREAR. Let's see. You spoke of the Pittock will. I don't know about that. Aren't you one of the plaintiffs in that action?

Mr. LEADBETTER. I have no interest in the Pittock will whatever.

Mr. FREAR. Are you one of the plaintiffs in the action?

Mr. LEADBETTER. Certainly not. Mr. Pittock was my father-in-law, and we were partners in thirty or forty different concerns for 25 years of his life, and when he died he left his estate by his will very properly to his children, but by some means or other he, in my judgment, had been influenced to the point of making a trust, providing over a period of 20 years, that two men who had no knowledge whatever of business, who had never made a dollar for themselves or for anybody else, or for him during his lifetime, should handle his estate of his competent heirs, of which I was not one. The Pittock will left me no \$500. As I stated, we had joint property in that thing, as partners, he as a partner, owning one-half, I owning another half, of over a million dollars. But I don't see what that has got to do with the Pittock will case.

Mr. FREAR. Well, this question has come out. I don't know.

Mr. LEADBETTER. You asked me about it.

Mr. FREAR. That is, the question has come out.

Mr. LEA. I mentioned that simply because of this reflection upon the integrity of Mr. Leadbetter, which had been made, and I did that merely for his benefit.

Mr. FREAR. I don't think it is any reflection of your integrity that you got \$500, or that you did not. Did the will give you \$500?

Mr. LEADBETTER. Nothing whatever. My name is not mentioned in the will. Mr. Sligh was a plain liar in making that statement.

Mr. FREAR. You did not bring the action? You did not bring any action? You say your name does not appear in the proceedings?

Mr. LEADBETTER. I didn't have anything to do with it. My wife is one of the heirs and she probably will contest the handling of this money by these people, whom she deems to be absolutely incompetent.

Mr. FREAR. Have you any objection to saying who the attorneys are? Is there any record here?

Mr. LEADBETTER. Cake & Cake are my attorneys.

Mr. FREAR. Who?

Mr. LEADBETTER. Cake & Cake are her attorneys, rather.

Mr. FREAR. Is the record here filed?

Mr. LEADBETTER. I do not think this is relevant to this matter at all, Mr. Frear. I don't see why you should inject this thing in.

Mr. FREAR. No; I do not think that it is. I think that is all.

Mr. LEADBETTER. Thank you.

Mr. FREAR. That is all.

(Witness excused.)

Mr. LEA. Have you got any witnesses?

Mr. FREAR. No; I do not think of any now.

Mr. LEA. Is there another witness here? Mr. Manary.

TESTIMONY OF JAMES MANARY.

(The witness was sworn by Mr. Frear.)

Mr. LEA. Where do you reside, Mr. Manary?

Mr. MANARY. Portland.

Mr. LEA. What is your occupation?

Mr. MANARY. I have always worked in the timber.

Mr. MAGEE. I can not hear you, Mr. Manary.

Mr. MANARY. I am not a very loud talker.

Mr. LEA. You are a brother of Robert Manary, are you?

Mr. MANARY. James.

Mr. LEA. And your first name is what?

Mr. MANARY. James Manary, my name is.

Mr. LEA. I see. Have you a brother named Robert?

Mr. MANARY. Yes, sir.

Mr. LEA. Where does he reside?

Mr. MANARY. Out near Gresham.

Mr. LEA. How far is Gresham from Portland?

Mr. MANARY. About 12 miles.

Mr. LEA. Did you have anything to do with—

Mr. MAGEE (interrupting). Can you speak a little louder, Mr. Manary?

Mr. MANARY. I can not very well. I have got a cold in my throat.

Mr. FREAR. We will have to keep quiet, then, so as to hear the witness.

Mr. MANARY. And if I had a little to drink, or something like that to wash it down, I might talk louder.

Mr. LEA. Did you have charge of any of the operations of the Warren Spruce Co. at Yaquina?

Mr. MANARY. Yes; I did at one time; yes.

Mr. LEA. What was the work that you had charge of?

Mr. MANARY. I was field superintendent down at Toledo.

Mr. LEA. For just that one district?

Mr. MANARY. Yes.

Mr. LEA. What did that district cover?

Mr. MANARY. Well, we were just starting in on the Toledo Slough there, as far as I went.

Mr. LEA. What time was that?

Mr. MANARY. Oh, right along about the first of February, I think, or in January.

Mr. LEA. 1918?

Mr. MANARY. Yes.

Mr. LEA. About how long did you remain there?

Mr. MANARY. I was gone three months.

Mr. LEA. Three months in that section?

Mr. MANARY. No; I wasn't quite three months; just two months, and I have forgotten just how long over.

Mr. LEA. Now, what were your duties in that connection?

Mr. MANARY. Well, I was to hire the foreman and any superintendent I wanted.

Mr. LEA. Now, do you know anything about—oh, where did you go from there?

Mr. MANARY. I went right up on Depot Slough and put in a couple of camps up there, then went over on the Siletz and put in a camp there; building a road to go down the Siletz River.

Mr. LEA. Now, was your brother employed down there at Toledo while you were down there?

Mr. MANARY. Yes, sir.

Mr. LEA. What kind of work was he doing?

Mr. MANARY. He was superintendent; my assistant.

Mr. LEA. And do you know why he left there?

Mr. MANARY. Yes; partly.

Mr. LEA. Why?

Mr. MANARY. Well, I was called away from there and made arrangements for me to go down on the Lewis and Clark Road, and there was an understanding made with the Warren Spruce people for me to be changed down there, and after I left there I understood that they put in another man in my place and he didn't get along with him.

Mr. LEA. That is, your brother didn't get along with your successor?

Mr. MANARY. Yes.

Mr. LEA. And left?

Mr. MANARY. Yes.

Mr. LEA. Now, what was your work up at the place you went to?

Mr. MANARY. Looking after the building of that road on the Lewis and Clark.

Mr. LEA. Where is that road?

Mr. MANARY. Below Astoria, in Clatsop County.

Mr. LEA. Was that for the Spruce Production Corporation?

Mr. MANARY. Yes.

Mr. LEA. Did you ever work at Clallam Bay?

Mr. MANARY. Yes, sir.

Mr. LEA. Do you know about what the capacity is there for handling logs?

Mr. MANARY. In which manner do you mean?

Mr. LEA. By towing.

Mr. MANARY. Well, up in the Goodyear Logging Co.'s road they logged about 5,000,000 feet in water and had it towed out of there, part of it.

Mr. LEA. How much at one time did you have in there?

Mr. MANARY. Oh, I had probably about 600,000. I would put up a raft and take it out when I could.

Mr. LEA. And how many logs could be accommodated inside there; what had they room for?

Mr. MANARY. The boom I had there I built myself. I do not know what they done afterwards about the boom. It would hold probably 1,500,000.

Mr. LEA. Where did you take them to?

Mr. MANARY. To Seattle.

Mr. LEA. What, if any, difficulty did you have in taking them out?

Mr. MANARY. Well, the channel across there is about 14 miles wide, and sometimes they come in there just the same as they would out in the open ocean, and I lost one raft that went out of there, and the boat had laid there a week trying to get out.

Mr. LEA. How many rafts did you take out?

Mr. MANARY. I think I took about three rafts out.

Mr. LEA. What year was that?

Mr. MANARY. That is five years ago; five years this fall.

Mr. LEA. You had to lay there a week before you went out with the raft?

Mr. MANARY. They had a raft up there one time and the boat laid there about a week at our pier—outside the pier; it could not lay against the pier.

Mr. LEA. It was too rough to lay against the pier?

Mr. MANARY. Yes.

Mr. LEA. Was that in wintertime or summer?

Mr. MANARY. No; it was along in November, somewhere about the 1st of November sometime.

Mr. LEA. Is the whole straits rough that way, or not?

Mr. MANARY. Yes; it is rough when you come up near Port Angeles, below Port Angeles. That is the worst point on the whole straits there.

Mr. FREAR. You mean between Port Angeles and Port Townsend?

Mr. MANARY. No; between Port Angeles and Clallam Bay.

Mr. LEA. How many years' experience have you had in the lumber business or the logging business?

Mr. MANARY. About 35 years.

Mr. LEA. And during that time how much of it have you had to do with logging operations and towing?

Mr. MANARY. Well, I never had any up there until that year. I have been logging on the Columbia River putting up rafts and towing them up here.

Mr. LEA. You have done that more or less for 35 years, have you?

Mr. MANARY. No; I had been for about 21 years on the Columbia River here.

Mr. LEA. What do you know, if anything, about the waste of food materials down at Yaquina Bay while you were down there in charge of operations?

Mr. MANARY. I had nothing to do at Yaquina Bay. I was at Toledo.

Mr. LEA. Well, at Toledo?

Mr. MANARY. The waste of foods?

Mr. LEA. Yes. Do you know anything about that?

Mr. MANARY. No; I do not know of any wasted.

Mr. LEA. Do you know anything about any food being left out in the storm or weather to spoil?

Mr. MANARY. No.

Mr. LEA. Where did you room while you were there; where did you eat?

Mr. MANARY. I roomed at the hotel there.

Mr. LEA. And how frequently did you visit the camps?

Mr. MANARY. I was at the camps all the time when I was not out on other business and in the timber. I done a great deal of cruising in the timber to locate the country.

Mr. LEA. Under whose advice; were you with any cruiser?

Mr. MANARY. Mr. Kumpie's.

Mr. LEA. And where were you cruising?

Mr. MANARY. I was not cruising; I was just locating the country for them to get in to get the timber out.

Mr. LEA. I believe that is all.

Mr. FREAR. In those Clallam Bay operations they are working the Davis system of rafting. That is what you were using?

Mr. MANARY. Not while I was there.

Mr. FREAR. That is what they have been using in recent years. How many years ago were you there?

Mr. MANARY. Five years ago. Mr. McFarland was there after I left and then they took up the Davis raft.

Mr. FREAR. The testimony is that they had used the Davis system on Queen Charlotte Island, and that in all the rafting that they have had there with this spruce one raft was lost—I mean, was broken up completely—and two others injured, out of a great many rafts that were sent out. That is across 80 miles of what is said to be a turbulent strait. Are you familiar with that up there?

Mr. MANARY. No; just on the Clallam Bay side.

Mr. FREAR. You have never been up to Queen Charlotte Island?

Mr. MANARY. No.

Mr. FREAR. That is what Canada did when she was called upon to get the logs?

Mr. MANARY. I do not know of anybody using the Davis raft system, only the Goodyear people.

Mr. FREAR. They have adopted it and they have never lost a raft, according to their statement since they adopted it. That is Mr. Lightner's testimony.

Mr. MANARY. Mr. Chesley, last year, told me that they lost a few logs off of one raft.

Mr. FREAR. This Davis system is almost the same as towing in a boat, the way they tie them up with chains?

Mr. MANARY. Every log is tied with a cable.

Mr. FREAR. So that it really is a system that has been adopted by loggers now generally, and that is a good system?

Mr. MANARY. Yes; I understand it is. He has a patent on that.

Mr. FREAR. I mean, it is a good system?

Mr. MANARY. I believe so. I never saw it done.

Mr. FREAR. You have never done it yourself?

Mr. MANARY. I know pretty well how it is done.

Mr. FREAR. Of course you would not do that in the Columbia River?

Mr. MANARY. No.

Mr. FREAR. What position did you have with this company?

Mr. MANARY. Superintendent.

Mr. FREAR. Of all the Warren Spruce operations?

Mr. MANARY. Oh, no; just at Toledo.

Mr. FREAR. What was the position, then?

Mr. MANARY. Field superintendent.

Mr. FREAR. At Toledo?

Mr. MANARY. Yes.

Mr. FREAR. How long were you with them?

Mr. MANARY. Going on three months, not quite three months.

Mr. FREAR. What time was that?

Mr. MANARY. I think I started in about the 1st of February.

Mr. FREAR. February, 1918?

Mr. MANARY. 1918.

Mr. FREAR. You were there for three months?

Mr. MANARY. Yes.

Mr. FREAR. What were you being paid then?

Mr. MANARY. Ten thousand dollars a year.

Mr. FREAR. You left what time?

Mr. MANARY. I left about the last of April.

Mr. FREAR. Why did you leave?

Mr. MANARY. Well, the other people wanted me to go down on that road to look after that road, and they went to the Warren Spruce people and made arrangements and asked for me to go down there.

Mr. FREAR. That is on the road down to the Blodgett tract?

Mr. MANARY. No.

Mr. FREAR. What road?

Mr. MANARY. The Lewis & Clark road.

Mr. FREAR. Were you still working for the Warren Spruce people?

Mr. MANARY. No.

Mr. FREAR. Oh, for the Grant-Smith-Porter Bros.?

Mr. MANARY. Yes, sir; they put in that road.

Mr. FREAR. What have you to say about the operations of the Warren Spruce people? That is, their methods, as to efficiency in logging.

Mr. MANARY. I do not know anything about their logging.

Mr. FREAR. About their general business methods down there?

Mr. MANARY. Well, it was all left to me down there while I was there.

Mr. FREAR. I will ask you this: Have you ever made statements to different people that they were not good loggers or not efficient in the work that they were doing there?

Mr. MANARY. I did not know anything about their logging at all.

Mr. FREAR. What was their work that you were engaged in?

Mr. MANARY. I was hired to take charge of the logging.

Mr. FREAR. Well, now, what was their work compared with good logging work?

Mr. MANARY. The logging work was supposed to be done at my say-so, as I said it was to be done.

Mr. FREAR. But all the responsibility could not be loaded on your shoulders; you would not want to be held accountable for all the things that were done there, I presume. What was their method, good or bad; were they good or bad loggers in there at that time?

Mr. MANARY. They got me what I wanted; they got the material.

Mr. FREAR. They got the material and supplies?

Mr. MANARY. Yes.

Mr. FREAR. What about production?

Mr. MANARY. Their was no production when I left; there was nothing got out before I left.

Mr. FREAR. What about the method they were pursuing? Was it a method of good loggers?

Mr. MANARY. Well, I could not say. They never was much on the ground, just once or twice, through the timber with me, and as far as their logging is concerned, I do not think they were loggers.

Mr. FREAR. What about the wastefulness that occurred there; that is, the wasteful methods that were pursued? That is, I mean, in a general way, of the material for construction, not using it and wasting time and money in useless construction, either of roads or logs, or matters of that kind. What have you to say about that?

Mr. MANARY. Well, I did not see any wastefulness. Of course, there were changes made very often; there were men that made changes; all these officers that come down and give different orders

from what Mr. Kumpis gave me and told me sometimes, and I would not know where I was.

Mr. FREAR. That is what I have understood came from you.

Mr. MANARY. Yes.

Mr. FREAR. That leads to a failure to produce, does it not? It delays operations and injures the general work?

Mr. MANARY. Sometimes it does; if a man will pay attention to it all the time.

Mr. FREAR. You had to more or less, I suppose?

Mr. MANARY. Of course, when your superior officer came along.

Mr. FREAR. Well, I will not ask you anything further along that line. After you went down to the Lewis and Clark road, what was the method pursued there, different or better or worse, in the handling of conditions there?

Mr. MANARY. Oh, handled about the same way; it was all soldier labor.

Mr. FREAR. You built a road there, a railroad?

Mr. MANARY. Yes.

Mr. FREAR. About how long a road was it?

Mr. MANARY. They built about 12 miles, in between 11 and 12 miles.

Mr. FREAR. Do you know what the cost of the road was?

Mr. MANARY. No; I do not.

Mr. FREAR. You received an option or part of an option from Davis, did you not, on the Blodgett tract?

Mr. MANARY. We had an option at one time on it.

Mr. FREAR. That was in the spring of 1918—January, or somewhere along there?

Mr. MANARY. No; it was along the fall of 1917, I believe.

Mr. FREAR. Davis had the option, and you were taken in with him, you went in and joined with him?

Mr. MANARY. Yes.

Mr. FREAR. To whom was that option transferred?

Mr. MANARY. It never was transferred; we returned it back to Mr. Brumby.

Mr. FREAR. Was not Donaldson interested in that tract?

Mr. MANARY. He came to me and asked me to get the option.

Mr. FREAR. Did he have an assignment of it?

Mr. MANARY. No.

Mr. FREAR. Nothing at all.

Mr. MANARY. No; we never turned the option over to him.

Mr. FREAR. Where did Rossman come in? Did he have an option?

Mr. MANARY. No. I did not know Rossman.

Mr. FREAR. Then you and Davis were the only ones who received it; that option was for how much?

Mr. MANARY. I don't remember what it was for.

Mr. FREAR. It was testified that it was for \$575,000.

Mr. MANARY. I could not tell you right now.

Mr. FREAR. How did you come to be interested in that option?

Mr. MANARY. Well, Donaldson came to me and told me he had some people that wanted to buy that.

Mr. FREAR. Donaldson?

Mr. MANARY. Yes, and that they were willing to put up \$25,000 for the option.

Mr. FREAR. Donaldson's people?

Mr. MANARY. Yes.

Mr. FREAR. Was that Bailey?

Mr. MANARY. I do not know who it was. He put \$25,000 up for the option until it would be cruised.

Mr. FREAR. This was in the fall or early winter months of 1917?

Mr. MANARY. Somewhere along about that.

Mr. FREAR. What did you do when he came to you?

Mr. MANARY. He never put up the money.

Mr. FREAR. I am trying to find out how you came to be interested in the option. You say Donaldson came to you. How did you come to be interested in the option first?

Mr. MANARY. He came to me and asked me to get it back, as I was acquainted with the Blodgett people.

Mr. FREAR. Wanted you to get it from the Blodgett people?

Mr. MANARY. Yes.

Mr. FREAR. You did not get it from the Blodgett people direct?

Mr. MANARY. I got it from Davis.

Mr. FREAR. And Davis got it from Blodgett. You went in with Davis on a half interest?

Mr. MANARY. It was me that got it from Davis.

Mr. FREAR. It was a half interest; what were the terms?

Mr. MANARY. There were some terms that I don't remember.

Mr. FREAR. There was nothing in writing?

Mr. MANARY. No.

Mr. FREAR. Just an agreement between you?

Mr. MANARY. Yes.

Mr. FREAR. At that time did you keep your option for the full length of time?

Mr. MANARY. Yes, somewhere about that.

Mr. FREAR. I understood it was released before that time, before the end of the thirty days. That was the testimony here this morning.

Mr. MANARY. There was some agreement that we were to take the option and these people were ready to put up at the time, but they did not and it was returned, and I do not know whether we kept it for the thirty days or not.

Mr. FREAR. Did Davis do the real work in regard to it; did he handle the business end of it?

Mr. MANARY. He was acquainted with Mr. Blodgett and he got it from Blodgett or someone.

Mr. FREAR. After the contract was released, was it released by Davis back to the Blodgetts?

Mr. MANARY. I think we returned the option at first, right back to them.

Mr. FREAR. That was before the expiration of the 30 days, or do you know?

Mr. MANARY. I don't remember.

Mr. FREAR. Was Mr. Davis connected with the Warren Spruce Co. in any way, and if so at what time?

Mr. MANARY. I do not know anything about that.

Mr. FREAR. You do not know whether he was an officer of the Warren Spruce Co.?

Mr. MANARY. Not to my knowledge.

Mr. FREAR. When did you enter the employ of the Warren Spruce Co.?

Mr. MANARY. It was along about the last of January, I believe.

Mr. FREAR. About the last of January, 1918?

Mr. MANARY. Yes.

Mr. FREAR. In this position to which you referred, you stated that you worked for them three months and then went back to the Grant-Smith-Porter job?

Mr. MANARY. Yes.

Mr. FREAR. Were you ever down on the Blodgett tract?

Mr. MANARY. No.

Mr. FREAR. You were never down there?

Mr. MANARY. No.

Mr. FREAR. Did you ever handle timber at all in purchases of this size, tracts of that kind?

Mr. MANARY. Yes.

Mr. FREAR. Whereabouts; what tracts did you ever sell?

Mr. MANARY. Well, I was in a deal with Mr. Bates with the Eccles people.

Mr. FREAR. How much was that; how large a deal was it?

Mr. MANARY. Somewhere about \$3,000,000.

Mr. FREAR. A large deal?

Mr. MANARY. Yes.

Mr. FREAR. Mr. Donaldson did not come across, did he; he was not able to get his parties up with the money on this Davis option of which you spoke?

Mr. MANARY. No.

(Witness excused.)

TESTIMONY OF HOWARD H. HOLLAND.

(The witness was sworn by Mr. Frear.)

Mr. LEA. Where do you reside, Mr. Holland?

Mr. HOLLAND. In Portland.

Mr. LEA. How long have you resided here?

Mr. HOLLAND. Approximately 22 years; since 1897, practically.

Mr. LEA. What is your business?

Mr. HOLLAND. Logging.

Mr. LEA. And how long has logging been your business?

Mr. HOLLAND. Oh, practically since 1904; I have been engaged in timber and logging and milling all my life, practically.

Mr. LEA. You were connected with the work of the Spruce Production Corporation here, were you?

Mr. HOLLAND. No; not until—with the exception of my appointment at the Yaquina Bay.

Mr. LEA. When did your connection in that respect begin?

Mr. HOLLAND. As I recall it, about the middle of June; about the 18th or 19th.

Mr. LEA. 1918?

Mr. HOLLAND. Yes.

Mr. LEA. And what were your duties at Yaquina Bay?

Mr. HOLLAND. Well, it was general supervision. My title was supervisor; it was supervising the work of the cost-plus contractors,

and also planning out the logging end of the work, and it was a sort of field-management job, except it was supervision only.

Mr. LEA. You were in effect the representative of Col. Disque in that operation in Yaquina Bay district?

Mr. HOLLAND. Yes, sir.

Mr. LEA. That included the Blodgett tract and the section north of the bay also, did it?

Mr. HOLLAND. Yes, sir.

Mr. LEA. Had the work on the mill started before you went there?

Mr. HOLLAND. No; that started just about the time I went there. The location of the mill was decided on, I think, the first two weeks I was there, before the 1st of July. I was in the woods at the time of the decision.

Mr. LEA. To what extent and how frequently did you confer with Mr. Disque as to these operations?

Mr. HOLLAND. Well, it practically kept me pretty busy on the work of laying out and planning out logging operations; that is, the logging roads and the placing of them and getting the location of the timber. Conferences were not very frequent with him, since most of the correspondence was taken up through Col. Hitchcock as a matter of convenience, in getting supplies and things of that kind; logging equipment, railroad equipment, steel and things of that kind. That part of the work was left to me; that is, the carrying of equipment to obtain a production of 30,000,000 per month by the 1st of March, 1919. With that knowledge of thirty-million production, I was supposed to prepare for it, in order that production would reach that point upon that date.

Mr. LEA. Did Mr. Disque interfere with you in carrying on your plans there to meet that demand, so far as that section was called upon to do it?

Mr. HOLLAND. Did he interfere?

Mr. LEA. Yes.

Mr. HOLLAND. No.

Mr. LEA. You exercised your own judgment in carrying out the operations?

Mr. HOLLAND. Yes.

Mr. FREAR. When did you testify you went in there?

Mr. HOLLAND. I think I stated about the 18th of June, as I remember. I can find that date exactly, the actual date; but I talked with Col. Disque on Saturday morning and went there the next Monday. That is as near as I can remember it offhand.

Mr. LEA. Reference has been made to the connection of the railroad—that is, the north branch railroad—with the railroad that runs along the north side of Yaquina Bay. I wish you would state to the committee why that connection was made.

Mr. HOLLAND. Well, in the first place, the road, if it had been built through this gap up beyond the point—if you will remember where you took the train when you went out on the north line—there is a little grade; going up there from the bay, you had to make that divide. Then, coming down to the bay, you would have had a switchback on the edge of the bay to have gotten out to the bay to the boom and rafting ground out there; so you would only have saved a mile and a half of road. The physical connection at Clallam, even though you were not going to haul over it, is worth the cost,

and I would utilize that in building my own logging road, in getting supplies, your equipment, your donkey engines, your locomotives, and provisions and everything else, and that connection is worth quite a little to you. Furthermore, the booming and rafting grounds at the lower point would be down at the end, and then the switch-back out in the water, and the conditions for rafting and booming were not good. There was a narrow channel at low tide, and it would interfere somewhat with transportation; and, furthermore, the storms get quite a sweep across that bay, and that may have interfered with the work of booming and rafting during the winter months.

Mr. LEA. And the railroad would have permitted the work to go on in any weather conditions?

Mr. HOLLAND. If your production was greater from the two points down there, both the north and south lines, so that your mill had more than it could do, and it was decided to be advantageous to ship something out, you could have done that also, providing the Spruce Production could have furnished proper equipment.

Mr. LEA. Did you observe the railroad operations or construction work while you were down there?

Mr. HOLLAND. A great deal. That is, the work had started on both the south and north line, or was just starting on the north line when I got there. On the other line there was a lot of it that had just been brushed out somewhat, and I went over that. The first thing I did was to walk the entire length of it, and every chance I had I walked over the construction work as it progressed.

Mr. LEA. Have you ever had any experience in railroad construction or logging road construction?

Mr. HOLLAND. In our own works, yes; we have had quite a little of that.

Mr. LEA. I wish you would tell this committee what you saw there and the difficulties that were involved, and the success and failure of the work as it may have appeared to you?

Mr. HOLLAND. Well, it is quite a long story, I mean to go into it in detail, but at the same time the only way you can get it is to get it in detail.

Mr. LEA. Yes.

Mr. HOLLAND. These roads were opened up their entire length, or nearly their entire length at the same time. It was not a follow-up proposition. The economical way to build any road, especially where transportation facilities are not good, is to follow up, start at your initial point and then follow up; bring your timbers for trestle work and your piling right along with you, and you can have grading crews out a little ahead, but you have got to keep your work coming from a common point, especially on a road of that nature. I think if that policy could have been adopted down there that the road could have been built much cheaper. Now, the fact that you were opening it up in a great many different places along the line meant that you had to provide food and supplies of all kinds. For instance, your piling and your bridge timbers and your construction timbers were towed out through the harbor, and they had to wait, they could not always get them out there when they wanted to on account of weather conditions. They were allowed to go in over the surf. I mean you had

a makeshift right along in order to keep the thing going and try to keep your whole operation going at full capacity all the time.

Mr. LEA. That is, for instance, if you had to deliver the materials for a bridge down toward the Blodgett tract did you have to take that out by water?

Mr. HOLLAND. A great deal of it was taken out by water.

Mr. LEA. Was there any established wagon road paralleling this railroad construction?

Mr. HOLLAND. No established wagon road at all. They used the beach, and there were a few places where you had to go off the beach and go around promontories where you could not get by on the beach. The beach was not always open to traffic, and there were a great many times when you could not travel the beach at all.

Mr. LEA. Was there any established road over those promontories?

Mr. HOLLAND. Just very poor roads. They were good in the summer time and very bad in the winter.

Mr. LEA. Did construction work have to be done to make those deliveries to the railroad, that is, with the wagons or trucks, so that they could pass?

Mr. HOLLAND. Well, there were more or less of these sand roads built, the plank roads. That is, there was some of that work done, and there were very few places where a wagon road came in close proximity to your railroad. Of course your railroad ran along the beach and there were places there where you would have less than half a mile, sometimes much less than half a mile, to get to the road, but the beach was the artery.

Mr. LEA. How were supplies from the beach taken up to the different locations on the railroad?

Mr. HOLLAND. That was all done by horses, teams. They were dragged up; piling, for instance, was dragged up, and bridge timbers were dragged up.

Mr. LEA. Didn't you have wagon roads?

Mr. HOLLAND. No, we did not have wagon roads for most of it, it was just a case of hauling it, putting three or four teams onto one load, as many teams as were necessary. It was a question of bulling it through.

Mr. LEA. Go ahead in your own way and tell us about the situation.

Mr. HOLLAND. It was quite a problem, I noticed, right straight through, in getting the material that was needed. There was piling, for instance, that had to be brought in, some of it, from the valley. We got out quite a lot of it ourselves. It was a country that had been burned over, and the second growth was a second growth—that part of it had quite a thick sap. As we went along and got into places where you got spruce piling we utilized that. We got piling from the Alsea. No, the bridge timbers, the stringers and caps, etc., some places we hewed caps and other places they had to be shipped in. Deliveries of lumber were slow sometimes and held us up.

Mr. LEA. How many different points of operation did you have on that Blodgett road at once?

Mr. HOLLAND. Well, I should say, roughly about 10 distinct operating units there. They have that data, Mr. Lea, that shows the

number of camps and their locations on the map. I do not happen to have one with me, but it pretty well typifies, outlines the work.

Mr. LEA. If you will just proceed now in your own way.

Mr. HOLLAND. At the time, of course, that this work was going on, this construction work which was being done by the Warren Spruce Co., being done under the direction of our own surveyors—the only connection I had was one of supervision in a general sort of a way, I mean to see that the work progressed and try and have the whole thing progress uniformly—and during this time, of course, this logging development work had to go on. In other words, we did not want the main line road down there and then have to go in and start in and build logging roads and get ready to log. We wanted to have the whole thing finished simultaneously. We were fairly well equipped to start logging upon the completion of the road, that is, we would have been. We had, as I recall it, several miles of spur in process of completion down there in the Blodgett tract. More or less grading was done, and some of them there were little gaps, but there would be some grading. There would be a gap, and then grading ahead. When the pile drivers finished on the main line I would move them in there and fill up those gaps with the piling work.

Mr. LEA. Was the main extent in the work of the Warren Spruce Co. down there construction work or the production of logs?

Mr. HOLLAND. Construction work, practically all.

Mr. LEA. Is the fact that 7 per cent of the lumber that was produced came from the cost-plus contractors any indication of the amount of work that they performed?

Mr. HOLLAND. Well, that of course deals with the logging end of the production, which I know nothing about except from talking around, any information a layman might have.

Mr. LEA. To what extent have they got into log production?

Mr. HOLLAND. In that locality?

Mr. LEA. These operations; yes.

Mr. HOLLAND. That was practically the only extent of their work down there. The only logging they did down there was conducting this Wessel Creek operation, which was their S. P. D. No. 10. That was not any large operation at all, and it was done under the selective type of logging. I mean that it was scattered spruce, and spruce where you not only did not take all the trees but you did not take but a small percentage of the log out of the tree. It did not compare with the major units which were being opened up by them on the north and south line, on the S. P. D.'s No. 11 and 12.

Mr. LEA. What was the attitude of the laborers there and their experience in carrying on this work at Toledo?

Mr. HOLLAND. The laborers?

Mr. LEA. Yes.

Mr. HOLLAND. Well, in the Toledo operation they were mostly soldiers. It was difficult at that time to get civilian labor and we were attempting to utilize as much soldier labor as we could down there. We had some soldiers that were pretty fair, but they had to learn this game. We were using them for felling and bucking a great deal. We were using them particularly for little schools toward the last. We were trying to get some of those fellows whipped into line so we could use them on our major operation. It was a discouraging operation, inasmuch as it took quite a little

machinery and quite a number of men to produce a small amount of timber. It was a trying operation to a logger. Our foreman there was a man that was—at least, during the time I was there—was a man that always had the reputation of being a pretty good logger, and he was often discouraged because he could not get better results. But it was not in the cards to get it in that kind of an operation, because it was selective in the first place, and a very thin stand of timber in the second place. They had one setting, for instance, where there were only seven trees to be brought in to one donkey setting. That means the expense of setting up, of course, to get those seven trees. But there were some very good logs in those seven trees. There did not happen to be in this particular instance much fir and other timber in there, and the territory was actually logged over.

Mr. LEA. Was there any disposition there on the part of anybody that you knew of to refuse or to fail to try to get experienced labor?

Mr. HOLLAND. Oh, no, no; they tried; they tried and I tried. I tried—in fact, as far as the cost-plus contract was concerned, they repeatedly came to me and asked me if I could not help them get somebody. I went up there a great many times to talk with the men that were there to find out what we could do to speed them up. I will admit it was quite a question what you could do. We were not working all these donkeys at any time. There were very rarely over two or three sides working. They were building a road at the same time that the logging work was going on.

Mr. LEA. Was this Toledo operation the first cost-plus effort in that section?

Mr. HOLLAND. I believe it was the only one in that section. I think I am right in that.

Mr. LEA. Did you see Mr. Miller doing any logging down there at that time?

Mr. HOLLAND. Yes; Mr. Miller was logging up on his road, just a short distance above Wessel Creek.

Mr. LEA. How did his logging compare with what was being conducted there by these men, the Spruce Division Corporation?

Mr. HOLLAND. Of course, Mr. Miller was logging fir. Now, at the time I was there I was trying to conduct that road there to help Mr. Miller and Mr. Storey as much as possible in getting their logs out. We loaned them cars, trucks, and hauled from the junction point over the line and dumped the logs, and attempted to sort them and keep them separate in the booms. Mr. Miller was logging up on the—I should say, roughly, about a mile above the "Y," where they connected up with the Wessel Creek Road, and at the particular time when I noticed his operation he had a pretty good showing. In other words, he had his road built up, and he had timber felled and bucked up, and what you would call a setting. He had three donkeys, a yarder, swinger, and loader, and was prepared to go ahead and get logs. While he was building a little road work he had pulled into his rollway quite a bunch, and in a matter of a week or so he was able to pull out quite a few logs. He probably got a production of eighty or ninety thousand feet a day.

As he kept going back, however, on the edges of the setting his production would decrease for that one setting, and in pulling out that particular setting he was compelled to shut down for a matter

of six weeks or such a matter to build road ahead. Not from choice, however, Mr. Frear; but I mean that was just one of those things that sometimes happen with the best of loggers. Most of us try to keep road ahead. If we can keep road ahead in our operations of our own on the river we have road ahead nearly a year. It is always good policy to do it. I think probably Mr. Miller and Mr. Storey in that operation were probably handicapped some in labor and supplies, etc., in getting stuff out; but I mean that when you consider a daily output you have got to take it over an average of days. You can not take a week's record or a month's record, but you have got to consider your record for the year.

Mr. FREAR. If I may interject right there—that was a difficult situation with them on the logging business; that is, I mean on the labor proposition, because they were practically obliged to compete with these other people, and the overage commercial logger could not do that.

Mr. HOLLAND. There were very few loggers in our Wessel Creek operations, or any of our operations down there, I believe. They were with Miller, had been with the Miller road. I would not be certain about that, Mr. Frear, but the difficulty in getting men was not confined to that operation alone. The difficulty in getting men, experienced men, Mr. Frear, is not in that territory alone. It has been the experience of every logger in every part of the West during the last year or two. A great many men are unable to get road ahead because they can not get labor—not only there, but elsewhere.

Mr. FREAR. Particularly at that time, during the war, it was a hard labor condition.

Mr. HOLLAND. Yes.

Mr. LEA. Where did you get the sled for your donkeys?

Mr. HOLLAND. Well, of course, the sleds that were used in the Wessel Creek operations were made there on the ground. All of this equipment that came in came in on just little timber skids. They were new engines, most of them, and realizing that we had to—the sled end of the game is a very important one to the logging industry—realizing that those had to be built we endeavored to get as many as we could from the Wessel Creek operations. We pulled in what trees we could and had a regular sled gang making sleds at Toledo.

Mr. LEA. What is required for a sled?

Mr. HOLLAND. It requires a very good sizeable log in the first place.

Mr. LEA. About how big?

Mr. HOLLAND. A good sled would require a log anywhere from 4 to 64 feet in length. It has got to be sound, and it ought to be at least 42 inches on the top end. It ought to be bigger than that; it ought to be 48 inches.

Mr. FREAR. What kind of timber?

Mr. HOLLAND. Fir timber. Spruce is too soft, Mr. Frear, and cedar is not obtainable in that country.

Mr. FREAR. I saw them there and I was wondering.

Mr. HOLLAND. Hemlock is no good for that purpose.

Mr. LEA. What became of the surplus sleds that existed at the time of the armistice?

Mr. HOLLAND. They were taken back to Vancouver, I believe, at my suggestion. I found by knocking them down again—there were some of them that were not put together, although the timbers were there—by knocking them down we could get rough timber rate out, and that seemed good policy to ship them back, as long as the donkeys were going back, and especially as these sleds were made generally for particular donkeys. You had your loaders and your yarders, and both of them were of different sizes, different borings and all that, so that these sleds should accompany the donkeys that they were to go with.

Mr. LEA. How many sleds were there down there?

Mr. HOLLAND. As I recall it, there was somewhere, completed, about 40. I will not be certain about it. That is besides those that were in the woods on the Wessel Creek operation.

Mr. LEA. Now, are you familiar with the timber along the north coast route there?

Mr. HOLLAND. More or less. I was in through the timber a great deal in there looking up our logging roads and places to put them, and I also endeavored to get in and get a general idea of the location of the timber. But when I went on the ground there were some men there that had been doing preliminary work, cruising, and I put them on this work of making a 10-acre cruise. In other words, going twice through a 40 and putting down on each 10 acres the amount of timber that would appear on 10 acres. I made that sort of a cruise with the idea of putting in that sort of unit, definitely locating the timber in respect to its location in a section, or as to creeks or hillsides, etc.

Mr. LEA. About what spruce did you determine was there?

Mr. HOLLAND. What quantity of spruce?

Mr. LEA. What quantity of spruce did you determine to be located below Otter Rock along the coast slope?

Mr. HOLLAND. Those figures were in the neighborhood of 150,000,000, I think, from the result of the work, from what I saw of it. I did not personally do any actual checking of my men's work, at least the men that were conducting this cruising work, but I feel that they are pretty conservative; that is, I think the stuff would have cut that and more.

Mr. LEA. Do you know about the total amount of all kinds of timber; that is, of saw timber up the coast there in that section?

Mr. HOLLAND. Roughly, the territory opened up as far as the main line construction is concerned, there would be something better than 400,000,000.

Mr. LEA. About how long would that take the Toledo sawmill to saw it on an 8-hour shift,

Mr. HOLLAND. Four hundred million.?

Mr. LEA. Yes.

Mr. HOLLAND. Without paper and pencil, Mr. Lea, I do not know whether I can figure it. It depends on how you run your Toledo sawmill. If you are going to put 250,000 feet a day—

Mr. LEA. Figuring on an 8-hour shift.

Mr. HOLLAND. Well, on an 8-hour shift that mill—I have got to digress a little on that, because your cut-up plant is there with your head saws. Your mill for commercial purposes would be changed around somewhat. You would not have that cut-up plant as an en-

tire unit, but with your two head saws and the gang edger that they had there you would have to have some other cutting units in there.

Mr. LEA. For an ordinary sawmill.

Mr. HOLLAND. You would have to have resaws for an ordinary sawmill because you would not want to go an inch or 2 inches or 3 inches with those head screws. Also you would not confine it to cants as much as you would in the cant spruce work, cutting larger units and having the resaws take care of it. In running that mill as a whole, if you ran both sides of it, there would probably be at least two resaws and possibly more.

Mr. LEA. The mill would handle the lumber that the head saws could take care of.

Mr. HOLLAND. If you figure on 300,000 a day on an 8-hour day—I will not be certain the mill would cut that—I mean I think there are others who can give you more definite information regarding that, but if it was 300,000 a day on an 8-hour day, if you run 300 days—what is that, nine million or ninety million?

Mr. LEA. Ninety million.

Mr. HOLLAND. Well, at that rate it would take over four years.

Mr. LEA. About how long would it take to saw all the spruce that was there?

Mr. HOLLAND. Well, of course, your spruce was to be delivered from not only your north line, but from your south line.

Mr. LEA. I understand that, but this particular section, how long would that keep the mill busy?

Mr. HOLLAND. This north section?

Mr. LEA. Yes.

Mr. FREAR. You mean commercial sawing?

Mr. LEA. I mean sawing as the Government figured on it there.

Mr. HOLLAND. For air stock, selective air stock?

Mr. LEA. For aircraft purposes.

Mr. HOLLAND. Do you mean an 8-hour shift or a double shift, or a treble shift?

Mr. LEA. Eight-hour shift.

Mr. HOLLAND. Well, I think their plan called for something around half a million feet, 500,000 feet on an 8-hour shift. I will not be certain about that. Mr. Swan, who built that mill, is a man I have known, and he has stated to me that it would cut, in three shifts, better than a million feet. He has stated to me that it would cut as high as a million two hundred thousand feet.

Mr. LEA. For aircraft purposes?

Mr. HOLLAND. For aircraft purposes. It was a question of additional units, sawing units. Maybe half a million on eight hours is a little high, but on the basis of that it would be 400,000 feet in eight hours; in putting it through the resaws they figured roughly. I think Mr. Swan so stated that he would handle easily 750,000 feet on two shifts. Now, that brings down that general average, but I mean he figured safe on that, and by crowding they could get more. It was merely a question of adding resaw units to increase the cut.

Mr. LEA. Who is Mr. Swan?

Mr. HOLLAND. He is the man that really, I think, drew the plans and constructed the mill, supervised the construction of it, for the S. P. D.

Mr. LEA. Of what experience was he?

Mr. HOLLAND. He has been an old mill constructor—millwright and mill constructor—and was at one time connected, I believe, with the Allis-Chalmers Co., but I will not be certain about that, but I think he was. He has built a great many mills on the coast and is still doing a great deal of that work. He is supposed to be a very experienced man in that regard.

Mr. LEA. Now, do you know about the wasting of food and food materials down there in that spruce operation??

Mr. HOLLAND. There was very little, and especially considering the conditions under which food supplies were forwarded. There was once in a while that a little meat would go bad, but that happens in the best of logging camps and the best of families. It was due almost entirely to transportation facilities, due to the handicap that nature worked on us, which were the high tides, which would not allow transportation, and sometimes the weather conditions, either by boat or water, weather conditions would handicap.

Mr. LEA. What was the method of disposal of waste material at the camp?

Mr. HOLLAND. Meat was ordered burned. Any meat that was bad, I mean that had spoiled or anything—always in any logging camp there is a certain amount of it that spoils during extreme hot weather—I think probably in the Army they were a little more particular than in ordinary civil life with spoiled meat, because they feel a responsibility for those men. I mean meat that was tainted, or what you might call a little high, but meat that did spoil under those conditions was burned, through the orders of the Medical Department of your Army. That is, anything that was destroyed was done through the authority of the Medical Department. That is, as far as I was able to observe.

Mr. LEA. Now, going back to the question of production, how many sides were provided for in those operations at the Blodgett tract and the north coast route?

Mr. HOLLAND. Well, the game was a progressive one, Mr. Lea. In trying to determine the output of a side—that is, throughout the operation as a whole—you have to get your railroads laid out and your logging road laid out definitely on the ground in order to determine the number of sides to take care of it. I started in with the idea of ordering the equipment and preparing for a production of practically a million feet a day. You would have to have a little more than that to get 30,000,000 a month. I figured we would actually need at least 40 sides doing business all the while in order to get it. I found that down in the Blodgett tract, the way the thing was opening up, the location of the timber—that is, the belt in which the spruce was located and was dense—was only about a mile and a half wide. We were enabled to get into that mile and a half strip, which was probably 4 or 5 miles long and a mile and a half deep—we were enabled to get into that in several different places, so that we could open it up in its entirety as regards length. Not only were we prepared there to get the thickest stand of spruce, the heaviest stands, but the best quality in order to start our operation. In other words, in that particular location I figured that a side would have gotten nearer eighty thousand a day than thirty. It was almost straight

logging. There would be more timber actually taken out, and the stand of spruce timber was almost entirely, consisted almost entirely of spruce, and, in fact, on the territories that we had developed and opened up there was hardly enough fir to give fuel for your donkeys.

Mr. LEA. If your work had gone on to completion as planned, what would your probable production there in a year have been?

Mr. HOLLAND. Well, on the Blodgett tract—

Mr. LEA. I mean for you to take the whole operation.

Mr. HOLLAND. If I might be permitted to take them separately—

Mr. LEA. Yes.

Mr. HOLLAND. In the Blodgett tract I figured we would get, that we could get from that side alone 800,000 feet if we had to. We could get 600,000 easily. Now, if we could have averaged 60,000 a day a side, 10 sides would have provided us the 600,000 feet; and I think we would have gotten—of course, the important thing would have been to have kept 10 sides going continuously, and that would have meant several extra sides. What I mean by a side, I mean logging-engine unit. It may be a yarder and a swing and a loader, or it might mean just a yarder and a loader, depending on your method of loading; but, generally speaking, it would have been the three engines. It would have been nearer 80 than 60 during the first year of our operation down there, I believe, whether the Aircraft Lumber Co. had done it or whether we had done it ourselves.

Mr. LEA. That is, 80,000 a day for the working units?

Mr. HOLLAND. Yes.

Mr. LEA. How many units would there have been in the north line?

Mr. HOLLAND. Well, there would have been—to have met the requirements there would be less timber required from the north line, and I would have figured more units of operation there, but you would have gotten a less production per side, and even at that the territory opened up on the north side would have been more nearly straight spruce logging than that first unit opened up a mile and a half from the coast, or two miles from the coast, because there was very little fir in that particular strip. As you went back and got up on the creeks farther it would have been more selective logging as to type of tree. I mean you would have had to get in among the other stuff and take your spruce.

Mr. LEA. Combining the production of the two areas, about what would you have expected as the annual production?

Mr. HOLLAND. I should have expected at least 50,000 for the side within the two areas.

Mr. LEA. What I meant, logging—

Mr. HOLLAND. You mean annual?

Mr. LEA. The total production.

Mr. HOLLAND. Your annual production?

Mr. LEA. Yes.

Mr. HOLLAND. Well, my orders were to get 30,000,000 a month, and we were going to get it, Mr. Lea, if there was any way of doing it, and if it was a question of adding more units we would have gotten it. We would have gotten it for as long as our timber held out, at least.

Mr. LEA. Now, what proportion of that 30,000,000 feet a month was to come from this Yaquina Bay district?

Mr. HOLLAND. That 30,000,000 a month was lost that I am referring to. The 30,000,000 of logs was to come from—

Mr. LEA. From that section?

Mr. HOLLAND. From that section.

Mr. LEA. Do you believe there was a reasonable prospect of getting it?

Mr. HOLLAND. Yes.

Mr. LEA. For one year?

Mr. HOLLAND. Yes.

Mr. LEA. Are you acquainted with the Queen Charlotte Island?

Mr. HOLLAND. Not that far north. The farthest north I have been has been the Quatsino Sound district on the north part of Vancouver Island.

Mr. LEA. So you have not been on Queen Charlotte Island?

Mr. HOLLAND. I have not been there at all.

Mr. LEA. Were you ever in the milling business?

Mr. HOLLAND. Why, yes; but not actively engaged in it.

Mr. LEA. Well, was the question of deciding whether this mill would be constructed determined before or after your connection with these operations?

Mr. HOLLAND. It was about the same time that I went in, but I was not—I happened at that particular time to be in the woods, out on the Blodgett tract, and therefore that decision was made, I believe by the lumber producing end, I think by Maj. Griggs and Major—

Mr. LEA (interrupting). As a practical way of handling the situation, what is your judgment about that, whether or not the mill should have been constructed there or the logs transported elsewhere for cutting?

Mr. FREAR. That is rather a large question, but I don't know but what it is—

Mr. HOLLAND. Yes; it is a large question, Mr. Frear. The problem of hauling the stuff out—

Mr. FREAR. I don't think we have asked any of the witnesses so far that question in that form, but I have no objection to your answering it.

Mr. HOLLAND. The question of transporting logs out to the valley over the hills was more or less of a problem; I mean a problem that—

Mr. LEA. That is what I want to get at—the reasons instead of the mere opinion.

Mr. HOLLAND. Most of the standard or regular railroads, I mean transcontinental railroads, are not anxious to haul logs. A log load on your track is hard. Now, we were putting in those logs down there double length, for instance, in order to facilitate logging and also to facilitate any changes in specifications for our stock that might come up. They did change some, you know, from their early spring requirements and from their later requirements, and we were still prepared to anticipate a few changes—they wanting longer wing beams and other changes—and we were bucking longer lengths, double lengths, so as to get stuff better than 40 feet in length—between 40s and 54s. We were using disconnected and connected trucks for that reason. In order to have transported your product

of that length out over the Corvallis & Eastern Railroad, for instance, you would have had to use two cars, double car lengths, and then the log laid on your cars is hard on the track; it would have been necessary to have increased your siding capacity materially; it would have meant using a lot of ballast—additional ballast, strengthening the bridges and one thing and another along the C. & E., and it didn't seem as though it was—and prepare special logging cars for hauling stuff.

Mr. LEA. Is logging a severer test over a railroad than ordinary railroad transportation?

Mr. HOLLAND. Yes; it is because your load is not uniformly placed on your car or your trucks or whatever you use. It might be on one corner—a heavier load on one corner, and, generally speaking, a heavier load on one truck, your logs are generally placed the butts all in one direction, if you have noticed that on a car, a carload just—that you don't alternate your butts and tops; it is all one way.

Mr. LEA. Well, if you will, proceed with giving the facts that bore upon that question of transporting logs?

Mr. HOLLAND. Well, of course, that mill proposition, after it was decided to put it there or to be there, it left then to the logging end of it the problem of getting the stuff to your mill. I tried to show you on the way down the river, from Toledo down, the plans that we had outlined at least and started on for booming and for rafting and for caring for those rafts after they were rafted, in the storage grounds. We had only started on that work of providing storage. It would have been necessary to have provided storage for at least 40,000,000 feet to have been safe to have carried you over and to have in the mill logs during periods when you might have been held up your railroad line, might have had some slide or accident, which shut you down, which would necessarily mean that you had to have a supply ahead.

You asked about the tie onto the C. & E. road at Yaquina. We had planned that we might take logs up to Toledo and dump much of that product from that north line directly into that Toledo boom. You had your flood and ebb tides; you had to provide so that logs could get to your mill slip both on the flood and ebb tide. The booming ground at Toledo would not have been sufficient to have handled even the product from the north line, let alone that from the south; you would have had to have extended that out, branched out, coming out toward the mill, in order to have had better water to have boomed your logs and taken care of your logs as they left the car. You can't dump many logs over one brow skid—one rollway if they are not in deep water; if that log lands in the mud you can't keep piling them in the mud, you have got to dump them in the water or you will break your timber. The reason we built the booming and rafting ground at Yaquina for the north line was because we would have the advantage, if we needed it, we could raft logs there and tow them to a temporary storage, which would constitute part of our storage for the mill at all times. The south-side stuff had to be rafted across the river, because there was not that physical connection across the bay. If the game had gone on for three or four years, if this were to be conducted as a commercial operation, I would make the connection and put in a drawbridge there, because the advantage of the con-

nection there is paramount, I think, to most every logger having that and getting supplies and being able to take care of the materials in other ways if he should elect.

Mr. LEA. Where were the nearest available sawmills to handle the quantity of production that was prepared to be handled down there?

Mr. HOLLAND. The mills on the river were pretty much confined—or confining their efforts pretty much—to ship-timber work. Now, the mills in the valley were located, I think, actually as Maj. Leadbetter stated to-day—that you had a mill up there at Silver Falls, you had, perhaps, that Spaulding mill and Salem and Newberg, and there may have been a mill at Eugene. It would have been transporting those logs by railroad to all of those points from Yaquina Bay, and it would have meant in most cases a special installation in each one of those mills to have handled the product economically.

Mr. LEA. About what would be the distance, on an average, that logs would have to be shipped if they were shipped out?

Mr. HOLLAND. Well, I should say 150 or 160 miles, on an average.

Mr. LEA. Now, can you state approximately the different quantity that would be required to be shipped, depending on whether or not the logs were shipped out, or the finished airplane lumber—the proportions?

Mr. HOLLAND. In other words, the proportion of the airplane stock that was developed in the logs that we put in?

Mr. LEA. Yes.

Mr. HOLLAND. Well, the only evidence I have, which is meager, of any lumber being shipped out, our stock being shipped out was sawed by Mr. Storey's mill, I believe. His mill was confined to a—

Mr. LEA. What I mean, the product of the proposed cut-up plant suitable for airplane purposes, as compared with the log?

Mr. HOLLAND. Well—

Mr. LEA. If I don't make myself plain—do you understand what I mean? The idea is—

Mr. HOLLAND. You are trying to get me—

Mr. LEA. The comparative quantity to be shipped, depending on whether you sent out the raw log or the finished airplane stock?

Mr. HOLLAND. Well, of course, it would have been much less in the finished airplane stock. Of course, in your log run you have your curfs and your slab and your bark and everything of that kind, constitutes at least a third of the contents of that log, possibly more, so that much of it goes out in curfs and slab, that your scale rule provides for. But that part shipped out as a log constitutes weight. Now, as I understand it, the problem was that if the railroad—the C. & E. Railroad—would not handle the product of that mill and allow the commercial lumber to be shipped out with the air stock, that the commercial end of it—the stuff that would not go into our stock—would be either left there or burned or disposed of in some way and only the air stock sent out, so that at no time would that road be crowded with lumber that didn't go into air stock, unless it was elected to do so.

Mr. LEA. Then by having a cut-up plant there, the amount that would have to be carried for war purposes would be purely the finished airplane lumber?

Mr. HOLLAND. Yes.

Mr. LEA. Which only represented a small percentage of the total weight of the log?

Mr. HOLLAND. Of course, it was the plan to ship that stuff direct to the airplane factories, I mean it would have to be stopped at Vancouver or be rehandled, it would be put aboard a car there and shipped right through.

Mr. LEA. Yes. I believe that is all.

Mr. FREAR. Taking, Mr. Holland, the fact that your production here, you stated, would reach a million a day, or 30,000,000 feet a month—and I understand that is substantially the amount that you expected?

Mr. HOLLAND. That was the amount we were asked to get, and we hoped to get it.

Mr. FREAR. And if 30,000,000 feet could have been produced at Clallam Bay—and I believe they expected to produce all of that in that section—and an equal amount at Grays Harbor, which is a very great producing logging point, I understand, is it not?

Mr. HOLLAND. Yes; I guess as far as—

Mr. FREAR. And 30,000,000 feet more over in Clatsop County, in the large timber section there, in the neighborhood of the river, that will give us over a billion feet or over a hundred million feet a month and over a billion feet a year, of spruce and fir with which to build airplanes.

Mr. HOLLAND. That is in the logs.

Mr. FREAR. That is in the log. And taking, I think, the amount of—the number of planes on the front was something like 15,000 for the Allies, on the battle front, although there was double that number that had to be in reserve—have you ever estimated how many planes would have been produced in a year—the material for how many planes—under this system that was being inaugurated here, say that a thousand feet of finished airplane lumber would make a plane? It is in evidence, I believe, that it averages that for large planes, and we were not manufacturing many large planes, we had none at the front, at least, except the De Haviland 4s; and 26,500,000 feet was being manufactured up in British Columbia, independent of our own efforts, and we were manufacturing it here at a rate that was astounding; have you ever figured up how many planes would have been manufactured—could have been manufactured in a year, had all the lumber that was to be produced in the next six months, and would they ever have been able to have made planes at the rate that the spruce was to be produced?

Mr. HOLLAND. I never figured that.

Mr. FREAR. Did you ever figure how many men it would take to handle the planes that could have been produced?

Mr. HOLLAND. Of course, my understanding was that Lincoln County and Clallam Bay were the largest producers, by far, that is, would have been in 1919.

Mr. FREAR. But you were taking—

Mr. HOLLAND. Much the largest producers.

Mr. FREAR. But you were taking just one district, of course.

Mr. HOLLAND. Yes; that is all I knew about.

Mr. FREAR. The Yaquina district. Now, of course, there was claimed to be and there was the country all around where they were conducting independent spruce operations, all of which were con-

tributing; these were only four of the Spruce Production Corporation enterprises of which I am speaking, and of course a great proportion of the spruce production and fir production had come from independent operators. didn't it—it had in the past?

Mr. HOLLAND. It had in the past, but would not have in 1919.

Mr. FREAR. Why not, if it could be done just as economically? The country needed airplanes, it needed them as quick as possible, and why shouldn't they undertake to get them any way that they could: Why would they wait for any particular method to get them in from the Yaquina Bay or from any other place? Why wouldn't we take them from any place?

Mr. HOLLAND. Well, I perhaps did not quite understand your statement, but as far as—of course, Yaquina Bay—

Mr. FREAR. I am not questioning your testimony in any way in regard to it, but I am showing where it may lead to in the results, and your proposition as laid down to you was fifty million feet, I understand.

Mr. HOLLAND. Thirty million a month.

Mr. MAGEE. Thirty million feet of logs?

Mr. HOLLAND. In logs.

Mr. FREAR. And it would have been a production of considerably over a billion feet by Government operations alone, and, in addition to that, we would have had all the private operators—

Mr. HOLLAND. Well, do I—

Mr. FREAR. And at the same time Great Britain was continuing her production and she was going very fast, because she had had 8,000,000 feet of finished spruce and fir the last month.

Mr. HOLLAND. Do I understand that 30,000,000 feet per month of the finished air stock was supposed to be needed—did that represent the needs?

Mr. FREAR. No; 30,000,000 feet of air stock—

Mr. HOLLAND. In the number of districts, wasn't that statement made?

Mr. FREAR. Of finished—

Mr. HOLLAND. Of the finished air stock. That was—

Mr. FREAR. Thirty million feet of finished air stock, and you mean—

Mr. HOLLAND. Per month; yes.

Mr. FREAR. Per month.

Mr. HOLLAND. You see, that would run, if you got 20 per cent out of your logs, that would mean five times 30,000,000, or 150,000,000 feet of logs per month.

Mr. FREAR. That is practically what this amounted to, the 30,000,000 feet of finished airplane lumber. At a thousand feet for an airplane—of course, it only takes a few feet, but it is estimated, I understand, at a thousand feet—that would make 30,000 airplanes a month, and we had only about 15,000 airplanes with all the Allies; ours were less than a thousand on the front at that time; and I am speaking about the conditions as we confront them seriously with all this tremendous amount of production that was proposed. It would seem so, if our computations are right. I am interested in just knowing where we were getting to and what the amount of production would have resulted in if it had been continued. I didn't ask for an answer, but I suppose that is so?

Mr. HOLLAND. I don't think there is any answer, Mr. Frear. I don't know how—your requirements are—my requirements were outlined to me, at least their demands, and I tried to get them.

Mr. FREAR. You were with us when we went on the trip down to the Blodgett tract?

Mr. HOLLAND. Yes.

Mr. FREAR. From Yaquina Bay. There was a road that, as we understand, has cost about between eighty and ninety thousand dollars a mile, depending on the method of computation. That road had slides in several places, as I remember, when we went down.

Mr. HOLLAND. There was one slide.

Mr. MAGEE. Which road is that?

Mr. FREAR. The 23-mile road.

Mr. MAGEE. The Blodgett road?

Mr. FREAR. The Blodgett road—known as the Blodgett road.

Mr. HOLLAND. There was one slide, you remember, where we all got out and walked over where that slide had come from back on the hill there, about a mile and a half from Bay View. The slide work, as far as serious—I mean the most of it was on the Yaquina Bay end, which was a very small amount. With a shovel, a comparatively small crew of men on it three or four weeks would have cleaned that stuff up in pretty good shape.

Mr. FREAR. It would have kept a shovel along there most of the time, wouldn't it?

Mr. HOLLAND. We had planned in our operation that we could finish our grade way late in the fall, and on account of the new grade, this being a new grade, we would sand ballast during the winter; and all slopes have to get their level, get their natural slope and placement, and we had planned for to do it on both ends, to meet any exigencies.

Mr. FREAR. So as to care for it, and that was one of the conditions that confronted you with this road, which was built long before the Blodgett tract was ever bought. You were working there in June, and what was the condition of it then; how far had the railroad advanced?

Mr. HOLLAND. Of course, it was some finished grade and—

Mr. FREAR. Some rails laid then?

Mr. HOLLAND. No rail was laid at all then.

Mr. FREAR. No rails had been laid then?

Mr. HOLLAND. No.

Mr. FREAR. How far had the grade extended at that time?

Mr. HOLLAND. It had been opened up in these different units of operation, so that it is hard—we had a progress chart carried on during each month, so that you could get it at the end of each week, showing the progress as the work went on.

Mr. FREAR. You suggested that the follow-up method was pursued by railroads generally in operating. Now, that is a general plan, is it, in extending all the roads?

Mr. HOLLAND. I merely make that statement in connection with most logging roads. For instance, there is a road—they might sometimes be opened up, both ends, and, of course, railroads like this North Bank, where you have railroad transportation right along, or river transportation right along, you open up in many different

units, because there was much tunnel work to be done, and all that. Most transcontinental lines it is the best way, at different points.

Mr. FREAR. With most railroads that are being built, isn't it true that after the grade is established that the train moves up and the cars move up, bringing the ties, bringing the rails—

Mr. HOLLAND. Yes.

Mr. FREAR. And everything—that they are not brought around from side entrances or anything like that?

Mr. HOLLAND. Yes.

Mr. FREAR. And by having the temporary tracks laid down at the side, that is the way they build, that is the way they construct?

Mr. HOLLAND. Yes; that is the way this road could—if it could have been built leisurely; if it was not a forced proposition, it would have been built that way, because your problems of carrying around were too great. Now, if it had built that way, it could have been built a whole lot cheaper, per mile; there is no doubt about it.

Mr. FREAR. If it had been built as an ordinary logging road?

Mr. HOLLAND. As an ordinary road.

Mr. FREAR. As an ordinary logging road should have been built?

Mr. HOLLAND. It was a road that had to be built to carry a maximum production at the worst stage of the game.

Mr. FREAR. And it was a road that, as built, would probably be an asset for some large railroad to take over in its present form, where it would not have been of any service as a logging road. That is true, isn't it?

Mr. HOLLAND. Well, of course it depends on the purpose of taking over—

Mr. FREAR. Do you know of any other logging road, to your knowledge, where they have spent anything like that amount of money for construction? If so, where and under what circumstances?

Mr. HOLLAND. I won't say as regards the actual facts, Mr. Frear. I talked with a man the other day that built some road—a road from the Columbia River, over in the Nehalem Valley, and he made a statement to me the other day that in normal times—this was built several years ago—that his main line cost him \$50,000 per mile. He said his spurs that he put in—“of course, spurs and stuff I put in only cost me from 10 to 15—the logging spurs, but I had to build that road to take out about three or four billion feet of timber. I knew it was there and that most of it came out over my line; so,” he said, “I built it to handle that, with the idea of handling that amount.”

Mr. FREAR. Miller testified that he built a logging road in 1918—a little over a mile—at the rate of about \$12,000 to \$15,000 a mile, for logging purposes, and I think that it was testified that that was built in good shape for logging purposes.

Mr. HOLLAND. Was that down there?

Mr. FREAR. That is on the north side from Toledo—north.

Mr. HOLLAND. You mean—

Mr. FREAR. Over the divide—that is where they were building.

Mr. HOLLAND. Well, at the time that I saw—at the 1st of September, for instance—Mr. Miller had no road built up beyond the point where he had been logging during part of August. In fact, he had

to shut down his camp in order to build road ahead to get another setting. That is merely—

Mr. FREAR. He stated it was 1918. I assume it was that.

Mr. HOLLAND. It must have been after that time that he built it.

Mr. FREAR. It may have been so. He said if it had continued over the divide it might have reached in the neighborhood of \$20,000, I think it was, or \$25,000, because of the size of the cuts, but beyond that it would only have been \$12,000 or \$15,000 up the Siletz.

Mr. HOLLAND. All depends on the nature of the work to be done, the size of your cuts, the amount of your trestlework, and, of course, the transportation of your material up to the point of utilization.

Mr. FREAR. I was going to ask one question, which I think has been answered before: That taking Corvallis road—that is, that branch of the Southern Pacific—the grade there runs over 3 per cent in places, doesn't? I understood near the summit.

Mr. HOLLAND. I think their maximum is 2, Mr. Frear.

Mr. FREAR. I was told it was about 3, near the summit. Now, I just ask you.

Mr. HOLLAND. Do you remember in discussing that that—

Mr. FREAR. The road from Albany down to Toledo, near the summit, I understood it was 3 per cent, and that was from people that are using the road, and that the curves are very serious?

Mr. HOLLAND. I don't know about that.

Mr. FREAR. Will you find out about that, Mr. Holland?

Mr. HOLLAND. I will find out.

Mr. FREAR. That is all.

Mr. MAGEE. Just a question or two. How did you intend to get logs from the coast road to Toledo?

Mr. HOLLAND. Two ways, Mr. Magee, depending on the weather conditions and also depending on the nature of the log in the boom at the mill. We had a great many things to contend with in the way of storage grounds at the mill, and above it, in order to get logs to that mill slip at all stages of the weather, which, of course, is tide as far as the mill is concerned—

Mr. MAGEE. You had a physical junction at Yaquina?

Mr. HOLLAND. We had a physical junction; yes, sir.

Mr. MAGEE. If you utilized that and transported your logs over the Southern Pacific Railroad, you would not need any transfer of the logs at Yaquina?

Mr. HOLLAND. You mean by that that you would not have dumped there out at the water—you mean you would simply have gone right on to Toledo with them. You could have done that.

Mr. MAGEE. That would have been the cheapest and quickest and easiest way to get the logs there, wouldn't it?

Mr. HOLLAND. It all depends on—it would have necessitated a booming and rafting grounds at Toledo, or, at least, booming ground at Toledo, and would have necessitated some trestlework there to have taken care of that, because the provision already made on depot slough, where this timber from the Wessel Creek tract was boomed, would not have permitted the booming of the logs on the north line, which would have been better than 400,000 feet per day.

Mr. MAGEE. Was that the shortest way?

Mr. HOLLAND. Well, it would not have permitted that without special booming facilities, but if you could have put them into your

mill boom, it would have been the nicest way to have handled it as long as we could have handled it with that.

Mr. MAGEE. Did you intend to do that?

Mr. HOLLAND. We intended to do that to some extent. There were many things that would interfere with it perhaps. For instance, the Miama Quarry Co. came in there and were using that track down as far as Oysterville, which was just a couple of miles above Yaquina—were using that track, were hauling logs there. We didn't know how much use they were going to make out of that road, and we didn't want to—

Mr. MAGEE. The Government had the power and had the right to utilize it.

Mr. HOLLAND. Yes; could have stopped the Miama; but I mean we also figured on this boom at Yaquina. We had our plans all laid for booming and rafting grounds there as well as across the bay, and we figured that we could tow the logs up there and store them in the lower river between Yaquina and Toledo as well as above.

Mr. MAGEE. How long would it take you to tow the logs from Yaquina to Toledo?

Mr. HOLLAND. Towing on the tide, probably take—might take four or five hours in a raft. There would be 600,000 feet in a raft.

Mr. MAGEE. That is, if you had favorable weather.

Mr. HOLLAND. Well, most weather; you could tell in most weather. There wasn't any bad weather down there, except once in a while a rainstorm—

Mr. MAGEE. How long did it take you to transport logs from Yaquina to Toledo over the Southern Pacific Railroad?

Mr. HOLLAND. You would transport them in trainloads. If you wanted to transport the entire product of your north line from Yaquina to Toledo, you could have done so, which would have been four or five hundred thousand feet per day—I mean it would have been an average of 400,000.

Mr. MAGEE. You could have done it that way?

Mr. HOLLAND. Because you could have hauled your own cars with your own engines over there.

Mr. MAGEE. How long would it take you to haul a carload of logs from Yaquina to Toledo over the railroad?

Mr. HOLLAND. How long?

Mr. MAGEE. Yes.

Mr. HOLLAND. Well, let's see; 9 miles, at 12 miles per hour, would have been less than an hour, wouldn't it? I don't know about my arithmetic to-day. Of course, your switching and your unloading, and all that sort of thing—

Mr. MAGEE. You would not switch; you would take your logs right directly from the woods, and they would be loaded on the car, and you would have a straight line of railroad to your mill.

Mr. HOLLAND. Yes; but you have got to do a little switching in doing your dumping. Where are you going to dump your logs? Are you going to dump them—you have to run them out to the river. You have to run them somewhere, and you have got to—

Mr. MAGEE. You mean you have got to take care of them after you get them to Toledo?

Mr. HOLLAND. Yes, absolutely.

Mr. MAGEE. I understand that; but what I can't understand is this: If you intended to do it—if you did not intend to do it, then I can understand it—but if you did intend to do it, when you had, as you say, a direct railroad connection, straight line of road from the woods where your logs were getting loaded to the Toledo mill, why you should go to work and build terminals and wharves and trestle at Yaquina Bay and dump the logs into Yaquina Bay and tow them down to Toledo?

Mr. HOLLAND. Did you happen to notice the slip at Yaquina, where we had a trestle out into the water and made the connection there at both ends with the railroad? That is the only part of that construction work at Yaquina that had to do directly with the handling of logs. All the rest of this stuff that you mention—your dockage, your wharves there—was in connection with the transfer from the southern line, from the south road, or in handling material which was going forward on this construction work.

Mr. MAGEE. State whether the terminal and the wharves there had any connection at all with logs which you intended to transport from the Blodgett tract north.

Mr. HOLLAND. Well, there would not have been any logs taken over that way.

Mr. MAGEE. So that all construction that is on the north side at or near the physical junction with the Southern Pacific Railroad, terminals and wharves and trustles, were to be used entirely in connection with logs coming down from the north over the coast road?

Mr. HOLLAND. Now, your wharves—for instance, you refer to a wharf—there was only one temporary dock or wharf—

Mr. MAGEE. You have a trestle on each side?

Mr. HOLLAND. Yes, sir.

Mr. MAGEE. You have a trestle to take care of logs—used in connection with the transporting of logs from the south—from the Blodgett tract?

Mr. HOLLAND. Yes.

Mr. MAGEE. Now, you had the trestle on the other side, as I understand, to be used in connection with the transportation of logs from the north over the coast road?

Mr. HOLLAND. Yes.

Mr. MAGEE. Is that right?

Mr. HOLLAND. Yes; formerly part of the—

Mr. MAGEE. Each trestle was to be used solely in connection with the transportation of logs from either direction; that is, the trestle on the south side with logs from the Blodgett tract, the trestle on the north side with logs brought in over the coast road, from the north; is that right?

Mr. HOLLAND. Now, I can't quite get what you are—I can't find what you are getting at. What is your point?

Mr. MAGEE. You have logs there estimated, I think, at some 8,000,000 feet of logs, which were actually brought down over the coast road and in the water now?

Mr. HOLLAND. Yes.

Mr. MAGEE. In Yaquina Bay?

Mr. HOLLAND. Yes.

Mr. MAGEE. Did you ever transport any logs brought down over the coast road, over the Southern Pacific road, to Toledo?

Mr. HOLLAND. No; there has not been, because there was no provision at Toledo for taking care of them, in the first place; that is, for that amount that is down there.

Mr. MAGEE. I suppose all your logs have gone to Yaquina and have been unloaded there and dumped into the water?

Mr. HOLLAND. Well, there have been very few put in. You see, you have no large available stores at Toledo that was completed. You know this game is only just started—this storage-ground game. All that storage is filled up with logs at the present time. Now, you could not put these logs in the north line at Toledo and take care of them at the present time with the storage and moving and booming facilities that were completed.

Mr. MAGEE. How many feet of logs have you in the water there which you brought down over the coast road from the north?

Mr. HOLLAND. Well, that is something I can't answer, because there has been brought in during the summer—three or four months since I have been there.

Mr. MAGEE. Do you think there are 8,000,000 feet of logs?

Mr. HOLLAND. As I remember it, there was 7,400,000 feet of logs in the Depot Slough that were taken out of this Wessel Creek operation that were not sawed up.

Mr. MAGEE. You mean brought down over the coast road?

Mr. HOLLAND. That is, brought down over the road back of Toledo—the Wessel Creek—those were in the Depot Slough at Toledo. Now, from the north road—

Mr. MAGEE. You mean brought down over the Storey-Fisher road?

Mr. HOLLAND. Yes.

Mr. MAGEE. I don't mean those logs. I mean the logs that you pointed out to us up at Yaquina near the junction of the Southern Pacific Railroad.

Mr. HOLLAND. I am trying to tell you that I had no connection with that; I had nothing to do with that. I was out of this service in the 1st of February, and this stuff has all been done this summer from the north.

Mr. MAGEE. You saw them. You were in charge of us, weren't you, when we went down there and investigated these railroads and property of the Government, weren't you?

Mr. HOLLAND. Yes.

Mr. MAGEE. You had charge of us?

Mr. HOLLAND. Yes; I had charge of you.

Mr. MAGEE. You were very kind to us, and we went around at your direction. You remember pointing out to us the logs over in Yaquina Bay?

Mr. HOLLAND. Yes.

Mr. MAGEE. And you know, I assume, as superintendent of the operations there, that those logs came down over the coast road to Yaquina Bay and were then dumped into the water?

Mr. HOLLAND. Yes.

Mr. MAGEE. Now, do you say that it was the intention to utilize the Southern Pacific road from Yaquina to Toledo in the transportation of logs brought down the coast road from near Otter Rock?

Mr. HOLLAND. Why, Mr. Magee, you could or could not have, as you saw fit.

Mr. MAGEE. I am talking about what was the plan.

Mr. HOLLAND. Yes.

Mr. MAGEE. What did you intend to do? You didn't need to go to large expenditures to get two means of transportation of logs from Yaquina Bay, did you, to Toledo?

Mr. HOLLAND. Do you understand what I say, that this game was a progressive one? That we had to feel our way along in all of this stuff?

Mr. MAGEE. You didn't have—as I understand here, the largest estimate was only 150,000,000 feet of spruce up near Otter Rock that could be brought down over the coast road in any event.

Mr. HOLLAND. Well, there were times during the year when that booming ground on the Yaquina Bay side was pretty rough.

Mr. MAGEE. Oh, yes; I understand that.

Mr. HOLLAND. You had storms coming in there. Now during these times you could not—

Mr. MAGEE (interrupting). What I am getting at is, was it the intention to use both of those ways, by water and by the Southern Pacific Railroad?

Mr. HOLLAND. Yes.

Mr. MAGEE. In getting logs?

Mr. HOLLAND. Yes, sir.

Mr. MAGEE. From Yaquina to the Toledo mill?

Mr. HOLLAND. Yes, sir.

Mr. MAGEE. To use them both?

Mr. HOLLAND. Use them both.

Mr. MAGEE. At the same time?

Mr. HOLLAND. You could use either one or the other, or both at the same time, if you so desired.

Mr. MAGEE. You could, but I want to know what it was planned; whether it was planned to use the railroad or planned to tow them by rafts on the water?

Mr. HOLLAND. Mr. Magee, you can't plan, this thing is so progressive. Supposing, for instance, we had had two towboats; there would have been times when one of those towboats would have been laid up, possibly both of them. You can't anticipate in that case. You would possibly have to transport to Yaquina.

Mr. MAGEE. I understand all about that, but the railroad was there.

Mr. HOLLAND. It could be utilized.

Mr. MAGEE. It could have been operated every day in the year, couldn't it?

Mr. HOLLAND. Yes, sir.

Mr. MAGEE. It was operated every day in the year, wasn't it?

Mr. HOLLAND. Yes, sir.

Mr. MAGEE. There wasn't a moment when this railroad wasn't available?

Mr. HOLLAND. No, sir.

Mr. MAGEE. Now, if it was intended to transport logs over that railroad, or if it was feasible to transport logs over that railroad, then the only reasonable way to do it was to make the connection and transport them over the railroad, wasn't it?

Mr. HOLLAND. Well, your criticism is, then, the building of that dumping ground?

Mr. MAGEE. I am not criticising. I am only getting at what any reasonable, practical man would do under the circumstances.

Mr. HOLLAND. Yes. All right.

Mr. MAGEE. That is the point.

Mr. HOLLAND. All right.

Mr. MAGEE. That is right, isn't it?

Mr. HOLLAND. All right; that is all right.

Mr. MAGEE. And it was the only practical, reasonable means of doing it, wasn't it?

Mr. HOLLAND. Well, that is one of the ways.

Mr. MAGEE. Well, would you say so? I am getting at your view.

Mr. HOLLAND. Well, I say just exactly what I said before. I would want them both. I would not want to be tied to one or the other. For instance, Mr. Magee, supposing you had booming ground at Toledo that could have taken care of your 400,000 feet aday; supposing something had happened that you could not saw a day and you would have had only a pond for storage up there; you would have had to have boomed at Toledo or you would have had to have dumped at some other point. That booming and rafting ground down below was worth its weight in gold, if you needed it.

Mr. MAGEE. You didn't have only a moderate supply of spruce up the coast road.

Mr. HOLLAND. I know; but that amount of spruce was coming in every day, right from the start. If you had only one hundred million there it was going to be put in in so many days, so many weeks, or so many months; it was going to come in when you wanted it.

Mr. MAGEE. Suppose you didn't have the water there; you had the railroad?

Mr. HOLLAND. I know, but there is a limit to what you could hold in the boom and raft at Toledo.

Mr. MAGEE. You could have taken care of that proposition?

Mr. HOLLAND. We could have taken care of that proposition, all we could have; but if we had had to run daily production we would have handled a lot of it down there at Yaquina Bay.

Mr. MAGEE. In other words, do you want to go on record as saying that the railroad there wasn't a sufficient means of transportation of the logs to Toledo?

Mr. HOLLAND. No; I don't want to go on record as saying that.

Mr. MAGEE. Of course you don't.

Mr. HOLLAND. I don't want to go on record as saying that. I know if we had had to have done it we could have built this physical connection from the south line on to that railroad, and I know that railroad could have been made to have taken care of a million feet of logs per month if we had had to have done it.

Mr. MAGEE. All the logs that could possibly have come down over the coast road?

Mr. HOLLAND. Over either coast road.

Mr. LEA. You meant a million a day?

Mr. HOLLAND. A million a day; yes.

Mr. MAGEE. I say from over the coast road?

Mr. HOLLAND. A million a day. You could have taken it from the south line, if you had wanted to.

Mr. MAGEE. There is no question about that?

Mr. HOLLAND. No.

Mr. MAGEE. In other words, having a straight railroad connection, without any shift of logs from the place of loading to the Toledo mill, there would be no reasonable excuse for going to work and building terminals and wharves and trestles to dump those logs into the water somewhere on the way, would there?

Mr. HOLLAND. No; you would have had to have made that same provision at Toledo, however.

Mr. MAGEE. Well, I see.

Mr. HOLLAND. Yes.

Mr. MAGEE. But where you could run your logs from Yaquina Bay to Toledo, perhaps a carload of logs in 20 or 25 minutes, where in towing them, in getting your rafts together, and so forth, it might take four or five or six or seven hours; if you wanted to save time, if time meant anything, the railroad was the quickest way of doing it, wasn't it?

Mr. HOLLAND. Of course, that raft contains about 600,000 feet. That means a whole day's run.

Mr. MAGEE. Yes.

Mr. HOLLAND. That would have meant more than a day's run for the north line.

Mr. MAGEE. If you had not had cars enough you would have had a steady stream of logs going in over the railroad, wouldn't you—if you had cars enough?

Mr. HOLLAND. Yes. Your turnover, Mr. Magee—

Mr. MAGEE. I meant you would if you had cars enough.

Mr. HOLLAND. Your turnover of equipment meant an increase in your mileage of haul; your turnover of your equipment is less often. For instance, if you have got 8 miles or 10 miles, instead of 19 or 20, you can turn your equipment over oftener. That does not mean that you don't have to have—

Mr. MAGEE (interrupting). Doesn't it seem to you, Mr. Holland, a most extraordinary proposition that if you have a railroad going direct from the forest to the mill that you should stop a trainload of logs half way to the mill and dump them into a bay and then tow them to the mill?

Mr. HOLLAND. I have just gotten Mr. Magee's point now. Yes; that is straight.

Mr. MAGEE. That is an extraordinary proposition, isn't it?

Mr. HOLLAND. That would mean merely this, Mr. Magee: That you would have to consider your cost of your extra railroad haul as compared to your towing. You would have also to consider whether or not you had a booming raft and had that expense after you had arrived at the Toledo point.

Mr. MAGEE. Well, time here was the essence of the work, wasn't it?

Mr. HOLLAND. As far as time was concerned, you could have delivered logs from Yaquina in a raft; a raft put up to-day could have been delivered there to-morrow. Now, a raft would have contained from five to six hundred feet—that is, hundred thousand feet.

Mr. MAGEE. You would have to get your logs to Yaquina by railroad on a car, wouldn't you?

Mr. HOLLAND. To Toledo, you mean.

Mr. MAGEE. There are no logs near Yaquina; your logs would be brought to Yaquina from 12 or 14 miles up in the woods?

Mr. HOLLAND. Yes, sir.

Mr. MAGEE. Now, then, if you towed them by water you would have to take them down over your road 12 or 14 miles, and then dump them in the water?

Mr. HOLLAND. Yes, sir.

Mr. MAGEE. Whereas you tell me if you had a physical connection with the Southern Pacific you could go right on with your carloads of logs to Toledo, right to your mill?

Mr. HOLLAND. Yes, sir.

Mr. MAGEE. The point I make, and I am asking for information, is that it seems to me that if you intended to use the Southern Pacific Railroad from Yaquina to Toledo, that the only reasonable and sensible and practical means of transporting those logs after you got them on the car and got them started over the railroad, was to keep them going on the railroad until they reached the mill; was that right?

Mr. HOLLAND. All right.

Mr. MAGEE. All right.

Mr. LEA. I think there is one point. In other words, there would be no justification for this dumping in the river, except on account of storage purposes; isn't that it?

Mr. HOLLAND. Yes. Well—

Mr. LEA. (Interrupting). Well, there is another reason.

Mr. HOLLAND. It is "coppering" your bet game. That is, I mean your being able to play the game all the time.

Mr. LEA. But this terminal facility on the north side formed a necessary unit in transportation with the south railroad, didn't it?

Mr. HOLLAND. Yes. That is, only in regards to supplies and stuff of that kind.

Mr. LEA. Yes.

Mr. MAGEE. Now, I will tell you the way it looks to me, sitting here and hearing all the evidence, and all the circumstances, and I don't make this in any sort of criticism, but it seems to me that the way it was planned, and the way it was intended to get the logs from the forest to the Toledo mill, was by rail to Yaquina and then from Yaquina by water in rafting.

Mr. HOLLAND. Do you mean that—

Mr. MAGEE (interrupting). That that was the way?

Mr. HOLLAND. Yes.

Mr. MAGEE. It was intended and planned to get the logs.

Mr. HOLLAND. Well, from the south line, Mr. Magee, that was absolutely true.

Mr. MAGEE. I mean from the north line.

Mr. HOLLAND. Yes.

Mr. MAGEE. The south line, that proposition is not there, because from the south line, bringing them up from the Blodgett tract, of course you would have to get them up from the bay and then put them in the water and then tow them.

Mr. HOLLAND. Of course, if the whole thing—if I had gotten there before that work had been started down there, I think I would have made that physical connection from the south line also.

Mr. MAGEE. Certainly. You mean on the south line?

Mr. HOLLAND. I would have made a connection across with the drawbridge to Yaquina.

Mr. MAGEE. You would have had the drawbridge so you could get to the railroad even from the south line, instead of dumping them in the water?

Mr. HOLLAND. Yes.

Mr. MAGEE. There is no question about that, is there?

Mr. HOLLAND. No.

Mr. MAGEE. And that was possible, was it?

Mr. HOLLAND. That was feasible.

Mr. MAGEE. And that is the reason I asked you the question whether there was any connection between the two trestles.

Mr. HOLLAND. Yes, sir.

Mr. MAGEE. Of course, I understand you had not anything to do with the location of the roads, or anything of that sort; you were sent down there to superintend the work after all that had been determined; that is right, isn't it?

Mr. HOLLAND. Yes, sir.

Mr. LEA. All right. We adjourn until 10?

Mr. MAGEE. Yes. I will let you adjourn.

(Thereupon, at 5.48 p. m. the subcommittee adjourned proceedings until tomorrow, Wednesday, September 10, 1919, 10 a. m.)

SUBCOMMITTEE No. 1 (AVIATION)
OF THE SELECT COMMITTEE ON
EXPENDITURES IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES.
Wednesday, September 10, 1919.

The subcommittee met at 10 o'clock a. m., pursuant to adjournment, at the courthouse, Portland, Oreg., Hon. James A. Frear (chairman) presiding. Also present, Hon. Walter W. Magee and Hon. Clarence F. Lea.

Mr. FREAR. I will just make this statement for the record. The committee has been in practically continuous session since our arrival in Seattle, and afterwards in Portland, and an effort has been made to hear all material witnesses who desired to furnish information to the committee. The committee now seeks to close its hearings by Friday evening, so as to leave for San Francisco the following day.

There are yet to be heard officers to testify to the records of the spruce division, the committee's accountant, who has prepared data at the request of the committee, and other witnesses from among the long list submitted to the chairman of the committee. Ten witnesses have thus far been called who have testified for the Spruce Production Corporation, and two of these witnesses were before the committee for approximately four and one-half days of the hearings. Efforts have been made to give full opportunity to those who have had complaints against the Spruce Corporation and its predecessors, on the one hand, and those who have defended its action, on the other.

The committee again states that it is not here in the position of trying any individual but simply to ascertain the facts so far as possible. At this time in order to give further opportunity for all to be heard who are desired on the part of the Spruce Production Corporation, or those who are in sympathy with its work, this investigating committee will sit throughout the day and evening if necessary, listening to all witnesses who may present themselves to that end, and thereafter the witnesses that we have sent out to Portland to investigate the books and for other purposes, and such other witnesses as may be sifted out from among the list that has been presented to the chairman, will have an opportunity to be heard before the conclusion of our hearings on Friday night.

The chairman of the committee also states that he has offered to have witness fees paid in full to any one who appears on any phase of the investigation, and has so stated to the members of the committee, so that absolutely no distinction is made in such matters. This statement is made for the purpose of placing as a matter of record the effort of the committee to allow all parties a fair and impartial hearing.

Mr. MAGEE. As I understand, Gen. Disque stated that he would like to appear before the committee. What arrangement has been made for that?

Mr. FREAR. He will be expected to appear sometime during the day or night session to-day, if he so desires; and I understand he has published a statement to the effect that he has other important testimony, and the committee would be glad to receive it.

Mr. MAGEE. Then I would suggest that the general be given notice in order that he may have full opportunity to appear before the committee.

Mr. FREAR. That can be done by those who are here from the Spruce Corporation.

Mr. LEA. At this time I desire to say that I think this matter should be disposed of on its merits. To do that necessitates the production of the facts. The extent to which this committee should go in producing the facts should not be determined as a matter of time and a matter of convenience, but it should take the time that is necessary to get at the facts. In my judgment there are at least 15 witnesses that should be called to testify to important matters in this investigation, more or less favorable to the Spruce Production Corporation, in order to properly present the facts to this committee. To desert this investigation without calling these witnesses is to shut our eyes and our ears to the facts.

It appears from the testimony that is already introduced that practically every witness that has appeared before this committee to testify has had a personal animus or personal grievance involved, and I believe that a further investigation of the facts will tend to show what those grievances are and, in many cases, that their contentions are without merit. While I am willing to do all that I can to hasten the termination of this investigation, I will not be in such a hurry that I am not willing to stay here until the truth is fully developed. So with that in mind I am ready to proceed.

Mr. FREAR. The statement was made upon the committee's appearing in Portland, in a public letter addressed by Mr. Disque and through the press, that he demanded a list of witnesses furnished by him be heard by this committee before it finished its labors. At that time there was stated on the record the absolute impossibility of hearing all the witnesses whose names had been presented on either one side or the other of the Spruce Production investigation without remaining in Portland for a period of several weeks. Efforts have been made to expedite the hearings. Ten witnesses have been heard by the committee in reference to a defense of the Spruce Production Corporation's methods, policies, and performance. Two of those witnesses consumed four and one-half days of the time of the hearings thus far taken at Seattle and Portland. It had been agreed by the members of the committee, as nearly as could be determined, that the hearings would be concluded Friday, so that we could get away Saturday, and all of our appointments at San Francisco, Los Angeles, San Antonio, and Denver have been made in advance with that understanding.

The effect of the request or demand made by the member of the committee, Mr. Lea, may result in requiring the committee to remain here for a long period, whereas this is only one small part of the investigation the committee is conducting at various places, and

the money expenditure of less than \$50,000,000 here is less than 5 per cent of the total amount that has been expended for aircraft purposes. Full opportunity has been given for cross-examinations to an unlimited extent of witnesses thus far called. This is a procedure new in congressional investigations. If the witnesses called hereafter are cross-examined to the same extent under the present practices, there may be no end to the investigation. If any number of witnesses are to be called in addition to those already heard, the same proposition is presented.

In all fairness, the committee has endeavored to hear all witnesses and will sit in continuous session throughout the day and night if necessary to hear whatever witnesses may be called by Mr. Lea. That is all that can be expected, and it is far more than any other investigation, so far as known, has ever been required to perform. This we will gladly do in an effort to get what is claimed to be a full and impartial hearing.

Mr. MAGEE. I would like to know what witnesses the gentleman from California [Mr. Lea] desires to call, whether they are within reach, and within what time he can bring them before the committee.

Mr. LEA. We will be here until 6 o'clock in the morning.

Mr. FREAR. All right; well and good.

Mr. MAGEE. No; I am not going to let any bluff of this sort against me get away by either of my distinguished colleagues. When we leave Portland, so far as I am concerned, I do not want it to be reasonably said on the part of anybody that full opportunity was not given everybody to come before this committee and give it such information as such person might deem necessary for the committee in this investigation. Now, I want that thing settled, and I think this committee ought to agree on what they are going to do and how long these hearings will continue. So far as I am personally concerned, if it is necessary to that end, I am willing to sit here next week, or any reasonable time, to do it.

Mr. LEA. I think Mr. Magee is perfectly right.

Mr. FREAR. That will interfere with all the telegraphic arrangements.

Mr. MAGEE. I say, so far as I am concerned, that is the way I feel about it. I think we ought to agree, and I think we can agree; but I want Mr. Lea to give the names of the witnesses, where they are, if they are within reach in a reasonable time to be called, and I think I am entitled to that information, and let us reach an understanding right here. I do not want it said after I get away from here that somebody did not have full opportunity to present such facts as he desired to the committee.

Mr. FREAR. That will be said under any circumstances, no matter what you do.

Mr. MAGEE. I can not do any thing more than state my position—that if necessary I will stay here into next week, and I can only prove what I mean by that statement by staying.

Mr. LEA. My belief is that we have got time enough to hear these witnesses, and for my part I am willing to cooperate to try to hear them on their merits, and in that connection I would suggest this, that we cut out comments on the testimony as we go, which has no proper place here, and that we leave the argument until the facts are

introduced and try to confine the examination to essential questions. If we do that, I believe we can hear all the witnesses.

Mr. MAGEE. I can not change my method of procedure.

Mr. LEA. This is no criticism of you, Mr. Magee.

Mr. MAGEE. I think I have taken up in this investigation a very small percentage of the time occupied. In some instances I have not asked any questions at all. I have not asked any questions, so far as I know, in the spirit of cross-examination. All the questions I have asked have been on points that I wanted information on myself, or which possibly had been overlooked by my distinguished colleagues, and I am only asking for information and facts. I would like to know, Mr. Lea, within what reasonable time you can call and get through with these witnesses whom you desire to have called before the committee.

Mr. LEA. I think between now and 6 o'clock to-morrow morning we can get them.

Mr. MAGEE. Then I am with you until 6 o'clock to-morrow morning, and let's don't hear anything more about it.

Mr. LEA. That is, if there will not be any more of these extraneous matters to interfere. The record will show that in many cases the chairman has occupied 75 per cent of the time the witness was on the stand.

Mr. FREAR. Just a moment. The chairman does not agree to change his method of examination or cross-examination at the behest or request of any member of the committee or anyone else, nor to accept the charge, which is untrue and false, as stated by Mr. Lea, a member of the committee, as to the time consumed by the chairman. In the last two days one lawyer and another man who was equally conversant with public hearings—Mr. Eaman and Mr. Leadbetter—distinctly acted in a way unfair to the committee and sought to inject extraneous matters into the investigation, and it was almost impossible to hold them down to what are proper limits of investigation. The record will show whether or not the various members of the committee have carried on the investigation so far as they could to the best of their ability, and I am willing to stand by the record, and that is all there is to it; but I will endeavor with Mr. Lea and my colleague, Mr. Magee, to secure a hearing of all the witnesses, and we will proceed.

TESTIMONY OF MARK E. REED.

(The witness was sworn by Mr. Frear.)

Mr. LEA. What is your residence?

Mr. REED. Shelton, Wash.

Mr. LEA. What is your occupation?

Mr. REED. I am a logger.

Mr. LEA. What, if any, official position do you occupy in the State of Washington?

Mr. REED. Official position?

Mr. LEA. Yes.

Mr. REED. I am a member of the legislature and have been for three successive terms.

Mr. LEA. You were also floor leader of the house in the last legislature?

Mr. REED. Oh, I don't know.

Mr. LEA. I simply asked that. You are not volunteering that, but that is a fact, that you were the Republican floor leader of the legislature.

Mr. REED. I am a Republican member of the legislature.

Mr. LEA. How long have you been a logger?

Mr. REED. Twenty-four years.

Mr. LEA. In what district?

Mr. REED. In the Puget Sound district.

Mr. LEA. What has been the extent of your operations?

Mr. REED. I am the president of the Simpson Logging Co., the Phoenix Logging Co., and the Fredson Bros. Logging Co., with an aggregate output of 200,000,000 feet a year.

Mr. LEA. Do you know if there are any other logging companies in this section of the Northwest that do that large a business per year?

Mr. REED. I do not think there is that large a production—under one management, you mean?

Mr. LEA. Yes; that is what I mean.

Mr. REED. No, sir.

Mr. LEA. Are you familiar with towing on Clallam Bay?

Mr. REED. I am familiar with towing on the Straits of Juan de Fuca.

Mr. LEA. What is the source of your information about that? What experience have you had?

Mr. REED. My companies have sold many million feet of logs for delivery in British Columbia, and I am also interested in the largest log towing company which is the owner of tugboats on Puget Sound.

Mr. LEA. How many tugboats does your company operate?

Mr. REED. My recollection is at the present time it is 17.

Mr. LEA. What is your position in reference to that towing company? Do you have any official position in the corporation?

Mr. REED. No, sir. I am a stockholder.

Mr. LEA. What do you know about towing conditions on the straits?

Mr. REED. I know that at times in the year it is impossible to tow at all, and even a ship must lay up.

Mr. LEA. What times of the year does this condition exist?

Mr. REED. In the fall and winter principally; it is no uncommon thing for the wind to blow 60 miles an hour off the cape.

Mr. LEA. What have you known of the experiences of loggers in towing in the straits?

Mr. REED. I think we have all had our experience in losing our tows.

Mr. LEA. What is the general practice as to towing there, as to when it is done and under what conditions?

Mr. REED. Towing generally is done in the spring and summer months. The Goodyear Logging Co., which has a comparatively small operation, probably 36 to 40 million a year, put their logs in a crib raft, which I believe is very satisfactory and can be towed in reasonably rough weather but, as I say, there are times when even a ship can not be towed through the straits.

Mr. LEA. For what length of time will these storms last that interfere with towing, ordinarily?

Mr. REED. Oh, 5, sometimes 10 days. I have known a boat to lie in Deception Pass for two weeks, one of our towboats.

Mr. LEA. You were a member of the board of directors of the Spruce Production Corporation, were you not?

Mr. REED. Yes.

Mr. LEA. What is your judgment as to the practicability of handling the product of the Pleasant Lake section that was tapped, by towing on the straits from Clallam Bay easterly, considering the amount of production and the circumstances?

Mr. REED. Considering the volume of the traffic and the effort which was being made for a continuous production there would have been times when it would not have been practical; we could not have maintained the production.

Mr. LEA. Do you know about what quantity of logs were to be handled according to the program, from that Clallam country, by the Spruce Production Corporation?

Mr. REED. We were expecting to handle a million and a half feet a day.

Mr. LEA. So that the production contemplated would be as much in one month as that of the Goodyear Co. in one year?

Mr. REED. No.

Mr. LEA. That is what I figured.

Mr. REED. No; it would not figure—well, I think; I have no definite information and personal knowledge of the Goodyear output, but I understand it is from 36 to 40 million a year. You could not reasonably expect to log in that country on an average of more than 20 days a month.

Mr. LEA. So it would be about 30 million a month, or a million a day?

Mr. REED. Yes.

Mr. LEA. Do you know anything about the capacity there at Clallam Bay for handling a million feet of logs per day?

Mr. REED. I never was in Clallam Bay.

Mr. LEA. How many towboats would it take to handle a million feet of logs a day from Clallam Bay to Port Angeles? In the first place what distance is that?

Mr. REED. I do not know how far that is.

Mr. LEA. I think it is about 40 or 50 miles is it not? Supposing it is 45 miles, how many tugboats would it take to handle a million logs a day?

Mr. FREAR. My understanding is that it is nearer 30 than 40. It is a direct line.

Mr. REED. I would say if you were going to maintain a continuous production it would take about three towboats.

Mr. LEA. How much do towboats cost apiece?

Mr. REED. That depends upon the towboats; there are boats and boats.

Mr. LEA. Well, practical ones for that purpose.

Mr. REED. Under present costs I would imagine that a towboat would cost \$150,000 to \$200,000 at least.

Mr. MAGEE. Do you call them towboats here, or tugs?

Mr. REED. Both; towboats, largely, for logs.

Mr. LEA. When were you appointed on the board of directors of the Spruce Production Corporation?

Mr. REED. It was in February, 1918; at the time that Mr. George S. Long left the board I succeeded him.

Mr. LEA. How closely associated were you with the enterprise of the Spruce Production Corporation?

Mr. REED. Quite closely allied with them. I tried to keep in touch with them all the time.

Mr. LEA. You attended the meetings of the board of directors, did you?

Mr. REED. Yes, sir; and not only the meetings, but I was many times here in a conference when there was no regular meeting of the board.

Mr. LEA. You are acquainted with Mr. Disque, of course?

Mr. REED. Yes, sir.

Mr. LEA. When did you become acquainted with him?

Mr. REED. When he came out. I think it was in November, 1917, that I met him first.

Mr. MAGEE. Does the date appear when Mr. Long resigned and you succeeded him?

Mr. REED. I can give you the date.

Mr. LEA. You accepted this on the 14th of February, 1918, did you?

Mr. REED. That is my letter of acceptance; yes, sir. I think there was a telegram came to me a few days before that from Mr. Howe.

Mr. FREAR. February, was that?

Mr. REED. Yes.

Mr. LEA. You frequently conferred with Mr. Disque, did you?

Mr. REED. I did; yes, sir.

Mr. LEA. Your relations were harmonious with him in the work here in the spruce production, were they?

Mr. REED. Very harmonious. Early in the organization we had a distinct understanding.

Mr. LEA. What was that understanding, Mr. Reed?

Mr. REED. Well, I wrote him a letter along early in April, I think it was to know where I was at and what I was expected to do.

Mr. LEA. If you will just state the substance of that, so that the committee will understand your relations?

Mr. REED. I have got the letter, if you want it.

Mr. LEA. If you will just read the letter.

Mr. REED. This is dated April 6, 1918 [reading]:

Col. BRICE P. DISQUE,

*Spruce Production Division, United States Signal Corps,
Ycon Building, Portland, Oreg.*

MY DEAR COLONEL: Since the last meeting of the Pacific coast advisory committee of the Aircraft Board in your office I have been turning over in my own mind whether or not your office and the committee were carrying out the intent of the organization as it was framed by the National Aircraft Board. You realize, of course, that the members of this committee have not been fully advised as to the activities of your department and contracts involving large disbursements have been entered into and work started in accordance with their provisions without these contracts being submitted to the board for approval and advice. At a later date and after activities had started under the terms of the contract, a portion of the contracts were submitted to the board for its action and approval. It developed that there are serious defects in these contracts which should have been remedied before their execution, and if they had been allowed to go through as originally drafted in all probability there would have been more or less confusion, to say the least, in the matter of the accounting

necessary under the terms of the contract. I trust the contracts referred to have been recalled and revised in accordance with our understanding.

I think we all agree that this is a condition of affairs which should not exist, and in fact the system should be so revised that such a condition of affairs could not arise in the future without a clear omission of duty, for which the responsibility therefore could be fixed. I am not clear just what service is expected of the members of the Pacific coast aircraft board, but I had presumed that their duties were largely advisory to you, and in that capacity to a certain extent at least they would be called upon to share responsibility with you. If I am correct in this conclusion I certainly do not care to assume this responsibility unless the members of the board can be fully advised as to the proposed terms of a contract and all of the conditions around which the contract is built up before the contract is executed and the contract approved by the board before work is started thereunder.

I realize fully that your undertaking is a large one, and that it is necessary to have prompt action, but even with these conditions in view there is but one principle upon which business can be conducted with safety, and that is on careful and conservative lines, with a knowledge, so far as possible of the results to be obtained by any action taken. In view of the magnitude of your undertaking and the vast expenditures that you will be called upon to make, I think it is highly important for the Government, and from your own standpoint as well as the individual members of the Aircraft Board, that the greatest care be taken to see that the records of this board are properly kept, and that its members and yourself be fully advised as to the terms of any contract entered into and the results attained by the activities carried on under these contracts.

I wish you to know that in writing this letter I am not doing so in the spirit of carping criticism, but rather in the interest of protecting the Government and your reputation, as well as that of the individual members of the board. I would like a reply from you covering your ideas as to the activities of the board, the plan for carrying them out, and the responsibilities that you expect them to assume.

Thanking you for an early reply, and with personal regards, I remain.

Mr. LEA. What was his reply to that statement of your position?

Mr. REED. A few days after that—a day or two after that letter was written, I came to Portland.

Mr. FREAR. What time was that letter, Mr. Reed?

Mr. REED. April 6, 1918. I came over to Portland, and we discussed the matter frankly, and he thanked me for writing the letter, and said that I might rest assured that any criticisms or any activities that I thought necessary to present would receive consideration, and he wanted me to feel free at all time to criticize and to be advised as to what was going on in his department. Thereafter as much time as I could I spent here with him, and our relations were always harmonious and pleasant.

Mr. LEA. Now, the contracts referred to, were they recalled and revised?

Mr. REED. They were.

Mr. LEA. Now, Mr. Reed, I wish you would state what was the general method of determining the policies of the Spruce Production Corporation.

Mr. REED. You will understand that the civilian members of that board were not here all the time, and we could not be familiar with all the details from day to day. About this time we had up direct with the department at Washington the matter of deciding just what the duties of the board were, and it was decided that we were simply to act in an advisory capacity, and we did do so thereafter. I have the copies of the correspondence and telegrams in regard to that, if you want them. When any matters of importance came up Col. Disque called us up by phone. It took me one day to get

here after I got the word. The other members of the board lived here in Portland. We all discussed the matters at issue, and while we did not always agree we ironed out our differences and the majority ruled.

Mr. LEA. Now, Mr. Reed, were you consulted in reference to the railroad built north from Yaquina?

Mr. REED. Yes, sir.

Mr. LEA. Did you make any attempt to determine the best place to locate that railroad?

Mr. REED. I did.

Mr. LEA. I wish you would tell the committee in your own way about that matter; in the first place, how it came up. Will you just explain the situation?

Mr. REED. Well, there seemed to be a considerable difference of opinion with respect to the feasibility of routes. We had several reports and they did not agree. Mr. Benson, who was a member of the committee, had made a report which I did not altogether agree with at that time, but I had not, myself, made a personal examination of the ground. I told Mr. Benson frankly that I wanted to check up his conclusions, and it was arranged that I would either go down there myself or send some one who I could have confidence in before I would make up my mind as to which route should be accepted. I could not get away to go myself, and I sent one of my logging superintendents, who is an experienced man, raised in the woods, and whose judgment I take from day to day on those matters. I sent him down there at my own expense to make a report to me of the feasibility of the two routes, and particularly with respect to the logging timber in the two routes.

Mr. LEA. In that connection, did you own any timber in that country, or were you interested in any railroad that ran to any mill or property that you owned?

Mr. REED. Not a dollar. He made a written report to me which I turned over to the committee the other day when I was here. I think that has gone into the record.

Mr. LEA. Yes. Just another question; did you get any compensation for acting as a member of the board of directors?

Mr. REED. The Aircraft Board?

Mr. LEA. Yes.

Mr. REED. I paid my own expenses, and gave my time.

Mr. LEA. This report that you got, was that at your own expense or at the expense of the Spruce Production Division?

Mr. REED. Absolutely at my own expense.

Mr. LEA. Now, tell the committee about the report.

Mr. REED. Now, the report will speak for itself.

Mr. LEA. Yes, sir; it is in the record.

Mr. FREAR. I do not see what further can be added. This committee is in no position to cross-examine the man who made the report, and it has even been opposed here, the permitting of affidavits to be introduced that have been suggested by the chairman. It seems to me that is as far as we ought to go, to rest with the report.

Mr. LEA. I told you, Mr. Chairman, that if you wanted to put those affidavits in that I would not want to deny you the privilege.

Mr. FREAR. I did not so understand it at all. If the witness is produced before 6 o'clock in the morning, the superintendent, or

whoever he may be, so he can be cross-examined, that would be satisfactory.

Mr. LEA. Tell about your connection with that, Mr. Reed.

Mr. REED. On the information that I received I voted for the selection of the coast route.

Mr. LEA. For what reasons?

Mr. REED. For the reason that the ridge route was over a saw-tooth ridge, with very precipitous banks, that a road could not be built on it and handle any volume of traffic with safety or practicability. You could not get spurs off of the ridge road to reach out and get the best of the timber in the gulches below, because the curvature was too sharp, even for a geared locomotive.

Mr. LEA. Then you could not get the west slope timber by going up over the east slope?

Mr. REED. No, sir. The coast road was strongly recommended for the reason that spurs could easily be built into the canyons. The bottoms were wide enough to get in nicely and reach all the timber for a selective logging proposition, which was what we had in mind at that time.

Mr. LEA. So you determined that that was the best way to get the spruce?

Mr. REED. Yes, sir; and that the road could be built for less money, for the reason that there were transportation facilities to get the material along the road. The other way there was not; it was over a much rougher country and necessitated fills that could not have been operated that winter.

Mr. LEA. What did you ascertain as to the amount of spruce and timber below Otter Rock along the coast line—slope?

Mr. REED. Well, I do not remember, Mr. Lea. The cruises were all before us at that time. My superintendent did not make a detailed cruise of the timber; he was not there long enough.

Mr. LEA. He was not there for that purpose.

Mr. REED. He was not there for that purpose.

Mr. LEA. Now, you are the owner of logging roads, are you?

Mr. REED. Yes.

Mr. LEA. What experience have you had in their location and operation?

Mr. REED. I have been responsible for their location and operation, and head of the organization for some 15 years, and before that I worked in the woods at almost every job.

Mr. LEA. How long are the longest logging roads you have operated?

Mr. REED. The longest road that I have now is about 41 or 42 miles of main line. I should say 15 miles of switches.

Mr. LEA. Where is that located?

Mr. REED. That is located in Mason and Grays Harbor Counties, Wash.

Mr. LEA. How does the type of that road compare with standard construction?

Mr. REED. We tried to build it just as good as any road could be built, considering the cost. The rails are not as heavy as on some roads, although there are none less than 50 and most of them 60 pound rails on the main line. The president of the Milwaukee road was over the road some three years ago, and he said that our equipment and

our roadbed was kept up better than it was on their main line of road.

Mr. LEA. How does the wear and strain on a road for logging traffic compare with ordinary traffic?

Mr. REED. In my judgment it is the hardest traffic that can be put over a railroad, because the loads are uneven and are not always firmly in place, and a rough road precipitates wrecks and trouble, and when you are held up in your railroad everything behind it—the expense is going on and nothing coming out. So our policy has always been to build our main-line road and keep it in the best practical operating condition.

Mr. LEA. When was your road built?

Mr. REED. The road was originally chartered by Congress in the early eighties, the early part of the road, as I understand it, but we bought the road. It was reorganized in 1895, and the present organization dates from that. But that is only a part of the main line; that original organization runs out 17 miles, and the remainder of the main line is owned by the Simpson Logging Co., which operates on the road; but while it is two companies, it is one ownership.

Mr. LEA. Now, referring back. What are the logging conditions in the Siletz territory, so far as you know them? Are you familiar with them there, and can you give the committee any information on that subject?

Mr. REED. I can not; nothing that is not covered by the report.

Mr. LEA. How much timber did you transport, or have you transported per day over your railroad?

Mr. REED. We have transported a million feet. It is not any trouble to transport a million or a million and a half. It is just a question of putting in the additional sidings necessary and the necessary equipment to handle the traffic.

Mr. LEA. Now, what is your judgment as to the practicability of selective logging?

Mr. REED. There is no question about the practicability of it at all. We have been doing it for years in this country, and many million feet of long timbers have been taken out; we have handled them through selective logging operations. Those timbers ran from 42 to 120 feet long, and we have taken them out at a reasonable cost. There was no trouble about that at all.

Mr. LEA. What was your judgment as to instituting that practice for the spruce-production purposes?

Mr. REED. I certainly think that it was the wise, a very wise, provision, and if the operations had gotten into action we would have stopped hollering for an increased supply of spruce very promptly, in my judgment.

Mr. LEA. Mr. Reed, I wish you would briefly state to the committee the conditions of the industry as they existed at the time that Mr. Disque came here to the coast.

Mr. FREAR. You mean the lumber industry?

Mr. LEA. The logging and lumber industry.

Mr. REED. In July, 1917, we had a strike throughout the industry which practically closed down or crippled the entire industry, logging camps as well as mills. Some operations ran short-handed, ours among others, but it was, generally speaking, paralyzed until some time in September when the men went back to work, but not

satisfied. They adopted the policy, as they called it, of striking on the job. They would work a few days and strike, go over to some other operation and strike again. So that when Gen. Disque arrived here there was a very wide difference of opinion among the operators themselves as to whether or not the demand which had been made for the eight-hour day should be granted. Some of them wanted to grant it and some did not. The industry was divided against itself, so to speak. I do not believe that any man could have been chosen in the Northwest who could have brought about harmonious relationships. Gen. Disque, or Col. Disque, at a large meeting of lumbermen, I think the largest that I ever saw in this country, brought about a compromise, and we went on an eight-hour day. From that time on the industry moved along the best it could considering the shortage of labor and the inefficiency of it. But we had no more strikes during the war.

Mr. LEA. Now, what was the efficiency of labor during the war period as compared with former periods?

Mr. REED. Very inefficient—and is yet.

Mr. LEA. Due to what reasons, as you understand it?

Mr. REED. Well, primarily, the most experienced men, the best men that we had, a large percentage of them, were called in the draft. Many of them who were not actually called wanted to go and did go. The result was that the ranks of our labor were filled up—with all due respect to the soldier labor—with inexperienced and inefficient men, and we did not get the results. They did the best they could. You could not expect those men to get the same results that we did before. The other labor that remained with us, the foreign labor, was largely pro-German. They were inefficient and did what they could to hamper the operation. In my judgment, no organization, no industry ever passed through a more strenuous time than the lumbermen in the Northwest in trying to get out spruce and fir material for the Shipping Board and the Aircraft Board.

Mr. LEA. Did you attend a meeting of loggers in the Puget Sound section in reference to the question of taking over the Siems-Carey contract?

Mr. REED. I did.

Mr. LEA. I wish you would briefly tell us about that.

Mr. REED. A meeting was called—I think it was fathered by the lumberman's information bureau, dominated largely by Mr. Butler, of Everett, and some 50 prominent loggers attended, and the representatives of the Spruce Production Board. I think Maj. Eaman was one of them, I am not sure. But, anyway, the Siems-Carey contractors—there had been some feeling along the loggers, or some of them, that they were not getting a square deal, and that their efforts were not being appreciated. The Spruce Production Division advised the loggers at that meeting that the Siems-Carey contract would be waived, in so far as it covered the getting out of the flitches, but that they would finish the railroad, as I remember it, and the operation of the railroad was to be taken over by the Government. The Spruce Production Division, or the representatives, made the loggers an offer that if they would take over the Siems-Carey contract, in so far as its production was concerned, and guarantee the same amount, that they would allow them to do it,

and Siems-Carey waived their contract. The matter was discussed pro and con by many loggers, Mr. Butler, Mr. Chinn, Mr. Irving urging it, and Mr. C. H. Cobb particularly, and several others opposing it. Mr. Cobb, who is probably the oldest and most experienced logger in the business, said that he had just returned from the Siems-Carey operations, and that, in his judgment, it was very efficient, and that they were going to get the spruce. On his judgment and others a vote was taken, and of the 50 present my recollection is that there was either 5 or 7 votes cast to take over that logging operation, and the rest of them voted against it.

Mr. LEA. Prior to that time had this association submitted any contract to the Spruce Production Corporation for the production of logs, through Mr. Chinn?

Mr. REED. Yes, sir. I do not know just what time it was, but along in the summer, while we were building these railroads, a meeting was held here with the loggers—and I would say that these meetings with loggers were addressed continually either by Col. Disque, some member of his staff, or myself at many times—urging them to undertake these logging contracts, every time there was a meeting of lumbermen or loggers. A meeting was held here in which Mr. Chinn and his associates considered with Col. Disque the taking over of a logging contract. I was called over here one day, and the colonel submitted to me a letter from Mr. Chinn, as president of this bureau, agreeing to take a contract under certain conditions, and briefly it amounted to paying him \$50 a thousand for selective logging. The colonel asked me what I thought of it, and I told him I thought it was an outrageous proposition, and that we should not consider the contract at all.

Mr. FREAR. Just a minute. Has the contract been introduced in evidence, or anything of that kind? Of course, you are giving your conclusion, but we ought to have the benefit of it as well.

Mr. LEA. Col. Disque testified to the terms of it.

Mr. FREAR. I understand, but I mean has the contract been placed in evidence? He is not a lawyer.

Mr. MAGEE. I think it is in evidence. That is my impression.

Mr. FREAR. Was it over in Seattle or where?

Mr. LEA. I think it is in evidence, but I am not sure about it. You saw the letter, did you?

Mr. REED. Yes.

Mr. LEA. If you will, go ahead and explain it.

Mr. REED. It was a letter, Mr. Chairman.

Mr. FREAR. I was wondering if it was in the record, so that we can form our own judgment.

Mr. REED. This contract, according to their figures, as I remember it, provided a profit for them of \$10 a thousand for putting in these logs; and under our experience and under the experience of a cost-plus contract, which I was very familiar with, the Airplane Spruce & Lumber Co., of Hoquiam, I told Col. Disque that I knew—felt confident—that we could put in the logs for less than \$40 a thousand, and when we got to going, I thought, \$20 a thousand; that \$10 a thousand was too much profit; and that the contract was objectionable, particularly, in my judgment, from the fact that it would have to cover a stipulated amount of logs. The loggers that were represented, in my judgment, would not consider a contract of less than

150,000,000; and if hostilities should cease, it seemed to me that we would be up against a prospective profit of \$10 a thousand, or a million and a half dollars, to pay them for something that they had not really earned. Therefore I thought that the cost-plus contract was a better proposition than this, although their offer was exorbitant at sight.

Mr. LEA. Were you over in on the route of the Lake Pleasant Railroad before it was constructed?

Mr. REED. Yes, sir.

Mr. LEA. What can you say as to the necessity of grubbing out that route?

Mr. REED. Well, along in the spring of 1918 I was up in the Lake Crescent country as an arbitrator between the State of Washington and the Puget Sound Mills & Timber Co., and this question of route, or the building of a railroad by the Spruce Production Division, was then being considered. So when I got through with the State work I took a trip over the Lyre River Canyon and around the lake—the east side of the lake, as I understood that that was the difficult part of that right of way, and it was; that is a hard piece of road. There is a rock canyon around the canyon—that is, it was hard when I was climbing around there. I never was there after it was built.

Mr. LEA. Now, about the grubbing?

Mr. REED. The grubbing of the right of way?

Mr. LEA. Yes; the clearing of it.

Mr. REED. Oh, the clearing.

Mr. LEA. Yes.

Mr. REED. The right of way was cleared, as I understand it, 200 feet under Government regulation, which is never done with a logging road.

Mr. LEA. And how did that come to be required?

Mr. REED. Increased the cost.

Mr. LEA. What department of the Government required this clearing?

Mr. REED. The Forestry Department, as I understand it.

Mr. LEA. Yes. Now, at the time Siems and Carey came out here, did you attend a consultation with Col. Disque about the fitch contract?

Mr. REED. Yes, sir.

Mr. LEA. And what in substance occurred at that time?

Mr. REED. I think it was in April. I was over here on some other matters in connection with the Spruce Production Division, and Col. Disque came out of his back office and said, "Mr. Reed, I wish you would come in here. There are some parties talking over a contract, and I would like to have you sit in on the conference." I went in and there was Mr. Siems and Mr. Carey, and, I think, Mr. Kerbaugh, and an engineer from Clallam County by the name of Rickson.

They were discussing a tentative contract which they had there, which contemplated the sawing of the logs into sections, I think six sections in a log, just cutting right through it. This contract was discussed pro and con all through, and no conclusions were reached. The Siems-Carey people said they were going East and that they would take this matter up in Washington, and the General said he was going East and would take it up with them. About the only conclusion that Col. Disque and myself had was that after this meeting

I said to him we were not so much interested in the flitch contract at that time as we were in getting the logging road built into that section, getting the road extended, and that I thought that when he went East, which would be in a few days, he should urge the railroad administration to build that railroad and that we would take care of the logging end of it later.

Mr. LEA. You thought the construction of a railroad was the practical way to tap this timber?

Mr. REED. Yes, sir, I did; and no other way.

Mr. LEA. Well, just go ahead with your explanation.

Mr. REED. Well, I thought we should build a railroad into the timber.

When the colonel returned, we were informed that a contract had been entered into, that the railroad administration would not permit of the extension of the Milwaukee, and that it was necessary for the War Department to build the road itself; that this contract had been entered into with the Siems-Carey people, covering both the building of the railroad and the cutting of the flitches. I asked the colonel about the location of the road, and he told me that he had decided on the Lake Pleasant route, and that it could not be built up the Deep Creek route and finished by the 1st of December, when we wanted it finished, and that if it was built up there that it meant heavy cuts and fills and it would be impracticable to operate it during the winter, which I concurred with him in. He asked me if I knew anything about the Lake Crescent right of way, and I told him no, nothing except the Lyre River route, and that it was an expensive piece of road to build up there, but it looked like a practical route and a good grade. We discussed the contract pro and con. I don't remember the details, but when Mr. Ryan was out here in July Col. Disque and Mr. Ryan and myself were in the office and we were discussing these contracts again. Mr. Ryan stated that the railroad contract was not made through his office, but by the War Department, and my recollection is that on the flitch contract he said that one of the first matters that came before him when he assumed office was this Siems-Carey contract; that there was laid on his desk two contracts, one the tentative contract prepared by Gen. Disque, and the other one, which had the O. K. of the War Department, and that he signed, naturally, the one of the War Department, although he knew nothing about it, as he hadn't been in office long enough to familiarize himself with the job, and he was asking many questions in connection with those contracts.

Mr. LEA. Do you remember whether that related to the flitch contract or the railroad contract?

Mr. REED. I think that was the flitch contract; I am sure of it.

Mr. LEA. Now, coming to another subject. Just one question about the civilian pay of soldiers: Do you know about the percentage of soldiers that were employed in the commercial industry here on the coast?

Mr. REED. Well, I don't know—

Mr. LEA. That is, in a general way.

Mr. REED (continuing). The percentage that was employed commercially, but it is safe to say that 25 per cent of the product of any operation that had civilian soldiers, unless they were doing sales-

tive logging in that under a cost-plus contract, would be all that would cover the Government requirements. The rest of the 75 per cent would have become commercial business, because they take out everything as it goes on the ground. Twenty-five per cent spruce stand would be a large stand.

Mr. LEA. That is, the larger per cent of the log went into commercial lines?

Mr. REED. Commercial lines; and it seemed to me—I know the colonel discussed that with me also—that it would be very unfair to ask enlisted men to work for a dollar a day and the private operator obtain the benefit of that low-wage scale.

Mr. LEA. What was the relation of spruce to the lumber industry before the war?

Mr. REED. Spruce was practically a by-product before the war. There was no market for spruce logs, except a little clear. I only know of one mill on Puget Sound that was cutting clear spruce, and that was a mill in Tacoma. The rest of the log went into box material, which was cheap material. Now, every operator that could that owned spruce timber built away from it rather than to it up to the time that the war broke out. Of course, as the development of the requirements of the Allies before we got into the war kept growing, why, there was a better market for spruce, but before 1914 there was practically none.

Mr. LEA. What did that mean as to the development of spruce production when the war began?

Mr. REED. That meant that these spruce areas had not been opened up, and that it was necessary for some strenuous effort to be made to open it up. Private capital could not do it. The Government wanted the stock, and there seemed to be no other way but for the Government to build the railroad and open it up.

Mr. LEA. Now, will you just explain a little further how the soldier labor operated in performing such a large percentage of work that went into commercial lines, why is that true?

Mr. REED. Beg pardon?

Mr. LEA. Why did the soldiers perform so large a percentage of the labor that went into commercial lines?

Mr. REED. Well, because the stand of spruce is very small compared with the stand of other products.

Mr. LEA. And the loggers were taking things clean as they went?

Mr. REED. And the loggers took everything as they went, sorted out the spruce, which went to the Government, and the other went on the general market, some of it for—a large percentage of that other went into shipbuilding.

Mr. LEA. So that, outside of selective logging, the soldiers had to do 100 per cent of labor for the Government to get 25 per cent of the result?

Mr. REED. That is it.

Mr. LEA. And the commercial mills done the other 75 per cent of the labor?

Mr. REED. Yes, sir; that is, speaking of the loggers. The mill can cut spruce logs straight if he has the logs.

Mr. LEA. Yes, it should have been the loggers. Were you concerned in reference to the purchase of the Blodgett tract?

Mr. REED. I was consulted.

Mr. LEA. Now, I wish you would tell us about that?

Mr. REED. Mr. Chairman, can I look at a memorandum book?

Mr. FREAR. Sure; you can testify from it, but not testify as to its contents; that is the rule.

Mr. REED. Yes. When it was decided to build it was reported to us that there was a splendid stand of spruce in that country, and when it was felt that we wanted to build a railroad in to open it up negotiations were opened for the purchase of the spruce timber first. Negotiations were carried on pro and con for several months, and it finally summed itself up, first, to a price of \$3 a thousand for the spruce and, as I remember it, \$1.50 a thousand for such fir as we destroyed in locating the selective logging of spruce and \$1 a thousand for the hemlock. Those figures may not be right, but it is approximately; as I remember it, anyway. That seemed to us to be rather excessive, and we gave consideration to the purchase of the entire tract, with the thought in mind that we could do better on price and still be adding value to our railroad, which we were building. After we got down to price, the first offer that we got from Mr. Blodgett was for \$635,000 and he retain the title to the land, and I think it was to give us seven years to remove the timber.

Mr. FREAR. When was that?

Mr. REED. Oh, it was along in the spring, I think, Mr. Chairman. I don't know just the time, but it was when our minds were reaching an agreement. The board strongly advised that that offer be turned down, that we did not want to be placed in the position of buying this timber and limited to the time of removal. So we authorized the colonel to make a direct offer to Mr. Blodgett of \$635,000 for this timber and land. He came back, in due time, with an offer that he would give us the title to the land, but retain the title to any minerals or oil rights that might be under the surface. Well, I said, "I think that is all right, I don't think there is anything there anyway. What we want is action, and let's accept it." And the board authorized Col. Disque to accept that proposition, and from that time on it seemed to me that our minds had met and the contract was actually agreed upon. Now, that must have been in July, not later than July. We told him to get his abstracts together, and they were sent to the United States attorney for examination. The \$635,000, the value of that timber—I don't know whether you have in the record, Mr. Chairman, the cruise on that timber.

Mr. FREAR. We have, substantially, but you can put it in, if you desire, as you have it.

Mr. REED. It shows the actual cruise that we bought on.

Mr. FREAR. Yes; it was bought on 253,000,000 feet of spruce, and I have forgotten the exact amount of fir—substantially the same amount, as I recollect it, and less of hemlock; but you can put your figures in.

Mr. REED. The cruise we bought on was 316,744,000 of fir, 253,765,000 of spruce, 200,476,000 of hemlock, 15,116,000 of cedar, or a total of 766,101,000 feet. On the basis of the purchase price, which was \$635,000, where he offered us the spruce only for \$3 a thousand, the spruce figured out \$2.50 a thousand, and the average of all of the timber practically 81 cents a thousand. So that we felt that we were making a good trade when we bought the entire tract, rather than to enter into a contract to log the spruce.

Mr. LEA. That is, the stumpage price for the spruce was more than the total purchase price.

Mr. REED. More than the total purchase price.

Mr. LEA. Why was that contract of purchase completed after the armistice?

Mr. REED. I know there were two reasons that influenced me.

Mr. LEA. What were they?

Mr. REED. One was that it added value to our railroad, and the other was that we had entered into a moral obligation to buy that timber, and if I had been doing business in my private capacity, I would have felt that I was bound to buy the timber. We had made the offer and we had accepted it, and it was a question of straightening up title, and if the title had been straightened up we would have bought it long before the armistice.

Mr. LEA. What in your judgment were the reasons for the location of the Toledo mill, or the construction of the Toledo mill?

Mr. REED. I would say that when that matter first came up, and right up to the last ditch, I opposed the building of the Toledo mill. I said that the logs could be brought to Portland and cut here, and, with the saving in the side lumber and the offal, that we would make a better deal and save the investment of the mill. My associates, particularly Mr. Ladd, on the board agreed with that view. We went into the figures—I have them here, many of them—as to the cost of sawing there and sawing here, and it developed that there was, when you took into consideration the freight rates, a difference of practically \$3 a thousand in the lumber shipped, whether cut at Toledo or on the Columbia River, in favor of the Toledo mill. But even that did not satisfy me in making the large investment; I thought it could be offset, to a certain extent, by the better market for the side lumber and the offal here, in the way of wood and product. But when we got to figuring with the railroad, and when we sent for the railroad officials or their operating officials and their engineer department, we found that the road would practically have to be rebuilt. We had to get out not less than 80 cars of logs a day over that road, and, with the numerous trestles and other low tunnels, it was a physical impossibility to put that product over the road without splitting it up. The tunnel, as I remember it, was only 13 feet from the top of the rail to the apex of the tunnel. A log flat is about 4 feet 10 inches from the top of the rail to the top of the bunk. Many of the logs down there are 8 feet on the stump and you could not get out with one—some of the logs with one log on a car.

When that condition developed, and taking into consideration the freight rate, I voted to build the mill.

Mr. LEA. Now, in reference to the delivery of the logs from the Lake Pleasant country to Port Angeles, how would the expense compare, where they could be transported from the forest to the mill by rail, with another method of sending them part way by rail and then towing them down the Straits?

Mr. REED. Well, I don't know just what that—I know the towing on the Straits is very expensive, something like—the present rate is \$2.50 a thousand; but, in any event, any practical logging operation, the sooner that you can get the log on the car and on wheels, the sooner you stop your expense; and if you can get away from taking

it off of that car until it reaches its destination, it is the economical operation to have.

Mr. LEA. I believe that is all.

Mr. FREAR. Mr. Lightner testified on that last question that it was a saving of a dollar a thousand to their company, as figured, by bringing it out from Lake Pleasant on the railway or bringing it out by the other route. A large part of that he based upon actual experience of the head of the Goodyear Lumber Co., and knowledge of the rates of the Milwaukee road and the joint rates that would have to be made. Of course, he is engaged in the logging business there, and I was wondering if you had taken these various things, which were familiar to them from actual experience, into consideration.

Mr. REED. I think so. Yes, sir; I have. I do not agree with Mr. Lightner's conclusion.

Mr. FREAR. You never have been to Clallam Bay, you say?

Mr. REED. I never have been to Clallam Bay.

Mr. FREAR. You have never been present in connection with this shipment of lumber, have you—the logs that would have had to have been undertaken there?

Mr. REED. From Clallam Bay; no, sir.

Mr. FREAR. You said that you figured the cost of the Blodgett tract at 81 cents for all the timber?

Mr. REED. Yes, sir.

Mr. FREAR. You built a railroad in there to get out the logs?

Mr. REED. Yes, sir.

Mr. FREAR. What was the cost of that railroad?

Mr. REED. Well, I don't know, except the figures that have been handed to me. They say it is—

Mr. FREAR. It is over \$2,000,000. Add that to the six hundred and some odd thousand dollars and then tell the committee how much the logs will cost a thousand?

Mr. REED. Well, Mr. Frear, I would answer that question if you would allow me to explain. I don't think that is—with no discourtesy—I don't think it is absolutely a fair question.

Mr. FREAR. All right. I want you to answer it fairly.

Mr. REED. Yes.

Mr. FREAR. And I want to give you plenty of opportunity.

Mr. REED. The railroad would handle more timber than is covered on the Blodgett tract alone. It opens up that entire tract in there, and I don't think it is fair to charge the Blodgett tract alone against the railroad.

Mr. FREAR. But the Blodgett tract has about all the timber that is directly accessible, has it not, to the railroad, and the timber down below there—have you ever cruised down there?

Mr. REED. No.

Mr. FREAR. It is in one bunch. A small piece of land beyond there that had some timber. But that would certainly be a factor in determining the cost of the timber?

Mr. REED. Yes; but even then, Mr. Chairman, I would not consider it a prohibitive cost.

Mr. FREAR. Four dollars a thousand, if it reaches that figure on the cost of hemlock, with a haul necessary to make of about 24 miles before it gets to water, is really a pretty strong price, isn't it?

Mr. REED. That is a strong price for hemlock, but it is not a strong price for cedar or for fir or——

Mr. FREAR. I was taking the average that you got.

Mr. REED. Yes; it is——

Mr. FREAR. But your price for spruce was figured at \$2.50?

Mr. REED. Yes.

Mr. FREAR. Which would make it six or seven dollars a thousand for getting out the spruce, I take it. If you count the railroad, as I have said, as a part of the expense, and you always do——

Mr. REED. Amortize it, all of it.

Mr. FREAR. You always do when you put in a railroad to take out your logs, that is always a necessary part, your own logging, labor, and every other question?

Mr. REED. Sure; but you have to consider your value, amortize.

Mr. FREAR. Surely; yes; the value, with the other factors.

Mr. REED. Yes.

Mr. FREAR. So that the price of 81 cents might be so understood as not to give a fair understanding of the situation with the road you have. I didn't know whether this other had ever occurred to you or not.

Mr. REED. Of course; but, as a matter of fact, if we wanted the spruce, and if we had to have the spruce, the question then was whether we would buy the entire tract, where the spruce would cost as \$2.50 a thousand, or buy the selected spruce at \$3 a thousand.

Mr. FREAR. Did you ever enter into a contract, individually, or otherwise, with anyone, for the purchase of logs, and build a railroad for about six months before you completed the contract, or nine months, as it turns out here the railroad built was begun in the summer, was it not, early summer?

Mr. REED. Yes, sir.

Mr. FREAR. And the contract was completed on December 2, and Mr. Blodgett, I understand—I think it is conceded—wrote that he would release from any moral obligation?

Mr. REED. I don't know about that. I never heard anything about that.

Mr. FREAR. Well, that is in the record. But did you ever buy or did you ever build a railroad under those circumstances?

Mr. REED. I never did; but I have never had the right of condemnation, either, to take that timber.

Mr. FREAR. Did these people have that were saying they had?

Mr. REED. Why, I always presumed that if Mr. Blodgett did not sell that timber to us, and we had to have it, that this Government was supreme and they could go and take it.

Mr. FREAR. But was that authority given at the time you started to building the railroad?

Mr. REED. I don't know whether it was or not. You know, we always thought——

Mr. MAGEE (interrupting). I agree with you, as a legal proposition.

Mr. REED. I don't know whether it was legal or not; but the Government can do anything they want to.

Mr. MAGEE. I think so, in time of war.

Mr. REED. Yes, sir; in time of war.

Mr. MAGEE. When the Nation is threatened.

Mr. REED. Yes, sir. They said we could not commandeer the saw-mills, but I always maintained they could.

Mr. FREAR. Well, don't you believe they ought to have done so, if necessary?

Mr. REED. Yes, sir.

Mr. FREAR. Well, I think we are all agreed on that proposition, too. Commercial sawing and commercial logging are practically the same; the same percentage of the finished product went into the waste and went into the finished airplanes, didn't it? That is, it went into the commercial—let me change that question. Taking the log and taking the lumber that came from the log, practically the same percentage of airplane stuff came from that log and from the lumber?

Mr. REED. I don't think so, Mr. Frear.

Mr. FREAR. Where am I wrong about that?

Mr. REED. Well, I don't think the same percentage of airplane stock came out of the log, out of all spruce that was cut, that would come out of Government lumber through a general cutting of the timber.

Mr. FREAR. What percentage of airplane stock would come out of the lumber that was cut under the log to be used that was used there in that way?

Mr. REED. Well, taking the whole tree—now this is only hearsay.

Mr. FREAR. That is all; we just want your judgment; that is all.

Mr. REED. Yes; not more than 15 per cent.

Mr. FREAR. Not more than 15 per cent of the lumber, or what part of the log?

Mr. REED. Taking the tree, a good average airplane tree, and the spruce as it came, that we cut for airplane purposes, I don't think over 15 per cent actually went into airplane lumber.

Mr. FREAR. That is, the lumber that came from the log?

Mr. REED. Yes, sir.

Mr. FREAR. Well, then, it would mean, instead of the soldiers being used in the lumber business, which was distinguished from the logging, that three-fourths—that 85 per cent of the lumber in which they were engaged in sawing, was for commercial purposes?

Mr. REED. Not 85 per cent, because—

Mr. FREAR (interrupting). Yes; on that basis?

Mr. REED. On that basis if all of the lumber shipped was used; if every foot of it was used in the airplane; but there was a great deal of waste and that all went out, and I thought when I stated 25 per cent I was about right.

Mr. FREAR. Well, I would not be surprised that that is right.

Mr. REED. Yes.

Mr. FREAR. And all I was trying to show was that they were not only employed in the woods producing 75 per cent of the logs for commercial purposes, but in the mills, if so engaged, were producing 75 per cent of the lumber for commercial purposes.

Mr. REED. No; I don't think that is true of mills, Mr. Frear. I don't want to be understood as saying that only 25 per cent of the select logs went into airplane lumber, but I said 25 per cent, or 15 per cent of the tree.

Mr. FREAR. Oh, that went into airplane lumber?

Mr. REED. Yes, sir.

Mr. FREAR. Oh, I see. I get the distinction you make.

Mr. REED. Yes.

Mr. FREAR. I will not enter into argumentative questions.

Mr. REED. No.

Mr. FREAR. Because the facts are all we care for.

Mr. REED. Yes. That is all.

Mr. FREAR. Ryan signed the War Department contract; that is the flitch contract, he told you, I believe?

Mr. REED. Well, that is as I remember it.

Mr. FREAR. Yes; I think that is true. He approved that?

Mr. REED. Yes. I remember it was a conversation that I had to dig up in my mind, since—

Mr. FREAR (interrupting). And he rejected the Disque tentative contract?

Mr. REED. Yes, sir.

Mr. FREAR. According to your statement?

Mr. REED. Yes, sir.

Mr. FREAR. And he said the contract for the railroad that he did not sign that, or something to that effect, or he brought up the subject, or how was it?

Mr. REED. Well, now, I want to correct my testimony this far, Mr. Chairman: I am not sure whether Disque told me that Ryan didn't sign the railroad contract or Ryan told me himself in that office.

Mr. FREAR. All right. I think that is sufficient.

Mr. REED. But I got that information, anyhow.

Mr. FREAR. That is, when Ryan was out here?

Mr. REED. Yes, sir.

Mr. FREAR. What brought up that subject between you and Ryan and Disque at that time that Disque made that statement to you?

Mr. REED. Well, we were all—we were discussing these contracts, and, as a matter of fact, I had never seen the Siems-Carey contract up to that time. I was interested to know myself what its terms was. There was a great furore and things were doing.

Mr. FREAR. Why was Disque volunteering that Ryan had not signed the contract?

Mr. REED. I don't say—I don't know whether Disque did or Ryan did.

Mr. FREAR. Yes.

Mr. REED. But we discussed the contracts there.

Mr. FREAR. Why were either Disque or Ryan volunteering to you at that time that Ryan had not signed this railroad contract?

Mr. REED. Well, I was directing questions as to the contract, as I remember it, and feeling, of course, that Mr. Ryan was entirely familiar with the situation.

Mr. FREAR. Yes; were you directing them with any thought—Mr. Ryan had just come from the operations up there?

Mr. REED. Yes.

Mr. FREAR. And he had just made an inspection of the road?

Mr. REED. And we had been talking about it.

Mr. FREAR. Well, how did the question of the contract and his signing it come up at that time?

Mr. REED. Well, it just developed in the conversation.

Mr. FREAR. Just developed in the conversation?

Mr. REED. Yes.

Mr. FREAR. You don't know who suggested it or brought it up?

Mr. REED. No; I do not.

Mr. FREAR. The question was asked you whether or not this was proper to be brought out by railroads. We all agree upon that, don't we?

Mr. REED. Yes.

Mr. FREAR. There is no other way to get it out as long as it is inland about 15 or 20 miles at the nearest point?

Mr. REED. Yes.

Mr. FREAR. When you were acting as arbitrator, is that the time Frost had some work there, I believe, in connection with proceedings either for the county or the State?

Mr. REED. No; that was a different time.

Mr. FREAR. He had testified with regard to some matters that he had, and he had surveys as well.

Mr. REED. That was between the county and him.

Mr. FREAR. You say that the regulations up there were 200 feet on the right of way?

Mr. REED. That is as I understood it.

Mr. FREAR. Have you ever been down on the Yaquina road, either north or south?

Mr. REED. No.

Mr. FREAR. I think they run there about 30 or 60 feet, do they not?

Mr. REED. Yes. That is the ordinary logging road, about 60 feet for a regular right of way.

Mr. FREAR. Does the State forestry have any different regulations for a road down in Oregon from what it has up in Washington, or is that a rule of the State?

Mr. REED. I don't know, Mr. Chairman.

Mr. FREAR. You were stating on that subject, and I was wondering on what it was based. You just heard that?

Mr. REED. Well, that is what they told me; and I said, "I don't see a damned bit of sense in it."

Mr. FREAR. I don't know whether that ought to go in the record or not, but I agree with it entirely.

Mr. MAGEE. Well, what do you mean; the Lake Pleasant cleared right of way is 200 feet in width?

Mr. REED. Why, at places it is cleared, as I understand it, 200 feet wide.

Mr. MAGEE. As a general proposition you don't mean to make that statement, do you?

Mr. REED. Well, I say I was told that it had been cleared 200 feet.

Mr. MAGEE. Have you ever been over the route?

Mr. REED. I have testified I have not, Mr. Magee.

Mr. MAGEE. You haven't measured it?

Mr. REED. No, sir.

Mr. MAGEE. You don't know anything about it?

Mr. REED. No, sir. I have only been over part of the right of way.

Mr. MAGEE. I have been over the route myself, and I would be very much surprised if the cleared portion would measure anywhere near 200 feet. Of course, it is a matter of measurement; it seems to me that the cleared right of way there might be a little wider than

the ordinary right of way of a railroad, but it did not impress me as being particularly wide.

Mr. REED. Well, I could not say. I haven't seen it. That is what I was told.

Mr. MAGEE. So what you say about that is not based on any knowledge, but just simply what you have heard?

Mr. REED. Yes, sir; yes, sir.

Mr. FREAR. You spoke of the Chinn letter, in which he made a proposition.

Mr. REED. Yes.

Mr. FREAR. In which you felt that the conditions would not be fair to the Government, and which certainly, if you formed the idea you had, you certainly were well within the rights and necessities of the situation in rejecting, but were any further negotiations had, or were any further suggestions made with these people to see if they had the same understanding of the letter that you had?

Mr. REED. I don't know, Mr. Frear. But subsequently these same people, and some others, entered into what is known as the Frost contract.

Mr. FREAR. Yes; and in that I think the amount of consideration there was mentioned as \$20, wasn't it?

Mr. REED. Yes.

Mr. FREAR. That was practically a voluntary contract?

Mr. REED. Yes. I was called into the conference when that original agreement was had with the loggers in Seattle.

Mr. FREAR. So it indicated if negotiations were had there might have been some misunderstanding of the conditions as you understood them, or there might have been a misinterpretation of the letter; is that true?

Mr. REED. I don't think so. I think if you will read that letter yourself you will draw the conclusion the same as I do.

Mr. FREAR. I don't pretend to pass upon what I think.

Mr. REED. You are a lawyer.

Mr. FREAR. What I think you are competent to pass on. I am frank to say that. But any negotiations, or any answer to that letter may have brought to light a difference of opinion on some phase of it, particularly in view of the fact that these people afterwards entered into a contract with the corporation to log practically without profit.

Mr. REED. It is possible.

Mr. FREAR. Yes. I think that is due to them, in justice.

Mr. REED. Yes, sir.

Mr. FREAR. Now, did I understand you to say that the proposition that they made up there at the meeting was, to take over the Siems-Carey fitch contract, as you understood it, and to leave to the Siems-Carey Co. the railroad contract?

Mr. REED. As I remember it.

Mr. FREAR. I am just testing your recollection. That is all.

Mr. REED. Yes. As I remember it, the Siems-Carey people were to continue with the building of the railroad, finish it up. It was practically along to the point of completion; but that they would step out of the fitch contract if the loggers would get together and guarantee to carry it through, and then there was some modifications suggested by these—

Mr. FREAR (interrupting). Let me call your attention to the fact, which I think is the testimony, that it was not quite that way, but that the Siems-Carey-Kerbaugh Co. retained their flitch contract but they relinquished the logging.

Mr. REED. Yes; I guess you are right.

Mr. FREAR. Yes.

Mr. REED. You are right.

Mr. FREAR. Yes; which, of course, is an entirely different proposition.

Mr. REED. Yes; you are right on that.

Mr. FREAR. I know you desire, like myself, to get the facts right.

Mr. REED. Yes.

Mr. FREAR. And that the letter signed by Gen. Disque, or Col. Disque at that time, would have required 5,000,000 feet of logs, which was in that contract, which was a very large item; that is, they thought so, I assume; but seven of them agreed to it. Now, you said that all the rest were against it. The record does not show that, and I don't think you want to be misunderstood. The record shows the number voting against, the number who did not vote against, and seven who voted for it.

Mr. REED. Well, seven voted for it, and most of them were against it. There might have been some that did not vote at all.

Mr. FREAR. Yes. The record of it was introduced in the record here.

Mr. REED. Yes; that might be true.

Mr. FREAR. I wanted to get your testimony straight. I know that you want to. Now, your road, of which you spoke, was chartered by Congress, you say; that is, a large part of it, or part of it; that is, that forty-odd miles of road.

Mr. REED. Yes, sir.

Mr. FREAR. That is the meaning of that? That is a new proposition.

Mr. REED. Why, in early days, that was in territorial days, I think, my understanding has always been that the original charter to that road came under the congressional act.

Mr. FREAR. Well, the Government built the road?

Mr. REED. No, sir.

Mr. FREAR. Who?

Mr. REED. It was built by private capital and made a common carrier.

Mr. FREAR. And made a common carrier?

Mr. REED. Yes, sir.

Mr. FREAR. That is, it was not built for a regular logging road, as you speak of, for private logging operations?

Mr. REED. Yes; it was built, and it never had any other traffic; but, taking its charter as it did, it had to become a common carrier, and gave it the right of condemnation.

Mr. FREAR. Yes. You don't know what it cost even at that time, do you?

Mr. REED. I don't know what it cost. I know what we have got invested in it.

Mr. FREAR. Well, the Government knows what it has got invested in the Yaquina Railroad, and also the Siems-Carey-Kerbaugh Road.

Mr. REED. Yes.

Mr. MAGEE. I suppose what you mean is that by congressional enactment authority to construct the road there under provisions of the act was given?

Mr. REED. Yes, sir.

Mr. FREAR. That is, for common-carrier purposes?

Mr. REED. For common-carrier purposes.

Mr. FREAR. As distinguished from a private logging road?

Mr. REED. Yes, sir. But we are continually building extensions to that road.

Mr. FREAR. The statement was made by a Milwaukee official, as I understood you, that your road was in better condition than the Milwaukee itself?

Mr. REED. Yes, sir.

Mr. FREAR. Well, speaking for one member of the committee, and two members of the committee, I am frank to say that we are glad that that would be the case if we have occasion to ride on a speeder. Do you agree with that?

Mr. LEA. Yes.

Mr. MAGEE. If you had hung onto that speeder you might not have been thrown off. [Laughter.]

Mr. FREAR. Now, you spoke of the ridge road and the coast road in reference to that road leading north from Yaquina Bay.

Mr. REED. Yes, sir.

Mr. FREAR. There was a ridge road proposed about a mile or so, or two miles east of the Yaquina Bay road, or the road that was built, was there not?

Mr. REED. Yes.

Mr. FREAR. On the top of the ridge?

Mr. REED. Yes.

Mr. FREAR. That is the road you referred to?

Mr. REED. There was a road proposed on the ridge.

Mr. FREAR. Yes; that is the road you referred to, and that is the road along the line of the Hawk survey, or something like that.

Mr. REED. Some survey, I don't know what it is.

Mr. FREAR. That is the road you had in mind?

Mr. REED. I had in mind the road they were talking of building on the ridge.

Mr. FREAR. On top of the ridge?

Mr. REED. Yes, sir.

Mr. FREAR. That is the road that was to lead from Willamina around Otter Rock on the ridge, as I understand it, and is shown by the diagrams, and there is a survey that was made along the top of that ridge. That would be about a mile or two miles east of the Yaquina road as constructed?

Mr. REED. Well, I should think so. Now, I don't know. I never was there, but just looking at the plat, my recollection is that it is.

Mr. FREAR. Yes. Well, we will have the map, so if there is any question as to where that survey road was made on top of the ridge it can be shown.

Mr. REED. Yes, sir.

Mr. FREAR. But that had no reference to what is known as the Miller road; that is over about 6 miles or more over east, because that is not on the ridge?

Mr. REED. No; that is not on the ridge.

Mr. FREAR. Of course, you have never been there?

Mr. REED. I don't know anything about it.

Mr. FREAR. But when you spoke of it, I supposed you meant those two surveys which are about a mile, or about a mile and a half or two miles apart?

Mr. REED. Those were the surveys that were particularly called to my attention.

Mr. FREAR. And those were seriously considered, both of them?

Mr. REED. Yes, sir.

Mr. FREAR. That is, as far as I have learned.

Mr. REED. They were.

Mr. FREAR. That is, when they were eventually built by the Warren Spruce Co.?

Mr. REED. Yes, sir.

Mr. FREAR. The road as eventually built cost between \$100,000 and \$130,000 a mile, according to the bases of computation, one according to the interstate basis of including all the sidings and the main road, and the other according to a basis of counting out the sidings separately and charging them up at the same basis as the main line; would you think that was rather an excessive cost for a logging road?

Mr. REED. I do.

Mr. FREAR. Under any circumstances?

Mr. REED. Well, I think it is an excessive cost, but there are some mitigating conditions and circumstances which should be taken into consideration in making that answer.

Mr. FREAR. Yes; in raising the cost of a railroad over ordinary conditions, during war times, and the difficulty of securing labor and material; and we all concede that.

Mr. REED. Yes, sir; and the policy of watchful waiting and trying to crowd everything into a few months which should have been covered by a few years, had something to do with it, too.

Mr. MAGEE. Aren't you in favor of the policy of watchful waiting?

Mr. REED. Not yet.

Mr. MAGEE. That is almost a political question, isn't it? [Laughter.] And we must concede that politics have been debarred from this investigation, when a good Republican is called by my friend over here at the right, and when I have called Gov. West to give his opinion on the other side, that we are entirely absent from partisanship. Now, on that Clallam Bay operation, which you have testified about, of course, you say you have never been there, but you are familiar with rafting and logging, as we understand, and own towboats. Now, do you know of anything that makes the conditions different in the sound from what they are up between Queen Charlottes Island and the mainland; that is, 80 miles across, and shallow, as has been testified to?

Mr. REED. Well, I know that they have difficult towing conditions.

Mr. FREAR. Up there?

Mr. REED. All I know about it is general information. I try to keep posted.

Mr. FREAR. Yes. That is, they would surely have as difficult conditions in a sound that was 80 miles across as in one that was 20 miles across, under ordinary circumstances?

Mr. REED. Well, I don't think there is any more treacherous water, Mr. Chairman, than in the Straits of Juan de Fuca at certain seasons of the year.

Mr. FREAR. Well, the testimony was that it was very rough up there at certain seasons of the year?

Mr. REED. Well, I think it is true, too.

Mr. FREAR. And they produced, they shipped logs with the Davis system 175 miles to be cut up and brought, either the logs or the lumber, down 500 miles to Vancouver. When I speak about "they" I mean the Canada officials under Mr. Pendleton, who was carrying on the operations; and they produced as high as 8,000,000 feet during the month of November, I believe, or October—26,000,500 feet of finished aircraft lumber, as he stated, with not to exceed 10 per cent of the logging or lumbering facilities that were possessed up here in the northwest part of the United States. Now, he did that, bringing these logs over from Queen Charlotte Island; that was his statement, and it has not been disputed. So that that method of logging is reasonably successful, is it not, when they could keep up that continuous cut of logs?

Mr. REED. I don't believe that they can keep up that continuous cut of logs. That is, if you are going to put in 150,000,000 feet a day in Queen Charlotte Sound or in Clallan Bay, there are times in the year when you could not tow them out.

Mr. FREAR. Oh, there is no question about that. We all concede that.

Mr. REED. And for a continuous operation I don't believe that it is the most practical route. That was all—

Mr. FREAR (interrupting). The testimony also is that the Goodyear people, with the Davis system, never lost a raft.

Mr. REED. They never lost a raft, but they have lost logs off of the raft.

Mr. FREAR. That is true of others, as we observed when we came along and saw logs ditched all along the side of the railway.

Mr. REED. Yes.

Mr. FREAR. So that is liable to occur either way?

Mr. REED. Oh, yes; a train is liable to wreck, too.

Mr. FREAR. And, of course, trains are liable to have bridges washed out, and slides, and things of that kind?

Mr. REED. Yes.

Mr. FREAR. So there is some likelihood or possibility of interference with operations in any system that you experience yourself, I assume?

Mr. REED. But this fact remains, Mr. Chairman, that the most successful operations known in the industry are railroad operations.

Mr. FREAR. Because they are the most general, I suppose?

Mr. REED. No; they were not in early days.

Mr. FREAR. No; but I mean under this later method it is very simple now.

Mr. REED. Yes.

Mr. FREAR. To get connecting links with a transcontinental road, as was arranged here, and could have been arranged by the Deep Creek route?

Mr. REED. Yes, sir.

Mr. FREAR. You were in favor of the Deep Creek route, I understood, were you not?

Mr. REED. Originally.

Mr. FREAR. Yes. You were a member of the Aircraft Board?

Mr. REED. Yes, sir.

Mr. FREAR. The Secretary of War in his letter so stated.

Mr. REED. Yes, sir. We recommended it to the Secretary of War.

Mr. FREAR. And in that he said he gave his objections to the other route.

Mr. REED. Yes.

Mr. FREAR. Which were brought out?

Mr. REED. We recommended it in the original recommendation.

Mr. FREAR. Did you ever take any position on the construction of the mill up there at Port Angeles?

Mr. REED. Yes, sir.

Mr. FREAR. What was the position?

Mr. REED. I can't say that I was ever in favor of building that mill.

Mr. FREAR. Here is a little newspaper clipping that some kind friend has sent me in regard to another matter. It says—I don't know what paper it is from; you may recognize it; it is under date of August 13:

Representative Reed held out with W. M. Ladd, of Portland, in opposition to the Oregon plans as long as possible, and the contract they drew up for the Olympic Peninsula development was not the one approved by Secretary of War Newton D. Baker and later on by John D. Ryan, who was head of the Airplane Production Service.

That we have passed. That is, you have stated——

Mr. REED (interrupting). Well, I am not responsible for the newspaper clipping.

Mr. FREAR. I know, but that is just the matter that you covered.

Mr. REED. Yes.

Mr. FREAR. I thought it referred to it down here.

Mr. REED. Yes.

Mr. FREAR. Here it says further, in the newspaper statement:

Thus far——

This is another, under date of August 25; I assume it is a Seattle paper, and it is no reflection, let me say. It says:

Thus far no effort has been made to produce Mark E. Reed, who succeeded George S. Long, Weyerhaeuser Timber Syndicate manager, on the advisory spruce committee and who later on became a director in the Spruce Production Corporation. Reed, it is well understood among his associates, will not volunteer his testimony, yet he was first selected by Gov. Ernest Lister and later by the Federal Government to aid the Army in getting out spruce. It is well known also that he opposed the terms on which the Slems-Carey-H. S. Kerbaugh contract was awarded, and held out against the Warren Spruce Co. contract that tapped the Blodgett tract in Lincoln County, Oreg.

Mr. REED. I don't know where they got that information.

Mr. FREAR. Well, is there any truth in it?

Mr. REED. No; it is not truthful. I didn't hold out against the Warren Spruce Co. contract. In fact, I think that was well under way before I went onto the board. I don't believe that it was necessary to build the mill at Port Angeles, but I can see from their standpoint why they thought it was.

Mr. FREAR. Do you want to examine the witness?

Mr. MAGEE. I just want to ask a question or two if you are through.

Mr. FREAR. That is all. Or do you, Mr. Lea?

Mr. LEA. Why, what caused you to change in favor of the Crescent route for the railroad up there?

Mr. REED. The statement principally that the road could not be built and put in operation by the 1st of December, and the examination showed that there were so many cuts and fills that even if it was opened up that we could not maintain a continuous operation, and I felt that the necessity for the spruce and the awful pressure that was behind us all the time made it necessary to take the most feasible route to obtain results.

Mr. LEA. You were here last week to testify, weren't you?

Mr. REED. Yes, sir.

Mr. LEA. And didn't get an opportunity?

Mr. REED. No, sir.

Mr. LEA. You haven't had any disposition to evade being a witness in this matter, have you?

Mr. REED. No, sir.

Mr. LEA. That is all.

Mr. FREAR. There was no suggestion from any member of the committee that he had.

Mr. LEA. I took it that that newspaper article that you put in the record suggests that. That is the reason I asked the question.

Mr. FREAR. No; I didn't intend that.

Mr. MAGEE. The extension of the tap road would have been shorter, so far as miles of railroad to be built are concerned?

Mr. REED. That is my understanding.

Mr. MAGEE. How many miles shorter?

Mr. REED. My recollection is about 10 miles; 10 or 11 miles. I think it was $25\frac{1}{2}$ miles as against 36.

Mr. MAGEE. Mr. Roberts, of the Union Pacific, had rendered a report that it was feasible to extend the line?

Mr. REED. It was feasible but not practical for the purpose that we wanted to reach.

Mr. MAGEE. Well, have you read his report?

Mr. REED. I don't know what he reported, but I know that was our conclusion.

Mr. MAGEE. Yes; I understand that was your conclusion, but Mr. Roberts reported, did he not, that it was feasible to build the road on that route, and gave you an estimated cost?

Mr. REED. I think he did.

Mr. MAGEE. Now, if you had not changed your mind, or if Gen. Disque had not changed his mind and located the road over along Lake Crescent, why you could have begun the construction of the road earlier than the construction of the Lake Crescent-Lake Pleasant road was begun, couldn't you?

Mr. REED. No. Our efforts were all bended toward getting permission to build the road. We never got that permission until after Col. Disque returned from the East, as I remember it, and so far as the matter of location was concerned.

Mr. MAGEE. Permission to build what road?

Mr. REED. Any road.

Mr. MAGEE. You don't claim that the Railroad Administration never authorized any building of road there, do you?

Mr. REED. We wanted the Railroad Administration to build the road.

Mr. MAGEE. Yes; but I say, you don't understand that no authority was given by the United States Railroad Administration?

Mr. REED. No. But we had to get permission from the War Department to go ahead and build the road. There had to be a contract entered into.

Mr. MAGEE. Gen. Disque has testified he took the full responsibility and changed his mind at a meeting here in Portland, after you were here in Portland, and determined he would build the road over the Lake Crescent route?

Mr. REED. I think that is true.

Mr. MAGEE. He also testified that the matter was under discussion for some weeks, possibly a period of two months before such conclusion was reached. Do you remember anything about that?

Mr. REED. Yes, sir.

Mr. MAGEE. He also testified that he would not permit the signing of the fitch contract with the Siems-Carey-Kerbaugh Co. until the railroad contract had been signed.

Mr. REED. I think that conclusion was reached at our meeting.

Mr. MAGEE. What I mean to say is if that is so, and I presume it to be so, if you were deliberating over this matter for six weeks or two months, if he had not indulged in that deliberation and had stuck to his original decision to extend the Deep Creek road, the construction of that road could have been begun some six weeks or two months earlier than the railroad construction actually was begun?

Mr. REED. If we had taken the responsibility to go ahead and build the road without the approval of the War Department, which I do not believe any member of the board or Col. Disque would have done.

Mr. MAGEE. Do you not understand, as a member of this advisory committee, Mr. Reed, that the Secretary of War had approved it?

Mr. REED. He had approved it.

Mr. MAGEE. And that Gen. Disque, in changing his mind, as pointed out by Gen. McIntyre in his communication to the Secretary of War, which is in evidence, stating that the Secretary of War was reversed. You are familiar with all that, are you not?

Mr. REED. I am familiar with the fact that it was recommended by the Secretary of War and we answered it——

Mr. FREAR. Answer yes or no.

Mr. REED. Of course, I have a right to explain my answer.

Mr. MAGEE. I asked you whether you were familiar with it.

Mr. REED. Yes, sir; I am familiar with it.

Mr. MAGEE. If there were six weeks or two months of deliberation, which resulted in a change of the decision, if there had not been that period of deliberation and the decision had been adhered to, the construction of the road could have been begun six weeks or two months earlier, could it not?

Mr. REED. Can I explain that answer?

Mr. MAGEE. Can you not answer that question?

Mr. REED. No, sir; I can not tell the whole truth without an explanation.

Mr. MAGEE. If you can not answer it, that settled it. I think the proposition is plain enough and it probably does not require any

answer. Now, you do not believe with the force of soldiers which you had here that you could not build an extension of the Deep Creek route into this west or Lake Pleasant locality where this route was, a distance of 25 miles, within the same length of time, or approximately the same length of time, that you could build 11 miles more, or 36 miles over this difficult Lake Crescent, Lake Pleasant route, do you?

Mr. REED. We could have built the road, but it would have been a much more difficult task, because there was no means for handling transportation. You could not begin to have built that road by putting a crew at one end of it and driving the road through. It was necessary, in order to expedite the work, to put in many crews, and on the Lake Pleasant route you had a State road, the best road in that country, to get your supplies and material to these crews. That was the main object.

Mr. MAGEE. Did you have any road over the north side of Lake Crescent, up there on the side of the mountain?

Mr. REED. Oh, no.

Mr. MAGEE. In that connection, you got through one place of 200 feet of solid rock for a long distance?

Mr. REED. I do not know how far it was.

Mr. MAGEE. You do not pretend to tell this committee that it was not feasible to extend the Deep Creek route and railroad construction into this spruce tract, do you?

Mr. REED. No, sir; I do not.

Mr. MAGEE. Certainly; and if the 4,000 men in the emergency of war were not a sufficient force to construct this road, in time of emergency the Government could have put 4,000 or 10,000 men more to construct this, could it not?

Mr. REED. They could do anything they wanted to in time of war.

Mr. MAGEE. Certainly. Now take this question of the purchase of the Blodgett tract. Did you understand that Mr. Blodgett was anxious to sell this tract?

Mr. REED. Yes; I think he was. Of course, there are statements to the contrary, but it was reported to us that he had offered to sell it before we opened negotiations for it.

Mr. MAGEE. There has been considerable evidence presented here that it was only by reason of the threat of commandeering and beginning the construction of the railroad from Yaquina Bay south along the coast that the Government got a price on the property. Do you know anything about that?

Mr. REED. I do not think it is true.

Mr. MAGEE. If he was not anxious to sell it, there is nothing in the statement that the Government was bound to take it as a moral obligation after the armistice?

Mr. REED. Well, he could have released us.

Mr. MAGEE. I say, if he did not, if he was not anxious to sell it, then there would be no force in that statement.

Mr. REED. If he was not anxious to sell it?

Mr. MAGEE. I say, if he was not anxious.

Mr. REED. I do not know whether he was anxious to sell it or not. I know he never offered to withdraw or call the cancellation of the proposed contract.

Mr. MAGEE. You had a number of discussions, I presume, before your board on that?

Mr. REED. Yes, sir.

Mr. MAGEE. You bought it to give value to the railroad?

Mr. REED. Yes, sir.

Mr. MAGEE. That is the fact of the matter?

Mr. REED. Yes; bought it to give value to the railroad and feeling we had made a good buy for the Government.

Mr. MAGEE. Yes; that is what I understood.

Mr. REED. Yes, sir.

Mr. MAGEE. You mentioned that the economical way to get logs to the mill, if you can, is wholly by railroad. Is that right?

Mr. REED. Yes, sir.

Mr. MAGEE. In other words, if you load a log on the car and go direct to the mill, that is the quickest way and the most economical way to get the log there. Is that right?

Mr. REED. Yes, sir.

Mr. MAGEE. Now, are you familiar with the mapography of Lincoln County?

Mr. REED. No, sir.

Mr. MAGEE. Have you been down there along Yaquina Bay?

Mr. REED. No, sir.

Mr. MAGEE. Well, there in the road they built up along the coast that you have described; they have brought down a considerable number of logs already and dumped them into Yaquina Bay. Do you know anything about that?

Mr. REED. I know that they have done that; yes, sir.

Mr. MAGEE. And I was questioning Mr. Holland some yesterday on that proposition, that if there was physical connection with the Southern Pacific at Yaquina Bay and they should take these logs and load them on the car and take them by way of the railroad, why should they then dump them into the water and tow them 11 or 12 miles when they could have been taken by railroad all the way? You do not know anything about that situation?

Mr. REED. No. There must be some very good reason for it.

Mr. MAGEE. I could not see any myself. In fact, I agree with your statement that where you get logs to the mill wholly by railroad, that is apparently the quickest way and the most economical way. I thoroughly agree with you. Now, you do not know whether there is any good stand of spruce down there in Lincoln County east of this ridge or not, do you?

Mr. REED. No; I do not.

Mr. MAGEE. You do not know whether it was feasible to extend the Storey-Fisher railway up over the ridge into the Siletz country?

Mr. REED. No. My information largely is gathered by the report.

Mr. MAGEE. You depended upon that report?

Mr. REED. I did.

Mr. MAGEE. As I recall, Gen. Disque testified that if there was a good stand of spruce over the east of the ridge—and the evidence is given here that there was a minimum of 550,000,000 feet of spruce and a maximum amount of 1,000,000,000 feet—and it was feasible to get over this divide into that spruce, the only sensible, reasonable, and practical means of doing it would have been an extension of the

Storey-Fisher road so that they could have had railroad transportation direct from the forest to the mill.

Mr. REED. I do not know anything about it, that part of it.

Mr. MAGEE. You have never been down there?

Mr. REED. I have never been down there.

Mr. LEA. As I understand your position in reference to the railroad route to Lake Pleasant was that, while the Deep Creek route was a feasible route, the best route was the Crescent route?

Mr. REED. That was—really we had nothing to do with the final selection of that route. My testimony covered by conversation with Gen. Disque concerning the selection of the route. I asked him which route had been selected and he told me the reasons for it.

Mr. LEA. Did you agree in the selection of the Crescent route?

Mr. REED. I did, after he made his explanation to me.

Mr. MAGEE. Did you understand that Gen. Disque did select it and determine it, or that it was determined by someone else?

Mr. REED. My understanding was that Col. Disque made that selection after he had gotten his reports, and that was done and the contract entered into before this conversation that I had with him.

Mr. MAGEE. He determined the route?

Mr. REED. Yes, sir.

Mr. MAGEE. That is all.

Mr. FREAR. That is all.

(Witness excused.)

(Thereupon, at 12.30 o'clock p. m., the committee took a recess until 1.45 o'clock p. m.)

AFTER RECESS.

The committee met, pursuant to the taking of recess, at 1.45 o'clock p. m.

TESTIMONY OF ALEX POLSON.

(The witness was sworn by Mr. Frear.)

Mr. LEA. Where do you live?

Mr. POLSON. Hoquiam.

Mr. LEA. How far is that from Grays Harbor?

Mr. POLSON. That is right on Grays Harbor.

Mr. LEA. How long have you lived in this State?

Mr. POLSON. Since 1879.

Mr. LEA. What has been your business?

Mr. POLSON. Lumbering.

Mr. LEA. Both milling and logging?

Mr. POLSON. Yes.

Mr. LEA. What is the size of the operations with which you have been connected?

Mr. POLSON. At the present time?

Mr. LEA. Yes, and before the war.

Mr. POLSON. I started in 1879 as a day laborer, and continued at that until 1882. I then built the first driving dam on the South Fork of the Cushman River, in Pacific County, State of Washington, and I hand logged on small streams until I built booms in the Hoquiam River and until I secured enough to buy ox teams, and I used those until the donkey engine was brought in, and so I was brought up

from handlogging to producing 200,000,000 feet a year before the war.

Mr. LEA. What is the name of your company?

Mr. POLSON. The Polson Logging Co.

Mr. LEA. You had a contract with the Government during the war, did you?

Mr. POLSON. No.

Mr. LEA. For the spruce-production corporation?

Mr. POLSON. No; I am president of the Airplane Spruce Co., cost plus.

Mr. LEA. And is that a corporation?

Mr. POLSON. It is.

Mr. LEA. When was that incorporated?

Mr. POLSON. I think about January, 1918; very close to that time.

Mr. LEA. For what purpose?

Mr. POLSON. Getting out spruce for airplanes.

Mr. LEA. On what is called a cost-plus contract, for the Spruce Production Corporation?

Mr. POLSON. I did, and my associates.

Mr. LEA. In what section did you operate for the spruce corporation?

Mr. POLSON. You mean section as to district, or as to the land?

Mr. LEA. No; as to district.

Mr. POLSON. The Grays Harbor district—county.

Mr. LEA. What was the general nature of your operations; what did they involve?

Mr. POLSON. Production of spruce for airplanes.

Mr. LEA. And about how much spruce did you produce during the life of your contract?

Mr. POLSON. A little over 18,000,000 spruce and a little fir.

Mr. LEA. Did that 18,000,000 include the fir?

Mr. POLSON. Yes; it was a little over that—probably 18,000,000 spruce—there was very little fir.

Mr. LEA. Did the Polson Co. produce any timber during the war for the Government?

Mr. POLSON. It produced more output of timber than probably any 10 firms in the State.

Mr. LEA. That is, in the Grays Harbor district?

Mr. POLSON. In the Grays Harbor district.

Mr. LEA. In producing 200,000,000 feet a year, how much would you produce a day?

Mr. POLSON. All the way from 750,000 to 1,500,000. It just depends upon the show that they have for that day. It might be favorable or unfavorable.

Mr. LEA. Did you have any soldier labor in your cost-plus operations?

Mr. POLSON. Yes; nearly all.

Mr. LEA. How much per thousand did it cost you to produce the spruce during the war?

Mr. POLSON. I believe it averages about \$38; of course, one-half of that did not produce any spruce, because we were not in the Quinault country. We had just got in ready to haul when the armistice was signed.

Mr. LEA. You had not reached production when the armistice arrived?

Mr. POLSON. By no means.

Mr. LEA. How much longer would it have taken you to have reached a real production?

Mr. POLSON. A real production—in about 60 days.

Mr. LEA. Then how much do you think you could have produced after that?

Mr. POLSON. About 20,000,000 a month.

Mr. LEA. Was this railroad into the Quinault completed?

Mr. POLSON. It was only partially completed.

Mr. LEA. Did you permit, or was there any particular waste of food materials or other materials in your operation there?

Mr. POLSON. If there was, it was absolutely unknown to us. There were strict orders that nobody should be permitted to do anything through carelessness or maliciousness. They were looking out for alien enemies, and alien enemies would be arrested or forced from the concern. We would have to take that up with the military department as to the soldiers, of course.

Mr. LEA. How long are your logging roads, your main line?

Mr. POLSON. The main line is about forty odd miles.

Mr. LEA. And when did its construction begin?

Mr. POLSON. Over 20 years ago.

Mr. LEA. What have your roads cost you per mile?

Mr. POLSON. That is a very hard question to answer. You might build one mile which might cost ten thousand, and the next mile might cost forty or fifty thousand. We have a mile and over that cost us over a hundred thousand.

Mr. LEA. That is, road that was built before the war?

Mr. POLSON. Yes; and you can readily see you might get into some heavy work building a switch, which might be very expensive, and the next switch might be on level ground.

Mr. LEA. To what point did you deliver the logs that you produced in the cost-plus operation?

Mr. POLSON. To the mills in Grays Harbor.

Mr. LEA. Did you tell me the amount of spruce that the Polson Co. produced during the war outside of the cost-plus operation?

Mr. POLSON. Not yet.

Mr. LEA. How much did you produce?

Mr. POLSON. Fifteen million, commercial spruce. That is the whole trade, about fifteen or sixteen million.

Mr. LEA. What can you say as to the production of your section of war lumber during the war?

Mr. POLSON. Spruce, airplane stock?

Mr. LEA. Yes.

Mr. POLSON. I think Grays Harbor County produced nearly if not all of one-half of the spruce produced in the two States.

Mr. LEA. What developed as to the condition of the mills in handling the logs that were brought in during the war?

Mr. POLSON. Very unsatisfactory.

Mr. LEA. In what way?

Mr. POLSON. Col. Breece took over the output of our camps as regards the spruce, and they were to be delivered to two mills designated by him, and they disagreed as to the Government

scale, and when the armistice was signed we had 4,000,000 in the water, some of it being there 60 to 90 days, and about 8,000,000 or 9,000,000 that we were holding up until the armistice was signed, and the market fell off and we had to sell it at less than the Government was paying for it.

Mr. LEA. You had to lose money on that material?

Mr. POLSON. Yes.

Mr. LEA. During the war did you engage in any selective logging?

Mr. POLSON. You mean for airplane spruce?

Mr. LEA. Yes.

Mr. POLSON. The airplane spruce was all selective logging.

Mr. LEA. And what did you think of the practicability of that method for that purpose?

Mr. POLSON. When the Government is doing it, it is the only way to do it, because we are just glutting the market with other stuff for which you have neither cars to move it with, and no yard room, and you are just taking up that much time.

Mr. LEA. Were the mills in your section able to dispose of the side cut?

Mr. POLSON. No; not with that enormous amount of it. They could not dispose of it because they could not get cars, and the market would not buy that during war times.

Mr. LEA. What did they do with it?

Mr. POLSON. They generally piled it up, so far as I know. We were not cutting it.

Mr. LEA. What was the price of rails out there during the war?

Mr. POLSON. We bought 16 miles of rails for this road to Quiniault Lake, about 16 miles, at \$95; it cost \$5 or \$10 to deliver them up into the woods.

Mr. LEA. Do you know the general conditions at Queen Charlotte Island?

Mr. POLSON. Not to be an authority on it, any more than to know it is located on the inside passage and located where spruce grows, and loggers log up in that vicinity; not often spruce, but very often fir.

Mr. LEA. Do you know anything about the conditions of the tide between there and the mainland?

Mr. POLSON. They have been towing there for 30 or 40 years.

Mr. LEA. To what, if any, extent is that towing route open?

Mr. POLSON. It is an inside passage, most of it; it is like a mill pond.

Mr. LEA. Are you acquainted with the towing conditions on the sound, the straits, above Clallam County?

Mr. POLSON. I have no personal experience.

Mr. LEA. Are you familiar with the waters there—you have gone through there?

Mr. POLSON. Just what they have told me.

Mr. LEA. Do you know whether or not it is practical for towing purposes?

Mr. POLSON. Well, personally I am not desirous of getting in that business there in lumbering that way. Mr. Robinson, that used to log there years ago, told me he lost 10 per cent of the logs he

put in. He afterwards sold out, I understand, to the Goodyear Lumber Co. That is practically all the information I have got.

Mr. LEA. What has been the reason that the northwest and the west part of Clallam County has not been developed?

Mr. POLSON. On account of the rough water and poor boomage.

Mr. LEA. That is along the straits?

Mr. POLSON. Along the straits.

Mr. LEA. What, in your judgment, is the practical way of getting timber out of that section?

Mr. POLSON. Either manufacturing it there or building a road and hauling it down to Grays Harbor mills.

Mr. LEA. What distance is it from Grays Harbor up to Lake Pleasant?

Mr. POLSON. About 100 miles, the way you would have to build a railroad.

Mr. LEA. What would be the most practicable route in the other direction?

Mr. POLSON. Well, I would not be—I could not give an intelligent opinion as to that.

Mr. LEA. You are familiar with that country up there?

Mr. POLSON. I never examined it closely. I know the forest is still standing there where it has never been accessible, but at Puget Sound it has been cut off for many miles inland.

Mr. LEA. Have you any relation to the Merrill & Ring Logging Co.?

Mr. POLSON. They are my associates.

Mr. LEA. That is, in your company?

Mr. POLSON. In the Polson Logging Co. only.

Mr. LEA. Did you engage in any riving during the war?

Mr. POLSON. We did; at the beginning of it.

Mr. LEA. What period was that?

Mr. POLSON. Just the first part of it.

Mr. LEA. About when did you abandon the riving operations?

Mr. POLSON. Oh, several months later.

Mr. LEA. Do you remember whether that was in the winter or the summer, or both?

Mr. POLSON. Beginning in the winter, and running into the spring.

Mr. LEA. What was the method of checking up your expenditures by the Spruce Production Corporation; that is, what did they have of satisfying themselves that your expenditures for which you were to be repaid were just, or met with their approval?

Mr. POLSON. They had bookkeepers in the office.

Mr. LEA. In your office?

Mr. POLSON. No; in the Airplane Spruce Co.'s office, through which everything had to pass. Nothing could be ordered, not even a pencil, except through the military department.

Mr. LEA. I think that is all.

Mr. FREAR. You said, Mr. Polson, that the Merrill & Ring people were associated with you.

Mr. POLSEN. In the Polson Logging Co.

Mr. FREAR. In the Polson Logging Co. They are very large loggers, are they not; that is, I mean not in connection with your operations, which are very large, but I mean on the average they are large loggers?

Mr. POLSON. Yes; they are large loggers.

Mr. FREAR. A good concern. They handle their business well, do they not?

Mr. POLSON. Well, I should always consider that so.

Mr. FREAR. You are connected with them and you ought to know.

Mr. POLSON. Yes.

Mr. FREAR. They handle their logs entirely by rafting, do they not?

Mr. POLSON. Yes.

Mr. FREAR. What about the results, so far as your observation goes?

Mr. POLSON. Well, they had a raft or two break up.

Mr. FREAR. When was that?

Mr. POLSON. About a year or two years ago. They had a large raft break up and go on the beach.

Mr. FREAR. That is, a raft that was simply tied together like the ordinary raft; they did not use the Davis system of rafting?

Mr. POLSON. I do not believe they did. I don't know.

Mr. FREAR. They have maintained those same operations since then—that is, the same method of rafting?

Mr. POLSON. I believe they have.

Mr. FREAR. Well, you are concerned with the company; you are interested in the company?

Mr. POLSON. No; absolutely not.

Mr. FREAR. Oh, I supposed you were.

Mr. POLSON. No.

Mr. FREAR. From what you stated here I understood you were interested in that company.

Mr. POLSON. No; I could talk intelligently if I was interested. No; that belongs absolutely to them. We have nothing to say about it.

Mr. FREAR. I did not know that. The testimony was that they did lose one raft, as you say, or one raft was broken up and they had lost some logs, but that was the ordinary system of rafting?

Mr. POLSON. Yes.

Mr. FREAR. Do you know anything about the Davis system of rafting?

Mr. POLSON. Well, is that anything different than the rafting they take from the Columbia River?

Mr. FREAR. I do not know, but it is different from the system that is employed by the Merrill & Ring people, who only just tie them together, but the Davis system ties together in a cigar shape with chains.

Mr. POLSON. Yes; I know about that. That is an invention of a Nova Scotian, which was brought out to the Columbia River.

Mr. FREAR. That system is practically safe, isn't it, in logging?

Mr. POLSON. Pretty nearly safe.

Mr. FREAR. Have you ever been up in the inside passage?

Mr. POLSON. I have been on the boat.

Mr. FREAR. Near Queen Charlotte Island?

Mr. POLSON. I have gone by there.

Mr. FREAR. You have not stopped there?

Mr. POLSON. No; any more than just went by.

Mr. FREAR. Do you know anything about the logging operations there from your own personal knowledge?

Mr. POLSON. Not from my own personal knowledge; no.

Mr. FREAR. Do you know anything about the drafting operations there, how many logs they lose, or anything like that?

Mr. POLSON. No.

Mr. FREAR. That is all in the testimony, and I did not know whether you were acquainted with it. You say that a man named Robinson some years ago told you about 10 per cent of his logs being lost, with the Goodyear Co., I understood.

Mr. POLSON. No. He was the one that went in there and logged on the straits, about the first logger, but afterwards I believe he sold out to the Goodyear people. He was logging there by himself.

Mr. FREAR. He was unfortunate to that extent himself.

Mr. POLSON. Yes; that is what he told me. I have no way of knowing if it is so or not.

Mr. FREAR. How many years ago is that?

Mr. POLSON. Oh, that is 10 years ago.

Mr. FREAR. The testimony of Mr. Lightner was that they had never lost a raft.

Mr. POLSON. I do not know as to him.

Mr. FREAR. So you do not know about that?

Mr. POLSON. They might have lost a million and I would never hear of it.

Mr. FREAR. Lightner testifies they never lost a log. You would never hear in either case, would you?

Mr. POLSON. No.

Mr. FREAR. You were not likely to hear about it.

Mr. POLSON. Not unless I was interested.

Mr. FREAR. Do you think the inside passage is like a mill pond at all times?

Mr. POLSON. Oh, there may be occasions, but it is like the inner sound, you will hardly ever know of a raft ever breaking up on the inner sound. It is like a large river.

Mr. FREAR. People who have testified before say that they have some very rough weather there; that its 80 miles across.

Mr. POLSON. They might get some rough weather in 80 miles.

Mr. FREAR. And in rafting logs 175 miles, as they said they do in their operations up there, that is quite an exposure.

Mr. POLSON. No; because you are towing—if a man is towing along he takes, as a rule, the sheltered side.

Mr. FREAR. Well, they would do that if they were only towing along on this 20-mile wide creek, wouldn't they, at Juan de Fuca?

Mr. POLSON. What hurts them there is the gale that comes in from the ocean.

Mr. FREAR. But it does not seem to hurt the Goodyear Co., who never lost a raft.

Mr. POLSON. Well, they have not logged very much yet.

Mr. FREAR. Haven't they? How many years have they been there?

Mr. POLSON. They have been there a few years.

Mr. FREAR. They have been there a few years, that is some time, if they have not lost raft, isn't it?

Mr. POLSON. Oh, yes; but a man can log 10 years and not put in a hundred million.

Mr. FREAR. But they are putting in more than that, are they not?

Mr. POLSON. I do not know as they are.

Mr. FREAR. I know, but would you admit that a man might log 10 years and put in over 100,000,000 feet; you are taking the conclusion that they would not.

Mr. POLSON. I am just judging from what I hear, that they have not got a very large outfit.

Mr. FREAR. Their statement, I think, is something like 40,000,000 a year.

Mr. POLSON. Well, they ought to be correct.

Mr. FREAR. They ought to know their own business.

Mr. POLSON. Yes.

Mr. FREAR. They testified as to this, and they probably know if they have logged in that length of time a couple of hundred million feet.

Mr. POLSON. Yes.

Mr. FREAR. And they have not lost a raft?

Mr. POLSON. That might be true, too.

Mr. FREAR. And they are on the straits. Now, you think the best method of reaching the Pleasant Lake route is by Grays Harbor?

Mr. POLSON. Oh, I did not say that is the only way, by rail.

Mr. FREAR. I mean the best way.

Mr. POLSON. What is that?

Mr. FREAR. I mean the best way. I am not prepared to argue the question, but I mean that is your judgment.

Mr. POLSON. That is my judgment.

Mr. FREAR. Because you have got large milling facilities there, you have got a very large bay, and all those things are considerations in logging, are they not?

Mr. POLSON. Oh, yes.

Mr. FREAR. So, if a railroad was built from Grays Harbor, in your judgment it would be just as desirable or better, as you say, than from Port Angeles, which is a very small place?

Mr. POLSON. Yes.

Mr. FREAR. I think that is a fair statement.

Mr. POLSON. Yes.

Mr. FREAR. Now, the Milwaukee road for years has been trying to get around to Grays Harbor, hasn't it; hasn't that been understood?

Mr. POLSON. The Milwaukee—may I answer that in my own way?

Mr. FREAR. Yes, do; right in your own way.

Mr. POLSON. The Northern Pacific from Moclips secured a right of way nearly through to the straits. The Milwaukee secured a right of way about one-third of the way. Then there came up such an indignation as to the railroad industries all over the United States that the Milwaukee and the Northern Pacific could not borrow any money at 7 per cent, while the Canadian roads could borrow it at 4 per cent, and it got so it was no investment, and they both threw up their hands—and the right of way crossed the Indian reserve—and quit. That is the reason there are no railroads across that peninsula.

Mr. FREAR. In other words, the Milwaukee from the north and the Northern Pacific from the south have been trying, both of them to get into Grays Harbor and to Port Angeles to connect, isn't that right?

Mr. POLSON. They were trying to connect, but finances and the sentiment of the public was so against the railroads that they could not.

Mr. FREAR. Well, the sentiment in regard to the railroads was somewhat based upon financial conditions, wasn't it, with the Milwaukee stock quoted what it was about five or six years ago and what it is quoted today; that has an impression on the people, hasn't it, as to the loans that will be made?

Mr. POLSON. I suppose that is it.

Mr. FREAR. Those things all have a bearing, haven't they, on the business end of it?

Mr. POLSON. Sure.

Mr. FREAR. But the fact remains that both of these roads were trying to get into that same territory and have been for a number of years. That is right, is it not? Tell me what the facts are—I mean prior to this time of which you speak.

Mr. POLSON. Prior to that time they were trying, and they would have succeeded had they been able to raise the money. That is the truth of it.

Mr. FREAR. That is what I want to know. Now, the Northern Pacific had reached as far north as Moclips?

Mr. POLSON. Yes.

Mr. FREAR. And that brought them within somewhere around 75 to 100 miles of the bridge, didn't it?

Mr. POLSON. Yes.

Mr. FREAR. And somewhat nearer than that to this timber which was down from—

Mr. POLSON. Yes.

Mr. FREAR (continuing). This Pleasant Lake timber?

Mr. POLSON. Yes.

Mr. FREAR. And on the other hand the Milwaukee was reaching out from the Port Angeles side and had reached over as far as Deep Creek. I do not know whether you know that or not.

Mr. POLSON. I did not know that.

Mr. FREAR. That shows on the map.

Mr. POLSON. Yes; I know; I can easily find out.

Mr. FREAR. Yes; and they were seeking to reach around from that way down to Grays Harbor, and the Railroad Administrator, it is admitted, refused to permit them to do it, before the War Department was brought in and this question of constructing the railroad at Government expense. The chairman of this committee sent you a request that you testify in Seattle, coming from the committee on the part of the House of Representatives—

Mr. POLSON. No; positively no.

Mr. FREAR. What?

Mr. POLSON. Positively no.

Mr. FREAR. Didn't you receive such a telegram?

Mr. POLSON. I did not.

Mr. FREAR. Oh, is that so? It must have been some other Polson that it reached.

Mr. POLSON. May I answer that?

Mr. FREAR. Yes.

Mr. POLSON. The only invitation I got was from R. D. Merrill, and he called me up by phone. He said, "Would you like to come up and testify before the committee?" I says, "I am besmirched as a cost-

plus contractor with the rest, and Grays Harbor has produced one-half of the spruce in two States;" and I did not take to it very kindly. I said, "I do not take to it kindly if this committee is going to slight Grays Harbor County. I will go if they will subpoena me, or if they will write me a letter, or something to that effect."

Mr. FEAR. Were you subpoenaed here?

Mr. POLSON. No; I was asked.

Mr. FEAR. By whom?

Mr. POLSON. I was in town here doing business——

Mr. FEAR. Were you asked by the committee?

Mr. POLSON. I was in town here doing business, and I met Col. Disque, and he says, "They will probably want you as a witness here." I says, "I am awfully busy, but if I can be of any use I will be glad to, but I wish very much the committee had met on Grays Harbor."

Mr. FEAR. The reason the question was asked you was because a telegram was sent, supposed to be sent to Aleck Poulsen, and an answer was received by the chairman of the committee and was shown to others, to the effect that you did not care to come.

Mr. POLSON. It must have reached the hands of some one else.

Mr. FEAR. You knew nothing about that?

Mr. POLSON. No; absolutely not.

Mr. FEAR. Your statement is sufficient, of course. I looked for the telegram, but could not find it.

Mr. POLSON. Somebody has forged it.

Mr. FEAR. Somebody acted for you, possibly, and without consulting you.

Mr. POLSON. I told them to open any telegrams, and they would open it and give it to me very carefully. Otherwise, if I stayed away a month a telegram would not be opened without I left word directing my secretary to open it.

Mr. FEAR. This had been opened and a reply sent to the chairman of the committee, and that is the reason we were somewhat surprised; but your explanation covers it. You had a cost-plus contract?

Mr. POLSON. I did.

Mr. FEAR. Do you know what the comparative cost of the production of aeroplane material by your company was compared to the other companies?

Mr. POLSON. I do not. I only know just approximately our own. I do not know as you care to have that.

Mr. FEAR. We have all of them in the records, which are to be introduced, and I am somewhat familiar with it.

Mr. POLSON. Very well.

Mr. FEAR. Have you had a settlement with the company here yet?

Mr. POLSON. We did.

Mr. FEAR. What was the basis of the settlement, or what was the amount?

Mr. POLSON. A clean slate.

Mr. FEAR. Just wiped out?

Mr. POLSON. In our company we took anything that was broken—you understand the cost-plus contract that all the large machinery and everything that would be lost. the Government, the military department bought that, on which there was no per cent at all. They

bought that and furnished it. We have only been allowed on things that could be lost and food and wages.

Mr. FREAR. When the war was over, the armistice was signed, then the Government took back this property?

Mr. POLSON. They took back their own property. We shipped it all back to them.

Mr. FREAR. Was the railroad built on the cost-plus plan?

Mr. POLSON. The labor, as far as they built—they only built—the labor was for 6 miles.

Mr. FREAR. What was the settlement on that?

Mr. POLSON. That was cost-plus, the labor.

Mr. FREAR. What was the basis of settlement with the Government after the armistice was signed?

Mr. POLSON. The contract with us was that we furnished the rails and the ties and the fastenings, and they did the labor. Then it was to be our property.

Mr. FREAR. Then you received the benefit of the labor and all that, and it became your property?

Mr. POLSON. Yes.

Mr. FREAR. Do you know whether that is the plan of all the cost-plus contracts or not?

Mr. POLSON. No; I do not.

Mr. FREAR. What did the Government furnish besides the labor; anything?

Mr. POLSON. Nothing.

Mr. FREAR. On the purchase of all that material, did you receive a cost plus on the purchase made? That is, for instance, you bought rails, or you bought ties, or anything like that, and they cost you—the rails, say, cost—\$95, as you say, did you receive on that a cost-plus price?

Mr. POLSON. Yes, sir—now you are on two questions. I would like to answer them so as not confound the two.

Mr. FREAR. Pursue your own course.

Mr. POLSON. We had a contract with the military department to build a road 16 miles to Queniult Lake, on which we were to furnish the rails, the ties, and the fastenings, and they were to do the labor. That was to open up the timber in the forest reserve—in the Indian reserve.

Mr. FREAR. Now, on that were you to get a cost-plus—on that railroad?

Mr. POLSON. On just the labor.

Mr. FREAR. Oh, you just got cost-plus on the labor. The ties and the rails and the fastenings, and the bridge timbers were furnished at your expense?

Mr. POLSON. At the expense of the Polson Logging Co.

Mr. FREAR. There was no cost-plus on that?

Mr. POLSON. There could not be, because we owned it.

Mr. FREAR. That ought to be made a matter of record.

Mr. POLSON. The difference in the price during normal times, we could practically have built the railroad ourselves and furnished everything.

Mr. FREAR. Of course, for instance, with the Siems-Carey or the Warren Spruce, or some of those other companies, we understand, on the contract that cost-plus attached to everything from a dish pan

up to the locomotive or rails, or anything, if it happened to be purchased.

Mr. POLSON. It did not with us. Now, you are going into South Bay, that is, south of Grays Harbor, where we had 60,000,000 feet, those places there they furnished the rails and built the road. They afterwards took up the rails and we shipped them back. Now, those rails and like that we had no cost-plus on at all, nor donkey engines, nor anything. But so far as the saws, and axes, and wire rope, and iron, and things that you could not account for to return, probably, it was cost-plus on those. When we broke any part or wore out any part we saved those parts and returned them. Everything was a mutual settlement.

Mr. FREAR. Did you have any unnecessary delay in the building of your road up there, in—what is it, Jefferson County?

Mr. POLSON. No; Grays Harbor County.

Mr. FREAR. In Grays Harbor County?

Mr. POLSON. Yes.

Mr. FREAR. Did you have any delay in Grays Harbor County during the way, due to the superintendency of parties here from Portland in the Spruce Production Corporation?

Mr. POLSON. There was some delay in that way, yes. Maj. Welch came through there and stopped us from putting in bents and told us to get pile drivers and pile it. He wanted to do more rapid work. He was not aware that under the surface was hardpan, because he had seen in other places where we had built with piles. He thought it would be more rapid, and it would have been if that condition did not exist. So we had nothing to do but go by his orders.

Mr. FREAR. Who was Welch?

Mr. POLSON. He was an old railroad engineer, as I understand it. I did not meet him.

Mr. FREAR. Was he a logger; did he have any experience in that line?

Mr. POLSON. I do not know.

Mr. FREAR. What was the result after you were placed under his orders?

Mr. POLSON. We could not drive the piles, and we had to blast for every pile we drove. That hindered us.

Mr. FREAR. What was the result of it; did you make any progress?

Mr. POLSON. No; we could not make any progress. That was slow work.

Mr. FREAR. It made a good deal of trouble, did it? Did you bring the complaints back here to the headquarters, here in Portland?

Mr. POLSON. They had their supervisor there.

Mr. FREAR. Who was that?

Mr. POLSON. Hutchinson.

Mr. FREAR. What did he do?

Mr. POLSON. I do not know what he done. He probably made some complaint.

Mr. FREAR. Did you make much complaint yourself?

Mr. POLSON. Not a great deal.

Mr. FREAR. What complaint did you make?

Mr. POLSON. I just complained to the supervisor.

Mr. FREAR. What did you complain about?

Mr. POLSON. I told him it was wrong, the wrong idea.

Mr. FREAR. What was the amount of delay that resulted from this method, the handling of it by Welch and whoever else was directing the operations there in your case?

Mr. POLSON. Oh, it was quite considerable.

Mr. FREAR. You testified before the Ray Committee, did you not? Ray was the intelligence officer who came out here, and you testified before him?

Mr. POLSON. I do not know who he is, but there were several intelligence officers that went in there and looked it over for themselves.

Mr. FREAR. What was their understanding of it? State, if you know.

Mr. POLSON. They went and looked it over. They watched them driving the piles and they saw what was done. It was not one, but there was three or four.

Mr. MAGEE. They could not drive the piles through the rock.

Mr. POLSON. It was just a mistake in judgment, they did not realize.

Mr. MAGEE. They did not realize that the rock was harder than the pile.

Mr. POLSON. You have to blast to drive a pile through it. It is very unsatisfactory.

Mr. FREAR. Let me read just a short portion here, a question that was in the statement of Aleck Polson, taken December 23, 1918, at Hoquiam, Wash., before Ray, the intelligence officer:

When did Hutchinson come down to take charge of the road building?

A. June 6. He took charge of the surveying of the road, the Airplane Spruce Co. road that Hutchinson was —. He changed our method of construction of the road. They were 30 days in getting a pile driver and when they started they had to blast out to drive every pile, and it took about a day to every bent.

What is the meaning of a bent?

Mr. POLSON. A bent is either four or five or six piles, crosswise. It depends how substantial you want to build your road.

Mr. FREAR (reading):

And took about a day to every bent instead of leaving us alone. We could have put in 15 or 20 a day and been through in 30 days.

That is right, is it?

Mr. POLSON. That is right.

Mr. FREAR. And then the next question was:

Your idea was to drive piles.

A. Yes, we would never have built the road for ourselves. They delayed the work from June 6 to October 6, practically making no progress. It hindered our company from getting out twenty to thirty million feet of spruce, and hindered the Airplane Spruce Co., which is the cost-plus company, from getting out from six to ten million feet before the war was ended.

That was true, was it?

Mr. POLSON. Yes. I do not remember the occasion.

Mr. FREAR. Well, it seems that was when your mind was very fresh on the subject, and it seems at that time you were having a good deal of difficulty, or had had a great deal of difficulty, because of the method of trying to handle your business. Would you think

that method might have been pursued with other loggers and other people in regard to their business, in the same way, by men who had no knowledge of business, like Hitchcock, for instance, and Hutchinson, and others of that type—did it come to your ears?

Mr. POLSON. I would like to say for Hutchinson that I gave him a recommendation when he quit logging himself, and I considered him a good, honest American boy. He was just mistaken in judgment.

Mr. FREAR. But it was very important when we was trying to get airplanes over to Europe. That held up your operations from June to October?

Mr. POLSON. Yes. When Maj. Grammer came in there he corrected all that. It was too late then.

Mr. FREAR. It was too late to be of any service?

Mr. POLSON. Yes.

Mr. FREAR. In the war that was on?

Mr. POLSON. Yes.

Mr. FREAR. Now, you were trying to get up the Quinault Reservation; that is, there was a fine stand of timber, as I understand it, in the Quinault and that is what you were trying to reach, wasn't it?

Mr. POLSON. Yes.

Mr. FREAR. And that was where this railroad was to be extended?

Mr. POLSON. Yes. It is graded into the Quinault.

Mr. FREAR. Now, that railroad, of course, is your road. Were you at that time logging on your own land up there where this road was extended or were you waiting to get into the Quinault?

Mr. POLSON. We were waiting to get into the Quinault, and we were about ready with our railroad switches into our own timber to connect up with this piece of road which the Government was to do the labor on.

Mr. FREAR. How did it come you were not logging your own timber before you were getting up into the Quinault, or was there any reason for it?

Mr. POLSON. Well, it was in a block of our own timber in which it is principally hemlock, cedar, and spruce, and we had to build nearly 20 miles of roads and switches to get into it.

Mr. FREAR. In other words, in carrying on selective-logging operations it required almost as much railroad construction as it would to take out the entire cut, would it?

Mr. POLSON. Always.

Mr. FREAR. Almost as much?

Mr. POLSON. It would take almost as much.

Mr. FREAR. It would take as much. That, of course, took time to construct—the railway?

Mr. POLSON. Yes.

Mr. FREAR. Then you state:

It was really a question of lack of equipment that delayed the building of the road.

A. To start on.

Q. After that what was the difficulty?

A. It was mismanagement. I think Hutchinson is absolutely patriotic, but he is absolutely a child. You might as well pick me up and take me to the First National Bank in New York City and tell me to look after everything and run the bank.

That is a very natural expression, too, I think.

If I were frank with them, I would tell them I did not know anything about the banking business and for them to go ahead and run it themselves. While, on the other hand, if I attempted to look after the running of the bank I would get things all bungled up, and that was the way with Hutchinson. He did not know anything about building a road.

Q. Did you take that up with Gen. Disque?

A. We wrote him and asked him what authority Hutchinson had. I also went over to see Gen. Disque, and when I asked to see him they told me he was sick. Another party who had been in there to see him told me he was not sick, and I made up my mind if he did not want to see me I would not try to see him further. I knew his mind was changed by malicious stories told about our concern. He was just misinformed and he listened to them.

That was your testimony?

Mr. POLSON. Well, I do not remember, but I suppose it is.

Mr. FREAR. Well, I do not know that there is any criticism upon the testimony. That is all.

Mr. LEA. When did Mr. Grammer come down there, do you recall?

Mr. POLSON. In October, I believe.

Mr. LEA. When did this process of driving the piles—was that changed or was it completed in that manner?

Mr. POLSON. It was completed at that time. The wet weather had commenced then.

Mr. LEA. Do you remember when it was completed?

Mr. POLSON. It was just about the time Mr. Grammer got there.

Mr. LEA. How long a distance did those piles cover?

Mr. POLSON. Well, I think it was altogether 54 bents. I think they run from 12 to 16 feet apart.

Mr. LEA. That is all.

(Witness excused.)

TESTIMONY OF AMOS BENSON.

(The witness was sworn by Mr. Frear.)

Mr. LEA. Where do you reside, Mr. Benson?

Mr. BENSON. Portland, Oreg.

Mr. LEA. And your name is Amos Benson?

Mr. BENSON. Yes, sir.

Mr. LEA. How long have you resided here?

Mr. BENSON. Well, I have resided in Portland since 1911, I think.

Mr. LEA. And where did you reside before that?

Mr. BENSON. 1907 to 1911 I was in Clatskanie, Oreg.

Mr. LEA. Where were you born?

Mr. BENSON. I was born in Wisconsin, Lynxville.

Mr. LEA. How many years have you lived on the Pacific coast?

Mr. BENSON. Forty years.

Mr. LEA. What has been your occupation?

Mr. BENSON. Well, when I was 14 years old I went into the logging camp with my father and I was there until 1911.

Mr. LEA. You were there until when?

Mr. BENSON. 1911.

Mr. LEA. And during that time in what sort of work did you engage?

Mr. BENSON. Well, I remember the first job I had was greasing skids for ox team, and did chores around. I did nearly every job in the camp, except the real hard work. I fired a donkey and tended

rollway and worked on a railroad train, ran a locomotive, and I also learned to be the bookkeeper. I was bookkeeper for—I think it was from the time I was about 17 until I was about 19.

Mr. LEA. What experience have you had as to logging operations and the locating of logging roads?

Mr. BENSON. Well, I was put in as foreman when I was 20 years old, to run a camp, and I ran a camp all the time after that until 1911; and we never hired any engineers at all to locate our roads; we used to locate them ourselves.

Mr. LEA. What is your age now?

Mr. BENSON. Forty-two.

Mr. LEA. And what was the extent of the operations in which you were engaged in the logging business?

Mr. BENSON. Well, it varied in different years. The first camp I had charge of, there was three yarders. The logging was different in those days from what it is now. We didn't call them sides. We just had one yarding engine on the rollway, and that is all the donkey there was there. Finally worked up to one time I had charge of three camps.

Mr. LEA. I mean how much per year was this company producing?

Mr. BENSON. Well, the first year I ran a camp, we put in 20,000,000; I remember that; and in 1905 and 1906 we put in 60,000,000 a year, each year. I don't remember the other years now.

Mr. LEA. Where were you operating?

Mr. BENSON. When we put in the 60,000,000?

Mr. LEA. Yes.

Mr. BENSON. Oak Point, Wash.

Mr. LEA. At any time during the war, were you associated with the Spruce Production Corporation,

Mr. BENSON. The corporation?

Mr. LEA. Yes.

Mr. BENSON. Yes, sir.

Mr. LEA. In what capacity?

Mr. BENSON. Well, the corporation was formed in the latter part of August, and I was a director.

Mr. LEA. What time did you become connected with the Spruce Production Corporation?

Mr. BENSON. With the corporation, the latter part of August, when it was formed. I was a member of the advisory board before that, though.

Mr. LEA. And what, if any, relation have you to it at the present time?

Mr. BENSON. Nothing.

Mr. LEA. When did you terminate your connection with the corporation?

Mr. BENSON. Well, I think it was about January, if I remember right.

Mr. LEA. Of this year?

Mr. BENSON. Yes.

Mr. LEA. You know Gen. Disque?

Mr. BENSON. Yes sir.

Mr. LEA. And advised with him during the proceedings out here. did you,

Mr. BENSON. Yes, sir; every time he called on me.

Mr. LEA. And how often was that?

Mr. BENSON. Well, that varied. I remember when I was first appointed on the advisory board he went east, and there was about a month that I didn't do anything; then he came back and called on me.

Mr. LEA. After his return, what was the practice about that?

Mr. BENSON. Well, he would call me in occasionally, at no regular stated times; he just called me in when there was something he wanted to talk about.

Mr. LEA. Did you attend the meetings of the board?

Mr. BENSON. Yes, sir.

Mr. LEA. Have you ever cruised timber?

Mr. BENSON. I am not a timber cruiser.

Mr. LEA. Now, were you consulted in reference to the location of the road that runs north from Yaquina?

Mr. BENSON. Yes, sir.

Mr. LEA. And by whom?

Mr. BENSON. Well, one day Col. Disque says to me, "It looks like that is going to be an operation down there, and I wish you would go down and see if they are getting started off right," and I told him, "All right."

Mr. MAGEE. I can't hear what you say.

Mr. BENSON. I say, Col. Disque asked me to go down there and look over the operations at Yaquina and see if they were getting started off right.

Mr. LEA. Do you remember when that was?

Mr. BENSON. Well, I can't place it exactly, but it was some time about the middle of April.

Mr. LEA. 1918?

Mr. BENSON. Yes, sir.

Mr. LEA. Now, I wish you would tell the committee in reference to locating that line of railroad and learning the availability of spruce in that section.

Mr. BENSON. I suppose the best way is to refer to the map that I have here.

Mr. LEA. In the first place, you did go down there, did you?

Mr. BENSON. Yes, sir.

Mr. LEA. How much time did you spend down there before you reported?

Mr. BENSON. I was in there two weeks before I reported at all, before I said anything to anybody.

Mr. LEA. And how much time did you spend there entirely?

Mr. BENSON. About two months.

Mr. LEA. About two months.

Mr. BENSON. About the 17th of June, I think, or something like that when I—

Mr. LEA. From about the middle of June until the 17th of June you were in that section investigating spruce and the location of a railroad?

Mr. BENSON. Yes, sir.

Mr. FREAR. That was not your testimony, was it?

Mr. BENSON. What?

Mr. FREAR. That was not your testimony, was it, just given here?

Mr. BENSON. From the middle of April until the 17th of June.

Mr. FREAR. Yes. Read the last part of the question.

(The last part of the question was read by the stenographer.)

Mr. FREAR. Were you two months making the investigation?

Mr. BENSON. Yes, sir. Of course, there was two or three times I came to Portland for about a day or two, but it was in regard to the work.

Mr. LEA. And who was with you in making that investigation?

Mr. BENSON. Well, I had a cruiser by the name of Mr. McDonald, who was with me all the time.

Mr. LEA. And how long have you known Mr. McDonald?

Mr. BENSON. I had only met him a few days before I started on that work.

Mr. LEA. What do you know about his experience and ability as a cruiser?

Mr. BENSON. Well, after being out with him there a few days I made up my mind that he was well acquainted with that country. I think he was a thorough cruiser.

Mr. LEA. And in what section of the country did you visit during those two months?

Mr. BENSON. Well, at first, when I went down, I had no idea of what I was going to do, but I thought the first thing I would do—at that time the Warren Spruce were logging up on Wessel Creek, in about section 23, and they were planning then to extend that railroad on up on top of the ridge in 14, on top of the main ridge, and then on in a northerly direction toward Siletz Bay. First we started up from Toledo, and we walked up past the operations of the logging, and went up on top of the ridge, and I saw that that was going to be a—the last 2 miles, to get on top—it was from an elevation of about 60 feet to about 540—I saw that was going to be a very difficult piece of road to build and hard to operate, because it would be a steady grade of $5\frac{1}{2}$ per cent, and the curves were not to be compensated, and there was some 40° curves laid out in it. So, when we got on top of the ridge, we went on down what is known as the Ellsworth Trail to the county road, down close to the coast, and went back to Newport. I reported to Capt. Brown—and in the meantime Mr. McDonald had outlined to me where he considered the main bodies of this spruce were. I reported to Capt. Brown, who had charge of the military in the district, and asked—well, I don't know just exactly what his job was, but he was supposed to be the head man there for the Government—I reported to him that I wished he would let me have Capt. Harmon, who was the chief engineer on the Southern road. I had met him a time or two before. I told him I was afraid that ridge road was not the road in and I would like to have Capt. Harmon go along with me—

Mr. FREAR. Harmon?

Mr. BENSON. Harmon. [Continuing.] To go along with me, so as to get his engineering judgment of it. He did so.

The next morning we started out. We walked from Newport up to Yaquina along the beach to see, in case we could get a coastline in there, or if we found later on that that is what we wanted—to see what the chance was to get down to the water. We found that we would have to go clear to Yaquina to get a good place to dump the logs. We didn't put in any more time that day trying to get the

location down the hill there, but went on up clear to Otter Rock and stayed there that night.

The next morning we started out and walked up the Otter Rock ridge, which goes through sections 28 and 27, up to a point about the center of section 26. These sections are in 9 south, range 11 west. Then we followed the top of this main ridge south—

Mr. FREAR. Section 26, will you just place it in our minds? We do not see where where you are pointing there with the pencil. Just say about how far from Otter Rock, for instance.

Mr. BENSON. Oh, that was about—that trail was about 5 miles north.

Mr. FREAR. In a northeasterly direction?

Mr. BENSON. In a northeasterly direction. That is not by sections, you know. That is by the trail.

Mr. FREAR. Yes.

Mr. BENSON. Then we followed the ridge south to a point a little south of the center of section 11 in 10-11, and then we followed a ridge down through 13. I wanted to go down that way to see if there was any spruce over east of 13 and 12. That was to avoid retracing the trip we had had two days before.

Now, on this trip south on the ridge we discovered from section 26 south for 2 miles the ridge was very rough; it gets rough back on top. There are places where the elevation is 850 feet. There are a number of passes along there. Nearly all of those passes are about 550. Of course, these elevations were taken with aneroids. Then there are places along that 2 miles where it is almost impossible to build a railroad, and if it was built up there I don't see what good it would be, because you could not get the logs to it, as they are all down below you. By that time I had made up my mind that the ridge was no place to build a railroad.

The next question was to find out whether there was any timber in here, enough to justify a road from any direction.

Mr. LEA. That is, in what?

Mr. BENSON. In this district south of Otter Rock and west of the main ridge. Mind you, there was no passes through that ridge any place lower than 550 in the vicinity of this timber.

Let's see, the next day—I may not get this just the right day—

Mr. LEA. Well, the particular day won't make any difference.

Mr. BENSON. The next trip I recollect was up the ridge between Coal Creek and Wade Creek to about the corner of section 15—the northwest corner—and then we turned and went down into Wade Creek and followed Wade Creek back out to its mouth.

Mr. FREAR. Just a moment, to indicate there in the record: How far is that from the coast—about how far?

Mr. BENSON. Well, that is about a mile and three-quarters, in a straight line.

Mr. FREAR. From the coast?

Mr. BENSON. Yes.

Mr. FREAR. That locates it on the map so that anyone won't have to look it up. You didn't give the town or range.

Mr. BENSON. Is there anything more definite you want?

Mr. FREAR. No; that makes it all right.

Mr. BENSON. We went down into the South Fork of Wade Creek and followed that out to the mouth. We were looking for spruce

in there. I was not attempting to make a detailed cruise or anything like that, but I just wanted to size up the quality and see that in my judgment there was quantity enough to pay to build a railroad.

Mr. LEA. That is, you mean you were not trying to find the quality at that time?

Mr. BENSON. I was not trying to make a detailed cruise, because we didn't have time; we had to hurry.

Mr. LEA. You mean you didn't make any cruise at all—that you didn't at that time?

Mr. BENSON. We made a detailed cruise later.

Mr. LEA. Yes.

Mr. BENSON. Let's see, now, the next—as I remember it, the next trip was up through Johnson Creek. That was on the ridge between Johnson Creek and Miner Creek, up to about the quarter post between sections 33 and 34.

Mr. FREAR. That is about how far from the coast?

Mr. BENSON. That is about a mile and three-quarters on an air line.

Mr. FREAR. The creek empties into the ocean?

Mr. BENSON. Yes, sir. At that point—right about there—there is a falls on Spencer Creek which is about 105 feet in elevation. We looked at the timber around in the vicinity of the falls, and then cut south until we hit the south fork of Spencer Creek; went down that a ways and then cut up onto the ridge on the south side and went on out toward the ocean.

One day we went up the ridge between Coal Creek and Molach; went back to the bottom of the main ridge. I don't remember just which way we went out that time.

Mr. LEA. Well, the particular trip is not so important as why you did so and what you found.

Mr. BENSON. You mean what did we find?

Mr. LEA. Yes; what I mean, it is not necessary to tell "This day we were there and a certain day some place else," but if you will just tell us the places you did go and how much spruce you found and where it is located.

Mr. BENSON. Well, later on we made this map, and this indicates in a rough way—this yellow—just about where the spruce lays in there. Some places the spruce was kind of rough—limbs came down low—and other places it was pretty nice.

Mr. LEA. What did you find? You did cruise the next section south of Otter Rock, did you?

Mr. BENSON. Well, you would not call it—the work we did you would not call it a cruise that a regular professional cruiser would go out and make if he was doing it for an employer.

Mr. LEA. Did you satisfy yourself as to what quantity of spruce was available in that section?

Mr. BENSON. Yes, sir; by checking up with some cruises that we got from different sources, I figured that we ought to find at least 200,000,000 feet in there of a commercial cruise.

Mr. LEA. That is, south of Otter Rock and west of the slope?

Mr. BENSON. Yes, sir.

Mr. LEA. That is, on the west slope. Now, what did you do over in the Siletz Basin to find spruce and with reference to the practicality of selecting a route in that direction?

Mr. BENSON. Well, I was down in that country about February. I went down on another trip. That was before this trip. We went clear on through and clear to the mouth of the bay. At that time we were looking into the feasibility of riving and floating them down the river, and putting the cants on barges and taking them out over the bay. Mr. Jim Manary was along on the trip, and he at that time was the foreman of the Warren Spruce Works here. He is a man I had known a good many years, and he used to own his own logging camp on the river, and I had a great deal of confidence in his ability. And as we were going down the county road here, Jim pointed out to me the idea that he had of this Siletz country at that time, as far as he had seen it, and his idea was that you would not find much spruce between Jaybridge Ridge and—well, south—clear south as far as you wanted to go there and on the Siletz slope.

Mr. LEA. Now, the Jaybird Ridge is in what position with reference to Otter Rock; that is, in what direction?

Mr. BENSON. It is about due east.

Mr. FREAR. How far—how far east?

Mr. BENSON. Well, the first of it starts about 4 miles in a straight line, but these distances that you get like that don't represent the way it is really on the ground, because you go up over some high hills there, and it makes the distance farther as you walk it.

Mr. FREAR. I was just trying to locate where you were.

Mr. LEA. And what did you do to determine the amount of spruce on the east slope there; that is, in the west side of the Siletz Basin?

Mr. BENSON. Well, now, on that trip, as you go along the wagon road here the country is open; you can see a long distance and you see that there was no spruce down close. And Mr. McDonald informed me that about the only spruce there was between that Jaybird Ridge and south here toward Toledo was about 25,000,000 around the headwaters of Dewey Creek. And as I had not seen any along the road there, and as there was great pressure to get spruce at that time, we had figured out that to build a line up the coast we would have to go about eight miles and a half with the main line to reach Molach Creek, which would be the first creek. Over here it looked like at least 20 miles of new line—new line to build to get to where there was any large body of spruce.

Mr. LEA. That is, to go north of Toledo into the Siletz Basin you would have to build about 20 miles to get into any considerable quantity of spruce?

Mr. BENSON. Yes; connecting onto the end of the railroad that was there—Mr. Miller's railroad.

Mr. LEA. Yes.

Mr. BENSON. So consequently I didn't examine that country up in there around the Siletz—the—well, it is what they call the "Bulls Back" there; I don't know of any other name—very thoroughly at that time, because I had figured that this district in here—was enough timber on it to afford to open it up, and there was no other way that it could come out; it had to come out that way, and I figured that it was the quickest thing we could get action on.

Mr. LEA. Now, when you determined that it was impracticable to build a road up the easterly slope of those mountains, that also meant that the west timber must come out on the west slope, didn't it?

Mr. BENSON. Yes, sir; it has got to come out the ocean way; it is almost impossible—

Mr. LEA. If you could have found a passage over at the head of Jaybird, what would have been the situation so far as removing timber by a line through the Siletz Valley?

Mr. BENSON. Well, I thought about that. If you did that, in the first place this Miller line here—there is about 3 miles of the present road that is on a creek bottom—that would have to be rebuilt, and as there is no ballast in that country, about the only way we could do we would have to build a trestle for that 3 miles. Then there would be about 20 miles of new line to build down the Siletz River, as you would have to follow the windings of the river; you can't get across country there because there are ridges in here. That would take you down to the mouth of Jaybird; then to go back of Jaybird with about 7 miles of railroad, that is 27, and 6 down here is 33, and then about 7 more to get down Spencer Creek to the north of it, would make about 40 miles of railroad, and you would have to lift all this body—this 40 miles of main line to reach the center down here along the ocean, with the distance that you would have to build your spurs, and also would have to lift that timber over a 550-foot summit besides, and I considered that impractical when, at the same point here—the same central point, about 10 miles of main line would get it to Yaquina Bay.

Mr. LEA. So about 10 miles along the coast route would tap this timber that from the interior will take something like 40 miles?

Mr. BENSON. Yes, sir; that is, roughly guessing; it is about 38 or 40, something like that.

Mr. LEA. Well, that line that you speak of north from Toledo would reach to what point—the 20-mile line, or did you mention? What distance would it be? You said 20 miles to reach the spruce?

Mr. BENSON. Well, that would take you down here about to the mouth of Jaybird.

Mr. LEA. And how near is that to the "Bulls Back"?

Mr. BENSON. Oh, just about a half a mile from the first starting in of it.

Mr. LEA. Now, did you subsequently investigate there to find out about the other timber?

Mr. BENSON. Yes, sir. Afterwards you mean?

Mr. LEA. Yes.

Mr. BENSON. Yes.

Mr. LEA. And what did you subsequently find?

Mr. FREAR. And when?

Mr. BENSON. How is that?

Mr. FREAR. And when?

Mr. BENSON. Well, that was—well, in the early part of June I went up this Otter Rock ridge from Otter Rock to section 26, and followed down the Jaybird and left it about the south line of section 19, went over toward the Siletz. I remember that day well; it took us 15 hours to make that trip. On June 11 I went up to section 26 to Otter Rock and went north on the ridge and down—as

we went along the ridge we would go off it down on one side and then down on the other to get to see as much of the timber as we could.

Mr. LEA. That was on what ridge?

Mr. BENSON. On the ridge, the main ridge from section 26 north toward the "Bull's Neck," and went down into it and stayed all night at Mowrey's that night.

Mr. LEA. Where is Mowrey's located?

Mr. BENSON. Section 1, 9 south, 11 west.

Mr. LEA. And what position was that—

Mr. BENSON. Those two trips were taken at the express request of Gen. Disque, after he had made a trip with me around this entire tract to make sure that things were as they had been represented to us.

Mr. LEA. How is Mowrey's with reference to the tidewater?

Mr. BENSON. It is just about the head. The tidewater comes up above it a little ways. It is about as far as it is practical to float logs there.

Mr. LEA. And what distance would the railroad be up the Siletz Valley from Toledo, to reach Mowrey's?

Mr. BENSON. Well, that is about 20 miles there; it is close to the mouth of the Jaybird.

Mr. LEA. Now, did you finally determine the amount of spruce timber in the Siletz Basin?

Mr. BENSON. Well, not accurately.

Mr. BENSON. I formed an opinion from looking at cruises and from what I saw I didn't think there was over 200,000,000 feet of spruce in the Siletz Basin.

Mr. LEA. That is, the total amount in the Siletz Basin only about equaled the coast timber south of Otter Rock?

Mr. BENSON. Yes, sir.

Mr. LEA. And how was it as to its position, as to whether or not it was scattered or in groups?

Mr. BENSON. It is not in as compact a body.

Mr. LEA. Over how wide an area is that spruce in this Siletz Basin distributed?

Mr. BENSON. Well, the biggest tract in there in any one tract is in the Jaybird.

Mr. LEA. About how much is in the Jaybird?

Mr. BENSON. I would judge there is about 60,000,000.

Mr. LEA. Sixty million. About how far is that from Dewey, where there is 25,000,000?

Mr. BENSON. Well, the head of Jaybird and the head of Dewey Creek come close together up there next to the main ridge, but they run in opposite directions toward the Siletz River. They both empty into the Siletz.

Mr. LEA. Can they be connected in the same line there or not?

Mr. BENSON. It would be awful hard to get from Dewey into Jaybird, because that is right where that bad part of the ridge is, of the main ridge.

Mr. LEA. How far is it to the body of spruce on Bull's Back?

Mr. BENSON. Now, in the first place, here in sections 16 and 17 (indicating on map) we had pretty accurate cruises, and these two sections showed about 15,000,000 going, taking the Bulls Back proper

right in the inside of it, that spruce is mostly very rough, and there is very little airplane stock in there, but around the edge of it next to this side hill there is some very fine spruce.

Mr. LEA. What is the quality of that Bulls Back spruce, so far as airplane lumber is concerned?

Mr. BENSON. You mean the inside of it?

Mr. LEA. Yes, sir.

Mr. BENSON. Well, there is not very much airplane lumber there.

Mr. LEA. For what reason?

Mr. BENSON. Well, there are limbs on the trees.

Mr. LEA. I didn't hear you.

Mr. BENSON. Limbs on the trees; it is rough.

Mr. LEA. Oh, yes. It is a lower grade of spruce?

Mr. BENSON. Yes.

Mr. LEA. Now, is there any other considerable body of spruce in that Siletz area?

Mr. BENSON. Yes. I have been told—I didn't see this myself—that 6, and 26, 35, are gretty good—that is 8-11—township 8 south, range 11 west.

Mr. LEA. Now, after you made these investigations to whom did you report?

Mr. BENSON. To Gen. or to Col. Disque.

Mr. LEA. And do you know of any further investigation that was made of this same matter?

Mr. BENSON. Yes. After I had reported on that we sent, or he got Mr. Roberts, he requested the chief engineer of the O. R. & N. to go down and look it over, and he sent Mr. Roberts, stating that he would be just the man to do it. Mr. Roberts worked for the O. R. & N. And then later Mr.—oh, he is a director of the corporation, who testified here this morning. What is his name?

Mr. LEA. Mr. Reed?

Mr. BENSON. Mr. Reed; yes. Mr. Reed sent his logging superintendent down there to look it over.

Mr. LEA. Were you acquainted with Mr. Hillier?

Mr. BENSON. No, sir.

Mr. LEA. Who made the investigation for Reed?

Mr. BENSON. No, sir.

Mr. LEA. Did you have anything to do with Mr. Reed's investigation?

Mr. BENSON. No, sir.

Mr. LEA. I mean Mr. Hillier's investigation?

Mr. BENSON. No, sir; I never saw Mr. Hillier.

Mr. LEA. And do you own any timber in that country?

Mr. BENSON. No, sir.

Mr. LEA. Or have you any interest in any railroads or any mill that would be served by a Government-constructed line there any place?

Mr. BENSON. We haven't any timber, or railroads, or mills any place.

Mr. LEA. And in making this investigation did you have any compensation from the Government for this service?

Mr. BENSON. No, sir.

Mr. LEA. Did you have any other motive than to follow the route that would best serve the Government's interests?

Mr. BENSON. No, sir.

Mr. LEA. Now did you consider whether or not the route as built up the coast could be extended over into the Siletz Basin, if necessary?

Mr. BENSON. Well, yes, sir; we did look into that. We followed Spencer Creek out the full length of it to see if we could get up the Spencer Creek. We found we could, without too excessive a cost; and then followed down Rock Creek to see how that was; that would be to haul loads up Rock Creek and then down Spencer, to get over Otter Rock ridge. We found it was feasible but quite a long line. In going up and down this Otter Rock ridge we had noticed a lower pass, and as we took aneroid readings over it every trip we found that was about four fifty elevation. So we thought we would run that out and see what was the chance to get over. So I got Mr. Cobb, who was the chief logging engineer for the Government there, and we went up and ran down both sides of it. I accompanied him on those trips. And Mr. Cobb figured that he could get, I think it was a 3 per cent grade up with the empties and two and a quarter against the load. And then we investigated clear on up the coast to Siletz Bay and found that that was cheap building along there.

Mr. LEA. Above Otter Rock?

Mr. BENSON. Yes, sir.

Mr. LEA. Now what would have been the object of going to the Siletz Bay?

Mr. BENSON. Well, the idea was that later on, after we had time to cruise this country north of Otter Rock and west of the main ridge, if it showed sufficient timber to warrant the building of that railroad, then the ideal way would be to build the railroad clear to Siletz Bay. Then I was figuring as this Siletz River is tide-water clear up to section 1, I should roughly guess it is about 20 miles in distance, that we could take donkey engines on scows up there and put these logs into the water; maybe there might be some places where we would have to put in short spur lines and have a cheap railroad and drift those logs down to the mouth of Siletz Bay and load them on the train and bring them out here in the Bay; that was provided there was timber enough up here to justify building that line along the ocean.

Mr. LEA. That wasn't part of the adopted plan, was it?

Mr. BENSON. Later on?

Mr. LEA. I say, that plan was not finally adopted? That was looking to the future?

Mr. BENSON. Yes, sir. Now, in case we should fall down, that that timber should not develop there, we figured that we could go north on this ridge from section 26—the ridge is not so rough north of the center of 26, and there is a whole lot of fine spruce close to the top, and there is some spur ridges that put off from it. We could get a large share of the Jaybird spruce that way, and a large share of this at the head of Depot Creek. That is on the ocean side.

Mr. LEA. Where is Depot Creek?

Mr. BENSON. It runs into Depot Bay on the ocean.

Mr. FREAR. That is not Depot Slough that they have spoken of?

Mr. BENSON. No, sir. No; that is different altogether.

Mr. FREAR. Yes.

Mr. LEA. That is north of Otter Rock?

Mr. BENSON. Yes, sir. And this fine spruce around the edge here of the Bulls Back—we could get that fine on top there. I should judge we ought to be able to get a hundred to a hundred and twenty-five million in addition to this two hundred million.

Mr. LEA. That is, over half of the lumber inside of the Siletz Basin would have been available by this coast route, by extending it to that point?

Mr. BENSON. Yes, sir.

Mr. LEA. Are you in the timber business now?

Mr. BENSON. No, sir.

Mr. LEA. Now, did you have a visit there from the committee from Toledo, or did you go into that section with them?

Mr. BENSON. Yes. As I remember that. I was in Portland and Col. Disque—we had made arrangements for Col. Disque to go down; I wanted him to go over this, because I felt it so important that I wanted other fellows to look at it, too; and this committee was in Portland—let's see, now. Well, I don't remember just exactly how we got started with that committee, but anyhow Col. Disque asked me to go over there with them and look at their route. I told him all right, and we made arrangements to do it. I told him that I wanted him to send somebody else along so as to make sure that there would be no mistake about what report I made, no misrepresentation about it. So we went over to the Siletz. He told me to take whoever I wanted to, so I took Mr. Alec McDonald and Mr. W. F. Prost, two cruisers. We went over to Siletz City and met them one morning, and in that party were Messrs. Morgan, Hall, Derrick and Ingram. They took us down to section 20 in township 9, 10 west, and up on to a pass on the Jaybird Ridge. This is the ridge between the Siletz River and Jaybird Creek. This elevation was 300 feet in this pass. We went down into Jaybird Creek and found the elevation was 90 feet. That meant to get an easy grade out of there you would consume all the distance between this pass and the mouth of Jaybird. At once I thought what is the use of going here? It is better to go around the Siletz River and have a water grade, because you have got to have a railroad there anyhow to get 16 and 17. I found that they had not made any reconnaissance of this route at all, didn't have aneroids, didn't know the elevations. So, then, we came back on the Siletz side of the ridge and came on up and went up to a pass about the corner of sections 19 and 20, 30 and 29, where we found the elevation 325 feet; their idea being on these passes that they would build a road across the country here and cut over into Jaybird.

Now, on the slope of Jaybird Ridge next to Jaybird Creek—that would be the east slope—there was no spruce at all along there until you get down into the creek. Then we came back south, and in the center of section 29, which is known as Lutzen's Prairie, the elevation was 120. You would have to come down here; you can't avoid it; come south to the center of section 32; that is 1 mile. There they had a pass 550 feet in elevation. That meant a rise of 430 feet in 1 mile. There is no room for development there, and it would be impossible to get a road there that you could build to operate loaded trains up. From there we came on down into, you might say, the floor of the Siletz Valley, which is an elevation of 200 feet there. And here is

the ridge between Siletz River drainage and the Yaquina drainage; the elevation is 400. And then on down to the end of Mr. Miller's road, where the elevation is 230. They contended, before we started on the trip, that they could build a road from the end of Miller's road to the head of tidewater here [indicating on map], and it would only be 12 miles long. In other words, they just drew straight across the map, and you could not find the ground that way when you got there. Then, as we left that night they all admitted it was impossible, every one of them.

Mr. FREAR. What is that?

Mr. BENSON. I say, when we parted that night, that evening, they all admitted that route was impractical.

Mr. FREAR. Where you are pointing?

Mr. BENSON. The route I have just described, you see; and they say, "If we can find another route, will you be willing to come out and look at it?" I told them I didn't think they could find any route there that would be practical without following right down the Siletz River, because some of these ridges put right down next to the bank, and you can't get over them. However, I said, "I am willing to do anything reasonable." Then I went over, and during that time is when I ran down the Jaybird and did some of this other work, and I was in there four or five days. There is no telephone at Otter Rock. I received a letter Sunday from Mr. Ball, stating that they had found another route, and requesting me to go with them. Well, it was a day or two after that before I came out to Newport. The next morning after I got up I was in the place there, I walked in the room where they sell soda water and stuff like that; I was just going to go and telephone Mr. Ball that I was ready; and I met him there. I told him that I was ready to go with him to look at this other route, and he said that they had decided not to take it up with me any more, that they were going to take it up with headquarters in Portland. So I didn't go on that trip.

Mr. LEA. Now, Mr. Benson, have you any information as to the cost of that railroad?

Mr. BENSON. The one that is built now?

Mr. LEA. Yes.

Mr. BENSON. Yes, sir.

Mr. LEA. On the north line. How much did that cost?

Mr. BENSON. I asked the comptroller of the Spruce Corporation to give me the figures on it. [Witness here refers to paper.] These figures represent 10.85 miles, which cost \$982,838.59, which is an average per mile of \$90,751.47. Do you want the other?

Mr. FREAR. Will you give those figures again? Just a moment. This 10.80 cost how much?

Mr. BENSON. 10.83, it is.

Mr. FREAR. It cost how much?

Mr. BENSON. \$982,838.59. The average per mile is \$90,751.47. Do you want the other items here of the spurs and everything?

Mr. LEA. Yes; the other items and their cost in connection with it.

Mr. BENSON. Spurs and sidings complete, 4.83 miles, \$328,520.32; average per mile, \$68,016.62. Main line, two-thirds completed, 1.75 miles, amount \$106,179.22.

Mr. FREAR. What does that mean? I don't quite get that.

Mr. BENSON. It means there is 1.75 miles of main line that is two-thirds completed.

Mr. FREAR. That is, you mean it is not completed?

Mr. BENSON. It is not completed.

Mr. FREAR. And is that an additional figure?

Mr. BENSON. Yes, sir.

Mr. FREAR. What is that amount?

Mr. BENSON. \$106,179.52; average per mile, \$60,673.84. Spurs, two-thirds completed, 3 miles—

Mr. FREAR. Interrupting. That is in addition to the 4.83?

Mr. BENSON. Yes, sir; the amount is \$136,127.20, which is an average of \$45,375.73. The total amount of all those figures is \$1,553,665.33. He told me that that represented everything that had been spent on the north side, excepting actual logging expenses. In other words, there were a lot of rails bought for further use in building the railroad track and a lot of ties and switches, and some work done at the terminal. He said that was the outside figure—everything.

Mr. LEA. I think that is all. Oh, did you determine about the amount of other timber in the Siletz?

Mr. BENSON. You mean other than spruce?

Mr. LEA. Yes.

Mr. BENSON. I don't pay any attention to that at all.

Mr. LEA. That is all.

Mr. FREAR. Are you an engineer, Mr. Benson?

Mr. BENSON. No, sir.

Mr. FREAR. Ever studied engineering?

Mr. BENSON. Well, I went to an engineering school six months one time, but I didn't—

Mr. FREAR (interrupting). You say you are not a cruiser?

Mr. BENSON. No, sir.

Mr. FREAR. You say you never employed an engineer to build a road that was built for your company that you were ever connected with?

Mr. BENSON. Well, I can recollect one time I employed an engineer to lay out a curve on our road—just one curve.

Mr. FREAR. With the exception of employing an engineer to lay out one curve, in all your experience you say you never employed an engineer to build a road; is that right?

Mr. BENSON. Yes, sir.

Mr. FREAR. Mr. McDonald, whom you spoke about, is McDonald, the cruiser for the Warren Spruce Co.?

Mr. BENSON. Yes, sir.

Mr. FREAR. Under pay by the Warren Spruce Co.?

Mr. BENSON. I think so.

Mr. FREAR. You don't answer hardly loud enough for the reporter to get it.

Mr. BENSON. All right.

Mr. FREAR. And that is important.

Mr. BENSON. I will try to talk louder.

Mr. FREAR. When you first went out there to look over this ground did you go to Toledo or go to the people who lived around the Siletz and inquire of them, so as to get an understanding from people who were familiar with the locality, as to the timber that grew in there; I mean at the outset?

Mr. BENSON. At the very start?

Mr. FREAR. Yes.

Mr. BENSON. No; I didn't.

Mr. FREAR. You went out there with the idea primarily to consider the difference between logging from a road along the top of what you call the ridge, or the divide, and a road on the west side of the divide near the coast?

Mr. BENSON. Well, I would not put it exactly that way. What I was after was to find the most practical way to get the timber out.

Mr. FREAR. Well, you have spoken repeatedly about the divide—the top of the divide; that is, on the top of the divide that runs about a mile or 2 miles west of the coast north and south, in a northerly and southerly direction?

Mr. BENSON. No.

Mr. FREAR. Now, there is a survey along there, is there not—has been for years?

Mr. BENSON. A survey for a road?

Mr. FREAR. Yes.

Mr. MAGEE. East of the coast?

Mr. FREAR. No; I mean along the top of the divide.

Mr. BENSON. I don't think so.

Mr. FREAR. Isn't the Hawk Road, or survey—doesn't that run near along the top of the divide?

Mr. BENSON. As I understand it, that goes down toward the ocean.

Mr. FREAR. They have another one, I know; there are two. There was no survey, then, along the top of the divide?

Mr. BENSON. Not that I know of.

Mr. FREAR. Well, that is not on the east side of the slope, the divide that you have been speaking about, or the ridge?

Mr. BENSON. How is that?

Mr. FREAR. That divide, or the ridge that you have been speaking about, is not on the east side; it is on the top, isn't it, of the divide?

Mr. BENSON. Yes; the divide is the top.

Mr. FREAR. Yes; right on the top?

Mr. BENSON. Yes.

Mr. FREAR. Now, you estimated that the timber on the west side of the divide reached 200,000,000 feet of airplane spruce?

Mr. BENSON. That was my opinion; yes, sir.

Mr. FREAR. Well, but you are not a cruiser?

Mr. BENSON. No, sir.

Mr. FREAR. No. Now, who did you have that estimated that for you?

Mr. BENSON. Well, we had a good many owners' cruises that were available that we could study.

Mr. FREAR. What owners' cruises have you that indicated that that would reach 200,000,000 feet of airplane stuff, which requires a personal examination and investigation to ascertain?

Mr. BENSON. Well, I didn't say 200,000,000 of airplane stuff; I said 200,000,000 of commercial spruce.

Mr. FREAR. Oh, I see. What proportion of that would be airplane stuff, if you know? This is near the coast.

Mr. BENSON. Well, from what I can judge, talking with different men who have sawed this, I would say, oh, probably 20 per cent.

Mr. FREAR. Twenty per cent would have been airplane stuff; that would have been about 20,000,000 feet of that timber?

Mr. BENSON. About 40,000,000.

Mr. FREAR. Forty million feet of that timber, in your judgment, would have been airplane stock?

Mr. BENSON. Yes, sir.

Mr. FREAR. You had no cruise on that?

Mr. BENSON. No complete cruise at that time.

Mr. FREAR. No. Did McDonald make any cruise when he was out with you?

Mr. BENSON. Not a detail cruise at that time.

Mr. FREAR. Did you take with you an engineer along there to consider that route?

Mr. BENSON. Yes, sir.

Mr. FREAR. Who did you have as an engineer?

Mr. BENSON. Well, the first trip I made I had Capt. Harman, who was chief engineer of the district; then later on he put Mr. Cobb, who was his chief locating engineer, on the work.

Mr. FREAR. Did they make any survey of this line?

Mr. BENSON. Yes, sir.

Mr. FREAR. At what time?

Mr. BENSON. Well, I suppose they started about the middle of May.

Mr. FREAR. The middle of May, 1918. Have you their survey, or anything to show to the committee what was the result of this preliminary examination you made?

Mr. BENSON. No, sir.

Mr. FREAR. What kind of a survey was it?

Mr. BENSON. Well, first Mr. Cobb went over and did what you would call a reconnoissance; he would take a hand level and go over the country to see if it was possible to get through.

Mr. FREAR. Then what?

Mr. BENSON. Then he put the surveying crews on and made a thorough survey.

Mr. FREAR. That was when you started to build the road?

Mr. BENSON. When we were getting ready to build it.

Mr. FREAR. Yes; getting ready before you had made any determination—before you had made any survey?

Mr. BENSON. Well, it wasn't really decided at that time, but the colonel said to go ahead and make a survey. In the meantime we were investigating the timber more.

Mr. FREAR. "The colonel said"; you mean Col. Disque?

Mr. BENSON. Yes, sir.

Mr. FREAR. Col. Disque wanted to go down there and verify your report, you say?

Mr. BENSON. Yes; I wanted him to.

Mr. FREAR. You wanted him to; yes. Now, what did you do, and how long were you about it, when you went down there with Col. Disque?

Mr. BENSON. He put in two days there.

Mr. FREAR. Yes. How did he put them in?

Mr. BENSON. Well, the first day we went up and took a look at the timber up in around Wade Creek and Spencer Creek.

Mr. FREAR. That is a little way north of Newport, over on the west side of the divide?

Mr. BENSON. Yes, sir.

Mr. FREAR. He went up with you along there; yes.

Mr. BENSON. And we went back to Newport.

Mr. FREAR. Then went back to Newport. Newport was a good stopping ground, according to the testimony of some of the witnesses, because it was convenient to that line and had good hotels?

Mr. BENSON. Well, it was about the only convenient place to land there.

Mr. FREAR. I guess that is right.

Mr. BENSON. And on the next morning——

Mr. FREAR (interrupting). All right, now; the next morning?

Mr. BENSON. We started out early, something like 4.30, I think.

Mr. FREAR. Four-thirty in the morning?

Mr. BENSON. Yes, sir; and went over in an automobile near what is termed the Y; that Y is about in a northerly line with section 30.

Mr. FREAR. But explain how you went around.

Mr. BENSON. Went around in an automobile.

Mr. FREAR. But how did you get around? You didn't go over the divide?

Mr. BENSON. Oh, no.

Mr. FREAR. Explain the route you took to get around.

Mr. BENSON. We went over the wagon road that leads from Newport to Toledo.

Mr. FREAR. You went around to Toledo first?

Mr. BENSON. We didn't go into Toledo. The road forks up above Toledo there aways.

Mr. FREAR. Yes; you went to the forks north of Toledo, and then what way?

Mr. BENSON. Then up to about where the Y is on Miller's logging road.

Mr. FREAR. Yes. The highway leads close to the railroad along there?

Mr. BENSON. Yes; and got out and walked up to the camp.

Mr. FREAR. To Wessel's camp?

Mr. BENSON. Yes, sir.

Mr. FREAR. That is over about 3 or 4 miles west of the highway, isn't it, or 3 miles?

Mr. BENSON. Something like that; a couple of miles, I guess.

Mr. FREAR. Well, a couple of miles; we will call it that.

Mr. BENSON. And had our breakfast there.

Mr. FREAR. Yes.

Mr. BENSON. And then walked on up over this proposed road that was to be built up to get on top of the ridge.

Mr. FREAR. That is, you then walked in a westerly direction to get up, to get back to this——

Mr. BENSON (interrupting). To the top of the main ridge.

Mr. FREAR. To the top of the ridge that has been described, about 2 miles west, or 2 miles east, of the ocean; that is right?

Mr. BENSON. Yes, sir.

Mr. FREAR. Yes. Then where did you go?

Mr. BENSON. We landed on the ridge about——

Mr. FREAR (interrupting). You got back on the ridge then?

Mr. BENSON. Where we landed is about the southwest corner of section 14.

Mr. FREAR. Yes; on the ridge.

Mr. BENSON. Then we went north on this ridge. The idea was I wanted to show the colonel that I considered it impractical to build a railroad up there, and I wanted him to see.

Mr. FREAR. Then you went north along the ridge?

Mr. BENSON. Along the top of the main ridge toward section 29, in nine-eleven, when we came to the hard places where I considered it almost impossible to build a road, and the colonel said he would not put a dollar of Government money into a road up there.

Mr. FREAR. Yes.

Mr. BENSON. But that he wanted us to investigate these other roads more thoroughly first before it was decided on. Then we went back down the Otter Rock ridge and back to Newport, and he left for Portland.

Mr. FREAR. So that, as a matter of fact, Disque never went over to the Siletz Basin, excepting the branch at Wessels. That is right, is it not?

Mr. BENSON. So far as I know.

Mr. FREAR. His efforts were directed to the ridge where you were going over it and down as far as Otter Rock, excepting the single case when he went out on the Wessels Branch; that is right, is it?

Mr. BENSON. Yes.

Mr. FREAR. Now, the testimony here is without dispute, that the Miller road, which was the main line north, beyond the junction that led over to the Wessels line, was about a mile and a half or thereabouts in length?

Mr. BENSON. Yes, sir.

Mr. FREAR. And that any proposed road to get into the Siletz would be up in that direction, either over the Miller road or over what was known as the Porter surveys, which was a survey leading into the Miller road or along that line; were you familiar with that fact?

Mr. BENSON. Do you mean, in order to get a road over to Siletz, they had to run over the Miller road?

Mr. FREAR. No. That was the survey made both by Miller and Storey and by Welch and by Porter, Porter acting on behalf of the village of Toledo. Do you know of those facts? That has been the testimony before the committee.

Mr. BENSON. It is generally known that they were to reach into the Miller road.

Mr. FREAR. You have before you a survey of that Miller road or the Porter survey or the one north of Miller's?

Mr. BENSON. There is no survey here [indicating on the map].

Mr. FREAR. I was asking you if you had those surveys; I do not know.

Mr. BENSON. You mean this line here?

Mr. FREAR. Yes.

Mr. BENSON. That is the line that Mr. Morgan and that delegation indicated was to be their route.

Mr. FREAR. An engineer had been before the committee, and various witnesses have been before the committee, who testified that the Miller road would be extended and would have a grade of less

than 2 per cent for the returning of empties and not to exceed, I think, over $1\frac{1}{2}$ per cent for loaded cars. Did you know anything about that fact—I mean at the time you were making your investigation—or did you make an investigation to see if you could get up in there at all?

Mr. BENSON. After I found he had to go to Jaybird to get any considerable amount of spruce I did not investigate it.

Mr. FREAR. The testimony of a number of cruisers who have been up in there, and lumbermen who have been logging in there, is to the effect that 550,000,000 feet of spruce timber is in that neighborhood and over 10,000,000,000 feet of timber that can be reached by a 20-mile line north of Millers.

Mr. BENSON. The general impression down in that country, as I found it, was that they give credit for all of this spruce between Yaquina Bay and the Siletz Bay to the Siletz drainage.

Mr. FREAR. This is not the Siletz Bay, and they have testified that if you proceed a mile and a half you would be in spruce that would make good airplane spruce, a mile and a half from the extension of the Miller Road. Did you go down to the Miller Road?

Mr. BENSON. Yes; I walked to the south.

Mr. FREAR. Did you walk north?

Mr. BENSON. It ends right on the wagon road, or did, and the road follows right along in the vicinity of where that road would be built until it gets over the divide, and there is no spruce within a mile and a half.

Mr. FREAR. The testimony of the witnesses here, who were engaged down there, is that there is spruce in there. You judged by what; did you ever go over this road?

Mr. BENSON. You can see all over the country there.

Mr. FREAR. We have all been along that road. Did you judge as to that spruce by riding up and down the road, the highway?

Mr. BENSON. No.

Mr. FREAR. How far can you see around the country there, what distance up in among the timber; is there any timber at all in there?

Mr. BENSON. Yes; there is timber there.

Mr. FREAR. Thick timber?

Mr. BENSON. No; it is not so very thick along there.

Mr. FREAR. Can you see through this timber? You say you can see all around the country from this highway. If so, how far; can you see 10 miles or 40 miles, or what, looking in a westerly direction from the highway?

Mr. BENSON. You can see far enough to see there is no spruce on the westerly slope toward where this road would be built inside of a mile and a half.

Mr. FREAR. That is the testimony of the witnesses, that you could reach it within that distance. You did not see any?

Mr. BENSON. No, sir.

Mr. FREAR. Where did you first see spruce?

Mr. BENSON. You mean going north?

Mr. FREAR. Yes. Well, you went up on the highway, or how did you go north?

Mr. BENSON. I have been on the highway and on this road they proposed to build; that is, this route I went down to examine with that delegation.

Mr. FREAR. Did you go down that highway to the Miller line?

Mr. BENSON. We went down the highway to this end [indicating] and walked out.

Mr. FREAR. Walked back what distance?

Mr. BENSON. I could not say. We did not walk all the way. There is some of the way you can get in an automobile and ride around to get into the timber again.

Mr. FREAR. In other words, you were riding along the highway a portion of the time, and walking a part of the time up through that country. Now, as I said, the testimony that has been submitted to the committee by a number of reputable people is to the effect that about 700,000,000 feet of spruce is in that district, and in the neighborhood of 150,000,000 is to be found over west of the divide, and the rest would be east of the divide in the Siletz Basin. You do not agree with that; you did not find over 200,000,000 feet of spruce in your extended investigations?

Mr. BENSON. That is my information.

Mr. FREAR. You had with you McDonald, you say, at this time?

Mr. BENSON. He was with me, and there were several gentlemen.

Mr. FREAR. And, as you say, McDonald was in the employ of the Warren Spruce Co.?

Mr. BENSON. Yes.

Mr. FREAR. He was not employed by the Spruce Production Corporation?

Mr. BENSON. I understood the Spruce Production Corporation could not pay any of the employees, so they had to be paid through the contractor.

Mr. FREAR. They had engineers here, did they not? Could not they employ civilians as cruisers as well as they could employ typewriters and stenographers?

Mr. BENSON. These were soldiers, were they not?

Mr. FREAR. Not as I understand it. I am inquiring because you were an officer of the corporation?

Mr. BENSON. Yes, sir; it is a corporation now, but it was not then.

Mr. FREAR. Were they not employing civilians for different kinds of work?

Mr. BENSON. I do not think the Government could employ civilians at that time. That was my impression.

Mr. FREAR. Were they all soldiers who were over in the Vancouver plant?

Mr. BENSON. Well, I don't know about that.

Mr. FREAR. You are not a soldier; you were connected with them in some capacity, were you not?

Mr. BENSON. But I did not get a salary.

Mr. FREAR. But they could have paid you; they were asking you to give service for which you were entitled to be paid.

Mr. BENSON. That was my impression.

Mr. FREAR. That everything was voluntary except the men who happened to be in uniform. Is that right?

Mr. BENSON. He had to be paid through a cost-plus contractor, or some kind of contractor?

Mr. FREAR. That is, they could not have pay for the performance of any necessary services required in their investigations, and they had to depend on some cost-plus contractor—in this case, the Warren

Spruce Co.—or they had to depend upon some man in uniform. That is right?

Mr. BENSON. That is my opinion; that is, that is my information.

Mr. FREAR. And that is one reason why no one else was employed. Are you an officer of the corporation, or were you?

Mr. BENSON. I was.

Mr. FREAR. What were you?

Mr. BENSON. A director.

Mr. FREAR. Were you an officer with any military title?

Mr. BENSON. No, sir.

Mr. FREAR. And you were not recommended for distinguished service?

Mr. BENSON. I think I was later on—afterwards.

Mr. FREAR. As a civilian, or what?

Mr. BENSON. Yes, sir.

Mr. FREAR. Were you major or captain?

Mr. BENSON. No; I was not in the Army at all.

Mr. FREAR. What was the recommendation? As a civilian, were you recommended for distinguished service?

Mr. BENSON. I forget just what it was, but it was for something.

Mr. FREAR. Did you ever get the medal?

Mr. BENSON. No, sir.

Mr. FREAR. That was by Col. Disque?

Mr. BENSON. Yes, sir.

Mr. FREAR. Do you know anything about these figures that you have given us about the railroad?

Mr. BENSON. Well, I got them from the comptroller of the corporation. That is all I know. He said they were correct.

Mr. FREAR. Of course, that is an arbitrary estimation of valuations, and he did not know anything more about it excepting as the figures are reported to him?

Mr. BENSON. I suppose that is so.

Mr. FREAR. But that you got from the comptroller, and he got his information from the reports of others.

Mr. LEA. How did you ascertain the figures as to the amount of spruce in the basin?

Mr. BENSON. What basin?

Mr. LEA. In the Siletz Basin.

Mr. BENSON. I figured on those cruises that were available, and taking the judgment of Mr. McDonald there, I arrived at that opinion.

Mr. LEA. Where did you get these figures, from other cruises, from more than one cruise?

Mr. BENSON. There was a cruiser named Mr. Frost that got a lot of cruises from a friend of his that had made them for some purpose. I think he was going to buy and sell timber in there. I remember that bunch particularly. One reason why I did not make more of a detailed investigation of that country, up around the Bulls Back and up, was it was so far away and it would have taken three times as much railroad to get up there as here. I was going all the time, every day, and I did not have time to get around to it.

Mr. LEA. While you were down there did you inquire of local people to find out about where the timber was, the spruce?

Mr. BENSON. Yes; I had talked with some of them and I found out that I could not find anybody who had any reliable information. It is surprising how little they know of their country.

Mr. LEA. While you were in the logging and lumbering business, what amount of railroads were constructed in connection with the operations?

Mr. BENSON. Well, I don't know; it is hard to tell. We had one main line we built, which was 7 miles long, at one time.

Mr. LEA. What I was getting at was as to how much experience you had in connection with the laying out of these logging railroads?

Mr. BENSON. I used to always inspect them after the foreman had laid them out, and when they were difficult I went along with him. I remember one time they had a large switchback to lay out, and I laid that out myself.

Mr. LEA. Could you give a little more definite idea as to the extent of those railroads?

Mr. BENSON. That switchback was about 4 miles long. It is hard to tell, but there was a large number of miles.

Mr. LEA. During the time that you were in the business you were extending logging railroads?

Mr. BENSON. Continually building railroads and switches, and things like that.

Mr. FREAR. You say you talked with various people down there. Did you talk to Morgan, who was a cruiser?

Mr. BENSON. I talked with Morgan at the time he was on that trip with me.

Mr. FREAR. Did you ask him about the cruises he had made over in the basin?

Mr. BENSON. Morgan, as I remember, did not figure much spruce here south of the Jaybird Ridge.

Mr. FREAR. He changed his mind after he saw you, when he testified here that there was about 550,000,000 feet of spruce and about 10,000,000,000 feet of timber, did he not?

Mr. BENSON. I do not know as to that. What I did say was that he did not figure very much spruce south of the Jaybird Ridge. I do not remember what he said as to those things in that country.

Mr. FREAR. Did you talk with Mr. Hall, who was there on the Siletz Indian Reservation?

Mr. BENSON. I talked with him.

Mr. FREAR. Did you inquire of him about the amount of spruce and the amount of fir. He had been a cruiser, as he testified, and a timberman there for a number of years, and also a guide, and he said that there was a billion feet of spruce in there, and that has been the testimony of two or three people from that Siletz region.

Mr. BENSON. And Morgan disputed it.

Mr. BENSON. That depends upon how far north they go. You put it at 200,000,000. You did not believe that there was anything like a billion feet?

Mr. BENSON. No, sir; that is, for the Siletz drainage.

Mr. FREAR. Did you talk with Mr. Ball, who was a cruiser, was he not?

Mr. BENSON. I do not think so.

Mr. FREAR. I think he said he had cruised and had done business as a timberman for many years. You did not talk with him at all on the subject?

Mr. BENSON. Yes, I did; but he had a map that he showed me that he had used when he was assessor.

Mr. FREAR. And that was on the basis that the assessments were made, was it not?

Mr. BENSON. I suppose so.

Mr. FREAR. I am not sure about Ball. Maybe it is Wade I am thinking about.

Mr. BENSON. No; Ball was assessor.

Mr. FREAR. I am not sure he was a cruiser, but Wade was a cruiser with many years' experience, like Morgan. Did you talk with him?

Mr. BENSON. I do not know as I talked with him about spruce.

Mr. FREAR. But he was in your party, was he not; or was he?

Mr. BENSON. No.

Mr. FREAR. That first time?

Mr. BENSON. Wade was in one of the delegations that came up to Portland here.

Mr. FREAR. You did not talk to him at all about the spruce that was there. Did you talk to Mr. Storey, or was he there then?

Mr. BENSON. Storey, I do not think came there until the latter part of the summer.

Mr. FREAR. Was Miller there at the time?

Mr. BENSON. Yes.

Mr. FREAR. Did you talk with Miller about the amount of spruce and timber up there?

Mr. BENSON. Yes, sir.

Mr. FREAR. He has testified before us. What did he tell you.

Mr. BENSON. I did not get anything very definite out of him.

Mr. FREAR. You were not getting anything definite out of anyone excepting McDonald, apparently, from this statement.

Mr. BENSON. He was the only one I found—

Mr. FREAR. Had he ever been in the Siletz region before?

Mr. BENSON. Yes, sir; he had cruised that whole territory 13 years before and had been working there for the Warren Spruce people and was there at the time I came down.

Mr. FREAR. What doing?

Mr. BENSON. Looking over the country to find where the spruce was.

Mr. FREAR. Were they building in there to get spruce?

Mr. BENSON. They were logging on Wessels Creek and he was looking ahead to see where to locate.

Mr. FREAR. And you depended entirely on his judgment?

Mr. BENSON. Not entirely.

Mr. FREAR. It appears there were a number of men in the neighborhood of Toledo and you did not speak to any of them excepting Hall who said there was a billion feet, and you did not believe him and you left there.

Mr. LEA. He says he talked with Ball.

Mr. BENSON. I told you Mr. Hall, the day we went out to inspect that route, was with us. He was always talking about how he knew the country and how he could go all over it, and what the character

of it was, but when we got across the ridge and into Jaybird, he didn't know where we were and we got lost.

Mr. FREAR. Of course everyone has to have his first experience in getting lost?

Mr. BENSON. I know, but to go down a ridge to a creek and get lost and not know enough to go back up the creek again——

Mr. FREAR. On account of that you felt that his judgment was not good for carrying on any matter?

Mr. BENSON. I did not base my opinion as to his judgment as a cruiser on that.

Mr. LEA. Was anybody else from this Toledo crowd along when Hall got lost?

Mr. BENSON. Yes.

Mr. LEA. So those people got lost and your own cruiser had to find them?

Mr. BENSON. Yes.

Mr. FREAR. Where was that?

Mr. BENSON. That was down in Jaybird, about six-nineteen.

Mr. FREAR. How far is that from Toledo?

Mr. BENSON. I do not know. It is 11 miles in an air line.

Mr. FREAR. How far would it be by the road?

Mr. BENSON. I do not remember those distances down there. It has been over a year ago. There is one thing I want to say, that I considered Mr. Morgan a good cruiser.

Mr. FREAR. He says there was 550,000,000 feet of spruce.

Mr. BENSON. I think he is a good cruiser.

Mr. MAGEE. Do you profess to know the amount of timber in the Siletz country, or basin, as they call it?

Mr. BENSON. No; I just told you that was the opinion I had formed from looking at these cruises.

Mr. MAGEE. But you did not know of your own knowledge what timber there was there?

Mr. BENSON. Not definitely.

Mr. MAGEE. Is it not generally understood that it is the best stand of timber in the State of Oregon?

Mr. BENSON. I think you will find that that Siletz country is very much overestimated.

Mr. MAGEE. Is it not generally understood, or is it not notorious here?

Mr. BENSON. That what?

Mr. MAGEE. That it is the best stand of timber in the State of Oregon?

Mr. BENSON. You mean fir or spruce?

Mr. MAGEE. Timber, fir and spruce together.

Mr. BENSON. Well, it has got the name for having lots of good timber.

Mr. MAGEE. There is not any question about that, is there?

Mr. BENSON. No, sir.

Mr. MAGEE. Is it your contention that it was not feasible to extend the Storey-Miller road from Toledo up over the divide into the Siletz Basin?

Mr. BENSON. You can extend the road.

Mr. MAGEE. I say it is feasible to build a road up through there?

Mr. BENSON. From Miller's road up over this divide and down to the Siletz River and on down the river. That is feasible.

Mr. MAGEE. Surveys have been made showing it was feasible?

Mr. BENSON. I have been told so.

Mr. MAGEE. Surveys, which have been put in evidence, showed a grade up of something like 2 per cent and over the divide between 1 and 2 per cent. Assuming that there is a large amount of spruce lumber there. Up to the time of your evidence the minimum given was 550,000,000 feet, and the maximum 1,000,000,000 feet of spruce lumber. Assuming there is such an amount of spruce lumber and it is feasible to build a railroad to Toledo from there, would not the most feasible and reasonable and practical means to get that lumber have been to extend that road so that you could have a railroad direct from the forest to the mill?

Mr. BENSON. Well, now, in the first place——

Mr. MAGEE. Can you answer that question; assuming it is feasible to build a railroad, and assuming that amount of lumber is there, then what do you say?

Mr. BENSON. I considered that it was best to open this tract on the coast first. Do you want me to give the reason why?

Mr. MAGEE. That would not change your view.

Mr. BENSON. Do you want me to tell my reason?

Mr. MAGEE. You have given your reasons.

Mr. BENSON. I considered it best to build this one first.

Mr. MAGEE. I say, suppose you wanted to get spruce, and there is that amount of spruce lumber up in the Siletz country, and it is feasible to extend the railroad, you could have extended the Story railroad there a few miles and got into this spruce belt?

Mr. BENSON. Twenty miles.

Mr. MAGEE. You would not have to extend 20 miles before you reached any spruce?

Mr. BENSON. You would begin to get spruce in about 18 miles.

Mr. MAGEE. Assuming you could get spruce within a mile and a half and could then continue to get spruce as you went along; suppose the spruce, as was testified to, was sufficient to meet the needs of the Government, the most economical and practical means of getting it would have been to extend the railroad there into it.

Mr. BENSON. As I understand Miller's statement, he was figuring to go on to Dewey Creek.

Mr. MAGEE. You are getting off the subject. I am asking if that would not have been the most practical way of getting the spruce?

Mr. BENSON. You would not have gotten very much.

Mr. MAGEE. You would if it was there.

Mr. BENSON. Yes, but I do not believe it is there.

Mr. MAGEE. I am assuming for the purposes of the question that it is there. That is part of my question. Assuming that it was there and that it was feasible to extend the road——

Mr. BENSON. If there had been thick spruce all around.

Mr. MAGEE. Assuming the spruce was there and you say it was feasible to build the railroad, that would have been the quickest and most practical means of getting it?

Mr. BENSON. Yes.

Mr. MAGEE. There is no question about that?

Mr. BENSON. No, sir.

Mr. MAGEE. And if you build your road up around the coast you would load your cars up in the forest and bring them down to Yaquina and dump them at Yaquina Bay and tow them 10 or 12 miles down to Toledo. That is right?

Mr. BENSON. That was my idea; yes, sir.

Mr. MAGEE. Mr. Reed testified this morning that the most economic way to get logs from the forest to the mill is where you have railroad transportation direct.

Mr. BENSON. Direct to the mill?

Mr. MAGEE. Direct from the forest to the mill. Is that so or is it not so?

Mr. BENSON. It might be so in some instances.

Mr. MAGEE. Would it be more economical to have railroad transportation from the forest to the mill than to take the logs part of the way by railroad and then dump them and then tow them part way?

Mr. BENSON. My idea would be in this instance that it would be better to take them part way by water.

Mr. MAGEE. You think part way by rail and then dumping them in the water and towing them the rest of the way would be the most economical?

Mr. BENSON. Yes, sir.

Mr. MAGEE. That is your judgment about it?

Mr. BENSON. Yes, sir.

Mr. MAGEE. And that is the kind of judgment which you exercised in selecting this coast route to get out this spruce timber, was it?

Mr. BENSON. Well, I did the best way I could.

Mr. MAGEE. I say that is the kind of judgment that you exercised, based upon your information, that it is the most economic and the quickest way to get logs, to convey them part way by railroad and dump them in the water and tow them the rest of the way instead of having a railroad connection all the way from where you cut the logs to the mill?

Mr. BENSON. I suppose I would have to say yes to that.

Mr. MAGEE. It is the quickest and most economic way?

Mr. BENSON. Still I want to tell you—

Mr. MAGEE. No. I asked if you think that railroad transportation part of the way and dumping into the water and towing the rest of the way is the most economical, and can you not answer yes or no?

Mr. BENSON. The most economical way is by water from Yaquina to Toledo.

Mr. MAGEE. Would it be quicker and more economical than if you could transport the logs all the way by rail?

Mr. BENSON. It might not be the quickest; it would be the most economical.

Mr. MAGEE. You would differ with Mr. Reed on that proposition, would you?

Mr. BENSON. Yes; if he said by rail all the way.

Mr. MAGEE. Well, that is all.

Mr. LEA. You said you had a reason. What is the reason, if any, for dumping them into the water there?

Mr. BENSON. One reason is that at the mill site you can not have a boom that will hold a very large amount, and you can not have your logs coming just as the mills want them; you have got to have

storage, and you can not store them on the ground, and you might as well raft them at Yaquina and tie them up for storage.

Mr. LEA. It was necessary to store these logs below the mill?

Mr. BENSON. You have got to have storage some place, and then, on the other hand, to have taken them by rail you would have to have quite a lot more cars and another locomotive or so to take care of that extra hauling.

Mr. LEA. You wanted to say a while ago why you thought it was best to go up the coast first?

Mr. BENSON. In the first place, where this Miller loop ends now down at the Toledo end, they boom the logs in a small slough which goes nearly dry at low tide. They got along last summer because they only had a small output, and if a trainload did go aground, maybe the tide would rise and lift it off, but you can not do that with a large output. That means you have got to have to build a mile of railroad, which was all trestle, out to Yaquina. This railroad is about 6 miles long, and there is about 3 miles of it that has got to be rebuilt, and the best way is to build a trestle, and then you have got to have about 20 miles of road from the end of Miller's road on down to the vicinity of Jaybird. There is 24 miles to build, and there is 3 miles of old road, making 27 miles of haul nearly to get to your timber, as against from the center here about 10 or 12 miles. That was my reason.

(Witness excused.)

TESTIMONY OF A. J. McDONALD.

(The witness was sworn by Mr. Frear.)

Mr. LEA. State your name?

Mr. McDONALD. A. J. McDonald.

Mr. LEA. Where do you reside?

Mr. McDONALD. Portland.

Mr. LEA. How long have you resided in this State?

Mr. McDONALD. Seventeen years.

Mr. LEA. What is your occupation?

Mr. McDONALD. Timber cruiser.

Mr. LEA. How long have you been a timber cruiser?

Mr. McDONALD. Well, that has practically always been my occupation.

Mr. LEA. You have resided at Portland ever since you have been in this State, have you?

Mr. McDONALD. Yes, sir.

Mr. LEA. Are you acquainted with the Siletz Basin?

Mr. McDONALD. Yes, sir.

Mr. LEA. And the Siletz country?

Mr. McDONALD. Yes.

Mr. LEA. Have you done any cruising there?

Mr. McDONALD. Yes, sir.

Mr. LEA. When did you first begin cruising in the Siletz territory?

Mr. McDONALD. 1905.

Mr. LEA. And to what extent have you cruised in there since that time?

Mr. McDONALD. Well, I have done some work there practically every year since.

Mr. LEA. Speak a little louder, please.

Mr. McDONALD. I have done a little work in there every year since. Some years more than others.

Mr. LEA. By whom have you been employed at various times when you were doing cruising in this section?

Mr. McDONALD. Principally by Davis & Davis.

Mr. LEA. Who are they.

Mr. McDONALD. C. H. Davis, jr., formerly was president. When they first commenced in there his cousin Minot Davis was with him, and afterwards Mr. Davis, sr., bought Minot out.

Mr. LEA. Were you cruising lands that they owned exclusively?

Mr. McDONALD. What they were buying and what they considered buying.

Mr. LEA. Over how wide an area there had you cruised before 1918?

Mr. McDONALD. I have worked in 8-7, 8-9, and 8-10.

Mr. LEA. That is, you mean townships?

Mr. McDONALD. Townships, 9-8, 9, 19, and 11-10-10 and 11.

Mr. LEA. Now, do you know Mr. Benson?

Mr. McDONALD. I do.

Mr. LEA. How long have you known him?

Mr. McDONALD. I have known of the Benson people ever since I have been here. I have not been intimately acquainted with Mr. Benson—you mean Amos Benson?

Mr. LEA. Yes.

Mr. McDONALD. Until 1918.

Mr. LEA. Were you ever employed by his father for cruising?

Mr. McDONALD. No.

Mr. LEA. Now, did you do any cruising in the Siletz territory in 1918?

Mr. McDONALD. I did.

Mr. LEA. At whose request?

Mr. McDONALD. The Warren Spruce Co.

Mr. LEA. When did you begin your cruise of 1918?

Mr. McDONALD. Well, I went there in their employ as a cruiser in January of 1918.

Mr. LEA. Where were you cruising after that?

Mr. McDONALD. Well, we did not—I did not do any regular cruising, did not start in to do any regular cruising, and only cruised about a month as a cruiser; that is, settled down to cruising work.

Mr. LEA. At what time?

Mr. McDONALD. In July and August.

Mr. LEA. In what year?

Mr. McDONALD. July and August of 1918, after Mr. Benson left there.

Mr. LEA. Were you employed by the Warren Spruce Co. before you went down there with Mr. Benson?

Mr. McDONALD. I entered their employ in January, 1918.

Mr. LEA. Now, Mr. McDonald, I wish you would go ahead and tell us in your own way the cruises you have made and the efforts you have made to find out the amount of spruce in the Siletz Basin, and tell us all about it.

Mr. McDONALD. I do not know how I can, very well, explain the matter. I know where all the timber is in the Siletz Basin. I know where the location of the timber in general is, and the spruce and the

mixed timber, and fir. I have spent practically the greater portion of my time in that timber. I have made cruises of it before I ever knew of the Warren Spruce Co. or anybody connected with them.

Mr. LEA. I wish you would fully explain your source of information, what effort you made to find out where the spruce is there.

Mr. McDONALD. When we went down there?

Mr. LEA. Yes.

Mr. McDONALD. While I was with them?

Mr. LEA. Give us your information and how you got it.

Mr. McDONALD. I got it from work done previously to going there for the Warren Spruce Co.

Mr. LEA. And you were down there with Mr. Benson, were you?

Mr. McDONALD. Yes.

Mr. LEA. How long?

Mr. McDONALD. About two months.

Mr. LEA. Tell us about that.

Mr. MAGEE. About how long?

Mr. McDONALD. About two months that I was with Mr. Benson. I think it was from about the middle of April until the middle of June, when Mr. Benson left there.

Mr. LEA. What were you doing during those two months when you were down there with Mr. Benson?

Mr. McDONALD. We were making a general reconnaissance of the country.

Mr. LEA. For what purpose?

Mr. McDONALD. To determine where the greatest body of the spruce was and the best location for a route to get the spruce to tidewater.

Mr. LEA. What did you find out as to the quantity of spruce in the Siletz Basin?

Mr. McDONALD. Well, what do I understand you to mean by the Siletz Basin?

Mr. MAGEE. I mean the territory that is drained by the Siletz; not the coast area, but inside.

Mr. McDONALD. About 150,000,000.

Mr. LEA. And where is that timber located, principally?

Mr. McDONALD. It is located from—it is in—

Mr. LEA. Have you any map?

Mr. McDONALD. No; I have no map here.

Mr. LEA. Do you need a map to point that out?

Mr. McDONALD. No; it would be in the north side of 10-10 and in the northeast corner of 9-10.

Mr. MAGEE. I do not know, Mr. Chairman, it may be climatic influence, but I can not hear hardly any witness, sitting right here across the table.

Mr. LEA. Speak a little louder, if you will. Where else?

Mr. McDONALD. The north half of 10-10, the northeast corner of 10-11, scattered over the principal portion of—I would have to look at the map, I believe; I think I am mixed up.

Mr. FREAR. Do you want this map?

Mr. McDONALD. Just for a second.

Mr. FREAR. I do not know that it is a valuable map for that purpose, but you are welcome to it.

Mr. LEA. Can you tell by the general locations?

Mr. McDONALD (after examining map). The north half of 9-10, the northeast portion of 9-11 and 8-10, and the southeast corner of 8-11.

Mr. LEA. Did you visit the head of Dewey Creek?

Mr. McDONALD. Yes.

Mr. LEA. What, if any, spruce did you find there?

Mr. McDONALD. Previous to this work I had cruised all the timber at the head of Dewey Creek. I made a detailed cruise of it all, and my detailed cruise of that shows less than 25,000,000 in the head of Dewey Creek.

Mr. LEA. Did you visit Jaybird Creek?

Mr. McDONALD. Well, Jaybird Creek we put at about 60,000,000.

Mr. LEA. Did you visit the Bulls Back?

Mr. McDONALD. Yes.

Mr. LEA. How much did you find there?

Mr. McDONALD. Well, we included that in a general way in the 150,000,000 that we figured was on that area.

Mr. LEA. What is the quality of the spruce on the Bulls Back?

Mr. McDONALD. It is very coarse.

Mr. LEA. What about the spruce across the river around the Bulls Back?

Mr. McDONALD. Good, first-class timber.

Mr. LEA. Where is the principal body of spruce in the Siletz River Basin?

Mr. McDONALD. In the portion that I have mentioned.

Mr. LEA. Now, did you make any effort to find out the spruce on the coast—on the west slope and south of Otter Rock?

Mr. McDONALD. I did.

Mr. LEA. What did you find out there—how much?

Mr. McDONALD. About 200,000,000.

Mr. LEA. Are you an engineer?

Mr. McDONALD. I took a course in engineering when I was a young man.

Mr. LEA. Have you followed engineering?

Mr. McDONALD. No; not as a profession.

Mr. LEA. What is the location of the spruce on the Siletz River Basin—is it scattered or compact?

Mr. McDONALD. With the exception of some sections in the north side of 9-10 and that part that lies right around the Bulls Back and along the east corner of 8-11 it is very scattered timber.

Mr. LEA. Who else was down there with you in making this investigation?

Mr. McDONALD. Mr. Benson, and part of the time Mr. William Frost.

Mr. LEA. Anyone else?

Mr. McDONALD. Well, we made a number of trips through there with a number of different parties.

Mr. LEA. Were you with the committee from Toledo that came out there to look over the ground?

Mr. McDONALD. Yes.

Mr. LEA. Where did you go that day?

Mr. McDONALD. We followed where they conducted.

Mr. LEA. Did you find any spruce that day or were you looking for spruce that day?

Mr. McDONALD. We were not looking for spruce; they were going to show us where there was railroad passes over two ridges. They took us to three different locations on the divide, between Jaybird Creek and the Latzman Prairie, which is on the Siletz River and on what is called the Dewey Creek reach, between the Latzman Prairie and the Dewey Creek Basin. It is a high ridge that runs east and west, running between the coast and the Siletz River, called the Dewey Creek Ridge.

Mr. LEA. Did you find any pass that was satisfactory?

Mr. McDONALD. Not over the Dewey Creek Ridge.

Mr. LEA. Did you have any trouble locating the place they wanted to go?

Mr. McDONALD. We had trouble at the first start out. They wanted to locate the second corner, and got lost in there. They showed us what they called the first pass, down at the foot of Latzman Prairie, going over into Jaybird, near the mouth of Jaybird Creek, and then they went down in there to look for a corner, and they got lost in there, and they never found it.

Mr. LEA. Did you see Mr. Roberts while you were down there?

Mr. McDONALD. I was with Mr. Roberts four days.

Mr. LEA. Now, to whom did you report when you got through your investigation?

Mr. McDONALD. To Mr. Benson and Mr. Hill.

Mr. LEA. Who is Mr. Hill?

Mr. McDONALD. He was field manager for the Warren Spruce Co.

Mr. LEA. Did you own any timber in that district?

Mr. McDONALD. No, sir.

Mr. LEA. How much time was Mr. Benson with you?

Mr. McDONALD. The greater portion—we spent the greater portion of our time in the woods for a period of about two months.

Mr. LEA. I believe that is all.

Mr. FREAR. How long were you with the Warren Spruce people?

Mr. McDONALD. From January, 1918, to August, 1918.

Mr. FREAR. What was your pay?

Mr. McDONALD. \$300 a month.

Mr. FREAR. That is \$10 a day, Sundays and all days?

Mr. McDONALD. Yes.

Mr. FREAR. Were you working Sundays and all days?

Mr. McDONALD. We worked Sundays, without regard to what day of the week it was.

Mr. FREAR. Now, this Davis tract of which you speak. How much land did you cruise for them?

Mr. McDONALD. For the Davis Co.?

Mr. FREAR. Yes.

Mr. McDONALD. I could not tell you that.

Mr. FREAR. Well, several sections, or how much?

Mr. McDONALD. A great many thousand acres.

Mr. FREAR. Whereabouts was it located?

Mr. McDONALD. In the towns that I have mentioned.

Mr. FREAR. Well, how far is that from this railroad that has been built up to Otter Rock?

Mr. McDONALD. Some of it right along it.

Mr. FREAR. How near?

Mr. McDONALD. The railroad goes through some of it.

Mr. FREAR. How many pieces?

Mr. McDONALD. I could not tell you.

Mr. FREAR. One or two pieces?

Mr. McDONALD. Yes; more than one or two. I could not tell you how many pieces.

Mr. FREAR. Can you point them out on the map, please?

Mr. McDONALD. No; I could not.

Mr. FREAR. Here is the map. Put on your glasses, please, and show the committee where it is. Here are the names of all the owners.

Mr. McDONALD. Some of them, I do not know the owners.

Mr. FREAR. But the owners are here; their names are on the map. Come and point out a single tract that runs through any land in the name of Davis.

Mr. McDONALD. There isn't any; they are not under the name of Davis.

Mr. FREAR. Whose name would it appear under?

Mr. McDONALD. He never bought any in there.

Mr. FREAR. I thought you said they did.

Mr. McDONALD. I said I looked at land that he considered buying. I did not say that he bought that land.

Mr. FREAR. I see. I misunderstood you then. How near to Otter Rock was the Davis land?

Mr. McDONALD. Up in here is the nearest land that Davis had. [Indicating on map.] In this vicinity is the nearest land that Davis had to the Otter Rock.

Mr. FREAR. That is the nearest land; that would be up on the Siletz, in section 11, township 9, range 11, about in the neighborhood of 20 miles from the north line of the Miller line, 20 miles or more, according to the survey that went up there—the railroad survey. I am trying to get it identified on the map now. What pieces did you survey or cruise besides the Davis land?

Mr. McDONALD. I cruised such land as Mr. Davis had under consideration to purchase.

Mr. FREAR. Well, that is rather indefinite.

Mr. McDONALD. There was a great deal of it that he rejected.

Mr. FREAR. That is indefinite. Just give us a general idea. I do not want the particular section; I want to know where you were cruising.

Mr. McDONALD. I gave you the number of townships I have cruised.

Mr. FREAR. Those townships were north of Otter Rock, as a rule.

Mr. McDONALD. No; they were south as well as north.

Mr. FREAR. Did he buy any of this land?

Mr. McDONALD. No.

Mr. FREAR. He did not buy any?

Mr. McDONALD. No.

Mr. FREAR. Have you got your cruises?

Mr. McDONALD. He has got them.

Mr. FREAR. You have not got the cruises?

Mr. McDONALD. No.

Mr. FREAR. How many years were you cruising—always for Davis?

Mr. McDONALD. No.

Mr. FREAR. For who else?

Mr. McDONALD. I did a lot of work in there in 1918 for Peabody, Houghteling & Co., of Chicago.

Mr. FREAR. Have they any timber in here?

Mr. McDONALD. No; they didn't buy it.

Mr. FREAR. Where was that cruise?

Mr. McDONALD. That was in what is known as the Stondall tract. It was the Pendleton Lumber Co. tract.

Mr. FREAR. Was there any timber there?

Mr. McDONALD. Yes; there was timber there.

Mr. FREAR. Where is the timber, as far as you know, the best timber to be found in this Siletz Valley?

Mr. McDONALD. Do you mean in that portion of Lincoln County that is on that map, or in the Siletz Basin?

Mr. FREAR. This basin takes about 40 miles or more by the surveyed road up to Siletz Bay, I take it.

Mr. McDONALD. But the Siletz watershed is comparatively small.

Mr. FREAR. The testimony is, by a number of witnesses who have appeared before the committee, that 550,000,000 feet of spruce—cruisers as well as others have testified—on the roadway up to tide-water, which I think was 20 miles or more from the bay—south of the bay—and that that can be logged in by road up to that point. And you say what—100,000,000?

Mr. McDONALD. One hundred and fifty million.

Mr. FREAR. You say 150,000,000. You are only 100,000,000 apart?

Mr. McDONALD. That is all.

Mr. FREAR. That is all. There were a number of surveyors that testified.

Mr. LEA. What was the usual pay of cruisers during the war?

Mr. McDONALD. I do not know.

Mr. LEA. What did you get most of the time?

Mr. McDONALD. I would have got, if I had not been working for the Warren Spruce Co., I would have got \$15 a day, but I went to work for them before there was any raise in the cruiser's wages. I understand they were paying them as high as \$15 a day during that summer.

Mr. LEA. That is all.

(Witness excused.)

TESTIMONY OF WILLIAM M. LADD.

(The witness was sworn by Mr. Frear.)

Mr. LEA. Where do you reside, Mr. Ladd?

Mr. LADD. I reside at Ravera, Multnomah County, Oreg.

Mr. LEA. What are your initials?

Mr. LADD. William M. Ladd.

Mr. LEA. What is your occupation?

Mr. LADD. I am a bank officer, chairman of the board of directors of Ladd & Tilton Bank.

Mr. LEA. How long have you resided in Oregon?

Mr. LADD. I was born in Portland in 1855.

Mr. LEA. Were you ever engaged in the lumber business?

Mr. LADD. No, sir.

Mr. LEA. Did you have any official position with the Spruce Production Corporation?

Mr. LADD. Yes, sir.

Mr. LEA. What was that relation?

Mr. LADD. I suppose you would call it official.

Mr. LEA. What was your position?

Mr. LADD. If you will permit me to read these appointments—

Mr. LEA. I just wanted to find out the date and what the connection was.

Mr. LADD. All right, sir; I will explain to you the best I can. Mr. R. F. Howe, on January 23, 1918, wrote me these words:

I take pleasure in confirming herewith your appointment as a member of the Pacific coast committee of the Aircraft Board, and ask you to act as chairman of the committee.

Mr. LEA. How long after that did you act?

Mr. LADD. I have acted up to the formation of the corporation, as a member of the committee up to the time of the formation of the corporation, in August, I think it was, of 1918.

Mr. LEA. And then you became a director, did you, in the corporation?

Mr. LADD. Yes.

Mr. LEA. And you are at present?

Mr. LADD. Yes, sir.

Mr. LEA. What were your duties as director, as you have practiced them?

Mr. LADD. Director of what?

Mr. LEA. Of the corporation.

Mr. LADD. The ordinary duties, to attend the meetings and to pass upon such questions as are presented.

Mr. LEA. You have attended the meetings, have you?

Mr. LADD. Some of them, sir.

Mr. LEA. When did you become acquainted with Mr. Disque?

Mr. LADD. January 23, 1918.

Mr. LEA. You frequently conferred with him since, I presume?

Mr. LADD. Whenever he has asked me to come there, sir, I have gone, according to instructions from the chairman of the Aircraft Board. Perhaps it would be well to explain what transpired on that day, so that you will have a clear understanding of my relation to the committee.

Mr. LEA. Yes; if you will.

Mr. LADD. Perhaps you will let me make a statement, sir. Mr. Howe called on me, I think, about the 20th of January, 1918, bearing a letter of introduction to me from Mr. Charles H. Sabin, of the Guaranty Trust Co. of New York.

Mr. FREAR. Mr. Howe?

Mr. LADD. R. F. Howe. He said he was chairman of the Aircraft Board at Washington. He said he had come out here to look into the spruce production matter and he asked me for the names of some lumbermen with whom he could confer. I gave him some names and he disappeared. On either the afternoon of the 22d or the morning of the 23d I was asked to go to Col. Disque's office, on the second floor of the Yeon Building, at a certain time. I went there and there I was introduced to Col. Disque. I never had seen him before. There were present at that meeting with Mr. Howe,

Gen. Salsman, I think was his name, from the Signal Corps at Washington, some attorney, and some men that Mr. Howe had with him. I do not remember their names. Mr. Benson was there; Mr. George S. Long, of Tacoma, was there; Mr. Bloedel and some gentleman whose name I do not remember, connected with the fir production department at Washington. I think they said he represented Lacey & Co. I do not remember his name. And Col. Disque was there. Also I think at the meeting were some officers that belonged to Col. Disque.

The meeting was called and Mr. Howe sought to form an advisory committee for this coast, and he asked me if I would accept such a position as a member thereof. I begged to be excused, because I did not know anything about lumbering or logging. He said he understood that, but he would like to have me serve. I supposed he was an officer from Washington and that he called upon me to do my duty for the Government, so I accepted the position, to do the best I could with it. He asked Mr. Long if he would accept and serve on that committee, and Mr. Long said he did not think he ought to serve on it, because he was the manager of the Weyerhaeuser Timber Co. He went away from that meeting with that in view. After discussion I asked Mr. Howe what he meant that we should do, and Mr. Howe said, "I guess I had better put it in writing, so that you will have a clear understanding of it." So he did put it in writing, and he wrote me a letter on January 23, which, if you wish—I do not want to burden the record, but if you wish to have it—

Mr. LEA. We would like to get at just the material part.

Mr. FREAR. I do not think there is any controversy about it. Just tell what it was, briefly.

Mr. LADD. The sum and substance of it—after making that statement he wrote the letter the same day and I got it, I suppose, the next day. He said what we were appointed for was this, that Gen. Disque had to refer some questions in which he would be in doubt to the Aircraft Board in Washington, and there had been great delays, and he wanted to facilitate the getting out of the spruce, because they were in great need of it.

They wanted this committee to be subject to the call of Col. Disque, so whenever any problem came to Disque that he was not clear upon that he could refer it to us instead of referring it back to Washington. I asked him about the vote. I said, "Supposing that the three of us side against Col. Disque, what then?" He said, "Well, Col. Disque would have the right to appeal to Washington." I said, "Supposing we tie, then what?" He said that the same thing would obtain; Col. Disque could appeal to Washington if he desired.

Mr. LEA. Now, then, you entered upon your duties as director and got along harmoniously, did you?

Mr. LADD. Yes, sir.

Mr. LEA. Were you consulted in reference to the location of a mill at Toledo?

Mr. LADD. Yes, sir.

Mr. LEA. With what result?

Mr. LADD. The mill was built. I suppose it was built.

Mr. LEA. Did you concur in that judgment?

Mr. LADD. No, sir.

Mr. LEA. And did you finally concur in that, or not?

Mr. LADD. Yes, sir.

Mr. LEA. And for what reason?

Mr. LADD. For the reason that it was impossible to ship the logs to Portland. I desired to have the logs shipped to Portland. The reasons I objected to building a mill down there were two. The first and uppermost was a selfish interest—I didn't want to see any more mills built in this country, which after the war would have to be sold at less than they cost, and therefore somebody would be a competitor of my friends who were in the milling business, at an investment of less than what they had put in. Second, I wanted to save the Government the money of the cost of the mill. So I endeavored to ascertain whether the millers on the river here, or in the valley, would saw the logs, in case we brought them to them, and I also investigated the cost thereof, because Maj. Hitchcock had figured the cost of \$13.90 as the cost of the production of the flitches down there, or cants, if the mill was built now. And so I went to four different sawmill men, whom I had confidence in, and asked them to figure the cost of sawing, bringing logs from there down here, and they figured it out, and the four varied I think about 19 cents. I can give you the exact figures if you would like to know. The average I think was \$13.75, being 15 cents in favor of manufacturing at Portland.

Mr. LEA. Portland or Toledo?

Mr. LADD. Hitchcock stated to me—Col. Disque was then in the East when that matter came up to me, and I took it up with Hitchcock, or he took it up with me, and he said the cost was \$13.90, and I told him, flatly, that I didn't wish to build a mill down there, that I was opposed to it, and I spent, I suppose, two weeks—ten days or two weeks getting at the facts, went after the Southern Pacific, got the freight rates, etc., and so on, and finally we had a session with the Southern Pacific officials. I don't remember whether Col. Disque had returned from Washington then or not, but it seems to me that he had. They said that it was a physical impossibility to bring out the large logs. The figures were made on 6,000 feet, board measure, minimum car, and that is what our expense would be—on which the figures would be. The Southern Pacific raised objections to bringing it because they said right out flatly they didn't want to haul logs, they wanted to haul the manufactured product, and if they had the manufactured product down there or the manufacturing of product down there, they would have the freight down there on goods that would have to go to them, and they would rather do that than to take logs up to Portland to be manufactured here. The same way for valley mills. I tried to get the valley mills to saw logs, and when we got to the question of detail, I remember they said it would—they went into the matter of cars, eight days for a trip, it would take 540 cars to handle the amount that we intended to put into the water or onto the cars.

I think they figured on 1,000,000 feet a day, and I figured 500,000. And that would—on a 100,000 shipment a day, it took 128 cars, and if they got out 500,000 it would take five times that, or 540 cars. They hadn't any cars to do it; they had a limited number of engines. They said their cars were in poor shape, but if the Government demanded it, would do anything that the Government said. They made an estimate of \$100,000 or something of that kind for side tracks. But what determined—even this, I was determined that they should

bring them down here, and what put an end to the discussion was the fact that when they came to raise the question of tunnels, there was 12½ feet clearance in the tunnels on that branch from Albany or Corvallis to Yaquina, and that only permitted, as the experts said, about 3,000 minimum. That raised, you see, the price; and on the main line, as I recollect it, the clearance of tunnels was 13 feet, so that you could not ship an 8-foot log on a car. Then, another thing, the Southern Pacific objected to us bringing their—they said they would have to bring their trains through Salem, and that passed through a main street of the city, and the logs would have to be chained; they didn't want to take the risk of the logs falling off and injuring anybody passing on the street. And so that made it necessary, if we got out the timber—the spruce or fir, in that section, to have a mill down there. So I gave up.

Mr. LEA. Now, is there any other information that you have that you regard as material to this committee or information that you would like to give the committee?

Mr. LADD. I don't know, sir, what you are driving at.

Mr. LEA. Well, I didn't know but what you might have something in your mind.

Mr. LADD. I am willing to give anything that I know, sir.

Oh, I would like to state this inasmuch as—a bit of my experience. When I was green on the question of timber, and spruce especially, and I commenced to ask some questions about the supply of spruce, I went to the Forestry Department to get a map. They said they were preparing them for Col. Disque and they would be there, so I didn't ask for them, as I didn't want to put the Government to that expense. I saw I could get the information there.

In one of the conversations with some one, Col. Disque's administration of the Michigan Penitentiary came up, and it was spoken of against him, to his detriment, and that made me wonder about it; and I wanted to be satisfied as to the character of the man that I was going to work with, and so I wrote back to a friend of mine at Jackson, Mich.—I happened to know a gentleman there—and told him what I had heard and asked him if he would give me the facts if he could. I have the letter here from him, which I will be pleased to show you, if you wish.

Mr. LEA. Well, what is the substance of the letter?

Mr. FREAR. I don't think that is any part of the record; that is, we have introduced only here on the subject the investigation of the Michigan legislative body, and this gentleman can't be cross-examined.

Mr. LEA. As just showing his information.

Mr. FREAR. I know; but I say that it would be cumulative in the record.

Mr. LEA. Just state the substance of what you found out.

Mr. FREAR. There is no objection to your stating that he told you something, whatever it is, although I do not think it is admissible regularly in evidence; but there is no objection here.

Mr. LADD. Well, here is what he says: "Col. Disque was"—

Mr. FREAR. I object to that. Strike it out. Now, I am willing you should say, in a general way, what they have told you. Now, that is not testimony at all; it would not be testimony in any court;

you could not do that; but we are perfectly—we have an objection to your reading into the record these letters that you have.

Mr. LEA. May I see this letter and see if it is of any importance?

Mr. LADD. All right, sir. [Handing letter to Mr. Lea.]

Mr. FREAR. You can say if he says Disque is all right. We don't object to it.

Mr. LADD. Well, he said he was a high-class man, clean in body and in mind and in integrity, and that I could advise with him and trust him.

Mr. FREAR. No objection to anything of that kind.

Mr. LEA. How long had you known this man that gave you the information?

Mr. LADD. I have only met him once, I think, about 15 years ago. I have had some correspondence with him.

Mr. LEA. Now, is there anything further? I have not had an opportunity of—

Mr. LADD. He is a man of high character, sir.

Mr. LEA. I have not had the opportunity of discussing your knowledge on this situation, but I thought there might be something that you regarded as material that you would like to state here to the committee in reference to the facts?

Mr. LADD. I have no ax to grind, sir, in it.

Mr. LEA. Did you have anything to do with the negotiations for the Siems-Carey contract?

Mr. LADD. Which contract?

Mr. LEA. For the logging contract.

Mr. LADD. All I can remember about the Siems-Carey is being present at a meeting at which some of their people were there, and their attorney was there, and I think the attorney of Gen. Disque's office was present, and they discussed the question of either logging or flitches, I don't know which; I think it was flitches.

Mr. LEA. What, in substance, occurred at that time, as you remember it?

Mr. LADD. Oh, I don't remember the details, sir, at all. They discussed the matter, and I understand—well, they had a contract drawn up, a rough agreement, and I think they read it section by section, but I have no notion about those sections, sir. And then I understand—oh, I remember this, that we would not pass upon that matter of their contract, because there was no railroad, and it was referred back to Washington. You see, I voted to recommend to Washington to have the Milwaukee road extended into that country, because they were already there, and that, I think, was under consideration at this time that we had this meeting with Siems-Carey.

Mr. LEA. That was before Mr. Disque went East to try to get that road extended, was it?

Mr. LADD. I don't know about that, sir; I don't remember.

Mr. LEA. Do you know whether or not Mr. Disque did go East to try to get the Milwaukee extended?

Mr. LADD. I think he said here in testimony that he did. I think I have heard him say that.

Mr. LEA. Are you acquainted with Mr. Blodgett?

Mr. LADD. Yes, sir.

Mr. LEA. Did you ever have any discussion with him as to the sale of his property after the sale had been agreed upon?

Mr. LADD. I don't think so, sir. I think I had one talk with Mr. Blodgett when he was here. I don't remember the date. I could fix that date, if it was necessary, by referring to his letter; he wrote me a personal letter about a transaction that happened while he was here in the city at that time. I can fix that date.

Mr. LEA. Have you it with you?

Mr. LADD. No, sir.

Mr. LEA. Well, did he ever inform you as to whether or not he was willing to sell this property that he did sell to the Government?

Mr. LADD. I think he wrote a letter to Col. Disque, giving his price for his property, in April I think it was; I think there was a letter of April, 1918. I think you will find some letter from him in the files down at the office.

Mr. LEA. Well, you mean by that that there is a letter saying that he was willing to sell it?

Mr. LADD. Yes, sir; he made a proposition. He made his price, as I recollect the program.

Mr. FREAR. The letter is in evidence.

Mr. LADD. Is it in evidence?

Mr. FREAR. But the question of whether he was willing, or not, or had to have a bearing with a threat of commandeering and all that. But he did make a price.

Mr. LADD. I think he was willing.

Mr. FREAR. You think he was.

Mr. LADD. That is my impression; yes, sir; from what he said to me.

Mr. LEA. What did he say to you about that?

Mr. LADD. He said he was negotiating at that time, but nothing was—in his personal conversation with me, I don't think any reference was made to price.

Mr. LEA. I see.

Mr. LADD. In that conversation he spoke commendatorily of Col. Disque's work at that time.

Mr. FREAR. In the statement made just a moment ago, you said that you were in favor of the Milwaukee road going around by Deep Creek; that is, its extension, which I think is the fact.

Mr. LADD. No, sir; I didn't say going by Deep Creek.

Mr. FREAR. What did you say?

Mr. LADD. I said I was in favor of the Milwaukee building the road, sir.

Mr. FREAR. The Milwaukee building the road?

Mr. LADD. Yes, sir—extending its road.

Mr. FREAR. Well, then you said then Disque went back to Washington?

Mr. LADD. No; I didn't. He said that—

Mr. FREAR. But you answered with him. Now, tell what the fact was. You answered affirmatively, following his question.

Mr. LADD. Did I?

Mr. FREAR. I understood so.

Mr. LADD. Will you read the question and answer?

Mr. FREAR. No; we can't spend the time. You just go on and state what the fact is.

Mr. LADD. I thought my recollection, sir, of my answer was that I did not know whether Col. Disque went or not.

Mr. FREAR. Oh, pardon me. Then I misunderstood you entirely. You didn't know anything about Disque going to Washington?

Mr. LADD. I know he went from time to time, but I don't know the dates, sir.

Mr. FREAR. Or the purpose?

Mr. LADD. I know the purpose of some missions.

Mr. FREAR. Well, that is all. Oh, here is just a statement that is in the paper. It says here—this is the paper which I read from to Mr. Reed—it says here:

Representative Reed held out with W. M. Ladd, of Portland, in opposition to the Oregon plans as long as possible, and the contracts they drew up for the Olympic Peninsula development was not the one approved by Secretary of War Newton D. Baker and later by John D. Ryan, who was head of the Airplane Production Service.

That is dated back August 13. Did that correctly state your position?

Mr. LADD. No, sir.

Mr. FREAR. What was your position?

Mr. LADD. That question never came up to me, sir.

Mr. MAGEE. Was there a mill at Toledo, Mr. Ladd?

Mr. LADD. What?

Mr. MAGEE. Was there a sawmill at Toledo?

Mr. LADD. I have been told that there were two there—small mills.

Mr. MAGEE. Yes. What was done by you in reference to utilizing them for anything, to your knowledge?

Mr. LADD. Nothing; no question ever came up for me to pass judgment—no question of that kind ever came up to me, that I recollect of.

Mr. LEA. Is there anything else that you wanted to state?

Mr. LADD. No, sir. I can give you the details of different things, if you want. I don't think it is material, sir, so far as I am concerned.

Mr. LEA. I just wanted to get the essential things and let the other go, if we can.

(Witness excused.)

TESTIMONY OF J. B. YEON.

(The witness was sworn by Mr. Frear.)

Mr. LEA. Where do you reside, Mr. Yeon?

Mr. YEON. Portland.

Mr. LEA. How long have you resided here?

Mr. YEON. Since 1885, in April, I first landed here.

Mr. LEA. What has been your business?

Mr. YEON. When I first came here I went into the lumber business. The last 14 years I have been here in the real estate business mostly.

Mr. LEA. With whom were you associated in the lumber business?

Mr. YEON. The only association I had during all my lumbering career was Mr. Pelton, who is deceased now. He had a quarter interest in the Yeon Lumber Co. and I had three-quarters. Operated under the Yeon-Pelton Lumber Co. for about four years. Since then I have been operating for myself straight.

Mr. LEA. You are the owner of the Yeon Building, are you?

Mr. YEON. Yes, sir.

Mr. LEA. What was the extent of the operations in the lumber business as conducted by you prior to leaving the business?

Mr. YEON. Well, I was—in my last operation I was employing 250 men per day.

Mr. LEA. About how much logs were you handling a year?

Mr. YEON. All the way from fifty to sixty millions.

Mr. LEA. Where were you operating?

Mr. YEON. My first operation was at Cathlamet, Wash., and my last operation was at Rainier, Oreg. That is about 46 miles from here, down the river.

Mr. LEA. Now, did you have any official position with the Spruce Production Corporation during the war?

Mr. YEON. Yes, sir.

Mr. LEA. What was it?

Mr. YEON. District supervisor for the Clatsop district, down the river.

Mr. LEA. Down the Columbia River?

Mr. YEON. Yes.

Mr. LEA. Did you have any other connection with them?

Mr. YEON. No; not any.

Mr. LEA. What were your duties as supervisor down there?

Mr. YEON. Well, it was to follow up the cost-plan operation.

Mr. LEA. Who was the cost-plus contractor down there?

Mr. YEON. Porter Bros.

Mr. LEA. You were the representative of Mr. Disque in connection with that operation, were you?

Mr. YEON. Yes, sir.

Mr. LEA. Do you remember about what date you were appointed?

Mr. YEON. I think, if my memory serves me right, it was about June 24, 1918.

Mr. LEA. And you continued, then, until the time of the armistice, did you?

Mr. YEON. Until January the 10th, if I recollect right.

Mr. LEA. Did you have any compensation for your services?

Mr. YEON. Not any, sir.

Mr. LEA. I wish you would briefly describe to the committee the general nature of those operations down there, and with what difficulty and success or failure it was carried on.

Mr. YEON. Well, I came into the operation there, as I stated a minute ago, about June 24, and the road was not quite completed. I think we had about 4 miles to reach the main body of timber. We completed that road and then started in operation. Our output there ranged all the way from two hundred to two hundred and fifty thousand a day after we got logging.

Mr. LEA. How many sides did you have?

Mr. YEON. Let's see; we had about four—an average of about six sides.

Mr. LEA. And in the meantime were you extending your spurs?

Mr. YEON. Yes, sir; up to the woods.

Mr. LEA. You were carrying on regular logging operations?

Mr. YEON. A regular logging operation; falling timber and everything like that.

Mr. LEA. I presume that was selective logging?

Mr. YEON. Yes, sir.

Mr. LEA. And what was your judgment as to the selective logging to accomplish the purposes of the Government?

Mr. YEON. Well, it is the only thing that really could be done.

Mr. LEA. Now, if you will just go ahead with your statement—

Mr. YEON. Yes.

Mr. LEA (continuing). About conditions down there.

Mr. YEON. Of course, the Government didn't want any spruce put in other than what would make airplane material, and the market for spruce has been a drug on the market, naturally, before the war came on, practically as it is now, and they didn't want to come in and put in a whole lot of timber that the Government had no use for, which would put them on the market to dispose of it—that is, to dispose of everything that they could not use for airplane—consequently it was decided to handle nothing but airplane material, and that is what meant the selective logging end of it.

Mr. LEA. What did you observe down there as to whether there was any waste of materials or supplies, or food supplies, in carrying on the operation, by this contractor?

Mr. YEON. Why, I didn't notice any waste of any kind.

Mr. LEA. Did you keep in pretty close touch with the situation?

Mr. YEON. Very. On the ground all the time nearly—about five days in the week.

Mr. LEA. You, of course, had conducted logging camps in your regular business while you were engaged in the industry?

Mr. YEON. Yes, sir.

Mr. LEA. What was the general situation as to labor in carrying on the work down there?

Mr. YEON. Well, we had mostly soldiers. We kept civilians for such as timber fallers, as much as we could get—practical men that understood the business, hook tenders, engineers, and the like of that. And then the balance of it we sandwiched in with the soldier labor, because you will readily understand that you take a green man that has never been in the logging operation and put him into falling timber, or even bucking logs or running a donkey engine, it would be practically out of the question; that is, if you are going to operate with any degree of success.

Mr. LEA. How did the efficiency of the labor compare during that time with prewar periods?

Mr. YEON. About 50 per cent.

Mr. LEA. Only got about 50 per cent from the men that you got before?

Mr. YEON. Yes; on an average. In the first place, the hours being cut to eight hours—the time being cut to eight hours per day—curtailed the output very much. They used to work 10 hours. And then the fact of the inexperienced labor also decreased the output very much. In other words, you take men, for instance, that—soldiers, such as barbers, bookkeepers, clerks in stores, there were all classes, you know, that came in—the most unfortunate part—and that handicapped the logging end of it. Our best experienced young men in the logging business volunteered to go to the front as soon as the war was declared, and a lot of them were drafted, which, of course, it developed later on that it was the greatest mistake for the lumber industry that could happen, but it was all done, and there

was nothing left but to make the best of it with the class of labor that was available at that time.

Mr. LEA. This company you say had not—had it reached its full production about when the armistice came?

Mr. YEON. Yes; just coming to the point where we were going to turn upon results.

Mr. LEA. About what would have been their productivity after that?

Mr. YEON. Well, we would average about 250,000 or 300,000 a day; that is, selective logging, you understand.

Mr. LEA. You knew Col. Disque, of course, all this time?

Mr. YEON. Yes, sir; I met Col. Disque about the first or second day after he landed in Portland, I believe.

Mr. LEA. To what extent did you confer with him about these matters out here with reference to the production of spruce?

Mr. YEON. Well, from the time that he came to Portland I met him off and on; he has called me down to his office and he was up to my office several times, I think, to obtain all the information that he possibly could get from the lumber operators. He stated, in these many words, that he wished to start off right; that he fully realized that he had no experience in the lumber business, and he was strongly in hopes that everybody would come to his rescue, in other words, so that he might be able to make his decision with the most efficiency and the most speed that possibly could be figured out toward turning out airplane material. That seems to have been the height of his ambition.

Mr. LEA. And did he interfere with you in your duties down there as supervisor?

Mr. YEON. Not a bit in the world. If there was any criticism coming out of Clatsop district from June 24 until January, the burden rests upon my shoulders; I could not "pass the buck" to anybody, in other words. I had the greatest support that any man could get. If the result has not come, it was nobody's fault but my own.

Mr. LEA. Did you have anything to do with the location of the Yaquina Road north?

Mr. YEON. No, sir; I did not.

Mr. LEA. That, of course, was not in your district?

Mr. YEON. No. I went over there one time—I went through there twice, in fact; one time at Gen. Disque's request, when he made a trip down there to go over the route and asked me to go along with him, which I did; then I went once after that. The following day that we were through with Mr. Van Orsdal, the engineer which had recommended the route on the ridge, and I done that a second day for the fact that we had all decided, after we had concluded it was impractical for the railroad to go on that ridge, but I wanted to be sure that we had went over the route that Mr. Van Orsdal had recommended that was practical, because if we had turned it down probably he would have come back and said, "Why, you didn't go over the route at all that I had in mind"; so I went there with him again the next day so as to be dead sure that we had went over that route. The day previously—

Mr. LEA (interrupting). For what reason had you determined that route was impractical?

Mr. YEON. Well, the location of the road was one of the hardest construction that a man could undertake, especially when we figured that the main operation would follow—that is, would come in the following winter, such as slides and cuts—and then we had to go through quite a stretch of fir timber, in which the Government had no interest whatever. We were after spruce.

Mr. LEA. What conclusion, if any, did you reach as to the proper location for a railroad there to reach spruce?

Mr. YEON. That one by Otter Rock seemed to be the most practical and feasible route to be put out to get the spruce that there was in that country, as far as I could judge by the reports that had come as to the amount of timber that was in that district.

Mr. LEA. And what was the source of your information as to the timber in that district?

Mr. YEON. Well, not any more than the estimate that they had prepared. Some of the estimate was done by cruising, or cruises that had been copied off of the assessor's record in order to get at the assessing of the timber for taxes.

Mr. LEA. Now, did you construct any logging roads during the war?

Mr. LEA. Yes.

Mr. LEA. And what was your experience about that?

Mr. YEON. In what way? In the way of costs?

Mr. YEON. Yes.

Mr. YEON. Why, we constructed roads at Clatsop. Now, just what that cost per mile I don't believe I could intelligently tell you, unless I have reference to the records.

Mr. LEA. How long was that route?

Mr. YEON. About 5 miles; the one that I had anything to do with; 5 miles of main line and branches besides.

Mr. LEA. Did you ever operate any long logging roads?

Mr. YEON. Of my own?

Mr. LEA. Yes.

Mr. YEON. About 12 miles is the longest I operated at Rainier.

Mr. LEA. Mr. Yeon, is there anything else that you think the committee ought to know here of a material nature with reference to this investigation?

Mr. YEON. I don't know as I have. All the connection that I have, had, as I say, I found them thoroughly clean, absolutely. And there might have been a little opening for a little criticism on the lack of judgment or the lack of experience on certain things, which you will always find in an operation of this extent; but I have always found that everybody was doing the very best that was in them, and if there is anything that was crooked in any way there is no man on earth who wants to know it any more than I do; and if there is, why, the sky is the limit. I am right with you to the limit to punish whoever was guilty. But so far I have been unable to find out anything that was really crooked or done intentionally that should not have been done.

Mr. LEA. Down in the district where you were supervisor, in what way were the Government's financial interests protected?

Mr. YEON. You mean in the way of purchase and disbursements, and the like?

Mr. LEA. Yes.

Mr. YEON. Every requisition was made from the Clatsop office. That was my headquarters. That is, in other words, I am a strong believer that no man can operate a logging camp 50 or 100 miles from Portland and sit in the office on a swivel chair; you have got to be on the ground to follow every detail. That has been my practice and why I have had a success in the lumber business. And every requisition was made and O. K'd by me or my assistant, which was Lieut. Rainey, a Government man, before it was the Clatsop office. Then it was forwarded here to the head office in Portland to the purchasing agent. Then he went ahead and purchased the goods wherever he could get the best price, naturally. Then the goods were shipped back and we had a man that would check them in when they arrived in Clatsop; we had a big warehouse; and then from there it was sent to the different camps and charged to these different camps. Then the pay roll was all made out at the end of the month and checked by myself and my assistant and O. K'd before it was sent to this head office here in Portland; and then it was paid by this disbursing agent here of the Government. So there wasn't one cent that went through the cost plus or myself in the way of purchasing or disbursements.

Mr. LEA. I believe that is all.

Mr. FREAR. You said that that road down there at Yaquina was according to your best judgment in building?

Mr. YEON. Yes.

Mr. FREAR. That is right?

Mr. YEON. Yes.

Mr. FREAR. And that you based your judgment on what you had learned, and also upon what some assessor had stated?

Mr. YEON. That is the best of my judgment, by the information that Mr. Benson had at that time.

Mr. FREAR. Yes; and what some assessor had stated?

Mr. YEON. Yes. He got some of it; that is, he told me he got some of it from the assessor and some from the cruiser.

Mr. FREAR. Yes. One of the assessors who has been down there testified before this committee that 550,000,000 of spruce, as well as a large part of the fir, was on the east side of the divide and only about 150,000,000 feet was on the other side, only a part of which was spruce that is suitable for airplane stock?

Mr. YEON. Well, as to that I would not be authority at all.

Mr. FREAR. No; I assume not.

Mr. YEON. Because I didn't get into those details. I simply went over that route they had in mind.

Mr. FREAR. You didn't go up the Siletz, or anything like that, to make an examination?

Mr. YEON. No; I did not.

Mr. FREAR. Were you in the military service?

Mr. YEON. At that time not any more than, for instance, when a trip like that would come they would ask me—

Mr. FREAR (interrupting). No. I mean here in Portland; were you in the military service?

Mr. YEON. No, no.

Mr. FREAR. Were you a captain or a major or anything like that?

Mr. YEON. No. I had a commission offered to me, but I would not accept it.

Mr. FREAR. Were you recommended for the distinguished service?

Mr. YEON. For a majorship.

Mr. FREAR. For a majorship?

Mr. YEON. Yes. But I told Col. Disque that I didn't have any desire along those lines at all.

Mr. FREAR. When was that?

Mr. YEON. Unless they could show me I could not get results as good as I could by taking a commission, then I desired to remain as I was.

Mr. FREAR. You had had no previous military experience?

Mr. YEON. None at all.

Mr. FREAR. You owned the building over there?

Mr. YEON. The Yeon Building; yes.

Mr. FREAR. How many floors or how much space has been occupied by this spruce production?

Mr. YEON. When Col. Disque came out here he reserved a suite of five offices.

Mr. FREAR. And it grew to what?

Mr. YEON. And it grew to one floor, which, I am here to state, was not a very profitable proposition to me, from the fact that I had to kick out some regular tenants that had been in the building since the building existed, who had to go elsewhere to make them room.

Mr. FREAR. Was it only one floor that was used?

Mr. YEON. No. They had had one floor. Then they got the second floor. That is two. Then they absorbed about half of another floor. There was about two floors and a half all told. Now they have about a floor and a quarter, as near as I can judge. They are subletting to the Southern, which has a lease on those quarters which they now occupy.

Mr. FREAR. And about what was the rental per floor?

Mr. YEON. Right offhand I don't know as I could tell. It probably ran about \$700 a floor.

Mr. FREAR. Seven hundred dollars a month?

Mr. YEON. Yes; a floor.

Mr. FREAR. That is all.

Mr. MAGEE. Was your selective logging, Mr. Yeon, confined to spruce, or did you get out fir, too?

Mr. YEON. We got out a few fir of the very finest select fir, with the spruce. That is, provided that it was right handy to some spruce that we had to get out. In other words, we went in to get, you see, 15 or 20 trees, and if there was three or four excellently fine fir, why we cut them down and brought them in. Otherwise we didn't make any effort whatever to get any fir by itself.

Mr. MAGEE. That is all?

Mr. FREAR. That is all.

(Witness excused.)

Mr. LEA. The witness that I wanted is not here now. Suppose we adjourn until, say—

Mr. FREAR (interrupting). Well, is Mr. Disque coming on before we adjourn? He will come on afterwards?

Mr. LEA. Well, did you want to put him on now?

Mr. FREAR. That is what I said; we would get through with them as far as we can, right along.

Mr. LEA. I think, as far as I know, that he will—

Mr. FREAR (interrupting). He said he had some important testimony, I understood from the paper, to give.

Mr. LEA. Did he speak to you about it?

Mr. FREAR. No. I was told that he stated that in the paper. I don't know what it is. And I thought he certainly ought to be entitled to give it.

Mr. LEA. I thought that if he wanted to come on it would be better to come afterwards to answer any additional things that may come up.

Mr. FREAR. We haven't any further questions to ask, and what we had best do is to clean it up as we go along. That is my idea now.

Mr. STEARNS. Mr. Eastman is here.

Mr. LEA. Mr. Eastman, will you be sworn?

TESTIMONY OF WATSON EASTMAN.

(The witness was sworn by Mr. Frear.)

Mr. LEA. What is your name?

Mr. EASTMAN. Watson Eastman.

Mr. LEA. Where do you reside?

Mr. EASTMAN. Portland.

Mr. LEA. What is your occupation?

Mr. EASTMAN. Logging and milling.

Mr. LEA. What experience have you had as a logger and miller?

Mr. EASTMAN. Well, I have been getting out timber and milling timber for 27 years.

Mr. LEA. And with what company were you associated before the war?

Mr. EASTMAN. The Western Cooperage Co.

Mr. LEA. What is the extent of the operations of that company?

Mr. EASTMAN. They have a mill here on the Columbia River—on the Willamette River—a logging railroad, with four logging operations, and factories in San Francisco, Los Angeles, and Seattle.

Mr. LEA. Now, what were your duties in reference to the Spruce Production Corporation, if any?

Mr. EASTMAN. My chief duties were to hurry up getting in logs from the commercial loggers; first of all, to supervise the bucking of logs in the various commercial camps, wing-beam lengths. It had been difficult to get the loggers to cut the logs these new lengths, because they were accustomed to cutting commercial lengths.

Mr. LEA. Well, what were the usual commercial lengths?

Mr. EASTMAN. From 24 feet up.

Mr. LEA. And what were the airplane lengths?

Mr. EASTMAN. The airplane lengths were from 18 to 22.

Mr. LEA. When did your connection with those duties begin?

Mr. EASTMAN. In June, 1919.

Mr. LEA. And did they continue until the armistice?

Mr. EASTMAN. Yes, sir.

Mr. LEA. Now, I wish you would briefly state what your experience was in that regard with the industry, what you did, and with what success?

Mr. EASTMAN. Well, my department endeavored to get more wing-beam stock from the log by bucking them properly and trying to get

the loggers to put in more spruce, and that was about all there was to it.

Mr. LEA. Well, what inducements were held out to the loggers to produce?

Mr. EASTMAN. There was a bulletin sent out to loggers saying that the division would come back for any excess amount that any logger, I believe, would agree to put in over and above his ordinary input; I don't recall the exact date of that bulletin, but the records will show it.

Mr. LEA. What were the general terms of agreement with the loggers, the independent loggers, as to the production of spruce logs during the war?

Mr. EASTMAN. One of the important things was that a price was set, a price of 11, 20, and 40 for the various grades, to stimulate the input of logs, stabilize the price. It was thought that that would bring enough logs at first when the requirement was small.

Mr. LEA. And did it?

Mr. EASTMAN. No. The demands, it seems, from the Allies and our Government became so large that it was an impossibility for the industry to supply enough spruce from the locations in which they were located.

Mr. LEA. Now, with how many loggers were contracts made?

Mr. EASTMAN. I do not recall. There were several selective logging contracts made.

Mr. LEA. But of other contracts, how many do you know? With how many different loggers did the Spruce Production Corporation do business during the war?

Mr. EASTMAN. Well, you mean directly?

Mr. LEA. Yes.

Mr. EASTMAN. By purchase?

Mr. LEA. Yes.

Mr. EASTMAN. There wasn't very many.

Mr. LEA. Well, how many indirectly with the mills?

Mr. EASTMAN. Indirectly through the mills at the last report I think that the greater number of the mills were selling their logs—the great number of the loggers were selling their logs to the mill and the Government guaranteed a certain price for sawing, and the mills took these logs at the Government price.

Mr. LEA. Do you know how many in number there were?

Mr. EASTMAN. There were somewhere around 80 or 90 spruce loggers.

Mr. LEA. I believe that is all.

Mr. MAGEE. Now, did you have any trouble with the loggers and lumbermen here in getting them to work?

Mr. EASTMAN. In what way?

Mr. MAGEE. Well, in getting out spruce, aircraft lumber.

Mr. EASTMAN. I can say this: That every logger that I interviewed in all districts were very anxious, and did work constantly.

Mr. MAGEE. You found everyone of them patriotic and wanting to do everything he could to help the Government, didn't you?

Mr. EASTMAN. I did.

Mr. MAGEE. Well, isn't it your opinion that a man who was in the logging business, who understood the business, made it a pro-

fession, could get along with the loggers a great deal better and more efficiently than a man who could not tell a spruce from fir and hemlock?

Mr. EASTMAN. Well, that would depend on the man's temperament, I presume.

Mr. MAGEE. Well, I would like to have your opinion now, whether you could get out more spruce, or more fir, or more aircraft lumber under an organization of loggers and lumbermen who had made that business their life work than under the dictation of military authority?

Mr. EASTMAN. Well, if I may be frank I will say this: That the logger is used to a small operation and he is pretty economic, and he knows how to log, but he wasn't used to anything like this, and I doubt whether any man appointed to do this job, being only a logger, that he would have undertaken to fill an order of 300,000,000 feet of aircraft lumber a month, which they were calling for. I doubt if he could hardly grasp it. And I would like to say—

Mr. MAGEE (interrupting). Well, you would have to depend on the aggregate product of the different mills, wouldn't you?

Mr. EASTMAN. Well, we got everything we could from the mills. But what I mean to say is—

Mr. MAGEE (interrupting). Do you think the mills were working at their full capacity?

Mr. EASTMAN. No; not the mills.

Mr. MAGEE. You had, as I understand, over 400 mills functioning here on the coast?

Mr. EASTMAN. Yes.

Mr. MAGEE. These mills were all supplied with machinery and equipment?

Mr. EASTMAN. Plenty of mills.

Mr. MAGEE. Yes; a plenty of mills.

Mr. EASTMAN. Plenty of mills and machinery, but not always in the right place.

Mr. MAGEE. Well, what they needed was direction and organization, wasn't it?

Mr. EASTMAN. Well, we had men over there that were good milling men in charge of the fir mills, and a man in charge of the supervision of spruce mills, to induce the mills to get out a higher grade stock, a higher grade flitch, and great progress was made in getting the mills to cut stuff the right way so we could get a larger output.

Mr. MAGEE. Well, a man who didn't know anything about the business would necessarily have to depend upon the judgment and advice of men who did know the business, wouldn't he?

Mr. EASTMAN. Why, certainly.

Mr. MAGEE. So that a man who knew the business would presumptively and conclusively be in a much better position to do efficient work than a man who didn't know anything about the business?

Mr. EASTMAN. He would if he was also a good organizer.

Mr. MAGEE. Well, I presume you have a good many loggers and lumbermen on this coast who are good organizers, haven't you?

Mr. EASTMAN. We have a few that have extended operations scattered about, and, of course, when you have scattered operations you must have organizing ability.

Mr. MAGEE. There is not any question about that?

Mr. EASTMAN. No. There are some pretty good men out here.

Mr. MAGEE. All you needed was to get these mills working; to get them to functioning and getting out lumber to meet an emergency?

Mr. EASTMAN. No; we needed more than that, Mr. Magee. We had a serious situation here in the way of the I. W. W.'s and pro-Germans.

Mr. MAGEE. Well, I understand all about that, but you say that a good many of your young men volunteered and went into the service, and that left a shortage here. Now, it has always seemed to me that under the great need of getting out spruce lumber here it would have been much better if those men had been returned to do work in that emergency, just the way that Great Britain and France finally had to return their men, and that it would have been much better to take men who were drafted here and to put them at work here with which they were familiar, than to send them to other camps and then send in here a lot of dentists and doctors, and lawyers and clerks who knew absolutely nothing about the lumber or logging business. That is the way it seemed to me. In other words, that it was absolutely impossible to get the same efficiency or the same results from men who were entirely unfamiliar with the work as compared with the efficiency and results that could have been obtained from men who had made that work a life business and who were entirely familiar with it.

Mr. EASTMAN. Well, we got a great many—

Mr. MAGEE (interrupting). Is that right, or isn't it?

Mr. EASTMAN. Oh, that is right. But we did get a great many of those men out of the cantonments and back into the woods.

Mr. MAGEE. Yes.

Mr. EASTMAN. And I want to say this: That I have heard a lot about these lawyers and dentists, but I have been around in the woods a great deal and have seen soldier hook tenders and soldier loggers and soldier buckers and fallers that were crackajacks. They had a lot of poor men and they also had a lot of good ones right in the Army.

Mr. MAGEE. Oh, yes. I suppose you had men who probably were familiar with the business.

Mr. EASTMAN. We had some crackajacks.

Mr. MAGEE. And who knew about the work. I don't suppose there is any question about that; but it seems to me that each man to his trade, if you want to get economy and efficiency. That is my judgment about it.

Mr. EASTMAN. There wasn't enough men in the whole country to meet the emergency that were skilled.

Mr. MAGEE. Well, there probably would have been enough men to have met all the reasonable needs of the allied Governments. Of course I can see, if you are going to start out on the program with the idea of supplying every man in the allied armies with an airplane, why then, perhaps, you would need a large force here; but it has not yet been apparent to me that it was necessary to supply every man in the allied army with an airplane.

Mr. EASTMAN. Well, that is another question. But with the demands that they made here I will tell you there wasn't enough skilled loggers in this country to carry out the program. I don't know whether the program was right or not.

Mr. MAGEE. You mean, Mr. Eastman, if none of them had gone into the service?

Mr. EASTMAN. Nowheres near enough. We had a shortage of loggers here in 1916; a big shortage.

Mr. MAGEE. If they had been kept here, you would not have needed so many of the soldiers?

Mr. EASTMAN. We had a shortage in 1916, 1917 was worse, and 1918 was still worse.

Mr. MAGEE. Well, I suppose there was a shortage all over the country, probably, to a greater or less extent in all sorts of business and all sorts of trades, but if these men had not gone, or if they had been kept here, you would not have needed to have brought so many others here who did not know anything about the business, would you?

Mr. EASTMAN. I don't know how many went out. I understood a lot came back.

Mr. MAGEE. Yes; that is all.

Mr. FREAR. You held a commission, did you?

Mr. EASTMAN. Yes, sir.

Mr. FREAR. What were you?

Mr. EASTMAN. Major.

Mr. FREAR. Had you had any previous military experience?

Mr. EASTMAN. No, sir.

Mr. FREAR. How long were you in the service, Mr. Eastman?

Mr. EASTMAN. I was commissioned in September.

Mr. FREAR. September, 1918?

Mr. EASTMAN. 1918, the 13th; but I was working over there before that, because I was asked to help out.

Mr. FREAR. And you were recommended for a distinguished service medal?

Mr. EASTMAN. No, sir.

Mr. FREAR. Oh, I was thinking your name was among them. That is all.

Mr. LEA. That is all.

(Witness excused.)

Mr. LEA. Well, suppose we adjourn until 8 o'clock?

Mr. FREAR. All right. Adjourn until 8 o'clock.

(At 5.32 p. m. of this day, Wednesday, September 10, 1919, the subcommittee took a recess until 8 p. m.)

NIGHT SESSION.

The committee met, pursuant to the taking of recess, at 8 o'clock p. m.

TESTIMONY OF H. E. WALKER—Recalled.

Mr. FREAR. You have already been sworn, Mr. Walker?

Mr. WALKER. Yes.

Mr. LEA. Did you have something that you wanted to say?

Mr. WALKER. All I wanted was to make a brief statement in connection with certain matters that Sergt. French brought out in his testimony. They are not of great importance, but it might be well to refer to them.

Mr. LEA. Whose testimony?

Mr. WALKER. The testimony of Sergt. French, which was given the first afternoon of the hearing you had in Portland. He spoke about reporting the laxity of methods in tallying the cants at the cut-up plant. I might state in that connection that we had a very complete statistical system over there, and each day we knew exactly what had happened over there the day before, and each car of cants was tallied as it came in, and the quality of it noted and sent in to the inspection department and complete track kept of them. I believe that the apparent inaction on the reports of Mr. French, as he states in his testimony, was due to the fact that his superior officers, whoever they were, already had the ground very completely covered in this office. I know of several cases where they reported cars that were shipped out that were supposed not to be tallied properly, where that was found not to be the case. I believe that is all.

Mr. LEA. Can you tell the percentage of cants sawed by the mills of the Spruce Production Corporation that went into lumber?

Mr. WALKER. We operated two mills direct, and our average amount of cants from the selected No. 1 and 2 logs was 45 per cent. (Witness excused.)

TESTIMONY OF MOTT SAWYER.

(Witness was sworn by Mr. Frear.)

Mr. LEA. How old are you, Mr. Sawyer?

Mr. SAWYER. I am 42.

Mr. LEA. Where do you reside?

Mr. SAWYER. Seattle.

Mr. LEA. And how long have you lived at Seattle?

Mr. SAWYER. I have been there this time since June of 1918. I have lived there twice before.

Mr. LEA. What is your occupation?

Mr. SAWYER. At the present time I am assistant general superintendent of the Chicago, Milwaukee & St. Paul Railroad.

Mr. LEA. How long have you been in that employ; that is, this last time?

Mr. SAWYER. In this particular position, since March of this year.

Mr. LEA. And what were you doing before that?

Mr. SAWYER. Well, I have spent 24 years in railway service, with three brief intermissions. I have filled every position in the railway service from section laborer on up through different grades to general manager of a small railroad, and my present position with a very large one. I have also served in the accounting and construction departments, working on most of the railroads in the West.

Mr. LEA. What is your jurisdiction in your present position?

Mr. SAWYER. I am an assistant to the general superintendent of the lines west of the Missouri River.

Mr. LEA. Are you an engineer?

Mr. SAWYER. I am a member of the American Railway Engineering Association and serve on two of their standing committees.

Mr. LEA. What experience have you had as a construction engineer?

Mr. SAWYER. I have not served as a construction engineer to any considerable extent. I have been employed in the construction department of the Spokane, Portland & Seattle Railway and the West-

ern Pacific, and the Chicago, Milwaukee & St. Paul; I have done some work on hydroelectric development, but as a man directing the work rather than a man doing the technical side of engineering.

Mr. LEA. You were connected with the Spruce Production Corporation during the war, were you?

Mr. SAWYER. Yes, sir; from the 5th of June, 1918, until the 10th of March of this year.

Mr. LEA. You were with the Milwaukee Railroad up to the 5th of June?

Mr. SAWYER. Yes, sir; on the 5th of June I was superintendent of their lines, with headquarters at Tacoma.

Mr. LEA. And on whose suggestion or request did you enter the work of the Spruce Production Corporation?

Mr. SAWYER. Gen. Disque sent for me. So far as I know, so far as my own personal knowledge goes, my entrance was on his request. He sent for me; the message got to me, as I recall it now, on the 3d of June, saying he wanted to see me. I came to Portland and called on him the following day. He said to me, in substance, that he was just starting certain railroad construction work in Clallam County which involved also very considerable logging operations and saw-mill operations; that he was exceedingly busy and his own organization was exceedingly busy, and that he wanted some one to go on to the job and represent him, with complete authority and to handle it without reference to this Portland office, except as to matters of broad general policy; that the place would carry with it a commission as major in the Army. I told him that of course a man in his position could have anyone he wanted; that there would be no question about my giving the best that I had in that capacity, but that I would very much prefer to serve him as a civilian engineer rather than as an Army officer.

Mr. LEA. How did you serve?

Mr. SAWYER. I had on that day a very lengthy discussion of the entire situation with him. He explained to me at considerable length the reasons why it was necessary that the man filling the position should be commissioned. I felt that for various reasons it was not fitting or proper that I should be commissioned.

Mr. LEA. When were you commissioned?

Mr. SAWYER. Oh, very shortly thereafter. I do not remember the date of the commission, but I entered his service on the 5th of June, and the papers came along in due course.

Mr. LEA. What duties did you take up?

Mr. SAWYER. I had entire charge of the operations in Clallam County, reporting to him only on such matters as seemed to me to be matters of broad general policy that the head of the organization should pass on. Generally speaking, I had entire charge of the actual operations up there.

Mr. LEA. Did that include the work in reference to the logging part as well as the railroad construction?

Mr. SAWYER. Yes; although, if I may explain, my duties in connection with logging were quite different from my duties in connection with the railroad construction; that is, the construction of the railroad to Lake Pleasant. The railroad construction was, as you know, a cost-plus operation. I closely supervised that and personally approved the details of the transaction. The logging operation was a

regular contract, and my duties there, as I understood them, and as they were explained to me by the General, were to keep in such touch with the operation as to be sure that there would be no reasonable question of the contractors complying with the contract, but as to the actual supervision of that work that was entirely with the general contractors.

Mr. LEA. What experience had you as to serving roads that engaged in logging?

Mr. SAWYER. Most of my time for the past 10 or 11 years has been on roads which handle logs, in the so-called sugar-pine country in California, and at Puget Sound I operated a little independent railroad of which I had charge of all the departments, and I handled various divisions of the Milwaukee in the white-pine country in Idaho and here on the Sound, so that I was intimately familiar with logging operations and methods, and also I had quite an extensive acquaintance among logging men and lumbermen generally on the Sound.

Mr. LEA. Something has been said about the clearing of the right of way for the Crescent Lake Railroad. I wish you would explain what the facts were about that.

Mr. SAWYER. I did not hear the testimony, but to-day I heard some reference to the requirements of the Federal Forest Service. We built that railroad to high standard on account of the volume of the traffic which we expected to move over it, and also, of course, with a view to the fact that there would be some salvage value; that it was not simply a temporary logging line, and we cleared our right of way to a width of 50 feet. On the Federal forest reserve, which embraced some 4 or 5 miles of line along Lake Crescent, I had official notice from the forester to clear 200 feet. I told him that it was entirely out of the question to clear 200 feet at that time, but that this matter would have due consideration when we had time. I reported that to Gen. Disque with a suggestion that in my opinion the requirement was unreasonable, and a suggestion that the matter be discussed between the War Department and the Interior Department, with a view to having the requirement modified. It is my impression that that 200 feet clearing never has been done.

Tf.4,niasHdoL

Mr. LEA. How wide is it cleared?

Mr. SAWYER. Generally speaking, it was our practice to clear that right of way for that main line to a width of 50 feet, and there were some places where on account of the height of the fills, or for some other local reason, we went a little farther. On the logging lines which were built into the timber generally, we had cleared 30 feet, and in some cases only 20; but the main line of the railroad was generally cleared to a width of 50 feet.

Mr. LEA. There was a large expense in clearing that right of way, which I have forgotten now, but probably you know, and I wish you would explain the character of the work that occasioned that expense.

Mr. SAWYER. Principally it was due to the exceedingly heavy growth on the line. That railroad runs through two sections of land which contained more standing timber than any other two sections in the United States, and for that reason the volume of the debris that had to be removed was most unusual. Again, the work was pressed with regard to practically nothing but speed, and for that

reason we did not take the time to handle the logs with donkeys and rig up for economic operations. We simply threw in all the men we could get and dug it out by hand, in order to save time.

Mr. LEA. The logs being deposited along the side?

Mr. SAWYER. Being rolled out. Many were cut into short lengths and rolled by hand. And in other places we used teams, and in some places one or two donkey engines; but the essential thing was the speed of operation.

Mr. LEA. That suggests another thing: I want to ask you, and that is about the number of shifts used in constructing that road.

Mr. SAWYER. Generally speaking, there was one shift used only. There was a clause in the contract, as I believe there is necessarily under the Federal laws in all public contracts, restricting the hours of working to eight. On account of the emergency, Gen. Disque issued an order some time in July authorizing the contractors to work 10 hours. That was put into effect, I think, for about 90 days. There were, however, some critical points on the work which, on account of natural conditions, or, in one case, unexpected difficulties arose during the work which showed that the work could not be completed on schedule time. We set in the beginning a careful schedule on which the work was to go forward, the dates the track was to be laid past the different points. When it became evident that a tunnel, or cut, or some other part of the work was going to hold up the work longer, we put on a second shift, and in one or two cases we put on a third shift. It is my recollection that there were probably five or six points where two shifts of men were worked, and probably two, possibly three places where three shifts worked; but in no cases did three shifts run through the operation; generally speaking, I should say a month or six weeks.

Mr. LEA. I think it would be interesting and instructing to the committee if you would give a brief recital of the history of that construction and how it was done.

Mr. SAWYER. Well, let me say in the beginning that, while I have quite a practical knowledge of the entire transaction, my personal experience and my personal knowledge relates only to the operations in Clallam County subsequent to the 5th of June, 1918.

Mr. LEA. The construction work began after that date, did it not?

Mr. SAWYER. Yes. I was drafted into the service by Gen. Disque on the 5th of June. I made my first hurried trip over the peninsula on the 10th or 12th of June. At that time the general location of the railroad was determined and there were five locating engineers at work on the line, and other location parties were being organized just as rapidly as the men could be secured. There were on the route certain critical points where there was only one place to put the railroad. We fixed those arbitrarily. Just by observation it was evident we would have to put a railroad at a certain point. We determined that without a survey, and we started a locating engineer there running the actual line. Then we jumped to the next place where we could arbitrarily say our line would go, and started another man in there, and at the same time we had contractors going in to look over the work and bid on it. We worked, possibly, with 8 locating parties on that 36 miles of railroad. The general contractors for the work and their men had a very wide acquaintance in the West, and they spread the word by long-distance telephone and telegraph about

this work and that they wanted subcontractors. We got probably 20 of the most important firms in the West in that line of work to look the work over and submit bids. From those men the general contractors and I selected those whose reputation was satisfactory, with particular reference to the particular piece of work that we wanted them to do. For instance, one contractor bid on a piece of work up toward the Lake Pleasant end. I knew him and had seen him work, and Carey, the head of the general contractors, had seen him work, and we told him we would not give him that job, but that there was a piece of rock work on the lake that we would like him to bid on, and he did bid on it, and he did a good job. We hand-picked out of this western country the men whose records and equipment suited them for the particular pieces of work we had to do, and also took into consideration, of course, their ideas on the price for which the work could be done, and the fact of their having whatever heavy equipment might be necessary. Those men were started in just as soon as we could determine the proper men and they could get their outfits working.

It is my present recollection that the first actual work was done in the starting of the camps on the 27th of June; between the 27th of June and the 1st of August we put something over 5,000 men to work in 26 camps on the 36 miles of railroad.

Mr. LEA. Scattered all over the line?

Mr. SAWYER. Scattered all over the line. We had, as you know, excellent transportation facilities.

Mr. LEA. In what way?

Mr. SAWYER. There was a very fine State road which practically paralleled the entire line. There was about 9 miles along Lake Crescent which could be reached by barges and ferry boats from the lake and on the rest of the line there was this State aid road very close to the right of way, so that we were able to drop a camp in wherever we wanted it and serve it with trucks from the road.

Mr. LEA. About how long was that part through the Lyre Canyon where there was no road?

Mr. SAWYER. There was no wagon road for about 5 miles from the head of the Lyre Canyon, but to connect between the Milwaukee Railroad and the mouth of the canyon was a simple matter of opening up a temporary road in there, so that we got into one camp about $2\frac{1}{2}$ miles from the road with very little trouble, to build the road down from the lake, or rather from the main county road just before it gets to the lake down into the canyon about a mile and a half. So that we had four camps on the line between Lake Crescent and the railroad, and it was only necessary to build about a mile and a half of wagon road.

Mr. LEA. Where did you get the timber for construction purposes?

Mr. SAWYER. Fortunately, we did not have to use a great deal. Most of that which we used came from the big mill at Port Angeles. We had difficulty in securing sufficient timber from those people and we were obliged to ship in some timber from mills on the sound. I should say probably a third of our total requirements we were forced to buy on the sound and ship in by rail.

Mr. LEA. Did you establish any tie mill up there?

Mr. SAWYER. Yes; we had on the entire operation five tie mills, two of them located along the railroad and three of them on beyond in the other operations, spruce operations.

Mr. LEA. It has been testified here that two bridges washed out on that railroad. Is that so?

Mr. SAWYER. Technically, I guess it is; actually it is not. We got a little high water in the Solduc River earlier than it was expected, and one of our span-bridge swings between piers 150 feet apart was not completed; it was carrying on what they call false work. Under that, we had piles driven across the river, and we had those piles washed out from under the temporary structure. In another place there was error of judgment by one of the engineers as to the size of the culvert. We were in a hurry and did not have time to stop to make the elaborate investigations and we put in boxes, as I recall it, a double 4 by 6 box culvert. That proved inadequate and washed out, and we had to put in a bridge 6 feet long.

Mr. LEA. What do you mean by a box culvert.

Mr. SAWYER. Two boxes, 4 feet by 6 feet.

Mr. LEA. Each one?

Mr. SAWYER. So that we had an opening 8 feet wide and 6 feet high. That proved inadequate and we had to double the size of the waterway. I suppose that tied up operations three or four hours.

Mr. LEA. Now, this railroad, of course, cost a large sum, and what information can you give to the committee as to why that is true?

Mr. SAWYER. I think it is proper that I again refer to my initial conversation with Gen. Disque. He told me that it was necessary that this railroad be built and in operation by the middle of December, and I remarked that that seemed like a very large order. He says, "I know it is a large order, but it has got to be done." There was some further discussion about it and I said, "I understand, then, that it is on account of the war emergency that the railroad has to be built on schedule time regardless of cost?" He said, "Practically that. It is represented to me from Washington that there is absolute necessity for this output on a certain date, and while the operation is to be conducted as economically as it is possible, the absolutely essential thing is the time." And the work was organized on that basis. I should say that probably the railroad could be built under normal conditions and as a commercial operation for between a half and two-thirds of its actual cost. That difference is almost entirely represented by the necessity for the utmost speed. For example, we had 26 camps serving 36 miles of railroad. I think it probable that if that operation had been built by a private contractor in the ordinary way, he would have had not to exceed eight, possibly less than eight. Again, we took a big steam shovel, one of the largest that is in ordinary use, overland for a distance of 20 miles, and we used it two weeks. Under any ordinary conditions that work would have been held up until the rail came to it and the shovel could have been moved in conveniently. The entire operation was prosecuted in that way. I have already referred to the matter of clearing the right of way.

Mr. LEA. How about the efficiency of the labor you had?

Mr. SAWYER. The efficiency of the labor was not anywhere near 100 per cent as compared to what we expected in ordinary railroad construction in times past, but that, I think, was due again to the

war conditions. I believe there has been a good deal of testimony about the upset labor conditions in this western country at the time, and I guess it is a matter of common knowledge that all labor everywhere was more or less upset. There was also a serious shortage of labor, and the general's instructions were most imperative that our operation in Clallam County was not to interfere with the general labor market on the Sound, so that we made no effort to get labor into that country. Whenever we did not find the men coming in naturally, without effort, to attract them we used soldiers, and naturally we did not get enlisted men who were best fitted for that sort of work; but, on the other hand, the men that we did get worked with the most admirable spirit. I have never been anywhere on construction work where the spirit of the men and the desire to accomplish something compared in any way with the atmosphere of those enlisted men on that job, and I think that in many cases fully made up for their lack of familiarity with the work and in many cases their actual unfitness for the work.

There is another element in the case that should not be overlooked. These men were better housed and better fed, and had better latrines and sanitary provisions generally, that were very much more elaborate and very much better than I have ever known in this western country. I think the arrangements were in all respects proper, but they were also expensive. We did not in ordinary timber camps put in shower baths and latrines and things of that kind; nobody thinks of doing that in ordinary construction work.

Mr. LEA. In what time was the road completed?

Mr. SAWYER. I would like to just bring in something that is not in place in a public hearing, but among the general contractors was a man named Pat Welch, of Foley, Welch & Sons, a partner of Maj. Stuart, of the British army. He came to me and said in substance that we could have his plant, his organization, and anything he had, but he would not build on the railroad with a time limit, and he then hung up a very substantial bet that the line could not be completed in nine months. We ran a locomotive over that railroad five months from the day we started the first preliminary survey and, so far as my knowledge of American railroads goes, that is an absolute record as to time. It was not in economy, but it was a record for time.

Mr. LEA. Now, as to the character of the construction of that road, what was the weight of the rails?

Mr. SAWYER. For the most part they were 80 pound. We used a little Russian rail, which was very unusual, which weighed 67½ pounds, but only a little of it. It was not suitable.

Mr. LEA. That was selected from the rails that were prepared to be sent to Russia during the war?

Mr. SAWYER. Yes.

Mr. LEA. Is the 80-pound rail a standard rail?

Mr. SAWYER. It is rather an unusual weight. It is lighter than is commonly used on main lines and heavier than is used on ordinary logging lines. It is a sort of compromise. It is considerably lighter than the Milwaukee used in its main-line work.

Mr. LEA. How about the ties?

Mr. SAWYER. The ties conformed to the Railroad Administration standard—that is, as to the main line. In our logging operations

we intended to use ties which would not pass main-line inspection, and we did use in a few sidetracks on the main-line railroad some cull ties, but all of those in the main-line railroad and most of those in the sidetracks would pass for the main line of any railroad. That, I might say, was generally true of the construction of the railroad. It is built to main-line standards and high standards—necessarily so.

Mr. LEA. Now, what amount of traffic was this road prepared to handle?

Mr. SAWYER. My studies of the situation led me to believe that it would be necessary for a considerable number of months to handle over the road an average of 300 cars of logs a day, and, of course, the same number of empties in the other direction, plus the merchandise to take care of three or four thousand men.

Mr. LEA. How does that amount of traffic compare with the ordinary amount of traffic of an average transcontinental line?

Mr. SAWYER. There is no one of the northern transcontinental lines which to-day moves more than two-thirds of that business. The Southern Pacific and Santa Fe have moved it, but I think they never have averaged that for any considerable period. At the present time the main line of the Northern Pacific is moving about 200 loads a day. The main line of the Milwaukee is moving approximately the same, and the main line of the Great Northern about 150.

Mr. LEA. How does the wear and strain on a railroad from log traffic compare with the ordinary commercial traffic?

Mr. SAWYER. It is very much worse. The logs necessarily are loaded hurriedly, and the peculiar shape of the logs and the nature of the way they were piled into cars results in an unsymmetrical load, an unbalanced load, so that the car is very hard to keep on the track, and if it is kept on the track it is very hard on the track. It tends to knock it out of line and out of surface, as the trackman says, puts bends and depressions in it.

Mr. LEA. Assuming that this road would have handled about 300 cars a day, about what would have been the expense of transporting logs from Pleasant Lake to the Port Angeles mill per thousand?

Mr. SAWYER. Around about a dollar a thousand feet.

Mr. LEA. Now, in case the Port Angeles mill failed to saw the entire log product what, if any provision had been made for towing?

Mr. SAWYER. We had, as I think is in the record, contracts with a number of mills on the Sound to take care of the initial output up to the time when the Angeles mill was ready, and also of any surplus there might be that the other mills could not handle. The arrangements were completed at the time the armistice was signed to tow these logs down the Sound from a point on Squim Bay—I forget the name of the railway station, but it is a connection with what is known as the Snow Creek Logging Co.'s railroad. In a general way, that is about 20 miles east of Port Angeles.

Mr. LEA. Now, is that dumping point that was provided for in the Sound or in the straits?

Mr. SAWYER. It is in the bay which runs down into the peninsula, and which opens just about on the corner between the straits and the Sound, just about at the point where the straits run into Puget Sound. You will recall that the straits run east and west and the main Sound north and south.

Mr. LEA. Yes.

Mr. SAWYER. Generally speaking, this was on the northeast corner of the peninsula.

Mr. LEA. What was the object of providing for the towing operation from there instead of from Port Angeles?

Mr. SAWYER. In order to get away from the difficulty and danger and certain delay in towing logs out of Port Angeles. The water in the straits is exceedingly rough, particularly in the winter months. On the bay, going on east 20 miles, we get away from the most dangerous points and avoided considerable risk to our logs and also a certainty of very serious delay to our movement.

Mr. LEA. Have you had the opportunity of observing the water conditions on the straits?

Mr. SAWYER. Yes. I have been on the Sound off and on for 20 years. I happened to be, at one point in my checkered career, a member of the crew of a sloop that won some races up in that country.

Mr. LEA. What about the practicability of towing on the straits, where continuous operation was required?

Mr. SAWYER. Where continuous operation is required it is absolutely not practicable. The logs are towed out of the straits, and where continuous operation and regular prompt operation is not required it is perfectly feasible and perfectly practicable, but the movement is subject to very serious delays during four months of the year. It would be subject to delay for at least half the time, and during the entire year it is subject to occasional delay.

Mr. LEA. What portion of the year would be the time in which it would be subject to the serious delay?

Mr. SAWYER. From about the 1st of November to about the 1st of March.

Mr. LEA. Have you ever been at Clallam Bay?

Mr. SAWYER. Yes, sir; many times.

Mr. LEA. What do you know about the shipping facilities there?

Mr. SAWYER. The shipping facilities there are exceedingly limited. I endeavored last summer, late in the summer when our operations were very heavy and the movement of our trucks was congesting the ferry capacity on Lake Crescent, to move some freight into Lake Pleasant by way of Clallam Bay, and I found the steamboat company which has served that country for many years unwilling to enter into the arrangement on account of the great difficulty and frequent impossibility of transferring the freight shipments. Again, when the work was shut down I had a couple of hundred head of horses to go out of that country. The roads were very bad, wet weather, and I went to the same shipping company and asked to arrange with them to have a boat come to Clallam Bay for those horses on a certain day, and they declined to send the boat there because it would be exceedingly doubtful whether we would happen to pick on a day when they could load the horses. That bay is open to the north and to the east, and there is only one small part of it that is in any way sheltered, so that the water in there is very rough. One of the worst shipwrecks in the annals of American shipping occurred less than 20 miles from there. That is one of the most dangerous pieces of water in the United States.

Mr. LEA. Do you know anything about the water capacity there for making up rafts?

Mr. SAWYER. It is very limited. There is, as I say, only a small part of the bay which is protected—and this I have obviously not from personal knowledge—but I have been told by men who did the work in there that for a considerable part of that production area the bottom is exceedingly hard so that piling can not be driven. So that there is only room to handle a small quantity of logs. The operators in there at the present time, the Goodyear Lumber Co. work on a very small scale, and get along nicely, but they have got the place about to its limit. I guess that it might be possible to arrange to handle three to five hundred thousand feet a day there, but half a million feet a day would certainly be the limit, and that only during periods of good weather.

Mr. LEA. Now, when you were engaged in this work, did the Milwaukee in any way prescribe your duties or have control of construction?

Mr. SAWYER. Most assuredly not; most emphatically not. On the contrary, I had quite a good many quite heated controversies with the officials of the Milwaukee about various details of the movement, and I think it may not be unfair to say that I was a very unpleasant neighbor for the Milwaukee officials for quite some time.

Mr. LEA. Now, Mr. Sawyer, the question of the advisability of the Crescent Lake route as compared with the extension of the Milwaukee beyond Deep Creek has been a consideration. What do you know as to the comparative difficulties of constructing by these two routes?

Mr. SAWYER. Let me say in the beginning, as I have already said, that the route was determined when I went to the job, but very shortly after I took hold—I do not remember when, but it was some time in June—I met in Seattle a Mr. Byram, at that time president of the Milwaukee Railroad, and had some talk with him about conditions up there. He took occasion to express deep disgust at our action in choosing the Lake Crescent location, saying that it was a very serious mistake. I had previously heard some talk about that and for my own information and to protect myself against some possible hostile inquiry I made quite a careful investigation. The route which was built required 8 miles more track than the projected route from Deep Creek. The quantity of material to be handled on the two routes was about the same, but the material on the Deep Creek route was concentrated on 3 or 4 miles, in about the middle of the work. That road climbed over a divide where the crossing would have to be made with a series of deep cuts and high fills, work that could only be done by machinery, steam shovels. There was no way of getting those steam shovels in, and it would have been tremendously expensive and a very long process to get the shovels in. It was the judgment of experienced men who built the road, and after probably half a dozen trips into the Pysht country, I fully concur in their judgment that it would not have been possible to do the grading for the route over the Pysht summit in the time that was allotted. Even thought it had been the line almost all the distance runs through what is commonly, generally spoken of as clay.

The nature of the spruce tree is such that he grows in the mud and clay, and any time the testimony is offered that any particular route runs through spruce all the way, that testimony means that

that route would be exceedingly difficult to handle in wet weather. This route over the Pysht summit, as I say, was in clay. In that country the average rainfall is about 140 inches, or practically 12 feet a year. There is no good supply of gravel material adjacent to the line, and it would have been, as a practical matter, utterly impossible to lay track and put that line in shape for traffic in the middle of the rainy season. On the contrary, the Lake Crescent route runs for practically its entire length through rock and gravel. There is less than half a mile on the 36 miles where the country is such that the wet weather will seriously interfere with the line, and it also, by chance, was so arranged that the quantity of material along the Lake Crescent line is very well distributed over 20 miles, so that the work could be attacked at a number of places.

Mr. FREAR. I rather think this thing has gone to such an extent that the evidence on these matters should be brought out by questions and answers. Frankly, I do not believe that this is the right way to present this question. You have talked about half an hour, or very nearly that length of time, and I do not like the way that everything is condemned on one side without possible qualification, and I believe questions and answers will develop the real situation war better.

Mr. SAWYER. I am in the hands of the committee, interested only in the truth and the facts.

Mr. FREAR. I understand. I had no idea that this was going to extend to this great length, and that everything was going to be condemned on one side and everything accepted on the other.

Mr. SAWYER. I think it has already been condemned on one side.

Mr. FREAR. It has, by the gentleman who is the witness, I understand.

Mr. SAWYER. It is about my turn.

Mr. FREAR. You are getting your turn, all right; that is sure.

Mr. SAWYER. I am entitled to it.

Mr. LEA. I think it is ridiculous for the chairman of this committee to constantly manifest animus against any witness who comes and states an opinion that is contrary to his preconceived opinions. I will proceed by asking this witness questions. I did not want to precipitate any trouble of this kind.

Mr. FREAR. I will state this for the record, that this witness who is a railroad engineer, has tried to practically cover every proposition here involved, from logging to bays and everything else for the period of 15 to 20 minutes without interruption. I have simply asked that questions and answers be offered, which is the only reasonable way permitted in a court, in an investigating committee or any other place. Never before, so far as I know, has any witness been allowed such license. I think it is proper to present questions and answers; that is all, and let the facts be shown.

Mr. LEA. What was the last sentence there, Mr. Reporter?

(Testimony repeated, as follows: "On the contrary, the Lake Crescent route runs for practically its entire length through rock and gravel. There is less than half a mile on the 36 miles where the country is such that the wet weather will seriously interfere with the line, and it also, by chance, was so arranged that the quantity of material along the Lake Crescent line is very well distributed over 20 miles, so that the work could be attacked at a number of places.")

Mr. LEA. You had reference to the road that parallels the Crescent Lake route?

Mr. SAWYER. Yes; and also the lake. The lake was of very great advantage in doing that work.

Mr. LEA. Now, were you familiar with the negotiations that were had with the Siems-Carey-Kerbaugh Co. as to relinquishing their contract for fitches?

Mr. SAWYER. Yes, sir. I sat in both sessions of the loggers which have been referred to, except that portion of one of them which was a star-chamber operation.

Mr. LEA. What was the substance of the understanding or the offer?

Mr. FREAR. You had better ask him for the written document. The offer we know, because that has been put in the record.

Mr. LEA. Well, I wanted to see if we had it right. It was not put in the record; no, sir; the offer that was made to relinquish the Siems-Carey logging contract.

Mr. FREAR. Yes; it was put in by Disque, as I understand.

Mr. SAWYER. If I might volunteer a suggestion there, Mr. Chairman, the testimony on that that I have listened to was partly based on a misapprehension. I think it proper that that misapprehension be cleared up.

Mr. FREAR. Well, possibly all the others were mistaken, but go on and make a brief statement, as long as it does not lead into a long dissertation upon the subject of this contract as well as other things.

Mr. SAWYER. The misapprehension I speak of was on the proposition that the 500,000,000 feet of logs which the loggers were asked to get out was very greatly in excess of the requirements of Siems-Carey. As a matter of fact it was practically the same or a little less. The Siems-Carey contract contemplated the delivery of 250,000,000 feet of fitches in the calendar year 1919. I heard testimony here to-night that they selected No. 1 and No. 2 logs on certain operations which ran 45 per cent cants, fitches. On that basis it would take 550,000,000 feet of logs to get out the 250,000,000 feet of fitches, so that nothing was asked of those loggers that Siems-Carey were not obligated to perform. If I might suggest something else in there; it has not been testified to, but I think it only fair that it should be testified to, that the firm of Siems-Carey-Kerbaugh offered to give up—to cancel not only that part of the contract which related to the—

Mr. FREAR. I object to that unless there is some statement made or something produced here in the record except the voluntary conclusion of the witness.

Mr. SAWYER. This is not a conclusion, it is a statement of fact.

Mr. FREAR. It is entirely a conclusion of the witness that is presented to this committee.

Mr. LEA. These negotiations were going on, what did Siems and Carey offer to surrender?

Mr. FREAR. Who did?

Mr. LEA. I said Siems and Carey.

Mr. FREAR. Were they there? There is no evidence that they were.

Mr. LEA. Were Siems and Carey present at that time?

Mr. SAWYER. Not physically present in the room. They were on an adjacent floor and submitted a written proposal.

Mr. FREAR. I ask to have the written proposal brought forward, or something to show where it is or what it is.

Mr. SAWYER. The written proposal is not in my possession, but it was substantially the proposal which was submitted by Gen. Disque to the loggers and which is already in your record.

Mr. FREAR. It is in the record, then?

Mr. SAWYER. It was accompanied by a message to the effect that they would be glad to make a similar arrangement covering the balance of their contract; that they would cancel their entire contract.

Mr. FREAR. That ought to be stricken from the record. There is no evidence of that whatsoever before this committee.

Mr. SAWYER. I am offering evidence.

Mr. LEA. Oh, Mr. Chairman, let us have a little latitude here.

Mr. FREAR. This witness has shown an evident bias and a complete claim of understanding of every possible matter that can come up. We do not know whether he was with these people, whether he was there or not. He is simply offering his conclusion.

Mr. LEA. He stated that he sat in on this conference, and that is the offer that was made.

Mr. FREAR. By whom and where?

Mr. LEA. By Siems and Carey, who were then in the building.

Mr. FREAR. But they were not there present. He states that they were not there in the room. He is stating a conclusion. Who made the offer? That is the only question you can put in in court. All I ask is that some reasonable limitation be placed upon this method of examination, which permits one person to go on and make wholesale conclusions.

Mr. SAWYER. Will you pardon me if I suggest a reference to the Butler testimony in this case?

Mr. FREAR. I do not remember what Butler testified, but I think he was present. Mr. Butler and Mr. Chinn were witnesses, and they had all the records, all the papers, and they were put in the record. We have absolutely nothing here of that kind.

Mr. LEA. Whenever any testimony you do not like goes in you begin to raise technical objections, but when it is something you want in any old thing on earth goes; even a letter written by a discontented soldier is put in. All I ask is somewhat the same latitude.

Mr. FREAR. The counsel for the defense has refused to permit the chairman and others to put in affidavits that are sworn to here.

Mr. LEA. You are mistaken about that.

Mr. FREAR (continuing). And now he insists that the testimony of a man be received in the record who does not state that he knows. If he does know, we want to find out on what basis he knows, and that should be accepted in the record and put in.

Mr. LEA. If the chairman does not want this evidence in, we will stop right now.

Mr. FREAR. It will not be put in without some reasonable check upon it; that is certainly the disposition of the chairman.

Mr. SAWYER. Anything that I have to say can be proven anywhere at any time.

Mr. FREAR. But we have no way of proving it or disproving it in the closing hours of this hearing.

Mr. SAWYER. I offered you my testimony in the beginning.

Mr. FREAR. This statement of yours covers everything.

Mr. SAWYER. I offered you my testimony in the beginning, and anything I have got to say can be positively proven.

Mr. FREAR. That is not law and that is not testimony.

Mr. SAWYER. There is nothing legal like in the testimony in these proceedings, anyway.

Mr. FREAR. Isn't it? Well, the committee will endeavor to have some restrictions. If you know of anything, if you have any papers or know of something, who came in and made the proposition, or something else, that is testimony. If you heard Siems or Carey come in and make the proposition, that is testimony; all those things become testimony, but the idea of you saying that Siems and Carey did this and that Siems and Carey did that, notwithstanding that counsel here at the end of the table wants all those things in the record, I submit that any court or any investigating committee reading the testimony that you have put in would say that questions and answers ought to have been brought forth, and the basis of determining that ought to be present.

Mr. SAWYER. I endeavored to testify that I personally heard that offer that was made, and that it was made in my presence.

Mr. FREAR. By whom?

Mr. SAWYER. By W. F. Carey, the head of the firm of Siems-Carey & Co.

Mr. FREAR. What was the offer?

Mr. SAWYER. The offer was to cancel in its entirety his contract for operations in Clallam County, provided he could have satisfactory assurance that the contract would be carried out in accordance with the offer made by these loggers; that is to say, carried out without profit.

Mr. FREAR. Unquestionably that is the testimony.

Mr. SAWYER. I endeavored to give that testimony sometime ago.

Mr. LEA. That is all.

Mr. FREAR. Why was it, if that was true, that Disque, who was representing these people, limited it to the flitches and insisted upon it being a matter of logs purely, and never said a word in all the correspondence that has passed between the parties in reference to flitches, so far as a written report shows or anything else that has come before the committee.

Mr. SAWYER. The people who made the offers were loggers pure and simple. They had not interest in the milling operations in connection with it, the suggestion there that another outfit of millers take over the miller end.

Mr. FREAR. There is nothing in the record that is shown that carries out such a suggestion anywhere, so far as the committee knows.

Mr. SAWYER. I made the statement.

Mr. FREAR. This is an entirely new and novel proposition. I ask, if that was true, why didn't Disque suggest that was one of the things that ought to be undertaken?

Mr. SAWYER. I have no knowledge of the general's operations.

Mr. FREAR. You were connected with the Milwaukee road before you were appointed here in this work?

Mr. SAWYER. Yes, sir.

Mr. FREAR. And what was your position then?

Mr. SAWYER. Superintendent.

Mr. FREAR. Of what?

Mr. SAWYER. Oh, it was technically known as the Tacoma-Eastern Railroad, the Coast Division of the St. Paul road.

Mr. FREAR. Then you say when you undertook these operations you became—what was the term you used?

Mr. SAWYER. At the present time I am assistant to the general superintendent.

Mr. FREAR. That is as I understand it, you stated that you became a very unpleasant neighbor for the Milwaukee during the operation of this work.

Mr. SAWYER. Yes, sir.

Mr. FREAR. And then you were appointed immediately afterwards as assistant to the general superintendent?

Mr. SAWYER. Yes, sir.

Mr. FREAR. While you were handling these operations under the contract, as I understand, there was no appeal from anything—from your action; you had the determination of these matters as embodied in the contract, that is, of all the matters, and determination of how the road should be built, and there was no appeal from either the contractor or the contractee. The contract so read, in substance, and gives all that power to the man who had charge, and you had charge. That is right, is it not?

Mr. SAWYER. Yes, sir. That is a very common provision in such contracts.

Mr. FREAR. Well, that may be so, but of course it is a very unusual contract, it would seem to me, to give to one who was in the position that you were occupying at that time, that the Government of the United States as well as Siems-Carey Co. had no appeal from your decision in such matters.

Mr. SAWYER. There must be a head for an operation.

Mr. FREAR. There must be a head for an operation, true, but such power resting in one man who before the operations was an active officer of the Milwaukee, and immediately steps back into one of the most prominent positions in the Milwaukee road, was surely a tremendous power, we must confess, to be placed in your hands.

Mr. SAWYER. Just what relation do you trace between the position formerly occupied by me and the power?

Mr. FREAR. Well, it speaks for itself.

Mr. SAWYER. I do not think it speaks for itself. I object most emphatically to that insinuation.

Mr. FREAR. There is no insinuation; there is the statement of fact. No contract in my experience, and I have studied these things for years, has ever approached the power that was given here, which placed all these matters in your hands without the permission even of an appeal.

Mr. SAWYER. I had nothing to do with the contract, but I object to the suggestion as to my previous occupation and my present one.

Mr. FREAR. I haven't any question as to your honorable occupation, as to your honorable position, or anything of that kind, nor has anyone else. The point is that you were in that position, though, and

that you had the sole control is a matter of legal knowledge based on the contract.

Mr. SAWYER. But I did not give up my rights as a citizen when I entered the service of the St. Paul road.

Mr. FREAR. True, nor when you left there.

Mr. SAWYER. Nor when I left there. I served my country honorably, and only my country.

Mr. FREAR. You have testified here in all branches of this case practically, in reference to logging, in reference to bays, in reference to slides, in reference to practically every phase of the question. Now, what has been your experience as a logger?

Mr. SAWYER. I think I stated quite clearly that for the past 10 years I have been very closely associated with loggers in different parts of the West.

Mr. FREAR. Well, a lot of us have been. What has been your experience as a logger?

Mr. SAWYER. I think I have answered that question.

Mr. FREAR. Is that all the answer you care to offer?

Mr. SAWYER. Yes, sir.

Mr. FREAR. And on the basis of that information you seek to pass judgment upon all the rafting, upon all the work that was performed in Clallam Bay and elsewhere on the Sound, as I understand it.

Mr. SAWYER. By no means. I was guided by frequent and lengthy conferences with experts, men who had given their lives to such work. No man stands by his own knowledge.

Mr. FREAR. The loggers there testified they had never lost a raft in Clallam Bay. We, as a committee, had just as good an opportunity for observation of that bay as you had, unless you went out and made soundings or unless you have soundings to offer to the committee or some statement; is that not true?

Mr. SAWYER. No; I would hardly think so.

Mr. FREAR. We discussed it with Lightner and with all those people about those surroundings. Lightner was the man in charge of the operation.

Mr. SAWYER. He, I think, testified to the reason for his position.

Mr. FREAR. Oh, the reason for his position is no more suggestive than the reason for your position.

Mr. SAWYER. Not a bit.

Mr. FREAR. So ours or anybody else.

Mr. SAWYER. Not a bit; but his statement is not corroborated in any way.

Mr. FREAR. By what?

Mr. SAWYER. By anyone else with knowledge of the facts.

Mr. FREAR. As to the rafting?

Mr. SAWYER. As to the conditions in the bay. There is no question about the fact that the rafting can be done. My statement as to the rafting was that with reference to regularity and freedom from delay. His operations run through eight months in the year, and during those eight months if a raft lays up for two weeks it does not make any difference. If a raft laid up 24 hours in our operations it probably meant the lives of men in France.

Mr. FREAR. That is true—that is true—and when you stopped the mills here to build railroads way down to the Blodgett tract—

Mr. SAWYER. That was out of my field entirely.

Mr. FREAR. I understand, but this all relates to the lives of men in France, that we are interested in.

Mr. SAWYER. I can not testify as to the Blodgett tract.

Mr. FREAR. I understand not. No; they were not permitted to carry on some of their logging operations and their cutting operations because of a change of policy that was suddenly determined upon here, which meant the lives of men in France—that is true.

Mr. SAWYER. I have no knowledge of anything of that sort.

Mr. FREAR. Here is the situation that occurs to us: There is no controversy; it can not be disputed that the Goodyear Co. never lost a raft while they were logging there.

Mr. SAWYER. That has no connection with what we are talking about.

Mr. FREAR. Now, I ask to have that stricken out; that answer. It has no basis. I was going to put a question to you.

Do you mean to say that that statement is not true?

Mr. SAWYER. No, sir.

Mr. FREAR. Do you mean to say the statement is not true that Pendleton, with all their work there upon that sound, which he claims is a rough body of water, 80 miles wide—do you mean to say his statement is not true when he says that all their work was done by rafting in the same way?

Mr. SAWYER. I do not know anything about Pendleton's work, but again I do not see any connection.

Mr. FREAR. I do not know that you do see the connection; possibly you and I can not have the same viewpoint in that, but Pendleton was able to bring results with one-tenth of the milling and one-tenth of the logging capacity.

Mr. SAWYER. I do not know anything about his operations.

Mr. FREAR. That would have been—on the same basis here it would have been 260,000,000 feet of finished airplane lumber, if his statement is correct that he would have produced in the same time, based on what he actually succeeded in getting.

This Siems-Carey-Kerbaugh Railway you say is built as a modern, up-to-date road?

Mr. SAWYER. Yes, sir.

Mr. FREAR. How does this road compare with the Milwaukee road, to which it joined at Joyce?

Mr. SAWYER. Considerably superior. That is one of the points—

Mr. FREAR. The Milwaukee road has lighter rails, hasn't it?

Mr. SAWYER. Yes. That is one of the points on which I was an unpleasant neighbor.

Mr. FREAR. The Milwaukee road, in a way, is a road without the same standard of general workmanship, either originally or in the present time.

Mr. SAWYER. Yes, sir.

Mr. FREAR. That same branch of the Milwaukee road was to carry over every log that came in from Lake Pleasant, was it not?

Mr. SAWYER. After being rebuilt to my specifications.

Mr. FREAR. You had no voice in the Milwaukee road building, did you?

Mr. SAWYER. I have already suggested that I was an unpleasant neighbor and it was to be rebuilt to my specifications.

Mr. FREAR. Whereabouts?

Mr. SAWYER. Between the junction near Joyce and Port Angeles.

Mr. FREAR. Have you any statement—has Col. Disque got anything to show that he was ordering a rebuilding of the Milwaukee road?

Mr. SAWYER. I presume that he has the records in his files. There was considerable correspondence about that, I know.

Mr. FREAR. Any power in Col. Disque, or in you, to determine the policy of the Milwaukee road, which rested entirely with the Railway Administration in Washington?

Mr. SAWYER. I went over that railroad with the Federal manager and agreed with him as to what was necessary to be done to handle our traffic. I hadn't the power to order it, but it would be done.

Mr. FREAR. That is the first reference that has ever come to the management of the Milwaukee road; also the first that we have ever heard suggested. Is that in the records at Washington? Who was the manager that you went with?

Mr. SAWYER. H. E. Byram, the Federal manager at Chicago. I presume the record is in his office in Chicago.

Mr. FREAR. H. E. Byram—that is not the president of the Milwaukee road?

Mr. SAWYER. I said the Federal manager of the Milwaukee road.

Mr. FREAR. Of the Milwaukee road?

Mr. SAWYER. Yes, sir. Before the Federal control—I may explain, before the Federal Government took over the railroad he was president of the corporation. He is now divorced from the corporation and the Federal manager under the Railroad Administration.

Mr. FREAR. The same substantial relation, is it not?

Mr. SAWYER. Why——

Mr. FREAR. Although a different title.

Mr. SAWYER. In a general way.

Mr. FREAR. Under the jurisdiction, of course, of the Government. And you had a talk with the president of the Milwaukee road?

Mr. SAWYER. Went over his property with him.

Mr. FREAR. Went over the Milwaukee road property, and this road, of course, that we have in consideration here, will eventually be taken over by the Milwaukee road, won't it, if it is to be used at all?

Mr. SAWYER. I really don't know.

Mr. FREAR. Of course, none of us know.

Mr. SAWYER. They would seem to be the logical people to operate it; but, after the suggestion that has been made by this committee, it would take some nerve for them to buy it, but I hope they will.

Mr. FREAR. I hope they will buy it for at least 10 per cent back on construction, although this committee has been informed that it will not be bought excepting on reproduction value. Upon what do you base the rate of \$1 per thousand into Port Angeles?

Mr. SAWYER. Oh, it is based on a calculation as to the wages of trainmen and enginemen, the fuel consumed, and the general cost of running a train.

Mr. FREAR. But there are joint rates with the Milwaukee road. What were those?

Mr. SAWYER. We didn't contemplate paying tariff rates over that railroad. We expected to make an arrangement under which our own trains would run through over their rails.

Mr. FREAR. But you didn't make any such arrangement?

Mr. SAWYER. The Federal manager had recommended the arrangement to Washington.

Mr. FREAR. The arrangement had got to such an extent that you were making calculations, were you not, to build a railroad through to Port Crescent?

Mr. SAWYER. There had been talk of that.

Mr. FREAR. Surely, up to the very last; that is true, is it not?

Mr. SAWYER. There had been talk of it.

Mr. FREAR. The engineers of the Milwaukee road, and I assume, other engineers as well, and operators as well, had recommended to Mr. Disque—Col. Disque, as he says in his statement to the Secretary of War, that this road along by Deep Creek, up what you call the Pysht Creek, was the desirable route, and he suggested a very strong prejudice, as we have read the McIntyre report which contained his letter, against the Crescent Lake route, and the Secretary of War conformed to his opinion, in his letter. What was your experience in reference to this Pysht Creek route?

Mr. SAWYER. Why, I think that was when the ceremonies broke up to-night. I was endeavoring to explain that I had been over that route, spent considerable time on it, giving the matter considerable time.

Mr. FREAR. How many times had you been over that route?

Mr. SAWYER. Oh, I had been in there four or five times, I guess.

Mr. FREAR. Where did you go, and when, and what purpose did you have in view? The decision had been made by that time to go over the Crescent Lake route, hadn't it?

Mr. SAWYER. I have already explained I expected considerable adverse criticism, and I had already received some adverse criticism. I wanted to inform myself as to the conditions.

Mr. FREAR. But you had no responsibility whatever in the decision, as I understand it.

Mr. SAWYER. I had no personal responsibility, but I had some curiosity as a citizen and as representative of the organization.

Mr. FREAR. Your interest as a citizen caused you to go up on this Pysht Creek route several times?

Mr. SAWYER. I didn't go over it several times. I was in that country several different times, at different places.

Mr. FREAR. That is, in an automobile? How did you go along the route?

Mr. SAWYER. I was through in an automobile and other times I walked, and other times I had a saddle horse.

Mr. FREAR. Did you walk and take a saddle horse over the entire survey?

Mr. SAWYER. No, sir.

Mr. FREAR. What?

Mr. SAWYER. No, sir.

Mr. FREAR. The testimony is here from some of the witnesses that that was a very feasible route, it was so feasible, in fact, that the Milwaukee Road had adopted it and asked for the extension or for a loan from the Government in order to make the extension?

Mr. SAWYER. That was under different circumstances and for different purpose.

Mr. FREAR. Well, the purpose was to get an extension of the road?

Mr. SAWYER. Yes.

Mr. FREAR. For the purpose of getting into this Clallam Bay tract?

Mr. SAWYER. That is not what we were interested in. We were interested in getting out spruce on a given date, and getting it out regularly after that date. That we could do the way we started, and that we could not do the other way.

Mr. FREAR. Of course, the War Department could have undertaken that and given their active influence and thrown 5,000 men right in there, in the same way they had been over the on Siems-Carey-Kerbaugh Road.

Mr. SAWYER. They could not have accomplished the results, if they had.

Mr. FREAR. That is a conclusion, of course. Possibly. You had 36 miles to build, with 5,000 men, which is said——

Mr. SAWYER. We never had 5,000 men.

Mr. FREAR. That is your statement, is it not? Let me see if I have misquoted you.

Mr. SAWYER. About three thousand. If I made the statement five thousand, it was a slip of the tongue. We actually worked something over three thousand.

Mr. FREAR. Well, that was the statement that I had, and it was rather a surprise.

Mr. SAWYER. I beg your pardon for an inadvertent slip of the tongue.

Mr. FREAR. That is all right. It says 5,000 men worked in 26 camps; that is the statement.

Mr. SAWYER. We have something over 3,000. It is my recollection that the maximum number was thirty-three hundred and something.

Mr. FREAR. The statement of some officer of the concern is that 4,000 soldiers were working; but I take it that some of that 4,000 soldiers may have been in logging camps. I don't know whether that is true or not.

Mr. SAWYER. We had just less than 4,000 soldiers on the two jobs.

Mr. FREAR. That is it. Well, then, over 3,000. How many men do you employ usually in one of those camps, ordinarily?

Mr. SAWYER. Oh, that just depends on conditions. I should say——

Mr. FREAR. I was wondering if there was any uniformity.

Mr. SAWYER. There is no uniformity. It depends on conditions. Probably 150 would be an average number.

Mr. FREAR. One hundred and fifty. That would be 26 camps; that would take a little less than 150 to the camp, then. If you put 26 camps on 25 miles of road, that would be a camp on every mile; and they had a road—a good road—up from Pysht Creek; they had a way of bringing everything over this same main-line road and carrying it down Pysht Creek, which acted almost as a parallel road, in a similar way.

Mr. SAWYER. That was 6 or 7 miles from the heavy part of the work, and the heavy part of the work was work that could not be done by hand. Those cuts were exceedingly deep. It would not be feasible to take them out by hand. You could not cover it with men enough to make it by hand in a reasonable length of time.

Mr. FREAR. That is possibly true of a road built upon this route; but the testimony of Frost and of others who discussed the Pysht

Creek route was that that could have been built at a less cost, and it would seem that it could have been built just as quickly.

Mr. SAWYER. They were talking about something entirely different.

Mr. FREAR. Talking about what?

Mr. SAWYER. Something entirely different. There is not any reasonable relationship between the ordinary logging road and the road that was necessary to serve our purpose.

Mr. FREAR. Or the road that was built, in other words.

Mr. SAWYER. The same thing.

Mr. FREAR. The same thing. And are they building that kind of a road elsewhere throughout this whole district?

Mr. SAWYER. Yes, sir.

Mr. FREAR. Who has one of them, outside of the Yaquina road?

Mr. SAWYER. There were two witnesses before you to-day who have got similar railroads.

Mr. FREAR. Nothing like, as I understand, this road.

Mr. SAWYER. Similar construction: two of the most successful logging operators in the country, perhaps.

Mr. FREAR. They are very good operators. Of course, they have the means with which to construct. The average logger hasn't anything like those means; they haven't a great corporation back of them whereby they can build such roads.

Mr. SAWYER. The ordinary logger gets out 190,000 feet of logs a day, and we would get out 3,000,000. There isn't any reasonable relationship between the two jobs.

Mr. FREAR. You don't know whether you would have gotten out 3,000,000 or not. If you had gotten out 3,000,000, you would have had planes in a very short time for practically every man in Europe.

Mr. SAWYER. Well, that is up to somebody in Europe, not me.

Mr. FREAR. Surely the responsibility would not rest with you. The clearing of the 200 feet for the Forestry, I understand that that didn't apply there?

Mr. SAWYER. Well, it didn't apply, because I was too busy to do it.

Mr. FREAR. Well, what is the rule? What is that rule?

Mr. SAWYER. With them it is a matter of fire protection, and I guess it is a reasonable rule. They want inflammable débris back a certain distance from the track.

Mr. FREAR. That hasn't anything to do with ordinary grubbing or clearing out or anything of that kind.

Mr. SAWYER. Oh, no.

Mr. FREAR. You didn't do it because you couldn't?

Mr. SAWYER. I didn't have time.

Mr. FREAR. Now, you state that was the heaviest—I am just asking you on the statement made here—that is the heaviest stand of timber, I think you said, in the country?

Mr. SAWYER. That is not on the Forest Reserve. Some of the clearing which we did is through the heaviest timber. It is the timber on the Forest Reserve.

Mr. FREAR. What caused that statement to be made—that it is the heaviest timber in the country? I took that statement because it seemed to me a little—

Mr. SAWYER. It is my recollection that to-day sections 30 and 31 in township 12-5 down there carry more standing timber than any other two sections in the United States, and I offered that suggestion

on account of the query that was made as to why it cost so much to do the clearing.

Mr. FREAR. If that was so—that was the reason that struck me as a very remarkable statement—that up there in that whole tract, which was not a part of the Lake Pleasant, which was not a part of the—

Mr. SAWYER. There was practically no spruce on those two sections, but in order to get through those we had to remove more debris than we would in a similar place anywhere else in the United States, and that has a bearing on the cost of the clearing.

Mr. FREAR. On what information is that based? Where will we find something to evidence that?

Mr. SAWYER. I think Mr. Cecil, district forester in this town, will confirm that.

Mr. FREAR. You think he will confirm that statement?

Mr. SAWYER. Yes, sir.

Mr. FREAR. He will not confirm some statements that have been made here, I understand.

Mr. SAWYER. I don't know as to that; but that can readily be confirmed by Mr. Savidge, the land commissioner of the State of Washington, at Olympia, also.

Mr. FREAR. What was the stand of timber up at the particular tract that you have in mind?

Mr. SAWYER. The amount in feet?

Mr. FREAR. Yes.

Mr. SAWYER. Oh, I don't remember—in feet.

Mr. FREAR. Was that along the lake or where?

Mr. SAWYER. No; it is about two miles before you get to Lake Pleasant, as you go out on the road.

Mr. FREAR. That is down the Sol Duc River?

Mr. SAWYER. Yes, sir; just about where—if anyone showed you—it is just about where the second crossing of the railroad over the Sol Duc River is.

Mr. FREAR. And how long did that continue?

Mr. SAWYER. Oh, there is—

Mr. FREAR. I mean, how long a distance?

Mr. SAWYER. About 7 miles of right of way through that sort of timber. Those two sections, that was the heaviest, and there is 7 miles in there.

Mr. FREAR. What kind of timber is that?

Mr. SAWYER. Oh, it is probably 50 per cent hemlock, 40 per cent fir, and 10 per cent cedar, with a little scattering spruce, but not very much spruce.

Mr. FREAR. You don't know the sections. I wanted to find out if you knew the sections. That would be about 6 miles before you get to Lake Pleasant?

Mr. SAWYER. About 7—I think it is 7 miles before Lake Pleasant. That statement would be generally true, or possibly 8 miles. If we had a map around here, I could indicate the limits of it.

Mr. FREAR. Well, that is close enough, because we can find out. Now, the Lyre Canyon is a pretty serious canyon, isn't it?

Mr. SAWYER. Yes; that is very heavy work.

Mr. FREAR. Very heavy work over it when you went through.

Mr. SAWYER. Very heavy work.

Mr. FREAR. Are there many logging roads, or roads to bring out logs, to your knowledge, that have tunnels built of the size of those tunnels over there?

Mr. SAWYER. No, no; I don't know of any others. But, again, it is not an ordinary logging road. This is built for a different purpose, entirely, than the ordinary logging operation.

Mr. FREAR. When was this road located—could you say? I think your statement was it was located prior to June.

Mr. SAWYER. The general line was established when I went up there—when I went to Seattle on the 5th of June. The definite and final location was probably not completed before the 1st or the 5th of July.

Mr. FREAR. When was work begun, the actual work?

Mr. SAWYER. It is my recollection that the first tree was felled on the 27th of June. I am speaking from memory.

Mr. FREAR. The work was not completed when the armistice was signed, was it? How much was left?

Mr. SAWYER. There was about 10 miles of track to lay when the armistice was signed. The grading was completed.

Mr. FREAR. That 10 miles was toward the Lake Pleasant end?

Mr. SAWYER. Yes; the track laying was progressing from Joyce. That reminds me about one suggestion I would like to answer, with your kind permission.

Mr. FREAR. Surely.

Mr. SAWYER. I have heard some criticism as to the name "Disque" being applied to that junction, and I want to say that I got a letter—an official letter from the commanding general, saying that he objected to the use of the name "Disque" for the connection, and asking me to have it changed. That was done without his knowledge and over his protest.

Mr. FREAR. You mean Gen. Disque or Col. Disque?

Mr. SAWYER. Gen. Disque.

Mr. FREAR. We never believed that there was any responsibility attached to him when we saw that place that was there. Surely it is no compliment to him or anyone else.

Mr. SAWYER. I merely wanted to make it plain that that was done by the Milwaukee road without the knowledge of anyone in this operation.

Mr. FREAR. That would be accepted without question. Four camps—and I am asking this for the purpose of getting a line on the construction—four camps were between Lake Crescent and Joyce; that is, a distance of about 5 miles?

Mr. SAWYER. A little over 5.

Mr. FREAR. A little over 5. Now, how would those camps be established in there? You spoke of getting access; how was access had to them?

Mr. SAWYER. The country between Joyce and the mouth of the Lyre River Canyon had been logged off and then burned off, so that it was a very simple matter to run a tote road up there through the stumps.

Mr. FREAR. It ran right up to the side of the canyon, didn't it?

Mr. SAWYER. Yes; there is a little less than 3 miles in there. It was a very simple matter to get two camps in there.

Mr. FREAR. What would you build, false construction along the sides, so as to—

Mr. SAWYER. These were not in the canyon, Mr. Chairman. It is about 3 miles from the railroad connection to the canyon—to the mouth of the canyon.

Mr. FREAR. Yes.

Mr. SAWYER. And these two camps were in the first 3 miles before you got into that exceedingly precipitous canyon?

Mr. FREAR. After you come to the canyon there there is only one camp established in there.

Mr. SAWYER. There were two more camps. We ran a wagon road in from—you probably recall a little hotel at the head of the lake.

Mr. FREAR. Oh, yes.

Mr. SAWYER. Well, we struck off the main road right there and went over to the mouth of the canyon, and then went along the cliff above it and located one camp right where we struck the canyon, and the other one up on the top of the cliff above the canyon, so that the men from that camp had a very steep trail down to their actual work.

Mr. FREAR. In railroad construction like that—and I ask for information—do you proceed from the ends, or can you work from the side? Could you work from the side of the canyon where the river flows, or how do you do it?

Mr. SAWYER. That work in the canyon was very largely done from the side. On most of that rock workmen started in on the face of the cliff, at about the elevation of the track, and ran a little tunnel in 20 or 30 feet; then at the end of that tunnel they, as they say, cross-cut, put in an "F," possibly several lateral branches, filled that up with powder and blew the rock off into—

Mr. FREAR. And then worked from the ends in getting at it.

Mr. SAWYER. No; worked from a great many different places, wherever they could attack it, depending entirely, or very largely, upon the character of the material and the way it broke up.

Mr. FREAR. Who was Edward Donlan; what was his position?

Mr. SAWYER. Donlan is a lumberman from Montana. He was a friend, some years ago, of W. F. Carey, the head of this firm of Siems-Carey-Kerbaugh. Understand, I am talking now from not personal knowledge.

Mr. FREAR. I understood you had met him.

Mr. SAWYER. Yes; I know him; and, as a matter of hearsay, I know the relationship and the circumstance, but only as hearsay.

Donlan had been at one time in charge of the lumbering operations of what is now the Anaconda Copper Mining Co., but had left that service. I don't know the details; but, at any rate, he was out of the service of the Anaconda Copper Mining Co. for a number of years, and I believe was on rather bad terms with them. And he and Carey were personal friends, and when this operation in Clallam County was called to Carey's attention he wired Donlan and asked him to accompany him to Clallam County as a personal friend and as an experienced timber man. Donlan went out with him and became interested in the proposition, and for about three months, as I now recollect it—possibly four months—he was in charge of the logging end of the business for Carey.

Mr. FREAR. What was his position, what was he known as, superintendent or manager or what, so far as you know?

Mr. SAWYER. Oh, things were in an unsettled condition and I don't know that he had any title, but he——

Mr. FREAR. He had charge of it?

Mr. SAWYER. He had charge of it. But that connection was brief. His relations or his operations had previously been in a different country and under different conditions, and, for various reasons, he dropped out. He started the operations up there and was in undisturbed charge of them for a brief time, but he was entirely separated from the organization before the work got very far along.

Mr. FREAR. What was the character of his work, just as briefly as you can describe it?

Mr. SAWYER. Oh, he made the preliminary plans.

Mr. FREAR. For what?

Mr. SAWYER. For the logging operations. He had nothing to do with the railroad construction, but he made the preliminary plans for the spruce operations. He acquired some timber holdings in there, got some options on camp sites, and he started some little work in cruising. I think even before he left he had a little work done surveying a logging road. In general, he did the preliminary work on the logging operations. But his connection was brief and he was entirely separated from any connection with the operation, very shortly, and I may ask that whatever—if he ever had any partnership enterprise or interested in the enterprise or anything of that sort it was settled personally and not through the Government funds. In other words, we never paid him for any promotion work.

Mr. FREAR. That is, it was entirely with Carey and Kerbaugh and the others?

Mr. SAWYER. Well, I don't know what his relationship was, but the Government didn't pay him anything.

Mr. FREAR. The record in the Ray case or Ray investigation, showed that Kerbaugh came and met him and they came on together, and so I was just wondering what the connection was.

Mr. SAWYER. That is because, as I understood it, it was a special friend of Carey's, and had had extensive logging and milling experience, though in a different country and under different conditions.

Mr. FREAR. He is a senator, isn't he—is he a senator now or do you know—of Montana?

Mr. SAWYER. Yes; I think he is. I think he was the Republican leader in the Montana senate.

Mr. MAGEE. Who is this?

Mr. FREAR. Carey.

Mr. SAWYER. Oh, Carey?

Mr. FREAR. I mean Donlan.

Mr. SAWYER. Donlan.

Mr. FREAR. Donlan; yes.

Mr. SAWYER. I think Carey is of the true faith.

Mr. MAGEE. What?

Mr. SAWYER. I think he is a good Democrat; I am not sure.

Mr. FREAR. It is pretty hard to tell about the "true faith" when the Republicans here are calling ex-Governor West, and when my confrere over here, with whom I sometimes have a wordy warfare for a moment insists on calling the Republican leader of the legislature out here; I think it is pretty hard to get a fair balance.

Mr. LEA. Well, that is evidence that there are good men in both parties.

Mr. FREAR. That is one of the possibilities.

Mr. SAWYER. The strange thing is that no one has asked me about my politics.

Mr. FREAR. We may assume, when you speak of the "true faith" in the tone that you have, that it doesn't require a very difficult operation to arrive at.

Mr. SAWYER. As a matter of fact, I never consciously voted for a Democrat in my life; but I don't think that has any significance.

Mr. FREAR. Not at all. I think that is all.

Mr. MAGEE. Now, is the Milwaukee affiliated in any way with the Union Pacific, Major?

Mr. SAWYER. Why, they are not affiliated in any way. They have some joint interests in common.

Mr. MAGEE. Yes.

Mr. SAWYER. That is to say, the Union Depot in Spokane, for instance, is owned jointly, and there is some railroad in the Grays Harbor district owned jointly; but, on the other hand, they have similar joint ownership with a little railroad over in Idaho, with the Northern Pacific. There are, I think, some few men serving on the boards of both companies, but I think it can not properly be said that they are not entirely separate.

Mr. MAGEE. Do they have the same terminals in Seattle?

Mr. SAWYER. They have separate freight terminals. The Milwaukee is a tenant in the Union Pacific passenger station, but only a tenant; it pays so much a month. It has no property ownership; and it owns a site for a passenger station, which it at one time hoped to develop.

Mr. MAGEE. Are there any other relations existing between the two roads, to your knowledge?

Mr. SAWYER. Why, no unusual relations. There are through freight and joint rates and that sort of thing, as there are between the Union Pacific and the Northwestern, but—

Mr. MAGEE. How many men are directors on—the same directors in the two directorates?

Mr. SAWYER. I can't say.

Mr. MAGEE. Have you any idea?

Mr. SAWYER. No; I can't say. It is a matter of public record. I should say not more than two or three, but I could not name half of the directors of either company, offhand.

Mr. MAGEE. Well, you are assistant superintendent and I thought you might have the knowledge; that is the reason I asked it.

Mr. SAWYER. Well, that is quite out of my ordinary line of work.

Mr. MAGEE. Now, you said something about towing logs. I didn't just get that; somewhere near Port Angeles. Was it the intention to tow some of these logs that might be brought from Lake Pleasant locality over this road? I got the idea, in other words, that they were to get the logs at Port Angeles and cut them up there.

Mr. SAWYER. The plan from that operation was changed quite a number of times, but the final plan, on which we were working and which I think was not subject to further change, contemplated the erection of one large mill at Port Angeles, the leasing or securing on some contract basis of the existing mill at Port Angeles, and the

erection of a third mill at Lake Pleasant. Those three mills after they were all in full operation would get the output of the Siems-Carey job, but they would not all be in operation when the logs started moving, and there was always the probability that one of them would break down or for some reason production would cease.

Mr. MAGEE. Well, you said something about towing—used the word “towing.” Didn’t you use the word “towing”?

Mr. SAWYER. Pardon me just a minute. I may not be very fast, but I am trying to make this plain to you in order to answer the last question. Most of the mills—

Mr. MAGEE (interrupting). Now, I will get at that later, but I am trying to get what you said about the word “towing.”

Mr. SAWYER. I am sorry, but I am trying to get it as clear as I can.

Mr. MAGEE. Didn’t you say something about towing?

Mr. SAWYER. Just a minute. Let me speak a word, if I may.

Mr. MAGEE. I will ask the questions I know what questions I want to ask and I will ask them.

Mr. SAWYER. I did talk about towing.

Mr. MAGEE. And I don’t ask for a speech at the end of every question, Major. What I had in mind is what you said about towing, and I didn’t just get it, and I am asking for information.

Mr. SAWYER. I don’t remember my precise words. I am endeavoring to explain what the actual towing operation would be.

Mr. MAGEE. I want to know if you said anything about towing. I understood there was some towing 20 miles from Port Angeles, or something of that kind, and all I ask for is whether there was any towing proposition.

Mr. SAWYER. In the contingency to which I have just referred, it would be necessary to tow logs, and it was my intention to tow those logs from a point approximately 20 miles east of Port Angeles.

Mr. MAGEE. Tow them where?

Mr. SAWYER. It is a matter of record that contracts were in effect with five different mills at five different points on the sound to tow those logs.

Mr. MAGEE. No; I say, to tow them where?

Mr. SAWYER. To the five points where these mills were located—Bellingham, Everett, Ballard, Seattle, and, I think, Port Blakeley.

Mr. MAGEE. How far is Bellingham?

Mr. SAWYER. Oh, about 60 miles by water, I guess.

Mr. MAGEE. Above; north? Which direction from Port Angeles?

Mr. SAWYER. East and a little south.

Mr. MAGEE. Now, I understood that the reason given for the erection of the cut-up mill at Port Angeles was because no satisfactory terms could be reached for the purchase or control of the existing cut-up mill there?

Mr. SAWYER. No satisfactory arrangement could be reached for its purchase, but we could lease—we could not lease it, either—but we could contract with them to saw spruce on two shifts. One shift would take care of their commercial operations.

Mr. MAGEE. Suppose you had been able to purchase it, would you still have built a permanent mill there, which has been under way?

Mr. SAWYER. No, sir.

Mr. MAGEE. Well, that is as I understood it. That is, you would not need but one cut-up plant at Port Angeles?

Mr. SAWYER. There wasn't any cut-up plant at Port Angeles. We contemplated building a cut-up mill to serve this sawmill, of which we would use only the head saws.

Mr. MAGEE. Is that existing mill there which you tried to purchase—that is only a sawmill?

Mr. SAWYER. That is a complete sawmill, but it is not adapted to the production of airplane spruce. We contemplated using only what the millman calls the head saw; that is the first big unit in that mill.

Mr. MAGEE. It could be adapted to it, couldn't it?

Mr. SAWYER. Yes; it could be adapted to it.

Mr. MAGEE. In other words, if you had succeeded in making satisfactory terms for the purchase of that mill, there would not have been any necessity for the construction of the present cut-up Government mill there?

Mr. SAWYER. Yes, sir. It was found in the operation of these mills, in the West that the ordinary sawmill machinery in practice was not adapted to the proper utilization of the spruce, the proper handling of the spruce, and it was the intention up there to handle all.

Mr. MAGEE. I suppose you mean cutting with the grain?

Mr. SAWYER. Yes, sir; in general terms.

Mr. MAGEE. You could put in machinery in any mill to cut with the grain, couldn't you?

Mr. SAWYER. Yes, sir; but not so rapidly or so efficiently.

Mr. MAGEE. Oh, well, if you wanted it more rapidly, then you would make arrangements to do it more rapidly, and it could be done with the expenditure of money?

Mr. SAWYER. Oh, you could do it with a handsaw.

Mr. MAGEE. You don't mean to convey the impression to the committee that you could not take any mill and put in machinery, if you had the money to provide it, that would cut this timber with the grain, do you?

Mr. SAWYER. Oh, no.

Mr. MAGEE. Certainly not.

Mr. SAWYER. But our experts figured out a cheaper and faster way to do it.

Mr. MAGEE. So I understood all along that the reason for building this cut-up mill at Port Angeles was because they could not make or come to terms with the owners of the present mill there. Now, what, to my mind, was this suggestion of yours, which appears to be entirely contradictory to the evidence already presented and, of course, more or less confusing.

Mr. SAWYER. I think possibly we are talking about different things.

Mr. MAGEE. No, we are not talking about different things. The only proposition is whether, if the Government could have come to satisfactory terms with the owners of the present mills, whether they would have built the present cut-up mill there?

Mr. SAWYER. There is not cut-up mill there at present.

Mr. MAGEE. Well, started to build one?

Mr. SAWYER. I don't think there was any start made; possibly a few piles driven.

Mr. MAGEE. Where; at Port Angeles?

Mr. SAWYER. For a cut-up mill. I think we are talking about different things, Mr. Representative.

Mr. MAGEE. What kind of a mill is it the Government started there?

Mr. SAWYER. That is an ordinary sawmill to make flitches, but we contemplated putting in in addition to that a mill which would take the flitches and put them into a finished shape.

Mr. MAGEE. That is a cut-up mill, isn't it; if you took a flitch and cut it that is cutting it up, just as much as a process is of cutting a log into flitches?

Mr. SAWYER. Yes; but that is not what was to be done with the mill that is now there.

Mr. MAGEE. Well, take the mill that the Government spent—how much money there—a million?

Mr. SAWYER. I don't recall.

Mr. MAGEE. A million and two hundred thousand dollars?

Mr. SAWYER. I don't recall the figures.

Mr. MAGEE. Well, it is a very permanent structure, isn't it?

Mr. SAWYER. Yes.

Mr. MAGEE. I understand 1,700 piles were driven there on about an acre of ground.

Mr. SAWYER. A good many, at least.

Mr. MAGEE. Well, it is made a permanent structure?

Mr. SAWYER. Yes, sir.

Mr. MAGEE. Not a war-emergency measure, but a permanent structure for years to come, isn't it?

Mr. SAWYER. Yes, sir.

Mr. MAGEE. What did they intend to do there? Did they intend to cut up anything at all?

Mr. SAWYER. That will was intended to produce the spruce flitches and to utilize—

Mr. MAGEE (interrupting). That is, to take the logs and saw the logs into flitches?

Mr. SAWYER. Into flitches, and saw the residue—

Mr. MAGEE (interrupting). What is the difference between a flitch and a cant?

Mr. SAWYER. Why, there is a little technical difference to a millman, but I don't know just what it is.

Mr. MAGEE. There is really no difference, is there?

Mr. SAWYER. Practically none. There is technically a little difference, but I don't know just what it is.

Mr. MAGEE. After you get your cant you have to saw that, don't you?

Mr. SAWYER. Yes, sir.

Mr. MAGEE. To get your lumber in shape to ship?

Mr. SAWYER. Yes.

Mr. MAGEE. Where would you do that?

Mr. SAWYER. It was the intention to put what these people called a cut-up mill at the tail of this sawmill.

Mr. MAGEE. That is as I understand it. In other words, you would take the logs there; you were to cut them into cants or flitches?

Mr. SAWYER. Yes, sir.

Mr. MAGEE. Then, after they were cut into cants or flitches, then you were still to cut them or trim them, or whatever technical words

loggers use, into lumber suitable for shipment to the East; isn't that right?

Mr. SAWYER. The cut-up mill was to make the airplane stock suitable for shipment. The other mill was to take the residue from the stock and make that into commercial lumber.

Mr. MAGEE. Yes; I understand that. I am talking about airplane stock. Of course, I am not a lumberman—

Mr. SAWYER (interrupting). Neither am I, so far as that goes.

Mr. MAGEE. But I sometimes think I know as much of this proposition as some of the gentlemen I have come in contact with. As I understand, this mill received the logs and cut the logs into flitches or cants, and after they had done that they trimmed them and cut them into lumber suitable for shipment to different points in the East or to our allies? In other words, not the finished airplane products, but the lumber from which the finished airplane products would be made, would be shipped from this mill?

Mr. SAWYER. Not from the mill which now stands.

Mr. MAGEE. The Government mill?

Mr. SAWYER. No, sir.

Mr. MAGEE. What sort of shipments would they make from that mill?

Mr. SAWYER. They would produce the flitches which would go at the tail of this mill into the cut-up mill.

Mr. MAGEE. I am not talking about this uncompleted mill. Now, you know, Major, that I am talking about the plans for a complete mill there, or whatever structures they were to erect on this ground. You understand that, don't you?

Mr. SAWYER. I must confess that I honestly do not see what you are driving at.

Mr. MAGEE. Well, you have an uncompleted mill there, haven't you?

Mr. SAWYER. Yes, sir; and another mill contemplated but not yet constructed.

Mr. MAGEE. At the tail of it?

Mr. SAWYER. At the tail of it.

Mr. MAGEE. In connection with it?

Mr. SAWYER. Yes, sir.

Mr. MAGEE. As a part of the same operation, we might say?

Mr. SAWYER. Well, that was also to be an adjunct to the mill now at Port Angeles, the old mill there. It was to take the output of both mills.

Mr. MAGEE. If the Government mill had been completed under the plans as contemplated, the logs would go to the Government mill?

Mr. SAWYER. Both mills.

Mr. MAGEE. Wouldn't they?

Mr. SAWYER. Both mills.

Mr. MAGEE. Well, if you could not get control of the other mill, it would not go there?

Mr. SAWYER. No.

Mr. MAGEE. After completed, the logs would go to the Government mill?

Mr. SAWYER. Yes.

Mr. MAGEE. There they would be cut up into flitches or cants?

Mr. SAWYER. Yes.

Mr. MAGEE. Then they would go to an adjunct Government mill and be trimmed or cut up into lumber suitable for shipment east?

Mr. SAWYER. Yes.

Mr. MAGEE. Is that right?

Mr. SAWYER. That is right, as I understand it.

Mr. MAGEE. Well, that is just as I understand it, too. Now, what is the life of a logging road?

Mr. SAWYER. Oh, that is an utterly impossible question. Mark Reed testified here to-day of his logging road that was started prior to 1885, I think.

Mr. MAGEE. Yes, sir.

Mr. SAWYER. An ordinary logging road cuts out in two or three years, maybe four or five.

Mr. MAGEE. Well, take the Goodyear Lumber Co.; they have got a logging road, haven't they?

Mr. SAWYER. Yes. I suppose their main line may run in there—oh, there is not any telling; anywhere from 5 to 50 years.

Mr. MAGEE. Certainly.

Mr. SAWYER. It just depends on the conditions. You can't say how long.

Mr. MAGEE. If it gets out of repair they repair it?

Mr. SAWYER. Well, they may abandon it or operate in some other way.

Mr. MAGEE. They may take up the rails and ties and throw them in the Pacific Ocean and abandon the road, but what I mean to say is, I assume there are a great many logging roads here on the coast, like the one described by Mr. Reed, that was built, as he testified, under an act of Congress, I think, in the early eighties.

Mr. SAWYER. Why, I should say that the life of a logging road, in that sense, was whatever time it was profitable to operate it.

Mr. MAGEE. Certainly; whatever time it is maintained.

Mr. SAWYER. Yes; of course.

Mr. MAGEE. Repaired and maintained; there is not any question about that, is there?

Mr. SAWYER. No; not at all. But most of them don't last in that way, for the reason they use passes, and they——

Mr. MAGEE (interrupting). I suppose they would use a spur in a piece of timber, and when they cut the timber off they would take up the rails and ties and move somewhere else.

Mr. SAWYER. Yes, sir.

Mr. MAGEE. Take a tract, for instance, like this Olympic tract; do you know how many miles of spur road it would be necessary to build there to get out that timber?

Mr. SAWYER. We didn't have the definite survey completed, but it would be in the neighborhood of 130 miles.

Mr. MAGEE. Some one estimated here that it would take ordinarily, regarding the distance of 800 feet as probably the maximum distance on each side of the spur to bring the logs to the spur, that it would take something like 1,068 miles of spur roads.

Mr. SAWYER. Oh, well, people have testified to a lot of nonsense here.

Mr. MAGEE. Well, this spruce timber is scattered, isn't it? In other words, there might not be only a few trees on an acre of ground?

Mr. SAWYER. Our location plans were practically complete, and they contemplated approximately 130 miles of railroad to develop that area.

Mr. MAGEE. Well, had you been over the tract?

Mr. SAWYER. Yes, sir.

Mr. MAGEE. How many acres in it?

Mr. SAWYER. Oh, I can't say offhand from memory. Something like 22,000, I think.

Mr. MAGEE. You have been over the whole 22,000 acres?

Mr. SAWYER. Oh, by no means.

Mr. MAGEE. Well, that is what I am getting at. Now, then, what do you say as to the distance on each side of a spur that it would be practical to log?

Mr. SAWYER. I didn't make those calculations personally. Our logging engineers had been over that railroad and made their plans on a basis of approximately 130 miles of spur tracks.

Mr. MAGEE. So that is all you know about it?

Mr. SAWYER. Yes, sir.

Mr. MAGEE. It might be possible that it would take three or four times that?

Mr. SAWYER. It might be possible, but exceedingly improbable.

Mr. MAGEE. Well, so far as you know of your own knowledge, as far as your own knowledge goes, Major?

Mr. SAWYER. The estimates were made by thoroughly competent men after careful study.

Mr. MAGEE. Well, I say, so far as your own knowledge goes, you don't know how many miles of road would be necessary?

Mr. SAWYER. So far as myself making the calculations, no; I didn't make the calculations.

Mr. MAGEE. That is as nearly as you can get to an answer, is it?

Mr. SAWYER. It is as nearly as I intend to get to an answer to that kind of question.

Mr. MAGEE. Well, you don't intend to answer any question except in your own way, do you?

Mr. SAWYER. I don't intend to answer any question unless the answer gives the full, complete, precise truth.

Mr. MAGEE. Yes; and you don't intend to give the committee the facts in the case, unless you so intend, do you?

Mr. SAWYER. I intend to give the committee the facts in the case, but I intend to see that they get all the facts and no partial facts.

Mr. MAGEE. Yes; facts from your viewpoint. Now, the committee would like facts, and I must say that it don't seem to me that I get very many facts from a dissertation or an artistic argument, skillful argument from an engineering standpoint, as to this or that. When I speak of the miles of spur road going into this tract of 22,000 acres, why, I am asking for information, and if you don't know, why that answers it.

Mr. SAWYER. I don't see why there should be a distinction between me and men who differ from me in opinion.

Mr. MAGEE. I don't make any distinction. There is no distinction, as far as I am concerned.

Mr. SAWYER. I think the record of the committee speaks for itself.

Mr. MAGEE. The only thing I have asked of the witness is, as I have asked of every witness, to answer my questions yes or no. If

they can't answer, that satisfies me. I don't ask for an explanation. I simply ask for an answer if they know. If they don't know, they can't answer. Now, take this Lyre Canyon, do you know what depth of rock you cut through there?

Mr. SAWYER. Oh, about 140 feet was moved. We didn't cut through it, but the distance from the grade of the track to the top of the rock that was moved was something around about 140 feet.

Mr. MAGEE. Did you measure it, so that you know?

Mr. SAWYER. Why, it is a matter of record. I didn't personally do it, and I don't recall the figures.

Mr. MAGEE. Well, what I mean is, whether that is approximately—

Mr. SAWYER (interrupting). That is approximately correct; yes, sir. It was carefully measured.

Mr. FREAR. What kind of rock was it?

Mr. MAGEE. As you described here, you blasted it out?

Mr. SAWYER. Yes, sir.

Mr. MAGEE. By boring in, is it?

Mr. SAWYER. Yes.

Mr. MAGEE. As you term it, and putting in the powder?

Mr. SAWYER. But before that was done it was carefully measured by the engineers, so there is a precise record of just what was done.

Mr. MAGEE. Yes, sir. Now, what kind of rock was that?

Mr. SAWYER. Why, in that canyon there is a curious variation. Geologists would call the formation sedimentary, all through; it would commonly by a layman be spoken of as granite.

Mr. MAGEE. What you call solid rock?

Mr. SAWYER. Yes. It varies between a very soft shale and exceedingly hard granite. In a short distance there is a great variation.

Mr. MAGEE. I rode over the line there and I was wondering at the depth of this solid rock, and I estimate it at probably 150 feet in depth.

Mr. SAWYER. That is about what it is.

Mr. MAGEE. And that is the reason I asked for the information. Now, can you tell the committee about what distance they blasted through this solid granite rock in that canyon?

Mr. SAWYER. Well, there is about a mile and a half of that solid-rock work.

Mr. MAGEE. Yes, sir.

Mr. SAWYER. But that was not all a cut. A part of that was made up of a fill. I should say that the length of the rock wall which was taken out, if it had been continuous, would be around about a half mile—possibly a little more.

Mr. MAGEE. Now, what, if you know, Major, is the width of the roadbed there through which this solid rock was cut?

Mr. SAWYER. It was cut with the intention of having a 22-foot roadbed. On the fills due allowance was made for settlement and shrinkage. They were possibly 26, possibly 28 feet when they were put up, but the standard aimed at was 22 feet of finished permanent roadbed.

Mr. MAGEE. What I had reference to was, it seemed to me as I rode over the right of way that it was probably about 50 feet, as

you mentioned here; at least, it seemed to me it could not be 200 feet.

Mr. SAWYER. Oh, no. We did not clear 200 feet anywhere.

Mr. MAGEE. Yes; that is the way it seemed to me. Now, was the roadbed here through this Lyre Canyon, through this granite rock, 26 feet in width, or 50 feet?

Mr. SAWYER. It was our intention—our standard was 22 feet.

Mr. MAGEE. Yes. Do you know what it actually is?

Mr. SAWYER. Well, that varies from place to place.

Mr. MAGEE. No; I mean in the canyon there, or approximately?

Mr. SAWYER. Oh, it will vary all the way from, I suppose at this time, 17 or 18 feet to possibly 30.

Mr. MAGEE. Now, what is the president of the Milwaukee's name? Is it Byram or Byran, or how do you spell it?

Mr. SAWYER. The man I spoke of is no longer president.

Mr. MAGEE. I understand; he was president.

Mr. SAWYER. The Federal manager now is C. E. Byram.

Mr. MAGEE. Byram?

Mr. SAWYER. Byram.

Mr. MAGEE. Now, you testify, as I understand, that he was disgusted at the decision to build the Lake Crescent-Lake Pleasant Road?

Mr. SAWYER. Yes, sir.

Mr. MAGEE. Now, as I understood, Gen. Disque testified that President Byram had put a doubt in his mind, which was the determining factor in changing his decision from the Deep Creek route to the Lake Crescent-Lake Pleasant route. Were you here when he so testified?

Mr. SAWYER. No. I have heard him speak of that, and while I have no personal knowledge of that subject, only as a matter of hearsay—

Mr. MAGEE (interrupting). Well, now, that answers the question.

Mr. SAWYER. I have no personal knowledge of that situation.

Mr. MAGEE. And were you here when his letter to the Secretary of War was read to that effect—Gen. Disque's letter?

Mr. SAWYER. I really don't know. I have read the letter, but whether I heard it at this hearing, or they read it before, I can't tell you. I think it was read in Seattle at a part of that hearing.

Mr. MAGEE. It was incorporated as a part of the letter of Gen. McIntyre to the Secretary of War.

Mr. SAWYER. I am familiar with the letter.

Mr. MAGEE. In other words, I could not just reconcile your testimony with Gen. Disque's testimony.

Mr. SAWYER. I think, if I may make a suggestion—I don't want to make a speech, but there are many things here where we are talking about different things. Mr. Byram's object up there and his point of view was different from ours. He wanted something else.

Mr. MAGEE. What did he want? That is what I am getting at. Did he make application to have the Deep Creek route extended? Was that what he wanted?

Mr. SAWYER. He didn't want any extension, but if there was to be an extension he wanted it to be the Deep Creek route.

Mr. MAGEE. Yes. Well, now, that is what I had in mind.

Mr. SAWYER. Now, may I ask permission to just make one statement there?

Mr. MAGEE. Well, now, that answers my question.

Mr. SAWYER. That brings up something else. Go ahead; but there is one question that comes to me I would like to correct at your leisure.

Mr. MAGEE. All right; correct it now, if you have something to correct.

Mr. SAWYER. I want to say that the statement was made in Seattle that the Lake Crescent route, which was adopted, would make a shorter line from Port Angeles to Grays Harbor by between 30 to 50 miles.

Mr. MAGEE. Yes.

Mr. SAWYER. As a matter of fact, the developed line shows a difference of about 8 miles.

Mr. MAGEE. Yes. Well, now, I will assure you also that I am only asking these questions for information. I want to get all the information I can to get these things as clearly in my mind as I can. Now, Mr. Byram, then, as I understand, favored the extension of the Deep Creek route into this—what do you call it? The Olympic or Olympia tract?

Mr. SAWYER. That is the Olympic Peninsula.

Mr. MAGEE. Yes; into where this tract of heavy timber is.

Mr. SAWYER. Our immediate objective is commonly known as the Hoko watershed.

Mr. MAGEE. Yes. Now, that was the route, as I understand, upon which Mr. Roberts gave an estimate?

Mr. SAWYER. I think he did not make a careful estimate.

Mr. MAGEE. No; he said it wasn't a careful estimate.

Mr. SAWYER. He made an approximate estimate or a rough estimate.

Mr. MAGEE. An approximate estimate, as I recall. It is in the record, something like \$1,600,000.

Mr. SAWYER. Yes.

Mr. MAGEE. So that it was feasible to extend the Deep Creek route into that timber up there?

Mr. SAWYER. If you had the time.

Mr. MAGEE. There is no question about that, is there?

Mr. SAWYER. No question about the feasibility, if you had the time; but the limitation is always with you.

Mr. MAGEE. Now, that answers my question. There wasn't any question as to the feasibility of it.

Mr. SAWYER. That question I won't answer without an explanation. That is a misleading question.

Mr. MAGEE. It is? Now, then, Gen. Disque has testified that he was in doubt, or wobbling there for six weeks, or such a matter, and whatever the record shows, so that if he had rested on his first decision and had not changed his mind, why the construction of that extension from Deep Creek, if it had been determined on, could have been begun quite a material time sooner than the construction was begun on the Lake Crescent-Lake Pleasant route, couldn't it?

Mr. SAWYER. I have no knowledge of that; but six weeks would not be a material factor.

Mr. MAGEE. Six weeks would not amount to anything?

Mr. SAWYER. Not in that connection.

Mr. MAGEE. But 10 days might amount to a great deal on the front in France?

Mr. SAWYER. Precisely.

Mr. MAGEE. Well, that is all.

Mr. SAWYER. Thank you. Mr. Lea, are you through?

Mr. LEA. Why yes; I was through.

(Witness excused.)

Mr. LEA. Well, we are losing valuable time here, Mr. Chairman, if we are going to run until 6 o'clock to-morrow morning.

Mr. FREAR. Well, let's put this letter in evidence.

Mr. LEA. All right.

Mr. FREAR. Yes; a letter from Col. Stearns has been addressed to the chairman asking that certain statements made by him, slight inaccuracies, I think in every case, be inserted in the record, in order to correct and to save recalling, and if there is no objection to that being inserted in the record it will be copied right in.

Mr. MAGEE. There is no objection from me.

(Said letter is set out in full, as follows:)

SEPTEMBER 8, 1919.

HON. JAMES A. FREAR,

Chairman Congressional Investigating Committee,

Portland, Oreg.

DEAR SIR: In my testimony before the committee in Seattle you gave me an opportunity to correct any misstatements that I may have made in the record. In view of this fact, it is requested that the following corrections of my testimony be read into the records:

Answer to question concerning the number of contracts made with the Siems, Carey-H. S. Kerbaugh Corporation. I stated that there were two. This should be changed to four, as there were two supplemental contracts covering advances.

I stated that the amount of capital stock was \$100,000. This should be corrected to read the paid-in stock was \$100,000, the actual capital stock being \$10,000,000, upon which a call was issued of \$1 per share, or \$100,000.

Statement to the effect that \$25,000,000 worth of debentures were not issued should be corrected to read that these debentures were not issued to the Allies, but were issued to the Bureau of Aircraft Production, a formal order being placed for their purchase and the sum of \$25,000,000 was being set aside on its books as a commitment against the 1918-19 appropriation. Of this amount two payments were received by the corporation, the first for \$15,000,000 and the second for \$6,500,000, leaving a balance of \$3,500,000.

Statement was made that the present percentage of original cost recovered on salvage sales was now decreased to approximately 55 per cent. This should be changed to 74 per cent.

Respectfully, yours,

C. P. STEARNS.

Mr. MAGEE. Are there to be any more witnesses called?

Mr. LEA. Not by me to-night.

Mr. MAGEE. Then will you excuse me?

Mr. LEA. Certainly.

(Mr. Frear and Mr. Lea here conferred in an undertone.)

Mr. FREAR. We will adjourn until 10 o'clock to-morrow morning.

(Whereupon, at 10 p. m., Wednesday, September 10, 1919, the subcommittee adjourned until 10 o'clock a. m., Thursday, September 11, 1919.)

SUBCOMMITTEE No. 1 (AVIATION)
OF THE SELECT COMMITTEE ON
EXPENDITORS IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES,
Thursday, September 11, 1919.

The subcommittee met at 10 o'clock a. m., pursuant to adjournment, at the courthouse, Portland, Oreg., Hon. James A. Frear (chairman) presiding. Also present, Hon. Walter W. Magee and Hon. Clarence F. Lea.

Mr. FREAR. At the conclusion of the hearings last night approximately a score of witnesses had been heard on the part of the Spruce Production Corporation and those interested in stating its position in this investigation. At the night session it was agreed that, no further witnesses being in attendance, and in an effort to close the hearings at some fixed time as had been agreed upon, the time fixed for such testimony then expired. The night session closed at 10 o'clock.

It also appears from the record and Mr. Disque, who had written a letter to the committee asking for the privilege to testify, had been heard for three and a half days during the early part of the investigation and had requested to again appear; and with that in view it was made a matter of record yesterday that he should appear during the day if he so desired to be heard. It is a matter of fact that Mr. Disque has not been present at any of the hearings since he was originally called, and this statement is to make as a matter of record the fact that he has been invited to make any further statement he desired, and to evidence the fact that no prejudice has existed in permitting him to make such statement as was referred to in the record yesterday. The committee has no further questions to ask of him, but in case he does desire to make any further statement he can probably be permitted to do so after our arrival in New York, where hearings are expected to take place hereafter.

Mr. MAGEE. I wish to say that Gen. Disque, when on the stand, stated that he wanted to appear before the committee again before we left Portland. I assume, of course, that the officers of the Spruce Production Corporation got in touch with the general yesterday, but I think that that fact ought to appear or ought not to appear, and if that is not so an officer of the Spruce Production Corporation ought to be requested at once to get in touch with the general, so that we will have some word as to whether he desires to appear here to-day before the committee, and if so we should hear him; and if he does

not choose to be heard that he should be notified that when we take evidence in New York he will then be given an opportunity to appear before the committee there if he so desires. I want this matter settled here so that there can not be any question as to the opportunity given to the general if he desires to appear further before the committee, because I said something at the time he made the request indicating that he would be given such opportunity if desired, and I want to carry out whatever inference might be drawn from my statement.

Mr. LEA. As I understand it, the main thing Mr. Disque desired was the opportunity of replying to any further charges that might be made against him, and I presume that if he could have that privilege at Washington or New York it would answer his purpose. That is my presumption.

Mr. MAGEE. Capt. Walker, do you represent the Spruce Production Co. here?

Mr. WALKER. Yes, sir. I think he really meant charges against the corporation.

Mr. MAGEE. The question is whether Gen. Disque wants to appear before the committee to-day, or whether he prefers to appear before the committee in New York or Washington later on.

Mr. WALKER. I guess it was immaterial to him. Of course, he did not know what further charges might be brought before the end of the hearings, and it was natural that he might wish to state his side of it. I will take it up with him.

Mr. MAGEE. Take it up with him now.

Mr. FREAR. That must be decided right away, as we do not want to delay the hearings.

Mr. LEA. As I understand it, I think the situation is this: Suppose something should come up here that should change the situation as it now stands; he should have a right to decide, with knowledge of what the situation is, and I do not think we will have any trouble about that feature of it.

Mr. MAGEE. We are going to close this, and I want to settle it, and I want to have due notice given. The papers have stated that he has additional important information for the committee, and if he has I would like to get the information and have him give it here in open session. I do not want any bad faith imputed to me, and I want to get in touch with Gen. Disque and settle the matter now. I am in favor of adjourning the session until 2 o'clock if he wants to be heard to-day, or if he prefers to be heard in Washington or New York that is satisfactory to me if he will so state.

Mr. LEA. Of course, the essential feature is that he be given opportunity to reply, if something should come up later, a serious charge affecting his integrity, or something of that sort, in which case naturally he would like to be heard.

Mr. MAGEE. That is your position, but I am not going to be placed in any such position; I want the matter settled with Gen. Disque so that there can be no misunderstanding. He claimed he wanted to be heard. He can be heard in Washington or New York, and we must close the hearings here within a reasonable time. I do not know of any charges preferred against anybody, and I do not understand that any charges have been brought against him. Whatever inference one might draw has been drawn out of the extmanation

of witnesses, and some of them have been more or less excited and have made very strong statements, as you know, and have been given wide latitude; but it has been stated in the newspapers that the general has additional important information for the committee. I do not know whether that is so or not, and if he has he can impart it to the committee whenever he desires; but I want to relieve myself of any charge of bad faith in the statement I made to the general when he made the request of the committee to be heard, and I said he would be given another opportunity to be heard. So I want to get in touch with the general now and have the thing settled.

Mr. WALKER. I will do that now.

Mr. FREAR. This statement should appear in the record also at this time, that the suggestion has been urged in a seemingly unfair way that the witnesses called by the chairman or the committee generally have been voluntary witnesses who had grievances, and objectionable expressions have been passed upon their reasons for so appearing. The chairman desires to state that many people claiming to have information regarding the purposes of this investigation have refused to give their names and refused to permit themselves to be called, and the disposition shown has been one of reluctance on the part of practically all the witnesses who have been called; and, on the other hand, that no subpoenas have been issued to bring forward those desiring to testify on behalf of the Spruce Corporation or those connected with it, and that no unfair deductions should be drawn from that fact. The committee desires to investigate without prejudice and thanks those in attendance whether they are subpoenaed or not.

(Thereupon the committee suspended the hearing for 15 minutes, whereupon the following occurred:)

Mr. LEA. Capt. Walker has returned and reports that Col. Disque says if he will be given an opportunity to appear in the East that will be satisfactory to him.

Mr. WALKER. He wanted me to state further that he had made no statements to the papers lately about his position in the matter of having additional information.

Mr. FREAR. Then he was misrepresented in the papers?

Mr. WALKER. Yes, sir.

Mr. MAGEE. So that there will be no misunderstanding let it appear of record that Capt. Walker states that after conferring with Gen. Disque Gen. Disque says that if he is given an opportunity to testify further in the East in case he so desires that is satisfactory to him. Is that correct?

Mr. WALKER. Yes, sir.

TESTIMONY OF GEORGE H. CECIL.

(The witness was duly sworn by Mr. Frear.)

Mr. FREAR. State your name.

Mr. CECIL. George H. Cecil.

Mr. FREAR. You are district forester, Mr. Cecil?

Mr. CECIL. District forester of the United States Forest Service.

Mr. FREAR. And as such you are located at Portland?

Mr. CECIL. Headquarters at Portland, Oreg.

Mr. FREAR. Did you have occasion to take up with Mr. Disque during the early part of 1918 the matter of a road in Clallam County for the purpose of getting out spruce for aircraft purposes?

Mr. CECIL. Col. Disque, then Col. Disque, asked us to have a logging engineer make an examination of that tract and make a recommendation as to the feasibility of it.

Mr. FREAR. I do not care to go into details, but you did make an examination?

Mr. CECIL. Yes, sir.

Mr. FREAR. And you wrote a letter to Col. Disque?

Mr. CECIL. Yes, sir.

Mr. FREAR. In regard to your finding?

Mr. CECIL. The letter accompanied the logging engineer's report.

Mr. FREAR. That was on the date of April 4, 1918?

Mr. CECIL. Yes, sir.

Mr. FREAR. And the letter read by Col. Disque, or Mr. Disque now, he quotes two or three paragraphs of that letter, but the letter was not put in evidence. I will ask you if this is a correct copy of that letter, the whole letter [showing]?

Mr. CECIL. Yes, sir.

Mr. FREAR. I desire to read the whole of the letter, part of which was not referred to by Mr. Disque:

Col. BRICE P. DISQUE,

Signal Corps, Yeon Building, Portland, Oreg.

DEAR SIR: I am inclosing for your information a report submitted by Logging Engineer Nelson on the Hoko River and adjacent areas.

It appears from this report that there is spruce sufficient in quantity and quality to justify a considerable outlay in making it available for use. If it is expected that it will be necessary to considerably augment the present output in the immediate future it would seem the best proposition would be to undertake to reach the timber by the road via Clallam Bay and the Hoko. Even though it was decided to also develop along one of the other routes in order to reach other timber around Lake Pleasant (Lake Tyee) and then south, the above would probably be the most feasible undertaking for immediate development.

That appears in that letter?

Mr. CECIL. Yes, sir.

Mr. FREAR. The rest of the letter Col. Disque read.

Mr. MAGEE. Are you going to put the letter in evidence?

Mr. FREAR. Yes.

Mr. LEA. I would like to hear the rest of it.

Mr. FREAR. Disque read the rest of the letter, but he left out the first part of it.

Mr. LEA. Just read the rest of it.

Mr. FREAR. The letter is offered in evidence for the purpose of showing that your letter to Disque advised him that the proper place to put it for immediate development was the Hoko River from Clallam Bay, and we have no knowledge of that fact from the letter as he read it.

Mr. CECIL. The letter was quoted in part, and I thought, in justice to myself, the whole letter should be put in.

Mr. FREAR. In justice to you, it certainly should be put in.

Mr. LEA. Col. Disque presented that letter, and I asked, as I remember it, to have the whole letter in evidence.

Mr. FREAR. If Mr. Lea knew about that and that other half went in, I do not think it was fair to the other members of the committee.

Mr. LEA. The letter was presented here to the committee.

Mr. FREAR. I had no knowledge of it.

Mr. MAGEE. I think it ought to be put in evidence. I offer the letter now, Mr. Chairman.

Mr. LEA. To what point did you read?

Mr. FREAR. I read down to here [indicating].

Mr. LEA. I would like to read the letter in full.

(The remainder of the letter referred to is as follows:)

From Nelson's report it appears that the proposed route of the Milwaukee is just as long as that via Lake Crescent and down the Sol Duc; that it is a more difficult route in many respects; and, further, it has not the advantage of the latter in opening up considerable areas of timber prior to reaching the region around Lake Pleasant (Lake Tye).

It will undoubtedly be necessary to build the latter route sometime in order to develop the timber along the line, and I do not believe that two routes so close together in the same territory will be justified.

I suggest, therefore, the possibility of getting the two companies together and selecting the more feasible of the two routes for development. All the timber on the Hoko would necessarily have to come out by the way of Clallam Bay, in case the railroad was built up that stream, in order to justify its construction. In addition to the Lake Pleasant timber, however, the Dickey might be allotted to the other road to compensate them for the construction of their line. I believe that it is extremely important that either one or the other of these two routes, with main-line connections, be extended to west of Lake Pleasant and then south to open up the timber on the Hoh and other streams having large possibilities in the way of spruce production, eventually to connect with the Polson road from Grays Harbor. Such a line would pass through the heart of the finest spruce region of Washington, and with the necessary spurs would make this material accessible.

Mr. Nelson and I will be glad to call and discuss this matter with you further, if you so desire.

Very truly, yours,

GEO. H. CECIL, *District Forester.*

Mr. FREAR. Part of that letter has been placed in the record by Mr. Disque. Taking the letter as a whole your proposition to Mr. Disque was, first, that for immediate action, for early results, the Hoko River, that 15-mile road, as it has been testified here, was the proper road to get it out.

Mr. CECIL. Yes, sir.

Mr. FREAR. Now, subsequently you were referring to your judgment regarding the difference between what is known as the Deep Creek or the Pysht River route and the Crescent Lake route, but it had no reference to the Clallam Bay Railroad.

Mr. CECIL. It had no reference to that.

Mr. FREAR. Now, testimony has come before the committee, and I will ask you if you have any cruises or knowledge of the fact that from Joyce up to Lake Pleasant on this new road that has been put through there is practically no spruce until you reach Lake Pleasant. That was the telegram from Howes, and that is the testimony that has been placed before the committee.

Mr. CECIL. I have not been on the ground personally, Mr. Frear, and I would not like to say, but from the records of my office I could tell.

Mr. FREAR. There is the suggestion here that there is spruce, and it is the first suggestion we have had that there is spruce.

Mr. CECIL. In here?

Mr. FREAR. Yes.

Mr. CECIL. No; it says timber. That was on the other route, the Lake Crescent route. It was fir and not spruce.

Mr. FREAR. Oh, it was fir and not spruce.

Mr. CECIL. Yes. It does not say "spruce," it says "timber."

Mr. FREAR. Then there was no spruce. The testimony has been placed before the committee that there is no spruce in any quantity until you reach Lake Pleasant, and that is not disputed by anything that you have in your possession.

Mr. CECIL. No, indeed.

Mr. FREAR. That road is 36 miles in length and, in addition to the 20 miles, made the entire length 56 miles to Port Angeles before spruce was reached.

Mr. CECIL. Yes.

Mr. FREAR. After the presentation of this letter to Mr. Disque, did you have further conferences with him?

Mr. CECIL. Not in regard to this matter. Mr. Nelson, I think, did, but I did not personally.

Mr. FREAR. This letter says, "Mr. Nelson and I will be glad to call and discuss this matter with you further if you so desire." Did Mr. Disque ever send for you?

Mr. CECIL. I think he had some discussion with Nelson on the matter, but not with me. Nelson was a logging engineer, also in the Forest Service.

Mr. FREAR. Do you know anything about the timber in the Siletz Valley?

Mr. CECIL. No; I am not at all familiar with the Siletz.

Mr. FREAR. You are not familiar with it?

Mr. CECIL. No.

Mr. FREAR. Do you have cruises in your office of the various timber tracts?

Mr. CECIL. Only so far as they are inside of the national forest. I have a great deal of data collected from county cruises outside of the national forest. In fact I gave Col. Disque cruises in the State of Washington of all sections, of 40-acre subdivisions that had spruce on.

Mr. FREAR. I wish, so far as it is possible for you to do so, you would examine your records and see what cruises appear in regard to the Siletz region, the Siletz district.

Mr. CECIL. I will.

Mr. FREAR. And let the committee know this afternoon the result of your examination.

Mr. CECIL. Yes, sir; I will. I have some data on that, I am quite sure.

Mr. FREAR. This letter has been offered in the record.

Mr. LEA. Was this letter based on your own examination?

Mr. CECIL. No, sir. As it said, it was accompanying the report of the logging engineer who had made the examination on the ground.

Mr. LEA. And you reported to Mr. Disque on the faith of that?

Mr. CECIL. I sent the copy of the report. This was a letter submitting the report.

Mr. LEA. In your opinion it was important, if there was a large spruce production, to build this Lake Crescent road.

Mr. CECIL. At that time we were expecting the war to last four years, and my judgment was if the war lasted four years it would be necessary to open up some of this spruce lower down in the Hoh, in the heavily timbered portion of the peninsula.

Mr. LEA. You did think that was the proper thing to do?

Mr. CECIL. Yes.

Mr. LEA. Opening up Clallam Bay was simply an additional amount, afforded an opportunity for getting an additional amount of spruce.

Mr. CECIL. For an amount that could be gotten at immediately. We could have gotten spruce in there, according to our engineer's report, within 90 days?

Mr. LEA. They were operating in there at that time on spruce, were they not, the Goodyear Lumber Co.?

Mr. CECIL. Very little. Most of the spruce laid near the head of the Hoko and the Dickey.

Mr. LEA. Wasn't there a line advancing in that region?

Mr. CECIL. Very slowly.

Mr. LEA. And there was spruce up there, of course.

Mr. CECIL. Yes; there was spruce up there.

Mr. LEA. Is anything you said here intended to change anything that is stated in that report?

Mr. CECIL. Not at all. All I want to put in is that I wish to bring out that two routes were recommended, and we thought if the war continued for four years it would be necessary to open up south of Lake Crescent. The immediate development of the Hoko River was to open up near Clallam Bay.

Mr. LEA. What was the quantity of timber that would be reached by the Lake Crescent route?

Mr. CECIL. I do not know. There is an immense amount of timber if you go on south and take in the Hoko and some of those streams to the south. There would be an immense amount of timber opened up. I have estimates on every watershed in the State of Washington.

Mr. LEA. Do you know the distance to the first spruce spur on this Lake Crescent route?

Mr. CECIL. No; I do not. I have not been over the upper end of the road. I have been to Lake Crescent, but not farther south.

Mr. LEA. That is all.

Mr. FREAR. When this country was asking for airplane material, and that was the important proposition, you wrote Col. Disque that this was the way to immediately open it up, as you have just testified, in 90 days.

Mr. CECIL. Yes, sir. The report shows that it could have been opened up in 90 days.

Mr. FREAR. This was only 15 miles, as has been testified, to the timber.

Mr. CECIL. Yes.

Mr. FREAR. And from that on could a road be extended up into this Pleasant Lake timber?

Mr. CECIL. Well, it was brought out in the report that it could have, yes; but it could not have gotten into the timber south of there. If we were going to be in the war a great many years it would be necessary to get into that timber.

Mr. FREAR. The testimony of Mr. Polson yesterday was that it could have been reached by the Northern Pacific from Grays Harbor.

Mr. CECIL. Yes, sir. The scheme was that a connection should be made between the two roads.

Mr. FREAR. The Northern Pacific and the Milwaukee?

Mr. CECIL. Yes.

Mr. FREAR. But for immediate development, to get the timber at once, the way was to go up from Clallam Bay?

Mr. CECIL. That was my belief.

Mr. FREAR. The 15-mile road, instead of taking this 36-mile road?

Mr. CECIL. Yes.

Mr. FREAR. Where they had this heavy construction, as has been testified.

Mr. LEA. But the largest development was not possible from that point, isn't that true, from Clallam Bay?

Mr. CECIL. Yes; that would be true. The timber from the Hoko could not go out that way.

Mr. FREAR. Why?

Mr. CECIL. There were several reasons. In the first place, you would have several adverse grades to haul over.

Mr. FREAR. Whereabouts; from what stags?

Mr. CECIL. South from Lake Pleasant.

Mr. FREAR. Well, in Lake Pleasant country it has been testified that there is over 700,000,000 feet of spruce.

Mr. CECIL. Yes.

Mr. FREAR. And it is testified that there was about 700,000,000 feet of spruce down in the Siletz, and in the Siletz there is about 10,000,000,000 feet of fir which was being used.

Mr. CECIL. Yes.

Mr. FREAR. And with the fir that you speak of in the Lake Pleasant district and that in the Tillamook and that in Grays Harbor, in the Quinalt, don't you think that we could have reached enough spruce and enough fir in all those various districts which were opened up to have gotten along without touching this Hoh River?

Mr. CECIL. Of course, when you speak of the amount of spruce in particular that is true, but only from 15 to 20 per cent would make aircraft material.

Mr. FREAR. Yes; but with that material that could be had it would have placed an airplane practically in the hands of every soldier over in Europe, and it takes 10 men to handle an airplane, so the question is, Was it necessary to get into the upper Hoh? Who could have manned the airplanes from all this timber that we were planning to put over into Europe?

Mr. CECIL. Of course, they asked, as I understand it, for 20,000,000 feet a month, and it would take an immense amount to yield 20,000,000 feet of aircraft spruce per month.

Mr. FREAR. That is true.

Mr. CECIL. You can very easily figure that.

Mr. FREAR. But they were using more fir than spruce.

Mr. CECIL. Yes; but at this time they had not adopted the use of fir, at the time this letter was written.

Mr. FREAR. At the time of the letter, but before we had finished operations they had, so as a matter of fact the development of the upper Hoh River was not necessary, was it, in view of the fact that

we were using fir, and more of it was being used, being cut over here at the Vancouver plant, than spruce?

Mr. CECIL. That would be pretty hard to say. I would want to check the figures.

Mr. FREAR. I want to get that in in connection with the necessity of building a railroad over to the Hoh River as well as a railroad to Callam Bay, and all the other railroads that were being constructed.

(Witness excused.)

Mr. FREAR. I desire to offer this affidavit of W. C. Butler. Its materiality is not so very important, so far as I know, but it is based upon a newspaper article, and I desire to put it in the record so as to support it. In the record, page 3221, appears a statement from Mr. Disque. The question was by Mr. Magee:

Is that the association with which Mr. Butler is affiliated, Mr. Disque?

Mr. DISQUE. That is the association with which Mr. Butler is closely affiliated. Mr. Chinn is the man who manages this association.

Now, for a large part of two pages he goes on and discusses this proposition, and Mr. Magee then says:

Do you question their patriotism?

Mr. DISQUE. I do.

Mr. LEA. Mr. Chinn and Mr. Butler were both before the committee complaining that they could not get contracts for the loggers. Was there any other reason than this that they could not get them?

Mr. DISQUE. To the loggers?

Mr. LEA. That they could not get contracts from the Spruce Production Corporation.

Mr. DISQUE. That is why they could not get them, because I would not come to terms and pay them several times as much profit, etc.

Mr. Lea is the one who brings out the close connection and seeks to plaster Mr. Butler with being unpatriotic. That has not been attempted with any other witness here, so far as I know.

Mr. LEA. Now, I do not understand from the testimony you read that it is in conflict with this affidavit.

Mr. FREAR. I ask to have this affidavit go in the record, whether you agree to it or not.

Mr. LEA. The affidavit refers to a newspaper report, and as far as my opinion of Butler is concerned that is not material.

Mr. FREAR. Mr. Butler's opinion is probably about likewise of the gentleman who has just discussed the matter, but, of course, that is not any part of this hearing.

Mr. LEA. I have very good reasons for my opinion of Mr. Butler, and it is not very complimentary to him.

Mr. FREAR. Mr. Butler, as appears in the testimony, is a brother of Nicholas Murray Butler, who was present at the hearings in Seattle when the hearings were held there, and it is a very unfortunate thing that he does not receive the commendation of every member of the committee.

Mr. LEA. What is it that Jerry Simpson says, "The best of stock will run down."

Mr. MAGEE. I want to say, in this connection, that we have no more distinguished, respected, and esteemed citizen in the East than Dr. Butler, president of Columbia University.

Mr. LEA. Understand me, I am not casting any reflection on Dr. Butler. I have no reason to.

Mr. FREAR. Even Mr. Disque withdrew his expression regarding Mr. Butler when he saw the position in which it placed him.

(The affidavit above referred to is marked "Exhibit No. 27, September 11, 1919," and copied into the record, as follows:)

STATE OF WASHINGTON, *County of Snohomish, ss:*

W. C. Butler, being duly sworn, testifies as follows:

Referring to the testimony of Gen. Disque given before your committee on Friday, September 5, as reported by the Morning Oregonian of Saturday, September 6, beginning:

"Questioning the good faith of certain Puget Sound loggers who approached him for a conference with respect to logging in Lincoln County August, 1918, Gen. Disque told the committee why he had turned their proposition down.

"Several of the witnesses who testified adversely at the Seattle hearing were members of this conference, including W. C. Butler, of Everett," etc.

That he was not present at such conference, if one was held, knew nothing of it, and was in no wise interested or concerned with the negotiations along the lines referred to in Gen. Disque's testimony as to such conference.

He was not familiar nor interested in the proposal or information sent to Gen. Disque by Mr. Chinn, and knew nothing of such discussions or negotiations.

That at no time has he had conference or negotiations either with Gen. Disque—Gen. Disque's office—of any logging operators with a view of conducting logging operations for the United States Government on any basis other than without profit or at absolute cost.

Dated at Everett, Wash., this 9th day of September, 1919.

WM. C. BUTLER.

Subscribed and sworn to before me this 9th day of September, 1919.

[SEAL.]

J. A. NORWAY,

*Notary public in and for the State of Washington,
residing at Everett.*

I desire to read into the record a statement which has just been handed me:

PORTLAND REALTY BOARD—GET-TOGETHER MEETING—FRIDAY, SEPTEMBER 12, 1919—CRYSTAL DINING ROOM, BENSON HOTEL.

Gen. Brice P. Disque, formerly commanding Spruce Production Division, United States Army, will give the board a 20-minute talk on matters of current interest.

I will suggest that it was before a similar meeting, during the pendency of this investigation, at which Mr. Disque went on and defended himself and the Spruce Production Corporation in regard to charges that had not been filed before this committee, which was trying to investigate conditions; and at the same time one of the members of this committee appeared before that same meeting and stated matters reflecting upon his associate members of this committee, as to their purposes, what they were doing. Mr. Disque, who is not a general, of course, as he is retired to private life now—Mr. Disque has been invited to appear before this committee this morning to give any additional facts, and he has decided not to do so, in which event the committee is unable to be of any service to him in giving him proper publicity.

TESTIMONY OF C. C. CAMPBELL.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Where do you live, Mr. Campbell?

Mr. CAMPBELL. The only home I have is in old Mexico.

Mr. FREAR. Were you born there?

Mr. CAMPBELL. No, sir; born in Nebraska.

Mr. FREAR. What are your initials?

Mr. CAMPBELL. C. C.

Mr. FREAR. How is it that your only home is in old Mexico?

Mr. CAMPBELL. I went down there before I was of age.

Mr. FREAR. And how long did you remain there?

Mr. CAMPBELL. About 14 years.

Mr. FREAR. And where did you go then?

Mr. CAMPBELL. Came back here.

Mr. FREAR. Where—to Portland, Oreg.?

Mr. CAMPBELL. No; came back and went into the Army.

Mr. FREAR. Where?

Mr. CAMPBELL. In Portland, Me.

Mr. FREAR. In Portland, Me?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. And was this during this last war?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. And then what?

Mr. CAMPBELL. I was commissioned in the Army.

Mr. FREAR. Yes; just briefly state.

Mr. CAMPBELL. I was executive officer of the Finance Division in Washington.

Mr. FREAR. And then what?

Mr. CAMPBELL. Then I came out here.

Mr. FREAR. That is, on the Aircraft?

Mr. CAMPBELL. Yes.

Mr. FREAR. And then what?

Mr. CAMPBELL. Came out here as district manager of finance.

Mr. FREAR. That was at what time?

Mr. CAMPBELL. About the 1st of December.

Mr. FREAR. Of 1917?

Mr. CAMPBELL. 1918.

Mr. FREAR. The 1st of December, 1918?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. That was after the signing of the armistice?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Are you familiar with the records of the Spruce Production Corporation, and with the——

Mr. CAMPBELL. To a certain extent; yes, sir.

Mr. FREAR. From the books of the division?

Mr. CAMPBELL. Yes.

Mr. FREAR. But were from prior to that time. That is the only purpose, just to show the qualifications. You are a public accountant, are you?

Mr. CAMPBELL. No, sir.

Mr. FREAR. What is your experience?

Mr. CAMPBELL. Well, I have had 15 years of accounting experience in connection with my business.

Mr. FREAR. And you are now in charge of the books of the department—of this corporation?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Have you the Hammond contract there?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. We have asked to have certain letters presented that would make it a little convenient for you and for the committee, so as to get to those points at once. Will you explain to the committee the basis of the Hammond settlement as it was made?

Mr. CAMPBELL. Well, before you go into that I would like to state that the Hammond settlement was made by the contract board and agreed to about the time of my arrival here and I had nothing to do with it.

Mr. FREAR. I understand, but I mean just explain to the committee—

Mr. CAMPBELL. I think some member of the board should be called.

Mr. FREAR (continuing). What the records show.

Mr. CAMPBELL. They were settled with on the basis of amortizing the cost of building and equipping their railroad. The contract, I think, was for 6,000,000 feet of logs.

Mr. FREAR. What company is this?

Mr. CAMPBELL. Hammond Lumber Co.

Mr. FREAR. Where are they?

Mr. CAMPBELL. I think their offices are in San Francisco.

Mr. FREAR. And where were those logs to be cut, if you know; in what section?

Mr. CAMPBELL. I don't know without referring to the contract. Somewhere in the Seaside district down here, along the coast.

Mr. FREAR. You have the contract, I think, haven't you?

Mr. CAMPBELL. Yes, sir. The road was built—it is the timber tributary to the Necanicum River, near Holladay, Oreg.

Mr. FREAR. Now, you can give the substance of the contract and then the basis of the settlement.

Mr. CAMPBELL. Well, the substance of the contract—they were to furnish this 60,000,000 feet of logs and they were to build a railroad in to those logs, as I remember.

Mr. FREAR. What was the price for the log—the contract price?

Mr. CAMPBELL. The contract price of the logs, while it fixed a price of \$40, their profit was limited to two and a half a thousand; that is, after the contract was completed, if they had more than that amount—

Mr. FREAR. I see.

Mr. CAMPBELL (continuing). They had to turn it back to the Government.

Mr. FREAR. Now, go on and tell the basis of the settlement, to see if the spirit of the contract was complied with.

Mr. CAMPBELL. The expense of building their road and equipping it was—60 per cent of it was to have been amortized.

Mr. FREAR. Sixty or sixty-five?

Mr. CAMPBELL. I think it was 60. No, 65—that is right—was to have been amortized over the delivery of these—during the period of the delivery of these logs. That was one of the contemplations of the contract, and, in the event of cancellation, the unamortized portion of this was to be paid to them in final settlement. They delivered very few logs on the contract, I think 2,384,188 feet of logs they had delivered, that complied with the terms of the contract—

Mr. FREAR. Yes.

Mr. CAMPBELL (continuing). Which was 96.26 per cent of their 60,000,000 feet. And their cost of construction, not covered by this 2,000,000 feet delivered, was repaid to them.

Mr. FREAR. How much was the cost of the logs produced?

Mr. CAMPBELL. Well, I did not take the cost of the logs produced, and I don't know what the cost of the logs produced was. I am getting the cost of the railroad construction.

Mr. FREAR. What was that cost, then?

Mr. CAMPBELL. The cost of that was, with the total for overhead, \$724,682.16.

Mr. FREAR. That is, \$724,682, including the 10 per cent profit—that includes the 10 per cent profit?

Mr. CAMPBELL. Ten per cent for overhead.

Mr. FREAR. What mileage was that, do you know?

Mr. CAMPBELL. I don't know what the mileage of their road was. I don't know whether it states here. I never inquired. I don't know the length of their railroad, myself.

Mr. FREAR. Who can tell where the railroad is? Is there any member of your corporation who knows?

Mr. CAMPBELL. Maj. Harrington. It was not one of our railroads. It is not included in that, it is a privately owned road, built by the Hamond Lumber Co.

Mr. FREAR. Where did it extend to, do you know that?

Mr. CAMPBELL. What?

Mr. FREAR. Where did it extend to, do you know that?

Mr. CAMPBELL. I don't know, only as is stated in the contract.

Mr. FREAR. It don't state where it extended to, it simply states the section in which it is to be found.

Mr. CAMPBELL. It may be that we can tell. Here is a map attached to their claim, from which we can probably tell.

Mr. FREAR. Here is an amount of \$700,000. I am trying to find out—and it is a cost-plus contract, I understand, isn't it?

Mr. CAMPBELL. No, it was not a cost-plus contract.

Mr. FREAR. No, and that was to come under the final settlement?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. I want to find out just what kind of a road it was and how much they got out of it, if I can, under this contract.

Mr. CAMPBELL. You will have to get that from the engineering department. I am not familiar with it.

Mr. FREAR. You don't know; don't know anything about it?

Mr. CAMPBELL. No, I never saw the road, I know nothing about it.

Mr. FREAR. State what facts you have got.

Mr. CAMPBELL. I think I have given you what you asked for. If there is anything else you want now—except the payment for the unamortized portion of this on the basis of 65 per cent amounted to \$452,324.14.

Mr. FREAR. Four hundred and fifty-two thousand.

Mr. CAMPBELL. Yes.

Mr. FREAR. What does that cover—that four hundred and fifty-two thousand; can you give the basis on which that amount was developed?

Mr. CAMPBELL. Yes, sir; I think I can. The cost of the railroad—the Seaside railroad itself, was \$391,791.77.

Mr. FREAR. Yes.

Mr. CAMPBELL. Their rolling stock was \$73,819.02.

Mr. FREAR. Yes.

Mr. CAMPBELL. Logging engines and equipment, \$106,364.05; camp construction, \$31,372.94; camp commissary equipment, \$90; camp and mess equipment, \$6,766.37; shop equipment, \$3,266.74; auto truck and auto equipment, \$4,969.41; office equipment, \$456.77; and their rafting grounds at Warrenton, \$26,467.98. That makes a total of \$645,365.05.

Mr. FREAR. How much?

Mr. CAMPBELL. \$645,365.05. Then, as I understand, in putting in their claim they included the equipment used in the construction of the road and expected their amortization on that, and I think the Claims Board refused to allow that, but finally agreed to allow them a rental—a rental for the equipment used, instead of amortizing it, and they allowed them—

Mr. FREAR. What was the rental?

Mr. CAMPBELL. They allowed them \$13,436.91 rental.

Mr. FREAR. What was the amount that was paid to them, \$452,000?

Mr. CAMPBELL. \$452,324.24.

Mr. FREAR. And I am trying to ascertain the effect of the amortization, which must have been anticipated when the contract was drawn. The effect of this, as I understand it here, is that—well, I am asking you—you have no way of estimating what the cost of the logs was, this 2,384,000 feet of logs. By assuming that the—

Mr. CAMPBELL. You mean the cost to the Government?

Mr. FREAR. Yes.

Mr. CAMPBELL. Of those few logs.

Mr. FREAR. The cost to the Government; yes; after getting those logs out of there, in view of what we have paid.

Mr. CAMPBELL. I don't know. They never have figured on that basis.

Mr. FREAR. The Hammond Lumber Co. owns the railroad now?

Mr. CAMPBELL. They do.

Mr. FREAR. With this settlement which they had, and they were paid that amount of money, as you said, \$452,000, and what has the Government got out of it besides the logs?

Mr. CAMPBELL. That is all.

Mr. FREAR. That is sufficient at this stage, I guess. Have you the Lewis & Clark settlement?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Will you explain the settlement made in the case of the Lewis & Clark—

Mr. CAMPBELL. The only thing I have here to give you that from is the report of the contract board as was established.

Mr. FREAR. Just what the records show, that is all.

Mr. CAMPBELL. These people entered a claim on account of their two contracts for \$123,370, I believe.

Mr. LEA. What claim was that?

Mr. CAMPBELL. That is the Lewis & Clark.

Mr. FREAR. Grant Smith—Porter Brothers. They were the contractors, weren't they?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Just go on and state what you have there before you in reference to it.

Mr. CAMPBELL. The Government in this case, I think, was to furnish the labor for these railways, and the Lewis & Clark people to furnish the material, as I remember it. They had agreed to build a certain amount of railroad, and there was one line of $3\frac{1}{2}$ miles which had not been built. I think for the labor in the construction—

Mr. FREAR. How many miles did you say?

Mr. CAMPBELL. I don't know the mileage, except the short line that was not completed at all, that appears in the claim.

Mr. FREAR. A memorandum here before me states it is 12 miles and $3\frac{1}{2}$ miles—12 miles and $3\frac{1}{2}$.

Mr. CAMPBELL. I have that in some other papers here. I could look it up, if you want the mileage.

Mr. FREAR. That would make about 15 miles altogether?

Mr. CAMPBELL. Lewis & Clark had 13 main-line miles completed, and spurs and sidings amounting to 7.36 miles.

Mr. FREAR. Amounting to 7?

Mr. CAMPBELL. 7.36 miles.

Mr. FREAR. Now, go on and state, if you will. They presented a claim for \$123,370?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. How much was on the 12-mile road?

Mr. CAMPBELL. Of the claims they presented?

Mr. FREAR. Yes.

Mr. CAMPBELL. Let's see if I have their original claim here. I think I have. The claim on that one was \$51,370.

Mr. FREAR. Yes. On the $3\frac{1}{2}$ -mile road?

Mr. CAMPBELL. Yes, sir. They tendered a claim for the other contract, the road that had been completed, seventy-two thousand—or practically completed, \$72,000. Those claims were settled by the contract board, two of them were lumped and one settlement made. They were allowed \$43,639 for the completion of the $3\frac{1}{2}$ miles of road, and \$21,000 for the uncompleted portion of the other line or for the labor necessary to complete the other line.

Mr. FREAR. Has this payment been made?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. When was that made?

Mr. CAMPBELL. That was adjusted by the old contract board on February 26, and I presume payment was made shortly after that.

Mr. FREAR. Your records show that it has been paid?

Mr. CAMPBELL. Yes, sir; I think I have the voucher covering the final settlement in my pocket. [Examining.] The final settlement with them was made on March 27.

Mr. FREAR. March 27?

Mr. CAMPBELL. Yes.

Mr. FREAR. At the figures you have stated?

Mr. CAMPBELL. Yes, sir. Of course the final voucher didn't read for that amount, because they owed the Government money and the Government owed them money; the accounts were balanced, and I think the balance of their account was about \$25,000.

Mr. FREAR. That was all figured in at the time of the settlement?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. The provision here appears to be, according to the memorandum, that Capt. J. H. Markam was the one who determined——

Mr. CAMPBELL. I think he was to make final determination.

Mr. FREAR. And he was the arbiter; that is, he had the sole——

Mr. CAMPBELL. Supervisor.

Mr. FREAR. He had the sole decision in it. Have you the Willapa Lumber Co. contract there?

Mr. CAMPBELL. No, sir.

Mr. FREAR. I have a copy here, and I just will ask you if that is a correct copy. Have you the Hammond contract there?

Mr. CAMPBELL. Yes, sir. I have also furnished the committee one. I think this is the last copy for our file. Can you put yours in?

Mr. FREAR. I think Mr. Gabrielson has a copy.

Mr. CAMPBELL. He has one. He also has one of the Lewis & Clark. I furnished those to him.

Mr. LEA. I suggest that we let the witness retain this.

Mr. FREAR. That is your original?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. We will introduce those in the record. That is the Willapa Lumber Co., is it?

Mr. CAMPBELL. Yes, sir. Well, this is a contract for the sale of commercial lumber to them.

Mr. FREAR. A contract for the sale of lumber to them by the Spruce Production Corporation?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. What is the price or the amount that is fixed there for the sale?

Mr. CAMPBELL. A flat price of \$18.10 per thousand.

Mr. FREAR. For what?

Mr. CAMPBELL. Well, according to the contract it is for the purchase of lumber which was advertised for sale.

Mr. FREAR. There is a copy here?

Mr. CAMPBELL. There is a copy of the advertisement here, dated January 18, 1919.

Mr. FREAR. What was that price made to cover?

Mr. CAMPBELL. Well, that covered all of the commercial lumber owned by the corporation at that time. There might have been a few small lots of lumber that were not included in that advertisement, because they were scattered somewhere.

Mr. FREAR. Reading from this contract the "company agrees to purchase said lumber at the flat price of \$18.10 per thousand feet board measure, payment therefor to be made as hereinafter provided. The corporation will also sell and the lumber company agrees to buy all piling strips (where lumber is not piled with its own sizes as stickers) at \$10 per thousand feet board measure, roofing boards and foundation timber at \$7.50 per thousand feet board measure." Can you tell me now how this contract was executed?

Mr. CAMPBELL. When you ask how it was executed what do you mean, sir?

Mr. FREAR. I mean what was the method of determination, how did these people buy that lumber, what kind of lumber was it, were they allowed to make any particular selections from the——

Mr. CAMPBELL. They took everything we had.

Mr. FREAR. They took everything you had?

Mr. CAMPBELL. Yes, sir. This referred particularly to the stock of commercial lumber at the Vancouver cut-up plant. Have you been over there?

Mr. FREAR. Yes; I have been over there.

Mr. CAMPBELL. Several acres of it piled over there, side cut.

Mr. FREAR. Yes.

Mr. CAMPBELL. From the airplane operations. They called that commercial lumber, but, of course, it was not cut to commercial sizes.

Mr. FREAR. Was it to be taken by them from the lumber as it was placed in the yard there?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. And on the measurements that were found there?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. That is to say—and you testify to this of your own knowledge—that it didn't mean lumber as finished and sent out, did it?

Mr. CAMPBELL. I believe the contract contemplated lumber of commercial sizes; I don't know, because we went ahead—

Mr. FREAR. Did it mean that they could buy that lumber for \$18.10 a thousand, then finish it up, change the condition of it, and have that the basis of measurement as it was sent out by them?

Mr. CAMPBELL. I think that was contemplated; yes, sir.

Mr. FREAR. If that was true, it would permit them to buy lumber off \$18.10 a thousand and sell it for all the way up to \$60 a thousand, would it not?

Mr. CAMPBELL. On the present market; yes.

Mr. FREAR. Now, I am trying to ascertain what the method was. Why did this contract permit them to make the selections and throw away the refuse and improve—

Mr. CAMPBELL. They don't make any selections, but they take it as it is piled.

Mr. FREAR. But do they not take it and finish it up and then have that made as the correct measurement?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Why was that condition placed in there? Do you know whether that was submitted to any other purchaser?

Mr. CAMPBELL. I don't know anything about the contract—

Mr. FREAR. Who was it that determined that method of procedure?

Mr. CAMPBELL. I could not tell you anything about that, because I don't know. Mr. Walker says he can give it to you.

Mr. WALKER. I had two bids for it at the time this contract was made, and as I remember, the nearest one was \$10, on the same basis and that—

Mr. FREAR. On what basis?

Mr. WALKER. The same basis as the Willapa basis.

Mr. FREAR. But does this statement contain any such inference as has been presented by the witness?

Mr. WALKER. The contract was drawn there and everybody understood it.

Mr. FREAR. How do you say that everybody understood it? The contract speaks for itself, does it not?

Mr. WALKER. Yes, sir.

Mr. FREAR. Will you give the provisions there that enables anyone to take that lumber, finish it up, and then, after having finished it and discarded all that they thought was useless, to make that as the basis of measurement on which the lumber was sold?

Mr. WALKER. Here it says, paragraph 4, Mr. Frear:

Measurement of said lumber shall be based on commercial sizes of lumber, in accordance with invoices, as shipped, provided that if lumber of odd lengths, widths, or thickness is sold by the lumber company upon actual measurements, the corporation shall have the benefit thereof and receive payment on the basis of measurement of said odd sizes in accordance with the invoices, it being understood that the lumber company may mill said lumber in accordance with customary sawmill practice, and that payment therefor shall be based on measurements thereof as shipped. Present proportions on short and long lumber shall govern per invoice as shipped.

The idea was—we sawed that out of the cants, there was no—it was not possible to cut the lumber to commercial sizes, and as it measures, the natural measurement now would necessarily have to be reduced to bring it to a commercial size.

Mr. FREAR. And that would be——

Mr. WALKER. That is the only way that they can measure up lumber, is in milling it down to a commercial size.

Mr. FREAR. And finishing up that lumber?

Mr. WALKER. You see, in figuring that, the regular commercial sizes it takes to make it is a basis of payment.

Mr. FREAR. What was the reason that that was framed in that way, which, I understand, has a different interpretation from that given by you; what was the reason that they were permitted, under this proposed contract, to take this lumber, finish it up, and make that as what you call the commercial size and have that the basis of settlement from the payment of \$18.10?

Mr. WALKER. Well, I can best illustrate it by example, I think. Mr. Frear. Take a piece, say it was 2 by 5, we will say it would have to be dressed down to 2 by 4; that would be the nearest commercial size, we will assume, that is in that; we would have to lose that, in any event, because it is not a customary commercial size. But if they took that 2 by 4 and finished it up into a piece that would require a 1 by 4 to make it, they would pay for that 1 by 4. They can take a 2 by 4 and work it into a piece that would require 1 by 4 and expect to only pay for the 1 by 4.

Mr. FREAR. How was this determined? They made the selection, did they not?

Mr. WALKER. Well, they had to.

Mr. FREAR. And you say the lumber as shipped determines it?

Mr. WALKER. Yes.

Mr. FREAR. That is, when the measurement occurs?

Mr. WALKER. We have a man there keeping an account of just what lumber goes into that finished-up lumber, though, and they can't butcher up lumber in getting out an order of finished lumber.

Mr. FREAR. Is there anything in the contract that says they can't determine it themselves as to the method of shipment?

Mr. WALKER. No.

Mr. FREAR. It is based on the lumber as shipped, and I am asking for this purpose—the object of the inquiry is this: Whether or not at \$18.10 a thousand that would enable them to sell lumber at a price as high as \$60.000 a thousand after the lumber was shipped out?

Mr. WALKER. Well, I can only answer that in this way. Undoubtedly some of that lumber would be sold that high; there is other that would be sold lower than that price, you see; and in any event the lumber marked lately has risen considerably from what it was at the time these bids were taken.

Mr. FREAR. When were those bids made?

Mr. WALKER. Why, the advertisement gives it here.

Mr. CAMPBELL. February.

Mr. WALKER. February, 1919. As I remember it, the nearest bid to the Willapa's was \$10 on that, Mr. Frear. There were several bids received.

Mr. FREAR. Yes; I understand.

Mr. WALKER. Yes.

Mr. FREAR. There is no difference of opinion as to that, but the point is whether or not there was an understanding by the bidders that this method was pursued by the Willapa Lumber Co. was the one which would operate with the purchaser?

Mr. WALKER. Yes, sir.

Mr. FREAR. Well, now, whom did you explain that to?

Mr. WALKER. Well, of course Lieut. McDonald was the man that was in charge of this sale. All I know is what I heard when I was in his office.

Mr. FREAR. I understand.

Mr. WALKER. I was there when he was discussing it with a Mr. Hart, from New York City.

Mr. FREAR. But you said the understanding was with all of them. Now, you don't know anything about that, apparently.

Mr. WALKER. Well, I know that this contract, the tentative form of contract, it was the general understanding at that time.

Mr. FREAR. You say it was the general understanding?

Mr. WALKER. Yes, sir.

Mr. FREAR. How do you know that?

Mr. WALKER. Well, I have heard Lieut. McDonald, as I say, express it to Mr. Hart, of New York, and he had charge of it.

Mr. FREAR. Yes; because he expressed it to one person you say that that was the general understanding. Is that the basis of your information?

Mr. WALKER. Well, I assume he would tell every man that.

Mr. FREAR. Oh, that is an assumption on your part?

Mr. WALKER. I happened to be there when he was discussing it with this particular man.

Mr. FREAR. With Mr. Hart; yes. And that is all you know about its being a general understanding, is it? Or do you know anything about it? Did you hear him talk to anyone else?

Mr. WALKER. I paid so little attention to that that I can't—

Mr. FREAR (interrupting). I know; but your remark that it was a general understanding is quite sweeping, and I wanted to know.

Mr. WALKER. Yes. Pardon me. [Mr. Walker here looked at advertisement.] Here it says in the advertisement, Mr. Frear, further on up the advertisement, it says that the bidders must inspect the lumber as it now stands at the Vancouver Barracks.

Mr. FREAR. Yes; I understand that was all done.

Mr. WALKER. And in paragraph 7 it says:

Bids must be on the basis of the unit price per thousand as in the pile. Measurements will be based on commercial sizes of lumber as shipped. And payments on odd lengths, widths, and thicknesses will be made as shipped. Present proportions of short and long lumber shall govern the purchaser's sale, and he will be required to pay for the lumber shipped as in the proportion of such sizes as they now obtain.

Mr. FREAR. Now that is true, but why wasn't the lumber sold as it stood there, instead of the method, the operation, after they had cleaned it up and were ready to ship it?

Mr. WALKER. Well, for this reason, Mr. Frear: We had inventories of that lumber that took the net size of the lumber. Those piles over there contain—they vary from two-by-fours, and sometimes under by an eighth of an inch in every way. They are not commercial sizes in any cases.

Mr. FREAR. I understand that.

Mr. WALKER. And there is no way for any man to tell what they would produce in commercial sizes, and if he bid on that basis he would have to either cheat the Government or we would be cheating him—one or the other.

Mr. FREAR. Would that necessarily be so? The Government may have been cheated under this operation that you have proposed here.

Mr. WALKER. Well.

Mr. FREAR. I am not saying intentionally so.

Mr. WALKER. No.

Mr. FREAR. But I mean that that may have been the result, and I am asking if there was any other sale that you ever made over there that was made on the basis that the payments were to be made on the basis of the lumber as shipped, and they were permitted to take the lumber over and fashion it to suit themselves before it was sold?

Mr. WALKER. I don't know whether I made myself clear, Mr. Frear.

Mr. FREAR. You said that it was checked there, and I asked why it could not have been sold as it stood there, and as apparently was the understanding of some of the bidders. A pile of lumber was there, and you have the dimensions of the lumber, have you not—of that pile?

Mr. WALKER. Well, we had an inventory, and the inventory was—

Mr. FREAR (interrupting). Yes; an inventory. Now that could have been a basis of intelligible understanding, couldn't it? To any man who was going to buy it you could say, "Here are the dimensions"; he could see the pile there; then he could determine whether he was going to buy it.

Mr. WALKER. But, as I say, the amount of commercial lumber he could get out of any such inventory would necessarily be the basis of an estimate, Mr. Frear.

Mr. FREAR. Surely; this is on the basis of estimating.

Mr. WALKER. They all bid on the same.

Mr. MAGEE. Let me see if I understand just the situation here.

Mr. FREAR. I just want to ask one more question on that. The witness who is sitting shakes his head. Let's see if I am right.

Mr. CAMPBELL. This is not made on any basis of estimates, in accordance with paragraph 7 of the bid, or the terms of the contract; it is not any estimate.

Mr. FREAR. Then the witness is not testifying correctly?

Mr. WALKER. No; it is a unit price per thousand, Mr. Frear. That lumber wasn't bought in at a lump amount.

Mr. FREAR. Oh, I understand, but that is why I am asking, why it wasn't bought in as any ordinary lumber would be bought in.

Mr. MAGEE. Let me see if I understand what the contention is here.

Mr. FREAR. I can see the danger in this kind of a proposition.

Mr. MAGEE. In order to clear this proposition up.

Mr. WALKER. Yes.

Mr. MAGEE. Is this the condition, Captain: That you had this lumber in an unfinished state in different piles, that is not ready for shipment to market; that it had to be resawed or refinished before it would be in the shape of lumber which could be exactly measured for shipment to market?

Mr. WALKER. It was not in the customary commercial sizes.

Mr. MAGEE. Now just wait a minute. Now, if they bid on the piles as they were there as to the amount of finished lumber which could be obtained from them for commercial purposes it would be an estimate upon the part of any bidder?

Mr. CAMPBELL. It would be.

Mr. MAGEE. Well, if you made the basis the putting of this lumber in its rough shape into such sizes as would be suitable for commercial purposes, why then it could be sawed into those sizes and measured exactly and shipped to market; now is that the condition?

Mr. CAMPBELL. That is it; yes, sir.

Mr. WALKER. That is the condition?

Mr. CAMPBELL. Yes, sir.

Mr. MAGEE. Well, I wanted to get it clear in my mind.

Mr. FREAR. Well, I think we clearly understand what the contract provides there. You have it there.

Mr. CAMPBELL. Yes, sir; and since I have read this bid, the advertisement for the bids certainly makes it as clear as it is set forth in the contract.

Mr. FREAR. There is no question but what it makes it clear as it stands here, but how would two men in sawing—and here is the meat in the coconut, and if it is not true the committee wants to know—how would two men in purchasing this pile of lumber saw it up in the same method so that the shipments made by them would correspond or would be the same?

Mr. WALKER. They could not butcher up our lumber, Mr. Frear. They would have to take it as it was and saw it to the nearest commercial size, whoever they were. We have a man there to keep constant track of that.

Mr. FREAR. Well, is there any evidence that there was any effort to do that, do you know?

Mr. WALKER. Any effort to butcher it up?

Mr. FREAR. Yes.

Mr. WALKER. No.

Mr. FREAR. Well, now, some of that lumber sold at \$60, as I said, a thousand. What is the inference there outside of the lumber market, which I was to inquire about in a moment?

Mr. WALKER. Well, of course, in selling any big lot of lumber there will naturally be grades that will bring higher prices and there will be others that will bring lower prices.

Mr. FREAR. What proportion of this lumber, so far as you know, brought less than \$18 a thousand?

Mr. WALKER. Well, I could not say right offhand. I don't know. There may not have been any cheaper.

Mr. CAMPBELL. I don't believe any of it.

Mr. WALKER. Of course, they have their milling expenses and other expenses on top of that, the handling, and insurance and so on.

Mr. FREAR. Yes; that would be taken out, I understand.

Mr. MAGEE. The purchaser paid for the recutting of the timber?

Mr. WALKER. Yes, sir; the handling of the trucks, and all of that.

Mr. FREAR. That is, that would not be one of the elements of the contract that would be performed by the Government?

Mr. WALKER. Yes, sir.

Mr. LEA. Let me see, before leaving that point, there is a little clause in the contract there which Mr. Walker read, which in substance is intended to protect against the waste of the material. That is, the Government cooperates in seeing that this material is cut up properly; so I just want to call attention to that.

Mr. FREAR. Well, did the Government have control?

Mr. WALKER. Yes, sir. We have a man over there now.

Mr. MAGEE. Well, I suppose the only question here is whether to sell it in the rough, or to sell it on a basis of commercial lumber.

Mr. LEA. Yes, sir; that is all.

Mr. WALKER. The whole thing is whether to go to work and measure it in the pile before you mill it, or whether you mill it and measure it then?

Mr. FREAR. Yes; that, I understand, is the sole question.

Mr. WALKER. Yes, sir.

Mr. FREAR. And whether or not this is the right way of presenting the contract and whether there was an opportunity for any mistake in judgment by those who were bidding.

Mr. MAGEE. Well, I judge that depends on the Government's inspection.

Mr. WALKER. Yes.

Mr. MAGEE. In the cut of the timber, wouldn't it?

Mr. FREAR. He would be the man having control?

Mr. WALKER. Yes, sir.

Mr. FREAR. Does it say here that he is the man who has control, in the contract?

Mr. WALKER. I believe you will find that in the contract; that we have general control over the thing, naturally.

Mr. CAMPBELL. The title in the lumber remains in us until it is absolutely finished. I think it is just covered in that one clause, and we put a man there to supervise it.

Mr. WALKER. Here is the clause, Mr. Frear.

Mr. FREAR. Yes.

Mr. WALKER. Continuing paragraph 4 of the contract, it says:

The tally of all lumber as shipped shall be checked by the representative of the corporation, who shall certify to the correctness of the invoices covering the same.

And later on——

Mr. FREAR (interrupting). Who shall certify to the correctness of the invoices. Does that mean as to the character of material that may be cut out? Now, I am just inquiring.

Mr. WALKER. Yes. "The tally of all lumber shipped shall be checked by the representative of the corporation, who shall certify to the correctness of the invoices covering the same." Now, he checks the tally and the invoices.

Mr. FREAR. I understand. Now, where does that in any way say that the Government's agent shall have the right to determine what kind of lumber shall be put into the finished product, how the rough lumber shall be finished? I am inquiring, and will follow it with another question in a moment.

Mr. LEA. That, as I understand, don't cover it.

Mr. FREAR. No; that does not cover it. It covers simply the checking as to the amount of the invoice.

Mr. WALKER.

Should the representatives of the parties be unable to agree upon said pile tally the same shall be referred to the Pacific Lumber Inspection Bureau, whose decision shall be accepted, and the basis of payment subject to adjustment upon final shipments as aforesaid.

Mr. FREAR. Well, of course, that does not affect it; that is the pile tally. You get the point?

Mr. CAMPBELL. No; I don't get the point.

Mr. LEA. Let me look at this a minute. I think I can find it. Where is that clause you read a while ago?

Mr. CAMPBELL. This is it here [indicating].

Mr. LEA. Now, in clause 8, in reference to the size of this lumber, "it being understood that the lumber company may mill said lumber in accordance with customary sawmill practice and the payment therefor shall be based on measurements thereof as shipped." Customary sawmill practice.

Mr. FREAR. Yes; that is all that relates to that. What is the practice, do you know, in sales that are made by lumber companies of piles of lumber like that to individuals? That is, for resawing. Do you know whether that is a customary way of drawing contracts?

Mr. CAMPBELL. It is made very seldom, and nobody would bid on a pile of lumber like that unless they bid on commercial sizes.

Mr. FREAR. That is a customary way, you say?

Mr. CAMPBELL. It is where I have lumbered; that is, handled lumber.

Mr. FREAR. That is, here in the West?

Mr. CAMPBELL. Well, I haven't lumbered here. I don't know what the practice is here.

Mr. FREAR. No. I inquired because I just wanted to find out if that was the custom here.

Mr. CAMPBELL. I don't believe a regular commercial organization would care to bid on——

Mr. FREAR (interrupting). Not even if it had an inventory of the sizes?

Mr. CAMPBELL (continuing). On lumber in the piles.

Mr. FREAR. On lumber in the piles, not even if they had an inventory of the sizes?

Mr. CAMPBELL. Well, it would be a very difficult thing to know exactly what the size is. These piles are inventoried as so many feet in the pile.

Mr. FREAR. Doesn't it give something about the dimensions—nothing at all?

Mr. CAMPBELL. No, sir; the piles were estimated.

Mr. FREAR. Then the purpose, as you explained it, was in order that the purchaser would have a knowledge of the exact character of the lumber contained in the pile as evidenced by the finished product?

Mr. CAMPBELL. Yes, sir. I think if this had not been done they would have bid on this as they would on a pile of junk. They would have estimated, and their estimates would have been much lower than what they were at the time.

Mr. WALKER. Mr. Frear, in connection with that point, of course Mr. Jayne is with the Willapa Co., but he tells me it is the custom to sell lumber here for milling purposes on the price per thousand as the grades will produce, and what it will produce, if you have a big pile.

Mr. FREAR. That is, based upon the production?

Mr. WALKER. Yes, sir.

Mr. FREAR. The results at the time of the shipment?

Mr. WALKER. Yes, sir.

Mr. FREAR. Well, we are inquiring about that.

Mr. WALKER. Yes, sir.

Mr. FREAR. Now, what was the increase in the lumber market, approximately, in a general way, on the finished product between February and, oh, say six months after that; I don't know; what was the time?

Mr. CAMPBELL. What was it?

Mr. WALKER. I am not competent at all on that.

Mr. FREAR. You are speaking about the lumber market. Surely you can tell. I just want to know in a general way.

Mr. WALKER. Do you know how the lumber market has gone up since February?

Mr. JAYNE. Yes, sir.

Mr. FREAR. Mr. Walker can testify as from that information, in a general way.

Mr. WALKER. He says the lumber market in general has increased about a hundred per cent, and the spruce market about 25 per cent.

Mr. FREAR. Up to the present time?

Mr. WALKER. Yes, sir.

Mr. FREAR. All right. Now again addressing the witness, Mr. Mitchell's salary is how much now?

Mr. CAMPBELL. \$1,500 a month.

Mr. FREAR. \$1,500 a month?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. That is his total salary?

Mr. CAMPBELL. That is the maximum.

Mr. FREAR. How long has that been his salary?

Mr. CAMPBELL. I should say since some time in December.

Mr. FREAR. December, last year?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. What was his salary prior to that?

Mr. CAMPBELL. Why, he had left the employ of the corporation; I don't believe he was employed at the time he took up this sales work for us. He had operated the cut-up plant.

Mr. FREAR. What was his salary then?

Mr. CAMPBELL. Well, I wasn't here at the time, but I have heard it said that it was around \$12,000 a year coming to him.

Mr. FREAR. How much; 12,000?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. I am just inquiring, because we have not had the records.

Mr. CAMPBELL. I think he had——

Mr. WALKER (interrupting). He had two contracts.

Mr. CAMPBELL. He had two contracts.

Mr. WALKER. If it is proper for me to suggest.

Mr. FREAR. You can suggest; that is all right; we just want the facts; that is all.

Mr. CAMPBELL. He had to pay his superintendents out of those two contracts.

Mr. WALKER. Out of the first one.

Mr. FREAR. Out of the 12,000?

Mr. CAMPBELL. No.

Mr. WALKER. He had one contract that would probably net him \$25,000 a year, or \$2,085 a month, and out of that he paid the salary of three superintendents, which, as a fact, amounted to \$900 a month expense. Then the contract was revoked later in the fall and he was given a straight salary compensation of a thousand dollars a month after that.

Mr. FREAR. \$1,500 a month, the statement of the witness is.

Mr. CAMPBELL. Well, this latter \$1,500 was for the sale of machinery. This came after he had left the corporation from operating the cut-up plant.

Mr. FREAR. Now, he is receiving, as I understand \$18,000 a year at that rate?

Mr. CAMPBELL. Well, of course, his salary of \$1,500 a month, Mr. Frear, is based really on the commission, on what he sells. As a matter of fact, he has always got his \$1,500 a month.

Mr. FREAR. On his share of that?

Mr. CAMPBELL. No. That is the maximum.

Mr. WALKER. No. He is not sure of that, if he does not sell the stuff.

Mr. FREAR. Oh, as a maximum?

Mr. CAMPBELL. Yes, sir.

Mr. WALKER. Yes, sir.

Mr. FREAR. That is, you mean to say he can't be paid over \$18,000 a year at that rate?

Mr. WALKER. That is all.

Mr. MAGEE. What is his compensation? Is it a commission compensation?

Mr. CAMPBELL. It is a commission.

Mr. WALKER. With a maximum limit.

Mr. MAGEE. Just what are the terms, if you know?

Mr. WALKER. Why he gets, I believe—I think it is 5 per cent on sales less than \$500 each, or little stuff, and it runs down to 2½ per

cent on sales of larger amounts; that is, big equipment and things like that. It is a sliding scale.

Mr. FREAR. What has been the result thus far since his employment as to the amounts of salary and accounting for his commissions?

Mr. WALKER. He has always received his \$1,500, and always earned more than that.

Mr. FREAR. In other words, that is, he has earned more under his contract?

Mr. WALKER. Under his contract; yes, sir.

Mr. FREAR. Yes; under his contract.

Mr. WALKER. Yes, sir.

Mr. FREAR. That is, in other words, he has received on the basis of at least \$18,000 a year on the contract?

Mr. WALKER. Fifteen hundred dollars a month. I don't think this contract began operation before March of this year.

Mr. FREAR. March of this year?

Mr. WALKER. Yes.

Mr. FREAR. I understand.

Mr. WALKER. It may be later than that.

Mr. FREAR. Who fixed this contract?

Mr. WALKER. I could not say as to that.

Mr. FREAR. You don't know who drew the contract or who determined the terms?

Mr. WALKER. Col. Stearns undoubtedly approved it.

Mr. FREAR. Was there any other—

Mr. WALKER (interrupting). Maybe the board of directors, for all I know. I don't know.

Mr. FREAR. You don't know whether he receives any other compensation?

Mr. WALKER. No; he receives no other compensation.

Mr. FREAR. That is, not from your organization?

Mr. WALKER. Not from our organization.

Mr. FREAR. Did he receive, or do you know, any compensation in the purchase when the purchases were made of machinery and so on?

Mr. WALKER. Why, in this way: Of course, his contract for the construction of the mill, as I remember, paid him 2½ per cent on the cost of construction of the mill, and naturally the purchases of material and equipment are a part of the cost, and in that way he did get that amount. That was to cover both the design and the construction of the mill.

Mr. FREAR. Now, those statements—

Mr. GABRIELSON (interrupting). That is the copy of the contract [indicating].

Mr. WALKER. This is our copy, Mr. Chairman.

Mr. FREAR. We want to introduce that in the record; I mean, make it an exhibit. Let's don't set it out. Then, we have the Hammond contract.

Mr. LEA. Yes.

Mr. FREAR. Make these as exhibits. We don't want to burden the record with them.

Mr. LEA. You had better leave it here to-day, and let him put it in evidence this afternoon.

Mr. FREAR. Yes. So far as your judgment is concerned, these compilations you have made as cost compilations, and so forth, are correct to the best of your judgment?

Mr. CAMPBELL. Yes, sir. I have attached an affidavit.

Mr. FREAR. What is that?

Mr. CAMPBELL. I have submitted that under oath.

Mr. FREAR. What is this?

Mr. GABRIELSON. The cost compilation.

Mr. LEA. Suppose we put this in the record?

Mr. GABRIELSON. The whole thing will go in the record later.

Mr. FREAR. We will offer this. You may mark this copy of contract.

(Said copy of contract was thereupon marked "Exhibit 28, Witness Campbell, September 11, 1919.")

Mr. FREAR. What was the exact amount of money paid in the British settlement by Great Britain?

Mr. CAMPBELL. I don't know whether that has been actually paid or not, but I have a letter here from Washington, stating that they had credited our account with a certain amount of money.

Mr. FREAR. What is that? That will be sufficient?

Mr. CAMPBELL. So I presume that the payment has been made. They didn't say it in so many words. I have a letter here from the Director of Air Service. Shall I quote this one paragraph?

Mr. FREAR. Yes, please.

Mr. CAMPBELL. It is a letter from the Director of Air Service to the Spruce Production Corporation:

Replying to your letter of July 28, 1919, with reference to settlement with the British Government, you are advised that the United States Liquidation Commission presented a bill to the British Government in the amount of \$13,274,550.20 for spruce, fir, and cedar lumber supplied by the Spruce Production Division and the United States Spruce Production Corporation, for which payment has not been received; \$3,997,862.31 was for lumber invoiced this bureau, leaving a balance of \$9,276,687.89, which will be credited to the United States Spruce Production Corporation on the books of the Sales Section, Liquidation Division.

Mr. FREAR. That is, let me see if I understand correctly; that is based upon this salvage estimate that has been placed in, together with the difference in the actual cost; is that it?

Mr. CAMPBELL. Well, I imagine that that was based on that.

Mr. FREAR. Yes; well, we just want your best judgment. We are trying to get an understanding of the basis.

Mr. CAMPBELL. I might mention here for your information that I was ordered by Washington when I came out here as district manager of finance about the 30th of January to submit an estimate of the final outcome of these liquidation proceedings out here.

Mr. FREAR. That is, the salvage that was being secured?

Mr. CAMPBELL. Well, not only the salvage. I had to estimate the amount of claims and the expense of assembling the equipment, and I refused—

Mr. FREAR (interrupting). Yes, I see; that is, the likelihood of settlement, and so on?

Mr. CAMPBELL. And I refused to do it for some time.

Mr. FREAR. Well, it was a pretty big contract, wasn't it?

Mr. CAMPBELL. And wired them I would not assume responsibility and I didn't know anybody who would, and I asked them what it

was for, and they wired back it was for this liquidation commission. Well, they fooled along until about the 14th of February, wiring back and forth, and finally I received a direct military order—I was in the service at this time—from Col. Brown to do this and send it to Washington by a man not later than February 20, which I did. And I accompanied it by telegrams and by letters stating that the information was really of no value and should not be used, but that I had taken ample steps to protect my guess and protect the Government in making a settlement. Well, when I went to Washington I was ordered there a little later and I met this liquidation commission and was with them for four or five days.

Mr. FREAR. Who was on the liquidation commission, by the way?

Mr. CAMPBELL. It is headed by Chester W. Cuthell.

Mr. FREAR. What is their title?

Mr. CAMPBELL. The liquidation commission of the War Department.

Mr. FREAR. And they have other duties; this aircraft is only one?

Mr. CAMPBELL. It is just a small portion of their duties; but during these conferences that we had at that time it was stated to me that the British, French, Italians, and the United States, none of them cared to wait until all these matters were liquidated and the accounts closed and the final cost determined, and that they had agreed among themselves that each one make this sort of an estimate, a guess, and it was natural to suppose that all those Governments were making the same kind of safe estimate that we were, and I then changed my mind and believed it was a fair basis of settlement if everybody understood the conditions; because, having dealt with England, I knew that any guess or estimate made on the part of England would be fairly safe.

Mr. FREAR. You made this estimate that has been placed in the record of the various salvage values. How did you make any estimate with regard to settlement values?

Mr. CAMPBELL. I did not take them into consideration. I made the salvage values so low that they would cover that.

Mr. FREAR. There were claims against the corporation?

Mr. CAMPBELL. Yes; there were millions of dollars of claims.

Mr. FREAR. What were they; how much in amount?

Mr. CAMPBELL. I could not tell exactly; probably some seven or eight million dollars.

Mr. FREAR. What was the amount of the settlements as made, approximately?

Mr. CAMPBELL. I think they amount to about two and a half million.

Mr. FREAR. That is to say, there was a reduction of about \$4,000,000 in the amounts as claimed and the amounts that were paid?

Mr. CAMPBELL. I believe I have heard it stated that it ran around 25 per cent; I am not sure. I find I have it here exactly. It is \$6,933,504.19.

Mr. FREAR. That is the amount claimed?

Mr. CAMPBELL. Yes; and the amount allowed on that was \$1,594,139.93.

Mr. FREAR. That would be about 25 per cent?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. How did you place that in your guess, as you call it, that was made to this liquidation board; how does that appear; in what relation?

Mr. CAMPBELL. As I stated to you, this was made up in about one hour and—

Mr. FREAR. I am not criticizing it, and I realize the difficulties, but I am trying to find out just what the elements are.

Mr. CAMPBELL. I estimated about how much the claims had been that were received and there had been some settlements made, and the ones that had been made at that time amounted to about 20 per cent. So I figured, as nearly as I can remember now, that the total of their claims probably amounted to \$3,000,000. It was just a wild guess; there were no figures at all, and in order to save putting this into the estimate and making any more wild guesses than necessary, I shaded the percentage of—

Mr. FREAR. Claims?

Mr. CAMPBELL. No; I shaded the percentage value which I placed on the assets.

Mr. FREAR. Did you put the \$3,000,000 in?

Mr. CAMPBELL. I did not include it anywhere; I just shaded the salvage value of the tangible assets that much.

Mr. FREAR. You had the salvage value placed so that it would cover this \$3,000,000, which really is about a million and a half?

Mr. CAMPBELL. Yes, sir. That is the basis on which I worked, and I did it because the fewer guesses I could put in the better.

Mr. FREAR. Those salvage estimates you have put in there, apart from any in the railway values ought to also include a million and a half in claims that have been settled. Is that right?

Mr. CAMPBELL. They would include more than that, because these were claims on account of logging operations. Then they had claims for—these were really not claims—but they had orders placed for materials and machinery which were in various processes of manufacture. They either had to buy those or cancel the orders. In some places where they had not proceeded very far they finally canceled the orders and paid a small amount for the work done. In others that had gone so far along they had to go ahead and buy the finished product, and those amounted to approximately two and a half million dollars.

Mr. FREAR. That should be added to the million and a half?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. That material that was received would go into additional property at a salvage value, so that would be in a class by itself?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. How was it that they continued to manufacture beyond the time of the armistice? You said where they had given contracts to go on. How long a period did that take?

Mr. CAMPBELL. I do not know how long it did take.

Mr. FREAR. Well, one month or six months.

Mr. CAMPBELL. I should say it took three months, probably, to get this material in.

Mr. FREAR. Three months on the average?

Mr. CAMPBELL. Yes. As near as I understand—I was not on this claims board—a great many concerns asked more for the cancel-

lation of the contract, or so much for the cancellation of the contract, that the claims board decided it would be better to let them finish it.

Mr. FREAR. That would be a matter of claims similar to the other claims, provided they had chosen to cancel them under the power that existed?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Is there anything further that you have in mind that you care to place before the committee, because we realize this is a very large subject and we are only devoting a small portion of our time to it.

Mr. MAGEE. I would like to know what the monthly operating expenses are of the Spruce Production Corporation.

Mr. FREAR. The salary list?

Mr. MAGEE. What it is costing the Government now—the operating expenses.

Mr. CAMPBELL. I think last month's expenses were about \$130,000.

Mr. FREAR. Have you got all the items?

Mr. MAGEE. Can you give us a statement running back, say, to the time of the armistice, showing the operating expenses here of the Spruce Production Corporation to date?

Mr. CAMPBELL. Yes; we can do that, if you would like to have it.

Mr. MAGEE. That is information that we ought to have, and we would like an itemized list of a month's operating expenses, so we can see the nature of them.

Mr. CAMPBELL. All right.

Mr. FREAR. This is a pay roll amounting to \$21,426.56; that is the pay roll for last month [indicating].

Mr. CAMPBELL. Yes.

Mr. FREAR. Apart from that pay roll, what expenses go to make up the total that you have mentioned?

Mr. CAMPBELL. Well, we are still working on these fire-protection matters, cleaning up the fire hazards in the woods, and I think last month's expense on that was about \$13,000. Of course, that is gradually coming down. It will be eliminated probably next month.

Mr. FREAR. I am asking more particularly along the line suggested by Mr. Magee. What other salaries or commissions have you that are being paid? For instance, Mitchell's name does not appear here.

Mr. CAMPBELL. He is not on the pay roll.

Mr. FREAR. How many other people are there whose names do not appear who are receiving commissions?

Mr. CAMPBELL. He is the only man working for the Government on a commission basis.

Mr. FREAR. The fire hazards were how much?

Mr. CAMPBELL. \$13,000.

Mr. FREAR. In what period?

Mr. CAMPBELL. One, the month of July.

Mr. FREAR. And how much were they for the month of June?

Mr. CAMPBELL. I have not that here.

Mr. FREAR. Approximately, what would they average?

Mr. CAMPBELL. Oh, they would be more.

Mr. FREAR. In the month of June?

Mr. CAMPBELL. Yes; they are reducing each month rapidly.

Mr. FREAR. Outside of the salary roll and fire hazards, what else is there?

Mr. CAMPBELL. Assembling—expense of assembling equipment that is coming in from the woods.

Mr. FREAR. That is pretty nearly all net, is it not?

Mr. CAMPBELL. Last month was very low, or July was very low, and I think there will be practically none this month.

Mr. FREAR. How much for the month of July?

Mr. CAMPBELL. July, \$26,000.

Mr. FREAR. What are the large items?

Mr. CAMPBELL. That is the largest item.

Mr. FREAR. Of those you have given?

Mr. CAMPBELL. I can give you a statement.

Mr. FREAR. We would be glad to have it. Here is a list of how many employees at the present time that you are carrying on the pay roll.

Mr. GABRIELSON. There are about 186.

Mr. FREAR. Is that right, 186?

Mr. CAMPBELL. Yes; about 186.

Mr. FREAR. Whereabouts are they?

Mr. CAMPBELL. They are here and at Vancouver, most of them. Of course we have a few scattered around over the operations; watchmen and people of that sort.

Mr. FREAR. But they are included in this list which totals \$21,000 in round numbers.

Mr. CAMPBELL. Yes, sir; it is about that; about \$20,000. There is one thing I wanted to mention, Mr. Chairman. I sat here the other day and heard the chairman mention the cost of some of the railroads as \$130,000 a mile.

Mr. FREAR. Yes.

Mr. CAMPBELL. I can give you the exact cost of those, and it seems to me that those figures would be better to use.

Mr. FREAR. Will you give us the cost and the basis of making your estimates?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. And the rule under which you are proceeding in making the estimates?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Can you do that right now, or how long would it take?

Mr. CAMPBELL. It would not take very long to read these into the record. Mr. Gabrielson has them.

Mr. FREAR. We have had them once?

Mr. LEA. Have you a prepared statement that includes that which you could insert without reading?

Mr. CAMPBELL. Yes; and so has Mr. Gabrielson.

Mr. LEA. We do not need anything else on that, then.

Mr. FREAR. I want to know the basis on which you made these estimates, and the rule under which you proceeded.

Mr. CAMPBELL. They are not exactly estimates. The costs of the railroads were kent in accordance with the Interstate Commerce Commission classification; that is, the one outlined by the Interstate Commerce Commission. There was a certain amount of main line completed in each instance, and some main line partially completed. There were spurs and sidings completed and uncompleted. We have

taken the report which came from the engineer. Of course my figures on mileage are all based on the engineer's report to me.

Mr. FREAR. We will assume, for the purpose of our inquiry, that the reports as made by the engineers of the completed railroad are as stated by them.

Mr. CAMPBELL. And he also reported to me the stage of completion of uncompleted main lines, sidings, and spurs on each road.

Mr. FREAR. Yes.

Mr. CAMPBELL. And the percentage of cost of those compared to main-line construction.

Mr. FREAR. How can he tell that, and how can you tell the percentage; that estimate of construction—what is the rule of procedure there?

Mr. CAMPBELL. I do not know his rule.

Mr. FREAR. That is a very important proposition which the committee wants to know.

Mr. CAMPBELL. I think Maj. Herington should be called.

Mr. FREAR. I notice that sidings and spurs are costing \$60,000 a mile, and the estimate should be in.

Mr. CAMPBELL. Yes.

Mr. FREAR. Maj. Herington is the one who would know; you would not have any information upon that?

Mr. CAMPBELL. All I know is the total based upon his estimates.

Mr. FREAR. And the arbitrary rule for making these estimates is based upon his report? I do not mean any criticism there.

Mr. CAMPBELL. Those are the figures on which it is based.

Mr. FREAR. It is based on Interstate Commerce Commission rules?

Mr. CAMPBELL. The accounts were on the Interstate Commerce Commission classification.

Mr. FREAR. Of the difference between spurs and sidetracks and so on?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. I suppose Maj. Herington should be called to ascertain why the distinction exists between the main line and the spurs and the sidings, and as to what rule he follows in making his estimates?

Mr. CAMPBELL. I think he should be; yes, sir.

Mr. FREAR. That is what I was trying to get at a day or two ago and I did not know where to get it. Thank you, very much. Is there anything else?

Mr. CAMPBELL. There is nothing I can think of.

Mr. MAGEE. Can you figure up there the cost of obtaining the terminals and construction wharves and trestles at Yaquina Bay?

Mr. CAMPBELL. It is very hard; I do not believe it could be done correctly. According to the Interstate Commerce Commission classification, all your trestles on a line are thrown into one account. We could go back and analyze the books of the Warren Spruce Co., but it would be a very long job. You would probably be through before we could give it to you.

Mr. FREAR. I will say at this time that the committee appreciates the help that your organization has given our accountants and others, because we have really been up against a large proposition, as you have.

Mr. CAMPBELL. I would like to say we have tried to get everything you have wanted that we could.

Mr. FREAR. I will say that Mr. Gabrielson says you have shown them every courtesy, and we appreciate it.

Mr. LEA. What was your business?

Mr. CAMPBELL. I have been in the lumber business and banking business in old Mexico.

Mr. FREAR. There is no question about that.

Mr. LEA. This Hammond project down there never reached the production stage, did it?

Mr. CAMPBELL. It had just started when the armistice was signed.

Mr. LEA. Was there anything of importance that occurred with reference to your meeting with this liquidation commission in Washington? You started in to say something about it?

Mr. CAMPBELL. There was nothing of any great importance, except for my own satisfaction I found out that all the governments were operating on this same basis, and that one man's guess was as good as another; what was fair for one was fair for another.

Mr. LEA. Was the estimate you forwarded for use by the Spruce Production Corporation the basis on which to make the sales of their property?

Mr. CAMPBELL. Absolutely not; no, sir.

Mr. MAGEE. It has been intimated that France and Italy refused to settle upon that estimated basis of salvage value.

Mr. CAMPBELL. No, sir; I do not believe that is true.

Mr. MAGEE. Have they?

Mr. CAMPBELL. No; because the commission just moved from England into France.

Mr. MAGEE. You heard the statement made, did you?

Mr. CAMPBELL. That they had refused to settle?

Mr. MAGEE. Yes; that they were waiting to determine what the actual salvage value is before they adjust their claims. You do not know anything about what the fact is?

Mr. CAMPBELL. No, sir. I do know that the French high commissioner, Mr. de Billey, told me they were more than anxious to settle on this estimated basis.

Mr. MAGEE. As furnished by you in February, 1919?

Mr. CAMPBELL. Yes, sir. He wanted to settle on this basis, and also to pay them on the basis of estimates they made to us for material furnished.

Mr. LEA. When did he tell you that?

Mr. CAMPBELL. Very shortly after this meeting.

Mr. LEA. While you were in Washington?

Mr. CAMPBELL. Yes.

Mr. FREAR. They accepted your guess?

Mr. CAMPBELL. They seemed to think it was just as fair as it could be.

Mr. FREAR. And that guess was 10 per cent of the salvage value of a number of the materials. For instance, the timber was salvaged nearly up to the full value.

Mr. CAMPBELL. I graded it.

Mr. MAGEE. What amount of logs did you say the Hammond Co. produced?

Mr. CAMPBELL. They actually delivered about 2,400,000, I think it was.

Mr. MAGEE. Do you know how much lumber that would make up—that amount of logs?

Mr. CAMPBELL. They figured about 15 per cent of airplane lumber from log footings on the average.

(Witness excused.)

(Thereupon, at 12.35 o'clock p. m., a recess was taken until 2 o'clock p. m.)

AFTER RECESS.

The committee met, pursuant to the taking of recess, at 2 o'clock p. m.

TESTIMONY OF JOHN P. MURPHY.

(The witness was sworn by Mr. Magee.)

Mr. MAGEE. Where do you reside?

Mr. MURPHY. Portland, Oreg.

Mr. MAGEE. You are an attorney at law?

Mr. MURPHY. I am; yes, sir.

Mr. MAGEE. You were attorney for the United States Spruce Production Corporation?

Mr. MURPHY. I am attorney at this time.

Mr. MAGEE. Did you have charge of looking after titles affecting the right of way in Lincoln County, Oreg., what was known as the railroad constructed by the Spruce Production Corporation, extending from Yaquina Bay up along the Pacific coast toward Otter Rock?

Mr. MURPHY. I have; yes, sir.

Mr. MAGEE. Also of the railroad extending from Yaquina Bay south into what is called the Blodgett tract?

Mr. MURPHY. I have; yes, sir.

Mr. MAGEE. Please state just what the conditions are as affecting the titles to the rights of way of these two roads?

Mr. MURPHY. The rights of way of both S. P. railroad No. 11 and No. 12 have been.

Mr. MAGEE. Which is No. 11?

Mr. MURPHY. No. 11 is the road running from Yaquina north along the coast; and No. 12 runs from Yaquina south along the coast. They have been or are now in process of being acquired in fee simple in the name of the United States Spruce Production Corporation. Previous to the incorporation and assignment of the Government property to the United States Spruce Production Corporation, the titles were acquired by the Warren Spruce Co., whatever titles were acquired. At that time our method was to take leases of the property rights with an option to take a deed at some future time.

Mr. MAGEE. Take road No. 11. That is the northern road. Where is that title now?

Mr. MURPHY. The title for the great majorities of the properties along the right of way is in the United States Spruce Production Corporation. There are some properties that are yet unacquired.

Mr. MAGEE. The title to these properties is not now in the Spruce Production Corporation?

Mr. MURPHY. Well, only those that have yet to be acquired.

Mr. MAGEE. Can you mention them?

Mr. MURPHY. I can not mention the names. There are some twelve of them on that road, as I understand. Some of them are in the process of being acquired and some technical defects exist as to these and are being cleared up.

Mr. FREAR. You say there are approximately 12 properties without perfected title?

Mr. MURPHY. Yes; out of 116.

Mr. MAGEE. Out of a total of 116 properties?

Mr. MURPHY. Yes; out of 116 properties.

Mr. MAGEE. Do you anticipate any particular difficulty in perfecting the title to these 12 remaining properties?

Mr. MURPHY. No. Most of these properties, with one exception, are owned by persons who have left the country and have left no address, or owned by estates. The one exception is owned by a man by the name of Baker, who has refused to sell his property to the corporation.

Mr. MAGEE. What proportion of the property, would you say, in distance is yet to be acquired, the right of way?

Mr. MURPHY. I would say practically 90 per cent is now acquired.

Mr. MAGEE. Can you give the committee approximately the cost of acquiring the title there?

Mr. MURPHY. We have paid approximately, on the north road, \$19,000 for the property acquired at this time.

Mr. MAGEE. Can you approximate what will probably be the cost of getting title to the remaining properties?

Mr. MURPHY. It will not be over \$700.

Mr. MAGEE. For the 12?

Mr. MURPHY. For the 12 remaining.

Mr. MAGEE. So that would make the total cost of acquiring the right of way, under your figures what?

Mr. MURPHY. Approximately \$20,000 for the property itself.

Mr. MAGEE. Will you give us the same information relative to No. 12, the road running south into the Blodgett tract?

Mr. MURPHY. There are 19 properties yet to be acquired. The total number of properties is 105. We have paid out at the present time \$11,346.26 for the properties already acquired on S. P. railroad No. 12. We estimate the balance, or the remaining properties, the total purchase price, will be approximately \$600.

Mr. MAGEE. So that would make a total on that basis, for your total, of how much?

Mr. MURPHY. Approximately \$12,000.

Mr. MAGEE. Have all the titles taken been taken in the name of the United States Spruce Production Corporation?

Mr. MURPHY. They have.

Mr. MAGEE. And the remaining titles will be taken in that way?

Mr. MURPHY. Yes.

Mr. MAGEE. Have any of the deeds yet been recorded in the county clerks' office?

Mr. MURPHY. They all have been recorded.

Mr. MAGEE. All those that have been perfected to date?

Mr. MURPHY. Yes, sir.

Mr. MAGEE. Do you expect any particular trouble in clearing up the title to railroad No. 12?

Mr. MURPHY. Not outside of the usual routine.
(Witness excused.)

TESTIMONY OF GEORGE B. HERINGTON.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. What you were called for specifically, Mr. Herington, was the statement of Mr. Campbell this morning that in figuring his railroad estimates he had accepted your figures, for the computation of estimates on spurs and sidetracks and so on with the main line, which have been accepted by the committee as the statement of the corporation.

Mr. HERINGTON. As I gather, the uncompleted portions of the railroad?

Mr. FREAR. And also the completed portion, and the basis on which you make your estimates of the cost to the Government of the spurs and sidetracks and so on.

Mr. LEA. Just to make the record clear, you are an engineer?

Mr. HERINGTON. I am the chief engineer.

Mr. FREAR. Your qualifications are admitted.

Mr. HERINGTON. Thank you. There is quite a mileage on each one of these properties which was in a state of progress. It was in a state of partial completion at the time the armistice was signed.

Mr. FREAR. Without too much detail, I think it would be well for you, if you will, to answer as to roads 1, 11, and 12, the amount of main line and the state of completion, and then as to the spurs and sidetracks, just briefly.

Mr. HERINGTON. On railroad No. 1—

Mr. FREAR. That is the road in Clallam?

Mr. HERINGTON. The railroad in Clallam County, 36 miles of main line complete with the rail, and $3\frac{1}{2}$ miles of sidings complete. There are in addition to that, 3 miles of uncompleted sidings, in which the grading was done and on which the frogs and switches were acquired and switch ties were acquired, etc., and ready for completion.

Mr. FREAR. And none laid?

Mr. HERINGTON. Those were not laid. The state of completion of those approximate 50 per cent of what it would cost to complete them; that is, the work done represents 3 miles, and 50 per cent, or the equivalent of $2\frac{1}{2}$ miles of equipment, is mileage. In the sidings which are fully laid, $3\frac{1}{2}$ miles of sidings fully laid, they may be considered as equivalent to approximately 75 per cent of the cost of the adjoining main line, mile for mile.

Mr. FREAR. What is your basis of making the estimate?

Mr. HERINGTON. The basis of making that estimate of 75 per cent is that the ballast on them is a little lighter, there is a little less percentage of grading on the siding, due to the normal load of the main-line roadbed, and due to the fact in some cases that a little lighter rail is used than on the main line.

Mr. FREAR. Is that all the elements taken into consideration?

Mr. HERINGTON. Those are the elements taken into consideration.

Mr. FREAR. I am asking entirely for information. Here is a main line that has been put through a new country; it includes the grubbing, cleaning up of the country, practically fixing the grades for a

right of way, we will say, 60 or 100 feet wide. You step in with your sidetrack and say that for a short distance, maybe 500 yards, that you will attach to those miles a sidetrack—the right of way is cleared, has been purchased, and all those things have been complied with; now, on what, with all these matters adjusted, how can you say that a sidetrack costs 75 per cent of a main line? I am just asking on what basis you compute that, and whether there is any rule for it?

Mr. HERINGTON. There is no set rule; each condition must apply to the peculiarities of its situation.

Mr. FREAR. Then, it is an arbitrary rule that you have applied?

Mr. HERINGTON. It is more or less of an arbitrary average rule that I have taken in making a size-up of the entire line. There are a number of sidings there, some sidings have rather heavy work and some have lighter work, but as an average the cost of those sidings would approximate 75 per cent of the cost of the main line.

Mr. FREAR. Now, let us see; you never put a siding where you have a very deep cut in rock, do you?

Mr. HERINGTON. Normally they are spaced to the mileage of operation.

Mr. FREAR. You never put a siding where you have a very heavy bridge, large bridges?

Mr. HERINGTON. Well, at times you have to cross drainages with them.

Mr. FREAR. Do you cross bridges in any railroads that we have mentioned on sidetracks?

Mr. HERINGTON. I do not recall that we do. There are very few bridges on that line.

Mr. FREAR. Is there any rule with railroads or engineers in determining the comparative value of sidetracks to the main line?

Mr. HERINGTON. They are usually computed, Mr. Frear, as nearly as a rule may be applied, by actual computation of quantities in individual cases, the quantities of work applying to the particular job, and siding mileage; of course, the heavy element that lies in it is the track and the grading, which might at times run very high.

Mr. FREAR. And the right of way and all those other elements are given in it?

Mr. HERINGTON. Yes.

Mr. FREAR. Now, sidetracks are always put into a place, a part of the railroad that is easy to attach; that is, to which it is easy to attach; that is, we will concede first, not in any cuts or tunnels or on bridges, now, how can you say that a sidetrack ordinarily, which is just a track adjoining the main line, that it is a fair estimate to place it at 75 per cent; on what theory do you advance that?

Mr. HERINGTON. Well, on the theory that the track construction has got to be practically as good as that of the main line.

Mr. FREAR. But you said they have lighter rails.

Mr. HERINGTON. In some cases it is slightly lighter rail, and in other cases it is the same weight as the main line.

Mr. FREAR. But it does not need to be, does it? The amount of use of that is much less than the main line, on the average.

Mr. HERINGTON. Well, the speed is somewhat less, but on a heavy freight line we ordinarily, in practice, lay the heaviest available, frequently second-hand rail, but pretty heavy rail, because the

same kind of power goes on the sidings that goes on the main line, and the same loads.

Mr. FREAR. Is there anything outside of your own individual judgment on which you base this; that is, any rule of railroads, either logging roads or transcontinental, or any other kind of railroads, that is accepted by engineers for this estimate that you are making?

Mr. HERINGTON. I do not think you can say that in any case it can be applied in the circumstances as a hard and fast rule in any practice.

Mr. FREAR. Is there any such rule?

Mr. HERINGTON. There is naturally no such rule.

Mr. FREAR. Then this is just your own judgment?

Mr. HERINGTON. This is my judgment.

Mr. FREAR. I see. I was trying to ascertain this from two or three witnesses, and this is the first time I have gotten it down to a definite point. That is the reason I was asking. Now, with that understanding, if you will go on, please.

Mr. HERINGTON. Do you wish these reduced to the equivalent miles, Mr. Chairman?

Mr. FREAR. Yes, if you please; just briefly.

Mr. HERINGTON. Taking these percentages and applying them to equivalent completed mileage would make 36 miles of completed main line, 2.6 of equivalent completed main line in the form of sidings. That is $3\frac{1}{2}$ miles of siding would approximate 2.6 in the other case, while the graded sidings would approximate $1.12\frac{1}{2}$, a total of 39.75 mileage completed and equivalent mileage.

Mr. FREAR. Counting the main line and the sidings?

Mr. HERINGTON. Counting the main track and the sidings, and the work which had been done, which is entitled to the equivalent mileage figure. That applied to the total cost of the line, from the figures that we have, brings an equivalent mileage cost of approximately \$100,000 per mile on that line.

Mr. FREAR. On that basis of figuring?

Mr. HERINGTON. On that basis of figuring.

Mr. FREAR. That is on the Siems-Carey-Kerbaugh road?

Mr. HERINGTON. The Siems-Carey-Kerbaugh line.

Mr. FREAR. Now, that includes the spurs, does it, the proposed spurs?

Mr. HERINGTON. No; the proposed spurs there were the logging railroads that were built for logging purposes.

Mr. FREAR. Those do not appear in this total.

Mr. HERINGTON. They do not appear in this. Those were built under the spruce contract. Those lines, of course, were built as regular logging lines a little heavier than the usual track in the woods, because as they concentrated and converged to the main line the traffic was naturally to be anticipated as heavier.

Mr. FREAR. Whatever construction was started on those would naturally be paid for out of what was known as the spruce contract.

Mr. HERINGTON. The spruce contract, yes.

Mr. FREAR. Now, on railroad No. 11 and on railroad No. 12 the rail on the sidings was of the same weight as the main line, and the ties were approximately the same.

Mr. HERINGTON. On this road?

Mr. FREAR. On this road running north from Yaquina to Otter Rock?

Mr. HERINGTON. Yes. In some cases the sidings had work which in order to get two tracks in, credits them with a very high percentage of grading. The fact that two tracks were built where one would otherwise be built, in some of that territory—in some cases three tracks—naturally got into the bill quite a little ways, much further than the mere main line.

Mr. FREAR. In other words, it was a little more difficult construction there than ordinarily would be.

Mr. HERINGTON. Than ordinarily for a siding. To go into No. 11 we have a completed main line of 10.83, and we have spurs and sidings, including the terminal sidings at Yaquina, 4.83 miles.

Mr. FREAR. Now, you count the spurs with the sidings in that case?

Mr. HERINGTON. The spurs and the sidings together in this. I haven't the figures by which I could conveniently separate them in time to reach you.

Mr. FREAR. I just want to get at the method.

Mr. HERINGTON. Now, on the main line—

Mr. FREAR. Just a minute; the spurs, were those built in this railway—oh, the Warren Spruce Co. had a cost-plus contract on both the railroad and the spruce.

Mr. HERINGTON. Yes; that was all handled under one condition.

Mr. FREAR. And so this entire proposition is figured together.

Mr. HERINGTON. It may be fairly so figured.

Mr. FREAR. That is the explanation, I see.

Mr. HERINGTON. I think I gave you 4.83 miles of spurs and sidings—

Mr. FREAR. Did you estimate the spurs the same as the sidings on the same basis, or what?

Mr. HERINGTON. I did, yes; on account of the nature of the construction up in there, the advanced nature of it, and the fact that the balancing up would come pretty nearly to the same general situation as the sidings.

Mr. FREAR. That would be 75 per cent?

Mr. HERINGTON. That would be 75 per cent of the cost of completed main line, which gives us an equivalent mileage of 3.62.

Mr. FREAR. For spurs and sidings?

Mr. HERINGTON. For spurs and sidings on which rail had been laid. Then we have as main line, uncompleted mileage on beyond the rail head, of 1½ miles, which takes up to the point at which the line began to leave the coast and reach up through the Spencer Creek drainage toward the summit to get over into the Siletz.

Mr. FREAR. That is around Otter Rock?

Mr. HERINGTON. That is up toward the little town site of Otter Rock, up in that neighborhood. It is a developing proposition there to get a reach on the side of the hill which will support the grade. The map which was offered in the testimony here the other day indicates that route in very heavy red lines. That may be considered, on account of the bridging, etc., specifically in that part of the uncompleted line as approximately two-thirds complete. The material was cut and ready for those bridges, and some con-

siderable work had been done toward them on the uncompleted portion.

Mr. FREAR. Were the bridges placed in position?

Mr. HERINGTON. They were not finally erected, but that is a— the labor portion of that is a comparatively small part of the trestle.

Mr. FREAR. What had been done on this uncompleted portion of the main line of which you speak that was run up there by Otter Rock?

Mr. HERINGTON. The grading had been approximated completed.

Mr. FREAR. The grading had?

Mr. HERINGTON. The timbers for the bridges had been approximately all cut, the ties had been cut in the woods along the side, and other ties had been provided for.

Mr. FREAR. Had the timbers for the bridges and ties been brought down?

Mr. HERINGTON. They had not all been delivered. There were some of them in the immediate neighborhood and ready for transit to the points.

Mr. FREAR. Whereabouts in the immediate neighborhood, back at the mill, etc.?

Mr. HERINGTON. Some of them were, I believe, and are still on hand at Otter Rock mill. Some of the little construction mills up there had a considerable number of them on hand, and at Yaquina, at the dock there.

Mr. FREAR. At Toledo?

Mr. HERINGTON. Yaquina.

Mr. FREAR. You did not have any manufacturing at Toledo?

Mr. HERINGTON. A considerable portion of the timber, as I recall— I was not present there to see very much of the operation down there—was manufactured at the Fischer-Storey mill at Toledo. They were also cutting cants, but they furnished considerable lumber. It was the only mill in the neighborhood there.

Mr. FREAR. This is to ascertain just the condition of this main line that you estimate uncomplete, main line that you estimate two-thirds.

Mr. HERINGTON. I am giving you this additional information that you may see its state of advance. Then we have again a matter of spurs, three miles, uncompleted mileage, which were advanced to grading and clearing in some cases. The surveys had been run way ahead of that, but I am not figuring that to any great extent, but to the chunking out and the work which had been done on these spurs. We find 3 miles of those. There is a little more than that that was actually opened up, but it comes back to the equivalent again. Of 3 miles of uncompleted spurs, and those spurs having been considered as 66 $\frac{2}{3}$ per cent of the value of the main line, and the spur again at 75 per cent of the value of the main line, would leave 66 $\frac{2}{3}$ per cent of 75 per cent as applying to the equivalent mileage. Reaching it in that somewhat general, but I believe very fair way of taking it for an approximation of that kind, we have a total of 17.12 equivalent miles of work.

Mr. FREAR. What is the percentage of 66 per cent of the 75 there, so as to ascertain what an uncompleted spur would be to a main line?

Mr. HERINGTON. The spur at 66 $\frac{2}{3}$ per cent of a line—

Mr. FREAR. That would be one-half the main line, wouldn't it?

Mr. HERINGTON. Just about.

Mr. FREAR. Of an uncompleted spur?

Mr. HERINGTON. Of an uncompleted spur.

Mr. FREAR. Without rails, ties, or anything allowed?

Mr. HERINGTON. The ties were provided for these spurs, Mr. Frear, and in fact the ties for considerable advance work were on hand and all piled, and are still piled at Yaquina. A considerable amount of the work for the bridging and things of that kind were also handled.

Mr. FREAR. All the labor that is involved in placing it in position and bringing the ties up from Yaquina, and the work that is necessarily attendant on constructing this spur out in the woods, that is all to be done yet.

Mr. HERINGTON. Yes; that represents practically half, as we—

Mr. FREAR. You put it at half of the main line construction?

Mr. HERINGTON. Pretty nearly. In some cases it might be a little less and in some cases a little over, but I think that is rather a fair average for it. That brings us on railroad No. 11, on that basis of calculation, to 17.12 miles of equivalent track on which a comparison with the cost per mile of main line may be reached. It might vary half a mile one way or the other, according to two different men figuring it, but that reaches very close to what is a fair approximation there.

Mr. FREAR. Did you ever have any other engineer figuring over this; any engineer, I mean, not connected with your company, with the Spruce Production Co.?

Mr. HERINGTON. No; I do not recall of any. I have a lot of facts over there, and our boys have gathered from the cross-section notes—

Mr. FREAR. I mean, you directed the policy and the method of determining it entirely.

Mr. HERINGTON. Yes. In fact, last Sunday morning, in consultation with your Mr. Gabrielson and our accountants, we tried to arrive at a fair basis of this in order to bring this matter of equivalent mileage into its proper relation with the total cost of what was done, completed and uncompleted. That brings us, on the cost of the railroad, to approximately a million and a half, brings us down to about \$90,000 per mile of completed and uncompleted work in its equivalent relation.

Mr. FREAR. In addition to a main line trackage of less than 11 miles you put almost two-thirds in addition to that in the shape of sidetracks and spurs?

Mr. HERINGTON. Yes. Now, you take, for instance on that line, if that line should have been carried in through for two or three years' work in there—no one knew how long this war was going to last. I believe that is conceded—your terminal would have to take care of whatever came. Therefore a terminal in a condition of that kind naturally had to be provided.

Mr. FREAR. What do you figure the sidetracks down at the terminal, on the same basis of 75 per cent?

Mr. HERINGTON. Yes; I have averaged them all the way through the line. One of the sidetracks at the terminal is on a trestle, on the log dump trestle. Of course, that again is high, whereas another sidetrack may be a little low; but I think the average in through there is a very fair one.

Mr. FREAR. How much sidetrack is on trestle?

Mr. HERINGTON. Well, there is one siding down there pretty nearly 2,000 feet long.

Mr. FREAR. On trestle?

Mr. HERINGTON. The majority of it is on trestle.

Mr. FREAR. What is the purpose of that?

Mr. HERINGTON. That was the log dump.

Mr. FREAR. Oh, that was for the log dump.

Mr. HERINGTON. That was for the log dump—the one that stands toward the center.

Mr. FREAR. How much do you figure that per mile?

Mr. HERINGTON. That is rather a hard thing to figure there. They had some very hard piledriving at that time. I believe they had to shoe their piles. That character of construction would approximate, according to the difficulty of driving it, might run up, under war conditions to \$75,000 per mile. It might be a little less or a little bit more.

Mr. FREAR. Is that all on railroad No. 11?

Mr. HERINGTON. That is all on railroad No. 11.

Mr. FREAR. Now, railroad No. 12, the Blodgett?

Mr. HERINGTON. May I add one thing in that connection?

Mr. FREAR. Yes.

Mr. HERINGTON. You have in evidence a map which was prepared by our engineering department which shows the state of these various spurs.

Mr. FREAR. I think I have seen that; yes.

Mr. HERINGTON. That is, by different formed lines that carries the shape of the spurs, the condition of them, and shows the enormous development that was under way.

Mr. FREAR. Your description covers that sufficiently to indicate.

Mr. HERINGTON. Now, on Nov. 12 we have 23.42 miles of line under rail, practically completed line. Then we have sidings, a total mileage of 2.567, and those sidings on that line are in some cases light and in some cases heavy. A good deal of grading was really done for two and three tracks at certain points, which I have not really taken into this, so that it balances up to about 75 per cent.

Mr. FREAR. Where were the two or three tracks to be located?

Mr. HERINGTON. At the camp sites, down near the lower end, Big Creek camp.

Mr. FREAR. That place that they expected to have as sort of a large camp, that they pointed out?

Mr. HERINGTON. Yes. Then, there was another point that was practically down at the end of grade, where the final spurs would come in. There was quite a bit of grading done there. We have six-tenths of uncompleted main line there; that is, six-tenths on which the grading was done. There, again, it is 66½ per cent —while the work may be somewhat light, at the same time that was down at the very far end where the transportation expense and things of that kind would come into it for the grading, and bring that part of it very much higher cost than the portion nearer to—

Mr. FREAR. But your timber, rails, and all the accessories that had to be used in building that, where were they?

Mr. HERINGTON. The timber on that line and the ties, etc., are at various points along the line where they were delivered by the makers,

and some of them were at Yaquina, but in several places they are along the line ready to load on the tie train.

Mr. FREAR. You think two-thirds is a fair valuation for a grade that has been established with the ties and rails distributed back along that road and at Yaquina, without any labor being performed for laying the road?

Mr. HERINGTON. Well, it was in that particular case, I think, on account of the extreme distance from the working head of the line.

Mr. FREAR. But that is only in grading, I understand.

Mr. HERINGTON. But the labor is all you have in grading, as a rule.

Mr. FREAR. But you have the labor of laying the rails and all. Which is the most expensive, the labor in grading in a case like that or the labor in laying the rails and the ties?

Mr. HERINGTON. The labor in laying the rails is very much less in the percentage of cost than the grading.

Mr. FREAR. Then the only question would be the question of having the mills on the job?

Mr. HERINGTON. The mills were on the job, and, in fact, the rail was on the job, as far as that is concerned.

Mr. FREAR. That is, somewhere along this line?

Mr. HERINGTON. Yes; it was all provided. Then again we have 3.35 miles of spur which was graded and chunked out in a form that brings it to the equivalent of about 3.35 miles of spurs ready for rails.

Mr. FREAR. On what basis do you determine that?

Mr. HERINGTON. That is on the mileage basis and on the yardage in there.

Mr. FREAR. How do you figure, for instance, the spurs over there that had no rails or ties?

Mr. HERINGTON. I am not giving this 3.35 as the completed equation there. I am simply stating that is the equivalent spur mileage in itself. But there are some portions which were beyond that. There was more than that amount of spur under development; but this brings you to the approximate, to a base. Then we have, figuring the spurs if completed, 75 per cent of the value of the main line.

Mr. FREAR. You figure the spurs at the 75 per cent there?

Mr. HERINGTON. Yes; if they were completed. They were not completed; those were only two-thirds completed, as we might say, as spurs, and we reduce that 3.35 in that way to an equivalent mileage of 1.68.

Mr. FREAR. That is, it would be one-half of the main line?

Mr. HERINGTON. Yes. So that totaling up we have of main line, actual mileage, 23.42; sidings, actual mileage, the equivalent of 1.925; and of main line uncompleted an equivalent of four-tenths of 1 mile; and of spurs the equivalent of 1.68, making a total—

Mr. FREAR. Sixty-eight one hundredths?

Mr. HERINGTON. One and sixty-eight hundredths; yes. Making a total there of work done on that line which approximates 27.4 per cent of actual mileage.

Mr. FREAR. That is the way you estimate it?

Mr. HERINGTON. Yes; as a matter of equivalent mileage, which, applied to the total cost of the line, gives you a value there of approximately \$76,000 per mile.

Mr. FREAR. What is the total amount there?

Mr. HERINGTON. Two billion-dollars, as I have it figured here. I do not know whether that is the final figure that the accountants have reached or not, but that was a rough figure. So that I think that has a tendency to really illustrate in itself the actual work that was done which was not availed of.

Mr. FREAR. That covers the three roads?

Mr. HERINGTON. That covers the three roads.

Mr. FREAR. Do you know the method of computation of railroads in regard to the basis on which they secured their loans, or the security that is placed in reference to the main track, as to whether it includes sidetracks and spurs, etc.?

Mr. HERINGTON. There is quite a little technicality in that.

Mr. FREAR. Explain it to the committee.

Mr. HERINGTON. I have prepared that kind of information several times. For instance, you say on a railroad from Chicago to St. Paul or from Chicago—to get away from St. Paul—to St. Louis; that would be, say, 250 miles. Now, that would be a road mileage of 252 miles.

Mr. FREAR. That is, of main track?

Mr. HERINGTON. Of road mileage; that is, in operating mileage of 252 miles, where, if you had on that a second track for halfway you would show road mileage as 252, first main line 252, second main line so much, and qualify that in a general way so that a person would actually have a real idea, in going through the papers, of what the mortgage would cover.

Mr. FREAR. That is, you mean, in case it was a double track, for instance, it would only contain the same amount of mileage, if I understand correctly, but it would give the character of the railway construction.

Mr. HERINGTON. Well, you would use first the track road mileage, and you would then follow that up with a statement in which you would show the first main line, second main line, and siding mileage.

Mr. FREAR. But the road mileage gives the distance between the terminals.

Mr. HERINGTON. It is really the operating distance.

Mr. FREAR. Between terminal points?

Mr. HERINGTON. Yes.

Mr. FREAR. That is made the basis of mortgages in raising securities?

Mr. HERINGTON. To a very large extent.

Mr. FREAR. Isn't that usually so?

Mr. HERINGTON. It carries a qualification in the papers. You might have a mortgage for 252 miles, but at the same time in the papers behind that mortgage would be a description of the property.

Mr. FREAR. Now, is there any basis of estimating that is provided by the Interstate Commerce Commission?

Mr. HERINGTON. The Interstate Commerce Commission has somewhat the same term—what they call the operating mileage, or road mileage, as it is called—which is the operating distance, whether it is a one-track railroad or a four-track railroad, and then it likewise qualifies it into the first, second, third, and fourth, or siding mileage.

Mr. FREAR. Now, we will take, for illustration, the Milwaukee road, which has an average valuation given of something over \$60,000 a mile. That is shown, I think, in the 1917 or 1918 report. I

mean between \$60,000 and \$61,000, I do not remember the exact amount. Now, what mileage is that based on?

Mr. HERINGTON. That is probably based on the valuation figures prior to that time, on the basis of reproduction, on which the Interstate Commerce Commission valuation experts are not at all liberal and which only, as it may be seen, is taken into consideration. That would probably be the operating mileage.

Mr. FREAR. That is the actual main track?

Mr. HERINGTON. The actual distance, main track.

Mr. FREAR. I was wondering, and it is for information, because it is instructive to know those things.

Mr. HERINGTON. Anything in that respect, that figure is only comparable in case of comparable territory, etc. For instance, the Milwaukee has—as I recall the system, they have probably three-quarters of their mileage across the Mississippi Valley in prairie countries—

Mr. FREAR. I speak of this because the Milwaukee, the Northwestern, and the Wisconsin Central, and all those roads have the same business of raising money.

Mr. HERINGTON. Yes.

Mr. FREAR. And I was trying to ascertain how the mileage was determined in order to give you that average mileage that is used for taxation purposes. It is used for all purposes.

Mr. HERINGTON. In addition to that, of course, in mortgage matters and things of that kind there is usually a pretty comprehensive operating and engineering report on the property.

Mr. FREAR. If you take the taxation question, they tax it so much a mile?

Mr. HERINGTON. Yes.

Mr. FREAR. That is, you consider it upon the operating of the railroad between terminals?

Mr. HERINGTON. Except in a special case, like city terminals—

Mr. FREAR. There is not anything of that kind contained in your estimates—no terminals, nor anything of that kind?

Mr. HERINGTON. That is a question that I think possibly it might be well to take up further, Mr. Frear, with the accounting department, because the equipment for these lines was purchased and practically a majority of it was on hand on 11 and 12.

Mr. FREAR. That is not included.

Mr. HERINGTON. Well, that I could not say, whether it is included in that total or not.

Mr. FREAR. But in the case of your mileage, that is figured for purposes of assessment, that is, in State assessments of railways, or for the purpose of raising securities for equipment, the terminals are all figured in, aren't they, so that the estimate of 60 miles of road of the Milwaukee road, for instance, that includes the equipment and the terminals.

Mr. HERINGTON. Yes. Of course, for local taxation, like a point like the Chicago terminals of any railroad, where the property values are so very high, now, that it is usually separately considered.

Mr. FREAR. I am including the city valuations, which include the terminals, as I understand; for instance, in Chicago the depot is a twenty million depot for the Northwestern, or whatever amount it is, they apportion that amount that is in Illinois and the amount

that is in Wisconsin and the amount that happens to be in any other State—they apportion the amount that is taken into these terminals, as I understand.

Mr. HERINGTON. Yes.

Mr. FREAR. To each State.

Mr. HERINGTON. There are variations in that process in different States. I am not sure whether it is Georgia or Florida, but it seems to me that in Georgia or Florida they take one of the two of those, it seems to me they take into consideration the siding mileage in proportioning that out between the towns. I know that those towns used to incorporate themselves for four or five miles along the track, in order to get in it.

Mr. FREAR. Did you ever have something to do with town sites? The last day or so—we don't want to get in any further.

Mr. HERINGTON. Where are they?

Mr. FREAR. That is around Otter Rock. That is the only one I know of.

Mr. HERINGTON. That is about as far as it goes.

Mr. FREAR. That is all of them.

Mr. HERINGTON. Was there a question as to this Hammond contract that you wished further enlightenment on?

Mr. FREAR. No.

Mr. HERINGTON. I understood there was something.

Mr. FREAR. No.

Mr. HERINGTON. May I make a suggestion, Mr. Frear, that a good deal has been said—I happened to find this this noon in our files—a good deal has been said here about the general situation around Puget Sound, and I don't think there is a map in evidence here.

Mr. FREAR. We would be glad to have it.

Mr. HERINGTON. I have been attending these meetings and I don't think there is a general chart map where the sound or its general geography is really presented, and that is a sounding chart of the entire Puget Sound waters, and also shows the outlines of some of the harbors which have been under discussion. (Producing map.) Those are to scale there.

Mr. FREAR. These dotted lines simply refer to depth?

Mr. HERINGTON. Those are contours.

Mr. FREAR. They carry along the same figures, but they don't get the distance from shore line.

Mr. HERINGTON. No; that is a matter of scaling there, and the map in itself carries a scale, etc.

Mr. FREAR. We can have the map, can we?

Mr. HERINGTON. Yes. I thought it would be of considerable interest. It shows the rather exposed condition there in Clallam Bay that has been under discussion a good deal; rather makes it certain, instead of so many different opinions on it.

Mr. FREAR. Well, this Clallam Bay—

Mr. HERINGTON. It does.

Mr. FREAR. According to this map—what is the scale of miles, where is it here?

Mr. HERINGTON. Up above here, right here. Nautical miles, land miles.

Mr. FREAR. Clallam Bay, according to this, is about 15 miles inland—now, here—about 20 miles or 25 miles inland from the point, and about 20 miles across the strait there.

Mr. HERINGTON. That is about 18 miles, I believe, stated, as a rule, across the strait there, 18, and it is approximately that in.

Maj. Sawyer brought out a matter here in testimony last night as to the point at which the logs would be towed that were surplus from the first of the operations, from Port Angeles. I want to call attention to that, that it comes right down into—you can see the relation of this dumping point with the rest of the sound or distribution to the mills. Practically most of the towing that was to be done inside of sound water or inside of quiet waters.

Mr. FREAR. The most dangerous place in the towing from Clallam Bay, according to some of the testimony submitted, is in the neighborhood of—what point is that?

Mr. HERINGTON. Dungeness Point, when you have been out there for several hours and don't know what the weather is. You can practically anticipate here within an hour on what you are going to find the water, because it is so all around the point there.

Mr. FREAR. That is one of the dangerous places?

Mr. HERINGTON. It is.

Mr. FREAR. According to the testimony of the loggers and others who raft.

Mr. HERINGTON. Where a man is out at sea there and has no idea of weather and tide conditions that he is running into, but here it is in short telephone distance.

Mr. FREAR. That is about what distance from Port Angeles?

Mr. HERINGTON. I believe that is about 20 miles east by the railroad. The railroad wanders around there quite a little.

Mr. FREAR. But I mean across. I should think that would be about 40 miles, wouldn't it? Here is your scale of miles. Here is 30.

Mr. HERINGTON. Here is zero.

Mr. FREAR. Yes, it is more than that. I am talking about Port Angeles. Here is Port Angeles. Now, there is 30 miles right there, so it is nearer 50 miles from Port Angeles to this point, I mean.

Mr. HERINGTON. The distance is a matter of a Milwaukee time table there, as far as that is concerned. You can get at that very easily. But the actual geography of the thing is what I thought might particularly be interesting in there.

Mr. FREAR. The Milwaukee time table doesn't give us information of what is on the water. If you are logging from Port Angeles and come to this point—what is it?

Mr. HERINGTON. That is about 20 or 30 miles.

Mr. FREAR. No—this dumping point, which is right here back of Dungeness—this was the dumping point for the surplus logs that were to be temporarily sawed by the mills while the other mills were getting in—

Mr. FREAR. What other mills?

Mr. HERINGTON. The six mills along the town.

Mr. FREAR. You have to get them out of the dumping ground.

Mr. HERINGTON. At that time they would raft there with this quick and easy turn on Dungeness Point.

Mr. FREAR. You would have to again reraft from that dumping ground around to the various mills?

Mr. HERINGTON. You would only have the one rafting.

Mr. FREAR. You would raft into the booming ground?

Mr. HERINGTON. No, you dump from the track there, right down over the Milwaukee road.

Mr. FREAR. But I thought you were going to dump them in here at Port Angeles.

Mr. HERINGTON. For the mill there. Of course, there is no rafting to that, because they are dumped right into the boom.

Mr. FREAR. Well, now, what is the distance—let's get this right—from Port Angeles to this point.

Mr. HERINGTON. To Blinn?

Mr. FREAR. No, where my pencil is.

Mr. HERINGTON. Now, if you are all open sea, I think that is 20 or 30 miles.

Mr. FREAR. It is more than that, isn't it. Here you have it. There is a pencil. The full length of the pencil. Here is 40 miles right there. It runs there.

Mr. HERINGTON. These are nautical miles.

Mr. FREAR. Yes, and nautical miles are longer than statute miles.

Mr. HERINGTON. Yes.

Mr. FREAR. Well, it is over 50 miles, isn't it?

Mr. HERINGTON. It may be. Yes; I guess it is, because it is 124 miles around there from Seattle. But I just brought it up because it don't bring that geography right before us.

Mr. FREAR. I want to get the distance, if I can.

Mr. HERINGTON. But you see the intention there was to dump or boom the logs at Port Angeles.

Mr. FREAR. Another set of officials might change the plan entirely and decide they would dump them at Port Angeles and raft them over there.

Mr. HERINGTON. If the water was good they might.

Mr. FREAR. If the water was good they might build a short line to Port Crescent?

Mr. HERINGTON. That would be among the possibilities.

Mr. FREAR. And carry them over there.

Mr. HERINGTON. Do I understand I am excused?

Mr. FREAR. Yes. Let's introduce this in the record.

(Map referred to was marked "Exhibit 29, Herington, Sept. 11, 1919.")

(Witness excused.)

TESTIMONY OF ——— GABRIELSON—Recalled.

Mr. FREAR. You are an accountant, working for this committee, employed by this committee?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. In the firm of——

Mr. GABRIELSON. M. & L. W. Scudder.

Mr. FREAR. Of New York City?

Mr. GABRIELSON. 177 Broadway, New York.

Mr. FREAR. And you have been sent out by the committee, among other places, to this point, to make some investigation of the accounts here, have you not?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. That is, in relation to this that I wish to—how long have you been an accountant?

Mr. GABRIELSON. For about three years.

Mr. FREAR. How long?

Mr. GABRIELSON. Three years.

Mr. FREAR. How long have you been with Scudders?

Mr. GABRIELSON. Since the war.

Mr. FREAR. A graduate from any university?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Where?

Mr. GABRIELSON. Harvard University.

Mr. FREAR. I will ask you first, apart from your duties as an accountant, you have been making an examination of the records for anything that would throw light upon the general situation here, under the instructions of the committee, have you not?

Mr. GABRIELSON. I have; yes, sir.

Mr. FREAR. I will ask you first whether you have any letters which come either from your examination or from the records at Washington, where you have also been making an examination, regarding Col. Disque's authority to sign contracts; and if so, to what extent?

Mr. GABRIELSON. I have. I have found two communications in Washington, in what is known as the Potter-Ryan file, one under date of April 30—

Mr. FREAR. That was in the Aircraft Department of the War Department?

Mr. GABRIELSON. Aircraft Production of the War Department. One under date of April 30, 1918, and one under date of September— or July 15, 1918. Do you wish them read?

Mr. FREAR. Just let me see them.

Mr. GABRIELSON. It is the fourth paragraph there on the first one. [Producing.] And it is the first paragraph on the second page.

Mr. FREAR. These are typewritten copies taken from the public records there at Washington?

Mr. GABRIELSON. Yes.

Mr. FREAR. You might read it. I don't believe Mr. Magee has ever had them; I don't know that he has, and I don't know that I have before. Just read the two letters, please. They are brief.

Mr. GABRIELSON. This is from the fourth paragraph of the letter of April 30, 1918, from Capt. L. C. Preston, of the Finance Division, to Maj. Brown, of the Finance Division of the Bureau of Aircraft Production. [Reading:]

It has recently developed that Col. Disque has for some time past assumed that he has the right to approve all contracts, according to notice sent to this department by Capt. Crisp in letter of February 11, with the result that all contracts since the latter part of January have been made without being approved by this department or the Chief Signal Officer; the more important contracts which have not been approved being the three cost-plus contracts for rived spruce, with Grant Smith-Porter Bros. Co., Warren Spruce Co., and the Airplane Spruce & Lumber Co., estimated at \$13,000,000 each, and the contract with H. S. Mitchell for the management of the cut-up plant. By reason of the agreement entered into in these four contracts, it would seem that it would be desirable to

exercise some supervision regarding the terms and legal form of the more important contracts entered into by the Spruce Production Division.

Mr. FREAR. Now, just a moment. From whom does that letter come—that is, I mean what was his position, if any?

Mr. GABRIELSON. I think at that time he was in the Finance Division of the Signal Corps. He later became the head of the War Credits Board, after Col. Thompson ceased being, and this was written to the head of the Finance Division of the Bureau of Aircraft Production.

Mr. FREAR. Now, the second letter that you have, and give the date, and from whom and to whom.

Mr. GABRIELSON. The second letter is under date of July 15, 1918, from Maj. A. C. Downey, who was head of the Contracts Department of the Finance Division of the Bureau of Aircraft Production, to Maj. Brown, the head of the Finance Division.

Mr. FREAR. Read the letter, or not part of it—

Mr. GABRIELSON. [Reading:]

The contract section has endeavored to assist and cooperate with the spruce production division and had disapproved of certain contracts, in order that their disbursing officer might be protected. They have apparently not relished this method of treatment and have recently taken the matter clear up with the view of forcing the contract section to approve the contracts which had previously been returned unapproved. In view of these facts, it would occasion no grief to the contract section if Mr. Ryan should delegate to Col. Disque full authority to approve all contracts executed by the spruce production division.

However until such time as this authority is granted the contract section will continue to adhere to its former policy, to wit, in that it will not approve of any contracts which are of such character as to indicate in any way that the interests of the Government of the United States are not being subserved.

Mr. FREAR. Well, the first letters refers to three or four cost-plus contracts.

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. And how much do they mention there as totaling?

Mr. GABRIELSON. \$13,000,000 each; \$39,000,000.

Mr. FREAR. \$39,000,000 that were executed here without submission to the East?

Mr. GABRIELSON. Without approval by the Chief Signal Officer.

Mr. FREAR. What is the date of that letter?

Mr. GABRIELSON. April 30, 1918.

Mr. FREAR. And the second letter?

Mr. GABRIELSON. Dated July 15.

Mr. FREAR. That goes on to mention the same parties, that, Col. Disque?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. And Mr. Ryan, who at that time was head of the Aircraft Board?

Mr. GABRIELSON. Yes.

Mr. FREAR. Is there any other correspondence you noted there in relation to the matter?

Mr. GABRIELSON. No, sir; that is all I found.

Mr. FREAR. Was there anything appearing in the records to show that Mr. Ryan made any order in regard to granting special authority to Col. Disque?

Mr. GABRIELSON. Well, there was a great many letters that I ran across in the file there, and I am frank to say that they did not give me a clear idea, but my opinion was that all contracts under \$5,000,

that Col. Disque was to have the authority to approve, and, over that, he should sign them with the approval of Mr. Ryan. Now, I may be mistaken in that.

Mr. FREAR. Just inquire of Mr. Campbell there if he knows about it.

Mr. GABRIELSON. Mr. Campbell says that that is correct about the approval of contracts.

(The letters above referred to, of April 30, 1918, and July 15, 1918, together with attached papers, were marked "Exhibit 30—Gabrielson—September 11, 1919.)

Mr. FREAR. But there is nothing further?

Mr. GABRIELSON. Now, the \$5,000 was his limit of approval, as finally decided by Mr. Ryan?

Mr. FREAR. Have you any facts or figures that you can give us in relation to the Hammond Lumber Co., in addition to those furnished by Mr. Campbell? I would be glad to have you make it clear to the committee just what the basis of settlement was and how—

Mr. GABRIELSON. Well, a part of this may be reiteration of Mr. Campbell's statement this morning.

As I take it, the settlement was made according to the terms of the contract, and the contract included amortization of 65 per cent of the construction cost of the road, plus 10 per cent profit on the construction of the road, regardless of the number of logs that were hauled over this road.

Mr. FREAR. That is, there was no limitation?

Mr. GABRIELSON. No limitation. If he didn't haul any logs, or if he hauled the whole 60,000,000 logs contracted for, the amortization would be exactly the same.

Mr. FREAR. In other words, he would acquire the railroad upon that basis, without any investment, practically; that is, I mean a small investment?

Mr. GABRIELSON. He would acquire the road at about 32 per cent, I think, because he would get 65 per cent amortization on his construction cost, plus 65 per cent on the 10 per cent profit which he was allowed, which would make it, I think, about 32 per cent which he would get the road for, regardless of the logs that were hauled over the line.

Mr. FREAR. Now, I think the figures were placed in the record this morning, but have you made any estimate as to what that would be for the logs?

Mr. GABRIELSON. That would make the cost of the logs per thousand, \$255.25; that is, considering the termination settlement.

Mr. FREAR. That is of the logs?

Mr. GABRIELSON. Of the logs; yes.

Mr. FREAR. You are an accountant and can figure quickly. On the basis of 15 per cent to 20 per cent of the log being used for airplane lumber, what would be the cost, in the Hammond contract, for what airplane lumber was gotten out?

Mr. GABRIELSON. About \$1,200.

Mr. FREAR. How much?

Mr. GABRIELSON. About \$1,200.

Mr. FREAR. About \$1,200 a thousand. Were there many contracts of that character, or do you know?

Mr. GABRIELSON. I don't know.

Mr. MAGEE. Who approved this contract?

Mr. GABRIELSON. I can tell you in just a moment. Brice P. Disque, colonel of the Air Service.

Mr. MAGEE. What is the date of it?

Mr. GABRIELSON. September 12, 1918.

Mr. MAGEE. Is it approved by the director of the aircraft service?

Mr. GABRIELSON. No, sir.

Mr. MAGEE. Approved by nobody except Gen. Disque?

Mr. GABRIELSON. Gen. Disque seems to be the highest approval on here.

Mr. FREAR. What was the amount involved in that contract?

Mr. GABRIELSON. Sixty million.

Mr. FREAR. \$60,000,000.

Mr. GABRIELSON. 60,000,000 feet.

Mr. FREAR. Or 60,000,000 feet, and how much, in dollars, would that mean, provided the contract was carried out?

Mr. GABRIELSON. Well, you can't tell exactly because they were getting a maximum profit of \$2.50 per thousand and they were to get—let's see—

Mr. MAGEE. Well, now, you have read two letters—

Mr. FREAR. He is figuring; just a minute. What is the result?

Mr. GABRIELSON. Well, that figures up above the \$40. It would make about—wait a minute—

Mr. FREAR. What is the rate?

Mr. GABRIELSON. The rate is 40.

Mr. FREAR. Forty what?

Mr. GABRIELSON. \$40 a thousand.

Mr. FREAR. Forty times sixty would be what?

Mr. GABRIELSON. Two million four hundred thousand.

Mr. FREAR. \$2,400,000.

Mr. GABRIELSON. I was trying to figure in the 2½ per cent minimum.

Mr. FREAR. If it is carried out to its full conclusion, that would be the amount involved, outside of the profit?

Mr. GABRIELSON. Yes.

Mr. MAGEE. The last letter you read, in reference to the hesitation of officers in Washington to assume responsibility for the acts of Gen. Disque here in regard to contracts: Was he afterwards given complete authority to enter into such contracts as he chose?

Mr. GABRIELSON. Mr. Campbell just told me—he is the comptroller of the company—that \$5,000 was the limit that Gen. Disque was allowed.

Mr. MAGEE. What I am getting at is, do you know he had authority to enter into a contract of this kind like the Hammond Co. contract?

Mr. GABRIELSON. I don't.

Mr. FREAR. Without submitting it.

Mr. MAGEE. Do you know whether he had authority, or not?

Mr. GABRIELSON. I do not.

Mr. MAGEE. Haven't you been able to determine?

Mr. GABRIELSON. I say just as they told me, Mr. Magee, that \$5,000 was his limit of authority.

Mr. FREAR. Five thousand.

Mr. GABRIELSON. Five thousand.

Mr. MAGEE. Can you determine whether or not, from an examination of the records of this company, the general had authority to enter into a contract of this character?

Mr. GABRIELSON. I was not able to in Washington. I have not tried here.

Mr. MAGEE. Will you try, and let the committee know?

Mr. GABRIELSON. I will.

Mr. MAGEE (continuing). What the result of your investigation is?

Mr. GABRIELSON. I will.

Mr. MAGEE. And if he had such authority, furnish to the committee, if available, the authority and the source of the same.

Mr. GABRIELSON. All right, sir.

Mr. FREAR. And, if it is not found here, ascertain if there is anything found in the aircraft records of Gen. Menoher at Washington.

Mr. GABRIELSON. Yes, sir.

Mr. LEA. You didn't put that contract in evidence, did you?

Mr. GABRIELSON. We are going to put it in as an exhibit.

Mr. LEA. I think, in view of the importance of it, it might be well to put it in the record.

Mr. FREAR. We will; yes. Do you care to testify from it further now?

Mr. GABRIELSON. No.

Mr. LEA. I don't mean to part with it now, but I would like to have it understood that the report can be put into the record.

Mr. FREAR. Is there anything else in the Hammond contract that you care to call the committee's attention to?

Mr. GABRIELSON. I think that is all in regard to that.

Mr. FREAR. Just mark that as an exhibit, and better insert it in the record, because there is some point made about that.

(Contract referred to was marked "Exhibit 31, Gabrielson, Sept. 11, 1919," and is copied into the record, in full, as follows:)

EXHIBIT 31—GABRIELSON—SEPTEMBER 11, 1919—CONTRACT SPD—No. 157.

BUREAU OF AIRCRAFT PRODUCTION—SPRUCE PRODUCTION DIVISION—CONTRACT FOR SPRUCE LOGS.

These articles of agreement, made and entered into at Portland, Oreg., this 31st day of July, 1918, by and between the Hammond Lumber Co., a Delaware corporation, hereinafter referred to as the "logger," and the United States of America, hereinafter referred to as the "Government," represented by Prescott W. Cookingham, captain, A. S. A. P., United States Army, hereinafter referred to as the "contracting officer," witnesseth:

Whereas the Government is in need of spruce logs for the purpose of manufacturing aircraft material; and

Whereas the logger is in a position to furnish spruce logs suitable to the needs of the Government:

Now, therefore, under the provisions of section 120 of an act of Congress relating to national defense, approved June 3, 1916, and pursuant to all other laws of the United States and Executive orders of the President of the United States, or heads of its departments, under which requirements for advertising for proposals are dispensed with and contracts in the form hereof are fully authorized, the President hereby places the following order with the logger with the requirement that it comply with the contract hereinafter set forth, and in consideration of the mutual agreements herein contained, said parties have agreed, and by these presents do agree, to and with each other as follows, to wit:

ARTICLE I. The logger hereby agrees to sell to the Government and the Government hereby agrees to purchase from the logger 60,000,000 feet, log scale, of No. 1 and No. 2 spruce logs to be taken from the timber tributary to the Necanicum River, its branches and forks, south of Holladay, Oreg., and to procure for the logger upon the terms provided in Article X of this contract such railroad cars (not exceeding 50 in number) as the logger may need for the transportation and delivery of the logs within the time provided for such

delivery. Such logs are to be delivered on or before the last day of December, 1919, and shall conform in all respects to the requirements and provisions of the specifications hereto attached or such modification thereof as the Government shall hereafter from time to time adopt.

ART. II. The logger has already begun construction work and logging and agrees to continue such construction work and logging and to deliver not less than 1,250,000 feet, log scale, of such spruce logs during each of the months of September, October, November, and December, 1918, but a total delivery of 5,000,000 feet, log scale, of said spruce logs during said four months shall be deemed a compliance with this provision. Beginning with the 1st day of January, 1919, the logger shall deliver not less than 2,500,000 feet, log scale, of said spruce logs per month, but this provision shall be fully complied with if the logger shall deliver a minimum total of 10,000,000 feet, log scale, of said spruce logs in each third of a year, beginning on said January 1, 1919: *Provided, however*, That the entire contract amount of 60,000,000 feet shall be delivered on or before December 31, 1919, it being understood that such an amount, as with all prior deliveries shall total said 60,000,000 feet, shall be delivered during said last four months' period. The Government will accept no No. 3 logs hereunder and no payment will be made to the logger on account of the same. It is estimated that timber in territory aforesaid in which said logging operations are to be conducted will produce at least 60,000,000 feet of spruce logs which will meet the requirements of the aforesaid specifications, but in view of the impossibility of knowing with certainty that the spruce in said timber will provide sufficient logs complying with said specifications to enable delivery of said full 60,000,000, it is agreed that the contractor shall not be deemed to be in default of making the minimum deliveries for said respective four months' periods he shall have delivered a total of 35,000,000 feet of spruce conforming to said specifications on or before December 31, 1919. The logger shall not be held liable for delays in deliveries caused by strikes, fires, floods, riots, acts of God, or the public enemy, or any other cause beyond the control or without the fault of the logger.

ART. III. Logs produced under this agreement are to be delivered at Warrenton, Oreg. The logs are to be rafted by the logger and the rafts delivered at Warrenton to parties designated by, and upon terms approved by the contracting officer, provided the credit of such designated parties is approved by the logger. In the absence of designation by the contracting officer, or in the event the credit of designated parties is disapproved by logger, then deliveries shall be made to the Government. Where logs are to be rafted and delivered to the Government or to its designated parties, other than to mills operated by the logger, boom sticks and gear for such rafts shall be furnished at Warrenton, Oreg., by the Government. In case deliveries are made to designated parties as aforesaid, then payment for all logs so delivered shall be made by the parties so designated, and the Government shall be under no obligation to pay for logs so delivered. The logger may, however, saw such logs as may be designated by the contracting officer, into lumber at its mill at Warrenton, Oreg., subject to terms and specifications which are satisfactory to the contracting officer.

ART. IV. All logs delivered to designated parties or sawed by the logger, as in the preceding paragraph set forth, shall be considered as delivered under this contract, as well as those going direct to the Government.

ART. V. All spruce to be delivered under this contract shall be inspected at Warrenton, Oreg., after rafting, as to compliance with specifications hereto attached or such modifications thereof as the Government shall adopt, and scaled as to measurement by the Columbia River log-scaling bureau, which inspection and measurement shall be final. The Government reserves the right to refuse, and to mark the letters "C. S." on any spruce logs found on such inspection not to be in compliance with specifications hereto attached, or modifications thereof adopted by the Government. The logger shall provide such grading in advance of inspection as will facilitate inspection by said scaling bureau. The logger shall have the right to remove from rafts any No. 3 logs which may be included therein. Logs sawed by the logger, as hereinbefore provided, need not be rafted and shall be inspected and scaled in accordance with directions issued by the contracting officer.

ART. VI. The price to be paid by the Government or its designees for logs delivered hereunder shall be \$40 per thousand feet, according to log scale, and based on measurements as noted in the specifications hereto attached, or such modifications thereof as the Government shall adopt: *Provided, however*, That if said price shall result in the logger making more than \$2.50 per thousand

profit under this contract, then the purchase price shall be reduced in an amount to allow only \$2.50 per thousand profit upon all logs delivered; and at the termination of the contract the logger shall rebate and pay to the Government any excess in the amount received by the logger over and above said profit of \$2.50 per thousand.

For the purpose of ascertaining the amount of such profit, the Government shall have access to all books of the logger pertaining to this operation at all reasonable times, and the logger agrees to keep its accounts in such manner as may be prescribed by the contracting officer; in determining what profit has been made hereunder, the usual cost items covering an operation of this kind shall be figured, including operating expenses, maintenance, necessary overhead apportionable to said work, taxes on plant and equipment used, stumpage \$5 per thousand, and such an amount for depreciation for the railroad extending south from Holliday, Oreg., rolling stock, plant and equipment employed in said operation as will amortize 65 per cent of the cost of said railroad, rolling stock, plant and equipment so employed, including in such cost 10 per cent for overhead on the construction and assembling thereof; the amortizing of such 65 per cent to be based on the distribution thereof over the amount of the entire contract.

It is intended that the entire merchantable content of all spruce trees fallen under this contract for the purpose of obtaining No. 1 and No. 2 logs, in the selective logging process hereinafter provided for, shall be paid for at the rate of \$5 per thousand; stumpage on that portion of the tree producing No. 1 and No. 2 logs is included in the price of \$4 per thousand, as provided for in the first paragraph of this article; that portion of the merchantable content that will produce No. 3 logs shall be scaled in the woods from time to time by scalers of the inspection department of the Spruce Production Division and account thereof furnished to the parties hereto, and settlement shall be made for stumpage therefor in the same manner as is provided for payment for No. 1 and No. 2 logs, as set forth in Article IX hereof; payments for stumpage for No. 3 logs as hereinabove provided shall not be considered in figuring the profit of \$2.50 per thousand allowed to the logger hereunder.

ART. VII. In producing logs under this contract, the logger shall fall only such spruce trees as may be designated by the Government through its authorized representatives as suitable for aircraft stock, but it is understood that in cutting spruce trees suitable for selective logging all trees reasonably accessible to the operation of the logger will be selected and cut, which contain at least one log 20 feet or more in length and containing a reasonable amount of airplane stock; the contracting officer's determination as to the selection of such trees shall be final.

The logger shall be permitted to log No. 3 spruce logs not to exceed 5 per cent of the logs furnished hereunder and which No. 3 logs shall be the property of the logger. No other varieties of timber shall be logged by the logger on the railroad referred to herein without first obtaining the consent of the contracting officer.

ART. VIII. If the logger shall fail to make monthly deliveries in the amount and in the proportions as above specified, or if the logger shall fail to carry out any other terms of this contract, the Government shall have the right to cancel this contract forthwith and the logger shall be responsible for any damages caused the Government on account of the breach hereof, subject to the provisions of Articles II and XXI hereof. The Government may at any time cancel this contract without cause, by giving the logger 30 days' written notice. In event of such cancellation of the contract by the Government, without default on the part of the logger, the Government shall pay to the logger such portion of 65 per cent of the cost of the railroad extending south from Holladay, Oreg., rolling stock, plant, and equipment employed by the logger in said operation, including in such cost 10 per cent for overhead incurred in the construction and assembling thereof, as shall at the time of cancellation remain unamortized on account of nondelivery of the entire amount of logs contracted for; that is to say, such proportion of said 65 per cent of cost shall be paid by the Government as the balance of logs undelivered bears to the total amount deliverable under the contract.

With respect to the amount of said cost, Schedule A, which is attached hereto and made a part hereof, shows the cost of said railroad and equipment already installed on the 1st day of September, 1918. Additional equipment has also been ordered, the cost of which can not now be definitely stated, but said equipment is listed in Schedule B, attached hereto and made a part hereof.

It is contemplated that still additional equipment will be required, but it is agreed that no purchase of any such additional equipment or further railroad extension will be made costing more than \$7,500 for any particular addition to equipment or railroad extension without the approval of the contracting officer being first had therefor.

ART. IX. Payments shall be made for spruce logs delivered direct to the Government within a reasonable time after the presentation to the officer in charge of disbursements, Bureau of Aircraft Production, Spruce Production Division, Yeon Building, Portland, Oreg., or his duly authorized representative hereinafter called the "disbursing officer," or loggers' invoice, including piece tally manifests, documents showing delivery in accordance with the requirements hereof, and certificates of inspection executed by inspectors authorized by the Government, certifying to the measurement of the logs so delivered and its compliance with specifications hereto attached, or such modifications as the Government shall adopt, and upon a voucher wherein the said disbursing officer shall certify the amounts to be so paid, and that the same have been determined by him to be due and payable to the logger in accordance with the provisions of this contract. All payments shall be made, however, not later than 30 days after acceptance by the Government of the logs to be paid for.

ART. X. The Government agrees to procure for the logger such railroad cars as the logger may need, not exceeding 50 cars, the rental therefor at such rates as it may be necessary to pay in order to obtain such cars to be paid by the logger, who shall also be responsible for repairs to such cars while in use by it, ordinary wear and tear excepted; all cars to be used in transporting said spruce from Necanicum district to Warrenton, Oreg. The logger shall also supply and install all bunks necessary for the proper loading of said cars: *Provided, however,* That if the logger is required to pay a car rental in excess of \$1 per car per day, including Sundays and holidays, then the price to be paid for logs delivered hereunder as set forth in Article VI hereof shall be increased by such an amount as will absorb the cost of said excess car rental, such adjustment of cost to be computed monthly based on the amount of logs shipped during such month.

The Government further agrees to furnish the logger with two donkey engines to be used in its operations in clearing right of way hereunder and also to furnish two auto trucks to be used for the transportation of men and supplies during the construction period. All expenses of operation of said donkey engines and auto trucks, including all cost of maintenance and repairs, shall be borne by the logger, said engines and trucks to be returned in as good condition as when delivered, ordinary wear and tear excepted.

ART. XI. The Government agrees to furnish the logger with not to exceed 300 men, when and as required by the logger, to assist in the construction of such railroads as may be necessary to build for the operations contemplated hereunder. As soon as said railroads are completed, the Government agrees to furnish not to exceed 150 men as required by the logger to assist permanently in logging operations, provided the Government is authorized to furnish and is furnishing any soldiers for logging or lumber operations. All men furnished by the Government in accordance with this article shall be paid by the logger.

ART. XII. The logger will make suitable efforts to secure rights of way, where not already owned by the logger, but if right of way can not be secured by the logger, then the Government agrees to take all lawful steps that may be necessary to secure the rights of way for the logger.

ART. XIII. The Government reserves the right at any time during the period covered by this contract to change, alter, and amend the specifications attached to this agreement in such parts as it may deem advisable and the logger agrees that it will comply with all the terms of such specifications as changed, altered, or amended by the Government: *Provided, however,* That if the change in specifications causes a change in the cost of production, then a corresponding change shall be made in the price to be paid for said logs; and in the event that such change in specifications shall decrease the amount of spruce loggable hereunder, a proportionate increase in the maximum profit permitted shall be allowed to the logger under Article VI hereof.

ART. XIV. If the Government authorities recommend or cause an increase in the wage scale of any of the employees of the logger, then the price to be paid for logs delivered hereunder shall be increased a corresponding amount to cover the additional cost caused by the increase.

ART. XV. It is further understood and agreed that in view of the emergency now to be met, the logger will produce and operate hereunder to the fullest capacity possible under the circumstances.

ART. XVI. It is further contracted and agreed that the logger shall cut and deliver the spruce logs herein contracted to be delivered in a good and workmanlike manner.

ART. XVII. The logger agrees to haul all rived spruce products incident to existing operations in said district of the Government in said Necanicum River district, Holladay, Oreg., at a cost of \$12.50 per car, on cars furnished by the Government, without expense to the logger. For carrying out the terms of this contract, the contractor will extend its logging railroad from Holladay, Oreg., to section 19, T. 5 N., R. W., W. M., Clatsop County, Oreg., such extension to be made by the contractor's operations hereunder.

ART. XVIII. So long as the logger is engaged in railroad construction work it may have the use of the two Government camps and equipment thereof now established in the Necanicum River district, for the men employed by the logger.

ART. XIX. In the absence of any specific provision the customs prevalent among loggers in the Columbia River district shall control the relations of the parties hereunder.

ART. XX. Neither this contract nor any interest therein shall be transferred or assigned by the logger to any person, firm, or corporation without the approval in writing of the contracting officer, and in case of such transfer without his written consent, the Government may refuse to carry out this contract, either with the transferor or transferee, but all rights of action for any breach of this contract by said logger are reserved to the Government.

No No. 1 or No. 2 logs taken from the district contemplated hereby shall be sold to parties other than the Government or parties designated by it.

ART. XXI. If the logger fails to deliver the required footage in any of the above-mentioned four months' periods, the Government may at its option cancel this contract by written notice from the contracting officer to the logger, such cancellation to be without prejudice, however, to any claim of the Government for damages on account of such failure, should such failure be due to neglect or default on the part of the logger in properly, energetically, or adequately prosecuting the logging operations contemplated hereunder. The logger, however, shall not be held responsible, nor shall the Government cancel the contract for any failure to deliver minimum quantities or other failure of performance due to strikes, fires, acts of God, or public enemies, or other cause beyond the control or without the fault of the logger as provided for in Article II.

ART. XXII. No Member of or Delegate to Congress or resident commissioner is or shall be admitted to any share or part of this contract, or to any benefit that may arise therefrom. But this article shall not apply to this contract so far as it may be within the operation or exceptions of section 116 of act of Congress approved March 4, 1909 (35 Stats., 1109).

ART. XXIII. No person or persons shall be employed in the performance of this contract who are undergoing sentence of imprisonment at hard labor which has been imposed by any court of any of the several States, Territories, or municipalities having criminal jurisdiction.

ART. XXIV. Any notice or other communication to be given by the Government to the logger at Astoria, Oreg., and any notice to be given under this agreement to the Government, shall be addressed to the officer in charge of contracts of the Spruce Production Division, Bureau of Aircraft Production, War Department, second floor, Yeon Building, Portland, Oreg.

ART. XXV. Wherever the words "contracting officer" are used in this agreement, the same is understood to include his successors in office or duly authorized representative.

ART. XXVI. This contract shall be subject to the approval of the Director of Aircraft Production.

ART. XXVII. The Government may assign this contract to the United States Spruce Production Corporation or to such other concern as may be mutually agreed upon, and the assumption by such corporation or concern of the Government obligations under this contract shall relieve the Government of any responsibility or liability hereunder.

In witness whereof the logger has caused this contract to be executed by its proper officers duly authorized, and the Government has caused this contract to be executed by the undersigned contracting officer herein duly authorized.

HAMMOND LUMBER CO.,
By A. B. HAMMOND, *President*.

WM. McKIRILDY.

JOHNSTON WILSON.

HYMAN LEVIN.

Approved September 12, 1918.

By authority of the Director of Aircraft Production:

PRESCOTT W. COOKINGHAM,
Captain, A. S. A. P., Contracting Officer.

Approved September 12, 1918.

BRICE P. DISQUE,
Colonel, Air Service, United States Army.

Approved September 12, 1918.

R. S. ESKRIDGE,
Major, A. S. A. P., Approvals Officer.

WATSON EASTMAN,
In Charge of Logging Operations.

Mr. FREAR. What have you to say as to your findings in regard to the Lewis & Clark Railway settlement? Can you furnish facts or figures in regard to that, that will be of moment, in addition to what has been offered?

Mr. GABRIELSON. Yes. From the contract of the Lewis & Clark Railway, Capt. Markum was to have final decision on all matters, he was to be the arbiter of all disputes, and his statement as to the final completion of the road was to be final. The Lewis & Clark people were paid this amount of money.

Mr. FREAR. How much?

Mr. GABRIELSON. I haven't the exact figures here as to how much it was. Anyway, it was paid based on his recommendation.

Mr. FREAR. Was that placed in the record this morning by Mr. Campbell—what the Lewis & Clark people were paid?

Mr. GABRIELSON. The total amount?

Mr. LEA. Yes. He said that they were paid \$43,639 for one railroad, and twenty-one plus for another.

Mr. FREAR. Yes.

Mr. LEA. That is approximate.

Mr. MAGEE. Maj. Herington has suggested to me that he thinks this Hammond Company contract was awarded after the corporation or the Spruce Production Corporation—I give you the information given me and that may help.

Mr. GABRIELSON. That is what Maj. Campbell told me.

Mr. MAGEE. That may help you in your investigation.

Mr. GABRIELSON. I will look it up; I certainly will.

Mr. LEA. That means there are different things there in the two situations from what they were before.

Mr. GABRIELSON. Yes.

Mr. LEA. In that connection, I was wondering if you found whether any opinion had ever been rendered about the authority of Disque under the Spruce Production Division.

Mr. GABRIELSON. Well, that will come in a part of this, Mr. Lea, I will look that up in connection with that?

Mr. FREAR. But that would come in by the action of the board of trustees, would it not, that is, be likely to be that?

Mr. GABRIELSON. I should judge so, yes.

Mr. FREAR. This sixty-odd thousand dollars that goes—

Mr. GABRIELSON. Mr. Lea, isn't your \$64,000 that you have there— isn't that the total amount that was paid them finally?

Mr. LEA. Yes.

Mr. GABRIELSON. What your question was, was how much they had paid before that.

Mr. FREAR. Anything that you have there, yes.

Mr. GABRIELSON. Over and above this final approval the case was opened up again, due to their filing a claim for \$123,370, and of that amount \$64,637 was paid them and I can't find any authority for the payment of that.

Mr. FREAR. Or can you find what the purpose was in making the payment?

Mr. GABRIELSON. No; I can not. That was after opening up the case, after the man who, under the contract, had the final authority, had passed the final authority.

Mr. FREAR. That is, after Capt. Marvin?

Mr. GABRIELSON. Yes.

Mr. FREAR. Had passed upon that as the arbitrator, the one who decided under the contract?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Then the settlement was made. Now you say that this additional amount was paid. By whom was that settled? Or is there anything in the records to show?

Mr. GABRIELSON. That was allowed by what is called their contract or adjustment board or claim board of Maj. Eaman, Lieut. Col. Breece, Maj. Griggs, and Capt. Squires.

Mr. MAGEE. What date was this?

Mr. GABRIELSON. This was on January 31, 1919.

Mr. FREAR. Have you attempted to find any information or any authority for this second adjustment or second settlement?

Mr. GABRIELSON. The adjustment, as I take it, was based upon this claim as filed by the Lewis & Clark Railway, their claim being that the road was not in satisfactory condition, and this was filed in spite of the report of Capt. Marvin, and the claims board evidently looked into it and a report, I think, by Maj. Herington recommending the payment of the \$64,000.

Mr. FREAR. Without any further action on the part of Capt. Marvin?

Mr. GABRIELSON. I could not find any further action of Capt. Marvin at all.

Mr. FREAR. Who was the one that had the determination under the contract?

Mr. MAGEE. You didn't get an answer to that.

Mr. FREAR. What is your answer?

Mr. GABRIELSON. Sir?

Mr. FREAR. Who was the one that had the determination of the amount, Marvin?

Mr. GABRIELSON. Capt. Markham of the one road and Mr. Yeon of the second road. There was two small roads there, one of 3½ and the other of 12 miles.

Mr. FREAR. This question of railroad construction, the mileage valuation of the roads, will you give—we have had stated to the com-

mittee by Engineer Herington the basis upon which he made certain computations. Now will you give to the committee any additional information based upon the methods ordinarily employed by the Interstate Commerce Commission and by the railways in raising their securities, in order that both phases of the question may be presented to the committee and for its consideration.

Mr. GABRIELSON. Taking the position that the United States spruce production has as to the arrival of cost, of course they have two unfortunate elements in there—their estimating the percentage of completion and their estimating the percentage of value of construction of the sidings and spurs to the main line.

Mr. FREAR. Is there any rule with which you are familiar that gives any basis for that, outside of the personal judgment of the engineer?

Mr. GABRIELSON. Nothing that I know of, and I think that is conceded.

Mr. FREAR. Yes; that is conceded, as I understand. Now, go on.

Mr. GABRIELSON. The method usually arrived at is by the proper alignment of accounts and classification of accounts, so that they can be built up under separate headings, sidings, and main line; but when you do get the cost under this basis you have an analytical cost per each physical mile. However, you have not what is called the mile valuation. Mile valuation is your operating miles divided by your total cost.

Mr. FREAR. That is, that does not take into consideration sidings as a separate element?

Mr. GABRIELSON. No; because sidings are really just helpers to the main line, according to this viewpoint.

Mr. FREAR. Yes. Well, that would be from the commercial side, I guess?

Mr. GABRIELSON. From the commercial side; yes.

Mr. FREAR. Of giving a return?

Mr. GABRIELSON. Yes.

Mr. FREAR. Yes; which is a condition somewhat apart from this; but just give it upon that basis what the result is.

Mr. GABRIELSON. On that basis, if you simply take the total main line completed, divided by the total value or total cost, Spruce Production Road No. 1 would cost \$110,186.46 per mile.

Mr. FREAR. That is the road in Clallam County?

Mr. GABRIELSON. That is the Siems-Carey-Kerbaugh road.

Mr. MAGEE. The Lake Crescent road?

Mr. GABRIELSON. The Lake Crescent road; yes, sir. Spruce Production No. 11—is that the one that runs north?

Mr. FREAR. That is north from Yaquina Bay to Otter Rock.

Mr. GABRIELSON. Would average \$143,459.40 a mile. On this basis No. 12, Spruce Production No. 12, would equal \$89,076.04.

Mr. FREAR. I will state for the record that these figures don't bind in any way, but they are just offered as another way of arriving at the estimated cost. Have you any basis or any estimate made or calculations of the cost of rived spruce cants gotten out by the cost-plus contractors?

Mr. GABRIELSON. I am now speaking from their own records as put in this morning.

Mr. FREAR. That is, you mean their own records?

Mr. GABRIELSON. Yes; the Spruce Production Corporation's records.

Mr. FREAR. Yes; you mean the Spruce Production Corporation's records?

Mr. GABRIELSON. Yes. The average cost of cants under cost-plus contracts was \$144.08 a thousand.

Mr. FREAR. That is the average for lumber?

Mr. GABRIELSON. The average for the cants.

Mr. FREAR. For the cants?

Mr. GABRIELSON. Yes.

Mr. LEA. I didn't understand whether that is the rived cants or not.

Mr. FREAR. That is the rived cants; yes.

Mr. GABRIELSON. Yes; that is the cost of rived cants.

Mr. FREAR. Have you any estimate as to the lumber from those cants? Is there anything in regard to that?

Mr. GABRIELSON. There is nothing, Mr. Chairman.

Mr. FREAR. So that shows that the costs were at the rate of one hundred and forty-three—

Mr. GABRIELSON (interrupting). \$144.08.

Mr. FREAR. \$144?

Mr. GABRIELSON. Yes.

Mr. FREAR. Have you anything there before you as to the average cost of logs? Would that be shown in a separate item?

Mr. GABRIELSON. Yes.

Mr. FREAR. By these cost-plus operations?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. What is that?

Mr. GABRIELSON. I might say, further, for your information in regard to the rived cants, that the straight price of these straight-price contractors ranged from \$90 up to \$130.

Mr. FREAR. From ninety up to one hundred thirty? Was one hundred thirty the highest?

Mr. GABRIELSON. One hundred thirty was the highest.

Mr. FREAR. And the cost-plus contractors?

Mr. GABRIELSON. Was \$144.08.

Mr. MAGEE. What do you mean by that, independent loggers?

Mr. GABRIELSON. Yes, sir.

Mr. MAGEE. Contractors?

Mr. GABRIELSON. Buy them so much per thousand from the independent man.

Mr. MAGEE. From the loggers?

Mr. GABRIELSON. Yes; from the independent loggers.

Mr. MAGEE. From the logging companies?

Mr. GABRIELSON. Yes.

Mr. FREAR. In other words, the cost-plus contract was a more expensive way of securing the cants?

Mr. GABRIELSON. Yes.

Mr. FREAR. Than from the independent operators?

Mr. GABRIELSON. Yes.

Mr. FREAR. Now, what about the logs of which I spoke?

Mr. GABRIELSON. The average cost of logs under cost-plus contracts from their same book of schedules is \$34.77 a thousand.

Mr. FREAR. Have you it there from the different companies? If so, just give it briefly.

Mr. GABRIELSON. The Grant Smith-Porter Bros.—I have a better schedule here some place.

Mr. FREAR. Well, just substantially.

Mr. GABRIELSON. I think I can make it out from this. From Grant Smith-Porter Brothers, \$35.71. From the Warren Spruce Co., \$35.58. From Aeroplane Spruce & Lumber Co., \$38.87. From Edward Murphy, \$22.66.

Mr. FREAR. Now, what is the average from the independent companies, any of them, if you have the figures there?

Mr. GABRIELSON. On the fixed price?

Mr. FREAR. On the fixed price.

Mr. GABRIELSON. The fixed price—they had three different prices.

Mr. FREAR. What were they?

Mr. GABRIELSON. They were divided between No. 1, No. 2, and No. 3 logs.

Mr. FREAR. Yes; and what were they?

Mr. GABRIELSON. Twenty-five, twenty-five, and eight.

Mr. FREAR. Twenty-five dollars for the——

Mr. GABRIELSON (interrupting). No. 1; twenty-five for No. 2, and eight for No. 3. Now, that was their first price.

Mr. FREAR. Yes.

Mr. GABRIELSON. Their second price was \$26.75 for No. 1, \$26.75 for No. 2, and \$9 for No. 3.

Mr. FREAR. Yes. Now, if there is any correction——

Mr. WALKER (interrupting). Thirty-five, twenty, and eleven.

Mr. FREAR. You talk it over there and see if there is any correction on that.

Mr. GABRIELSON. I am coming to that now. And the last one was thirty-five for No. 1, twenty for No. 2, and eleven for No. 3.

Mr. FREAR. That was the last?

Mr. GABRIELSON. The last schedule of fixed prices that they put out. That is correct, isn't it?

Mr. FREAR. Now, when was that put out?

Mr. GABRIELSON. Do you know when that was put out?

Mr. WALKER. That was put out by Russell Hawkins.

Mr. FREAR. The \$35?

Mr. WALKER. Yes.

Mr. GABRIELSON. He says Russell Hawkins put it out.

Mr. FREAR. About when?

Mr. GABRIELSON. It was in the latter part of 1917, because that is when his régime was.

Mr. FREAR. Oh, these other figures then were some time in 1917, the first figures that were quoted of \$25.

Mr. WALKER. I don't know anything about them.

Mr. FREAR. Well, then, \$35, and so on, were the figures that were put out at the time that this Spruce Production organization was here?

Mr. WALKER. I think that is right.

Mr. FREAR. Then, the results from the cost-plus contractors were practically the same?

Mr. GABRIELSON. Yes.

Mr. FREAR. As the price fixed for independent operators?

Mr. GABRIELSON. Yes.

Mr. FREAR. And it was altogether then a question of policy. What have you ascertained in regard to the cost of the Vancouver cut-up plant?

Mr. GABRIELSON. They are carried on their capital account at \$884,427.79. That is the total cost, including the receiving yard, mill, storage yard, dry kilns, miscellaneous building and equipment, and planing mill.

Mr. FREAR. Well, is that mill in workable shape at this time? I mean is the machinery in place? Is it in a proper way to saw, or do you know?

Mr. GABRIELSON. I understand not. I have been over there and it is not mantled up now.

Mr. FREAR. "It is dismantled," is the term that I wanted.

Mr. GABRIELSON. Yes.

Mr. FREAR. How much is that?

Mr. GABRIELSON. \$884,000.

Mr. FREAR. Have you any estimate as to the amount that was necessary to the completion? Have any figures been furnished you as to what would be the estimated cost of completion to get it in working shape?

Mr. GABRIELSON. I understand it was completed a long time before, but it is dismantled now.

Mr. WALKER. We dismantled it in order to store all of our machinery, Mr. Frear.

Mr. GABRIELSON. Yes. It had been working for some time.

Mr. FREAR. I know it had been working for some time. I didn't know whether—

Mr. WALKER (interrupting). It was working at this time.

Mr. FREAR. All together?

Mr. WALKER. It was all completed.

Mr. FREAR. All completed?

Mr. WALKER. The mill and the dry kiln.

Mr. FREAR. What costs were the costs of the Port Angeles mill, and also of the Lake Pleasant mill, at the other extremity of the Siems-Carey-Kerbaugh line?

Mr. GABRIELSON. The Port Angeles mill is given at \$926,040.64.

Mr. FREAR. But that was never completed, was it?

Mr. GABRIELSON. I understand not. That is correct, isn't it?

Mr. WALKER. No; it was never completed.

Mr. GABRIELSON. It was never completed.

Mr. FREAR. Was there any estimate as to what would have been the eventual cost of the Port Angeles mill?

Mr. GABRIELSON. Mr. Walker will have to answer that.

Mr. WALKER. About twelve hundred thousand.

Mr. FREAR. About \$1,200,000?

Mr. WALKER. Yes, sir.

Mr. FREAR. That is an estimate. Now, what about the mill at Lake Pleasant?

Mr. GABRIELSON. Lake Pleasant mill is carried at \$104,174.26.

Mr. FREAR. That was never completed?

Mr. GABRIELSON. Just started.

Mr. FREAR. In fact, construction was just started on that?

Mr. WALKER. That includes, however, the cost of the machinery. The mill was bought, but it was not sent up there. It was the old Westminster mill.

Mr. FREAR. What became of that? Was it brought down to Vancouver?

Mr. WALKER. It was sent to Vancouver. A large part of it has been sold.

Mr. FREAR. All that could be has been salvaged. What is there in regard to the cost of the mill at Toledo?

Mr. GABRIELSON. The mill at Toledo is carried at \$950,347.43.

Mr. FREAR. That was not completed either, was it?

Mr. GABRIELSON. I understand not.

Mr. WALKER. Everything was there, Mr. Frear. The machinery was spotted but not set up, because they thought if anybody bought it they would have their own ideas.

Mr. FREAR. But I mean it was never completed?

Mr. WALKER. No, sir. I would take perhaps another month.

Mr. FREAR. So, I was wondering what the additional amount was estimated, if any estimate was made, to have completed the mill.

Mr. WALKER. I would say offhand about somewhere between sixty and one hundred thousand dollars.

Mr. FREAR. A little over a million dollars?

Mr. WALKER. Yes; it would practically make it a million dollars.

Mr. FREAR. Have you made any estimates, Mr. Gabrielson, from the books, as to the profits paid to cost-plus contractors?

Mr. GABRIELSON. Included in their statement is the total commissions or profits paid to the cost-plus contractors, totaling \$1,247,355.26.

Mr. FREAR. How were those paid and to whom?

Mr. GABRIELSON. Grant Smith-Porter Bros. received \$203,498.26; Warren Spruce Co., \$358,871.92; the Aeroplane Spruce & Lumber Co., \$100,148.86; the Siems-Carey-Kerbaugh railroad contract, \$255,567.97; and the Siems-Carey-Kerbaugh spruce contract, \$329,268.25.

Mr. MAGEE. These are commissions?

Mr. GABRIELSON. These are the commissions, yes; the profits earned.

Mr. FREAR. I didn't know that you had that in the Siems-Carey-Kerbaugh Spruce Co.

Mr. MAGEE. You say profits earned?

Mr. GABRIELSON. Profits earned—profits paid; commissions paid.

Mr. MAGEE. Yes. What I mean is, they are the commissions paid?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. So it is a percentage on moneys expended in the work?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Now, you furnished us an estimate in regard to the Hammond contract, or the number of logs under that contract, as something like 2,000,000 feet of logs?

Mr. GABRIELSON. Yes.

Mr. FREAR. Now, what have you got in regard to the Siems-Carey-Kerbaugh contract, the spruce contract? Is there anything in there to show?

Mr. WALKER. We have got some cut over here.

Mr. GABRIELSON. There was nothing ever delivered on that.

Mr. FREAR. Nothing ever delivered under the Siems-Carey-Kerbaugh contract?

Mr. GABRIELSON. Nothing ever delivered under the Siems-Carey-Kerbaugh.

Mr. FREAR. Have you any estimate of the amount of logs that were produced, that were cut by them?

Mr. WALKER. Well, they just cut such as was cleared off of these loops, Mr. Frear. I have it here, I believe.

Mr. FREAR. You have it? All right; that will just help in making up the record at this point.

(Mr. Gabrielson and Mr. Walker here consulted.)

Mr. GABRIELSON. Well, we will get those figures and put them in the record. He hasn't them compiled here.

Mr. FREAR. All right. Those will be inserted in the record?

Mr. GABRIELSON. Yes.

Mr. FREAR. Now, what basis of computation was made in the case of the Siems-Carey-Kerbaugh spruce contract in ascertaining the profits? There was a cancellation provision in their fitches contract?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Now, at what rate was this estimate made? It ran, I think, from 7 per cent up to 15 per cent, as I recall the contract.

Mr. CAMPBELL. They were paid on a 7 per cent basis.

Mr. FREAR. That was made on a 7 per cent basis of the money that they had expended?

Mr. CAMPBELL. That the contract would have allowed us legitimate expenses. They made a great many—

Mr. FREAR (interrupting). Will you step down this way, Mr. Campbell? I want to ask another question about that. Now, what was the amount of money paid to the Siems-Carey-Kerbaugh Co. on their spruce contract?

Mr. CAMPBELL. The total?

Mr. FREAR. Yes.

Mr. CAMPBELL. I haven't that figure with me. It was in the neighborhood of \$4,000,000, though.

Mr. FREAR. Well, I think I have it right here.

Mr. MAGEE. Haven't you the figures there, Mr. Gabrielson, showing on the make-up the aggregate of commissions paid under the fitches contract with the Siems-Carey Co.?

Mr. GABRIELSON. I haven't the Siems-Carey settlement here; no, sir.

Mr. MAGEE. Can't you get it?

Mr. GABRIELSON. I have it over in my room.

Mr. FREAR. This reads, the advances to Siems-Carey-Kerbaugh, and the spruce contract is over \$5,000,000, isn't it? [Mr. Frear shows paper to Mr. Campbell.]

Mr. CAMPBELL. No; it says four—four million three hundred and forty-one thousand.

Mr. FREAR. Are you sure?

Mr. CAMPBELL. Yes, sir. Here it is right here [indicating]. I might explain in that connection that they had—

Mr. FREAR (interrupting). Oh; it is the Warren Spruce I was looking at.

Mr. CAMPBELL. They had an original advance of \$750,000 on that contract.

Mr. FREAR. Yes.

Mr. CAMPBELL. Which was to be used as a revolving fund, and as they spent money from this revolving fund they sent in their

vouchers and canceled checks, and that money was reimbursed to them. Of course the total of it was carried as a total advance.

Mr. MAGEE. What percentage were they paid on expenditures under that contract?

Mr. CAMPBELL. Seven per cent.

Mr. MAGEE. Were they paid any more than 7 per cent on any expenditures?

Mr. CAMPBELL. No, sir.

Mr. MAGEE. Now the total amount you gave was how much?

Mr. GABRIELSON. On the spruce contract, \$329,268.25.

Mr. MAGEE. Well, that would show an expenditure of—

Mr. GABRIELSON (interrupting). \$4,703,803, plus the commissions paid to them of \$329,000.

Mr. FREAR. That was on the spruce contract?

Mr. CAMPBELL. Yes, sir.

Mr. MAGEE. Now what made up those expenditures under the spruce contract?

Mr. GABRIELSON. Their operations in building the track was 70 miles of spurs—

Mr. CAMPBELL (interrupting). Yes; all those spurs.

Mr. GABRIELSON (continuing). And the cutting of logs along the railway.

Mr. CAMPBELL (continuing). Were laid out; the building of the mills and all that.

Mr. FREAR. You haven't any way of estimating until you get the figures of the amount of logs they produced?

Mr. GABRIELSON. No. We will get those and place them in the record. He hasn't them here now.

Mr. FREAR. Well, while we are passing on that, what is there in regard to the Warren Spruce contract, so far as you know? What were their profits?

Mr. GABRIELSON. Seven per cent, I take it—the same thing.

Mr. FREAR. Well, have you got it figured up yet?

Mr. GABRIELSON. Well, \$358,000—I will get the total. You want the total amount of money involved?

Mr. FREAR. Yes; the amount of money which is stated in this abstract of expenditures to June 30 is \$5,613,964 to the Warren Spruce. Now, does that include the profits of 7 per cent that have just been mentioned?

Mr. CAMPBELL. Well, some of them are in there and some of them are not.

Mr. FREAR. What are in there?

Mr. CAMPBELL. Well, there are certain vouchers that had not been put through for reimbursement at the time that statement was made, reimbursement and compensation.

Mr. FREAR. Oh, I see. Then the Warren Spruce Co.'s items are in excess of the amount here?

Mr. CAMPBELL. They would be some; yes, sir.

Mr. FREAR. About how much?

Mr. CAMPBELL. What is the amount there?

Mr. FREAR. This is \$5,613,964.

Mr. CAMPBELL. Well, I should say a few hundred thousand, a couple of hundred thousand, something like that.

Mr. FREAR. Well, it would be in the neighborhood, then, of six million?

Mr. GABRIELSON. Six million eighty-five thousand.

Mr. FREAR. Six million eighty-five thousand, counting this profit to the Warren Spruce Co.?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Now, have you any way of estimating what logs they produced?

Mr. CAMPBELL. There is no need for estimating. It is there in actual figures. Mr. Gabrielson has it.

Mr. FREAR. Oh, have you it there?

Mr. CAMPBELL. This money was not expended on their logging operations, though, by any means, all of it.

Mr. FREAR. Some on railroads.

Mr. CAMPBELL. Some on railroads, some on riving, and some on logging.

Mr. FREAR. Yes; that is true.

Mr. GABRIELSON. Yes. They produced 4,553,253 feet of logs.

Mr. FREAR. That covers all their operations down there with the railroads as well?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Is there anything to be added to the Kerbaugh spruce contracts?

Mr. CAMPBELL. No, sir.

Mr. FREAR. The Siems-Carey-Kerbaugh?

Mr. CAMPBELL. No.

Mr. FREAR. That is closed up?

Mr. CAMPBELL. Yes.

Mr. FREAR. Is there any question of settlement with the Warren Spruce Co. at this time?

Mr. CAMPBELL. No, sir. We have not finally settled with either Siems-Carey or Warren Spruce. They have turned back the Government property that they used, and this property as turned in has to be checked against the old property officers' slips, and that check has not been completed yet. We don't know what their shortage is, and we can't settle until the shortage is determined.

Mr. FREAR. Now, I find that the Grant Smith-Porter Bros.—what was the profit that they made?

Mr. GABRIELSON. \$203,498.26.

Mr. FREAR. The statement in the June 30 report of expenditures reaches \$3,306,266. Has that matter been closed?

Mr. CAMPBELL. It has been closed. Now, I don't know whether it was quite closed on June 30 or not.

Mr. FREAR. They did not build any Government roads?

Mr. CAMPBELL. Yes; they built some railroad.

Mr. FREAR. They did?

Mr. CAMPBELL. Yes.

Mr. FREAR. About what was the mileage there?

Mr. CAMPBELL. I don't know. I can get it right here.

Mr. FREAR. We haven't been over those roads.

Mr. CAMPBELL. About 17 miles—no; more than that; 37 miles.

Mr. FREAR. They built 37 miles of road?

Mr. CAMPBELL. Yes.

Mr. FREAR. What was the average cost of their roads, do you know?

Mr. CAMPBELL. Well, they built several.

Mr. FREAR. Has that been figured out or estimated?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Per mile?

Mr. CAMPBELL. Well, on my basis of figuring, railroad No. 5 was \$46,597.93 a mile.

Mr. FREAR. \$46,000. What is the next?

Mr. CAMPBELL. Railroad No. 6 was \$36,000 a mile.

Mr. FREAR. \$36,000 a mile.

Mr. CAMPBELL. No. 7 was \$24,000 a mile.

Mr. FREAR. How many miles in No. 7?

Mr. CAMPBELL. No. 7 was 2.6 miles.

Mr. FREAR. Did that include sidings and spurs?

Mr. CAMPBELL. One and eighty-nine hundredths main line and seventeen hundredths siding and spurs.

Mr. FREAR. That was how much; that was how many?

Mr. CAMPBELL. Two and six-tenths miles.

Mr. FREAR. No; I mean the amount.

Mr. CAMPBELL. \$24,000.

Mr. FREAR. \$24,000 a mile?

Mr. CAMPBELL. A mile for the main line.

Mr. FREAR. How much for the sidings?

Mr. CAMPBELL. \$18,000 a mile.

Mr. FREAR. \$18,000 for the sidings. That was figured at two-thirds?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Well, that would be an average of what?

Mr. MAGEE. It would be three-fourths, wouldn't it? Eighteen to twenty-four?

Mr. CAMPBELL. Three-fourths.

Mr. FREAR. Yes; that is right.

Mr. CAMPBELL. Three-fourths.

Mr. FREAR. That would be an average of about a little over \$20,000—about \$22,000 a mile, wouldn't it, counting the sidings and all?

Mr. GABRIELSON. About that.

Mr. CAMPBELL. About \$23,000.

Mr. GABRIELSON. About \$23,000.

Mr. FREAR. About \$23,000 a mile?

Mr. CAMPBELL. Yes, sir.

Mr. FREAR. Counting the sidings. And the Grant Smith-Porter road—what road is that?

Mr. CAMPBELL. That is road No. 7.

Mr. FREAR. That is road No. 7.

Mr. CAMPBELL. And on road No. 9 they had 20.36 miles of main line and sidings.

Mr. FREAR. How much?

Mr. CAMPBELL. The main lines averaged \$29,000 and the spurs and sidings \$21,000.

Mr. FREAR. \$29,000 for the main, \$21,000 for the sidings?

Mr. CAMPBELL. Yes, sir.

Mr. MAGEE. Were these railroads built under any cost-plus contract?

Mr. CAMPBELL. They were all under cost plus.

Mr. FREAR. They were built under cost-plus contracts. Do you know anything about the conditions of construction down there?

Mr. CAMPBELL. I do not; no, sir.

Mr. FREAR. Are they approximately somewhat similar, or do you know, logging countries?

Mr. CAMPBELL. I don't know a thing about them. I haven't seen any of them.

Mr. FREAR. The reason I ask that question is, there is such a striking difference between \$23,000 a mile or \$30,000 or \$28,000 or \$29,000 a mile, on the one hand, and \$100,000 on the other, that the committee ought to have some information.

Mr. CAMPBELL. I think Maj. Herington can give some information on that.

Mr. FREAR. Mr. Herington, do you know?

Mr. HERINGTON. I may be able to volunteer a little to clear that up.

Mr. FREAR. All right.

Mr. HERINGTON. With the exception of the Lewis & Clark Railroad the Grant Smith-Porter operations were all what might be termed small territorial operations, in which the mileage was practically logging mileage that was to be taken up as soon as it was logged.

Mr. FREAR. That is, these were logging railways; these were not what you might call permanent roads?

Mr. HERINGTON. No, sir; some of these lines were taken up.

Mr. FREAR. What was the Grant Smith-Porter Bros. contract in regard to the production of spruce; in general, can you give us that?

Mr. CAMPBELL. Their contract was first for rived, and later converted into a logging contract.

Mr. FREAR. What was the logging contract? I have never seen it.

Mr. MAGEE. They built these roads, the 20 miles and everything?

Mr. CAMPBELL. That is, the Lewis and Clark road, in which the labor only was supplied.

Mr. FREAR. Will you get those contracts?

Mr. CAMPBELL. I can say as to the Lewis and Clark line that it was a heavier line.

Mr. MAGEE. Do you know about the other lines?

Mr. CAMPBELL. They were usually temporary.

Mr. MAGEE. Were they sufficient for transporting lumber over them?

Mr. CAMPBELL. If the amount that was to be carried was limited.

Mr. MAGEE. They were safe for operation?

Mr. CAMPBELL. Yes; at very slow speeds.

Mr. MAGEE. And they were operated?

Mr. CAMPBELL. They were operated. On No. 5 I think we were opening up the camps at the time. Those lines had 45-pound rails.

Mr. FREAR. What was the production by the Grant Smith-Porter Bros. of logs, or do you know?

Mr. GABRIELSON. The production of Grant Smith-Porter Bros. of logs was 34,582,463 feet.

Mr. FREAR. That is much larger than the others?

Mr. GABRIELSON. No; it is not as large. The Warren Spruce is 40,000,000; this is feet.

Mr. FREAR. Those are the only cost-plus contracts?

Mr. GABRIELSON. These were what you would call the major cost-plus contracts.

Mr. FREAR. What were the minor cost-plus contracts?

Mr. GABRIELSON. The only other record I have before me is the Edward Murphy cost-plus contract.

Mr. FREAR. What was that?

Mr. GABRIELSON. I have no details on that whatever.

Mr. FREAR. What was the amount paid to him in profits, something like \$100,000?

Mr. GABRIELSON. They do not give the commissions paid to him at all.

Mr. FREAR. Splits are the same as cants?

Mr. GABRIELSON. Flitches, I take it.

Mr. FREAR. This contract of the Warren Spruce Co. of January 11, 1918, is to produce "approximately 100,000,000 feet, board measure, of such spruce as shall be delivered to the Government hereunder," and that, I understand, is the same basis as the Grant Smith-Porter Bros. contract?

Mr. GABRIELSON. So Mr. Murphy says; yes.

Mr. FREAR. Have you any other information regarding these cost-plus contracts than what you have given us as to profits?

Mr. GABRIELSON. I have the question of interest in regard to these cost-plus contractors.

Mr. FREAR. The interest items; explain what you have on those.

Mr. GABRIELSON. This is the repayment to the cost-plus contractor of interest charges which they have paid to the Government for money loaned by the Government to them to carry on their operations. In other words, they borrow money from the Government, pay a certain interest on it, and then charge this interest into their cost and are reimbursed for the interest, so it makes a paper transaction, and, in the last analysis, gives them the money to carry on their operations free of cost.

Mr. FREAR. Give the amounts, if you will, that were paid by these cost-plus contractors to the Government for the moneys that were advanced.

Mr. MAGEE. Let me understand. I understand from your statement that these cost-plus contractors assumed absolutely no financial risk?

Mr. GABRIELSON. From the standpoint of borrowed money, no; they assumed no risk whatever.

Mr. MAGEE. Or from expenditures?

Mr. GABRIELSON. No.

Mr. MAGEE. They could not lose?

Mr. GABRIELSON. It was a sure game, as I see it.

Mr. FREAR. Just give the amounts that were paid by them to the Government for the use of moneys that were advanced.

Mr. GABRIELSON. Grant Smith-Porter Bros., \$11,566.96; the Airplane Spruce & Lumber Co., \$14,925.54; the Warren Spruce Co., \$19,994.15; Siems-Carey-Kerbaugh spruce contract, \$205,175.90; the Siems-Carey railway contract, \$34,861.11.

Mr. MAGEE. Was this interest added to the cost?

Mr. GABRIELSON. To the cost; yes, sir.

Mr. MAGEE. Did they get a percentage on the interest?

Mr. GABRIELSON. No; they were just reimbursed for this and they were not allowed a percentage of profit on the interest items.

Mr. FREAR. The Siems-Carey-Kerbaugh item is for over \$200,000 interest paid to the Government for money they had advanced. They had advanced \$750,000, according to this statement of June 30?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. What became of that account after they received this money? They paid \$200,000 to the Government as interest for the use of this money. Now, what became of that?

Mr. GABRIELSON. Not for the use of that \$750,000.

Mr. FREAR. For the use of how much?

Mr. GABRIELSON. For the use of the other moneys. The other moneys came in this way: Under their spruce contract they were to receive payment for delivered fitches, but until the time they delivered these fitches they were not entitled under the contract to any money. However, so far as they spent money on their operations the Spruce Production Corporation gave them money against vouchers, against their expenses out there of cutting and building their spurs.

Mr. FREAR. Did they not have a supplemental contract where they got this advanced money?

Mr. GABRIELSON. This other advanced money?

Mr. FREAR. Yes.

Mr. GABRIELSON. No; it was advanced through vouchers as against their pay rolls and invoices, but it was not a payment on the contract, because a payment on the contract was to be against delivered fitches. Mr. Walker says the \$750,000 is a revolving fund.

Mr. FREAR. That is what I thought. They paid this interest for the use of the money to start on their spruce operating expenditures. What was the interest record in regard to this interest money that they had paid to the Government for the use of the money?

Mr. GABRIELSON. They turned around and paid it back to the contractors on the vouchers. That is what it, in essence, amounted to.

Mr. FREAR. How long was the money held there? Is there any evidence of that from the records that you have?

Mr. WALKER. As a matter of fact, we just traded the checks on that.

Mr. FREAR. What authority of law was there, if you know, for the Government to advance this money without any interest to the large cost-plus contractors?

Mr. WALKER. The money was advanced by the War Credits Board and the interest was charged there, but in the contract itself one of the elements of cost was the interest on this money specifically stated. In other words, if we had charged them this interest and made them pay it and we had kept the money, they would not have received any profit whatever on the contract, because their profit was 7 per cent and the interest was the same amount.

Mr. FREAR. But their profits were to be based upon a contract from \$15,000,000 to \$25,000,000, depending upon the character of the fitches?

Mr. WALKER. Yes.

Mr. FREAR. Here is interest on only \$750,000 advanced by the Government, placed in their hands and, as I understand it, they paid nothing for the use of that money.

Mr. WALKER. The net result is that they paid nothing.

Mr. FREAR. Now, what authority was there for turning this money over to them? Where is the responsibility, and what law was it worked under?

Mr. WALKER. Well, this \$750,000 was used to pay for the expenditures as they met them. Now, the only increase in the advance occurred when they had paid out all of the \$750,000; that was just a working fund, and we refunded that. The War Credits Board approved the advance to them, and they paid that interest on the advance; but in the contract it was made specifically one of the elements of cost which should be reimbursed to Siems-Carey; that element of cost was this interest.

Mr. FREAR. Did you draw contract here, that you were to reimburse them?

Mr. WALKER. For the interest on the money?

Mr. FREAR. Moneys which they paid, so as to allow them to use Government moneys free?

Mr. WALKER. Well, that is incorporated in the contract. I do not know how it got there.

Mr. FREAR. It was not done in Washington; it was done here. was it not?

Mr. WALKER. I could not say. I did not draw the contract. I just know it is there.

Mr. FREAR. How much money at any particular time was advanced to the Siems-Carey-Kerbaugh Co. on the spruce contract, the full \$750,000?

Mr. WALKER. As a matter of fact, I believe they were borrowing outside of that \$750,000 to meet their requirements, most of the time.

Mr. FREAR. So that they had borrowed from the Government \$750,000 without any interest payment being made whatsoever?

Mr. WALKER. Yes, sir.

Mr. FREAR. But they were not making any cost-plus upon that loan?

Mr. WALKER. No; and to make the whole thing clear, as a matter of fact, as I was going to say, they also had the \$750,000 paid out on vouchers which were awaiting reimbursement also, and they got no interest on that.

Mr. FREAR. But they were getting the free use of the money?

Mr. WALKER. Yes; I see what you mean.

Mr. FREAR. For instance, John Jones is cutting logs; he is getting fitches out in a little mill down here, and John Jones has no cost-plus contract. John Jones has no loan from the Government, but these people, the Siems-Carey-Kerbaugh Co., were getting \$750,000 free of interest, and then had their cost-plus contract in addition. That is right?

Mr. WALKER. It became a cost-plus contract on cancellation. If they had carried it out and there had been no cancellation of the contract on the flat price, they would have paid that interest direct, and we would have kept it, you see.

Mr. FREAR. How could they have paid it if you were paying them the interest?

Mr. WALKER. When we canceled the contract that threw it into a cost-plus basis.

Mr. FREAR. You mean to say if it had been carried along until the contract had been completed, or for a considerable length of time, that the interest item would not have been paid back?

Mr. WALKER. Yes.

Mr. FREAR. But on what authority were you at the time of the cancellation permitted to pay back this interest which they had paid for money that they were still using?

Mr. WALKER. As I said, it was specifically stated in the contract, and that constituted our authority.

Mr. FREAR. And the contract, presumably, was drawn by your attorney, was it not, and by what authority was such contract made?

Mr. WALKER. That is a question beyond me.

Mr. FREAR. Was there action on that by the board of directors?

Mr. GABRIELSON. Mr. Walker said if they did not pay them back this interest charge their interest would have eaten up their profits. That could not be so, because they were paying 7 per cent interest per annum on their advances, but were being paid as profits 7 per cent every time they turned over their money. They might turn over their money four or five times a year.

Mr. FREAR. John Jones, who runs a small mill, has his plant and everything in operation. That is an investment with him, and he has invested, say, \$750,000 in the plant. He proceeds to cut, and the result is that the money he uses is his own, and he has not any cost-plus contract; he gets no benefit in the way of interest on that money he has invested. These other people go out and instead of having the plant—the small man was entitled to some interest, but that comes in his profits—these people have borrowed money from the Government instead of having their own money invested, and then they get interest free on this \$750,000, and their profits in addition on the contract.

Mr. WALKER. I do not want to enter into any discussion of the merits of that contract.

Mr. MAGEE. Let me see if I understand what the situation is? If this had been a straight-out cost-plus contract, the Government should have furnished the funds to carry out the contract. Is that right?

Mr. WALKER. Yes, sir.

Mr. MAGEE. Of course, when they began the contract they would have to have funds, I presume, to pay out for current expenses?

Mr. WALKER. Yes, sir.

Mr. MAGEE. And the revolving fund the Government might furnish would be used for that purpose. It might be \$50,000 or \$750,000. Is that right?

Mr. WALKER. Yes, sir.

Mr. MAGEE. Now, then, this not being ab initio a cost-plus contract, but from the fact that it developed into a cost-plus contract upon the signing of the armistice, the settlement was made upon the same basis as the settlement would have been if it had been a cost-plus contract originally?

Mr. WALKER. Yes, sir. I believe you will find that the War Credits Board demands interest on all loans which it approved, and made loans to men who are carrying out, as you say, a more or less private operation, in addition to their Government work, where they are operating at a fixed price; but when you enter into a cost-plus contract, that interest becomes an element of the cost and through that contract should be reimbursed to the contractor, because his profit is absolutely limited.

Mr. FREAR. There was a condition in there, but I do not suppose that would have any bearing on this, providing that if they furnished more than the full amount they would have up to a 15 per cent cost-plus contract.

Mr. WALKER. That was the limit of their profit under the fixed price, and if they had delivered on the fixed price they would have had to pay this interest, and, of course, that would have been one of the elements in determining whether they made more than 15 per cent on the cost or not.

Mr. GABRIELSON. I might say that as far as I know personally, and I am acquainted around with the cost-plus contractors in the Detroit district under the operation of the cost-plus contracts there, that this condition of repayment of interest as an item of cost is peculiar to the Northwest here.

Mr. FREAR. You mean it is not indulged in any other places

Mr. GABRIELSON. It is not as far as I know.

Mr. FREAR. Do you know of anything that occasioned this change; was it new here, or not?

Mr. WALKER. I know of no peculiar circumstances at all, but I understood that in the East they worked on a bogey system, a combination system.

Mr. FREAR. That is an entirely different proposition. That is where a fixed price is paid for the article and an additional amount given dependent upon the cheapness with which it can be produced.

Mr. MAGEE. I think this contract is well designated by Gen. McIntyre in his communication to the Secretary of War as a "liberal contract."

Mr. FREAR. There is an item consisting of the amount of finished airplane lumber from the cut-up plant and also from the outside mills. Have you those comparisons? First, have you anything further on this proposition of interest in mind?

Mr. GABRIELSON. I just want to make clear there a conviction that I have, that it is a condition peculiar to the Northwest and it gave the man the use of Government funds for nothing, which is, to my mind, the predominant point in this argument here.

Mr. MAGEE. That is the essence of a cost-plus contract, the interest, and the money go to the contractor and he takes no risk?

Mr. GABRIELSON. It is not the essence of all cost-plus contracts.

Mr. FREAR. Supposing they had not received advances they would have had to put up their own funds, but instead of putting up their own funds they got three-quarters of a million dollars from the Government without interest?

Mr. WALKER. Yes.

Mr. MAGEE. That is what the contract provides.

Mr. FREAR. It is not provided for in any other cost-plus contract except in the Northwest.

Mr. MAGEE. I assume that the Government arranged to advance the moneys for a good many operations during the war, and I think Congress passed certain enactments along those lines so those moneys might be provided.

Mr. LEA. And it would simply affect the amount of profit; there would be a difference in the amount of pay.

Mr. GABRIELSON. Organizations that worked in the Detroit district were presumed to have the equipment and funds necessary to carry on the work, and if they had to borrow funds and did not have to pay interest on it they would have an advantage over the man who did have funds.

Mr. MAGEE. Do you understand that for those contracts you referred to the Government advanced any moneys?

Mr. GABRIELSON. I can not speak with definite authority except in particular instances, but I know that in the case of the Ford Motor Co. the Ford Co. never receiver a cent of advances.

Mr. MAGEE. They probably did not need it.

Mr. GABRIELSON. But they had a cost-plus contract, and they received no advancement whatever.

Mr. LEA. What percentage was their profit?

Mr. GABRIELSON. Their profit ran, as per the final settlement, around 13 per cent.

Mr. LEA. If you are going to compensate a party on a cost-plus contract, the amount of percentage allowed should be determined by the question whether or not you allow interest. That is one factor.

Mr. GABRIELSON. That has got to go in the profit-and-loss statement; there is no doubt about that.

Mr. FREAR. What else have you to offer there?

Mr. GABRIELSON. I merely wanted to insert in the record that out of the 143,008,961 feet of finished airplane lumber shipped, 66,355,532 feet were shipped from outside plants.

Mr. FREAR. And what amount from the cut-up plant?

Mr. GABRIELSON. From the cut-up plant 76,653,429 feet.

Mr. FREAR. And, incidentally, it appears that by far the larger part of the airplane lumber shipped from the cut-up plant was fir?

Mr. GABRIELSON. Yes.

Mr. FREAR. What are the figures there?

Mr. GABRIELSON. The fir from the cut-up plant was 37,000,000 against 22,000,000.

Mr. FREAR. No; 37,000,000 against what under the spruce?

Mr. GABRIELSON. Against 35,000,000 of spruce. The outside ones were 22,000,000 of fir against 43,000,000 of spruce.

Mr. FREAR. So that of the spruce there was a far larger amount furnished by the outside mills?

Mr. GABRIELSON. Yes; the percentage was 2 to 1.

Mr. FREAR. Have you anything about what was paid for the lumber by the Government or by the Spruce Production Corporation, manufactured by outside parties?

Mr. GABRIELSON. I think Mr. Walker is in a position to give you those figures, the average figures on that, are you not, Mr. Walker?

Mr. WALKER. Yes.

Mr. FREAR. What were they? Do they show anything about the comparative amount of logs?

Mr. GABRIELSON. No; it does not give the logs.

Mr. FREAR. There was a very small amount of logs in comparison.

Mr. GABRIELSON. They had just begun; it is largely a question of estimating.

Mr. FREAR. What is the amount of lumber?

Mr. GABRIELSON. There is 100,000,000 feet of logs under the cost plus.

Mr. FREAR. And for the others, how much?

Mr. GABRIELSON. I do not know the total estimate of logs produced.

Mr. FREAR. It was several hundred million, was it not?

Mr. WALKER. To be sure; I can not get the exact number.

Mr. MAGEE. Not the total number of logs produced, but the amount of logs that went through the cut-up mill. In other words, the logs that came to the cut-up mill were very largely for cants?

Mr. FREAR. Those figures are already in the record.—

Mr. WALKER. Of the 143,000,000 feet of aircraft lumber shipped, 7 per cent of the total would come from logs produced by the cost-plus contractors.

Mr. MAGEE. Can you not give us there the prices paid by the Spruce Production Corporation per thousand, or the lumber obtained from the loggers, and the price obtained by the Spruce Production Corporation for sale?

Mr. GABRIELSON. You mean the finished lumber?

Mr. MAGEE. Yes.

Mr. GABRIELSON. You mean for the finished material?

Mr. MAGEE. Yes.

Mr. GABRIELSON. That is the figure that he is looking up now.

Mr. WALKER. There was original specification No. 1, we paid for the wing-beam stock \$150, but the specification No. 1 had 50 per cent wing beam and 50 per cent short cuttings. We paid \$105 for that, and that 15021-B, grade A, we paid them \$175. That is, wing-beam stock. And 1521-B, grade B, we paid \$80, and grade C, \$45. For cedar we paid the same prices as for spruce. I might say in that connection that the average price we paid the outside mills for spruce was \$84, for all the spruce they shipped.

Mr. FREAR. \$84 for lumber—airplane lumber?

Mr. WALKER. That included a lot of special stuff at lower prices.

Mr. GABRIELSON. What about the fir?

Mr. WALKER. \$62, and \$123 for the cedar they shipped.

Mr. FREAR. That is, finished airplane lumber?

Mr. WALKER. Yes, sir; that is both short cuttings and wing beams.

Mr. FREAR. Wing beams; that is most expensive.

Mr. WALKER. Yes. I gave you the unit prices we paid there before.

Mr. FREAR. Now, from your statement which was the most expensive in production, that from the outside plants or that furnished by the Government?

Mr. WALKER. If I can just say a few brief remarks about our cost at the cut-up plant. I think I can make that clear to you, Mr. Frear.

Mr. MAGEE. Have you got the figures there—I do not think I will ask for it again; I have made several heroic attempts to get it into the record and have failed every time—can you tell us where we can get any idea or information as to prices paid by the Spruce Production Corporation for the lumber which they got, and the prices which they received for what they sold?

Mr. WALKER. Yes.

Mr. FREAR. I am trying to get this before we go to any other matter.

Mr. WALKER. You want the price we received from the sales?

Mr. MAGEE. Yes; to the various governments.

Mr. WALKER. And the proportion that was received by the various governments.

Mr. FREAR. I want to get this other matter settled, if I can, first.

Mr. WALKER. We invoiced one hundred and forty-three million and odd feet at \$27,465,000. Those are round numbers, and I will give you what that would be per thousand.

Mr. FREAR. Yes; what would that be per thousand?

Mr. MAGEE. That includes what you got also from the cost-plus contractors?

Mr. WALKER. That includes everything.

Mr. MAGEE. That is not what I am after. I want to know what you paid these loggers and what you got. In other words, I want to know whether you paid a certain price and sold it at a large advanced price.

Mr. FREAR. Let us settle one thing at a time.

Mr. WALKER. I will explain that. That makes about an average price of \$200 per thousand.

Mr. GABRIELSON. \$236.79, isn't it?

Mr. WALKER. About \$192 per thousand.

Mr. FREAR. \$192 per thousand was what?

Mr. WALKER. Was the average price, the average selling price per thousand of the 143,000,000 feet.

Mr. FREAR. If you were selling to Great Britain, what was the amount you received from Great Britain?

Mr. WALKER. We received from Great Britain \$9,487,000 for the 41,487,000 feet that she received.

Mr. FREAR. That is at that same rate?

Mr. WALKER. Do you want me to get the unit price?

Mr. FREAR. That would be the same rate, one hundred and ninety-odd dollars.

Mr. WALKER. No; I do not think it would be, Mr. Frear. That was about \$228 per thousand, but in that connection—you see there are several elements that entered into this. There were various grades shipped and the prices were supposed to represent their relative values, and it so happened that England got—the difference in price merely means that England got a higher grade, or a greater proportion of the higher-grade material than some of the others.

Mr. FREAR. Now, England paid us how much in that final settlement?

Mr. WALKER. In the final settlement?

Mr. FREAR. Yes.

Mr. WALKER. Well, when the war was over—just a minute.

Mr. FREAR. I thought you had it right there—that is, the amount of money paid by England on the final settlement.

Mr. GABRIELSON. \$13,264,550.20.

Mr. FREAR. Did they pay nine million and something before?

Mr. WALKER. Well, the nine million was considered in connection with that. That is their total payment, Mr. Frear.

Mr. FREAR. How do you mean?

Mr. WALKER. I mean any payments that she had made on this nine million dollars worth of lumber that was invoiced to her was credited against this \$13,000,000.

Mr. FREAR. Now, in the settlement with Great Britain on this salvage that is going to go in, in which they were equally interested with us, she has made a payment of how much?

Mr. WALKER. As I remember it, England was trying to pay approximately—I think she got about 34 per cent in value.

Mr. LEA. You have that in the record already.

Mr. FREAR. I am trying to find out what this lumber cost Great Britain, counting the amount that she paid, as originally billed to her, the amount she pays at this time in amortizing the plant. We have not got that in.

Mr. WALKER. \$320 per thousand.

Mr. FREAR. \$320 per thousand for what?

Mr. WALKER. For the lumber she received.

Mr. FREAR. Now, counting the amortizing of the plant, where she pays for that, that is not included.

Mr. GABRIELSON. This is all she has paid at all, all she ever will pay for.

Mr. FREAR. That is a complete settlement. Now, how much is that for England?

Mr. WALKER. About \$320 per thousand.

Mr. FREAR. \$320 per thousand. Now, what is it for France, if there is any different basis of computation.

Mr. GABRIELSON. If they pay on the same basis, France will have to pay \$11,092,347.95.

Mr. FREAR. That will be on the final settlement?

Mr. GABRIELSON. If they settle on the same basis as England.

Mr. MAGEE. You mean on that salvage basis?

Mr. GABRIELSON. On the 10 per cent salvage.

Mr. MAGEE. She will not settle on that basis.

Mr. GABRIELSON. She has refused, but if she did settle she would have to pay that.

Mr. WALKER. She would pay \$320 a thousand.

Mr. FREAR. Then, that would be the basis of the final settlement with Italy, in the same manner you have suggested with Great Britain?

Mr. GABRIELSON. Do you want the Italian amount?

Mr. FREAR. No; that is immaterial. We are trying to arrive at the actual cost to these foreign Governments of the airplane stuff that we sent over.

Mr. WALKER. You see, Mr. Frear, that in arriving at this basis of settlement I may state the cut-up plant shipments and the outside mills' shipments were finally priced at the same price for the same grade, and the amounts arrived at that each country received, so that that was a measure of the value that they received.

Mr. FREAR. Now, if you will give me another idea: What was the amount, not that was fixed in theory or tentatively, shipped to these various countries and to ourself, but what was the amount actually shipped?

Mr. WALKER. Of footage?

Mr. FREAR. Of footage to these foreign Governments, and ourself.

Mr. WALKER. That has been in the statement that I have submitted to the committee.

Mr. FREAR. I know, but there is an enormous amount of figures, and now we are trying to identify it in connection with this matter.

Mr. WALKER. Just the footage?

Mr. FREAR. Yes; just the footage.

Mr. WALKER. Well, Great Britain, 41,437,047 feet.

Mr. FREAR. Who got that?

Mr. WALKER. Great Britain.

Mr. FREAR. That was shipped to them?

Mr. WALKER. Yes. The French got 34,595,701 feet.

Mr. FREAR. Yes.

Mr. WALKER. The Italians got 14,630,894 feet. The United States got 52,345,319 feet.

Mr. FREAR. Now, was that the basis on which the settlements were made, the proportionate amounts?

Mr. WALKER. No; the various grades included in these shipments were given prices which were supposed to be the measure of their relative value, and the footages were extended to those prices, and that gave the amounts on which we based it.

Mr. FREAR. Is there anything more you want to examine on in connection with that point?

Mr. MAGEE. I was going back to my original proposition, if I could. I want to see if I can find out what was paid the logger for his lumber and what it was sold for. Have you any means of ascertaining that?

Mr. WALKER. The prices of 35, 20, and 11 for spruce logs were paid by the various mills. That was the established price.

Mr. MAGEE. Haven't you got some approximation there, or are you able to figure out approximately what you paid the logger for lumber which you sold?

Mr. WALKER. I gave those prices to the outside mills, Mr. Magee. The prices we paid for his airplane stock was \$175 per thousand, for wing beams, wing-beam stock.

Mr. MAGEE. What did you sell it for?

Mr. WALKER. Well, in that connection, up to the last of September we sold it for just exactly what we paid for it here, but we were allocating these shipments on a certain per cent to each ally, or trying to do that, and it was very difficult to allocate the outside mill shipments in the same way we were allocating the cut-up plant shipments. In other words, we might give Great Britain 10 per cent of the outside mill shipments and 15 per cent of the cut-up plant shipments, so she would be bearing more of the cost of the cut-up plant than the French were. So in order to do away with that, after October, we threw the cost to the outside mill shipments in with the cost of the cut-up plant shipments and established a uniform price.

Mr. MAGEE. How do you figure that out, Mr. Gabrielson?

Mr. GABRIELSON. You mean pulling apart the mills on the outside as against the cut-up plant?

Mr. MAGEE. Yes; what they pay the outside mills per thousand for the lumber and what they sold it for.

Mr. GABRIELSON. Well, I have the figures here, the average figures here, leaving out grades, of \$84 for spruce and \$62 for fir, and \$123

for cedar. That is the lumber, that is what they paid the independent outside contractor. Then they threw it all in together and billed it all at just one price, and the billing ranged from grade A spruce, \$350 down to as low as \$45.

Mr. MAGEE. Well, are you able to state with any degree of definiteness, or can you approximate it, what would be the approximate price paid the independent logger per thousand for spruce, and what the Spruce Production Corporation sold it for?

Mr. GABRIELSON. I can only give you the figure they have paid the independent contractor. I can not give you the proportionate figure that was shipped.

Mr. MAGEE. Do you know what that was sold for in excess of what they paid?

Mr. WALKER. We paid——

Mr. MAGEE. I was asking Mr. Gabrielson if he knows about it.

Mr. GABRIELSON. I can not give the figures.

Mr. MAGEE. Would that apply to the fir, too?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. I have some figures that may develop that as soon as I can get through with it. Have you got something you want to give?

Mr. WALKER. I was going to tell Mr. Magee that we paid practically \$74 per 1,000 for all the outside mills shipped, and we billed it at an average price of \$86 per 1,000, and that was brought about in the last two months by changing the price of it.

Mr. FREAR. Have you made any estimates, Mr. Gabrielson, of the cost of spruce, fir, and cedar, if a 40 per cent salvage is received from the assets, and also a 30 per cent, 20 per cent, and 10 per cent?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Will you give those to the committee with an explanation of their relation to this entire question?

Mr. GABRIELSON. For the purpose of clarity, I will state the process I used in arriving at these figures.

Mr. FREAR. All right.

Mr. GABRIELSON. The capital expenditures to date have been \$23,-464,853.49.

Mr. FREAR. What do you mean by capital expenditures?

Mr. GABRIELSON. Capital expenditures, the capital outlay, such as railroads, cut-up plant, sawmill, etc. The operating expenses, such as pay rolls and invoices for miscellaneous expense items, things of that type, \$27,710,954.57. Now, they made total shipments here of 143,008,761 feet. To get the total amount of money that that cost you have got to find out the salvage value they are going to receive from their capital expenditures. So I have assumed, in the first place, that they will get 40 per cent of their investment out of this sale.

Mr. FREAR. That is, eventually?

Mr. GABRIELSON. Yes.

Mr. FREAR. Forty per cent from that?

Mr. GABRIELSON. In other words, they will sell for 40 per cent of their original cost.

Mr. FREAR. That counts railroads and all.

Mr. GABRIELSON. Yes. Now, the balance of the capital expenditures, plus the operating expenses, will be the total expense involved

in the transaction out here, and on a basis of 40 per cent salvage that would equal \$41,789,866.61.

Mr. FREAR. Now, what would that be of the average cost if these various classes of lumber had a 40 per cent salvage?

Mr. GABRIELSON. Now, taking that as against 143,000,000 feet of shipped lumber; that is, lumber that was shipped, and subdividing that between fir, spruce, and cedar—

Mr. FREAR. In proportion to the amounts?

Mr. GABRIELSON. In proportion to the amount as rendered on the original invoices to the foreign governments.

Mr. FREAR. Yes.

Mr. GABRIELSON. Well, just to get that in the record I will give what that is.

Mr. WALKER. I have it here.

Mr. GABRIELSON. The total invoice amount as rendered is \$27,465,863.76. The amount invoiced for spruce is \$18,793,485.10. The amount invoiced for fir is \$6,919,588.84. And the amount invoiced for cedar is \$1,752,789.82. Now, that is the basis I have used as against—

Mr. FREAR. I see.

Mr. GABRIELSON. So the first equation—I will just put it in the record so the equation will appear there—would be 18,793,485.10 over 27,465,863.76; multiplied by 41,789,866.61; that result to be divided by the total number of thousand feet shipped, which was 79,366 thousand feet. That was the formula that I used. I might say that was used through the 40 per cent salvage, the 30 per cent salvage, the 20 per cent salvage, and the 10 per cent salvage.

Mr. FREAR. That is, the same basis of computation.

Mr. GABRIELSON. Yes. I shall now give my results, that I find on this equation. On the 40 per cent salvage base the spruce would cost \$362 a thousand, the fir \$174.39, cedar \$699.29. On the basis of 10 per cent salvage—

Mr. FREAR. Run down 30 and the others, just as they go.

Mr. GABRIELSON. Excuse me, I meant 30. On the basis of 30 per cent salvage the cost of spruce would be \$382.32, fir \$184.19, cedar \$738.56. On the basis of 20 per cent salvage spruce would cost \$402.65, fir \$193.98, cedar \$777.82. On the basis of 10 per cent salvage, or the basis they settled with England on, spruce would cost \$422.97 a thousand, fir \$203.77, and cedar \$817.09.

Mr. FREAR. You say the same basis on which they settled with Great Britain, that is, they settled on part on the 10 per cent salvage, not on all.

Mr. GABRIELSON. The English settlement was based on 10 per cent salvage.

Mr. FREAR. Of all.

Mr. GABRIELSON. Of everything.

Mr. FREAR. It was?

Mr. CAMPBELL. It figured that as an average?

Mr. GABRIELSON. It figured an average of 10 per cent.

Mr. FREAR. And this is the basis of cost?

Mr. GABRIELSON. So the English people paid \$422.97 a thousand for the spruce that they received.

Mr. FREAR. Now, is there anything else along that line?

Mr. GABRIELSON. Sir?

Mr. FREAR. Is there anything else you have in mind there, Mr. Gabrielson? I think this ought to be put in the record, your basis of calculation there, so if anyone wants to make a correction or make an examination of it it should appear there fully set out.

Mr. GABRIELSON. I do want to say that I would like to reserve the right to correct the pennies on this, because there may be a little difference.

Mr. FREAR. I do not think pennies will figure very largely in matters of this size. I want to ask Campbell a few questions when you are through with that.

Mr. GABRIELSON. I think at this time that covers everything; I have the other matter for later.

Mr. FREAR. I understand.

Mr. GABRIELSON. I think that covers it.

Mr. LEA. Now, your basis of calculation includes the operations that did not reach production as well as those that did, of course.

Mr. GABRIELSON. It includes, Mr. Lea, the lumber actually produced and set against that figure is the total outlay here, the total expenses of everything. In other words, all the money that the taxpayers of the United States will have to pay for this operation is included. That was my basis.

Mr. LEA. It is not an ordinary commercial basis for estimating to show the success or failure of a proposition.

Mr. GABRIELSON. No; this is on the same basis as liquidating a defunct corporation. That is the basis I have used.

Mr. LEA. Now, the cost of the Toledo mill, did that include the shop?

Mr. GABRIELSON. The Siems-Carey mill?

Mr. LEA. No; the Toledo mill.

Mr. GABRIELSON. I will find out. The machine shop; yes. Is that what you have in mind?

Mr. LEA. Yes. Have you the cost of that machine shop separate from the mill?

Mr. GABRIELSON. Yes. \$73,992.02, and that is the roadhouse in connection with the machine shop. The two are given together.

Mr. LEA. If that was deducted, what would it leave the net cost of the mill?

Mr. GABRIELSON. It would leave about \$880,000, along in there.

Mr. LEA. Now, the valuation of the railroad on a basis of the main track would not be an accurate estimate cost of the different elements involved.

Mr. GABRIELSON. That is not an analytical cost; no. That is a per mile valuation. They do that, I might say, for funding bonds and for getting mortgages and things like that.

Mr. LEA. I do not know whether I understood you or not, but have you got the total amount paid Lewis and Clark on the Lewis and Clark settlement, on the final wind-up of the Lewis and Clark work.

Mr. GABRIELSON. Yes; but not the total amount of money paid them during the whole contract.

Mr. LEA. The final wind-up was how much?

Mr. GABRIELSON. What was that—\$64,000—

Mr. LEA. That was the final payment?

Mr. GABRIELSON. \$64,637. Yes; that was just the final payment.
 • Mr. LEA. In this Hammond lumber contract, will you explain briefly what that contract was for? I haven't read that?

Mr. GABRIELSON. The Hammond Lumber Co. contract was for 60,000,000 feet of logs, I think.

Mr. LEA. And that involved the construction of a railroad at Government expense, is that the idea.

Mr. GABRIELSON. That involved the construction of a road, and during the operation they were to repay him through what is technically called an amortization, 65 per cent of the cost of that road. However, in the cost of the road the Government had allowed him 10 per cent for overhead, 10 per cent profit on the construction. Then they turned around and amortized 65 per cent of not only the cost but 65 per cent of the profit also. So they paid him amortization on the profit as well as the cost.

Mr. LEA. It would be 65 per cent of 110 per cent.

Mr. GABRIELSON. Yes; that is just what it amounts to. They settled on that basis.

Mr. LEA. They settled on that basis?

Mr. GABRIELSON. They settled as per the terms of the contract. It was rather a peculiar contract. You see, he was to get 65 per cent on amortization, whether he pulled one log or 60,000,000 feet of logs over this railroad.

Mr. LEA. Well, in the settlement that was made, was there any deduction on account of logs that were pulled over it or produced?

Mr. GABRIELSON. The logs that were pulled over it he received a certain set price for them, and amortization included in that was on the basis of the shipped to the unshipped log. Now, to make myself clear, if he had shipped one-half of the logs, this one-half that he received \$40 per M. for, would have included amortization to one-half of his 65 per cent, and on the basis of settlement they would have paid him the other half of the 65 per cent.

Mr. LEA. Get the final figures if you have them there. Was the amortization paid 65 per cent of the 110 per cent?

Mr. GABRIELSON. Yes; 65 per cent of the 110 per cent.

Mr. LEA. Without any deductions on account of log production?

Mr. GABRIELSON. They had never paid him for any logs up to the time of the settlement.

Mr. LEA. So that feature was not involved.

Mr. GABRIELSON. You see he only shipped 2,384,000 feet of logs. He had just gotten underway. I think you will find that contract was not entered into until the fall of 1918.

Mr. LEA. What was the date of that Hammond contract?

Mr. GABRIELSON. That Hammond contract is not here, but it was in September some time.

Mr. LEA. Well, it will speak for itself. I think that is all.

(Witness excused.)

TESTIMONY OF C. C. CAMPBELL—Recalled.

Mr. FREAR. Mr. Campbell suggested that there was something here he could explain. I heard him talking a while ago.

Mr. CAMPBELL. About the approval of contracts?

Mr. FREAR. Yes.

Mr. CAMPBELL. I happened to be in Washington at that time and I think when the committee gets there, if Mr. Gabrielson will go to the files of the contract section he will find each one of these bearing the approval of the chief signal officer up to the time the corporation was started.

Mr. FREAR. Up to the time the corporation was started?

Mr. CAMPBELL. Yes.

Mr. FREAR. The difficulty in making any ascertainment of that is that we find that a printed copy will be furnished us, and generally we had to send here to Portland from Washington to get it, and it is left in blank.

Mr. CAMPBELL. The original of each one of those was signed by the Chief Signal Officer and kept in the contract file.

Mr. FREAR. Isn't it kept on file here?

Mr. CAMPBELL. No. They wired out here when they were approved. They would just wire that a certain contract had been approved by the Chief Signal Officer.

Mr. FREAR. Haven't you any record of the wires? We go back there and they say that everything—all the papers are here. Now you are sending us back there, and they will say they have no records.

Mr. CAMPBELL. The originals are there. I could go there and find them myself.

Mr. FREAR. I wish you would do it. They said they didn't have a single contract; that they were all out here.

Mr. CAMPBELL. They have every contract.

Mr. FREAR. Where is their office?

Mr. CAMPBELL. 4½ Missouri Avenue.

Mr. GABRIELSON. That is just where I looked, and they advised me they were all in Portland.

Mr. FREAR. I have had the people there looking for them, and they tell me there is nothing there.

Mr. CAMPBELL. I know we kept those things there. I kept them myself.

Mr. FREAR. I understood they sent them all out here. We didn't know anything about that.

Mr. CAMPBELL. I can get them, I know.

Mr. FREAR. Will you wire to-day and find out by to-morrow if they are to be had there?

Mr. CAMPBELL. Yes.

Mr. GABRIELSON. And, incidentally, the party from whom we can get them.

Mr. LEA. There is one question we ought to have answered by Mr. Campbell, and that is the method adopted by the organization to check the expenses of cost-plus contractors. Can you explain that? I understand that is in your department.

Mr. CAMPBELL. Yes, sir. I have that written out here, the entire procedure, two pages of it. Would you like to have that in the record?

Mr. FREAR. What is that?

Mr. LEA. I asked him to explain the method of checking the cost-plus contractors. He states that can go into the record.

(Whereupon the above-mentioned paper is copied into the record, as follows:)

PROCEDURE OF INTERNAL CHECK WITH COST-PLUS CONTRACTORS.

Line of authority in purchasing supplies for construction and operation:

1. Orders were first given camp clerks and were signed by the foreman of the department ordering.

2. Requisition was issued by the camp, bearing foreman's and camp clerk's signature, on the district store, stating the authority for the purchase and giving the use to which the supplies were to be put.

3. If the articles were not in stock at the district store, the storekeeper issued and signed a requisition on the Portland office, said requisition bearing the authority of the district supervisor.

4. The purchasing agent, contractor's head office, would then obtain the approval of the assistant purchasing officer (same as assistant property officer) stationed in contractor's office and purchase orders were issued in sextuplicate. Original copy sent to vendor, duplicate copy to the assistant accounting officer, triplicate copy to the assistant property officer, quadruplicate and quintuplicate copies to the purchasing department, contractor's office, and sextuplicate copy to district stores.

Receipt and check of merchandise shipments:

1. District stores on receiving merchandise checked the shipment against the vendor's invoice. Invoices were checked against purchase orders.

2. Invoice was certified, as to receipt and condition of material, by the storekeeper and by the property officer stationed at the district store.

3. Shipments to camps by the district stores were checked and receipted for by the camp clerks and also by the commanding officer of the camp.

Pay rolls:

1. Pay rolls were compiled under the supervision of camp clerks from data obtained by the timekeepers, who personally visited the men in the field twice each day.

2. The monthly pay rolls were signed by the camp foreman, by the camp clerk, and certified by commanding officer of the camp.

3. Pay rolls were then forwarded to the district supervisor to check, as to rate of pay, and approve same.

4. Pay rolls were forwarded to head office and again checked, as to Army pay deductions and extensions, by the assistant accounting officer stationed at the contractor's office.

5. Pay rolls were then forwarded to the district auditors, who made payment, requiring on pay rolls signatures from all employees.

Public vouchers:

1. Public vouchers were supported by contractor's vouchers, which were signed by the vendor and supported by vendor's invoices, contractor's vouchers bearing reference number of check making payment.

2. Public vouchers were passed to the assistant accounting officer stationed at contractor's office. Contractor's vouchers contain reference to the purchase authorizing the purchases shown on the invoice attached to the voucher, said purchase order being used by the assistant accounting officer to check the authority for the purchase by referring to his files containing duplicate copies of all purchase orders.

3. The public vouchers were then approved by the assistant accounting officer and forwarded to assistant property officer, who examined voucher to make sure that all nonexpendible property covered therein was listed on memo receipts which contractor signed, thereby making himself responsible to the Government for the care and safe return of such property. The property officer, being satisfied, approved the voucher, which was then forwarded by the assistant accounting officer to the corporation for reimbursement.

4. Reimbursements for pay-roll expenditures were made on basis of public vouchers supported by original pay rolls bearing signatures of all employees paid. The bank check, or pay draft, paying the employee was indicated on pay roll by a number reference.

Cash receipts from camp sales:

1. District auditors and assistant district auditors visited the camps daily, or every other day when the camp was more or less isolated, collecting cash (among other duties) received by the camp clerks from sale of meals and commissary supplies.

2. Meals were checked by a clerk under the supervision of the camp clerk. This record was given the camp clerk, who then collected or charged for the

meals received by the parties who were not on the pay roll. A camp record book (kept by the camp clerk), showing (among other things) total meals served, including cash and charge meals, was sent to the head office monthly, where the cash meals were checked with remittances from district auditors.

3. The commissary stocks carried in the camps were comparatively small, making some susceptible to ready check. Auditors in collecting cash would check over or make test checks on the stocks to prove the inventory issued by the camp clerks and to verify the sales figure. Inventories were further subject to a control carried on the general books in the contractor's head office.

4. District auditors signed for the cash received from camp clerks.

5. Remittance was made by district auditors to head office, where cash received was entered and receipts were issued district auditors for all cash received.

6. One party receiving all cash in the head office counted same, made a record for the accounting department of the amount, and passed same to cashier.

7. The Government was credited for all cash sales of the above character by means of entries to the contractor's reimbursement due account, and being approved by assistant accounting officer.

8. Sales of Government property were made by authority and direct supervision of an authorized Government officer.

Mr. FREAR. I want to ask you this in addition: We have had no statement of the salaries or expenses of these various cost-plus companies to show on what basis the cost-plus was figured. It is an impossible task, as you know, to even catch it as you would here. Now, can you give us any statement that will be of value, in the short time we are here, of the salaries that were paid all these various companies—the Warren Spruce Co., the Siems-Carey-Kerbaugh Co., the Grant Smith-Porter Bros. Co., and the Airplane Lumber Co.—as to the largest salaries that were paid?

Mr. CAMPBELL. Yes, sir. I have already furnished the Siems-Carey-Kerbaugh information to Mr. Gabrielson.

Mr. FREAR. The Siems-Carey-Kerbaugh, I think, we have.

Mr. CAMPBELL. And we can give you the rest of them.

Mr. FREAR. Can you to-morrow morning, just briefly?

Mr. CAMPBELL. I can have them by 11 o'clock, I would say.

Mr. FREAR. All right. If you will turn in that statement—I was wondering if I had seen the Siems-Carey-Kerbaugh statement.

Mr. CAMPBELL. I gave it to Mr. Gabrielson.

Mr. MAGEE. Will you see him and turn the four of them in?

Mr. FREAR. It is understood if they are delivered to the reporter they will go in the record.

Mr. LEA. There was one question I think that was referred to Mr. Campbell, that has not been cleared up, and that was in reference to a rejection of a 60 per cent shipment to the British in 1918.

Mr. FREAR. Oh, yes.

Mr. LEA. And you were to answer that, if you can.

Mr. CAMPBELL. As the question was asked me, it was stated that on or about August 15 the British had complained that 60 per cent of some shipment had been rejected, and I found that that telegram was dated August 15, and that that shipment must have been made from here at least four months prior to that time. That is before shipments were going from the cut-up plant to England. And on September 2 I got a letter from a representative of the British Government, who had been sent to Galveston to inspect a shipment before it went over, which showed that the shipments at that time when that shipment should have been made, about August 15, to reach Galveston, were perfectly all right. If you want that letter, I can furnish a copy of it.

Mr. MAGEE. I thought it was in evidence.

Mr. FREAR. Just tell us, as briefly as you can, is there any method of estimating what amount of material which was shipped, which has been testified here as being in the neighborhood of 143,000,000 feet, that is, it was manufactured—what amount of that was rejected, what percentage? Is there any way of making a—

Mr. CAMPBELL. I don't think there is.

Mr. FREAR. There is no way of getting that estimate at all?

Mr. CAMPBELL. I don't think so.

Mr. FREAR. For instance, we notice that in the Hughes's investigation it was developed that a considerable amount of rejections occurred in the Curtiss plant. We know that rejections occurred at Grand Rapids and elsewhere, according to the testimony that has either been before the committee or in one of these various hearings.

Mr. CAMPBELL. The Grand Rapids people, for instance—I checked up on them the other day—they placed orders in Washington for 1,500,000 feet of G list. G list was never intended for—

Mr. FREAR. Was that a part of the 143,000,000?

Mr. CAMPBELL. Airplane stock.

Mr. FREAR. Was that a part of the 104,000,000?

Mr. CAMPBELL. I think that G list was shipped prior to the time these accounts were started.

Mr. FREAR. Then that ought not to appear in this list.

Mr. CAMPBELL. No, sir.

Mr. FREAR. You have no means of determining any percentage, that is whether it would be 5 per cent or 15 or 25, on account of rejections?

Mr. CAMPBELL. Absolutely not.

Mr. FREAR. There were no claims made back upon the department here, or the division, of rejections that were refused?

Mr. CAMPBELL. There were some complaints in regard to the lumber, filed in Washington.

Mr. FREAR. I mean rejections that they refused to pay for, was that?

Mr. CAMPBELL. There was only one that I ever saw. It came from the Curtiss Engineering Corporation at Long Island.

Mr. FREAR. I understood that there were some up at Buffalo. I don't know whether that is so or not. I was wondering. Would they have come to you, or should they have come to other people as well?

Mr. CAMPBELL. Well, they should have come through the Washington office.

Mr. FREAR. You haven't any way of determining that?

Mr. CAMPBELL. No; we could not determine the percentage.

Mr. FREAR. That would be a factor, if we could tell that, in determining the actual cost of material. Now, the suggestion has been made in regard to these costs that that, of course, includes the railroads and mills. Well, it does—that is, in arriving at this salvage value, fixing the price of lumber.

Mr. CAMPBELL. I know of an instance where the Grand Rapids Airplane Co. ordered G list and box material, and when it reached there somebody inspected it on the basis of airplane stock and re-

jected some of their grading material for airplane stock. I do know that that happened.

Mr. FREAR. I was going to say that, of course, here is the theory of this question of estimating the value of the airplane stock as it went to England and the various countries and the cost at which it came to them. There is a different principle that was inaugurated between the Canadian Government, for instance, and ourselves. Ours was a large concentration of effort on a few cost-plus contracts, with the idea of not developing to the same extent the outside operations of the small loggers and millers as was done in Canada. Now, of course, that affected, upon the conclusion of the war, the cost of airplane stock, as we will ascertain when we get our final settlement.

Mr. CAMPBELL. Because of the signing of the armistice.

Mr. FREAR. Of course, we will all concede that that is very unimportant, in a way, compared with the importance of getting the airplane stock there.

Mr. CAMPBELL. Yes.

Mr. FREAR. That was the thing that was vital, and we all believed it was the most important. But the policy that was pursued here in building up large mills and extending railways, which might have been developed into two or three times the size, if they had so desired as a matter of policy then—that is one thing that we are having under consideration at this moment, and that is the reasons these questions, frankly, are asked.

Mr. CAMPBELL. Oh, I understand that.

Mr. FREAR. Well, the question comes from Mr. Magee whether or not from moneys that you received you could tell what amount of rejection had occurred? Were they all paid for?

Mr. CAMPBELL. All paid for.

Mr. FREAR. So that if they were rejected in England or in France or any other place, it was after the payment was made of the settlements with us were complete?

Mr. CAMPBELL. Well, the rejections were before any settlement was made, naturally, if there had been any.

Mr. FREAR. Well, then, there were no rejections?

Mr. CAMPBELL. I imagine not, so far as we know.

Mr. FREAR. Of course, there must have been defective material, but that is all paid for?

Mr. CAMPBELL. Yes.

Mr. MAGEE. You know whether you were paid for 143,000,000 feet of lumber, don't you?

Mr. CAMPBELL. Yes.

Mr. MAGEE. What do you say to that proposition?

Mr. CAMPBELL. We have been, with the exception of the French and the Italian. All the lumber shipped to the United States had been paid for, with the exception of the Curtiss account, and I have a wire from them, saying that they will be paid in full within the next few days.

Mr. FREAR. Well, all shipped to the account of the United States—all that amount has been paid for with the exception of the claim pending at the Curtiss Co.

Mr. CAMPBELL. It is not a claim. It is just the amount of our invoice.

Mr. FREAR. An account.

Mr. CAMPBELL. There might be two or three small factories that haven't paid, but practically all of them have, and there are no accounts in dispute.

I might mention, in connection with that salary list, working for Siems-Carey, one who does not appear there. He was hired by them, I think, at—he received \$20,000 for the erection—superintendence of the erection—of the Port Angeles and Lake Pleasant mills.

Mr. FREAR. That was the contract price?

Mr. CAMPBELL. That was the contract; and when the Spruce Corporation learned of that contract they notified them that in the event of cancelation that they would only allow six of that twenty thousand for the job.

Mr. MAGEE. How much was allowed?

Mr. CAMPBELL. Well, he didn't receive the entire six, because the jobs were not finished. A proportionate amount of the six thousand was allowed.

Mr. MAGEE. That is, the proportion of 6 to 20?

Mr. CAMPBELL. The proportion of six to the amount of work completed on the two mills.

Mr. MAGEE. Well, I understood you to say if he had completed it they would have allowed six.

Mr. CAMPBELL. They would have allowed six. The mills were not finished.

Mr. MAGEE. Not being completed, the proportion would be as 6 would have been to 20?

Mr. CAMPBELL. No; not as 6 to 20; as 6 would be to the comparative completion of the mills. If the mills were two-thirds completed, he got two-thirds of six thousand.

Mr. MAGEE. If the mill had been completed, he would have got six?

Mr. CAMPBELL. Yes, sir.

Mr. MAGEE. So that there would have been six which he got?

Mr. CAMPBELL. Yes.

Mr. MAGEE. And 20 claimed.

Mr. CAMPBELL. No; they would not have claimed it. They were notified they could not claim it.

Mr. MAGEE. I say he claimed it?

Mr. CAMPBELL. Smith-Carey paid him from their own pocket. Naturally, he got his money.

Mr. MAGEE. I say it was the amount of his claim; that would be the proportion of 6 to 20 that the Government allowed him, providing the plant had been completed?

Mr. CAMPBELL. If it was completed, that is right.

Mr. MAGEE. Now, not being completed, I assume what he got was in the same ratio, wasn't it?

Mr. CAMPBELL. That is right.

Mr. FREAR. Now, in this case of these amounts that has been furnished, regarding the employees of Siems-Carey-Kerbaugh Co., the salaries over \$200 per month, there appears to be in the neighborhood of 50 or 60 names, or thereabouts. Rogers receives a salary at the rate of \$15,000 a year—twelve thousand, or twelve hundred and fifty dollars a month.

Mr. CAMPBELL. I think that is right.

Mr. FREAR. What was his position; do you know?

Mr. CAMPBELL. I think he was general superintendent or general manager.

Mr. FREAR. And Tinkler, he has \$1,000 a month. He is superintendent of logging roads?

Mr. CAMPBELL. As I remember it, he was.

Mr. FREAR. That is what it states here. Now, in the case of Sawyer, for instance, his name doesn't appear here. He was paid from this office?

Mr. CAMPBELL. Sawyer was paid by the Army.

Mr. FREAR. Oh, he was then under the Army contract?

Mr. CAMPBELL. He was not a Siems-Carey employee, anyway.

Mr. FREAR. He was an Army officer. They had no civilians there—that is, I mean your corporation had no civilians working with a salary received in civil employment?

Mr. CAMPBELL. I think at one time after I came out here I had one man there checking up their warehouse goods, that I hired as a civilian.

Mr. FREAR. A short time?

Mr. CAMPBELL. He was not working for them, but I put him in there for my own protection.

Mr. FREAR. Here are a number of people that were at Joyce. There is a list of possibly 25 that were at Joyce, here, receiving \$200 or more. What were they? For the railroad business, was it?

Mr. CAMPBELL. The railroad, yes; at Joyce. Well, there was a large warehouse operating there, too, from which they issued materials to the—for the construction contract; that is, they bought materials from that warehouse.

Mr. FREAR. Did you check over, on the part of your corporation, to ascertain whether it was a reasonable number of people who were being employed by them under these cost-plus contracts? That was a cost-plus contract.

Mr. CAMPBELL. After I got here, and after the contract had been cancelled, of course their operating force had been let off; but so far as their office force and force of accountants was concerned, it was very reasonable, I thought; very. The others I didn't see, because I wasn't here.

Mr. FREAR. All right.

(The list of employees, Siems-Carey-H. S. Kerbaugh Corp., above referred to, was marked "Exhibit 32-Campbell-September 11, 1919.")
(Witness excused.)

Mr. FREAR. I will say, for the record, we are calling several witnesses, practically one or two witnesses on different points, and Mr. Ziegler, has, as I understand, had some experience with the spruce-production matter, and is called for that purpose—for the purpose of aiding the committee to get an understanding of the situation as he views it.

TESTIMONY OF J. B. ZIEGLER.

(Witness was sworn by Mr. Frear.)

Mr. FREAR. What is your business?

Mr. ZIEGLER. I am a farmer, at present. My profession is medicine, but I broke down.

Mr. FREAR. Dr. Ziegler.

Mr. ZIEGLER. Yes. I had to abandon it.

Mr. FREAR. Where do you live?

Mr. ZIEGLER. Tualatin.

Mr. FREAR. You lived down in the Siletz?

Mr. ZIEGLER. Yes; I homesteaded there in 1896.

Mr. FREAR. Have you any land there now?

Mr. ZIEGLER. No, sir.

Mr. FREAR. Nothing at all there?

Mr. ZIEGLER. No, sir. I sold out about four years later, in 1901. I didn't have timber, nohow. I had farm land.

Mr. FREAR. But you are familiar with the region down there?

Mr. ZIEGLER. Yes, sir.

Mr. FREAR. Well, now, you have also had some correspondence with the Secretary of War and various other people in reference to this spruce situation, and also came in contact with Mr. Disque, I believe, or Col. Disque, at that time, and with Maj. Hitchcock and two or three others. I wish you would state, as briefly as you can, beginning at the time that Col. Disque came here, your efforts to urge along the aircraft program, if you did take any part in that, and about what success attended your efforts; just briefly.

Mr. ZIEGLER. My first communication with the department was a telegram—or with Washington was a telegram to Congressman Hawley, respecting the sale of some spruce-bearing timberlands that I was acquainted with down on the Siletz.

Mr. FREAR. When was that?

Mr. ZIEGLER. The sale was advertised for September, 1917.

Mr. FREAR. Yes.

Mr. ZIEGLER. It didn't occur at that time. A part of it has been sold since. Whether it has all been sold or not I don't know, but there was one section that I was familiar with, very familiar, that bore 13,000,000 of spruce. That was advertised for sale at an upshot price of a dollar a thousand, I think it was. I tried to stop that sale, because the Government was in the market then for spruce airplane stock at \$105 a thousand, and the matter looked absurd to me. That is why I took it up. I finally received an answer to several letters. I was referred to the Airplane Board. I was instructed to report to the spruce office here and assist them all I could.

Mr. FREAR. By the Airplane Board where?

Mr. ZIEGLER. At Washington, and later from Lathrop Brown.

Mr. FREAR. That was when?

Mr. ZIEGLER. That was in October.

Mr. FREAR. That was after Col. Disque came here?

Mr. ZIEGLER. That was before; but by the time I reported, why, Col. Disque was on the ground.

Mr. FREAR. Well, now, what occurred, if anything, that you desire to testify to as to the production of airplane stock after that?

Mr. ZIEGLER. Why, I was sent out—in obedience, I suppose, to the recommendation—I was sent out by the Warren Spruce Co. as a scaler. I went to Raymond, Wash., under instructions from Col. Disque's office; received my equipment from them. I scaled several days alone, then—

Mr. FREAR. Where was that?

Mr. ZIEGLER. At Camp 1-A, Raymond, Wash. I was the first scaler on the ground.

Mr. FREAR. And is that your business—scaling?

Mr. ZIEGLER. Well, I had done considerable scaling when I was a young man, and I knew how to scale trees. It is a simple matter.

Several days later an enlisted man came to help me. It was properly teamwork. And trees were being spotted and numbered in series. The first report—was to make bimonthly reports—semi-monthly reports.

Mr. FREAR. Yes.

Mr. ZIEGLER. And the first report was under date of January 1.

Mr. FREAR. Just come briefly to the point, please, as to what was done. We don't care about dates, I mean, or anything like that. Just tell us briefly what was done in your scaling.

Mr. ZIEGLER. Yes. Well, the report was coupled also by my field notes, covering about 40 trees, averaging perhaps 10,000 feet to the tree, and the trees were being spotted in a serial number by Lieut.—a young man named Lieut. Waitman. The timber was on a school section.

Mr. FREAR. Just hurry along, if you can—that is, I mean as to what you did. He was spotting the trees on this school section. Now, what occurred?

Mr. ZIEGLER. Why, the matter of my report was that the trees being spotted were unfit for airplane stock and were making no airplane stock.

Mr. FREAR. To whom did you report that?

Mr. ZIEGLER. The chief inspector at the Spruce Production Office—Capt. Markham.

Mr. FREAR. That is, because they were not all airplane production material; is that it?

Mr. ZIEGLER. No; that they made no airplane stock whatever, and they bore upon them external evidence to that effect; that no woodsman would take those trees to make any kind of straight-splitting stock.

Mr. FREAR. Who was it that spotted them, do you know?

Mr. ZIEGLER. Lieut. Waitman, I think it was.

Mr. FREAR. Well, what occurred then, after you reported it?

Mr. ZIEGLER. Why, that was on September 8. I got a letter recalling me from the Spruce Production Office, stating that Col. Disque had concluded to dispense with the services of all civilian scalers.

Mr. FREAR. And did he dispense with them, or do you know?

Mr. ZIEGLER. Yes, as far as I know; and that letter was dated on the 6th. I was instructed to report to the superintendent, who would place me elsewhere; but I assumed from the tone of the letter that information of the sort that I was trying to convey to the office was unwelcome, so I came up to the office and tried to get an interview with Gen. Disque, and failed for a long time. The fault appeared to be very gross, for it was not only the two trees that was in the report, but the numbers in the serials, from Nos. 11 to 18, were all trees of that character; in fact, they were spotting practically all the big trees in the forest.

Mr. FREAR. Spruce trees.

Mr. ZIEGLER. The trees being used, the old trees, the remains of an old forest, and the second growth has grown up many years later, and it is only those old trees that were being used in those operations, and they were taking practically all those old trees.

Mr. FREAR. Well, that is—

Mr. ZIEGLER. All that were at all presentable.

Mr. FREAR. What did you do?

Mr. ZIEGLER. Well, I had to beseech the office to get an interview. It took me, I guess, a matter of two months until finally I reached Col. Hitchcock or Maj. Hitchcock and Capt. Tisdale.

Mr. FREAR. Then what?

Mr. ZIEGLER. Why, it was very plain, from what I already knew—

Mr. FREAR. What occurred at that time? You are arguing the question, but what we want is what occurred—whom did you see and what did you do?

Mr. ZIEGLER. I saw Maj. Hitchcock and Capt. Tisdale.

Mr. FREAR. All right. Now, what occurred there?

Mr. ZIEGLER. Why, all the interest they—I asked them why my letter hadn't been answered. You see, this information was ready at the beginning of the selection of these trees, and the fault was a gross one.

Mr. FREAR. Well, let's pass up what the fault was. Tell what occurred in your conversation with these people. That is the thing that we have got to pass upon—the testimony—

Mr. ZIEGLER. They resented what they called my persistence.

Mr. FREAR. Well, there was a persistence, if you were there two months.

Mr. ZIEGLER. Yes. Well, I was determined.

Mr. FREAR. Now, what occurred and what was decided upon, if anything?

Mr. ZIEGLER. Well, I asked them why I hadn't received any answer to the letter in which I furnished this information respecting the bad spotting of the trees. Well, Maj. Hitchcock says that my letter was of such a general character that he didn't think it was necessary to reply. I said, "Major, I don't see how it could possibly be more specific or more timely. I mentioned my trees and told the scale. One was scaling nearly 19,000 feet, costing the Government a matter of \$150, the stumpage and operation, and, besides, the still greater cost of transporting it out of the woods." I said, "I don't see how anything could be more specific or more timely." And, "Well," he said, "that is only a couple of trees." "Well, then," I said, "that is the only two trees that are covered in this report, but there are others," and I went on to state—

Mr. FREAR. When was this?

Mr. ZIEGLER. This interview, I think, occurred about May.

Mr. FREAR. 1918?

Mr. ZIEGLER. Yes. The report concerned was sent in two reports; my final report was February 8.

Mr. FREAR. Report to whom?

Mr. ZIEGLER. Capt. Markham, the same inspector, the chief inspector.

Mr. FREAR. Well, what then?

Mr. ZIEGLER. Well, when he asked me why I was so persistent, why, I was both surprised and incensed. I says, "I have one son, and he is over at the battle front now." I says, "It is reported that the Americans have no airplanes there to protect him." And, "Oh," Tisdale says, "that is all damned pro-German bunk." I said, "How many, then?" "Well," he says, "that is a military secret." "Well," I says, "Captain, I didn't come here for information; I am trying to impart information that I know is useful to the Government. I see it is now welcome." "Now," I says, "you accused me of making a general statement, not specific enough for answer. I want to make a general statement, and that is the operations that are conducted down there at that camp, under your guidance here, are being perverted for the purpose of selling timber to the Government that is unfit for their purpose, instead of getting airplane spruce." They are not attempting to bend all their energies to getting out airplane spruce at all, but they are selling all the timber that they can." "Well," he says, "you have got to look out what you are saying." I said, "Is that a threat?" He says, "Yes; it is." I said, "I am not afraid of you." Well, the two of them went into Gen. Disque's office; I supposed that they were consulting with him whether I should be placed under arrest or not.

Mr. FREAR. Well, what did occur?

Mr. ZIEGLER. And I waited there until the dinner hour, and never saw any more of them, and I left. Then I reported the whole matter—sent it up to the Secretary of War.

Mr. FREAR. With what result?

Mr. ZIEGLER. Well, I was queered up there by the politicians. Some told me to testify before the committee here, and they elicited a reply from the Secretary of War that my only interest in the operations was to embarrass the Government.

Mr. FREAR. Well, you felt you were acting sincerely and that you were acting for the best interests of the Government?

Mr. ZIEGLER. Why, I not only felt it, but I knew it.

Mr. FREAR. Yes; that you were acting for the best interests of the Government?

Mr. ZIEGLER. Yes, sir.

Mr. FREAR. When you reported there that there was a waste, as you saw it, of these trees and money. Now, of course, what did you attribute that to, inexperience on the part of the officers, or what?

Mr. ZIEGLER. Why, I attributed it at that time to inexperience. I had had some interviews with Gen. Disque concerning a program for operations that I had sent to the Secretary of War; in fact, it embodied all the selective logging and riving, and the use of enlisted men, and all the features of the program as he adopted, with one or two additional that he did not adopt; and one was that for the winter's work not try any land transportation, but get all the timber that was on tidewater and get it into the tidewater and some little mills there, and get it out by boat, and then in the summer-time he could see whether they needed anything else or not. They never adopted that.

Mr. FREAR. They didn't adopt that?

Mr. ZIEGLER. They adopted all the rest.

Mr. FREAR. Now what occurred after this affair with the Secretary of War? They didn't answer, or did they answer?

Mr. ZIEGLER. Yes. I finally got an answer through Senator McNary.

Mr. FREAR. To what effect?

Mr. ZIEGLER. In which he stated that he had information—it was the same old thing—that my accusations were indefinite and I had been given an opportunity to sustain them and had failed to do so. Now, that was the only opportunity that I had ever had to talk over that report with anybody at that office, and I had to do that by practically forcing myself in.

Mr. FREAR. That is the time when you talked to Hitchcock that you spoke of?

Mr. ZIEGLER. Yes. That I had been given numerous opportunities, so the letter stated.

Mr. FREAR. Now, what occurred after that, if anything, in regard to this production of aircraft material, that the committee ought to be informed of, as to their policy—the policy of production, or whatever you had in mind?

Mr. ZIEGLER. Well, I got the impression, combined with the waste that I saw down there—first, I attributed it to inexperience. Disque told me that he was entirely unacquainted with the matter, he would have to learn everything. But I am satisfied with what I have learned since it was partly inexperience and partly control by a number of men that intended to get hold of that \$50,000,000 appropriation for the production of airplane spruces easily and as rapidly as possible.

Mr. FREAR. That was your conclusion?

Mr. ZIEGLER. That is my conclusion; yes.

Mr. FREAR. Now, did you do anything?

Mr. ZIEGLER. And experience didn't matter. They would rather have inexperienced men than experienced men in the field. They didn't want any man that knew trees to spot the trees.

Mr. FREAR. What else did you have in mind besides the spotting of the trees there that ought to be brought to the attention of the committee, in the nature of waste or extravagance, as you viewed it?

Mr. ZIEGLER. They had a lot of heavy motor trucks that they could not possibly operate.

Mr. FREAR. Where were those?

Mr. ZIEGLER. Down there around Camp Raymond at that time. The only thing that was useful was a team and a wagon. The team and wagon was loaded; they was hauling out a lot of cants there. They were bringing them from the woods to the highway and then bringing them down to tidewater.

Mr. FREAR. What about the cants? Was that the riving time?

Mr. ZIEGLER. Yes.

Mr. FREAR. What was there about that? Anything? I think you spoke about that.

Mr. ZIEGLER. Well, the riving of the cants was a good operation, and if they actually wanted the grade of timber which was specified in the specifications that they sent out it was the only way to get it. They could not get it any other way. Mills could not cut it, and the specifications to the mills did not require the same grade of lumber as required from the rivers. It looked to me like those riving specifications were got out by somebody that was intending to kill it off.

Mr. FREAR. That is, to prevent its use?

Mr. ZIEGLER. Yes; to prevent or stall the riving operations.

Mr. FREAR. Well, what was your idea about it?

Mr. ZIEGLER. Well, I think the loggers wanted to sell logs and the mills wanted to cut them.

Mr. FREAR. Well, of course, that is one of the theories; and afterwards it was abandoned—that they had to get airplane stock.

Mr. ZIEGLER. And their specifications for the mills was 20 per cent—no; 1 and 20 deviation on one surface of the timber, and 1 and 20 on the other. Now, that is far from straight-grain stock. That is really about No. 1 grade mill stock. And their idea was that they could work out their straight stock out of that by picking out the best timbers and use the rest of it, shorter stuff; but no such permission was given to the rivers.

Mr. FREAR. How long did the riving last? About how long?

Mr. ZIEGLER. Well, I don't know. It was only of late that I have learned—

Mr. FREAR (interrupting). Well, were you identified with this work, or up to what time were you identified with it? That is, did you follow up this?

Mr. ZIEGLER. This riving?

Mr. FREAR. Yes; the riving and also the getting out of the airplane stock. Did you have any more connection with it beyond what you have expressed?

Mr. ZIEGLER. No, no; that was all. I supposed that I was sent out—well, to comply with the instructions from Washington that I was to be given an opportunity to get to assist and carry my suggestions into execution.

Mr. FREAR. Well, you were ready to do that?

Mr. ZIEGLER. I was ready to do that at all times, and I wanted to do it.

Mr. FREAR. Yes, sir.

Mr. ZIEGLER. And when Capt. Tisdale insinuated there it was just a matter of losing my job—why, when I left there I took up other work at a greater pay. Pay had nothing to do with it whatever.

Mr. FREAR. You were sincere in your purpose?

Mr. ZIEGLER. Absolutely. Not only that, but I was worried over it, because I saw that instead of the boys at the front getting the protection there was a great body of soldiers taken out of the military service, away from the field, to promote a great wasting operation. Now, as to the inefficiency of the control, there are a number of things that I would like to say about that.

Mr. FREAR. Well, be brief, if you will, please. We have been at it pretty strong here now.

Mr. ZIEGLER. I was given a pass to go over to that cut-up plant and examine it, and I did, and there was faults there—I am not an expert in that kind of machinery, although I have some experience, and I have common sense; but they had a lot of small saws, circular saws, heavy and thick, cutting at least a quarter of an inch kerf to cut into that fine lumber, and they were not big enough to go through and they had a lot of men there finishing, splicing out the efforts to saw through with axes, slashing the valuable timber up with axes. Later, under suggestion, I think from Maj. Breece, it was changed into a band sawmill. Well, why didn't they know

enough to put in cable saws in the first place? And why didn't they put their plant down on the water so they could receive logs by river instead of by inland?

Mr. FREAR. Did they ever tell you why?

Mr. ZIEGLER. Oh, I asked some man over there. No; no one knows. They didn't tell me.

Mr. FREAR. That is, they didn't locate the plant right, you thought?

Mr. ZIEGLER. They didn't locate it on the river. Right at the first of the operations it was easier to get logs in the river and transport them by river than it was by rail.

Mr. FREAR. Well, they didn't have the logs there, did they? Or did they? That is, at the cut-up plant. They received all cants?

Mr. ZIEGLER. They were receiving the cants?

Mr. FREAR. Yes.

Mr. ZIEGLER. But these cants were large. They averaged about six cants to the log, and those logs would average, say, 5 feet in diameter; so a cant would run from 300 to 600 feet to the cant. Two or three of them made a wagonload.

Mr. FREAR. Well, for the purpose of sale, that is, after the Government had gotten through with it, it would have been more suitable to have built it upon the water, or where?

Mr. ZIEGLER. Yes; it would have been more suitable for that purpose and would have been more suitable for that operation.

Mr. FREAR. For commercial operation?

Mr. ZIEGLER. For receiving the logs. Another thing that I observed over there: They had great stacks of cants stacked up there as refuse. Anybody could see they were utterly worthless.

Mr. FREAR. Why?

Mr. ZIEGLER. Oh, they were twisted and full of knots and had all kinds of defects.

Mr. FREAR. Where had they come from; outside?

Mr. ZIEGLER. Yes; some of them came from Raymond, and some of them came—there were only two camps, or two of those companies operating. I think the other one was Grant Smith. Some of them came from Warren Spruce operations down at Raymond, and I think some from Grant Smith. But there was an enormous amount of that refuse lumber stacked up there that never should have been transported out of the woods. That was another thing; that was one of the pieces of information that I wanted to give the office in the first place. No use in taking out stuff that a man with ordinary judgment, even in the beginning of a new operation, could see was unfit. There was no use in hauling it around.

Mr. FREAR. The substance of your judgment was that they did not use good judgment there in making the selection of timber? That is your judgment?

Mr. ZIEGLER. And worse than that; they didn't seem to care. I never found anybody that cared. I tried to find, before I wrote this letter, I tried to find somebody at the camp down there that would try to correct the matter, that had authority and was interested and would try to correct that matter. There was absolutely nobody. I tried the officer that was in command, and he said he had nothing to do with anything, except the military part of it.

Mr. FREAR. Did you ever have any talk with Mr. Disque, or Col. Disque?

Mr. ZIEGLER. I had two talks concerning these suggestions I had sent up to the War Department before I was sent out. After I was sent out I never saw him.

Mr. FREAR. Did you ever have any talks with Maj. Hitchcock? I am asking for information.

Mr. ZIEGLER. After that?

Mr. FREAR. After that one time.

Mr. ZIEGLER. No.

Mr. FREAR. Well, with anyone else in authority there?

Mr. ZIEGLER. No; I never did. No; after I went over to the cut up plant they didn't ask me—some one got me the pass and they didn't ask me for any report on the matter, but I would have been glad to have given them one of the operation. But after that I sought to go over there again to see what they were doing with that reject stuff, but after that there was no more passes, and I understood there was no more passes issued to civilians for any purpose—to anybody.

Mr. LEA. What is your occupation now? You spoke of going to another occupation.

Mr. ZIEGLER. I am a farmer.

Mr. LEA. Yes.

Mr. ZIEGLER. I owned a farm at the time, and I quit work and went to farming and am still trying to farm, and I am able to do about a half a day's work in a day.

Mr. LEA. That is all.

Mr. ZIEGLER. I don't claim to be an expert in this matter, but it did not require any. Oh, there is another statement I want to make about my interview with Maj. Hitchcock. If my report is on file, if it makes part of the record there I don't care to state it, because it is in that report.

Mr. FREAR. I see.

Mr. ZIEGLER. Will that be made a part of the record?

Mr. FREAR. Is the report made a part of the record?

Mr. ZIEGLER. I don't know. I am asking you.

Mr. FREAR. What report is it?

Mr. ZIEGLER. You have a copy of it.

Mr. FREAR. Oh, that statement?

Mr. ZIEGLER. Yes.

Mr. FREAR. No; that was not made part of the record, but what was it about Hitchcock that you have in mind? We haven't put in any report.

Mr. ZIEGLER. I tried to pin Hitchcock down to the spotting of the trees to see if there was any remedy proposed, and he says, "We can't look on the inside of a tree." I says, "Major, that is exactly what a woodsman does. He looks on the inside of his tree." He says, "How does he do that?" "Why," I says, "he makes a test chop." Before I went down there—

Mr. FREAR (interrupting). He didn't know what a test chop was at that time?

Mr. ZIEGLER. Well, I don't know whether he did or not. He didn't state whether he did or not. Before I went down there though this

question of a test chop was up and it was being opposed. There was to be no test chops, so——

Mr. FREAR (interrupting). Well, they eventually did adopt it, didn't they?

Mr. ZIEGLER. I don't know whether they did or not. But I was interested in the objections to a test chop, and it had something to do with my conclusions.

Mr. FREAR. And you helped put it over, did you?

Mr. ZIEGLER. Well, I don't know. I don't know whether——

Mr. FREAR (interrupting). Well, they eventually adopted that plan, didn't they?

Mr. ZIEGLER. They did.

Mr. FREAR. I understood so.

Mr. ZIEGLER. I don't know anything about that.

Mr. FREAR. All right. Well, I am much obliged, Mr. Ziegler.

(Witness excused.)

Mr. FREAR. We will adjourn until 10 o'clock to-morrow morning.

(Whereupon, at 5.26 p. m., proceedings before the subcommittee were adjourned until to-morrow, Friday, Sept. 12, 1919, 10 a. m.)

SUBCOMMITTEE No. 1 (AVIATION)
OF THE SELECT COMMITTEE ON
EXPENDITURES IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES,
Friday, September 12, 1919.

The subcommittee met at 10 o'clock a. m., pursuant to adjournment, at the courthouse, Portland, Oreg., Hon. James A. Frear (chairman), presiding. Also present Hon. Walter W. Magee and Hon. Clarence F. Lea.

MR. MAGEE. Mr. Chairman, a friend of mine calling on me last evening stated that some remark had been made in the record which Mr. Mitchell of the cut-up plant thought reflected on him. I stated that I had not received any such impression and requested him to call up Mr. Mitchell and state that fact. He called him up and then I talked with him and repeated to Mr. Mitchell that I had not received any such impression from anything that was said during the session. Mr. Mitchell desired to appear before the committee, and I stated to him that I felt the committee would be glad to have him do so at any time at his convenience and he stated he would like to appear before the committee at 2 o'clock this afternoon. If there is anything in the record which he thinks reflects upon him as he intimated to me, I feel that the committee would be glad to strike such a matter from the record. I feel sure that if there is any such thing in the record that no member of the committee had any intention of making any statement from which such a deduction could reasonably be drawn.

MR. FREAR. To that same effect was the statement made by Mr. Magee to me last night, that Mr. Mitchell felt that something had occurred in the hearings that reflected on him. I have just glanced at the record, which has been placed before me five minutes ago, and I fail to find the matter, but I will say this, that there is nothing intended, so far as I know, to reflect upon Mr. Mitchell in any way, and the suggestion regarding a commission, so far as I can ascertain, must have been based upon the fact that he was receiving a commission legitimately with limitations, of \$1,500 a month, and it probably arose from that; but if there is anything he wishes to have stricken from the record that he thinks reflects upon him that will be conceded without the necessity of his appearance before us.

I wish just briefly to make a further statement and that is, at the conclusion of these hearings, that while the committee has had divergent views on some matters of evidence and their effect, that

on one thing I feel sure we stand together, and that is as to the courteous and fair treatment we have received in every way from the Spruce Production officers, from Col. Stearns down to the lowest officer who has taken us out on the railroad and down Yaquina Bay and elsewhere, and this, by the way, includes Mr. Mitchell, who was very kind to the committee, and we appreciate that and present our acknowledgment at this time.

It might also be stated that suggestions that the committee has been delving into extraneous matters, I think, have been disproven, because we have endeavored as a committee to avoid anything that would involve any citizen in any explanations or in any reflections upon him unless it was directly connected with some responsibilities, and I believe the record will show that, and we are very glad to join, I believe, unanimously, in that opinion. I say this on account of the suggestion made about Mr. Mitchell.

Mr. LEA. Mr. Jones, of Newport, is here largely on account of the interest of the people of that community have taken in testimony produced before this committee, which they claim has a tendency to mislead this committee as to the amount of timber in the Siletz, and so I wish the committee could hear Mr. Jones. His testimony will be very short.

Mr. FREAR. All right.

TESTIMONY OF B. F. JONES.

(The witness was sworn by Mr. Frear.)

Mr. LEA. What is your name?

Mr. JONES. B. F. Jones.

Mr. LEA. Where do you reside?

Mr. JONES. I reside at Newport, Lincoln County, Oreg.

Mr. LEA. How long have you resided there?

Mr. JONES. I have resided in and around Lincoln County since 1870, excepting nine years during that time—nine years I have been out of the county.

Mr. LEA. What is your occupation?

Mr. JONES. My occupation is an attorney at the present time.

Mr. LEA. Have you any official position?

Mr. JONES. Well, I am representing that county in the State legislature.

Mr. LEA. And in reference to the town have you any official position?

Mr. JONES. I am mayor of the town.

Mr. LEA. What knowledge have you as to the timber conditions along the route of this North Coast Railroad and the proposed route into the Siletz River Basin north from Toledo?

Mr. JONES. I have been acquainted with that timber in a general way for 40 years, but since 1894 I have had a good deal to do with that timber in that vicinity.

Mr. LEA. I wish you would just state what opportunity you have had to observe the timber in that section.

Mr. JONES. While I lived at what is called the Siletz Agency—that is where the buildings are on the Siletz Agency across from Toledo—two years during this 40 years, and I was up and down the

the Siletz River, which was unsettled then, and over and through that timber a great deal. I have hunted in that peninsula—by the peninsula I mean the land lying between the Siletz River and the ocean; it is a long peninsula, some 25 miles long—and in 1900 from the present terminus of what you call the North Bank road on Spencer Creek I cut a foot trail up to the divide, along the divide and to the head of Jaybird Creek; and the next year, in 1901, I cut and had cut a horse trail from what is known as the Fred Wessel place, where the Spruce Division have been operating during the war, or started to operate there, up that creek, the middle fork of Depoe, on to Dewey Creek and onto the divide, and on up to section 36 in township 9-11.

I cut a horse trail through and I surveyed out the north half of township 9 south, range 11 west, which was unsurveyed by the Government, and I run from the township line out, as I recall, about 10 or 15 sections; run the lines around it for homesteaders. I might say that while I was away part of this time until three years ago, out of the county, that during that time I had a summer home near the end of this road, where I spent my vacations, and I have bought and sold numerous small tracts of land in there and cruised it. That is my knowledge.

Mr. LEA. How did you happen to come up here this time?

Mr. JONES. The reason I came up here is this, that on last Wednesday at the regular meeting of the Commercial Club the matter of this north bank road, or the discussion of this hearing, came up before the Commercial Club, and in the general discussion they determined that they would like to be heard; I mean to say the people living on the west side of this timber and the roads under controversy, and they decided they would like to have some five or six witnesses be heard at this hearing who were acquainted, and some timber cruisers, and I advised them that I had seen by the papers that you were leaving to-day and it would be useless to try to get any witnesses in because your time was almost up. Among those they selected, I was urged to come down, seeing that I perhaps had as much information as anyone; but we decided to drop the matter, and when I came home Wednesday evening I received a phone from Portland asking me to come down as they would be here a day and I could be heard. I am not here in the interest of any part of Lincoln County; I represent the whole county and have lived there all my life, and I came just because I was urged; I did not want to butt into this hearing at all.

Mr. LEA. You have surveyed in that section?

Mr. JONES. Understand I am not a surveyor. I can run a straight line if somebody will show me the township line. I did, however, survey some 15 sections and run a line so that the men who wanted to take the timber could locate there.

Mr. LEA. How long have you been logging and cruising in that section?

Mr. JONES. I have been logging 10 years and I would say about 8 months—

Mr. MAGEE. I would suggest that you answer the question promptly or it will take all day to get through with even your examination.

Mr. LEA. What cruising experience have you had?

Mr. JONES. The cruising that I have had has been simply in cruising these tracts that I have bought and sold, and the information I gained while falling timber in a logging camp.

Mr. LEA. If the railroad were extended in connection with the Miller road northerly to the Siletz River, how far would it have to extend from Toledo before it would reach a large body of spruce in that direction?

Mr. JONES. I would say from Toledo that it would be about 20 miles into what is called the head of tide, where Maury lives. You would have to following the line of the river largely; that makes the distance greater.

Mr. LEA. Just briefly state what the situation is as to the timber on the coast side where this north railroad goes.

Mr. JONES. The timber on the coast side?

Mr. LEA. The coast slope.

Mr. JONES. Well, as I said, this long peninsula or watershed is about equally divided; that is as to the area about such slopes, the Siletz River as it goes to the coast. That is a long winding road that divides the watershed and the timber commencing at Molock; that is, where the first spur goes into the spruce timber. There is the Molock, Coal Creek, Wade Creek, Spencer Creek, and Rock Creek; five creeks along the coast near the end of this road and what is called Otter Rock, which has been surveyed out for town sites.

Mr. LEA. You mean between the end of this road—

Mr. JONES. Not the end of the road, but where the spur goes into Molock where they were now logging. That is practically all—until you begin to raise the ridge—spruce timber.

Mr. LEA. As compared with the spruce available nearly straight down the river into the Siletz and this coast road, how does that timber stand, as to the amount of timber?

Mr. JONES. From the end of this road to the north bank of Spencer Creek in section 5, township 9 south, range 11 west, on Spencer Creek; that is a very long creek and it leads in by Jaybird. I have got to explain this in order to make it intelligible.

Mr. FREAR. Please make it brief, because we have other witnesses waiting. You do not have to describe all that particular section, because we will never be able to examine it. I do not want to cut you short.

Mr. JONES. But up this Spencer Creek leads on to the main creek dividing the watershed of the Siletz and the Pacific Ocean. It leads on down to this Jaybird and into Maury's. This road could be extended to the head of tide at Maury's and reach the same point that the other road run to from Toledo, and along through that country is about 8 miles of what I consider the best timber in the Siletz country.

Mr. LEA. Eight miles from where?

Mr. JONES. Eight miles from the end of the present north bank road into the head of tide at Maury's.

Mr. FREAR. That is near Otter Rock?

Mr. JONES. Yes, sir.

Mr. LEA. How about the timber south of Otter Rock along the coast, on the coast slope; just a general answer?

Mr. JONES. The timber is spruce for a mile or such a matter back, and then when you raise you get into yellow fir.

Mr. LEA. Did you have any interest in the old mill at Toledo?

Mr. JONES. I owned an interest in the mill when it was built.

Mr. LEA. You do not have an interest now?

Mr. JONES. No, sir; I have not had for 15 years.

Mr. LEA. Just briefly state the general history of that mill and what it has produced in the past.

Mr. JONES. It was a small mill when I was interested in it, probably 20,000 feet.

Mr. FREAR. Are you going to have to testify to this as to its operation prior to the war?

Mr. LEA. Up to the time it burned.

Mr. FREAR. He seems to be going back a good many years.

Mr. JONES. Before it was burned it had been increased in capacity from 40,000 to 60,000, and I think as high as 70,000 feet a day; but the mill has been a failure, and it has not produced anything, scarcely. It has not run to exceed 30 days at any one time that I remember of. They have been financially embarrassed, and they have an electric plant there that is operated from the used wood there. They have not put, until three years before this war, enough wood there to run the electric plant, and they bought the wood from the farmers, and we have had no day light at all, and sometimes none at night.

Mr. LEA. That is all.

Mr. FREAR. If the Government of the United States had given the \$75,000 which they asked for to help build another mill, as they gave money to these cost-plus operators to the extent of \$750,000; if you were given not one-tenth of that amount and could have built another mill they would have been able to do something?

Mr. JONES. Had they built a new mill, yes, sir; but not with the old mill.

Mr. FREAR. They said they were cutting something like 75,000 a day. That is the testimony of some men who were running the mill. Do you deny that?

Mr. JONES. I absolutely do deny that—not when they are running, but I mean to say they did not operate 90 days out of the year, in the last six years.

Mr. FREAR. You own the town site at the north end of Otter Rock, jointly with Leadbetter?

Mr. JONES. No.

Mr. FREAR. You owned it with Leadbetter, did you not? Answer yes or no. Then you can explain.

Mr. JONES. Yes, sir.

Mr. FREAR. Where is your home?

Mr. JONES. In Newport, Lincoln County, Oreg.

Mr. FREAR. How large is Newport?

Mr. JONES. In the summer time it reaches five or six thousand, and in the wintertime about fifteen hundred.

Mr. FREAR. And this road is built north from Yaquina Bay, running through Newport up to Otter Rock, which is the present terminal?

Mr. JONES. No, sir.

Mr. FREAR. Where is the present terminal?

Mr. JONES. The present terminus is a mile and a half of Otter Rock, in section 5, township 9, 11 west.

Mr. FREAR. Then the testimony of Herington ought to be stricken out, because he testified exactly opposite. Either you or Herington is wrong. There was a survey sold by Leadbetter to other parties, was there not, on what is known as the P. & W. C. & R. R. Navigation Co.?

Mr. JONES. By who?

Mr. FREAR. By Leadbetter. The survey of this road was sold to certain parties, Mr. Fitzgerald and some other parties?

Mr. JONES. No, sir.

Mr. FREAR. It was not?

Mr. JONES. That is my answer.

Mr. FREAR. Did he ever sell any survey to them?

Mr. JONES. No, sir; not to my knowledge.

Mr. FREAR. Did anyone?

Mr. JONES. Yes, sir.

Mr. FREAR. Who was that?

Mr. JONES. Mr. E. M. Bradford, of Augusta, Wis.; R. F. Baker, of Newport; and B. F. Jones.

Mr. FREAR. And who is B. F. Jones?

Mr. JONES. That is me. We made that survey about 10 years ago, from Newport to Otter Rock, and about 5 years ago Mr. Fitzgerald, representing this company that you have mentioned, came down there and he offered \$50 for an option on the survey, \$50 down and \$50 a year for 5 years. We refused it, and afterwards he came down there and wanted the people to donate a hundred thousand to build a road to Otter Rock.

Mr. FREAR. Well, that is all; that is all we care about.

Mr. JONES. You do not want the rest?

Mr. FREAR. That is not the road then that is shown here on the map as running north from Newport up above Otter Rock, up toward Willamina?

Mr. JONES. I do not know what your map is, sir [examining map]. I never had anything to do with that. This is a preliminary survey; one that was never finished.

Mr. FREAR. Do you know whether or not Mr. Leadbetter did have any interest in the survey of which I am speaking?

Mr. JONES. I have never met him but twice and never saw him for 7 years, but if he did have any interest I do not know it.

Mr. FREAR. You own nothing up there excepting the site, or do you own a half interest in the site at Otter Rock? Do you own some timber there?

Mr. JONES. No, sir; Ralph Williams, Senator Oberman, Mr. Leadbetter, and myself owned the little town site.

Mr. FREAR. The testimony was that you and Mr. Leadbetter owned a common interest.

Mr. JONES. I owned it all and sold a half to Leadbetter and sold a quarter to the other two gentlemen.

Mr. FREAR. Then have you got any interest in it now?

Mr. JONES. I have a one-fourth interest.

Mr. FREAR. Leadbetter owns half, you own a fourth, and the other fourth is owned by some other parties?

Mr. JONES. Yes, sir.

Mr. FREAR. And that is at the north terminal of this Otter Rock Road as projected?

Mr. JONES. As projected; yes, sir.

Mr. FREAR. And, as Mr. Herington testified, it had been graded. Has it been graded up to Otter Rock?

Mr. JONES. Yes, sir.

Mr. FREAR. That is all.

Mr. LEA. Were you asked to come here as a witness before this time?

Mr. JONES. I was interviewed by yourself and the chairman.

Mr. LEA. I mean before you saw me?

Mr. JONES. Yes, sir.

Mr. LEA. By whom?

Mr. JONES. By Mr. Frear.

Mr. LEA. And did you have a conversation with him about your testimony?

Mr. JONES. Well, did not go into any details. I was introduced to Mr. Frear and had been asked to go over to the Benson Hotel. I went over there and met Mr. Frear and told him I was from Lincoln County, and he said he wanted to find out about matters over there, and I told him I had some knowledge, and he said: "Can you stay over and testify some time?" And I told him I could, and then the matter was dropped.

Mr. LEA. Were you called?

Mr. MAGEE. No; I said the matter was dropped.

Mr. FREAR. After that I discovered that you were part owner in the site at Otter Rock, and for that reason I felt it would not be fair to you to call you. That was the reason.

Mr. MAGEE. What is your business, Mr. Jones?

Mr. JONES. I am trying to make a living out of the law business.

Mr. MAGEE. You are a lawyer, then?

Mr. JONES. Yes, sir.

Mr. MAGEE. Is Newport a city?

Mr. JONES. Well, under the laws of our State, yes, sir. It is incorporated.

Mr. MAGEE. Did the city want the railroad to go up the coast?

Mr. JONES. Well, they wanted to remain there; yes, sir.

Mr. MAGEE. It was constructed there, wasn't it? There wasn't any railroad there before this road was constructed?

Mr. JONES. Oh, no; no, sir.

Mr. MAGEE. What I want to know is, did the city want the railroad to go from Yaquina Bay up along the coast?

Mr. JONES. Well, they certainly did, but I wish to qualify this by saying—

Mr. MAGEE. That answers it.

Mr. JONES. That answers it, but—

Mr. MAGEE. Just answer my questions without volunteering explanations and we will get along all right.

Mr. JONES. All right, sir.

Mr. MAGEE. Were any meetings held or anything of that sort that you know of by the people of the city in reference to getting this railroad up along the coast?

Mr. JONES. Never, sir.

Mr. MAGEE. Were there any activities that you know about?

Mr. JONES. Never, sir.

Mr. MAGEE. Newport, as you say, is a summer resort?

Mr. JONES. Yes, sir.

Mr. MAGEE. And most of the people there at any time of the year are there during the summer season?

Mr. JONES. I would say that July and August is the summer season—that is, the tourist season in Newport.

Mr. MAGEE. Then the population is swollen, as I understood you say, some three or fourfold, at that time?

Mr. JONES. During those two months; yes, sir.

Mr. MAGEE. This railroad runs right up along the coast within a stone's throw of the beach, of the ocean?

Mr. JONES. No, sir; not within a stone's throw. I would say within a half a mile of the beach.

Mr. MAGEE. I understood nearer than that.

Mr. JONES. Where it passes through Newport; no, sir.

Mr. MAGEE. I mean up along the coast, up along the beach?

Mr. JONES. Oh, there are places north of Newport that it goes—

Mr. MAGEE. It runs right up along the beach, doesn't it?

Mr. JONES. North of Newport it does, sir; not through Newport.

Mr. MAGEE. You understood my question, didn't you?

Mr. JONES. Pardon.

Mr. MAGEE. You understood my question?

Mr. JONES. Yes, sir.

Mr. MAGEE. Now, if you will kindly give me direct answers rather than lawyer's answers, Mr. Jones, I may get some information.

Mr. JONES. I say north of Newport it runs along the beach.

Mr. MAGEE. I said this road for material distances runs along this coast, practically within a stone's throw?

Mr. JONES. Well, in many places within a stone's throw, but not all the way, sir.

Mr. MAGEE. For material distances?

Mr. JONES. Yes.

Mr. MAGEE. Did you ever hear of Agate Beach?

Mr. JONES. I have known of Agate Beach for 49 years, where the little hotel is now located, sir.

Mr. MAGEE. How long is Agate Beach?

Mr. JONES. Well, now, from Newport to Agate Beach I would say—

Mr. MAGEE. I did not ask what the distance was from Newport to Agate Beach; I asked you if you know—you say you have lived there for 40 years—how long Agate Beach is?

Mr. JONES. I do not know, sir. Agate Beach is a new name that has just been put in since they platted the townsite. If you refer to Newport Beach—

Mr. MAGEE. You know what I mean by Agate Beach.

Mr. JONES. Between Agate Beach and Newport is three and a half miles.

Mr. MAGEE. I asked you if you know—you have lived there 40 years and I was there three days—I would like to ask you now if you know what is the length of Agate Beach?

Mr. JONES. Yes, sir; Agate Beach is a townsite, and Newport is the beach.

Mr. MAGEE. I am talking about the ocean beach.

Mr. JONES. So am I.

Mr. MAGEE. Where people go at certain seasons of the year and look for and say that they find agates?

Mr. JONES. Yes; they find them north for 50 miles and south for 150 miles.

Mr. MAGEE. Have you ever heard of that place?

Mr. JONES. I never heard of an Agate Beach until in the last four years. That is the name of the town, not the beach.

Mr. MAGEE. Do you know of a hotel up there, right along the line of this road?

Mr. JONES. I certainly do. I have seen it and passed it hundreds of times.

Mr. MAGEE. It is quite a hotel?

Mr. JONES. Yes.

Mr. MAGEE. In going north on the left-hand side, is that right?

Mr. JONES. On the left-hand side of what?

Mr. MAGEE. In going north on this railroad, it is on the left-hand side of the railroad?

Mr. JONES. Yes, sir; on the railroad it is on the left-hand side; yes, sir.

Mr. MAGEE. And there is a highway that crosses the railroad in front of this hotel?

Mr. JONES. Well, there is a street, yes, sir; you can call it a highway.

Mr. MAGEE. Now, what is the name of that hotel?

Mr. JONES. It is called the Agate Beach Inn.

Mr. MAGEE. And that is quite a popular place, isn't it?

Mr. JONES. Well, yes.

Mr. MAGEE. And it is quite a beautiful place?

Mr. JONES. Well, all of the 400 miles of the Oregon coast is very beautiful.

Mr. MAGEE. I am asking about this particular hotel. You have lived there 40 years; I am asking you if you can tell me or not whether it is quite a beautiful place?

Mr. JONES. Well, people have different ideas about it; but I think it is a very beautiful place.

Mr. MAGEE. A good many people go there for their vacations?

Mr. JONES. Yes; there is a good many people there, yes, sir, in the summer time.

Mr. MAGEE. Now, then, a portion at least of this Agate Beach is right down there near the hotel, isn't it?

Mr. JONES. It is south of the hotel, toward Newport.

Mr. MAGEE. And for how many miles is there a beautiful beach there, which is ordinarily called Agate Beach?

Mr. JONES. They do not call it Agate Beach, but there is a beach there leading from there to Newport, three miles and a half.

Mr. MAGEE. That is what I am getting at.

Mr. JONES. It is Newport Beach, and has been for 50 years.

Mr. MAGEE. It is a beautiful beach?

Mr. JONES. It is a very lovely beach.

Mr. MAGEE. And that is the place where people go and look for and find agates?

Mr. JONES. Yes.

Mr. MAGEE. At certain seasons of the year?

Mr. JONES. A great many people?

Mr. MAGEE. It is very desirable and nice to have a railroad up along the coast as a convenience for people to get there, isn't it?

Mr. JONES. It certainly is nice for autos on the beach also; it is a playground for everybody.

Mr. MAGEE. That is all.

(Witness excused.)

TESTIMONY OF FREDERICK A. DOUTY.

(The witness was duly sworn by Mr. Frear.)

Mr. FREAR. You were subpoenaed by the committee, Mr. Douty, to appear here?

Mr. DOUTY. I understand so; yes, sir. It was served on me yesterday.

Mr. FREAR. I mean you come under subpoena?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. Where do you reside, Mr. Douty?

Mr. DOUTY. Portland.

Mr. MAGEE. How long have you resided in Portland?

Mr. DOUTY. I came to Portland in 1876, but I have resided in Portland only since 1903.

Mr. MAGEE. You came here when?

Mr. DOUTY. I came to Portland in 1876 and lived up the valley about 60 miles above here—south of here—until 1903, and I have been in Portland continuously since that time.

Mr. MAGEE. What is your business?

Mr. DOUTY. Well, I am owner of the Multnomah Lumber & Box Co., at Portland.

Mr. MAGEE. Now, did you have some relations with the Government in the year 1917 in reference to the production and shipment of spruce for aircraft purposes?

Mr. DOUTY. Yes.

Mr. MAGEE. Now, will you go on and state just what the facts are, as you know them of your own knowledge?

Mr. DOUTY. Early in July, 1917, the Wood Equipment Division, at Washington, D. C., requested the spruce manufacturers of Oregon and Washington to send representatives there for the purpose of holding a conference with the allied nations and the airplane manufacturers of the United States for the purpose of arriving at a specification and a price for the spruce lumber that was required for the construction of airplanes. Upon receipt of that request, the spruce manufacturers of the two States held a meeting at Centralia early in July that year. At that meeting the spruce manufacturers of the State of Washington selected Howard Jayne, of the Willapa Lumber Co., to represent the spruce manufacturers of the State of Washington, and the spruce manufacturers of the State of Oregon selected me to represent the industry of this State. My recollection is that the meeting was scheduled on the 15th of July, at Washington. Mr. Jayne and myself arrived there the morning of the meeting, and spent almost a week there. The airplane manufacturers of the United States were inclined to require a specification and grade that was almost impossible for the mills to produce, and they seemed to influence the situation there to such an extent that we were unable

to get a specification that we considered would be acceptable to the mills.

We finally agreed to accept the specification on a tentative plan. A test was to be made for from 30 to 60 days. If after that test it was not satisfactory, it was to be revised. With that understanding we made them a price of \$105 per thousand. That price was based on \$60 per thousand for all lengths under 17 feet, of which they should take 50 per cent. The price of \$150 was on what was known as beam stock, which would be 18 feet and longer, of which there should be 50 per cent, making the price average \$105 per thousand. After this price and specification was tentatively agreed upon the inspection department at Washington entered into the arrangement and insisted upon their inspecting the lumber at the mill, which proved to be very unsatisfactory to the mills for the reason that they took only a small percentage of the clear coming from the logs, leaving the mills overloaded on fall-down clears which were not of commercial sizes. After the test was made the mills were very much dissatisfied and I returned to Washington in an effort to try and get the specifications revised. After probably 30 days' time there I finally presented a proposition to the Wood equipment division, of which Maj. Sligh was in charge, that he agreed to and was quite satisfactory. He said that he considered that it was a little complicated and he did not think he could explain it to the foreign nations. He authorized me to take it up with the different allied nations, and if they approved it it was perfectly satisfactory to this Government, which I did. I took it up first with the British and they approved it. I next took it up with the French War Mission and they readily approved it. I also took it up with the Italian War Mission. They called in Dr. Magregor, of Columbia University, of New York, and approved it.

Mr. MAGEE. Whom did you see in taking it up with the British?

Mr. DOUTY. I saw Gen. Carmack and Capt. Thompson.

Mr. MAGEE. Who was Gen. Carmack?

Mr. DOUTY. Gen. Carmack had charge of the British War Mission pertaining to aviation.

Mr. MAGEE. And whom did you see in the French mission?

Mr. DOUTY. I saw Capt. Henry Douriff.

Mr. MAGEE. Go on, Mr. Douty.

Mr. DOUTY. The proposition as outlined was that the different districts on the coast, different spruce districts on the coast, would be allocated to the different nations.

Mr. MAGEE. That is, certain districts?

Mr. DOUTY. Certain districts. The Columbia River district was to be allotted to the French Government.

Mr. MAGEE. Just describe generally the Columbia River district.

Mr. DOUTY. The Columbia River district would include Portland mills and all mills located on the Columbia River.

Mr. MAGEE. That was to be allocated to the French?

Mr. DOUTY. To the French Government, yes. The Willapa Harbor district was to be allocated to the Italian Government.

Mr. MAGEE. Just describe that generally.

Mr. DOUTY. The Willapa Harbor district is what is known as Shoalwater Bay district. South Bend and Raymond, Wash., those

are the principal locations there—cities. The Grays Harbor district was to be allocated to the British.

Mr. MAGEE. What would that take in?

Mr. DOUTY. That would include Hoquiam and Aberdeen and Copalis.

Mr. MAGEE. Is the Olympic tract included in that, what is called the Olympic tract?

Mr. DOUTY. No, down on the Quinault, over on the west coast of Washington. Puget Sound, Tillamook Bay, Yaquina Bay and Coos Bay were to be given to the United States Government. The plan was that each government would have exclusive control of each particular district as allotted, and it would be up to them to develop that to such an extent as they might wish, as their requirements needed. They were to make contracts with the mills and loggers and advance to those operations such sums of money as they might need in the way of track extension and purchasing of equipment.

Mr. MAGEE. Of their own moneys?

Mr. DOUTY. Of their own moneys. This money was to be an advance on the contracts which was to be returned to the foreign governments by deducting 25 per cent of the value of each shipment as the shipments were made.

Mr. MAGEE. Now, let me see if I understand the proposition rightly, that all the British asked was consent to get where the timber was for the getting out of spruce and fir for aircraft purposes?

Mr. DOUTY. At this time fir was not being considered.

Mr. MAGEE. Well, spruce?

Mr. DOUTY. Spruce.

Mr. MAGEE. Is that right?

Mr. DOUTY. Yes, that is what they wanted.

Mr. MAGEE. And that the British Government would create its own organization?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. And pay all the expenditures thereof?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. Without any cost or expense to the Government of the United States so far as the production for the British Government was concerned?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. Is that right?

Mr. DOUTY. That was the understanding.

Mr. MAGEE. Now, was anything said, or any agreement reached in reference to the inspection of the lumber?

Mr. DOUTY. The understanding was that our particular government would take from the mills the entire run of clears coming from the logs, for which they would pay \$80 per thousand. They were then to inspect this on their own ideas of grade. Any that they might reject was to be returned to the mills, for which the mills were to give them credit at \$50 per 1,000, leaving a net cost to the mill of the rejects of \$30 per 1,000, which was considered a fair, safe commercial market value.

Mr. MAGEE. What I have in mind is whether or not the British Government was to supply its own inspectors.

Mr. DOUTY. They were.

Mr. MAGEE. As to what lumber the British Government got?

Mr. DOUTY. The understanding was that this Government would have nothing whatever to do with the inspection of any stock except that going to the airplane factories in this country.

Mr. MAGEE. So that under such an arrangement the British Government would get its own production, and if it did not get lumber that was satisfactory to it for the purposes desired it would be the fault of the British Government itself; is that right?

Mr. DOUTY. That is correct.

Mr. MAGEE. Was that arrangement perfectly satisfactory to the British Government?

Mr. DOUTY. Yes, sir; they consented to it.

Mr. MAGEE. Was it satisfactory to Gen. Carmack?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. Now, was each government to be limited in its operations to its particular defined district?

Mr. DOUTY. The understanding was that they were to operate, they were to be confined to each district as allocated, and in the event that any district overproduced more than its particular government required, or the particular government required, that such surplus was to be allocated to governments who might be short.

Mr. MAGEE. Now, go on and state as to the French Government.

Mr. DOUTY. I did not understand the question.

Mr. MAGEE. Was a similar arrangement to be made with the French Government?

Mr. DOUTY. Yes. That arrangement was understood with the English, the French, and the Italians, on the same basis.

Mr. MAGEE. That is, the same arrangement was to be made with each nation?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. And upon the same basis?

Mr. DOUTY. That is correct.

Mr. MAGEE. And you say of your own knowledge that such an arrangement was entirely satisfactory to the British Government, the French Government, and the Italian Government?

Mr. DOUTY. Yes, sir. I discussed it with them thoroughly and they readily consented to it. They said they thought it was a good plan.

Mr. MAGEE. So that under such an arrangement the United States would be limited to its own production?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. Unless some of the associated governments produced a supply in excess of their needs, and, as you have suggested, delivered some of it to the United States Government?

Mr. DOUTY. That is correct.

Mr. MAGEE. Now, did your department approve of that plan?

Mr. DOUTY. What do you mean by department?

Mr. MAGEE. Well, whoever had charge of the aircraft production for the United States.

Mr. DOUTY. Maj. Sligh approved of it before I presented it to the foreign governments. I presented it at his request.

Mr. MAGEE. Maj. Sligh held what position?

Mr. DOUTY. He had charge of the wood equipment division which did all the purchasing of all the wood parts required for airplanes.

Mr. MAGEE. Now, as I understand, this plan would make organized utilization of the loggers in the Northwest?

Mr. DOUTY. Yes, sir. In addition to this we asked for military help. We asked that from this Government, that we would have to be given help.

Mr. MAGEE. That is, so far as the production of the United States was concerned?

Mr. DOUTY. Yes, sir. It was generally understood on the whole situation that we would have to work out some plan by which the men would be released from service, or exempt from military duty that were in the industry here, that they should not be taken away.

Mr. MAGEE. Now, are there any further facts which you know about in reference to this plan?

Mr. DOUTY. Well, in addition to this plan the British then were very active, and they were not getting any stock at that time and were quite dissatisfied with the general arrangement and the way spruce was coming along. We had an I. W. W. strike here and it had affected the production, curtailed it quite extensively. So they asked permission to do some private operating. They asked permission to make a contract with some of the mills in North Carolina, some spruce mills, and advanced them \$100,000 on a contract to open up a tract of spruce. And they also asked permission to operate in the Olympia Peninsula.

Mr. MAGEE. The British Government?

Mr. DOUTY. The British Government did. They were given that permission, and they entered into a contract with the mill in North Carolina. This Government had nothing whatever to do with the operation of it; the British controlled it entirely.

Mr. MAGEE. They actually started operations there?

Mr. DOUTY. Yes; in North Carolina. I can not call the name of the mill now from memory, but it is a matter of record in Washington.

Mr. MAGEE. Producing what?

Mr. DOUTY. Spruce. They opened up a tract of 200,000,000 feet, the British did, in North Carolina, with their own money.

Mr. MAGEE. They got some production from there?

Mr. DOUTY. Yes; they got quite a lot of spruce from there. It was mostly short cuttings. They got very little beam stock, because the timber there is small and does not produce very much long stock.

Mr. MAGEE. It did not compare favorably with the spruce grown in the Northwest?

Mr. DOUTY. The grain is much better; will average much better than the grain of the spruce on the Pacific coast, but the size of the timber prevented production of beam stock. It was mostly short cuttings.

Mr. MAGEE. Now, can you tell the committee why that plan was not carried out?

Mr. DOUTY. The plan on the Olympic Peninsula—I made a trip from Washington to Port Angeles with the British engineer. His name was W. T. Y. Springett. We spent about a week on the Olympic Peninsula and then returned to Washington and took it up with

the Forestry Department and arranged there for access to the Government timber on the reserve. That is, we discussed the proposition with the Forestry Department and they told us what we would have to do to get this timber. Our plan on the Olympic Peninsula was that we would run feeders to the lake. What I mean by feeders is short railways leading to the different tracts of spruce. This was on the west end of the lake. We would haul the logs and dump them into the lake and float them 14 miles down to the other end of the lake, where we were to put one or more mills, whatever was necessary, and we would build a siding from the lower end of the lake to Joyce, which was about 4 miles. Part of the grade was already established. It had been abandoned by the Milwaukee road after they had logged the timber out of that district. We figured on this proposition that we would be turning out airplane stock within three to six months at the outside. We thought we could do it in three months.

Mr. MAGEE. And this was when?

Mr. DOUTY. This was in the fall of 1917, or the winter.

Mr. MAGEE. Do you remember what time?

Mr. DOUTY. The negotiations extended all the way from the first of October up to the 20th of December.

Mr. MAGEE. And the British Government was to do this?

Mr. DOUTY. The British Government was to do this with their own funds. It was estimated that one and a half million dollars would do this, and they were to advance this million and a half dollars on the contract.

Mr. MAGEE. And without cost or expense to the Government of the United States?

Mr. DOUTY. Yes. This Government had nothing whatever to do with the deal.

Mr. MAGEE. Now, what interfered with the plans, or why wasn't the plan and the other plans you refer to carried out, if you know?

Mr. DOUTY. Well, they were interfered with—I was killed off down in Washington by political influence, I think, and by some—I never could understand what the cause of it was. My character was attacked and they said I was irresponsible. This was handled by telegrams that were sent in there. After these telegrams came in, why the situation entirely changed and I was unable to get anything or get any cooperation. At that time Maj. Sligh was rejected from his management of the spruce division there and I had no opportunity to do anything. I could not get in cooperation with Mr. Leadbetter. He refused to see me. I called on him twice and he absolutely refused to see me. So I packed up my trunk and came home. I got home Christmas Day, 1917.

Mr. MAGEE. In what capacity was Mr. Leadbetter acting?

Mr. DOUTY. Mr. Leadbetter took Maj. Sligh's place. I have got the telegram and the letter that was sent in—one telegram and one letter that was sent in—if you would like to have it.

Mr. MAGEE. Bearing on this question?

Mr. DOUTY. Yes; showing the attack they made on me.

Mr. MAGEE. Will you read into the record whatever you have there and give us all the facts bearing on this proposition that you know about?

Mr. DOUTY. This is a copy of a letter from Disque to Leadbetter.
Mr. MAGEE. Give us the date.

Mr. DOUTY. It is dated Portland, Oreg., December 10, 1917.

MY DEAR MAJOR: There is a persistent rumor here that Maj. Sligh is being considered for a position on the aircraft board. Possibly you already know of it. You will agree with me that it must not happen. I understand that he has been highly recommended by many organizations in many States.

There is another rumor that English brokers have been trying to arrange through diplomatic channels for a concession of spruce timber in Washington, and the papers say that a five million dollar concern has been organized under five names to open mills in Puget Sound territory. The story is that Douty is engineering the whole thing. I hope there is nothing to it, and if there is, it should not go on. We need all the spruce, and English concerns should go into British Columbia, where they can get it off their own land. Douty's mill is butchering logs to such an extent that I am about to take away all they have in the river and send to another mill. He accumulated a large amount of rejects in this way which English brokers are willing to pay \$90 for, and his game is to sugar rejects. I do not like his ways.

I sent you a wire in regard to Vancouver Barracks to-day and I am hopefully waiting results. I never got into such a mess of petty doings. We are just completing a plan for extensive logging on an extensive plan and promises over fifty million a year, and Washington must get out of the way with a red flag.

Yours, truly,

DISQUE.

The next is a copy of the telegram:

PORTLAND, OREG., December 16, 1917.

Maj. W. F. LEADBETTER: Regarding your telegram Saturday, December 22—

I think this is a misprint on the date there—

I am not acting for the effect that may be produced at Washington. Troops are only arrived here Wednesday night and one-third still in Camp Lewis because no quarters available here. All are quarantined until December 27; came here under same. I will not ruin my plans now by a spectacular rush into camps. Have begged for these men six weeks. They were held that long after volunteering and the best material weeded out. Had my request been heeded, the men would have been at work in November and effect actually felt in deliveries about February 1. Do not let us fool ourselves. Men going into camp now will not be left until March. What you are getting started from camps in September and I acknowledge absolutely no responsibility for it.

Paragraphs 4, 7, and 8 of my memorandum to you not complied with. Mediation commission, contrary to Coffin's advice, went into situation; failed, and left things in very delicate shape. I would have had it solved by February 1. My letter to Chief Signal Officer November 27 in regard to labor situation unanswered. Clark was allowed eighteen thousand for inspection and now that his expenses come in under general office, ten thousand is allotted for the whole, and original authority curtailed by removing incidental expenses. Authority I asked for cut-up plant November 16 granted only on December 5. Construction delayed by commanding officer Vancouver Barracks until December 12. Secretary Wilson, Governor Lister, lumbermen, State Council of Defense, labor heads, business men, and everyone else out here who knows about this work have appealed in vain that this office be given money and absolute authority with no strings. Washington had better take immediate heed, or failure is certain. By authority I mean right to commandeer stumpage and logs, mills, and machinery, as well as absolute free hand at Vancouver Barracks and an immediate supply of men and officers. By money, I mean all that I call for without qualifications as to how it must be expended. Please remember that I am an experienced officer and have handled Government funds for years. Am just as jealous of my reputation and the Government's interests as anyone at Washington.

My message regarding dry kilns not a misprint. Estimate may be 20 per cent over, but times and prices justify such margin. I have the best men in the United States on the job and the entire resources of the University of Washington are behind me. My plans for kilns is the result of a composite idea gained from recommendations experience of Curtiss, Wright, and other

big manufacturers in the East, and Mr. Goss, who is assisting me, has spent time in all their factories, has their confidence, and that of scientific men and practical men in business here, as well as my own. It is considered very natural by experienced men here that kilns should cost more than the mill. I agree that no one ever heard of kilns of such magnitude, but neither did we hear before of an order for 109,000,000 feet of straight-grain clear spruce at the rate of 11,000,000 feet a month. Won't attempt further explanation. I have recommended it and know what I am doing. Do not know anything about Keating's telegram. We control shipping from here and it won't effect destination. Will see him and call him off now.

Mr. MAGEE. Just what is that?

Mr. DOUTY. Shall I read it again?

Mr. MAGEE. He don't know anything about whose telegram?

Mr. DOUTY. Don't know anything about Keating's telegram.

We control—

Mr. MAGEE. Do you know whether that refers to Keating of Colorado or not?

Mr. DOUTY. No. [Reading:]

We control shipping from here, and it won't effect destination. Will see him and call him off now. We have arranged to place every man in our command in camps at work, and as soon as their quarantine is over the 2,400 will be cutting logs. I could use 6,000 in addition if I had them. A man Douty has been at Washington for some time. He is generally considered here as questionable. His mill is up to some queer work, which I am investigating, and if my suspicions prove well founded I am going to take all his logs. There has been signs of cunning at work for months undermining spruce production. Sligh has either been fooled or is a party to it, and Douty knows that I will not spare him if I get the absolute evidence. I believe that both are trying to embarrass this office and—

Mr. MAGEE. What?

Mr. DOUTY (continuing reading).

Embarrass this office, and I am prepared for a show-down if it must come. I want this telegram read to the Aircraft Board and immediate assurance that there will be no more efforts or insinuations about the failure of this office until it has had a chance to fail.

DISQUE.

Mr. MAGEE. Now, after the sending of this telegram and this letter, did the plans and arrangements which you had made with our associated government go by the board and fall through?

Mr. DOUTY. They did.

Mr. MAGEE. Well, how long did you stay in Washington—until what date?

Mr. DOUTY. I stayed there about 24 hours after that telegram. I went up to see Mr. Leadbetter, and he refused—I went up to call on him, and they said he was out; thought he would be in soon. He came in. I called the attention of Mr. Lippincott, who was in the office, to his presence there, and I said I would like an interview with him. He went over and spoke to him, and Mr. Leadbetter glanced over and changed the color in his face and immediately slid out a side door. I sat there for 10 or 15 minutes. I told Mr. Lippincott—I said:

You know what my business is here; you know what I am figuring on doing out there in the way of spruce production. What I want to know is if I am going to have Mr. Leadbetter's cooperation on this as well as Col. Disque's.

I said:

If I am not, I want them to say so, and if they are going to cooperate with me I want to know where I stand.

I said:

I want to catch a train within an hour for New York, and you go down and see Mr. Leadbetter and tell him what I want and ask him to come up and give me about 10 or 15 minutes. It won't take me long to tell my story, because he is very familiar with what I am doing; it has been approved all along the line—by Col. Deeds and the Aircraft Board.

Mr. Lippincott went to the lower floor and returned in about 10 minutes and said Mr. Leadbetter said he didn't care to see me. And I took the train for New York and came home.

Mr. MAGEE. Do you remember what date that was, Mr. Douty?

Mr. DOUTY. That was between the 17th and 20th of December, I would say. I would not name the exact date.

Mr. MAGEE. 1917?

Mr. DOUTY. I went to New York and stayed one day and got home on Christmas day.

Mr. MAGEE. 1917?

Mr. DOUTY. 1917.

Mr. MAGEE. Now, will you go on and state what you know in reference to his charge that you were butchering logs, and so forth, that you referred to?

Mr. DOUTY. When I arrived in Portland—in fact, I had received a wire from my office here, saying that they were being very badly mistreated by the spruce production division here.

Mr. MAGEE. Your company?

Mr. DOUTY. Our company.

Mr. MAGEE. The Multnomah?

Mr. DOUTY. The Multnomah Lumber & Box Co. I came home, and when I arrived here they told me that they had had one or two men out there investigating—three men, I would say, that had been out there to investigate and watch our method of sawing spruce.

The first man, who was George Gerlinger, made a report that was against our operation. I would say, however, that Mr. Gerlinger, I don't suppose, ever saw a spruce log before in his life. He operates a small sawmill up at Falls City.

Mr. MAGEE. Where is that?

Mr. DOUTY. It is about 75 miles south of here, up the Willamette Valley.

He then sent a man from Willapa Harbor out. The man from Willapa Harbor was man enough, after he had looked the situation over, to come into the office and say to us that he had been in a good many spruce operations and he wanted to compliment us on the way we handled our product; that we were getting all out of the log that was possible, and that he could not find anything the matter with it. He told us that he had been sent out there. But Mr. Gerlinger slipped out and said nothing to us and slipped away. We didn't know that he was there until two or three days afterwards. We didn't know this other man—I can't even call his name now.

Mr. MAGEE. Was he a civilian or an officer?

Mr. DOUTY. He was at one time, I understand, sheriff of Pacific County in Washington.

Mr. MAGEE. I mean at this time was he——

Mr. DOUTY. He was a civilian, yes; they were both civilians. As a result of this——

Mr. MAGEE. When was this, what time?

Mr. DOUTY. This was in January, early January, 1917—or 1918.

Mr. MAGEE. 1918?

Mr. DOUTY. 1918. As a result of this, in about two weeks, I would say, we received a letter from Col. Disque advising us that we could not saw any more spruce logs. They sent Maj. Eastman to our mill to mark all the logs in rafts from our own camps, and instructed Eastman to divert them to other mills to be sawed for the Government. We didn't resist——

Mr. MAGEE. Stopped your sawing any more spruce.

Mr. DOUTY. Any high-grade spruce.

Mr. MAGEE. What?

Mr. DOUTY. He was perfectly willing for us to saw low-grade spruce.

Mr. MAGEE. I mean, he stopped you, as I understand, from sawing any more spruce for aircraft purposes?

Mr. DOUTY. He did.

Mr. MAGEE. Now, if you will, state there just how much spruce you had been getting out prior to that time from your mill for aircraft purposes, if you will briefly state, as showing what your production has been and what you have been doing for your country.

Mr. DOUTY. Up to the time that—from the 1st of September, 1917, up until the 1st of January, we shipped approximately \$150,000 worth to the Government.

Mr. MAGEE. Have you any idea what that would be in feet? Was that sawed lumber?

Mr. DOUTY. That was about 1,600,000 feet, I would say, in round numbers.

Mr. MAGEE. And what were you sawing at this time when these men came over there, per month, or approximately?

Mr. DOUTY. We were sawing on Government orders.

Mr. MAGEE. Yes; but I mean approximately, what rate per month?

Mr. DOUTY. We were sawing—do you mean airplane stock?

Mr. MAGEE. Yes.

Mr. DOUTY. We were shipping about one to two cars a week, depending on the run of the logs at that time.

Mr. MAGEE. Can you give us approximately, in thousand feet, about what rate per month that amount would run?

Mr. DOUTY. I would say—the minimum we shipped was about 200,000 feet, of any months—the poorest months we shipped.

Mr. MAGEE. And the maximum?

Mr. DOUTY. This was in the wintertime and logs were rather scarce.

Mr. MAGEE. That would run up to what maximum?

Mr. DOUTY. Our maximum shipments for any one month were a million and a quarter.

Mr. MAGEE. That was first-class spruce aircraft production?

Mr. DOUTY. No; that was cants. Those would be remanufactured. I think the maximum we shipped of finished stock was about 600,000 feet in one month.

Mr. MAGEE. A month?

Mr. DOUTY. Yes.

Mr. MAGEE. That was first class?

Mr. DOUTY. That was first class.

Mr. MAGEE. Spruce for aircraft purposes?

Mr. DOUTY. Yes.

Mr. MAGEE. Now, will you go on with your statement?

Mr. DOUTY. I would say that about two weeks elapsed that we were not permitted to cut spruce, when Maj. Breece, a southern lumberman, came here, came out to the office, and said he had been sent there by certain Cleveland bankers who were friends of his, to find out why they were not getting spruce.

Mr. MAGEE. When was this; do you remember?

Mr. DOUTY. This was early in 1918, I would say the latter part of January or first—yes; about the latter part of January. He said that he had looked the situation over in all the spruce districts; he looked the mills and equipment over, and that he had passed on our mill as being one of the best equipped to handle spruce, and he had watched our operations there, and had decided that our sawyer and our method of handling it was better than any mill—as good or better than any mill on the coast, and wanted to know why we were not cutting it. I told him why.

He left, and he came back in about an hour and said that he had put this up to Col. Disque and Col. Disque told him that he didn't care to have us operating on this, he didn't want anything to do with us. He says:

I told him that if I was going to run this thing out here, that if personal fights should enter into this at all, that I would not be handicapped, and if he was going to pull off such stuff as that on me I would get on the train and go home.

Mr. MAGEE. Maj. Breece said this?

Mr. DOUTY. He told me this. He said:

If you go back into cutting spruce again, I will see that you get a fair deal, and I will see that you get your share of the logs, enough to put—I want you to run night and day on this, and we will give you—see that you get all the logs you can handle outside of your own.

Mr. MAGEE. Maj. Breece wanted to get spruce out?

Mr. DOUTY. Yes. I said:

Major, we will do anything we can for the cause. We have always felt that way; we have been as patriotic as we could be.

I said:

I went down to Washington, and I spent \$4,000 of my own money down there, trying to get this thing arranged down there to get started off, so we could do something on spruce, but I think I have never received any thanks for it in any way, and I have been mistreated on this whole deal, but whatever you—

Mr. MAGEE. Did you receive any compensation?

Mr. DOUTY. Never received a cent; never asked for anything.

I said, "Now, if you want—whatever you want of this plant—anything you want done, it is yours, go ahead." He said, "All right. I like that spirit."

Commencing at that time, we started in sawing on what we call cants for shipment to Vancouver. From that up to the time the war ended, we shipped \$343,000 worth, during the year 1918.

Mr. MAGEE. You accepted the major's proposition, and did all that you could from that time on to get spruce out?

Mr. DOUTY. I did.

Mr. MAGEE. For aircraft purposes?

Mr. DOUTY. He was very nice to us. When we got short of men he gave us 80 soldiers, and treated us very nice. We never asked Maj. Breece anything but what he gave it to us; stayed right by us and we stayed by him.

I would say, too, that to my knowledge Col. Disque was never on my property, or while he has been to about every spruce mill, I think, on the coast, he never has been out to our property. Showed no cooperation whatever; fought us right down the line.

Mr. MAGEE. I understand Maj. Breece is a very efficient officer.

Mr. DOUTY. Yes; Maj. Breece is a gentleman.

Mr. MAGEE. This refers to butchering logs. You haven't covered that. What did Col. Disque refer to by that expression—butchering logs; do you know?

Mr. DOUTY. Well, I would say that he probably referred to some of his tactics that he pulls off to try to run things his way. Anyone that would not play the game with him he simply tried to kill them off; they either had to play the game with him or they were not in the game, that is all, and I absolutely refused to do it—to play it this way.

Mr. MAGEE. Well, did you—

Mr. DOUTY. He had no right to make any such statement, because, in the first place, he knew nothing about it.

Mr. MAGEE. What was the basis of it?

Mr. DOUTY. The basis of it—the basis of it was that after Maj. Sligh was removed from the Aircraft Division I did all I could to get him appointed on the Aircraft Board. With another party, we got 36 States in this Union to indorse Maj. Sligh for that position; but they didn't want Maj. Sligh in, they didn't want him to have any authority over them in any way, and he thought that—he classed me with Maj. Sligh; he thought I was working with him, and he was fighting Sligh and he wanted to kill me off at the same time, and he was doing everything he could; that is the only object I know of, because the statements that he made about our butchering logs were absolutely false.

Mr. MAGEE. Now, I heard something said about some logs which were sold to the British Government, or something of that kind, and they were, I think, transported down as far as Poughkeepsie, in my State—held up there by Gen. Disque, or something of that sort—and what I want to know is what there was about that and whether that had anything to do with this insinuation.

Mr. DOUTY. I would say that we had, about the 1st of January, 1918, three and a half million feet of fall-down clears on our yard; that this Government inspectors had gone through and picked out all of the airplane stock. We asked permission from the Spruce Production Division here to sell that stock, and they refused it to us. We sold it; they refused it to us for export purposes; they would not allow us to sell it. We secured cars from the car department and shipped 65 cars of that for storage to Poughkeepsie on a sale that we made to the English—to the Engineering Timber Co., of England—for which we received for that \$65 a thousand, f. o. b. the mill.

Col. Disque evidently took this up with the War Board at Washington, and the cars were all held up. They were held up and the War Board telegraphed their representative here to take it up with us and find out what our dealings were with the Engineering Timber Co., and they thought the Engineering Timber Co. were violating the export rules or laws—the war rules. We gave him access to all our books. He made a thorough investigation and found out what the facts were, and he telegraphed to the War Board that we were all right in every way on this and that it was no more than fair that we should be permitted to dispose of this stock; that it was a financial burden to us. We got a wire from the War Board, or letter from the War Board, about 10 days after that telling us that we were perfectly at liberty to move this stock; that they had investigated the matter and found out that an injustice had been done us.

But this stock, about a million and a half feet, is still on storage at Poughkeepsie, N. Y., in which we have a hundred thousand dollars tied up, and we also have about \$200,000 tied up in stock on our yard here.

Mr. MAGEE. That you were prevented by this organization from marketing?

Mr. DOUTY. Prevented by the Spruce Production from marketing. And this stock, a large part of it, about 2,000,000 feet of it, is cut on Government specifications, of sizes that are not salable in the commercial market, and we have presented a claim to this board for it, and we never have gotten any recognition of it. I went to Washington and stayed two months this year, and filed it there under the Dent Act. They referred it back here. It has been here now since the 1st of July. We have had no action on it yet. But the office—the Adjustment Board—Contract Adjustment Board here wrote letters around this town, asking certain people to write letters that they could attach to his claim, saying that—telling what my attitude toward the Spruce Production Division had been.

Mr. MAGEE. You mean the Production Board?

Mr. DOUTY. The Contract Board wrote letters, they wrote letters around town—

Mr. MAGEE. What do you mean by the Contract Board?

Mr. DOUTY. Well, the Contract Adjusting Board. Even since the war these letters were written, written since the armistice.

Mr. MAGEE. From that board?

Mr. DOUTY. From that board.

Mr. MAGEE. Do you know this of your own knowledge?

Mr. DOUTY. I have a copy of one of the letters. I know the party—

Mr. MAGEE. Where is that letter?

Mr. DOUTY. It is out in my office—the copy of it is.

Mr. MAGEE. Will you produce that copy—

Mr. DOUTY. I will.

Mr. MAGEE. For the record here?

Mr. DOUTY. I will. I will say I was called in by a professional man of this city—into his office—that was in the Spruce Equipment Division down here—and tell me that he heard Col. Disque say that he would see I never got a dollar on my claim.

Mr. MAGEE. That man is available, if necessary?

Mr. DOUTY. Yes, sir; he is.

Mr. MAGEE. Now, how much money has your company got tied up in the logs there at Poughkeepsie and in the logs here at your plant, which you have been prevented from putting onto the market?

Mr. DOUTY. I would say approximately \$300,000.

Mr. MAGEE. What is the amount of your claim that you have filed against the board?

Mr. DOUTY. We have filed a claim for \$219,000.

Mr. MAGEE. For 219?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. How was it that it happened you didn't file a claim for the full amount?

Mr. DOUTY. Well, we only asked—we asked an allowance for the remanufacturing of this stock and the loss of dockage. We also had about 6,000,000 feet of logs on hand at Government price, on which we asked an allowance on those. And then we constructed some barracks on our place, which we asked some allowance for. There were 12 items in the claim.

Mr. MAGEE. After making these allowances the amount which you demand is \$219,000?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. And does that fairly and equitably represent the damages which your company has sustained by reason of these actions and proceedings which you have described?

Mr. DOUTY. All we ask is a fair adjustment. If our ideas are wrong we are perfectly willing to leave it to any fair-open-minded commission. We know that our operation, so far as production is concerned, has been as satisfactory as that of any mill on the coast, and I think the records show that. We shipped something over 8,000,000 feet to the Government during the war. During the operation of 1918 we made a profit on \$343,000 of \$8,000 on Government shipments. The price was fixed arbitrarily by Disque. We were not given any opportunity to change it, although we tried to; but the price was general all over the coast.

Mr. MAGEE. Is there any further fact in reference to these matters which you desire to state to the committee?

Mr. DOUTY. No; I think that is all.

Mr. MAGEE. After these events, did you have any further conversation with any representative of the British Government?

Mr. DOUTY. I was requested to take lunch with Capt. Thompson, during the early part—

Mr. MAGEE. Prior to this time, did you meet a gentleman from some board of trade?

Mr. DOUTY. During the few times I was in Washington I called on the British Mission there. I knew them all quite well. I met a man by the name of MacFarland, from the Board of Trade of London, who was in the British Mission, on two occasions when I called there. They asked me if I would stand for an interview with Mr. MacFarland.

Mr. MAGEE. Who asked you?

Mr. DOUTY. Capt. Thompson.

Mr. MAGEE. Who was Capt. Thompson?

Mr. DOUTY. He was one of the staff of Gen. Carmack.

Mr. MAGEE. Representing the British Government?

Mr. DOUTY. Yes; he was a British officer—a British captain. Mr. MacFarland said that the British Government was very much dissatisfied with the way that the Government had handled this spruce situation.

Mr. MAGEE. The way this Government had handled them?

Mr. DOUTY. Yes. He said it was entirely different from their idea, but they were of course willing to submit to whatever the Government wanted to do. But he went into details and asked me about a good many of the expenditures that were being made here on the coast. I told him I could not give him any information on that, for the reason that I was evidently in bad with the Spruce Corporation here and I knew nothing whatever about the inside workings of it—that I knew nothing but gossip that was going around and I did not care to make any statement on that.

Mr. MAGEE. This was a conversation with Mr. MacFarland?

Mr. DOUTY. Yes.

Mr. MAGEE. What time was this, if you recall?

Mr. DOUTY. This was in the month of October, 1918.

Mr. MAGEE. Did you have any further conversation with Capt. Thompson?

Mr. DOUTY. Capt. Thompson was in Portland the early part of this year. He asked me to take luncheon with him one day.

Mr. MAGEE. Do you remember about what time that was?

Mr. DOUTY. Well, he was here, I think, for probably two months. I could not say; I think it was probably February or March that I saw him.

Mr. MAGEE. 1919?

Mr. DOUTY. February or March of 1919. He asked me to come down to lunch with him. He said, "Now, I have been making some investigations here and I think perhaps maybe there are some things that may be of interest to you just for general knowledge." He went ahead to relate to me that they had made an investigation and that there had only been a very small percentage of spruce shipped up to the time of the armistice put out by Government operations. He said a very large percentage of it was shipped by the regular mills. He also asked me quite a number of questions as to what I thought the salvage value on different equipment was. I did not place any value on it, because I told him I knew nothing about it, that it would be just a guess and I did not care to hazard a guess on it, but he said to me that the British Government had instructed him to come here and get the best settlement he could and that they would write it off and forget it. But he said they were very much dissatisfied with the way the proposition had been handled, but he said it was a bad case, "and we are going to simply write it off and charge it off to war expenditures and forget it."

Mr. MAGEE. Is there any further fact that you consider would be of interest to the committee which you now recall?

Mr. DOUTY. Nothing any more than when I went to Washington they were not getting the spruce early in the war and they asked me the reason why and I said, there were two reasons here. One reason was this. I said that we have got the logs; we have got plenty of spruce timber out there and we have plenty of mills to cut them, and we want to get the logs out; but what we want is men and money to

extend our roads and put in additional logging equipment to get the timber out to the mills. We have all the mills we need.

Mr. MAGEE. Does that mean, in plain English, that all that was needed was to back the loggers, and they would get out all the spruce lumber that could possibly be required for the needs of the United States and our Allies?

Mr. DOUTY. That is my opinion.

Mr. MAGEE. That is what it meant?

Mr. DOUTY. Yes, sir.

Mr. LEA. What do you mean by saying you needed men?

Mr. DOUTY. We were short. The Government had taken quite a lot of our men out and drafted them and taken them out on the regular enlistment plan, and we were short. They were taken right out of our industry.

Mr. LEA. What was the military help you suggested should be furnished to aid in the production of spruce.

Mr. DOUTY. I think I was responsible for military men having been sent here. I made application there through Maj. Sligh's division, and he took it up with the Aircraft Board, and they took it up with the Secretary of War. I think I was responsible for the men being sent here in the first place.

Mr. LEA. You deemed it necessary to increase the labor supply here, in order to get production, and that seemed the most available method?

Mr. DOUTY. Yes.

Mr. LEA. About what is the capacity of your mill?

Mr. DOUTY. We cut about 45,000,000 a year.

Mr. LEA. This lumber that was stored at Poughkeepsie; why did not the British firm take that when it arrived?

Mr. DOUTY. They were prevented from selling it, I understand.

Mr. LEA. Did you understand the embargo operated against the shipment; is that the idea?

Mr. DOUTY. Yes; this Government was controlling the exportation of all lumber.

Mr. LEA. And they were not permitted to move it. Was that an aircraft grade of lumber, or not?

Mr. DOUTY. No; it was rejects; it was sold as rejects.

Mr. LEA. Where did you get the telegram and letter from Mr. Disque to Mr. Leadbetter?

Dr. DOUTY. That was given to me by a party in Washington.

Mr. LEA. By whom?

Mr. DOUTY. I would not care to state that, who the party was that gave it to me.

Mr. LEA. Was it not given to you by Mr. Sligh?

Mr. DOUTY. It was not.

Mr. LEA. Do you know whether or not it was at the request of Mr. Sligh?

Mr. DOUTY. Not to my knowledge.

Mr. LEA. It was someone in the department, though, at Washington was it?

Mr. DOUTY. I would not make any statement on that. The reason I got it was because it was a personal affair of mine and I was somewhat interested in it. I did not know just what I might want to do in the future in the way of following it up.

Mr. LEA. Did the person who got those papers from the files have any right to them?

Mr. DOUTY. I could not say about that; I am not sure. I did not ask any questions. I think probably I had as much right to it as a man has to attack a man's character in a letter or telegram.

Mr. LEA. You said that Disque thought you were working with Sligh. Was that true or not?

Mr. DOUTY. That I was working with him?

Mr. LEA. Yes.

Mr. DOUTY. In what way do you mean?

Mr. LEA. You expressed it that way.

Mr. DOUTY. Yes; I was working with him, doing what I could to help the cause along.

Mr. LEA. Did you do anything to assist the British in the development of production up here, or did you take any steps looking toward that end?

Mr. DOUTY. I did.

Mr. LEA. What did you do?

Mr. DOUTY. I made a trip from Washington to Port Angeles with their engineer and looked the Olympic spruce situation over.

Mr. LEA. Was any effort made to organize any corporations?

Mr. DOUTY. The corporations were organized there for the purpose of—they were permanent organizations for future operations. As outlined it would have taken too long to have worked them out for war purposes. They were to be worked out and stock turned over to the British, providing they could be developed in time.

Mr. LEA. Were those corporations organized after the war started?

Mr. DOUTY. Yes.

Mr. LEA. Did you have anything to do with organizing them?

Mr. DOUTY. I did.

Mr. LEA. How many were there?

Mr. DOUTY. As I recall it, I think there were five different companies.

Mr. LEA. What was the object of organizing five companies to carry on the same work?

Mr. DOUTY. The object was a matter of financing them. It is easier to organize five companies of reasonable corporate capital limitations than to finance one large one.

Mr. LEA. Were these corporations for the purpose of spruce production?

Mr. DOUTY. Spruce and fir.

Mr. LEA. In organizing those companies was there any discussion as to the amount of income tax that would be paid, depending on whether there was one or five corporations?

Mr. DOUTY. I think that was discussed, and it was decided that inasmuch as the stockholders were all practically the same; that is, their interests were identical through all the corporations, that their returns would be made on what would be known as a consolidated return; that is, practically the same.

Mr. LEA. Were the stockholders the same in each corporation?

Mr. DOUTY. Yes; they were all the same.

Mr. LEA. And where were these corporations to be financed?

Mr. DOUTY. The Engineering Timber Co., of London, was to take three and a half million dollars of stock in them.

Mr. LEA. Were you to have any stock?

Mr. DOUTY. No; I was to be manager; I had no money in it at all.

Mr. LEA. Was your salary agreed on as manager?

Mr. DOUTY. I do not believe that it was; no; I do not think it was; I do not believe that was discussed.

Mr. LEA. When the plan of spruce production was unified here, then the work of these corporations quit; that is, no further steps were taken?

Mr. DOUTY. That was not the reason they quit. The principal reason why those corporations were not carried through was that the British Government would not permit the funds to be taken out of England during war times. The Engineering Timber Co., therefore, were unable to get their funds here.

Mr. LEA. Were they not organized pursuant to the British plan, to furnish their own capital for production?

Mr. DOUTY. That had nothing whatever to do with the British production of these corporations.

Mr. LEA. It was not done pursuant to the English plan?

Mr. DOUTY. No. It was discussed with them a time or two as to how they could get the funds there to see if they would be willing to advance this money; that is, to save exchange on it if they would advance this money in sums of \$500,000. The exchange was quite an item, and we discussed it with them somewhat, and my understanding is that the Engineering Timber Co. had some arrangement with the British Government, and the British Government were to get the lumber and the British Government were going to ship it.

Mr. LEA. About when was it you took up the question of developing the Clallam County spruce to supply the English demand?

Mr. DOUTY. It was during the months of October and November and December; there were probably three months that we were working on that.

Mr. LEA. Did you or Mr. Sligh make any agreement with the British Government about the shipment to them of this timber, or providing that they should get it?

Mr. DOUTY. You mean the product of the mills?

Mr. LEA. Yes.

Mr. DOUTY. Yes; we discussed it with them—with the representative from London. I went to Washington with him and we went in and discussed it with Gen. Carmack.

Mr. LEA. Did Mr. Sligh have any interest in these corporations?

Mr. DOUTY. No; nothing whatever.

Mr. LEA. Did you represent any other British interests than this corporation interest; that is, the affiliation you have spoken of already?

Mr. DOUTY. I did not.

Mr. LEA. Did you have any interest in this construction work to get out spruce in Clallam County other than through these corporations?

Mr. DOUTY. I did not.

Mr. LEA. This plan of building the railroad and logging was part of the corporation plan to produce the spruce?

Mr. DOUTY. Yes; that was the temporary plan; it was not permanent.

Mr. LEA. These corporations looked toward a permanent organization, did they?

Mr. DOUTY. They did.

Mr. LEA. How much airplane spruce did your company produce during the war?

Mr. DOUTY. About 8,000,000 feet.

Mr. LEA. Do you know what percentage of that was No. 1 specification?

Mr. DOUTY. I would say offhand that it was about a million six hundred thousand that was No. 1 specification and the balance of it was rejects and cants.

Mr. LEA. That is as near as you can estimate it now?

Mr. DOUTY. Approximately, that is about right.

Mr. LEA. Do you remember how much G-list material you shipped?

Mr. DOUTY. We shipped, I think, an order from the Spruce Corporation of about 1,400,000 feet—about that. These figures I am giving are just from memory, but I think they are about right.

Mr. LEA. You have not any figures to show how much G list you shipped after the 1st of November, 1917?

Mr. DOUTY. We did not ship any—only to the Government and what we shipped down to Poughkeepsie.

Mr. LEA. What part of it was before November 1 and what part afterwards—or about what?

Mr. DOUTY. You mean November, 1917?

Mr. LEA. Yes.

Mr. DOUTY. The shipments that were made to Poughkeepsie were started in January, 1918. We did not ship any in 1917, to my knowledge. I was not here at the time, but my understanding is that there was none shipped.

Mr. LEA. What was the company to which you shipped that?

Mr. DOUTY. The Engineering Timber Co.

Mr. LEA. The whole shipment of that stock was to this one company?

Mr. DOUTY. Yes.

Mr. LEA. Did your company get any order from Sligh for timber or spruce production?

Mr. DOUTY. We received the same order that was sent to all the mills when the war started. Each mill was asked to advise about what quantity they could furnish per month, and my recollection is that we reported approximately 500,000 feet, and his division sent us an order for 4,000,000 feet. That was before I returned to Washington. At that time I did not know Mr. Sligh.

Mr. LEA. Did the company furnish that amount?

Mr. DOUTY. We furnished about 8,000,000. On that order?

Mr. LEA. Yes.

Mr. DOUTY. No; we did not. The order was canceled.

Mr. LEA. You subsequently got other orders?

Mr. DOUTY. Yes.

Mr. LEA. Any other orders from Sligh?

Mr. DOUTY. My recollection is that is the only order we ever received from Washington. All the other orders came through the office here.

Mr. LEA. As to your claim against the Spruce Production Corporation, I just want to get the separate amounts. According to these

figures, there are 12 items. [Indicating on paper.] The 12 items include log adjustments, something over \$50,000; construction adjustments, over \$2,000; inspection adjustments, over \$1,000; clerical adjustments, over \$1,000; guard adjustments, over \$4,000; rental adjustment, over \$1,500; logging-equipment adjustments, \$6,500; mill-equipment adjustments, over \$900; stock adjustments, over \$98,000; and manufacturer's adjustments, over \$37,000; storage adjustments, over \$10,000; interest adjustments, over \$4,000; and according to these figures the aggregate amount would be \$219,690.87. That is your claim, is it not?

Mr. DOUTY. Yes, sir

Mr. LEA. So far, that matter has not been adjusted?

Mr. DOUTY. It has not.

Mr. LEA. That is all.

Mr. MAGEE. As I understand, the prospective operations of the Engineering Co. which you have described, the creation of these prospective five corporations, had nothing to do with the allocation of these districts which you have described and plans therefor, to England, France, and Italy?

Mr. DOUTY. No. This allocation proposition, as we had worked it out, was previous to this corporation plan. At that time the opening of the spruce on the Olympic Peninsula had not been considered.

Mr. MAGEE. What time was it that these prospective operations of the Engineering Timber Co. came up?

Mr. DOUTY. The negotiations started on about the 15th of November, near that, 1917.

Mr. MAGEE. I want to get this clear, as to whether or not under this allocation of districts the British Government, the French Government, and the Italian Government, each government would have absolute control over its own operations?

Mr. DOUTY. That was the understanding, and the British idea about opening up the Olympic Peninsula would be that they were to get the consent of this Government to do that, in addition to this other work.

Mr. MAGEE. Were these operating plans of the Engineering Timber Co. relative to opening up of the Olympia district?

Mr. DOUTY. They were.

Mr. MAGEE. And did not have any reference to any other district?

Mr. DOUTY. They did not.

Mr. MAGEE. But what I mean to say is, under the plan which you have described as satisfactory to the British Government in getting out spruce production, the British Government, as a Government, would have absolute control. Is that right?

Mr. DOUTY. That is correct.

Mr. MAGEE. They did just exactly as they pleased?

Mr. DOUTY. That was the understanding.

Mr. MAGEE. And in their own way?

Mr. DOUTY. That is correct.

Mr. MAGEE. And got their own agents to carry out their own operations?

Mr. DOUTY. That was the understanding.

Mr. MAGEE. And it was the same way with the French Government and with the Italian Government. Is that right?

Mr. DOUTY. That is correct.

Mr. MAGEE. Will you bear in mind the production of a copy of a communication from the contracting board you have described and give it to the committee?

Mr. DOUTY. Yes; I will give it to you this afternoon.

(The papers above referred to are as follows:)

WAR DEPARTMENT,
SPRUCE PRODUCTION DIVISION,
BUREAU AIRCRAFT PRODUCTION,
Portland, Oreg., January 15, 1919.

From: The contract board.

To: Russell Hawkins, Portland Hotel, Portland, Oreg.

Subject: Claim No. 168. Multnomah Lumber & Box Co., Portland, Oreg.

1. This board has been requested by the commanding general to ask you if you would be willing to make a statement which we may attach to the above claim regarding your personal opinion as to Mr. F. A. Douty's attitude toward the work of this division.

2. It is requested that you furnish this statement in original and three copies, as we are required to have all documents on these claims in that number of copies.

By direction of Brig. Gen. Disque.

For the contract board.

C. SQUIRES,
Captain, A. S. A. P., Recorder.

PORTLAND, OREG., January 22, 1919.

From: Russell Hawkins.

To: C. Squires, captain, A. S. A. P., U. S. A. (recorder, contract board).

Subject: Claim 168, Multnomah Lumber & Box Co.

1. The writer knows nothing whatever as to facts set up in claim No. 168.

2. The general and current trade information is that the Multnomah Lumber & Box Co., of which Mr. Fred Douty is a principal, has produced aircraft lumber in quality and quantity comparable with other spruce-cutting sawmills.

3. Not having been intimately associated with the Spruce Production Corporation since December 8, 1917, through objections raised by Senator George Chamberlain, I can not understand why at this time you should expect any information that would controvert good opinions which I understand have been expressed within the last year by those closely associated with the Spruce Production Corporation.

Yours, respectfully,

RUSSELL HAWKINS.

Mr. FREAR. What price was fixed by the Government on the sale of spruce and fir, if you know; I mean, what was paid to private operators at different times you have stated?

Mr. DOUTY. The original agreement with the Spruce Corporation was that they were to pay \$60 a thousand for the short cuttings of clears, which would be 17 feet and under, of which they were to take 50 per cent; and \$150 per thousand for beam stock, which would be clear stock 18 feet and longer, which would make an average of \$105. That was known as specification No. 1.

Mr. FREAR. That was the way in which you arrived at the figure of \$105?

Mr. DOUTY. Yes.

Mr. FREAR. What were the other specifications?

Mr. DOUTY. I am not familiar with the specifications gotten out later from memory. I have them in my office.

Mr. FREAR. Did they vary substantially from those prices?

Mr. DOUTY. The specification shown as specification No. 2 I could not give you accurately.

Mr. FREAR. That would be less in price?

Mr. DOUTY. Yes; it was a lower specification. The next price that was fixed was the price on cants. They were credited as Nos. 1, 2, and 3 grades. The price on No. 3 grade was \$30, and the price on No. 2 was \$50 or \$60, and the price on No. 1 was \$90. I think it was originally \$80; afterwards it was advanced to \$90.

Mr. FREAR. What would be the variation in results between that and the other prices you have mentioned?

Mr. DOUTY. The shipments we made under the cant specification averaged our mill approximately \$63.75 for the cants that were shipped during 1918 to Vancouver.

Mr. FREAR. And would that be proportionately upon the finished material; the finished material could have been gotten out at what price?

Mr. DOUTY. It would be pretty hard to state that. I could not give you an accurate statement about that, but I would think somewhere in the neighborhood of about \$110.

Mr. FREAR. That is to say, \$40 or \$50 would have been a reasonable payment for working it out into airplane material from the cants?

Mr. DOUTY. Yes; I think so.

Mr. FREAR. You are familiar with the lumber conditions; that is, so far as the number of operators is concerned on the coast?

Mr. DOUTY. Yes, sir.

Mr. FREAR. How long did you say you had been in business here?

Mr. DOUTY. In Portland, since 1903.

Mr. FREAR. Have you had to do with loggers and millmen?

Mr. DOUTY. Yes; I have been in this business ever since that date, here.

Mr. FREAR. Could you state roughly the general production power of the logging industries on the coast prior to our entrance into the war; that is, how many million feet, in general? I do not want a close estimate, but just in a general way so as to get an idea of the size of the operations here on the coast.

Mr. DOUTY. I would not want to make a statement on that from memory. That is quite an undertaking.

Mr. FREAR. The reason I asked the question in that form was this: For instance, in the Spruce Corporation book that was gotten out for September 2, there is a statement on the milling that 3,000,000 feet a day of finished lumber, I take it, was the capacity of the mills at that time, and I was wondering if there was anything mentioned about logging, and I am asking in a general way if you have estimated the amount of logs produced?

Mr. DOUTY. I never have.

Mr. FREAR. You never have made any estimate?

Mr. DOUTY. No.

Mr. FREAR. Well, on 30,000,000 feet a day, which is the estimate of the corporation, that would make 90,000,000 feet of lumber a day by the mills, if these estimates are correct, on three shifts?

Mr. DOUTY. Well, it is hardly practicable to operate three shifts.

Mr. FREAR. How many—two?

Mr. DOUTY. Two shifts; yes.

Mr. FREAR. Two shifts, then; that would make 60,000,000 feet of lumber a day that was produced by the various mills of Washington

and Oregon, or could be produced, I mean, on two shifts; that is correct, is it?

Mr. DOUTY. Yes; if those figures are correct, that would be a correct estimate.

Mr. FREAR. Then, the statement was made that the erection—and it appears in the catalogues—that the erection of the Toledo mill and the Puget Sound mill at Port Angeles would not influence the amount of production more than 2 per cent. Would that be a fair—

Mr. DOUTY. You have reference to the Government construction?

Mr. FREAR. The two mills that were constructed by the Government but never completed.

Mr. DOUTY. Well, I do not know anything about the capacity of those mills. I have never seen them or looked it up. I would not want to answer that question.

Mr. FREAR. I wanted to get it in the record some way.

Mr. DOUTY. I haven't any knowledge of it. I do not want to make any statement about things with which I am not familiar.

Mr. FREAR. I would not want you to unless you had some particular judgment on it. Do you know anything about the comparative conditions in Canada? Have you ever had any experience up there, or do you know anything about their lumbering and logging conditions?

Mr. DOUTY. I have no knowledge at all.

Mr. FREAR. That is all.

Mr. MAGEE. Is there any further statement that you wish to make in reference to this matter?

Mr. DOUTY. Nothing that I think of.

Mr. MAGEE. Either as to your prospective connections with the Engineering Timber Co. or with the division of districts here among the allied powers?

Mr. DOUTY. No; I haven't any explanation to make. These are matters that if anyone is interested in them they can investigate. Everything is open.

Mr. MAGEE. What I mean is, my colleague has drawn out from you something about you being prospective manager of some corporation or something of that sort. Now, the inference or deduction is, I assume, that you were interested in some way in having these districts divided up among the allied powers in reference to the plan which you have laid out here.

Mr. DOUTY. I will explain that matter very quickly by saying that this was simply a patriotic move on my part. I had all the business here I could handle. I have logging interests, and I had two mills at that time. One mill has burned since then. I was operating them, and I was doing this simply for patriotic purposes.

Mr. MAGEE. What I mean is, was there anything in reference to your connection with the Engineering Timber Co. which would interfere or be connected in any way with this allocation of districts?

Mr. DOUTY. No; absolutely not.

Mr. MAGEE. And the absolute control of Great Britain and France and Italy, regardless of you or any connection of yours therewith in reference to getting their own production out of these districts?

Mr. DOUTY. No, sir. That proposition was presented before ever the Engineering Timber Co. man came over, and they knew nothing of it. It was never presented to them and they had no knowledge of it, as far as I know.

Mr. MAGEE. In other words, in this plan of allocation the British Government would act as a Government and for itself?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. Without any relation or connection with you, directly or indirectly?

Mr. DOUTY. I had two objects in view—

Mr. MAGEE. Is that right?

Mr. DOUTY. That is correct.

Mr. MAGEE. And the French Government and the Italian Government the same way?

Mr. DOUTY. Yes, sir.

Mr. MAGEE. That is all.

Mr. LEA. You said you had two objects in view; do you want to say anything further?

Mr. DOUTY. That was just in the way of explanation. It is immaterial to me.

Mr. LEA. Now, these figures that I asked you about awhile ago, about your claim; this, I understand, is your claim, which I read the figures from [showing].

Mr. DOUTY. That is our amended claim.

Mr. LEA. Now, I wanted to read this one paragraph into the record from the claim:

As result of said arbitrarily low price claimant's profits on 4,953,835 feet of cants sawed and delivered on said United States Government order resulted in an exceedingly low net profit to claimants in the sum of \$8,074.43, which margin is unjust and inadequate, as claimant was entitled to at least 15 per cent net profit on the volume of said business, and an allowance for remanufacturing Government rejects, which percentage of profit and allowance would not be excessive, taking into consideration the hazard incidental to sawmill operation.

Mr. MAGEE. I offer the whole claim. Have it marked and put it in the record.

Mr. LEA. This is the original claim. There ought to be a copy put in if it is put in.

Mr. MAGEE. Well, get it in. We will not take an extract from it; put the whole claim in evidence. It has been before the committee.

Mr. LEA. I will be glad to have the whole thing in.

Mr. DOUTY. I think maybe the letter they kindly wrote around the city might be in this file—I guess it is not here.

Mr. MAGEE. You have a copy of this claim, can you furnish one for the record—have you got an extra copy of your claim?

Mr. DOUTY. I have just my office copy of it, that is all.

Mr. MAGEE. Will you have a copy made for the committee?

Mr. DOUTY. It would take some time to make it up. I could mail it to you.

Mr. MAGEE. If you will make it up and forward a copy to the chairman of the committee?

Mr. DOUTY. All right.

Mr. LEA. We can attach it as an exhibit.

Mr. MAGEE. I have had it introduced.

Mr. DOUTY. I would like to make a statement in connection with the claim, if it is in order; that this claim was based on our ideas of what would be an equitable adjustment. All we ask is an unbiased investigation of our books and the conditions, and an adjustment

made of what would be fair. These amounts are presented there from our own viewpoint. They may be too high and they may not be high enough, but we are satisfied with them. In fact we would probably be satisfied to take less to some extent on some of them. Since that claim was made out the value of logs has changed.

Mr. MAGEE. That claim sets out in detail what your claim is based upon, which is your judgment as to the damages which you have sustained in the premises?

Mr. DOUTY. Yes, at the time the armistice was signed.

Mr. MAGEE. Is that right?

Mr. DOUTY. That is correct.

Mr. MAGEE. That is all.

(Witness excused.)

TESTIMONY OF H. E. WALKER—Recalled.

Mr. FREAR. In the publication put out by the Spruce Corporation for the September 2 sale appears a statement upon the first page to the effect that the milling capacity of the Washington and Oregon district reaches approximately 30,000,000 feet a day, that is, for all kinds of timber. I was going to ask you if that is approximately what your estimates indicated, so as to have something in the record to base it upon.

Mr. WALKER. You will find that the Forestry Service record of production of lumber of all species for the Northwest has averaged approximately about 6,000,000,000 feet a year for the last few years.

Mr. FREAR. Six billion?

Mr. WALKER. Yes; and dividing that by 200 effective working days would make about 30,000,000 feet a day. I might say that doubling the shift would not double the output of the mill, necessarily, because the log supply might not be adequate.

Mr. FREAR. The log supply might be made sufficient the same as in the mill. You have to have the operators in the mill, and you have to have your log supply?

Mr. WALKER. It would require doubling the industry.

Mr. FREAR. That is understood.

(Witness excused.)

TESTIMONY OF E. F. LENIHAN.

(The witness was duly sworn by Mr. Frear.)

Mr. FREAR. State your name.

Mr. LENIHAN. E. F. Lenihan.

Mr. FREAR. You are employed at the Vancouver cut-up mill, I understand, Mr. Lenihan, in charge of the sales?

Mr. LENIHAN. Yes, sir. My headquarters are in Portland.

Mr. FREAR. You were engaged in making sales heretofore, since the armistice?

Mr. LENIHAN. Yes.

Mr. FREAR. As the material was gradually accumulated here?

Mr. LENIHAN. Yes.

Mr. FREAR. I wish you to inform the committee as to the method of making those sales that have taken place from time to time.

Mr. LENIHAN. First, the property was advertised through an agency known as Hall & Emery, I believe—a local concern.

Mr. FREAR. Here in Portland?

Mr. LENIHAN. Yes, sir. They conducted our advertising campaign; and the local papers, all the trade journals, and in the papers of Oregon and Washington and Idaho, and, I think, in Montana. That is, in the principal cities.

Mr. FREAR. Then what?

Mr. LENIHAN. Then it was more or less of a direct sale. We did, however, employ or make oral agreements with various brokers and dealers locally—people here in town. Not wishing to create a very extensive sales organization of our own, we took advantage of theirs and paid them a commission on sales originating and consummated by them.

Mr. FREAR. What was the commission?

Mr. LENIHAN. We paid them a varied commission; $7\frac{1}{2}$ per cent was the highest.

Mr. FREAR. And that was on how large sales?

Mr. LENIHAN. Well, that was on individual sales; principally on the major equipment only, such as donkey engines, locomotives, and locomotive cranes.

Mr. FREAR. And on what other material was the commission fixed?

Mr. LENIHAN. The miscellaneous equipment, such as small hardware and large hardware, was sold direct at the cut-up plant by our own salesmen.

Mr. FREAR. At what prices; and what was the method of determining values?

Mr. LENIHAN. Well, our prices averaged about 74 per cent of the cost. You must understand that about 90 per cent of that equipment was secondhand material—either secondhand or used. We took the market value and arrived at a price as near to it as we could in order to move the property rapidly.

Mr. FREAR. What has been the effect of this method of making sales so as to protect the Government to the best extent?

Mr. LENIHAN. That is, do you mean was that method better than accepting bids?

Mr. FREAR. Yes; better than accepting bids.

Mr. LENIHAN. I had an illustration this morning in one particular case. We had an offer on several items of that property. That bid was rejected, as 95 per cent of the bids have been. On that particular item we realized \$63,000 more on direct sales than we would have had we accepted the bid.

Mr. FREAR. How large a bid was that?

Mr. LENIHAN. That was a bid that amounted to \$128,000. Our selling price was \$194,625, and all of that property has been sold.

Mr. FREAR. Now, here is a paper that has been placed before the committee a few moments ago. Can you tell us about this?

Mr. LENIHAN. What is the name?

Mr. FREAR. The name of the party is M. Barde & Sons. Can you tell us approximately what was the cost or the inventoried value of that property?

Mr. LENIHAN. That property consisted principally of small tools and miscellaneous hardware, small and large hardware, you might

say. For instance, included in that item was something like fifteen or twenty thousand picks, secondhand picks, used picks. Oh, there may have been a few hundred new ones; yes. It was the same with shovels and axes and one thing and another that were used on these railroads in their construction. We fitted out, I should say, most of the contractors in this country; that is, the road contractors, with the small equipment, such tools as were included in the sale to M. Barde & Sons. We conducted that miscellaneous retail method of sale until practically all the contractors had been fitted out and road construction was well under way. Then we had a lot of this stuff left over, and we made a deal with M. Barde & Sons to take all of it, all the usable small and new and secondhand tools that we have left on hand, at a price of 55 cents on the dollar. That was practically the only market we had left in this locality, or practically in this country.

Mr. FREAR. Now, the 55 cents on the dollar, what was the dollar basis, inventory?

Mr. LENIHAN. No; on the jobber's price, what they could buy it for.

Mr. FREAR. Now, this advertising, which is in the form—

Mr. LENIHAN. It is rather a misleading advertisement.

Mr. FREAR. I was wondering about it. It says, "Probably \$1,000,-000 worth of new and used mill and logging supplies purchased by us at extremely low figure." This is in large type. It gives a photographic copy of their check for \$450,000.

Mr. LENIHAN. That was their original deposit on their original bid. They did \$2,500,000 on our entire equipment over there. To-day we have sold out of there over \$4,200,000 worth.

Mr. FREAR. Was this \$450,000 which was—

Mr. LENIHAN. That represented 20 per cent of the highest bid. Does that figure 20 per cent—it is something like that.

Mr. FREAR. What did they pay you for this material that was used, what was the amount?

Mr. LENIHAN. They have purchased from us in the neighborhood, I should say, of \$250,000 worth. We have actually received in cash in the neighborhood of \$250,000 to \$300,000 from Barde.

Mr. FREAR. Then their advertisement here that probably \$1,000,000 worth of new and used mill and logging supplies were purchased by them at an extremely low figure, which would be \$200,000, is an exaggeration?

Mr. LENIHAN. I should say that it is quite an exaggeration.

Mr. FREAR. I am willing to have your statement without getting any information from them, but we will mark this as an exhibit.

(Advertisement above mentioned received in evidence and marked "Exhibit No. 33, Lenihan, September 12, 1919.")

Mr. LENIHAN. To counteract the effect that had on the public, I sent letters to all the loggers and millmen and dealers to the effect that it was an erroneous statement and that it did not amount to anything like that, and that we still had a lot of material on hand.

Mr. MAGEE. They refer here to their purchase as a "big scoop." Did you see that?

Mr. LENIHAN. Yes; I saw that. I read it very carefully.

Mr. FREAR. As a big scoop on their competitors?

Mr. LENIHAN. No; they have very few competitors in that line. You understand that it is not like Chicago or the Eastern markets, where you can find a dozen parties that would be interested and could handle that amount of goods. I venture to say they could have bought that in at 30 cents on the dollar if they had held out probably another month or six weeks. I do not know whether that is information for the record.

Mr. FREAR. Did you, in fact, make any sales on competitive bids?

Mr. LENIHAN. I think there may have been probably half a dozen bids accepted.

Mr. FREAR. Competitive bids?

Mr. LENIHAN. Yes; we did sell some.

Mr. FREAR. On advertised competitive bids, I mean?

Mr. LENIHAN. No, sir.

Mr. FREAR. You did not advertise for competitive bids?

Mr. LENIHAN. No, sir; we sold a lot of secondhand wheelbarrows and that sort of stuff at auction. That was the only competitive bidding we had. That would probably run about \$200 or \$300 for a little item, or something of that kind.

Mr. FREAR. What was the percentage realized from those sales, compared with the jobber's price?

Mr. LENIHAN. I would not say it amounted to over—we got 10 per cent on that. Wheelbarrows, for instance, without a wheel. Just the odds and ends. After we had sold the stuff out and had this miscellaneous accumulation of stuff left we put it in a junk pile and got all the junk dealers here in town to come over and we let them bid for it.

Mr. FREAR. That would not be any larger percentage than the estimate salvage value on the Siems-Carey-Kerbaugh road?

Mr. LENIHAN. Well, sir, I am not familiar with that.

Mr. FREAR. You did not reach into the railroad?

Mr. LENIHAN. No, sir.

Mr. FREAR. You adopted this plan because you thought you would get as much from it as any other plan?

Mr. LENIHAN. I thought it was the most feasible thing at that time.

Mr. FREAR. Had you ever had experience in selling property of that kind?

Mr. LENIHAN. No, sir; not any.

Mr. FREAR. You simply came out here and was placed in charge as major?

Mr. LENIHAN. I did not make the decision.

Mr. FREAR. Who did make the decision?

Mr. LENIHAN. I presume that the board of directors. I was with this organization for a year and a half.

Mr. FREAR. You were with them?

Mr. LENIHAN. Yes.

Mr. FREAR. What was that?

Mr. LENIHAN. I was inspecting officer—manager of the inspection department.

Mr. FREAR. Where was that?

Mr. LENIHAN. Right here in Portland.

Mr. FREAR. What organization was that?

Mr. LENIHAN. The Spruce Production Corporation.

Mr. FREAR. I mean before you came here you had no experience?

Mr. LENIHAN. No.

Mr. FREAR. You came from Cleveland?

Mr. LENIHAN. Yes, sir.

Mr. FREAR. Several officials in this organization, I observe, came from the same place.

Mr. LENIHAN. There were two others, I believe—Hitchcock and Maj. Morley.

Mr. FREAR. And Eaman?

Mr. LENIHAN. No, sir; I think he is from Detroit.

Mr. FREAR. That is right; and Morley?

Mr. LENIHAN. Yes, sir; Maj. Morley.

Mr. FREAR. He is the one you mentioned?

Mr. LENIHAN. Yes, sir.

Mr. FREAR. I was just inquiring to ascertain on the part of the committee the method of making the sales.

Mr. MAGEE. It was Maj. Morley who impressed upon us the fact that he was a Republican, on several occasions.

Mr. FREAR. We have never inquired into the politics of people who have testified.

Mr. MAGEE. I mean that that was his voluntary statement.

Mr. LENIHAN. If you would like to have mine I am willing to testify.

Mr. FREAR. We did not want the witnesses to be put in the position of having to make that disclosure. The Australian ballot system is a sufficient protection. What I wanted to inquire was there any action of the directors in regard to these sales?

Mr. LENIHAN. No, sir.

Mr. FREAR. In anticipating them or confirming them?

Mr. LENIHAN. No, sir.

Mr. FREAR. Then, it was altogether left in your hands?

Mr. LENIHAN. Well, practically. Col. Stearns, of course, the president of the corporation, all sales contracts, all sales orders are signed by him as well as by myself.

Mr. FREAR. Of course, he had no greater experience than you had?

Mr. LENIHAN. I am not familiar with the experience of Col. Stearns at all. I doubt if he has had; I think he has been an Army officer all his life. I have had more or less experience with purchasing. I was in the shipbuilding business for a number of years, and you know what goes into a ship.

Mr. FREAR. That was before you came here?

Mr. LENIHAN. Yes, sir.

Mr. FREAR. Was that in Cleveland?

Mr. LENIHAN. No; in Manitowoc, Wis.

Mr. FREAR. You were engaged in the shipbuilding business there?

Mr. LENIHAN. Yes, sir.

Mr. FREAR. Who for?

Mr. LENIHAN. The Manitowoc Shipbuilding Co., Mr. Grear and Mr. Charles E. West.

Mr. FREAR. You purchased the supplies?

Mr. LENIHAN. I was purchaser, and stock man, and most everything at that time. It was rather a small plant.

Mr. FREAR. While you were connected with them, did you have anything to do with the disposal of property on hand, the selling of property?

Mr. LENIHAN. We never had any salvage.

Mr. FREAR. So you never had anything to do with this other end of it?

Mr. LENIHAN. No, sir.

Mr. FREAR. That is, as to the best method of realizing from sales. I am inquiring for the purpose of the record, because it seems to me that is something that ought to be made plain, as to the methods used.

Mr. LEA. What was your occupation before you went into the Spruce Production Division?

Mr. LENIHAN. I was a marine insurance broker.

Mr. LEA. What was the extent of this experience you had of buying, that you speak of?

Mr. LENIHAN. In Manitowoc, in the shipbuilding business?

Mr. LEA. Yes.

Mr. LENIHAN. Well, you know most everything seems to go into a ship, or into its construction, tools of all kinds and descriptions, pipefitting, boilers, engines, and we bought clothing, blankets, kitchen utensils, dining-room ware, and everything.

Mr. LEA. Now, you say that you did not determine the policies of sale here. Do you know who did determine the policies of sale?

Mr. LENIHAN. I did determine the policy of sales.

Mr. LEA. Oh, I misunderstood you, then.

Mr. LENIHAN. Of course I conferred with other men in the organization as to these policies.

Mr. LEA. Did you ever confer with Mr. Donovan?

Mr. LENIHAN. No, sir; not with the board of directors.

Mr. LEA. Do you know whether the board of directors had that matter of sales under consideration?

Mr. LENIHAN. I am not sure; I could not tell you, sir.

Mr. LEA. And from whom did you get your orders?

Mr. LENIHAN. From Col. Stearns.

Mr. LEA. Have you got the figures for the total amount of property of the corporation sold to date?

Mr. LENIHAN. No; the controller of accounts handles that. He informed me here a week or so ago that we had sold in the neighborhood of \$4,200,000 worth, realizing 74 per cent on the cost. That is all I can say.

Mr. LEA. That is all.

Mr. MAGEE. Maj. Lenihan, you have been connected with the sale of personal property here of the Spruce Production Corporation?

Mr. LENIHAN. Yes, sir.

Mr. MAGEE. You have had nothing to do with any realty or railroads?

Mr. LENIHAN. No, sir.

Mr. MAGEE. Now, can you tell us about the salvage percentage up to date on the sale of personal property of the Spruce Production Corporation?

Mr. LENIHAN. Why, I just stated that the comptroller informed me that it amounted to 74 per cent of the cost on the property that had been sold through my department up to date.

Mr. MAGEE. And the sales which have been made have met fully your expectations?

Mr. LENIHAN. I might say that I am very well gratified with the result, and as a matter of fact, I did not expect to realize that amount.

Mr. MAGEE. Well, that was the impression that I got from your work, and I want to congratulate you on it.

Mr. LENIHAN. Thank you, sir.

(Witness excused.)

Mr. FREAR. I wish to insert in the record a brief letter from W. M. Ladd, dated September 12, 1919, in which he makes some slight corrections in his testimony. There is no objection to it, as I understand.

(The letter referred to above is copied into the record in full as follows:)

HON. JAMES A. FREAR,
Chairman Congressional Investigation Committee,
Portland, Oreg.

DEAR SIR: Kindly make correction in my testimony, page 4246, eleventh line. Change year 1875 to year 1855, the date I testified.

On page 4248, your stenographer made a mistake in the month of August on the third line, first word. August should be January.

Page 4251, after the figures "\$13.75," please insert these words, which I think I gave in my testimony, "being 15 cents."

Yours, respectfully,

W. M. LADD.

Mr. FREAR. I think we will adjourn until 2 o'clock.

(Whereupon, at 12.30 o'clock p. m., the subcommittee took a recess until 2 o'clock p. m., this afternoon.)

AFTER RECESS.

The committee met, pursuant to the taking of recess, at 2 o'clock p. m.

TESTIMONY OF CHARLES E. DANT.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Your full name?

Mr. DANT. Charles E. Dant.

Mr. FREAR. Where do you live?

Mr. DANT. Portland.

Mr. FREAR. And how many years have you lived here?

Mr. DANT. More than 16 years.

Mr. FREAR. And your business is what?

Mr. DANT. Wholesale lumber dealer.

Mr. FREAR. And how long have you been engaged in that business?

Mr. DANT. Ever since I have been in Portland.

Mr. FREAR. To what extent is your business carried on? How large, I mean, are the operations of your business?

Mr. DANT. Well, we ship—I think we are the largest concern of our kind there.

Mr. FREAR. In Portland or in Oregon or Washington?

Mr. DANT. Well, either in Oregon or Washington.

Mr. FREAR. For illustration, what is the quantity of your shipments and the particular time—say, at the present time?

Mr. DANT. Well, take this month, we are making heavy shipments to China. I think that our shipments this month will amount to \$2,000,000.

Mr. FREAR. To China, or altogether?

Mr. DANT. Altogether.

Mr. FREAR. So that you have had some rather thorough understanding of lumber conditions out on the coast?

Mr. DANT. Yes, sir.

Mr. FREAR. During recent years?

Mr. DANT. Yes.

Mr. FREAR. You were interested in this matter of spruce production, were you, prior to our entering the war?

Mr. DANT. We were handling spruce, yes.

Mr. FREAR. For whom?

Mr. DANT. Well, we were getting it from different mills.

Mr. FREAR. I mean for whom? For other governments—foreign governments?

Mr. DANT. We were shipping to England and to France and to Italy before we entered the war.

Mr. FREAR. And what quantity, generally speaking? Could you determine, on the average, about how much you were shipping at that time?

Mr. DANT. Well, I don't know. It is quite a while back, but we shipped quite a number of million feet.

Mr. FREAR. To the various foreign governments?

Mr. DANT. To France and England mostly.

Mr. FREAR. Prior to the war, yes. Will you briefly give, for the benefit of the committee, the situation that arose; that is, after the war was declared with Germany by the Allies, and your own knowledge of the spruce situation as it developed.

Mr. DANT. Well, we sent a man over to England to find out what the requirements were.

Mr. FREAR. About what time was that?

Mr. DANT. That was in 1914.

Mr. FREAR. About the beginning of the war, or shortly after the beginning of the war?

Mr. DANT. Soon after the war began.

Mr. FREAR. Yes. Now, just briefly state what resulted.

Mr. DANT. They made up, or rather he found out that they wanted spruce over there and found out in what shape they wanted it. He then telegraphed some orders over here, or inquiries; we took it up with the mills.

Mr. FREAR. With the various mills through this section?

Mr. DANT. With the various mills, yes; got a price and cabled back, and the business commenced and was carried on during the latter part of 1914, 1915, and 1916, and into 1917.

Mr. FREAR. Well, during all that period you shipped lumber, did you—airplane lumber?

Mr. DANT. Yes, sir.

Mr. FREAR. To European countries?

Mr. DANT. Yes, sir.

Mr. FREAR. And I suppose there were others engaged in the same business, were there?

Mr. DANT. Several others; yes.

Mr. FREAR. Yes. After our Government got into the war, then what occurred, so far as the method of handling was concerned?

Mr. DANT. Well, then they prohibited the handling of spruce by private firms.

Mr. FREAR. Well, did they at the outset, or when was that?

Mr. DANT. Well, very soon—let me see. Very soon after we got in; yes.

Mr. FREAR. Yes; during the early summer of 1917 that would be?

Mr. DANT. Well, I think it was during the fall of 1917.

Mr. FREAR. That is what I was wondering, whether it was or not.

Mr. DANT. Yes.

Mr. FREAR. During the fall of 1917. And how was business undertaken then?

Mr. DANT. Well, the Spruce Production Division was formed and they took all the business over.

Mr. FREAR. Well, did you have any transactions with the department at Washington? I don't know whether you did or not.

Mr. DANT. None at all; no, sir.

Mr. FREAR. None at all. Now take it in 1915; I notice a statement by a Mr. Harter; I asked you for a brief statement of what occurred.

Mr. DANT. Yes.

Mr. FREAR. And about increasing the output, and financing the mills, and so on. Will you briefly state just what was done at that time, or prior to that.

Mr. DANT. Well, Mr. Harter came over here from London and gave us some pretty good size orders for spruce, which we in turn made advance payments on to the mills, so they could go ahead and make arrangements to get the spruce out.

Mr. FREAR. That is, you were helping to finance them?

Mr. DANT. Yes. We did considerable, or some of that—considerable of it.

Mr. FREAR. Now what were you handling airplane lumber for at that time?

Mr. DANT. What margin of profit?

Mr. FREAR. Yes. What margin of profit, in 1915?

Mr. DANT. Why, we got on some of it 5 per cent, some of it \$5 a thousand.

Mr. FREAR. And about what was the price at that time? It varied, did it?

Mr. DANT. \$65.

Mr. FREAR. \$65 a thousand for airplane?

Mr. DANT. Airplane lumber; yes.

Mr. FREAR. Was that finished airplane lumber?

Mr. DANT. No; it was rough, cut to the specifications that were furnished us by England and France.

Mr. FREAR. And that was shipped to England and finished there, was it?

Mr. DANT. Shipped to England and finished there; yes.

Mr. FREAR. Or European countries?

Mr. DANT. Yes.

Mr. FREAR. During the war and before we entered did you make any efforts to secure the timber that could be used for cutting spruce? For instance I refer you to the Blodgett tract.

Mr. DANT. We had various propositions up; yes. That was one of them.

Mr. FREAR. And that was for what purpose?

Mr. DANT. Well, to try and increase the output of spruce, get people interested—manufacturers and loggers.

Mr. FREAR. Now, what was the first change that was noted in regard to this, so far as Portland was concerned? Mr. Disque came out here, or Col. Disque?

Mr. DANT. Yes; Col. Disque came out here, and then they shortly after that prohibited the shipments by private concerns. Our contracts were all cancelled.

Mr. FREAR. Well; but prior to that you had been shipping, had you not?

Mr. DANT. Oh, yes; we had been shipping right along.

Mr. FREAR. That is, up to the time he came here?

Mr. DANT. We shipped right up to the time that he came.

Mr. FREAR. Do you know what the reason was that you stopped then after he came?

Mr. DANT. Well, he wanted to take it all over, to handle it all through his own office.

Mr. FREAR. That is, you were advised to that effect, were you, or what?

Mr. DANT. Yes, we were advised to that effect. The mills were advised not to make any further shipments to us or to anyone.

Mr. FREAR. I see. So, after that time it was undertaken entirely by his organization?

Mr. DANT. Undertaken by his organization; yes, sir.

Mr. FREAR. Did you furnish any after that time?

Mr. DANT. No, sir.

Mr. FREAR. Were you able to? Could you have furnished it, based on your experience in the past?

Mr. DANT. We could have continued to furnish it the same as we had been; yes, sir.

Mr. FREAR. I don't know whether it appears, or whether you are able to give the figures of how many million feet you were furnishing a year prior to the time this order went into effect.

Mr. DANT. Well, I really could not tell you. I could guess at it, but it was over quite a long period of time and we were shipping all the time all we could get.

Mr. FREAR. Well, it was over a million feet a year, was it?

Mr. DANT. Oh, yes; several million feet a year.

Mr. FREAR. What about the riving proposition that was first decided upon, and what was your judgment of that? You are familiar with all the phases, are you, of logging and lumbering?

Mr. DANT. Well, I am not a logger, nor I am not a manufacturer, but I am quite familiar with it. I am in touch with loggers and lumbermen.

Mr. FREAR. And with the production of lumber?

Mr. DANT. And with the production of lumber; yes, sir.

Mr. FREAR. That is, I suppose anyone engaged in the operations you have been would have an understanding. What of that riving operation that was started?

Mr. DANT. Well, I think some time in 1915 I heard something about riving.

Mr. FREAR. That is, before we entered the war?

Mr. DANT. Yes; and Mr. Ayer and Mr. Van Duzer, and myself talked the matter over, and Mr. Ayer got some logs and tried to rive them and see how it would work and decided that it was not practical.

Mr. FREAR. Mr. Van Duzer is one of the members of the advisory committee that was appointed on fir?

Mr. DANT. Yes, sir.

Mr. FREAR. Well, how long a period did that riving operation continue, if you know—about how long?

Mr. DANT. That is, under Col. Disque?

Mr. FREAR. Yes.

Mr. DANT. Well, I don't know, but they were talking about it for several months.

Mr. FREAR. It finally was——

Mr. DANT (interrupting). Abandoned, I think?

Mr. FREAR. Abandoned, and they undertook a different plan.

Mr. DANT. Yes, sir.

Mr. FREAR. Can you tell me in a general way about what the milling capacity is of the Oregon and Washington manufacturers of lumber?

Mr. DANT. Well, the last figures that I remember was about 2,000,000,000 feet in Oregon and 4,000,000,000 feet in Washington, annually.

Mr. FREAR. That is, the manufacture.

Mr. DANT. Manufactures; yes, sir.

Mr. FREAR. The statement contained in the Spruce Production book is to the effect that the possibilities run to about 30,000,000 feet in an 8-hour shift a day in the mills that are in existence in Washington and in Oregon.

Mr. DANT. 30,000,000 feet?

Mr. FREAR. Yes.

Mr. DANT. Well, that would be 7,500,000,000.

Mr. FREAR. Yes.

Mr. DANT. It is larger than I thought.

Mr. FREAR. And on two shifts, it would be possible to increase the output to 60,000,000,000 feet a day?

Mr. DANT. 60,000,000 feet a day.

Mr. FREAR. 60,000,000 feet a day.

Mr. DANT. Approximately that.

Mr. FREAR. Approximately that. Now there were something like 317,000,000 feet of spruce produced in 1916 and 1917, if I remember correctly the figures about that. That would leave or give about 5 days out of the 300 working days of time that would be occupied in milling that spruce, would it not, providing the mills were entirely devoted to it during that period?

Mr. DANT. I think that is correct.

Mr. FREAR. That is just simply to make the matter of record. With the remaining 295 days could there have been some further sawing and manufacturing of spruce lumber or fir lumber for airplane purposes?

Mr. DANT. There was always an abundance of sawing capacity—more sawing capacity all the time than was necessary.

Mr. FREAR. Well, those figures are approximately right, aren't they, upon the basis given?

Mr. DANT. Yes.

Mr. FREAR. Now that would be less than about $2\frac{1}{2}$ per cent, or less than 2 per cent, figuring on the basis named, of the milling capacity, devoted to the cutting of spruce; taking it at the maximum capacity, that is what I mean to say, from that 317,000,000 feet of spruce would be contained into 7,000,000,000 feet.

Mr. DANT. Yes.

Mr. FREAR. Less; or about 2 per cent.

Mr. DANT. It is always only—it is only a small part of the total.

Mr. FREAR. It is rather insignificant, isn't it?

Mr. DANT. Yes.

Mr. FREAR. Prior to the time that airplane products became necessary?

Mr. DANT. Yes.

Mr. FREAR. So that if the mills had been utilized the other 98 per cent of the output could have been turned into spruce and fir, could it not, to whatever extent was deemed necessary?

Mr. DANT. I think so.

Mr. FREAR. Do you know anything about the disposition of the lumbermen here on the coast, or those running the mills, whether there was any willingness on their part to undertake this?

Mr. DANT. They were all willing to do everything they could.

Mr. FREAR. All willing to produce spruce?

Mr. DANT. Yes.

Mr. FREAR. And help in every way they could. The production of two mills, one at Toledo and one at Port Angeles, was estimated at something like 600,000 a day, I believe. That would be practically an insignificant proportion of the total cut?

Mr. DANT. A very small amount.

Mr. FREAR. Yes. I think it is figured in the book at 2 per cent. So that the addition of those mills was so insignificant it had but very little bearing?

Mr. DANT. Yes, sir.

Mr. MAGEE. You didn't get an answer to it.

Mr. FREAR. Your answer was what?

Mr. DANT. Yes, sir.

Mr. FREAR. Now, what were the prices of airplane lumber, finished airplane lumber—state, if you know—fixed at the early part of the war by the authorities?

Mr. DANT. I didn't keep very close touch with it after we were out of it. The only price that I am sure of is a price that they fixed at \$105 per thousand.

Mr. FREAR. That was the average price?

Mr. DANT. Yes.

Mr. FREAR. Between one hundred and fifty and sixty for the two different grades?

Mr. DANT. I think so; yes.

Mr. FREAR. Well, at that price was it remunerative for millmen to have produced?

Mr. DANT. Yes; I think it was.

Mr. FREAR. And if they had not been willing to produce there was the power that existed in the Government to direct its attention toward them and urge them to. But, as I understand, they were all willing?

Mr. DANT. They were all willing to produce.

Mr. FREAR. Yes. Did you have a conversation or did you have any negotiations with any of the officers of foreign Governments at any time regarding the cutting of spruce lumber, furnishing spruce lumber?

Mr. DANT. I had a conversation with Col. Beckett, who was sent over here by the British war mission, and also with Lieut. Jean Holland.

Mr. FREAR. Holland?

Mr. DANT. Holland; yes; of the French high commission.

Mr. FREAR. How do you spell that name?

Mr. DANT. H-o-l-l-a-n-d.

Mr. FREAR. Holland?

Mr. DANT. Yes; Holland; of the French high commission.

Mr. FREAR. In regard to the airplane production?

Mr. DANT. In regard to the kind of lumber that was being shipped to him by the Spruce Production Board.

Mr. FREAR. Now, with whom was this conversation that you speak of?

Mr. DANT. With Lieut. Holland.

Mr. FREAR. And when was that conversation?

Mr. DANT. Well, that must have been in the early part of 1918.

Mr. FREAR. And whereabouts?

Mr. DANT. Well, here in Portland.

Mr. FREAR. He was here?

Mr. DANT. He was here; and he and I and Col. Beckett went out to Crown Point. I took him out on the highway to show him the highway.

Mr. FREAR. Col. Beckett was the English officer you spoke of?

Mr. DANT. Col. Beckett was the English officer I spoke of.

Mr. FREAR. What was said, if anything, about the shipments that were being made at that time?

Mr. DANT. Well, Lieut. Holland was very much discouraged with the kind of lumber that was being shipped and was out here to make an effort to get it changed, and he said that unless he could get it changed that he would go at once back to France and take it up with Gen. Pershing, and if he was unable to get it changed then that he would resign, because he would not face his superiors in France after having been sent over here to get lumber that they could use and have them piling up the docks in France with stuff that was not usable.

Mr. FREAR. Why wasn't it usable? Was any reason given?

Mr. DANT. It was cut up in the wrong shape and it would check and break.

Mr. FREAR. Explain to the committee what you mean by checking.

Mr. DANT. Well, on the flat-grain side of a piece, if it is struck by the sun it will immediately open up—open up checks. These pieces were cut up in wing-beam sizes, and they were so small that if the check was any place in a wing beam the wing beam was ruined.

Mr. FREAR. That is what he meant by checking, is it?

Mr. DANT. Yes. What he wanted was larger pieces, so they could trim out these checks and get—

Mr. FREAR (interrupting). Now, when you say a larger piece, as your hands indicate, the reporter don't get it. You mean how large pieces in dimensions?

Mr. DANT. Yes; pieces 4 to 6 inches thick.

Mr. FREAR. That is it. Yes.

Mr. DANT. And 8, 10, or 12 inches wide, with a vertical grain face which would not check.

Mr. FREAR. Now, what proportion did he say of the lumber shipped was unfit for use, or did he give any proportion?

Mr. DANT. He said that not more than 15 per cent of the stuff coming from the cut-up plant could be used.

Mr. FREAR. From what cut-up plant?

Mr. DANT. The Vancouver cut-up plant.

Mr. FREAR. Now, at what time was this?

Mr. DANT. This was in 1917.

Mr. FREAR. At what time in 1917?

Mr. DANT. Oh, last year.

Mr. FREAR. You mean 1918?

Mr. DANT. 1918.

Mr. FREAR. What time in 1918?

Mr. DANT. Well, it was in the spring or summer; I don't remember just exactly when.

Mr. FREAR. When they were here?

Mr. DANT. I don't remember just when they were here.

Mr. FREAR. Do you remember whether thereafter the method of cutting was changed at the Vancouver plant?

Mr. DANT. Soon after—Lieut. Holland also took this matter up with Mr. Van Duzer, of the Fir Production Board.

Mr. FREAR. You represented—

Mr. DANT (interrupting). Who was furnishing the Douglas fir cants to the Vancouver plant.

Mr. FREAR. I see.

Mr. DANT. And he told Mr. Van Duzer the same as he told me; that the stuff they were shipping was not usable; and Mr. Van Duzer promised to use his best efforts to have it changed, which he did try to change it.

Mr. FREAR. Yes.

Mr. DANT. But the change that was made was not made properly and was not much more satisfactory, if any, than the first.

Mr. FREAR. How did you gather that understanding?

Mr. DANT. Well, they shipped the cants with a flat-grain face and they would still check. They made them wide, but still with a flat-grain face, and they would check up and be in a bad condition when they got there.

Mr. FREAR. Well, that was a fault that was due to the method of manufacturing, was it—of turning out the lumber?

Mr. DANT. They were simply turning it out wrong; yes.

Mr. FREAR. Now what had been your plan prior to that, I mean the interference, of giving your orders?

Mr. DANT. The way to ship it was the way the people in England ordered it shipped, and the people in France.

Mr. FREAR. And how was that?

Mr. DANT That was 3 to 6 inches thick, 8 to 12 or 14 inches wide, with a vertical-grain face.

Mr. MAGEE. It was a simple matter, wasn't it, to cut in that way?

Mr. DANT. Yes, sir.

Mr. MAGEE It had just as well be cut that way as any other?

Mr. DANT. Just as well. That is the way they took it; that is the way they wanted it.

Mr. FREAR. Well, what further conversation did you have with Lieut. Holland with regard to it, or what further understanding was had between you, and if so on what based?

Mr. DANT. Well, there was nothing I could do. The only thing I could do for Lieut. Holland was to try and help him get the lumber in the way that he could use it, which I did try to do.

Mr. FREAR. That is, by what means?

Mr. DANT. I took it up with Mr. Van Duzer, who was well acquainted with Col. Disque, and asked to try and bring pressure in some way to get this lumber in a shape that they could use it.

Mr. FREAR. Now, did he mean that there was only 15 per cent that was usable when it got over there or when it left the plant, or what? Or did he state that?

Mr. DANT. When it got over there.

Mr. FREAR. When it got over there. And were they getting lumber any other place, or do you know—was anything said about that—from this country?

Mr. DANT. All they were getting was the old lots that various exporters had, like ourselves. We had, for instance, a hundred or a hundred and twenty-five cars on the Atlantic coast, and we kept getting those forward from time to time as fast as we could get space, and other lots at Halifax and Nova Scotia that the Ocean Lumber Co. had kept going forward; so they kept getting some of that all the time.

Mr. FREAR. What did he say, if anything, as to that lumber that had been cut by private individuals?

Mr. DANT. That lumber he could use. It was in the shape that he wanted it.

Mr. FREAR. Do you know anything about Capt. Blain being here?

Mr. DANT. Well, that wasn't in connection with the spruce.

Mr. FREAR. Oh, that was in regard to the shipyards. That is right. Did you have any connection at all with Col. Disque personally?

Mr. DANT. Well, no.

Mr. FREAR. In regard to the airplane lumber?

Mr. DANT. I tried to see him different times, but I was never able to see him but once.

Mr. FREAR. Do you know whether or not the change in methods that was brought about by his organization affected the production of lumber by the various mills throughout this section?

Mr. DANT. Is slowed it up.

Mr. FREAR. Why?

Mr. DANT. Well, he didn't understand what he was doing—very well, at least; and there were many orders issued up there that one order would come out and then there would be another one.

Mr. FREAR. That is, you mean contradictory orders?

Mr. DANT. That is what the millmen claimed. I didn't get the orders.

Mr. FREAR. No. I was trying to get your understanding of it. Do you know to what extent it was slowed up? I don't mean by the actual production, but I mean to what extent it affected the millmen who were interested and desirous of helping?

Mr. DANT. I couldn't tell you to what extent.

Mr. FREAR. Just a moment. You keep your seat. Mr. Gabrielson, a moment. I am showing you a letter attached to the papers here and ask where you secured the copy that that purports to be?

Mr. GABRIELSON. I received that in the official Potter-Ryan files in Washington.

Mr. FREAR. In the Aircraft Division?

Mr. GABRIELSON. Yes; the Aircraft Division of the Army.

Mr. FREAR. Is that a correct copy of the official record there?

Mr. GABRIELSON. Yes, sir; this is the copy that I made.

Mr. FREAR. You spoke of Lieut. Holland having made this statement to you and about his discouragement, as you expressed it, or disappointment?

Mr. DANT. Yes, sir.

Mr. FREAR. I read in the record a letter which has just been identified by Mr. Gabrielson in the committee's employ, a letter dated May 25, 1918, Versailles, France, from Gen. Belin to Gen. Tasker Bliss, United States.

Mr. LEA. What date is that?

Mr. FREAR. That is dated May 15, 1918. The quotations are as follows: "Before the United States entered the war, shipments of wood for airplanes took place by means of the ordinary mechanism of orders placed with private American firms, either by French manufacturers or, later, by the French Government. After the United States entered the war, control was taken over by the Government, which resulted in substituting a central organization, the only contractor abroad, for private American establishments. These measures did not succeed in entirely stopping shipments ordered of private American firms although they decreased them to a considerable extent and without replacing them, so far, by regular Government shipments.

"Whether this state of affairs is due to a slackening in American production, difficulties in railway transportation, and insufficient number of vessels chartered for the transportation of wood, measures taken by the United States to safeguard her own war supplies, or whether it is due to all these causes together, the fact remains that the first shipments of wood under the control of the American Government (arrivals distributed among the Allies from December, 1917), did not begin until early in March, 1918, and then only in a totally inadequate manner.

"Supplies of wood for the Air Service from September, 1917, until March, 1918, were thus entirely due to the remains of private importation. The gaps in the shipments during the last few months have seriously compromised the situation of aviation production and the situation of the Air Service is consequently such that the least thing may make a very serious matter of it."

That letter confirms, in a way, the statement that was made to you by Lieut. Holland from this general. Do you know what his position was—Gen. Belin, in France?

Mr. DANT. I don't.

Mr. FREAR. You don't know. And that is also in support of the same position taken this morning, of the British officer who was discussing with Douty the situation. I wish to put that in the record.

What other matters, Mr. Dant, occur to you as having an important bearing upon the question which is now before the committee; this matter of spruce production as it existed during the war?

Mr. DANT. This is always spoken of as spruce. I presume you know that when the spruce almost stopped coming, or slackened up, that they put in a large amount of Douglas fir?

Mr. FREAR. Now, when was that; what time did that occur, that they began putting in Douglas fir; did they do that before we were at war; I mean were you shipping fir—

Mr. DANT. No.

Mr. FREAR. To foreign countries?

Mr. DANT. After we were stopped in shipping spruce—

Mr. FREAR. That is in the spring of 1918?

Mr. DANT. Yes.

Mr. FREAR. Yes.

Mr. DANT (continuing). We thought that they could probably use fir.

Mr. LEA. I just want the record straight. Wasn't that in the fall of 1917? I simply suggest that.

Mr. FREAR. Yes; I misspoke myself. You said along about September.

Mr. DANT. So we arranged to have one of the mills—Mr. Ayer—get out a carload of fir, vertical grain fir, 18 feet and longer, and through the help of Mr. Philip Suter, British lumber inspector, we got that carload of fir in London very promptly. We sent it overland to Boston and got it on a Leland liner and got it through to London very quickly, with the result that we received a cable to ship about a hundred carloads. It amounted to something over a hundred carloads of this fir.

We started out to ship the fir as promptly as possible, and as soon as the fir or the Spruce Production Board found out that we were shipping this fir, they issued an order stopping us and took the fir over themselves.

Mr. FREAR. That was the first fir, so far as you know, that had been ordered abroad and shipped from here?

Mr. DANT. I believe that is the first.

Mr. FREAR. And that was undertaken as a private enterprise.

Mr. DANT. Well—

Mr. FREAR. That is, ordered from private parties. Well, before the armistice was signed, the production of fir did reach a very large proportion of the total, did it not?

Mr. DANT. Yes; probably a larger proportion than it might seem from the shipments, for this reason, that I understand that fir was only shipped in wing beams, while the spruce, they took various parts of the airplane out of spruce; but I think they shipped only wing beams in fir—

Mr. FREAR. If fir and spruce had been—

Mr. DANT. Up until the last.

Mr. FREAR. If orders had gone out to private mills to ship fir and spruce early in 1918 or in the fall of 1917, and with those mills having a capacity, as you have stated, or as appears in the record, of 60,000,000 feet of cutting a day, that ought to have provided—

Mr. DANT. There was never any trouble about getting plenty of stuff; there was not any trouble about that.

Mr. FREAR. What do you mean by that then?

Mr. DANT. Why, they could furnish more fir and spruce than they could possibly use at any time.

Mr. FREAR. What was the reason that they didn't, in your judgment?

Mr. DANT. Well, they furnished enough, but they didn't furnish it right. They shipped plenty, but they didn't ship it in the right shape.

Mr. FREAR. It is claimed they did not furnish enough, too; but if they had wanted to, they could have increased the amount of shipments many times over, could they not, if those figures are accurate and the work had been put upon the airplane stuff?

Mr. DANT. They could have shipped much more than they did, yes.

Mr. FREAR. Double it, treble it, couldn't they?

Mr. DANT. I think they could, yes.

Mr. FREAR. Because they were only occupying 2 per cent of the time in sawing spruce prior, during the years 1916—

Mr. DANT. They could have increased the fir.

Mr. FREAR. They could have increased the fir immeasurably?

Mr. DANT. Yes.

Mr. FREAR. You have stands of many billion feet of fir, haven't you, out here?

Mr. DANT. Yes.

Mr. FREAR. How many billion feet?

Mr. DANT. Well, something like five to seven hundred billion feet in Oregon.

Mr. FREAR. Of timber of all kinds?

Mr. DANT. In Oregon.

Mr. FREAR. In Oregon alone, and then Washington has a large stand.

Mr. DANT. Two to three hundred billion.

Mr. FREAR. You could get three hundred billion, and that would have been enough to have shipped to any army, in view of the fact that not over 15,000 planes of all kinds, or less than that, were, I think, engaged altogether on both sides. It takes, as I understand, between—do you know how much it takes for an airplane?

Mr. DANT. Depends on the kind of airplane.

Mr. FREAR. Well, now, take the Spad, which is the fighting plane used by Richenbacher and many of the other American aviators—the French Spad.

Mr. DANT. It only takes a small amount. I could not tell you the feet.

Mr. FREAR. About six or seven hundred feet.

Mr. DANT. Something like that, I should say, I don't know exactly.

Mr. FREAR. You don't know. It is only a small amount, proportionately, so the question of production did not enter into it, as I understand.

Mr. DANT. I never thought that it did.

Mr. FREAR. Surely, if the Government had undertaken it and pursued the plan that was pursued in Canada, the production could have been largely augmented.

Mr. DANT. Well, I really don't know much about what they——

Mr. FREAR. Do you know Pendleton?

Mr. DANT. No, sir.

Mr. FREAR. You don't know anything about the conditions up there?

Mr. DANT. I was up there, but I haven't any close knowledge of it.

Mr. FREAR. Is there anything further that occurs to you?

Mr. DANT. No, sir.

Mr. FREAR. I guess that is all.

Mr. LEA. Do you remember what date this was when Mr. Holland was out here?

Mr. DANT. Well, I don't. It might have been in the spring, it might have been in the summer.

Mr. LEA. Of 1918?

Mr. DANT. Yes.

Mr. LEA. Do you know whether he was here more than once?

Mr. DANT. Well, he was here and in Seattle.

Mr. LEA. How long did he remain out here?

Mr. DANT. Oh, he was around here for some weeks; may have been only two weeks, may have been longer.

Mr. LEA. What was the capacity in which he was here?

Mr. DANT. He came here representing the French High Commission and especially the lumber, looking after their lumber requirements for airplanes.

Mr. LEA. Now, as to the shipments that occurred and whether or not they fell down, have you specific figures on that?

Mr. DANT. I have some figures, yes. I haven't them with me.

Mr. LEA. Well, now, with reference to what time do you say that these shipments fell down?

Mr. DANT. Wait a minute. [Examining paper.] Not in this letter.

Well, let's see, they commenced to—when they commenced to change the specifications, then the shipments fell down.

Mr. LEA. The specification change was agreed on by the Allies, wasn't it; the United States and the Allies got together and drew up the specifications that were to govern?

Mr. DANT. I don't know about that.

Mr. LEA. And the timber that was cut here was in accordance with the agreement that they made, and subsequently they changed it; isn't that the way you understand it?

Mr. DANT. There were certain men went to Washington and agreed on a new specification. Whether the Allies—how much the Allies had to do with that I do not know.

Mr. LEA. I see. Well, that is in evidence already. Do you remember about when that was that the specifications were changed?

Mr. DANT. It was—when did Col. Disque get here?

Mr. LEA. I think it was about the 15th of November, the first time, and then he returned about the 1st of December, approximately.

Mr. FREAR. Somewhere along November or December.

Mr. DANT. Yes. Well, it was soon after that.

Mr. LEA. Before that time a great deal of G list of materials had been shipped?

Mr. DANT. Yes.

Mr. FREAR. And a very large proportion of that was rejected for airplane use, wasn't it?

Mr. DANT. No, sir.

Mr. LEA. Have you any record of the amount of rejections of that?

Mr. DANT. I only have the words of people coming over here, back and forth from London and from France, that the quality being shipped was satisfactory.

Mr. LEA. Well, do you claim that a larger percentage of this lumber in 1917 was usable than it was in 1918?

Mr. DANT. I claim that a larger percentage of the lumber shipped by private concerns in 1917 was usable—and prior to that time—than was usable from the cut-up plant.

Mr. LEA. Do you know the total amount shipped by the private concerns before the Spruce Production Division was instituted?

Mr. DANT. No, I don't. I don't think any one does.

Mr. LEA. Well, now, a good deal of what you have said here about that is your general knowledge of it, but not so much on the specific facts as to amounts, isn't it?

Mr. DANT. Well, I don't know just what you refer to. If you will be a little more specific—

Mr. LEA. Yes; about the amount of rejections.

Mr. DANT. As I say, I have the word of people that were engaged in the business, going back and forth between here and England and France.

Mr. LEA. Did they ever submit an official report to you about the amount of rejections?

Mr. DANT. No, sir.

Mr. LEA. And do you know whether or not there is such a report in existence?

Mr. DANT. I don't think that there is such a report.

Mr. LEA. What I meant, as to these Government shipments. I presume there is no report—no official report—on private shipments.

Mr. DANT. Not that I know of.

Mr. LEA. Now, Mr. Holland, in speaking about these specifications, didn't tell you who had prepared them, did he?

Mr. DANT. Who had prepared these specifications?

Mr. LEA. Yes.

Mr. DANT. No, sir.

Mr. LEA. Now, do you know what date the cut-up plant began operations?

Mr. DANT. I do not.

Mr. LEA. Now, are you sure that any of this conversation was directed to the product of the cut-up plant?

Mr. DANT. Yes, sir; because he went to the cut-up plant from our office.

Mr. LEA. Did he say that the product from the cut-up plant had arrived on the other side of the water before he had left the other side?

Mr. DANT. He said that the stuff arriving in France was not—could not be used to any more than the extent of 15 per cent.

Mr. LEA. But you know, of your own knowledge, that no material from the cut-up plant arrived in Europe during the winter of 1917 and 1918?

Mr. DANT. Of 1918?

Mr. LEA. 1917 and 1918.

Mr. DANT. I didn't say that it did arrive in the winter. I said that he was here in the spring or summer.

Mr. LEA. Well, what I was getting at, Mr. Dant: I thought you might be mistaken as to the cut-up plant material.

Mr. DANT. No, sir; I am not.

Mr. LEA. Don't infer anything improper about this at all, because these things happened a long while ago.

Mr. DANT. Yes.

Mr. LEA. But I wanted to see how definitely—how certain you were as to whether that was really the cut-up plant material.

Mr. DANT. Well, they changed their specifications at his request, so, if the stuff had been satisfactory why would they change it?

Mr. LEA. Well, it was changed; there is no doubt about that.

Mr. DANT. Yes.

Mr. LEA. But it was changed before the cut-up plant material had arrived in Europe.

Mr. DANT. Well, the cut-up plant had been running quite a long while when he arrived here.

Mr. LEA. You say it was late in the winter before the cut-up plant was set up.

Mr. MAGEE. The cut-up plant got in operation about the middle of February, 1918.

Mr. LEA. Yes.

Mr. DANT. The stuff must have been arriving in France.

Mr. LEA. It began operation in February, about the 15th, I think.

Mr. DANT. In the spring or summer?

Mr. LEA. Yes; it arrived there early in the spring.

Mr. FREAR. Let me interject a question at this time. Were priorities given to shipments of airplane lumber?

Mr. DANT. Yes, sir.

Mr. FREAR. And about what would be the time occupied in shipping from here to European countries, if you know? That may help.

Mr. MAGEE. I think Gen. Belin's letter here speaks of the airplane stuff arriving from the Spruce Production in—

Mr. FREAR. I was wondering if you knew about the length of time?

Mr. DANT. If it went right through, it might go through in 20 days; it might be much longer, depending on the connection with boat, etc.

Mr. LEA. Yes. Well, undoubtedly there was time enough for it to arrive in the early spring in 1918.

Mr. DANT. Yes.

Mr. LEA. I think that is all. Oh, do you recall when you first shipped lumber—airplane lumber to Europe, after the war began?

Mr. DANT. Well, it must have been along near the end of 1914 or the first of 1915. That is only from recollection.

Mr. LEA. You shipped as early as anybody did from here, probably?

Mr. DANT. Yes, sir.

Mr. LEA. And did you ship directly to the English Government, or to private agencies?

Mr. DANT. We shipped to importers in England.

Mr. LEA. I think that is all.

Mr. MAGEE. You think, Mr. Dant, if I understand you, that the production would have been reasonably sufficient if the lumber had been cut as the French wanted it?

Mr. DANT. I think it would have been much larger than what it was.

Mr. MAGEE. You spoke of 15 per cent. Now, do we understand from that that the other 85 per cent, according to your contention, was not usable for airplane production?

Mr. DANT. Here is what happened: Now, for instance, you put it on the car here and you ship it to Boston, say, and then it is taken off there and it is laid out on the docks. The minute the sun strikes it, it opens up if it has the flat grain surface. Then it is grabbed up with chains and big slings on the steamer and it is dropped down into the hold of a steamer, and then it goes over to France or England, and it is taken with these chains again and it is yanked up out of the hold. Then it is put on the docks in France. The pieces they were shipping were so small, being the wing-beam sizes, that they would not stand that rough handling, nor would they stand to have any checks in them.

Mr. MAGEE. Not big enough?

Mr. DANT. Yes; it was too small. When it once checked, it was ruined, where, if you had a large piece, 4 to 6 or 8 inches thick and 8, 10, 12, 14 inches wide, even if it did check a little on a piece, they could cut that off.

Mr. MAGEE. Yes; I understand that.

Mr. DANT. They could cut that off and then they could take the larger wing beams off.

Mr. MAGEE. What I am getting at, is it your contention that they could use only 15 per cent of it, cut in that way.

Mr. DANT. In the way that they cut it, yes; as though they—

Mr. MAGEE. And that the other 85 per cent was worthless for aircraft purposes?

Mr. DANT. Yes.

Mr. MAGEE. What would you say if a car or ship load of lumber had been cut in the way that you say it was cut before the Spruce Production Division began to cut it, what percentage of that would have been proper to use for aircraft purposes?

Mr. DANT. Sixty to seventy-five per cent.

Mr. MAGEE. Now, do you know anything about spruce stands in this country here in the Northwest?

Mr. DANT. Well, I know something about them; yes.

Mr. MAGEE. Do you know whether or not there is any spruce in the Siletz Basin?

Mr. DANT. Yes, sir.

Mr. MAGEE. What do you say as to that?

Mr. DANT. Fine spruce.

Mr. MAGEE. What knowledge have you there? Now, there was evidence given by Mr. Benson here yesterday—Mr. Amos Benson, and by Mr. McDonald, which would lead one to believe that the

Siletz Basin, so far as spruce is concerned, is well on toward being a Sahara Desert. What do you know about it, of your own knowledge?

Mr. DANT. Well, coming down to my own knowledge, I don't know an awful lot about it. We own some spruce over there. The land that we own is pretty well covered with spruce. I think we have—I think that on the land that we own it is mostly spruce.

Mr. MAGEE. Well, other witnesses that have come up here place in the Siletz Basin a minimum of 550,000,000 feet of lumber—spruce—and a maximum of a billion feet, and the committee had been led to believe, at least the impression is made upon my mind, that in the Siletz Basin was one of the best spruce stands in the Northwest, or in the State of Oregon.

Mr. DANT. The spruce that we own over there is good.

Mr. MAGEE. What is the common understanding, if I may ask you that, as to whether or not it is regarded as one of the best spruce stands in the State of Oregon or the Northwest or the United States, or whether it is not?

Mr. DANT. It is regarded as a first-class lot of spruce—a good deal of it is.

Mr. MAGEE. A large amount of good spruce there for aircraft purposes?

Mr. DANT. I don't think there is any doubt about that.

Mr. MAGEE. Is it regarded as one of the best spruce stands here in the Northwest?

Mr. DANT. I have always understood that it was; yes, sir.

Mr. MAGEE. Now, you stated that you never had been able to see Gen. Disque but once, although you had tried several times. What do you mean by that?

Mr. DANT. Well, he was always busy, or would refuse to see you.

Mr. MAGEE. Well, did he refuse at any time to see you?

Mr. DANT. Yes.

Mr. MAGEE. When was that?

Mr. DANT. Oh, I don't know exactly when, but——

Mr. MAGEE. Here in Portland?

Mr. DANT. Yes, sir.

Mr. MAGEE. On more than one occasion?

Mr. DANT. Yes; at least two or three occasions.

Mr. MAGEE. Did you ever have any words with him, or trouble with him, or anything of that sort?

Mr. DANT. Well, he regarded all importers or middlemen—he didn't want anything to do with them at all, apparently.

Mr. MAGEE. I think that is all.

Mr. FREAR. That just reminds me of a shipment of a million feet here, that, as I now recollect, was called for, and you said you would be able to secure it in a very brief time, with your knowledge of production. Is that contained in here?

Mr. DANT. I don't remember what you are referring to.

Mr. FREAR. I have got that impression. I will see if I can find it. Go on.

Mr. LEA. Did any of the orders you had pending at the time the embargo was placed on middlemen—were any of those reinstated?

Mr. DANT. No, sir.

Mr. LEA. So that from the time that order went into effect you were deprived of any profits in your business on account of this spruce shipment to Europe?

Mr. DANT. As a matter of fact, by this embargo going into effect, we were relieved of a considerable amount of loss; that is, we would have made a loss if we had had to have filled our contracts, and we were benefited by the embargo going in.

Mr. LEA. Do you mean to say that this sale to England was not profitable?

Mr. DANT. It was not profitable, and I may explain the reason as being on account of embargoes on American railroads, making it impossible for us to get to the Atlantic coast and catch steamers on which we had space. As soon as those steamers sailed, our contracts were canceled, and we were continually paying higher rates than we had figured on to get our stuff forwarded.

Mr. LEA. A raise in freight rates, you mean?

Mr. DANT. A raise in freight rates.

Mr. LEA. And at the same time delay in investment, wasn't it?

Mr. DANT. Well, we were paying storage all over the Atlantic coast—Philadelphia, Boston, Baltimore, and New York, and elsewhere—and we were mighty glad to be relieved; so we didn't lose any money on that account.

Mr. LEA. When was it that this business became unprofitable, before or after the United States entered the war?

Mr. DANT. Largely after the United States entered the war. I can't tell you exactly about that, but we kept missing the boats, you see, and then when we tried to get more space the rates kept going up, and we filled a great many orders at a loss on that account.

Mr. LEA. You had to run the risk of priority shipments, too, didn't you?

Mr. DANT. Yes, sir.

Mr. FREAR. If 60 to 75 per cent of airplane lumber was accepted under the former method and only 15 per cent, as was stated by Lieut. Holland, was being received that was suitable, that would mean from 400 to 500 per cent more airplane lumber was usable out of the same quantity at that time of which you speak?

Mr. DANT. There is no doubt about it.

Mr. FREAR. Well, something has been said about your business matters, I notice here. What were you paying taxes for, or what were the taxes that you were paying along about that time? I see a list here in this private letter.

Mr. DANT. Well, I don't know—

Mr. FREAR. The suggestion here is \$50,000; is that right?

Mr. DANT. We pay that all right. We pay more than that.

Mr. FREAR. That is simply to indicate the size of the operations and what you were engaged in doing. That is a year?

Mr. DANT. Yes, sir. We pay more than that.

Mr. FREAR. That is all.

(Witness excused.)

TESTIMONY OF N. E. AYER.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. You live in Portland, Oreg.?

Mr. AYER. Yes, sir.

Mr. FREAR. I learned, just a few moments ago, as you sat there, that you had had something to do with milling and with aircraft production, and I notice your name in this private letter which appears here of Mr. Dant's. Will you state briefly to the committee just exactly what your business is, how large, and what your experience was in airplane lumber shipment?

Mr. AYER. Why, I am the owner of the St. Johns Lumber Co. We manufacture about 55,000,000 to 60,000,000 feet a year, and in the year 1917 I had leased the Northern Pacific mill and was manufacturing about 65,000,000 there a year. We were furnishing some spruce lumber to the allied governments, through Mr. Dant, as a wholesaler and broker, and after we got started and were stopped on the furnishing of spruce, on account of the embargo placed, I suggested that we try shipping fir lumber, as fir, for wing-beam stock, in my opinion, is superior to the spruce or equally as good. We shipped a car and it proved satisfactory, and they wanted more of it very fast, and we were getting that out until we were stopped by the Spruce Production Division.

Mr. FREAR. That is, this one in which Col. Disque was the head?

Mr. AYER. Yes. Well, I don't think Col. Disque stopped us. I think we were stopped just before he came West.

Mr. FREAR. I was trying to locate the tie.

Mr. AYER. Yes. And then when Col. Disque first got here I could see then that they were not getting out the material that was wanted, and I took considerable interest in it, and I think when Col. Disque came here I—the very first day I heard he was here I wrote him a letter and told him I had a plan which I thought would help get production, and he replied in a letter thanking me for it. But I had nothing to do with Col. Disque for many months; he never wanted to see me. I called on him, but he would not see me. And after he started the cut-up plant he would not see me, but he would always refer me to some of his subordinates, and I could see that he was not preparing to handle the stock to get the production—the largest production for the Allies particularly. The cut-up plant at Vancouver was all right for the wing-beam stock and for the stock for our own factories, but it was not the stuff that the allied Governments wanted. But I didn't succeed in doing it, and when Lieut. Holland was here and Mr. Becett I tried then very hard to get to see Col. Disque and I did see him and I told him what they had said and what they wanted, and not to lose sight of the spruce mills and the fir mills to get the stuff that they wanted, and not try to simply ship stuff that they were manufacturing at the Vancouver plant.

Mr. FREAR. What did you tell that Lieut. Holland and the other representative said about it?

Mr. AYER. I told him just what they said, that the sizes and the way they were getting it was not satisfactory—there was too large a waste—and they were the wrong sizes and wrong lengths and everything. It was not satisfactory at all. They were shipping a great deal of stuff, but only a small proportion of it was getting into the airplanes.

Mr. FREAR. Well, now, was there anything done in reference to these milling operations?

Mr. AYER. In regard to the airplane?

Mr. FREAR. Yes.

Mr. AYER. Why, in April, 1917, I through—not to Mr. Disque personally, I tried it, but he would not take it, but through Mr. Van Duzer—

Mr. FREAR. You mean April, 1918.

Mr. AYER. No.

Mr. FREAR. 1917 was when the war was declared.

Mr. AYER. No; April, 1918.

Mr. FREAR. Yes.

Mr. AYER. Mr. Van Duzer had persuaded Col. Disque to try some fir in place of spruce, and he asked me to furnish it to him, which I did, and they found it was—and they sent men down to the mill to see it gotten out, and how to manufacture it when they got it at Vancouver, and after they got it there they telegraphed and telephoned and wanted all they could get of it; and that was the way that the fir got into the game. But as I understand it they only used the fir for wing beams, consequently only—although the production of fir from that time on was equal to that of spruce—that they probably shipped along 75 per cent of the amount of spruce that they received at the Vancouver plant, where they possibly shipped less than 50 per cent of the fir. So the fir really included about 75 per cent of the available stock that was suitable for the airplane.

Mr. FREAR. That could be used for the airplane?

Mr. AYER. Yes, sir.

Mr. FREAR. And before we reached the time of the signing of the armistice was being used to that extent?

Mr. AYER. To a very large extent.

Mr. FREAR. And you were the man, so far as you know, who developed this matter of the fir for airplane purposes—that is, in any merchantable degree, I mean.

Mr. AYER. Yes; I think so.

Mr. FREAR. What would be the approximate amount of shipments that you were making prior to this change that was made at that time, for airplane purposes, airplane lumber.

Mr. AYER. The amount shipped?

Mr. FREAR. Yes.

Mr. AYER. In 1917?

Mr. FREAR. That you were shipping, yes, or that you were turning over to Mr. —

Mr. AYER. Dant?

Mr. FREAR. Mr. Dant.

Mr. AYER. After the first car, I think we were shipping about—well, we shipped quite a lot of it, I think we shipped about two hundred or two hundred and fifty thousand feet before we were stopped.

Mr. FREAR. Before you were stopped?

Mr. AYER. Yes.

Mr. FREAR. Then you were stopped. What reason was given?

Mr. AYER. That they wanted all the export lumber to go through the hands of the Spruce Production Division.

Mr. FREAR. Did they ask you after that to continue sawing spruce lumber?

Mr. AYER. No; not until after the Vancouver plant wanted the sawing. I don't think there was but very little spruce shipped from November, 1917, until April, 1918.

Mr. FREAR. That would have caused a natural slowing up of operations if that same condition had extended generally, wouldn't it?

Mr. AYER. Oh, absolutely. There was no need of any slowing up in the operations.

Mr. FREAR. You could have continued right along just as well. .

Mr. AYER. Right along.

Mr. FREAR. About how much lumber would you say, Mr. Ayer, is contained—what is the comparison between the logs and the lumber—that is, how much lumber is taken out of a log. In 100,000 feet of logs, say, what would be the proportionate amount of lumber? That is what I am trying to get, on an average.

Mr. AYER. You probably do not realize that here in the Northwest we have several different sizes or grades of lumber.

Mr. FREAR. Yes.

Mr. AYER. And out of the red-fir log or a small log there would practically be none. Out of the old-growth yellow-fir log there would be quite a good percentage, probably in spruce it would run up as high as 30 or 40 per cent of airplane lumber. In fir not quite so high.

Mr. FREAR. I am taking, for instance, selective logging, which was suggested here, where airplane timber was selected and marked for cutting. Now, taking timber of that kind, what proportion of that timber would approximate—

Mr. AYER. You should get 40 per cent, then, out of selected logs, easily.

Mr. FREAR. You can get 40 per cent?

Mr. AYER. Yes, sir.

Mr. FREAR. Now, there was in the neighborhood of 7,000,000,000 feet of lumber, I understand, of all grades that was cut in 1917. I think that was the testimony suggested by Mr. Dant, or that is, at least, the capacity of the mills. Now, there are enough logs for that?

Mr. AYER. Yes.

Mr. FREAR. Now, that would be how many billion feet of logs, approximately, to bring out 7,000,000,000 feet of lumber, of all grades?

Mr. AYER. I do not quite catch the drift of your question.

Mr. FREAR. Would it take more than 7,000,000,000 feet of logs in the stump to bring out 7,000,000,000 feet of lumber in the mill?

Mr. AYER. No; 7,000,000,000 feet of logs would bring out more than 7,000,000,000 feet of sawed lumber. There is an overrun.

Mr. FREAR. There is an overrun from the log to the lumber?

Mr. AYER. Yes, sir.

Mr. FREAR. So that if 7,000,000,000 feet of lumber was manufactured, or 5,000,000,000 feet of lumber was manufactured, it indicated that there were logging facilities to bring out over 5,000,000,000 feet of logs?

Mr. AYER. Yes, sir.

Mr. FREAR. Now, that leads up to this question: You are engaged in manufacturing airplane lumber, and it was needed; the mills were engaged in manufacturing all kinds of lumber, commercial spruce and all other kinds?

Mr. AYER. Yes, sir.

Mr. FREAR. Three hundred and seventeen million feet, according to the uncontradicted testimony, was manufactured in both 1916 and 1917; it averaged within a million feet each year.

Mr. AYER. Yes, sir.

Mr. FREAR. Now, if all the capacity of the loggers and all the capacity of the mills, the private mills, had been turned to airplane lumber, or even 10 per cent of it, what would have been the result; wouldn't it have resulted in a great increase in airplane lumber?

Mr. AYER. A great increase.

Mr. FREAR. Necessarily so, because only about 2 per cent of the capacity was used in manufacturing the 317,000,000 feet?

Mr. AYER. Yes, sir.

Mr. FREAR. Now, with all that logging facilities, which was capable of bringing out over 5,000,000,000 feet of logs in this section of the country, and all the milling—and I am putting it conservatively—all the milling facilities that were capable of bringing out over 5,000,000,000 feet of lumber, what have you to say about the ability of the loggers and the lumbermen of the Northwest to have furnished several times as much airplane lumber, to put it modestly, as was brought out?

Mr. AYER. I do not think there is any question about it; they could have produced the lumber and produced the airplane stock without any trouble at all. They would have had to use fir along with the spruce.

Mr. FREAR. They would have to use fir along with the spruce?

Mr. AYER. Yes, sir.

Mr. FREAR. But even that spruce alone, in the sections that had been developed, that possibility existed, didn't it, so far as the spruce alone was concerned?

Mr. AYER. The sections that could have been developed; yes.

Mr. FREAR. I am referring to the new sections, for instance, the Pleasant Lake section—

Mr. AYER. And the Blodgett tract.

Mr. FREAR. And the Queniult.

Mr. AYER. Absolutely.

Mr. FREAR. There was plenty of it?

Mr. AYER. Yes.

Mr. FREAR. Did you determine, and I mean for the people over there, by your own work, that fir could be used as well and in some cases, as I understand, better than spruce?

Mr. AYER. Yes.

Mr. FREAR. Because you got the dimensions easier?

Mr. AYER. Yes.

Mr. FREAR. That is all.

Mr. LEA. Did you have any trouble selling spruce, airplane lumber, during the war?

Mr. AYER. No; not at all. I manufactured only a small proportion.

Mr. LEA. Wasn't that true of all the lumbermen?

Mr. AYER. Well, the spruce before we entered the war was largely manufactured by the mills that made a specialty of it.

Mr. LEA. After we entered the war couldn't any lumberman sell any airplane lumber that he wanted to offer?

Mr. AYER. Who to?

Mr. LEA. To the Spruce Production Corporation of the Government.

Mr. AYER. It was a pretty hard proposition, I think.

Mr. LEA. Efforts were constantly made, and they say the price was all right, why didn't they produce it?

Mr. AYER. One of the things was that when they were shipping lumber to the Allies they were doing it in a regular commercial specification. I think the specification was changed from the commercial to G-list specification, to what they call the Government specification No. 1, which was very much harder and very absurd. The Allied countries were satisfied with the G-list commercial specification, but when this country got into the game they wanted something better than the allied countries had had, and they changed the specification, and that itself cut down the production very materially. It was almost an impossibility. They sawed tree after tree that would not produce it, and it discouraged them.

Mr. LEA. Do you know who changed the specification or prepared it?

Mr. AYER. I understood that it was changed at a conference in Washington.

Mr. LEA. A conference with the Allies, wasn't it?

Mr. AYER. I think not; no, sir. It was changed, the No. 1 Government specification, I think, was changed at a conference in Washington.

Mr. LEA. And don't you know that the representatives of all the Allies' countries, and representatives of the United States got together and agreed on this specification?

Mr. AYER. I did not so understand it.

Mr. LEA. Well, that is the testimony, and the loggers here were offered a high price, that I understand was sufficient, this price offered by the Government was sufficient.

Mr. AYER. The price offered, I think, was \$70 and \$150, which made the average \$105, and they would only pay \$105, no matter whether you had a larger percentage of good or poor in it. They only gave you \$105 for it.

Mr. LEA. Do you think the price that the Government offered was high enough or not?

Mr. AYER. Not on that specification.

Mr. LEA. Well, do you know the prices for the different grades?

Mr. AYER. They were \$70 and \$150, and it was split to make \$105.

Mr. LEA. If you brought the best grade you could not get \$150 for it?

Mr. AYER. No, sir; when Mr. Hawkins was in charge of the spruce I asked him about that and he told me absolutely no.

Mr. LEA. Well, at any time after Mr. Disque came in charge here do you know of any time that a man could not get \$150 for the \$150 grade of spruce lumber?

Mr. AYER. I do not think Disque allowed them to saw the \$150 grade. He wanted them to saw it in cants for the Vancouver plant. There might have been a few outside mills that he had special contracts with that sawed \$150 lumber, but only a few.

Mr. LEA. Whatever the price was, do you know of anybody that had the lumber they wanted that could not get the price that the Government offered?

Mr. AYER. The lumber that they wanted, the mills had the lumber they wanted?

Mr. LEA. Yes.

Mr. AYER. I do not understand your question, Mr. Lea.

Mr. LEA. My idea is this, Mr. Ayer: As I understand it, it was getting all the lumber that it could get hold of at established prices.

Mr. AYER. Yes.

Mr. LEA. And that any logger or lumberman in this section, if he had the timber, could sell it?

Mr. AYER. Yes.

Mr. LEA. And that everybody that offered lumber did sell it?

Mr. AYER. Yes.

Mr. LEA. At the Government price?

Mr. AYER. Yes.

Mr. LEA. Now, what I want to get at is the merit of your contention that notwithstanding everybody could sell their lumber why didn't you produce more?

Mr. AYER. I think we are working a little at cross purposes. I think the mills that took spruce and fir over to the cut-up plant, they did try to give the Government the most that they could, but that was taken out of the hands of Mr. Disque and put it in the hands of the Fir Production Board, of which Mr. Van Duzer was in charge, and he hired a large number of men to go around to the mills to show them how to cut this lumber the way they wanted it at Vancouver, and they did produce quantities of fir. But they did not go far enough. I suggested to Mr. Disque and Mr. Van Duzer that they get the loggers to log fir in a selective proposition, to pay the loggers an extra price for putting in these logs, especially for the airplane cants, but they would not do that.

Mr. LEA. Now, you were here on the Pacific coast all the time, were you?

Mr. AYER. Yes, yes; 30 years.

Mr. LEA. Now, are you passing judgment on the wisdom of the leaders of the battle in Europe as to what they required? Is that the idea, or is it in reference to the proposition of producing lumber here on the Pacific coast?

Mr. FREAR. I object to that as containing a conclusion of counsel that is not supported by the testimony.

Mr. LEA. I am asking if it is.

Mr. FREAR. I think that is a very unfair question to put to any witness.

Mr. LEA. I will ask another question.

Mr. FREAR. I will ask counsel to read his own question.

Mr. LEA. I will ask another question. It is not your idea to pass on what they needed for airplanes, is it, in the matter of the technical construction?

Mr. AYER. I was doing that before the Government took hold of the production of airplane lumber. I was getting out stuff for that purpose.

Mr. LEA. You were manufacturing the material here.

Mr. AYER. I was shipping it also to some airplane factories in this country.

Mr. LEA. You understand that the Spruce Production Corporation had nothing to do with that phase of it, don't you?

Mr. AYER. Well, they claimed to have.

Mr. LEA. They simply tried to supply the demand that was requested; they did not create a demand for it, and they did not have any right to determine what it should be.

Mr. FREAR. That is one of the great issues.

Mr. AYER. I think they did.

Mr. FREAR. That is one of the issues in this investigation.

Mr. AYER. I think they did.

Mr. LEA. Of course there is no use to argue about it, because that is beyond question.

Mr. AYER. They had proof of it and requests for it, and afterwards they did try to get this lumber when Lieut. Holland and Col. Beckett wanted it. They sent flat-grained cants and even squared them up and made them look nice, but that was not what they wanted. Holland and Beckett told them exactly what they wanted, but they did not do it.

Mr. LEA. Now, going back to the question of spruce, and that is what my questions were directed at, was there any reason why any lumberman could not get pay for all the suitable airplane lumber that he produced?

Mr. AYER. If he would do it the Government way, I think he could, but he had to do it the Government way. I offered to put in a logging operation to get out the spruce and explained the whole thing to them, and I was turned down.

Mr. MAGEE. How could you get out the capacity if you were not permitted to work?

Mr. AYER. They did not get it, I guess, did they? I understand they did not.

Mr. LEA. You had furnished spruce lumber during the war to the Government?

Mr. AYER. Yes—not to this Government; no. I stopped sawing spruce.

Mr. LEA. Where did you operate, Mr. Ayer?

Mr. AYER. Here in Portland at St. Johns.

Mr. LEA. Do you conduct your own logging operations, or do you buy logs?

Mr. AYER. Both.

Mr. LEA. What did you do with the spruce material you got during the war?

Mr. AYER. Up to a certain point I manufactured, and after that I sold it to the mills that were making a speciality of getting out the Government spruce.

Mr. LEA. That is all.

Mr. FREAR. That is to say, you did not do any selective logging or anything like that for the spruce?

Mr. AYER. No.

Mr. FREAR. Now, the suggestion has come here whether or not any man manufacturing lumber could sell it to the Government. Of course, we understand from you that the question of specifications and the question of various limitations put by this Spruce Produc-

tion Corporation—the Government, but by the Spruce Production Corporation out here, was making it very difficult for you people to go on with the work.

Mr. AYER. That is, for a certain period. That was from the fall of 1917 up until the late spring and summer of 1918.

Mr. FREAR. Now, I understand, or is it a fact, that the organization here took charge of the labor situation, in regard to what should be done in the various mills, to this extent, that commercial lumbering had its limitations; that is, they held their hand—is that true, or was that true with you?

Mr. AYER. That the Government held its hand?

Mr. FREAR. Yes; through the labor situation.

Mr. AYER. Yes; the Government controlled the labor situation, and they put a maximum wage on which the labor should be paid.

Mr. FREAR. And the hours and all those conditions?

Mr. AYER. Yes, sir.

Mr. FREAR. Did that interfere with you—I do not know that it did; I am asking for information—in the matter of production by your mill, as to what it should saw?

Mr. AYER. It did.

Mr. FREAR. That is what I was asking. Now, in what particular; what way?

Mr. AYER. Why, I did not agree with the committee, or with Gen. Disque, in regard to this 8-hour day or the maximum-wage proposition; but I was then running my mill on a 9-hour day, 50 hours a week, and I continued to do it that way, and I was paying one or two or my men more than the maximum called for in the schedule. I was requested by Disque's office to discontinue—

Mr. FREAR. That is, by Mr. Disque's office?

Mr. AYER. Yes, sir. I tried to find out on what authority they had to make such a demand, and I could not find it out; but finally I had an order from the car service agent that they would supply me with no more cars until I complied with their demands. I worked with them and tried to find out, and finally, not being able to ship my lumber, I had to close the mill down.

Mr. FREAR. Do you know whether that condition was true of other mills?

Mr. AYER. I do not know of any other mill that had to shut down. I know they had control of the labor situation and were calling the mills to time for paying above the schedule set by the Government, set by Disque.

Mr. FREAR. They had control of priority shipments?

Mr. AYER. Yes, sir.

Mr. FREAR. They had the complete handling of all the transportation question here?

Mr. AYER. Yes.

Mr. FREAR. That is, in regard to the lumber situation?

Mr. AYER. Yes. The point I have never been able to find out was why Disque's office should control the railroad situation.

Mr. FREAR. What I mean to say is that in addition to all those things they were matters that affected a man who had his capital invested?

Mr. AYER. Absolutely.

Mr. FREAR. And who was trying to keep his mill going, and all that?

Mr. AYER. Yes, sir.

Mr. FREAR. And if organization had been had like occurred in British Columbia, where they took one of your loggers here, Pendleton, and placed him in charge, what would have been the result, by combining all the lumbering and logging forces there into a united effort to get out the spruce?

Mr. AYER. Well, that is a matter of opinion.

Mr. FREAR. I want your opinion.

Mr. AYER. I think they would have done better than they did.

Mr. FREAR. The testimony is that in British Columbia they brought the logs from Queen Charlotte Island, 175 miles, in Davis rafts to saw, and that they took them down from Queen Charlotte Island, a total distance of 500 miles, to Vancouver. Then they were able to build up in seven months shipments totaling 26,500,000 feet of airplane stuff, with only 10 per cent of the lumbering and logging facilities of this country. That is the testimony that Pendleton offered. Now, with all that in view—and without a soldier to help—with all that in view, I am asking you couldn't some such arrangement have been logically made here with the loggers and lumbermen?

Mr. AYER. It is my judgment it could have been done.

Mr. FREAR. You were patriotic here and willing to work?

Mr. AYER. Yes.

Mr. FREAR. You were willing to help along a purpose of that kind?

Mr. AYER. Absolutely.

Mr. LEA. If you wanted to help along, why didn't you conform to the Government regulations established here to settle the labor difficulties and try to encourage production?

Mr. AYER. I did not realize it was a Government proposition. I thought, as near as I could get it out, that it was simply an understanding between the Government and some of the mills, not all the mills, by any means.

Mr. LEA. That is all.

(Witness excused.)

TESTIMONY OF RUSSELL HAWKINS.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. State your name.

Mr. HAWKINS. Russell Hawkins, Bay City, Oreg.

Mr. FREAR. What is your business, Mr. Hawkins?

Mr. HAWKINS. I am president of the Whitney Co., a lumber institution that has been logging and lumbering since 1856.

Mr. FREAR. How long have you been engaged in the lumber business?

Mr. HAWKINS. Since 1893.

Mr. FREAR. Whereabouts?

Mr. HAWKINS. In New England and Pennsylvania. I was with the Diamond Match Co. for 10 years, and they have operations in California, Wisconsin, and New England.

Mr. FREAR. What other business connections have you had besides this; or have you had other business besides this work with the Whitney Co.?

Mr. HAWKINS. None whatever.

Mr. FREAR. I mean in the past; you have been vice president, as I understand, of the Diamond Match Co.

Mr. HAWKINS. Prior to that I was lumbering in New York and in Pennsylvania.

Mr. FREAR. So you have had some experience in logging and lumbering?

Mr. HAWKINS. I have been lumbering and using lumber and connected with lumber concerns, sawing lumber, since 1893.

Mr. FREAR. Will you please just briefly state, for our information, the airplane situation as it arose after our entry into the war; anything that you know prior to the war in relation to it, and as it grew, and your own connection with it, please.

Mr. HAWKINS. I was unfamiliar with the needs for aircraft manufacture until probably August of 1917. Late in July I had been appointed as one of a committee of 10 or 12, which committee was asked to become interested in the greater production of aircraft material. In September I was asked to go to Washington to confer with the wood section of the Equipment Division of the Signal Corps with respect to List G, so called, and the creation of specifications that would reduce the cargo needs—I will get that straighter—there has been a claim that under List G that it took 2 feet of cargo space for 1 foot of what could be manufactured under specifications, so-called, No. 1. I had many talks with Maj. Sligh and with other lumbermen there, and the original No. 1 specification was arrived at. That was subsequently changed, I think, in November late, or early in December, by Capt. Oakleaf, who, I believe, was associated with the Inspection Division of the Signal Corps. I think that specification was 15021 or 15021-C, or a modification of 15021-C. In the latter part of September, 1917, Mr. Coffin sent for me and asked if I would go West and help to increase the production of spruce logs. I had not been associated intimately with lumber manufacturing; that is, the sawing of logs. Since I had been in this country, for 12 years, I have been more particularly interested in the production of basic materials—logs. Mr. Coffin wired the chief of our company, Mr. David Whitney, of Detroit, asking if he would release me for six months in order to aid in the production of a greater quantity of spruce logs, and at no loss of income to me. It was understood I was to be employed as a civilian, and Mr. Whitney replied that he would be glad indeed to have—

Mr. FREAR. If you have no objection, right now I would like to read into the record the two telegrams which I understand were sent at that time.

Mr. HAWKINS. I have the copies here.

Mr. FREAR. I have them right here, and I think there is no question about them.

Mr. LEA. Just insert them without reading them.

Mr. FREAR. No; I think it is important to show the way he was regarded.

Mr. HAWKINS. I would prefer to have them read, because I have been accused by Senator Chamberlain on certain lines and I would like to have them read and the matter understood.

Mr. LEA. I merely suggested that to save time.

Mr. HAWKINS. Yes, sir; but I do not want to save time in that connection. This telegram is dated September 30, 1917.

WASHINGTON, D. C., September 30, 1917.

DAVID C. WHITNEY,
172½ Ford Building, Detroit, Mich.:

The Aircraft Production Board very urgently requests that you will consent that Mr. Russell Hawkins accept an appointment as organizer of spruce loggers in Washington and Oregon for the next six months without any loss of salary. We are desperately in need of a man of his capacity to increase the production of spruce logs and you will be doing your country a service by complying with this request. Please wire your consent.

HOWARD E. COFFIN,
Chairman Aircraft Production Board.

Mr. FREAR. What was your position then with the Whitney Co.?

Mr. HAWKINS. I was then vice chairman of the Whitney Co. It was then a limited partnership. Mr. Whitney replied on October 1. I was in Washington at this date.

DETROIT, MICH., October 1, 1917.

Hon. HOWARD E. COFFIN,
Chairman Aircraft Production Board,
Munsey Building, Washington, D. C.:

Your wire just received. Both myself and company anxious to aid you and our Government all manners possible. We consent to request that Mr. Russell Hawkins accept appointment you mention. Mr. Hawkins has had entire active charge of our western affairs and we respectfully ask that you grant him permission to be in Detroit for 48 hours October 16 and 17 that certain very important matters that only he can handle be made clear to minority shareholders of Western Co. It is satisfactory if Mr. Hawkins report Friday morning Washington.

Mr. FREAR. Mr. Coffin at that time was at the head of the Aircraft Production Division?

Mr. HAWKINS. Chairman; yes, sir, of the Aircraft Board.

Mr. FREAR. All right, go on.

Mr. HAWKINS. On October 11 I received my assignment of duty. It is too long to read.

Mr. FREAR. Tell briefly what it is, if you will. That was by Mr. Coffin?

Mr. HAWKINS. No, sir; by Maj. Charles R. Sligh, approved by E. A. Deeds, colonel, Signal Corps.

Mr. FREAR. Whereabouts were you to serve? At Portland, Oreg., or in Washington?

Mr. HAWKINS. It is pretty broad.

You are hereby required to proceed as soon as possible to the Pacific coast and assume charge and control of the work of producing aircraft spruce as required in the manufacture of aircraft for the United States and her allies, and in this capacity you will act as the representative of the Equipment Division of the Signal Corps. You will be required to establish as soon as possible grades and specifications for logs and lumber, to negotiate contracts with loggers and millmen for their full capacity and the entire amount of their production of aircraft spruce, and to establish just and equitable prices for the same. Any differences as affecting this matter, between loggers and millmen you are authorized to adjust. You will also encourage the opening of new spruce tracts, the building of new roads and the extension of old roads, and to prosecute vigorously the increase in spruce-log production. You are also

authorized, in the event of necessity, to recommend an equitable price for stumpage, if the owners of stumpage and loggers can not agree. You are also authorized to recommend advances in cash by the United States Government to responsible parties for the purpose of building new roads and the extension of old ones into new spruce tracts.

In arrangements of this kind you are authorized to extend contracts over a period of 18 months, if necessary. You are also to perform such other duties in connection with this work as may be required of you by this division. You will make your reports directly to Maj. Charles R. Sligh, in charge of the Woods Section of this division.

2. A contract officer will be detailed from the Signal Corps with authority to sign contracts. There will also be detailed an officer from the Finance Division who will be authorized to make payments in Portland for shipments.

3. You will also be required to exercise a supervisory control in the assignment of orders to different sections, and in the shipment of the product to parties designated by this division.

By direction of the Chief Signal Officer.

CHAS. R. SLIGH,
Major, Signal Corps.

Approved.

E. A. DEEDS,
Colonel, Signal Corps.

Mr. FREAR. That was a very broad power that was conferred upon you. What did you do, if anything, pursuant to the authority there conferred?

Mr. HAWKINS. I immediately came west and conferred with every logger friend I had, and those who were not friends—I mean, not acquaintances.

Mr. FREAR. Well, you had an extended acquaintance, did you, on the coast with loggers?

Mr. HAWKINS. I think so; yes, sir; very.

Mr. FREAR. What percentage of the loggers engaged in the business would you say that you knew?

Mr. HAWKINS. Well, I knew every logger in the Columbia River waters, and I knew every logger in Oregon, with the exception of one or two in the southern end of the State.

Mr. FREAR. So you know practically all the loggers?

Mr. HAWKINS. I knew a great many in Washington and along the Straits of Juan de Fuca.

Mr. FREAR. You knew the lumbering interests generally, did you, lumbering people?

Mr. HAWKINS. Well, in selling logs in Columbia River waters—we sold logs until May 1, 1912, when we sold our plant to another concern, called Larkin-Greene Logging Co.—I came in contact with all the sawmills in the Columbia River Basin, and we had timber interests elsewhere and I came in contact with lumbermen and others who were dickering and trading for timber at times.

Mr. FREAR. I am speaking as to your general acquaintance with this work that you were called upon to fill at that time. All right. You can go on now. After you came on here west, what was done?

Mr. HAWKINS. Well, my thought was that the main essential was to get the fundamental supply of logs. But there was no provision made for supplying the logger with money. There was a provision made to contract—Lieut. Crisp at that time was authorized to make contracts with lumbermen for the production of lumber only, and he was authorized to advance lumbermen 30 per cent of the value of contract. These contracts were to be made for 18 months.

Mr. FREAR. That was consigned to lumbermen?

Mr. HAWKINS. To sawmills, the producers of lumber from logs; yes, sir.

Mr. FREAR. But did not reach the loggers?

Mr. HAWKINS. No, sir. There was absolutely no method suggested or adopted—I even think later; although my connection was only with the division for 85 days—by which loggers could be encouraged to produce more logs.

Mr. FREAR. And that was the beginning of the operation, was the getting out of logs?

Mr. HAWKINS. That is the way I viewed it; yes, sir.

Mr. FREAR. All right. What was done next?

Mr. HAWKINS. I trotted along with the game until in December when I went to Washington and was advised by Maj. Leadbetter that I should see Maj. McChord, in charge of the personnel for the Signal Corps, and Mr. McChord advised me, or Maj. McChord advised me, that I had senatorial objection lodged against the issuance of a commission. I then called on a Senator friend of mine who I knew would not object to me, and called on Adj. Gen. McCain, who told me that I must see the Secretary of War; that his office had filed objection to my being commissioned a captain. Now I understand in discussing the question of commission with Mr. Howard Coffin, and with Deeds, and with Col. Montgomery, and everybody in the division wanted to discuss it, Col. Secane and others, it was understood that I was not to be commissioned a captain, except in case of military necessity was I to serve; but I preferred to be a civilian. I did not think that men ought to be in soldier clothes doing this logging work and industrial work, and my papers were so—notations are on my papers to that effect—but when I found that George Chamberlain had objected to my appointment, I naturally wanted it. There is just enough Irish in me to expect it, then. And Adj. Gen. McCain suggested that I accompany my Senator friend to see the Secretary. I called on Mr. Secretary Baker on the 31st of December, and he said there was nothing in it; that I should go back home and attend to my business; I was doing fine. I insisted and suggested that perhaps it would slip through his office, he wasn't familiar with what was going on, and that I would come in in the morning. He said, "No: to-morrow is a holiday, and make it Tuesday"—"make it the 2d of January." I am not sure about the Tuesday part of it. We called on the Secretary on Tuesday and he advised me that unfortunately for me there had been senatorial objection lodged against me, and to go home and keep my mouth shut and mind my own business and be patriotic and forget all about the spruce production; stay away from it; that he wanted Disque surrounded with men not interested in the lumber business. And I have kept my mouth shut.

Mr. FREAR. Here is a letter dated December 20, Washington, D. C., to Col. Brice P. Disque, signed by Squier; he at that time was the general commanding—

Mr. HAWKINS (interrupting). The Signal Corps.

Mr. FREAR. The Signal Corps.

Mr. HAWKINS. What is the date of that, sir?

Mr. FREAR. This is Washington, D. C., December 20, addressed to Col. Brice P. Disque, Yeon Building, Portland, Oreg. I desire to insert this part of the telegram—it is a telegram—that relates only to the matter here before us, and, if necessary, why we can introduce the whole telegram. The other is long and refers to other matters: "Have inspected engineer papers; personal impression favorable. If you want him, inform McChord. Send no telegrams to Gen. Dade by address Air Executive or Air Spruce. Secretary of War disapproves commission of Hawkins on information from a Senator. Air Personnel reports no papers on L. H. Batson," and so forth. That is, that is the part that referred to the question of your commission, that brought you into the fire. Now what occurred after that?

Mr. HAWKINS. When I reached home, a friend of mine handed me a letter written by the Hon. George E. Chamberlain, dated January 2, in which he claims I am trying to serve God and mammon. George never does.

Mr. MAGEE. What year?

Mr. HAWKINS. 1918. It reads:

MY DEAR SIR: I am in receipt of your night letter of the 31st commendatory of Mr. Hawkins and begging me not to oppose his appointment on partisan or political considerations. I assure you I would not allow partisan considerations to influence me in this or any other matter of national moment. Mr. Hawkins. I am informed by officers connected with the War Department, has been on the pay roll of the Whitney Lumber Co. while serving the Government in the matter of the procurement of spruce timber, and while so acting as the agent of the Whitney Co. was undertaking to sell such timber to the Government. Whether these things be true or not, I do not know. If they are, he must be convinced yourself—

That is the way it is written; it is bad grammar—

that no man can serve God and mammon. The matter is being looked into by the authorities here now.

With kind personal regards and best wishes for the New Year, I am,

Yours, very sincerely,

GEORGE E. CHAMBERLAIN.

Mr. FREAR. What were the facts regarding your own position at that time?

Mr. HAWKINS. The telegram states there; the telegraphic request of Howard E. Coffin to Mr. Whitney asks me to devote six months of my time at no loss of income to me. I have never taken a cent from the Government for any effort that I have given them—in the way of salary or traveling orders or anything else. I may have been included in one or two parties where traveling orders were general, but I have never profited a cent that I know of from the Government since the war started in 1917.

Mr. FREAR. I understood you to say you were not engaged in the lumbering business at that time?

Mr. HAWKINS. No, sir; I was not a logger. We had sold our camp at Blind Slough May 12, 1912, at prices fixed for the life of the property. It made no difference if those loggers got a million dollars for their property, our prices were fixed as of May 1, 1912, and we would get no more.

Mr. FREAR. That is what I wanted to have clear. Now, going back to October 30, what did you do, if anything, in regard to grading

rules? You undertook certain matters here, but you passed over it; and I want to get back to showing the work that you undertook.

Mr. HAWKINS. During the month of October I called on Frank Dugan, J. G. Weatherwax, and E. I. Karr. These three men have probably scaled more logs than any other three men on the west coast. Dugan is in charge of the scaling bureau on Puget Sound; Weatherwax and one other man scaled practically all of the logs produced in the Grays Harbor country; and Karr is the manager of the Columbia River Log Scaling & Grading Bureau, and scales, I presume—I think the reports last year showed some 700,000,000 feet of logs. I figured that these men—prior to this time spruce logs were what we call jackpotted. Everything that came out was spruce, and they were sold on jackpot prices, so much a thousand clear through, whether there was 60 per cent of No. 1 or 60 per cent of No. 2 or 60 per cent of No. 3 in the raft.

Mr. FREAR. That is, it was considered as a poor grade, compared with the fir?

Mr. HAWKINS. No. The spruce business wasn't a big business in this country, and there had never been much occasion for grading spruce.

Mr. FREAR. Oh, I understand. It was a matter of grades which you are speaking of?

Mr. HAWKINS. Yes, sir. And these men had probably scaled more spruce than any man living here, and I figured they would know more about the peculiarities of spruce than any laymen or sawmill men, and they were in the umpire position between the sawmill and the loggers and naturally would try to produce what would be fair qualities. And I also knew No. 3 logs were not logs that would produce straight-grain aircraft stock and that the main thing was to establish the lines between Nos. 2 and 3. There is always plenty of stock in 1, and in 2, but very little in a 3 log. These men reported some time in October that they had agreed, after going over raft after raft they had agreed on certain specifications. I discussed the matter with Col. Disque. He said, "It is your circular; you are in charge of logging and milling." And on October 30 the circular was issued that the division would accept logs graded according to 1, 2, and 3 qualities, and that has been in effect ever since.

Mr. FREAR. That grading provision has been in effect that you established prior to the war?

Mr. HAWKINS. No; that was not prior to the war. It was October 30, 1917.

Mr. FREAR. I mean when you first came in.

Mr. HAWKINS. Yes, sir.

Mr. FREAR. That is what I meant to say. Now, did you have any conference with Mr. Coffin, who was chairman of the Aircraft Board, in December, in which certain recommendations were made? If so, what?

Mr. HAWKINS. I did, sir. I had probably several hours with Mr. Coffin and he asked me to give him the substance of the recommendations and suggestions, which I did; and I will read them, if you want them.

Mr. FREAR. Yes.

Mr. HAWKINS. December 31, 1917. Now these ideas are in brief. They do not cover the two or three hours' conversation.

These ideas are sincerely submitted for your consideration :

First. Commandeer all straight-grained spruce trees.

Second. Encourage the formation of several large companies with men of responsibility (contractors preferably). who would have tools, foremen, horses, and equipment that could be used for the purpose.

This is under the head of split spruce.

Third. Would deal with these companies on liberal lines, a cost-plus basis, with such conditions attached to the deliveries that would absolutely protect the Government and fix the profits.

It was not contemplated in this that men would not deliver.

Advances should be made on liberal lines to such companies, of course, with the usual provisions that an acceptable surety bond be furnished.

5. Would deliver rived spruce to local mills or would cut up spruce at Vancouver, or both.

And I would like, before I forget it, to explain that I am perfectly willing to take such responsibility as it is necessary to take with respect to the establishment of the cut-up mill at Vancouver, and I would like you to ask me why a little later, please.

Mr. FREAR. I am going to ask you why; and I can guess what the answer would be without any inquiry.

Mr. HAWKINS. Do you want it now?

Mr. FREAR. Yes. It is because, is it not, that your plan was not that that was ultimately decided upon? I am asking you isn't that so?

Mr. HAWKINS. Precisely.

Mr. FREAR. Well now, why?

Mr. HAWKINS. Well, we were getting 14 to 16 per cent yield from spruce logs on cars, and we all knew that there was from 12 to 15 per cent more in that log that could not be salvaged with the ordinary sawmills, and the object of this plant was to take these second-class cants and manhandle them at a mill that was built for a manhandling plant. That is not a sawmill in the sense of a sawmill. If the grain ran off at all sorts of angles, we could go through it and it could be salvaged and worked with the angles; you could put it through—it was impossible to put it through an edger and get that result.

Mr. FREAR. So you had to have special machinery; that is, some extra saws, for that purpose?

Mr. HAWKINS. And the bevels were so adjusted as to saw with the grain and not crosswise of it.

Mr. FREAR. Yes. But now what did they do in addition to that?

Mr. HAWKINS. Well, I think that—no, I am not familiar with what occurred after my experience there.

Mr. FREAR. What was your estimate of the cost of the mill?

Mr. HAWKINS. The mill was to have cost in the beginning about \$225,000.

Mr. FREAR. How much did it cost?

Mr. HAWKINS. Damned if I know. Excuse my English. I had nothing to do, however, with the dry kilns or with the power plant.

Mr. FREAR. Do you know anything about the saws that were first installed in that mill?

Mr. HAWKINS. Why, yes. The saws, I think, were all right. They were thin saws, circulars. As I say, the original idea of that mill was to take a second or third class cant, a second or third quality, rather, and it was to be juggled around so you would saw that cant first with the grain; then the product from that was to be taken over to the resaws and through the trimmers, the individual trimming saws, not gangs, and worked back until it produced a greater yield from the log. In other words, I felt this, and I think everybody coincided with me at that time, that if we could get 30 per cent of yield from the log we had saved 15 per cent of original effort of production.

Mr. FREAR. Surely.

Mr. HAWKINS. 6. Have Forestry Department give authority to enter reserve and select spruce trees needed.

Logging of spruce. Make advances to loggers for extensions of railroads and for purchases of standing timber and rights of way. Would restrict these advances to producers of spruce and fir logs.

If they were in a cedar country or a hemlock country purely, it was a waste of money to commandeer their products.

Would arrange for repayment of advances at so much per thousand feet from the time advance is made.

In other words, if you advanced a logger \$100,000, take a lien on his logs for \$3 pot run, as she goes, and you get it back.

And if workable, would arrange for disposal of logs at time advance is made to sawmills in same watershed as logger.

In order to prevent cost of transportation.

8. If "relaying rails" are offered for sale at prices higher than \$55 per ton for weights from 50 to 60 pounds, inclusive, I would commandeer the same and arrange for the payment of the \$55 and refer the balance elsewhere.

If wire rope suitable—

These were problems we had to face at that time.

Mr. FREAR. Yes.

Mr. HAWKINS (reading):

If wire rope suitable for logging purposes is held for sale by brokers or other handlers of the product at prices higher than list, I would commandeer the same.

You see, prior to the war lists the discount on wire rope were 30 and 40 per cent off list.

Present values are 20 to 25 per cent less than list.

And that was in 1917.

Wire rope should be obtained and deliveries made to loggers or consistent producers of logs needed for aircraft and shipbuilding purposes.

Idle donkey engines should be commandeered and put to work.

Wages of army men employed in the various branches of work in companies should conform to the going rates.

That was suggested to me, and at that time I didn't see any objection to it.

Army men should work prevailing hours.

That didn't mean eight hours.

In order to secure a greater yield of usable lumber from logs, orders should be made in carload lots in proportion or by number of pieces of the various lengths, thicknesses, and widths needed.

In other words, my notion was this: That if an aircraft manufacturer in the United States had an order for 5,000 planes, he needed 10,000 pieces of wing beam stock; he needed 70,000 or 80,000 pieces of arch pieces; he needed so many pieces for the fuselage, the under body, and if they would order intelligently, instead of sending them a lot of 12 by 12's, or 10 by 10's, or 8 by 8's, or 6 by 6's, we would come closer to giving him what he wanted in the carload as he wanted it. Of course, I may be wrong in all of this, but these were my notions at that time.

Mr. FREAR. Well, these were your recommendations to Mr. Coffin, weren't they?

Mr. HAWKINS. Yes, sir.

If the orders should come this way, the stock of the aircraft manufacturer will always be pretty well balanced, and the sizes should be as close to the ultimate sizes needed by the aircraft builder as common sense should dictate.

Future. The large stands of spruce are located in western Washington and western Oregon, but at present inaccessible to railroad transportation. Western Washington has about five billions of standing spruce timber, while western Oregon is said to have three and a half to four billion feet.

An extension of the Milwaukee Road west through Clallam County and south to Humptulps in Grays Harbor County, Washington, an extension of the Northern Pacific Railroad from Moclipis north to and through the Quinalt Reservation and an extension of the Oregon and Washington Union Pacific System south and west in Grays Harbor County—

That is on North River—

would make available for operators at least two-thirds of the total spruce stands in western Washington. These extensions might possibly cost four and a half million dollars.

I would like to say right here in discussing that with Coffin he said that the administration would not permit that, and I suggested to him:

Why not loan these railroads the money from the Signal Corps budget, giving them 25 or 50 years to pay therefor at a low rate of interest, in order to encourage them to go in and take the chance?

There would be no particular traffic after the war, or until such time as the country had grown up to the railroad.

Mr. FREAR. In that connection, it may be said that three railroads that were built by the present Spruce Production Corporation, just three railroads, cost in the neighborhood of seven and a half million dollars.

Mr. HAWKINS. I didn't spend the money, sir.

All the roads mentioned above have accurate surveys and topographical maps and estimates of costs so that the facts can be actually had.

In so far as Oregon is concerned, an extension of the Southern Pacific from Willamina, in Yamhill County, west to the Pacific Coast and then south through the Siletz and the Alsea Bay countries would make available about the largest bodies of spruce.

Mr. MAGEE. There is not any spruce in the Siletz Basin, is there?

Mr. HAWKINS. Well, I have never been in the Siletz Basin; that is, through it. I have been on the edge of it. There is a little there, I should say.

Certainly all spruce and fir aircraft lumber needed should be ordered and handled through one channel.

There was a great mixup and confusion. The Aircraft Board was ordering stuff from the mills, and Shipping and Emergency Board

ordering stuff for ships, and so on, and it all seemed sensible to put control, or to control it, through one channel. Whoever controlled it I didn't care.

Mr. FREAR. This question of priorities between the Shipping Board, spruce, and all, had created a good deal of confusion, hadn't it?

Mr. HAWKINS. It had; yes, sir.

All fir and spruce aircraft, and all other classes of lumber needed for governmental purposes rightfully should be handled by one organization, and the handlers of the organization should be in either Oregon or Washington.

In my humble opinion the military authorities should be divided from the civilian authority. While you may have one military head O. K., his successor might not be. Respectfully submitted.

Mr. FREAR. That was your recommendation to Coffin in December?

Mr. HAWKINS. December 31, yes, sir.

Mr. LEA. Let's see. What date, Mr. Hawkins, did you terminate your connection?

Mr. HAWKINS. The second of January is when I was told by the Secretary of War to go home and attend to my business.

Mr. FREAR. Now did you at that time make any recommendations for advances to loggers, extension of roads, purchase of standing timber and rights of way—that is, to loggers generally?

Mr. HAWKINS. It is included in this statement I just read.

Mr. FREAR. Yes. I think your statement makes that very clear. Now that was practically the conclusion of your work in charge of the spruce production for the Government?

Mr. HAWKINS. Yes, sir.

Mr. FREAR. As a public official. Now there is a notation which I have that has come from other parties, during April, 1918, you had a conference with Col. Disque regarding some logs on the Fawcett Creek tract?

Mr. HAWKINS. Yes, sir. In the month of April we offered to log the Fawcett Creek tract, provided he would supply a railroad. We offered to supply all of the money necessary, some \$600,000, to put in a logging camp and the connecting road to the railroad that was necessary to be built from Tillamook to the tract, six miles. We had several discussions about it, and finally we tried to arrive at a suitable freight rate for the six-mile haul. The reason for our asking him to arrange with the Southern Pacific to build this railroad was that this railroad for six miles goes through probably some of the richest farms in Tillamook County. No private corporation can possibly get through there without paying an immense sum.

Mr. FREAR. For the right of way?

Mr. HAWKINS. For rights of way. And the colonel considered that reasonable. He said, "All right; we will get rights of way." And Capt. Grant went over the line and did get rights of way. Then everything was supposed to have been fixed, and suddenly on May—rather, before this final date, we agreed to pay \$1.50 per thousand for hauling logs over this road, and it was agreed that we would put in 8,000,000 a month of logs. So that we felt that we would have had to pay for that 6 miles of road before we got through with it. We were to get the regular list price for logs, 35, 20, and 11; so that we had no advantage there.

Mr. FREAR. That is, the regular prices that had been fixed for these grades?

Mr. HAWKINS. Yes, sir; the same as anybody else. The only condition was this: There are no milling facilities of any size in Tillamook Bay, so that the production of these logs did not aid in any way, because there was no sawmills there to manufacture them. So the Cummings-Moberly Co., a cypress manufacturing concern, agreed they would put up a mill to saw this stuff, provided there was a three-cornered arrangement made by which they were protected, so these logs would not go by them or elsewhere. It was understood that Jesse Remmick, who represented the Cummings-Moberly Co., and myself, should meet Maj. Griggs on some day late in May.

Mr. FREAR. 1918?

Mr. HAWKINS. Yes, sir. Well, when we came there for the meeting colonel told me he was pretty busy that afternoon.

Mr. FREAR. Colonel—

Mr. HAWKINS. Disque. And I sat around in the anteroom. It is the first time I ever had to do that, because I was pretty good feathers there up to that time. But he finally came bustling out and said we would have to pay \$3.35 a thousand if we wanted to do business.

Mr. FREAR. That is, \$3.35 for feight?

Mr. HAWKINS. Per thousand; yes, sir.

Mr. FREAR. For hauling how far?

Mr. HAWKINS. Six miles over the new road and six miles over the old road; 12 miles.

Mr. FREAR. Was that a high price?

Mr. HAWKINS. Well, the Southern Pacific were carrying at that time logs from Cochran to Oswego, which is 52 miles, for \$2.40 a thousand. It didn't look like a business proposition to me.

Mr. FREAR. Then what occurred?

Mr. HAWKINS. They also offered at that time to carry logs from Yaquina to Portland, 134 miles, for \$3.37 a thousand. Of course, these figures were prior to the time the freight rates were raised. Well, there was nothing to do. I backed out, got chagrined, and waited. Then a little later they began to tell us in the papers that they wanted 30,000,000 a month—that is, spruce—so I thought I would take another crack at them. So, on July 17, I made them another offer to log the spruce—I thought that was popular—on a cost-plus one-tenth of 1 per cent basis.

Mr. FREAR. You had heard of other people who had cost-plus contracts?

Mr. HAWKINS. And the one-tenth of 1 per cent was to go to the Red Cross Society.

Mr. MAGEE. Wasn't that a scandalous offer, under the circumstances?

Mr. HAWKINS. It was pretty liberal.

Mr. FREAR. Were you charged with being a profiteer on the strength of that?

Mr. HAWKINS. Well, I was afraid George Chamberlain might give me another crack, you know, and I wanted to be in the clear on it. [Laughter.] Well, in the offer—I think you can get the offer out of the files. I haven't any other copy but this.

Mr. FREAR. It is here in the record.

Mr. HAWKINS. Have you got one?

Mr. FREAR. Yes; I can give it to him.

Mr. HAWKINS. Do you want to know the conditions under which the offer was made?

Mr. FREAR. Yes; you might read them briefly.

Mr. HAWKINS. Well, we claimed that this tract was cruised in 1912; that is, a few years before the war; that it contained one hundred eighty-six million of spruce and about one hundred million of other woods, of which thirty million were fir, hemlock forty-eight, cedar twenty-eight, larch five. These inspections, by the way, and estimates—rather, these estimates and cruises were gained from what we call a six-run cruise. Each forty had—in other words, a little over 200 feet each cruiser took, making strips of 200 feet wide; so that the quantities are fairly accurate—as accurate as one can get.

Mr. FREAR. That is about the extreme, isn't it, of a cruise, that is ordinarily taken?

Mr. HAWKINS. It comes pretty close to being a three-count cruise, if you have got good men and cruisers of good judgment. And these cruisers were John D. Edwards and George Williams, men who had lived in that county a great many years and whose sole business had been estimating and cruising.

Mr. FREAR. What occurred to that offer?

Mr. HAWKINS. Well, now, there is one other condition I wanted to get in here.

Mr. FREAR. Oh, yes.

Mr. HAWKINS. And that is that the Whitney Co. was to receive \$3 for the spruce and fir, a dollar and a quarter for hemlock and larch; that is stumpage, nothing else. And we also agreed to buy from the division any of the logs produced at market prices, that they could not use, so as to reimburse them, less stumpage. In other words, the only possible profit or value that we could get from the tract was the then price of \$3 per thousand for the spruce, fir, and cedar.

That we should "control without interference the actual practical operation and direction of production of logs from the standing timber and all the incidental operations necessary for economic results. The Whitney Co. to receive the hearty, vigorous, and unqualified" support, and so on.

"I made it a condition in here"—I want to give you the wording: "No officer, director, nor stockholder of the Whitney Co. shall receive compensation, but may be considered or classed as any part of the cost of producing logs from the described property."

Mr. FREAR. Why did you offer such a contract as that?

Mr. HAWKINS. I thought they wanted spruce.

Mr. FREAR. That is, to help furnish the Government with spruce?

Mr. HAWKINS. Yes. I had a boy on a submarine, and I wanted to help, to be honest with you.

Mr. MAGEE. What is that?

Mr. HAWKINS. I had a boy on a submarine, and I wanted to help, to be honest with you. Money didn't mean everything with our crowd. I could not afford to do anything else, sir.

Mr. MAGEE. What did they tell you about this offer?

Mr. HAWKINS. Here is their answer—August 1, 1918.

Mr. MAGEE. And that is this cost-plus contract of one-tenth of 1 per cent, is it?

Mr. HAWKINS. Yes. On August 1, 1918—I have a letter signed by Brice P. Disque, colonel, Signal Corps:

Mr. RUSSELL HAWKINS,
President The Whitney Co.,
Lewis Building, Portland Oreg.

DEAR SIR: Very careful consideration has been given to your letter of July 17, in which you propose to undertake logging operations in the area known as the Fawcett Creek tract in Tillamook County.

This office has made careful investigation of the timber in question and as yet has been unable to locate spruce of sufficient quality and quantity to justify the extension of any railroad.

The practice of making cost-plus contracts is one which we wish to avoid as far as possible and it is our present intention not to enter into any more of this nature.

Mr. MAGEE. The contention was, then, that there was not any spruce there.

Mr. HAWKINS (continuing reading):

Your extremely generous offer is appreciated, and if you can arrange for your cruisers to accompany one or two from this division I will be very glad to go into the matter further with the view to arriving at a definite understanding regarding the quantity and quality of timber available, after which it may be possible to come to some mutual understanding for a satisfactory contract.

Mr. FREAR. And there was 186,000,000 feet of spruce, according to the cruise that you have mentioned, on that tract?

Mr. HAWKINS. Yes, sir; made by responsible men and as good cruisers as there are in the State of Oregon.

On August 2, I addressed the colonel in these words:

We acknowledge receipt of your favor of August 1 in answer to the offer of July 17 relating to Fawcett Creek timber.

We will furnish you two competent cruisers, Mr. John D. Edwards and George Williams, who will go at once, with two cruisers to be furnished by you, and make complete, or partial cruise, or verify former cruise, as you may desire, of this contract.

We have no wish to hurry you, knowing as we do the many difficulties attending the getting out of the spruce by the Government and the time necessarily taken up in settlement of details and preliminaries. But we are anxious for you to go upon this tract at the earliest possible moment in order that you may be convinced that the timber is there, exactly as we have represented it. Then, if the Government wants it, we can close the contract.

Mr. FREAR. Did they go?

Mr. HAWKINS. I don't know. Our men were never called upon to go.

Mr. FREAR. Did you ever hear of them again?

Mr. HAWKINS. Yes; I saw a 40-page report, by a firm, Brown & Brown, and it was so long, for 7,500 acres, that I didn't care to read it, to be honest with you. I knew what our tract contained. It is over there to-day, the stuff is still there, it hasn't been burned.

Mr. FREAR. What was the character of the report?

Mr. HAWKINS. Well, the report was based on riving—the butchering of the tract.

Mr. FREAR. What did they propose, if anything?

Mr. HAWKINS. Didn't propose anything. It remains now where it was on August 2.

Mr. FREAR. And they never did anything in regard to it?

Mr. HAWKINS. No. All the papers in our little country—here is a long article that the Whitney Co. was holding out, unpatriotic. That is what I have stood since then. Had men come and say, "Why don't you go ahead and cut the spruce?" "I can't; hands tied." Remick went ahead and built his mill.

Mr. FREAR. How?

Mr. HAWKINS. With soldier labor. Labor account on that mill was over \$100,000.

Mr. FREAR. He received the assistance?

Mr. HAWKINS. They told him to go ahead and they would fill the bay with logs. The mill is there to-day.

Mr. FREAR. And they would not give you any order, although you offered to—

Mr. HAWKINS. I am where I was on August 2 after I wrote that letter.

Mr. FREAR. Now, getting back to this 12-mile shipment, your increase of freight, I notice here a note as to what the increase would have amounted to on an 18 months' contract. Have you got that there?

Mr. HAWKINS. Well, it is easy to figure. You take 8,000,000 a month—

Mr. FREAR. Then figure it.

Mr. HAWKINS. One hundred and forty-four million, and take at a dollar and a half freight—about \$206,000, isn't it?

Mr. FREAR. It is marked here \$237,500 increase.

Mr. HAWKINS. Well, there would be supplies in there, donkeys and all sorts of stuff to go in, you know, as well.

Mr. FREAR. What did Disque say to you in regard to that? Do you remember anything about the 20,000,000 of—

Mr. HAWKINS. Yes; he said he would make a monkey out of himself if he ordered the road built.

Mr. MAGEE. He said what?

(The statement of the witness was read by the stenographer.)

Mr. FREAR. Why?

Mr. HAWKINS. I don't know, sir.

Mr. FREAR. Now, what was done later when they increased the amount of demands from 11,000,000 to 30,000,000 feet of aircraft lumber? That was not spruce; that was aircraft lumber, then.

Mr. HAWKINS. Spruce has always been desired over fir, except for—

Mr. FREAR. But they had begun cutting fir before this, as Mr. Ayer has just testified; they were then discovering that they didn't have to confine their efforts to spruce, as I take it.

Mr. HAWKINS. The division shipped, in October, fir, and in November, fir. I think in October the shipment amounted to some—this is now just going back in memory—about 4,000,000 feet of—3,900,000 feet of spruce and a million and a quarter or million and a half or about a million of fir, if I recollect. Five million—there was about 5,000,000 shipped in November, of which about a million was fir.

Mr. FREAR. Have you mentioned the letter that you wrote to Disque on July 7; is that covered in this transaction that you have mentioned?

Mr. HAWKINS. Yes.

Mr. FREAR. That is, the 186,000,000 feet.

Mr. HAWKINS. Yes.

Mr. FREAR. What did you have about riving; is there anything there?

Mr. HAWKINS. Yes. During the fall of 1917 the Lumbermen's Protective Association, I think they called it, or bureau, which was managed by Mr. Grammer, Mr. Russell, and Mr. Sawyer, suggested that it would be wise to get all of the farmers in Skagit and Jefferson and Grays Harbor and Clallam Counties busy riving during the winter. It was foreseen that the product would be small that winter because there had been no drive made; business had been going along without much push or energy; and specifications were made—I think Circular No. 10 covered them—showing a farmer, for instance, could haul some rived pieces into the local station and measure for himself what was coming to him. Well, I guess I heard of it—the game was that in February they were on some of our land, chopping trees down—

Mr. FREAR. That is, February of what year?

Mr. HAWKINS. 1918; after I was out of the service. That some men were on our lands on the Mima River, and it was reported to us that they were cutting the stuff without regard to quality at all; the men were inexperienced; and they went over some twenty-one forties, if I am correct in my recollection, and paid us a very large price, apparently, per unit; but they have absolutely wasted the stuff—the balance of the stuff on the forties—because there is nothing there left to harvest; it is on the ground, never taken away from there.

Mr. FREAR. They left it there?

Mr. HAWKINS. It is there yet. You can go see it.

Mr. FREAR. It is there now?

Mr. HAWKINS. Yes.

Mr. FREAR. What was done about that? That was the Spruce Production Corporation here?

Mr. HAWKINS. No; that was a firm of contractors.

Mr. FREAR. Oh, a firm of contractors; let by whom?

Mr. HAWKINS. By the Spruce Division, I imagine.

Mr. FREAR. What authority had they to go on your land and rive?

Mr. HAWKINS. They came to me and wanted a contract. I said, "I won't give you a contract, because I don't believe in that sort of nonsense, but if you are in need of the spruce, go take it."

Mr. FREAR. And they proceeded under that supposed authority?

Mr. HAWKINS. Yes, sir.

Mr. FREAR. Now, what was the result?

Mr. HAWKINS. I would not take any payment for the stumpage until December, 1918, because I wanted to be protected against fire. It is all right to go in and cut down a lot of stuff and then bring a fire hazard which would endanger possibly six or seven other thousands of acres. The money was of less value to us than that risk, and we acted accordingly.

Mr. FREAR. What I desire to know is what settlement was ever made for the cutting of this timber, or what effect did it have upon the property, if any?

Mr. HAWKINS. Well, from the standpoint of a logger, it made worthless about 900 acres of land. They have taken—they probably cut 60 per cent of the spruce trees on the land. It only contained spruce and hemlock. That spruce, by the time we can reach it with logging roads, will be rotten. The spruce on the land won't last over two years.

Mr. FREAR. Who were these loggers, or these contractors?

Mr. HAWKINS. They were all men in uniform that were performing the job. The payments came through Porter Bros. for it.

Mr. FREAR. What was the loss, if anything, to you, and has there been any request for settlement; any movement?

Mr. HAWKINS. No, sir; we don't want anything.

Mr. FREAR. What was the loss?

Mr. HAWKINS. We checked up there their measurements. They overpaid us some several hundred dollars; I have forgotten the detail of it; it was returned to them.

Mr. FREAR. It was what?

Mr. HAWKINS. I say they overpaid us some several hundred dollars, which was returned. We checked the measurements.

Mr. FREAR. Is that for this riving proposition?

Mr. HAWKINS. Yes, sir; we concluded that 21 forties outside of the right of way through it was absolutely useless to us.

Mr. FREAR. That is, because—for what reason?

Mr. HAWKINS. Because they have denuded it and haven't taken the stuff from the ground.

Mr. FREAR. And what was the value of the timber before they went in there with their operations?

Mr. HAWKINS. Well, I should think \$60 an acre, or \$70 an acre would be low.

Mr. FREAR. And what would that total?

Mr. HAWKINS. Sixty to eighty thousand dollars, according to your buyer's notion.

Mr. FREAR. And what did you get for it?

Mr. HAWKINS. Twenty-one thousand, I think, if I recollect correctly.

Mr. FREAR. I am simply stating that so that if any criticism appears it may be based upon the record as to the situation.

Mr. HAWKINS. Yes, sir.

Mr. FREAR. What, Mr. Hawkins, is the amount of airplane lumber in a Spad machine, if you know?

Mr. HAWKINS. I am not sure, but my information was it was about 600 rough—of rough lumber would make a spad; that would be 175 or 200 feet finished.

Mr. FREAR. That is the ordinary—what is known as a fighting French machine?

Mr. HAWKINS. Yes.

Mr. FREAR. Used by Rickenbacher and others?

Mr. HAWKINS. Yes.

Mr. FREAR. Have you ever made any calculations as to what amount of, or how many machines—fighting machines—could ever have been placed upon the ground with the program that had been started out?

Mr. HAWKINS. Do you mean including motors?

Mr. FREAR. Well, including railroad trains and—yes; and Liberty motors and everything else, if you choose, and what I am trying to find out is have you ever made any calculations on this subject?

Mr. HAWKINS. I am not a mathematical wonder, but if it took 2,000 feet per plane 30,000,000 would be 15,000 planes a month that could be produced from 30,000,000 feet.

Mr. FREAR. That is as many planes as they ever had there at the front fighting at any one time, isn't it?

Mr. HAWKINS. I was not there. I am not certain.

Mr. FREAR. Well, we never had any more than that, and I think that is more than the exact number. Now, here is the situation, and I desire to state it, because you are a logger and a man who is familiar with the lumbering business. The testimony—I want to make it of record if I can; that is, what the facts are—the testimony of record here is that the milling facilities in Washington and Oregon reached approximately six to seven billion feet of sawed lumber a year.

Mr. HAWKINS. All kinds?

Mr. FREAR. Of all kinds.

Mr. HAWKINS. Yes.

Mr. FREAR. That is, the facilities. In other words, 30,000,000 feet a day and two shifts would be 60,000,000 feet?

Mr. HAWKINS. Yes.

Mr. FREAR. It takes fully that many feet of logs, does it not, to supply the mills?

Mr. HAWKINS. Yes; because you have got your overruns and scaling—yes; overruns and scale would require at least that much.

Mr. FREAR. So necessarily that many feet of logs must have been cut during the year in which that lumber was sawed; that is, for the same length of time?

Mr. HAWKINS. Naturally.

Mr. FREAR. Now, 317,000,000 feet of spruce logs were cut in 1916, and also in 1917. That would take about on the percentage of the total cut of 6,000,000?

Mr. HAWKINS. Total cut of—

Mr. FREAR. Of 6,000,000,000.

Mr. HAWKINS. Of 6,000,000,000.

Mr. FREAR. Yes.

Mr. HAWKINS. That would be 5 per cent, wouldn't it?

Mr. FREAR. Yes; something like that; yes.

Mr. HAWKINS. Five per cent. Sixteen per cent of 5 per cent would produce your aircraft stock under the old régime.

Mr. FREAR. And if you are going to double it and put in extra time, you can increase to any extent—that is, to double the amount, if you choose?

Mr. HAWKINS. Well—

Mr. FREAR. I mean run two shifts a day. They were talking of running three shifts a day up in the Port Angeles mill.

Mr. HAWKINS. You take spruce that is patchy, and you had to go where the spruce was, before the war there wasn't—in justice, to state the situation, there wasn't much spruce marketed, except to paper-makers and boxmakers, shoo-makers.

Mr. FREAR. But we developed another situation here in a very short time; that was that you could go into the fir as well, and from the Vancouver plant they were shipping over 50 per cent fir.

Mr. HAWKINS. Well, aside from your requirements for shipbuilding, which, of course, took a very high grade of lumber, took the clear grades of lumber, I don't think there should be any trouble about getting any quantity of fir aircraft stock you wanted, but I think that the demands for fir aircraft lumber were simply based on wingbeams, not on large pieces.

Mr. FREAR. But there was plenty, in view of the spruce that you could have manufactured, for a 1,000,000 or 100,000 planes inside of a year, at the rate they were going?

Mr. HAWKINS. I can't say that you ever needed anything over 10,000,000 a month of spruce.

Mr. FREAR. Yes. Well, what I was going to say is this—

Mr. HAWKINS. You can figure—

Mr. FREAR. This has not a particular relation to that, but it comes here. You started out when you came West to interest the loggers?

Mr. HAWKINS. Yes.

Mr. FREAR. To get them interested in this proposition of getting airplane stock, to get out the logs?

Mr. HAWKINS. Yes.

Mr. FREAR. You were to interest all parties, as I understood from the statement that was read there, from Mr. Coffin?

Mr. HAWKINS. Yes.

Mr. FREAR. You were going to bring about a sort of cooperation between the loggers and the lumbermen and work this thing out?

Mr. HAWKINS. Yes.

Mr. FREAR. Do you understand what was done when it was turned over to your successors?

Mr. HAWKINS. Only from what I get from the newspapers; because I have been doing what Baker told me—attend to my business, my own business.

Mr. FREAR. But you were trying to get employment here, that is, I mean you were trying on a cost-plus contract of one-tenth of 1 per cent that was to go into the Red Cross fund, you were trying to help?

Mr. HAWKINS. Doing my level best.

Mr. FREAR. The testimony before this committee heretofore was that other people were trying to volunteer here to contribute as best they could. What was the trouble?

Mr. HAWKINS. I have always thought I was blackballed by our dear Senator, to be honest with you.

Mr. FREAR. Would that be the only reason? Why were other people, who surely had no personal relations, no political relations that would be affected—they found themselves—at least they have so testified before the committee—in the same position?

Mr. HAWKINS. I can't explain the working of the other man's mind.

Mr. FREAR. Could a cooperation, if it had existed, with any help possible by the Government, certain aid in putting in logging roads and work of that kind—could they have produced all the demands that were made upon them in logs and lumber?

Mr. HAWKINS. If I hadn't believed that by the cooperation of the sawmill men and the loggers that the Government could have gotten all the spruce—I am not talking about fir—all the spruce lumber that they needed, I certainly would never have volunteered and never have even listened to a suggestion to come and handle a thing that has not been productive of results.

Mr. FREAR. And if you had taken into consideration the subject of fir production the problem would have been much simpler?

Mr. HAWKINS. It would seem so to me, sir.

Mr. FREAR. Now, do you know anything about the situation that occurred in Canada, or did you keep any—

Mr. HAWKINS. No; I am not familiar at all with the situation up there.

Mr. FREAR. Do you know anything about the lumber conditions up there?

Mr. HAWKINS. Somewhat. I have been in parts of Canada; yes, sir.

Mr. FREAR. Well, now, do you know Mr. Pendleton?

Mr. HAWKINS. No, sir; I never met the gentleman.

Mr. FREAR. You don't know him?

Mr. HAWKINS. No, sir.

Mr. FREAR. He was a logger in Aberdeen, and I understood he had been around here.

Mr. HAWKINS. No, sir; I don't know Mr. Pendleton.

Mr. FREAR. The testimony is to the effect that he was an American logger and went up and took charge of some work up there, according to the letters that have been filed before the committee, and in that work he was able to produce 26,500,000 feet of finished airplane lumber within seven months, and it was hauled from Queen Charlotte Island for 500 miles—that is, milled on the way after being rafted 174 miles. He had no soldiers. He had only one-tenth of the equipment, milling and logging, that we had here. Now, if he could produce that, couldn't you produce under the same conditions proportionately as much here?

Mr. HAWKINS. I think so; yes, sir. I don't see why not.

Mr. FREAR. That would have been in the same period of time. If we had ten times the amount of equipment here, we could have produced 250,000,000 feet, if it had been necessary?

Mr. HAWKINS. Well, in my opinion I think the boys got carried away with a scheme of production there that they didn't quit in time.

Mr. FREAR. Didn't they lose sight entirely of the fact that we needed the logs and the airplane lumber gotten out at once and placed over there at the earliest possible moment, in this effort to make a long continued program and building railroads everywhere?

Mr. HAWKINS. Well, they got into the game. I guess they had to stay with it; it looks that way to me.

Mr. FREAR. It is a pretty big game the way they were undertaking it. They were using mills down at Toledo, among other places, to saw the timber for putting in new railways way down 25 miles there at the Blodgett tract, and those mills were engaged before that in cutting airplane lumber. That is the testimony. What I mean to say is if we used all of our efforts to furnish them at once, like they were doing in British Columbia—

Mr. HAWKINS. You can't make bread without flour, and if you get the logs you can make lumber.

Mr. FREAR. Could you have made the lumber and got the logs out under the proposition that you started?

Mr. HAWKINS. I sincerely believe so, yes sir. I know in one case there was a gentleman came down here, a lumberman—his name is Philip Behner—I asked Philip Behner if he would move some of his donkeys, and he said it would be all right, and he moved, I think, about 12 donkeys. I know several cases where they saw what we were after, were glad to cooperate. I never had anything but the most cheerful cooperation from loggers since I have been in this country, on anything.

Mr. FREAR. Have you been so that you could be approached, that is, with proper credentials, could you see people?

Mr. HAWKINS. I do it now. You bet.

Mr. FREAR. Have you anything else in mind on this subject that you can enlighten the committee on?

Mr. HAWKINS. No. No, I don't know of anything. I can't volunteer anything. I think I have covered my situation about as much as I can.

Mr. FREAR. I will be very glad if you will give any information that you can give.

Mr. LEA. Where is the Fawcett tract?

Mr. HAWKINS. It is in Tillamook County, 6 miles from Tillamook.

Mr. LEA. Is the Whitney Lumber Co. millers?

Mr. HAWKINS. No, sir; loggers, purely, and timber owners.

Mr. LEA. Was the company itself engaged in logging during the war?

Mr. HAWKINS. No, sir. It has not controlled a log since May 1 or since September 1, 1913.

Mr. LEA. Well, did you have anything to do with the selling of logs?

Mr. HAWKINS. None whatever; no, sir. You see, on May 1, 1912, we disposed of our camp, plant, and the timber to Larkin Green Logging Co., on condition that as they cut and sold the timber from this land this timber was to be placed in the shape of logs and in rafts; that they would give us so much per thousand, log scale. The prices were fixed at May 1, 1912, and haven't changed since.

Mr. LEA. How long did their lease run?

Mr. HAWKINS. As long as the timber lasts on that particular acreage—say four years more.

Mr. LEA. How large an acreage is that?

Mr. HAWKINS. Eleven thousand acres in the tract.

Mr. LEA. That includes the whole Fawcett tract?

Mr. HAWKINS. No; you are talking about—another—you asked me about logs. Fawcett Creek, that is another location. Fawcett Creek has been untouched; there is no logging in that section, in Tillamook County; that is, within 4 or 5 miles of it.

Mr. LEA. The Brown & Brown that you speak of—were they cruisers?

Mr. HAWKINS. Yes, sir; they are public estimators of timber.

Mr. LEA. Where are they located?

Mr. HAWKINS. Portland.

Mr. LEA. Do you know if they cruised your property?

Mr. HAWKINS. I said that I saw a 40-page report that they had made.

Mr. LEA. Who showed you that?

Mr. HAWKINS. Col. Disque.

Mr. LEA. Do you know what the substance of it was?

Mr. HAWKINS. It was based on rived spruce, selective logging.

Mr. LEA. Well, did they report on the amount of spruce?

Mr. HAWKINS. No, sir; not to my knowledge.

Mr. LEA. It was just on the timber suitable for riving; is that it?

Mr. HAWKINS. Well, it was so large, voluminous, and unnecessary I paid no attention to it. I knew our cruisers had given us correct figures in 1912, and any report of Brown & Brown would not change that stand of timber; it is there this minute.

Mr. LEA. In that report, did he dispute the quality of this—

Mr. HAWKINS. Of this? No; because he said he would like to have me—to have his cruisers go with ours. He writes that in his letter.

Mr. LEA. Was this Brown & Brown report after that time, or before?

Mr. HAWKINS. No; prior to that time. After that time he sent a man named Hamilton into the tract. Hamilton went alone; not with our men.

Mr. LEA. So, seemingly, he contended that he had a different report from your cruisers?

Mr. HAWKINS. Well, his contention was, in his letter, that he was not making any more contracts. He said nothing about the Brown & Brown cruise in his letter, did he? Here is his letter.

Mr. LEA. I didn't notice whether he did or not. You referred to Brown & Brown.

Mr. HAWKINS. He said, "This office has made careful investigation of the timber in question, and as yet has been unable to locate spruce of sufficient quality and quantity to justify the extension of any railroads."

Mr. LEA. What date is that letter?

Mr. HAWKINS. August 1, 1918.

Mr. LEA. Now, that is your—

Mr. HAWKINS. Wait. He goes on—wait a minute. [Reading.]

I will be very glad to go into the matter further with a view to arriving at a definite understanding regarding the quantity and quality of timber available, after which it may be possible to come to some mutual understanding for a satisfactory contract.

Mr. LEA. Now, how much railroad had to be constructed?

Mr. HAWKINS. Six miles to the timber edge, not—nothing into the tract. We agreed to—it was the understanding in our first talk with him that we would construct from the timber line in and to provide all the plant necessary, at our expense.

Mr. LEA. So what you would have had to have constructed would have been 6 miles, simply to the edge?

Mr. HAWKINS. Well, he went so far as to bring the Southern Pacific people into a conference, and it was agreed that they were going to build the road.

Mr. LEA. The Southern Pacific.

Mr. HAWKINS. If there was not sufficient quantity of timber to warrant it, why would they have been brought into a meeting to

discuss the question of the construction of the road? Their engineer was sent on the line and surveyed part of the line.

Mr. LEA. When was that?

Mr. HAWKINS. Oh, in June. They were there on the 1st of June.

Mr. FREAR. Did the Southern Pacific finally agree to build the road?

Mr. HAWKINS. I don't know, because the things flattened out and then, as I say, later on when they thought they wanted spruce I made them another proposition.

Mr. MAGEE. You said something about the fact that the logs are there to-day; I did not get the force of that statement.

Mr. HAWKINS. I said the grading rules; I think I said the grade rules were in force to-day.

Mr. MAGEE. I thought you had reference to some logs that were cut under some contract.

Mr. HAWKINS. You mean on the riving game on the river; yes; the stuff is there.

Mr. MAGEE. That is what I had reference to. The logs were cut when?

Mr. HAWKINS. The logs were cut all during 1918.

Mr. MAGEE. Were any of them taken out?

Mr. HAWKINS. About 20 per cent.

Mr. MAGEE. The other 80 per cent are there to-day?

Mr. HAWKINS. Yes, sir; you can go and see them.

Mr. MAGEE. Now, you did not get a commission?

Mr. HAWKINS. I did not.

Mr. MAGEE. You did not get any compensation?

Mr. HAWKINS. I did not.

Mr. MAGEE. You paid your own expenses?

Mr. HAWKINS. I did, sir.

Mr. MAGEE. Amounting to what?

Mr. HAWKINS. Oh, I do not keep track of such small things.

Mr. MAGEE. Approximately?

Mr. HAWKINS. Oh, I haven't the slightest idea.

Mr. MAGEE. Several thousand dollars?

Mr. HAWKINS. No, no. I could live a long while on \$7,000. No; I went to Washington once or twice and back again, and rooted around in the Grays Harbor country and down the river, at Tillamook.

Mr. MAGEE. Then the Secretary of War told you to go home and keep still?

Mr. HAWKINS. To keep quiet and attend to my own business.

Mr. MAGEE. That is all.

Mr. FREAR. Did you?

Mr. HAWKINS. I tried to and they wouldn't let me.

Mr. FREAR. It is a very hard thing to do. You are here under a subpoena.

Mr. HAWKINS. Yes.

Mr. FREAR. I think the price is in evidence here, of \$105 a thousand.

Mr. HAWKINS. \$105 was the price for specification lumber No. 1, plus \$45 for wing beams, I think.

(Witness excused.)

TESTIMONY OF GUY GEORGE GABRIELSON—Recalled.

Mr. FREAR. In connection with your testimony, a part of which was furnished yesterday, Mr. Gabrielson, I have asked you to make some computations in regard to the production of aircraft lumber and the sales as they were made, and to place that in the record. That is one of the matters we would like to have light. Sixty-six million feet of airplane lumber was sent from outside mills; that is right, according to the testimony submitted before the committee?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Have you computed this amount on the commercial price basis and what the cost is to the Government?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. On the spruce, fir, and cedar?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. What is it?

Mr. GABRIELSON. The price used in this is based on \$110 a thousand for spruce.

Mr. FREAR. \$110 a thousand?

Mr. GABRIELSON. \$110 a thousand for spruce, and \$65 for fir.

Mr. FREAR. Now, explain the methods of your computation and the results found.

Mr. GABRIELSON. As I stated yesterday in my testimony, this is based on the question of 40 per cent, 30 per cent, 20 per cent, and 10 per cent salvage. That is the percentage of resale money to the money cost. Now, in case they get 40 per cent salvage for all of the capital outlay here the total amount of investment here, or expenditures during the war, will equal \$41,789,866.56.

Mr. FREAR. That is for this airplane production?

Mr. GABRIELSON. That is taking the whole activities out here, considering the total net outlay, or total expenses that the people of the United States have to pay. Now, that is divided up between the cost of fir, spruce, and cedar. The cost of spruce is \$28,730,533.66.

Mr. FREAR. Now, wait a minute; just how have you arrived at that; what did you do first?

Mr. GABRIELSON. This is a continuation of the testimony yesterday.

Mr. FREAR. Do you deduct from your total any particular amount; are you including all outside as well as the Government spruce?

Mr. GABRIELSON. Up to date I am including all of the shipments, regardless of whether they were outside or inside. I am getting ready to distribute the outside from the inside, from the cut-up plant's shipments. Considering the shipments of spruce both from the cut-up plant and from the outside mills, based on the percentage of invoice cost of spruce, to the total invoices, we get an expenditure on spruce of \$28,730,533.26; for fir, \$10,447,466.64; and for cedar, \$2,611,866.66, or a total of \$41,789,866.56. If we take the price that these commodities could be purchased for on the outside market, or \$110 a thousand for spruce and cedar and \$65 for fir, deduct that cost from the total expenditure, through a subdivision of spruce, fir, and cedar, on the basis of 40 per cent salvage, we get a cost of spruce of \$667.36 a thousand, of fir \$240.20 a thousand, of cedar \$764.47 a thousand.

Mr. FREAR. On what basis is that?

Mr. GABRIELSON. This basis is now of the production cost of the manufacturer from the cut-up plant, excluding the outside mills, on a basis of 40 per cent salvage.

Mr. FREAR. And putting in the railroads and all the other expenditures that were here?

Mr. GABRIELSON. That is amortizing everything.

Mr. FREAR. On what basis of salvage is that?

Mr. GABRIELSON. This is on 40 per cent salvage basis.

Mr. FREAR. Give the other figures that you have there.

Mr. GABRIELSON. On the same hypothesis, on a 30 per cent salvage basis, the cost of spruce is \$712.30, of fir \$255.80, and cedar \$808. On a 20 per cent salvage basis—that is, getting one-fifth of its original cost at the time of the sale, of these resales of the cut-up plant and the sawmill, etc.—the cost of spruce is \$754.50, fir \$271.50, and cedar \$851.70. On a 10 per cent salvage basis, or the base of the English settlement, the cost of spruce in the cut-up plant was—I do not mean the cut-up plant; I mean, under Government operations; that is what I mean—spruce \$802.20 a thousand, fir \$287.20, and cedar \$895.20.

Mr. FREAR. That is to say, that it will all depend upon the amount of salvage that is received as to the exact amount that airplane timber will cost the Government?

Mr. GABRIELSON. Those who pay the bills; that is what it will ultimately cost the taxpayers; yes.

Mr. FREAR. Now, what is the total loss to the allied Governments over and above what the production would have cost if given to outside contractors and they had been able to provide, as was provided in Canada by Pendleton, by outside contractors in the way it was done?

Mr. GABRIELSON. The total production of 143,000,000 feet shipped, if placed with outside contractors at the rate of \$110 for spruce and cedar and \$65 a thousand for fir and the way it was handled, according to the English settlement, makes the losses as follows to the different Governments: On a 40 per cent salvage basis the loss to the English Government over what it would have cost them had they purchased it directly at \$110 and \$65 a thousand is \$8,914,070.46; to the French, \$6,901,215.84; the Italians, \$2,875,506.60; and the United States, \$10,064,273.10.

Mr. FREAR. That is on what basis?

Mr. GABRIELSON. That is on a 40 per cent salvage basis. I might say that the loss is split between the different Governments on the basis of the apportionment of the shipments to them.

Mr. FREAR. Go on with the other percentages.

Mr. GABRIELSON. Do you wish the figures of the losses according to the different countries?

Mr. FREAR. Yes.

Mr. GABRIELSON. On a 30 per cent salvage basis the total loss to the English was \$9,641,418.81; to the French, \$7,464,324.24; the Italians, \$3,110,135.10; and the United States, \$10,885,472.85. On a 20 per cent basis, the British, \$10,368,829.47; France, \$8,027,481.18; Italians, \$3,344,783.70; United States, \$11,706,742.95. On a 10 per cent basis, or the base of the English settlement, the loss to the British was \$11,096,859.82; the French, \$8,591,117.28; the Italians, \$3,579,632.20, and the United States, \$12,528,712.70.

Mr. FREAR. Is that all?

Mr. GABRIELSON. Yes, sir. I just have them in totals here, the total loss to all the Governments all combined.

Mr. FREAR. Just give that.

Mr. GABRIELSON. On a 40 per cent salvage the total loss was \$28,-755,066.56; on a 30 per cent salvage basis, \$31,101,351.84; on a 20 per cent salvage, \$33,447,837.28; on a 10 per cent salvage basis, \$35,796,322.70.

Mr. FREAR. That is, compared with the amount that was being paid to the outside private mills, independent of governmental operations?

Mr. GABRIELSON. Yes, sir. In fact, I think you will find that is a little higher price. I left a margin of security there.

Mr. FREAR. And that, of course, the inference there is that while the Government was making, or this Spruce Production Corporation out here was making preparations to get out a whole lot of spruce timber that eventually might be useful for airplanes, during that period other Governments—the Canadian Government, for instance—by adopting this private method, was bringing it out, and it was a matter of policy as to which should be pursued?

Mr. GABRIELSON. Now, as the war ceased when it did, this represents what it actually cost the people of the United States and the different Governments for the spruce, fir, and cedar that they actually received.

Mr. FREAR. That is the only asset we have, and we would have been willing to sacrifice it all if we could get the airplanes in time.

Mr. GABRIELSON. Certainly; production was the main thing.

Mr. LEA. I suppose, Mr. Gabrielson, it would be a reasonable conclusion from these figures that if the Germans had given us about one year's advance notice that they were going to quit on the 11th of November it would have saved us quite a lot of trouble and expense.

Mr. GABRIELSON. It probably would have saved us most of this, but here is the thing, Mr. Lea, and understand me this is looking at cold figures and disregarding the question of policy, the policy of making this outlay is something I am not interested in just now, this is the liquidation of a concern, and this is what it is going to cost the people of the United States for what spruce they got. That is the whole thing.

Mr. LEA. I was just making a joking remark, because your figures are undoubtedly correct.

Mr. FREAR. I will make a very serious remark, that after all those losses are figured up we are confronted with the proposition that with all that expenditure we never had an American built fighting or bombing plane at the front.

Mr. LEA. We had some mighty good fighters over there.

Mr. FREAR. We had some splendid men, and they certainly worked their heads off. Here is a letter of Mr. Leadbetter's that should be introduced in the record. We have all agreed on that so that it may go in the record.

SEPTEMBER 12, 1919.

Mr. FREAR,

Chairman Congressional Spruce Committee, City.

DEAR SIR: In accordance with your instructions this morning, I beg to hand you herewith the corrections in the written report of my testimony:

On page 3923, fourth paragraph: I was entered on the war records when I entered the Cavalry at 38 instead of 48.

On page 3928: The last word of the fourth line from the top should read "supplies" instead of replies.

On page 3932: Nothing much in it except a formal request. The insertion of the word "much" should be made as my recollection of the letter was that it was quite a lengthy communication without much to it.

On page 3924: Sixth line from the bottom reads, "I did not tell him that at all." This sentence should read "I did not blame them at all."

On page 3947, third paragraph from the bottom: In line with my conversation with you, I would like to qualify my statement regarding no arrangement or no agreement with Mr. Gompers, as Mr. Gompers, for whom I have the highest regard, might consider that in the conversation with Col. Disque and myself which satisfied Mr. Gompers that Col. Disque's attitude would not be inimical to labor and that there would not be unnecessary conflict between the soldiers and workers so that whereas there certainly was no arrangement nor agreement as to what Col. Disque would do when he arrived on the coast, we were able to satisfy Mr. Gompers that the colonel was the kind of a man who could be relied upon to give labor and operators each a square deal.

On page 3960, eighth line: The sentence reads, "He never claimed to have 'stated' anything." Should be, "He never claimed to have started anything."

Yours, very truly,

F. W. LEADBETTER.

(Thereupon, at 5 o'clock p. m., the committee adjourned subject to the call of the chairman.)

SUBCOMMITTEE NO. 1 (AVIATION) OF THE
SELECT COMMITTEE ON EXPENDITURES IN THE
WAR DEPARTMENT, HOUSE OF REPRESENTATIVES,
Portland, Oreg., September 13, 1919.

The subcommittee met at the Benson Hotel, Portland, Oreg., at 9.35 o'clock a. m., Hon. James A. Frear (chairman) presiding.

Also present: Hon. Walter W. Magee and Hon. Clarence F. Lea.

TESTIMONY OF GEO. H. KELLY.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. A statement has been furnished of certain correspondence between the Loggers Association and Mr. Disque, or Col. Disque at that time, including two or three letters and telegrams, relating to what was claimed by Mr. Disque on the stand to be the negotiations which he said they desired to enter into for the making of a contract, and claiming that the negotiations were offered by them or were initiated by them. I have here a copy of the correspondence in relation to it, which has been requested to be placed as an exhibit, not to be entered in the record, and which I think amply covers the matter that they had in mind, and makes a direct issue with Col. Disque as to the facts.

Mr. Kirk, who is a member of the Loggers' Association, is present at the meeting and knows all the facts, but I desire not to enter it in the record, but attach it as an exhibit.

Mr. LEA. No; there is no use swearing the witness for that.

Mr. FREAR. All right.

(Copy of correspondence referred to was marked "Exhibit 34, Sept. 13, 1919.")

Mr. FREAR. Mr. Kelly, what is your business?

Mr. KELLY. Well, most of my life I have been in the lumber business. I don't do much of anything now. I retired from the lumber business in 1910, and I have lived here in Portland since that time, except about a year and a half that I was in the Army.

Mr. FREAR. And how long have you been in the lumbering business?

Mr. KELLY. Well, up to the time I retired, 26 years, and then I was one year in the lumber business in France.

Mr. FREAR. You were a miller and a logger during this period?

Mr. KELLY. I have logged ever since I was big enough.

Mr. FREAR. Large and small?

Mr. KELLY. I started with a small mill that cut 1,500 feet a day, in 11 hour, and when I quit we were making 700,000 feet a day.

Mr. FREAR. So you have a rather intimate experience with the lumbering business and logging business?

Mr. KELLY. At the time I retired from the lumber business we were the largest rail shippers in the State, had a very large operation.

Mr. FREAR. Under what name?

Mr. KELLY. Booth-Kelly Lumber Co.

Mr. FREAR. Located at?

Mr. KELLY. The principal office is at Eugene, Oreg., about 125 miles south of here, down the Willamette Valley. We had five mills around—a radius of 20 miles from Eugene.

Mr. FREAR. Will you state to the committee, now, briefly, your entrance into the service during the war with Germany, what brought it about—that is, I mean everything that led up to it and the character of operations there?

Mr. KELLY. I was one of several men recommended for a commission in the forestry regiment that was being raised in Washington in 1917, and these recommendations were made by the Lumbermen's Association of the Pacific Coast, and I was called to Washington, on a hurry-up wire, about the latter part of August or the first of September, 1917. I was put into the recruiting of what the department called the forestry troops and the selection of the officers for the forestry troops, which afterwards became the Twentieth Engineers, and also had supervision over the selection and purchase of all the logging and mill machinery that was to be taken over to France for the operation; that included rails, locomotives, every kind of equipment, both for the men and for the operation.

Mr. FREAR. You said you were selected. Will you please state, briefly, the manner of selection, how selected, and so on?

Mr. KELLY. Well, I was recommended by this Lumbermen's Association. They recommended a number, and my orders were from Gen. Black to report at Washington.

Mr. FREAR. Chief Engineer of the Army?

Mr. KELLY. Chief Engineer of the Army.

Mr. FREAR. And then you were given this authority to gather together this division, or whatever it may be?

Mr. KELLY. I was supposed to recruit 10 battalions, which would be approximately about 8,000 men, and then to go to France, but I got 6,500 together and—

Mr. FREAR. At Washington?

Mr. KELLY. At Washington; and then——

Mr. FREAR. Now, leading up to that, after you got these men together and got the material of which you have spoken, did you have an interview with Gen. Black before you left this country?

Mr. KELLY. Yes; I was ordered to go abroad, and I was taken out of my battalion; I was assigned first to the Ninth Battalion of the Twentieth Engineers, which would be one of the last to go over, and then I was moved up to go over with the Third and Fourth Battalions, and I think I had six days' notice. Well, just at the time that—we paraded before the Secretary of War and Gen. Black and other Army officials, and I was called out of the line, as soon as we passed the reviewing stand, by an orderly, and told that Gen. Black and Gen. Biddle wanted to talk with me about lumber conditions out in Oregon.

Mr. FREAR. Who was Gen. Biddle?

Mr. KELLY. He was at that time Chief of Staff.

Mr. FREAR. The Chief of Staff and the Chief Engineer of the Army wanted to talk with you?

Mr. KELLY. Well, Gen. Biddle was an engineer. And I went to Gen. Biddle's office, and they questioned me all about the lumber production out here, which was just then getting started, and particularly about the location of Vancouver, as to whether that would be or would not be a suitable place for the erection of a cut-up plant. The engineers, I think, were a little opposed to it, because it was an Engineer post, and they rather had the idea that if they put a saw-mill plant up there, it was going to ruin it as an Army post; and I explained to them the advantage that I thought Vancouver possessed. I talked with them at great length, all about the wood supply out here, and what I thought was the proper method of handling it. I inferred from the conversation that the Engineers rather expected to take it over, and rather expected to have charge of that, as they did of all of the lumber manufactured in the East. And they asked me who I thought was a proper man to handle it, and I told them that I thought it was in the hands of the very best man that could be selected, Mr. Hawkins; that he was a practical lumberman of wide experience and had the confidence and good will of all the millmen and the loggers; that he was a rustler, and that I thought that the thing was well handled.

Mr. FREAR. That is, you are referring to Mr. Russell Hawkins?

Mr. KELLY. Mr. Russell Hawkins.

Mr. FREAR. Who at that time was in control of the production?

Mr. KELLY. He was in charge at that time. I went to France, then, immediately after that. I was ordered to the port of embarkation, and went to France immediately.

Mr. FREAR. Now, will you briefly state to the committee what occurred in France—that is, what you undertook, and the time it required to get in operation, and the extent of those operations?

Mr. KELLY. Two battalions of the Twentieth Engineers went over on the ship that I was on, one battalion——

Mr. FREAR. About how many men would that be?

Mr. KELLY. About 800 men; that is, they were full strength of enlisted, noncoms, and officers, practically 800. And one battalion was sent to Dijon, in Old Burgundy—it is in eastern France—and

the First Battalion, which I commanded, was sent to the Department of Landes—that is between Bordeaux and the Spanish border—and to operate in a big pine forest there. Eighty days after the formation of the Fourth Battalion was authorized by the War Department, and 11 days after we landed at Brest, we bought an old French sawmill and moved it and set it up and were sawing lumber in Landes.

Mr. FREAR. Within 11 days after you landed?

Mr. KELLY. Yes. I have some of the lumber here in Portland, but it is packed down in the warehouse, that I brought home for a souvenir.

Mr. LEA. Did you say in 11 days after you landed?

Mr. KELLY. Yes; and three days of that was consumed on the train going from Brest to our location in Landes.

Mr. FREAR. And you then erected the sawmill—this old sawmill—and started sawing lumber?

Mr. KELLY. Yes; we went right out in a wilderness. We even had to dig our wells to get water. It was a sand-dune country, and we hauled water in there until we could get our wells dug.

Mr. FREAR. Will you briefly state what you did there after you erected the first sawmill, and how many men you had under your employ at that time, or under your command?

Mr. KELLY. I stayed there for 19 days, and received orders to report to Paris, which was then the headquarters, and I reported there and was put in charge of all of the sawmill operations—that is, the erection of the mills—all of the logging operations, and the placing of the troops. You see, we were getting over new troops all the time, and I should say where the troops were needed most, and was placed in charge of all of that operation.

Mr. FREAR. What was your rank at that time?

Mr. KELLY. I was a major. I was immediately recommended for promotion, but there was no vacancy in the regiment. My recommendation came to Washington three times before I finally was promoted.

Mr. FREAR. Now, what occurred after you got to Paris?

Mr. KELLY. I reported to Gen. Mason M. Patrick, who had charge of what was known as construction and forestry. He had charge of all the lumber operations in France for the American forces, and also the construction of all buildings and docks, hospitals, barracks, and everything of that kind; it was all under that department.

Mr. FREAR. That is, he was the American officer in charge?

Mr. KELLY. He was in charge. Col. Woodruff was next under Gen. Patrick, and Col. Woodruff was the colonel of the Twentieth Engineers. They turned over all of the operations to me. They said all they wanted was the lumber; to go and get it, which I proceeded to do, and I traveled continually from one plant to the other and from one forest to the other all the time I was in France, only reporting to the headquarters, which were afterwards removed to Tours.

Mr. FREAR. How long were you in France?

Mr. KELLY. About 13 months.

Mr. FREAR. To what extent did the operations go during the time you were in charge; that is, the number of mills and the number of men employed and other matters that related to that?

Mr. KELLY. Well, before I make a statement I will just explain that later in the war all of the wood production was turned over to us by

the quartermaster, so that we had charge of a lot of quartermaster troops who were not engaged in the lumbering business, but were still under my supervision.

I had 16,000 white men; I had 9,000 colored troops who were attached to the regiment for duty and 9,000 quartermaster colored troops who were under our supervision but under the command of their own company officers.

Mr. FREAR. That is, under your control and authority and directing where they should operate?

Mr. KELLY. Sixteen thousand white men and 18,000 negroes.

Mr. LEA. I do not believe we have just what your position was. Did you have any particular title in reference to this work?

Mr. KELLY. No; I simply had a letter of authority from Col. Woodruff, which I carried with me all the time, and it was that—

Mr. LEA. I didn't know but what you were called chief of some certain work or something of that sort.

Mr. KELLY. No; they didn't go much on titles over there.

Mr. FREAR. They were not getting titles and stars around there very numerously when you were major and had charge of all those troops?

Mr. KELLY. There was a lot of majors over there that ranked me, and that is the reason I had to carry this letter around. I had only been in the Army a very short time, and I had a letter of authority that could make a man that got his commission 24 hours before I got mine—I could make him mind.

The production, when I went to France, was about—that is, when I took charge of this work—was about 3,500,000 feet a month of sawed timber and—

Mr. FREAR. How many mills were engaged then?

Mr. KELLY. Well, there was—

Mr. FREAR. Generally speaking.

Mr. KELLY (continuing). Probably—possibly a dozen then, and some were half built, and it was very much in a chaotic state. Gen. Patrick told me that the maximum amount of lumber that they wanted would be 15,000,000 feet a month, and to organize along that line, which I proceeded to do, and in less than 90 days I was giving them a little over 18,000,000 feet a month.

Mr. FREAR. How many mills would that take, approximately?

Mr. KELLY. Well, those were small; we had some very small mills, a good many of those old French mills, and I suppose we had possibly 20 mills. And in October, 1918, we produced a little over 50,000,000 feet of sawed stuff in a month, and were operating 81 mills. In addition to that, I had 10 new mills set up, ready for operation, waiting for troops and also for changes. The timber there is small and in very small tracts, and it was necessary to keep mills set up ahead of the work, so that when a company cut out at one place, we just picked up the outfit and took it over to another mill, and then we would move that mill at our leisure. We had three gangs of millwrights moving and setting up these mills, and then, of course, we had men building railroads and things of that kind; we did a good deal of railroad logging and all that had to be prepared ahead.

Mr. FREAR. That would be that by October, 1918, you had 90 mills either in process or ready to start work?

Mr. KELLY. Yes. I had 10 more mills at the base ports, ready to come, and orders had been placed in the United States for about 70 more small mills. We were ordered to produce 100,000,000 feet of

Mr. FREAR. Did you cut any spruce?

Mr. KELLY. Yes; we had three mills in eastern France, in the foothills of the Jura Alps, that cut spruce, and one of those three mills cut spruce altogether.

Mr. FREAR. What was this used for?

Mr. KELLY. Well, we used it for general lumber purposes, and under our agreement with the French anything that was fit for airplane stock was cut into airplane stock and turned over to the French.

Mr. FREAR. A part of this was used for airplane?

Mr. KELLY. Yes. We got it wherever we could. There was, of course, a crying demand for everything of that kind, and we worked very closely with the French authorities, not only because we wanted to help them out in getting this stock, but also because they helped us to secure timber, which had to all be done through the French mission.

Mr. FREAR. Before we go on with that: What other operations—lumbering operations—were being conducted in France and by what governments, if you know?

Mr. KELLY. The British, the French, and the Canadians, in addition to the Americans, all had their sawmill operations.

Mr. FREAR. How was that conducted—that is, so far as districts or divisions were concerned, just generally?

Mr. KELLY. Each outfit; that is, each nation had its own district, except in two places. In the Department of the Landes both the Americans and the British operated. That was a pine forest, and the British shipped all of their stuff out through the Port of Bayonne and up to those channel ports. In one district, in the Jura, where there was some very large fir forests, the Canadians operated right alongside of us. There was a very large forest there, the forest of Levier; the Canadians had one end of it and we had the other. The Canadians had a big spruce mill, a big hand mill, that was the biggest mill in France, at a place called Malbuisson, and they cut entirely airplane stock for the French. That was the largest stand of spruce in France, and this Canadian mill was right in the middle of it. We had one mill about 14 kilometers—that would be about 8 miles—away from it, and another one about 3 miles off in another direction, where the timber was not so good. But the French foresters went out and picked all of the airplane stock for this Canadian mill and marked it and then the Canadians logged it and sawed it and loaded it on the P. L. & M. Railway for the French.

Mr. FREAR. How many people did they have in these operations—the Canadians—and about how many mills, if you know, generally speaking?

Mr. KELLY. Well, I don't know. They had a great many mills and they were scattered all over France.

Mr. FREAR. Give the scope of their operations.

Mr. KELLY. Yes; you see they sawed a lot of stuff for the British and Australians as well, and for the French, and the Canadians paid for a lot of the stumpage that they got from the French by turning over lumber—or sawing lumber—to them.

Mr. FREAR. What other nations were engaged in the lumbering operations over there?

Mr. FREAR. They would at least be able to handle, would they, in your judgment, the stock from which the wing beams could be sawn up; that is, as was testified to by Mr. Dant yesterday—did you hear his testimony?

Mr. KELLY. Well, just a portion of it.

Mr. FREAR. Well, his testimony was to the effect that in order to avoid checking and avoid the rejects which occurred in France, which represents, he said, as high as 85 per cent of the amount of material forwarded, that it was more advisable or it was advisable to send the timbers in such shape that the stock could be cut up abroad rather than here. Now, an ordinary up-to-date mill could have done that anyhow?

Mr. KELLY. Very easily.

Mr. FREAR. Without difficulty?

Mr. KELLY. But now I have seen a great deal of freight handled, both on this end before I went over, because I was at Hoboken and Harrison, N. J., where a great amount of these stocks were handled, and it was part of my business to see that this stuff got over, and I visited all the different ports here continually and I saw how they handled lumber and other stuff, and you take these big Gantry cranes, lift the stuff, load lumber and dump it down, and then probably dump the body of a flat car or something of that kind, or maybe a drum of gasoline, or something of that kind, right on top of it. They had negro stevedores there and seemed to try to see how much stuff they could smash.

Mr. FREAR. So that, as a matter of actual service, usefulness, which was the better method of cutting up and shipping airplane stock, in your judgment, the finished product here in the particular pieces, or having it in such shape that it could be cut up over there?

Mr. KELLY. Well, the stuff that the Allies wanted to cut up over there—would have been very much preferable to have shipped it in the large sizes, because it would not be damaged so in handling, and they had plenty of cheap labor and could have worked the stuff up over there very, very well. In fact, all of the stuff that the Canadians and the Americans furnished in the way of airplane stock was in big cants that the French called "deals," and they were unedged. They simply tried to get the grain as straight as possible and to get off as thick a cant as possible without getting too many knots.

Mr. FREAR. I think it should appear in the record that I have not discussed this matter with you, so I am asking entirely for information on the part of the committee. You said similar cants were furnished over there for final—

Mr. KELLY. Yes; all that the Canadians cut and all that the Americans cut in France, the instructions were to cut them as thick as possible; in fact, they didn't want anything thinner than 3-inch, and that was cut, as the lumberman says, plump—it was just a trifle over 3-inch, and as wide as possible, and unedged, like you see hardwood planks in this country.

Mr. FREAR. What kind of help did you have over there in your lumbering operations?

Mr. KELLY. We had skilled lumbermen, as far as we could get them, but, of course, we had a great many laborers, and, as I stated before, we had these 18,000 colored troops, and a part of those—

Mr. FREAR. Colored and white?

Mr. KELLY. But I say we had 18,000 colored troops.

Mr. FREAR. Colored troops alone?

Mr. KELLY. Yes; 9,000 of them were quartermaster troops that were engaged in cutting wood all the time around among our operations. We had to clean the forests as we went. We had a good many of those colored men that operated sawmills, but our white men were a very fine, high-class grade of men.

Mr. FREAR. You had white soldiers with you there?

Mr. KELLY. We had white soldiers with us; yes, sir, about 16,000.

Mr. FREAR. About 16,000 of those in addition to the colored?

Mr. KELLY. All of those were not sawmill men, originally. We got about 9,000 sawmill men and loggers, and, of course, truck drivers and a certain amount of stenographers, because we aimed to frame up a battalion so that it was a compact unit that could go out and do anything.

Mr. FREAR. How many men did you have, all together, would you say at the apex of your work; that is, the peak of the work; how many men did you have in your employ, these soldiers, how many soldiers?

Mr. KELLY. About 34,00.

Mr. FREAR. Thirty-four thousand soldiers were under your directions?

Mr. KELLY. Yes, sir.

Mr. FREAR. Now tell the committee, please, what these men were paid?

Mr. KELLY. Enlisted men were paid \$33 a month. The master engineers—they had about five of them in each battalion—the master engineers, senior grade, got \$96 a month. That was the highest paid to any man until you get into the officers.

Mr. FREAR. These men worked in the woods and mills and every way, did they?

Mr. KELLY. Oh, yes.

Mr. FREAR. Tell us under what conditions they worked during the winter months.

Mr. KELLY. Well, in the Vosges mountains, that was where our largest operation were, it was very high and very cold. The first men got in there right in midwinter, along about November or December, 1917, and they were all in tents. They had all the way from three to six feet of snow there that winter, and the thermometer got down to seven below zero. We lost quite a few men by pneumonia. Then we had about two battalions of men further south in the Jura Alps, right up next to the Swiss border, and they would get—the average snowfall in there in the winter is about two meters, that is right near seven feet, and it is very cold and bleak in there. But before I left over there we found that we would have to put in another winter and I put the men all in barracks, built wooden barracks and lined them with building paper. But the first winter they were all in tents.

Mr. FREAR. You are somewhat familiar, I assume, with lumbering operations in Washington and Oregon, the States of Washington and Oregon, these two States, and I will ask you whether or not, so far as the climatic conditions were concerned, it was easier or harder working over there, as you have detailed the conditions, as compared with the conditions here?

Mr. KELLY. Well, you would never pretend to work men in this country in the bad weather that we had to work in there. They never stopped there. All of those mills, up until April—the end of April, 1918—ran 20 hours a day, 6 days in the week. In April we reduced the time to 114 hours a week. That is, the men would stop at 3 o'clock Saturday afternoon, and then we had inspection from that on until 6 o'clock. But they worked every day, rain or shine or mud—no difference.

Mr. FREAR. How many hours?

Mr. KELLY. Up until the end of April they worked two 10-hour shifts. Then we would have a shift of 10 hours in the daytime and 10 hours in the night. After that we reduced it to 57 hours a week.

Mr. FREAR. Was there anyone over there who determined that you should reduce it to eight hours a day—have an eight-hour day?

Mr. KELLY. They had a good deal of agitation over that point. There are always a lot of agitators in the Army, like there are in civil life. They said they were on Government work, and they were going to work eight hours a day; but I soon talked them out of that.

Mr. FREAR. By what method did you persuade them that in times of war, when they were not engaged in the fighting line, they ought to be patriotic and work over eight hours a day, if necessary?

Mr. KELLY. Well, we only had serious trouble in just one or two places. We had a few I. W. W.

Mr. FREAR. You had the I. W. W. over there, did you?

Mr. KELLY. Oh, yes. We got some drafted men, and some men of the I. W. W. had enlisted. They started in to make trouble, and we just put them in the guardhouse on bread and water, and they soon came to their milk.

Mr. FREAR. With over 30,000 men in your employ, what was your title before you left?

Mr. KELLY. I was a lieutenant colonel.

Mr. FREAR. You were promoted to lieutenant colonel?

Mr. KELLY. Yes.

Mr. FREAR. Did you ever complain because you were not made a colonel or a brigadier general, or believe that you were entitled to be given the title of major general?

Mr. KELLY. No.

Mr. FREAR. That never occurred to you?

Mr. KELLY. No.

Mr. FREAR. Did you ever recommend your officers for distinguished-service medals for the work in the mills; and if so, to what extent?

Mr. KELLY. Did I ever recommend them?

Mr. FREAR. Yes.

Mr. KELLY. No. I recommended some of my officers for promotion.

Mr. FREAR. For promotion?

Mr. KELLY. Yes. There was a committee of three of our regiment that passed on all promotions and also the making of all noncoms. We had a great many noncoms, and that was handled through my office.

Mr. FREAR. The reason this is asked on the part of the committee is that an officer, for instance, who, so far as we know, had never seen military service before, Maj. Eaman, who came 3,000 miles to testify in the investigation, as he states, at his own expense, arrived here in September, 1918, five or six weeks before the armistice

was signed, and he was recommended for a distinguished service medal, while his headquarters were in the Yeon Building in this city he was one of 20 recommended here. Did you have any such cases in your experience over there?

Mr. KELLY. No. They were not giving out any medals up to the time I left.

Mr. FREAR. They were engaged in preparing for war.

Mr. KELLY. They were busy at something else all the time.

Mr. FREAR. How far were you from the fighting line during these operations?

Mr. KELLY. We had a great many troops that were in what they called the zone of the armies. France was divided into military zones, and what they called the zone of the armies, or the advanced section, I went through every four or six weeks. We had mills that were right at the front, and we lost some of our officers. I remember there was a captain and a lieutenant who both got into machine-gun nests.

Mr. FREAR. That is, you were right near the front in your operations?

Mr. KELLY. Yes.

Mr. FREAR. Did you find it necessary to keep about 140 or 150 officers, and about 400 men around you, surrounding you, as occurred in the Yeon Building in this city, according to the reports that have been filed with this committee, in order to carry on your operations?

Mr. LEA. I think that is an unfair question. I do not think this witness is seeking to criticize other people in the war.

Mr. FREAR. I am asking a question.

Mr. LEA. You are trying to place something in his mouth.

Mr. FREAR. I am asking what the conditions were, for comparison.

Mr. KELLY. I can tell you just what officers I had in my own headquarters. I do not know anything about what happened in the Yeon Building or any place out here. There was not to exceed 10 officers in the headquarters of all of those combined regiments at Tours, and perhaps 12 or 14 enlisted men. Now, they handled all of the acquisition of timber from the French, handled all of the orders that came in from everywhere for all of the lumber, rustled all of the cars—there was a chronic car shortage over there—and attended to all of the manufacturing of all of the lumber, all of the piling, all of the telegraph poles, all of the barbed-wire entanglement stakes that the American Army used, and all of the wood after the quartermaster turned this business over to us.

Mr. FREAR. Did you have any force of men who were carried as a reserve before they were sent into active operations, and if so, how many men would you have in a sort of receiving camp?

Mr. KELLY. We had none at all. The demand for lumber was growing so fast that we were constantly grabbing what they called service troops all the time, and finally the Twentieth Engineers was made the nucleus of a very large regiment.

Mr. FREAR. That was your regiment?

Mr. KELLY. My regiment. It was to contain 145 companies.

Mr. FREAR. And that would be how many men?

Mr. KELLY. That would be about 40,000 men. That would be that many white men. Then, in addition to that, we still had the authority to handle these 18,000 colored men, who were simply attached to us for service. We took in the Forty-first, Forty-second, and Forty-third Engineers, and several service battalions, and the Tenth Engineers, and then sent men to the United States, and they were here when the armistice was signed, to bring over about 12,000 or 15,000 more skilled sawmill men to carry out this increased program of 100,000,000 feet of sawed lumber a month.

Mr. FREAR. And your force had arisen to what in number, did you say, while you were there in command as lieutenant colonel?

Mr. KELLY. About 34,000, white and colored.

Mr. FREAR. You had no assembling or receiving camp, you say?

Mr. KELLY. No.

Mr. FREAR. Now, you had nothing to compare with the receiving camp over here at Vancouver, where the testimony shows over 9,000 men and over 400 officers were concentrated before they were sent out; you had nothing of that kind?

Mr. KELLY. No. We always had a place to put the men. We would get a cable from Washington before any men were headed over for Brest or Bordeaux or St. Nazaire, where they were going to land, and we knew that we were going to get them; so we had an officer to meet the transport and take the men immediately to where they were to go to work.

Mr. FREAR. You have testified now in regard to the soldiers, the conditions under which they served, and you have testified to the pay that they received and the number of men you had, the final total, and the production of the mills, the number of mills, and matters of that kind. So far I have only spoken with you for a few moments on the subject. Can you give us any further information regarding conditions—information that would be helpful to the committee, to show the means by which, with the cooperation of the men and the officers, and in the conditions there, you were able to bring out this production of which you speak?

Mr. KELLY. Well, we had a splendid lot of men. I recall one thing: There was a Maj. McKay came down there, and he was a doctor. He came up to Tours and complained that we were working our men to death. I investigated the thing, and his chief complaint was that over on the mess-house door every day on the blackboard we would put up how much the day shift cut and how much the night shift cut, and we were pitting one against the other, and he said we were absolutely crucifying those poor men over there. But the men were willing and worked, and I never saw such a good spirit as they had in those men. That kept up all the time until the war ceased, and then they took them out and put them to building roads. They took men, for instance, who had been filers in a sawmill here in civil life, getting \$10 or \$12 a day, and put them out with a pick and shovel over there for \$33 a month.

Mr. FREAR. And they worked?

Mr. KELLY. Yes.

Mr. FREAR. Willingly?

Mr. KELLY. Well, they worked; I do not know how willing they were. Of course, a man naturally would not feel very good about it.

Mr. FREAR. They were in the Army.

Mr. KELLY. As long as they were filing or any work of that kind they did it willingly for their \$33 a month. I had sawyers over there in some of those mills, just as good men as ever took hold of a lever, at \$33 a month, and there were men who would command from \$7 to \$10 a day here. We had them from all over the United States—from the South, North, East, and West.

Mr. FREAR. How many automobiles did you use for your 34,000 men over there?

Mr. KELLY. Passenger automobiles?

Mr. FREAR. Passenger automobiles.

Mr. KELLY. We were permitted two to a battalion—two Dodge cars to a battalion.

Mr. FREAR. How many would that make?

Mr. KELLY. We had 13 battalions—about 26.

Mr. FREAR. The reason I speak of that is that I believe that the number appearing in the statement of automobiles offered for sale, passenger automobiles, was in the neighborhood of 100. You used Army trucks, did you?

Mr. KELLY. Yes; a great many.

Mr. FREAR. How many?

Mr. KELLY. Well, I suppose we had nearly two thousand, and they were of all kinds. Now, they ran from three-quarters of a ton up to five and one-half tons. A great many of them were small trucks. We had to take what we could get, and occasionally when there would be a drive going on, like I remember one instance when they were getting ready for the drive at St. Mihiel, they came down and took all the good trucks away from us that we had, and a great many of our horses.

Mr. FREAR. To use for other operations?

Mr. KELLY. Yes. We had a great time getting them back, and when we did get them back we got a lot of old junk.

Mr. FREAR. What was the method of lumbering there, getting out the timber, did you use horses or Army trucks?

Mr. KELLY. We used—

Mr. FREAR. Or, donkey engines?

Mr. KELLY. In the Landes we used mules as far as we could get them, and we hauled with our trucks, big wheels, spool skidders, called "bummers" in the South, and then we had a lot of logging by motor truck where it was long distances. Some places we would haul 8 or 10 miles, and then we had quite a lot of railroad. We had, I suppose, 150 or 200 miles of railroad at different times, all kinds and conditions.

Mr. FREAR. I have never discussed this question with you, but I will ask you if you know what the cost of the railroad was there?

Mr. KELLY. Well, I could not give you any answer to that that would clarify the matter, because we had every kind of railroad, from 60 centimeter, the gauge of which would be 24 inches, and from 9 to 16 pound rail, on up to 80 pound, new steels on standard gauge, and hardwood ties.

Mr. FREAR. Did you condemn rights of way in establishing those railroads, or was that necessary?

Mr. KELLY. Well, in places we would have to deal with the owner, but we always did that through the French mission. We had a mission, an American mission up at Paris, under Maj. Woolsey that kept in touch with all those matters. Sometimes we would have to

pay a Frenchman for his crop, or something of that kind, but we had very little trouble with rights of way.

Mr. FREAR. Take the high-grade road—I know nothing about the matter—take the high-grade road there what we call a standard-gauge road over here, about what would be the cost of construction, if you know?

Mr. KELLY. I do not know, because I do not know what this heavy steel costs, because that was arranged by the Director General of Transportation. We simply requisitioned on him. We cut our own ties and did our own grading, sometimes with prisoners and sometimes with labor troops.

Mr. FREAR. You had entire charge of the operations, there were no other contractors, as I understand, no cost-plus operators, or anything like that.

Mr. KELLY. No.

Mr. FREAR. What else do you think of, Colonel?

Mr. KELLY. Well, I do not recall anything. I probably could talk on here all day about something that would not interest you at all.

Mr. FREAR. It is of great interest, because I do not think any of us have had this phase of the matter presented before, and we knew nothing about it until late last evening.

Mr. KELLY. You spoke of one thing, about where they were in the zone of the armies. I recall two or three operations that were up around in that vicinity, Toul and Nancy, where the fellows were bombed there every night. We were running day and night, and they would come over and bomb these fellows every night. We had bomb-proof shelters for them. We had a number of men killed in the Argonne that were cutting wood there. Some of them were blown up by traps that were left there by the Germans after they went out of that country.

Mr. FREAR. Taking all things into consideration would you think it would be as dangerous over there in operating as it would be here in Oregon and Washington?

Mr. KELLY. Yes, I think it would be quite so.

Mr. FREAR. That is, where they have 8 feet of rainfall here?

Mr. KELLY. They do not have any more rainfall here than they have in France. Believe me it rains every day.

Mr. FREAR. They recommended distinguished service medals, as I recollect, according to the order, on the basis of rainfall, which reached an aggregate of 8 feet.. Did anything of that kind occur over there?

Mr. KELLY. I did not see any swimmer's medals over there.

Mr. FREAR. What else do you know of? Anything else?

Mr. KELLY. I think you asked if I saw any planes over there.

Mr. FREAR. Any bombing or fighting planes of American manufacture at the front.

Mr. KELLY. I did not see any. Right along at the later end of the war I saw nine planes being unloaded from a ship at Bordeaux. Those were the only planes that I ever saw.

Mr. FREAR. And that was at what time?

Mr. KELLY. Well, I think that was right at the end of October, but it might possibly have been right at the end of September. I was there both times.

Mr. FREAR. That was just shortly before the signing of the armistice?

Mr. KELLY. Yes, sir; it was a short time before. There was nine of them on the transport there, being unloaded.

Mr. FREAR. Is there anything else you think of.

Mr. KELLY. I do not think of anything.

Mr. LEA. Now, these men that came to France had gone through the receiving camp before they arrived there, hadn't they?

Mr. KELLY. The men that I took over, for instance; that is, these forestry troops?

Mr. LEA. What I mean is this, they had their immunity treatment before they went to France?

Mr. KELLY. Well, they generally got that at Washington or some camp where they were rounded up. They rounded up battalions at a time. For instance, this Third Battalion was formed at Fort Myer, Va., and the Fourth Battalion was concentrated at Washington University, right outside of Washington. It takes 11 days to give them their immunity treatment, and, of course, they would all have to have that. They would not let an officer or an individual go abroad without that treatment. But we had some men that went over in the Fourth Battalion, 138 men, that came from Camp Lewis, that were sent over there in midwinter, late in December, in fact about Christmas. They were sent over there with cotton shirts and overalls. They had not been here long enough to get uniforms. They were only there 24 hours before we took them to Hoboken and took them on across. I think those men had not been in the Army more than five or six days before they went on the transport.

Mr. LEA. They went into your service?

Mr. KELLY. They were woodmen that we picked out. I fixed up a system in Washington of finding out all the loggers and sawmill men that were in the Army, that were in the draft, and then I would have them transferred. You see I would get an order through The Adjutant General's Office and have those fellows transferred. That is how I got my skilled men. Of course, I got lots of them by voluntary enlistment. If a fellow got in the Army, or I found out that he would be in the draft and was going to be drafted I inducted him in. I got men from all over the United States that way.

Mr. LEA. You got that from the records in the War Department, the qualification cards; that is, as to the drafted men?

Mr. KELLY. No. I sent letters. I sent 2,500 letters to sawmill operators all over the United States asking them for the names of any men, the names and addresses of any men who were going to be drafted. You see a man that had a sawmill down South somewhere and five or six men working for him were going to be drafted he knew it, and then I got in communication with them and found out the man's draft number, and I would catch him before he got into the Army. In other words, I beat the fighting units to it. Then I got lots of men, for instance, out of Camp Lewis or any of these big concentration camps, out of the classification cards. I got lots of them that way.

Mr. MAGEE. From other parts of the country, too?

Mr. KELLY. Oh, yes; all over the United States—east, west, and south.

Mr. LEA. These colored men, I suppose, were all from the South?

Mr. KELLY. Yes. You see the regiment itself was a white regiment, but we took these service battalions. A colored service battalion is 1,000 men; it is bigger than the ordinary battalion. We tried to get those battalions from the lumber districts wherever we could. The best ones we got were from Georgia. I had 3,000 Georgia niggers and they were all good woodsmen and good sawmill men. We got some cotton pickers and preachers and one thing and another, and they were not very good.

Mr. LEA. That is all, I think. I appreciate your testimony very much. It is interesting and enlightening.

Mr. MAGEE. I would like to ask you, Colonel, if you could give us any information as to whether any other wood than spruce was used in the production of airplanes over there, and the extent of the production under you, and the nature of the spruce that you found there.

Mr. KELLY. We did not produce any over there that went into aircraft except this spruce at this operations that I have testified to, but the French and Germans did use some aspen and some kind of a—well, it was a wood similar to our poplar here, a kind of linn.

Mr. MAGEE. Basswood?

Mr. KELLY. Yes; like basswood. They used that in some places.

Mr. MAGEE. Whatever spruce you sawed, the portions that were suitable for aircraft production, those portions that were turned over to the French?

Mr. KELLY. Yes. It was our agreement that we would turn that over to the French without cost.

Mr. MAGEE. Did you find a good stand of spruce there? What was the nature of the spruce growth there?

Mr. KELLY. Well, it was an artificial growth of spruce, and very thick. The spruce there would run from thirty-five to fifty thousand feet to the acre, and there were some pretty good specimens of spruce. I have seen quite a few spruce trees that would be 3 feet in diameter breast high, but it does not run tall and clear like our timber out here.

Mr. MAGEE. You could not get such lengths of log in the clear.

Mr. KELLY. The longest spruce logs that we got over there were 20 feet. We never attempted to get any wing-beam stock or anything of that kind.

Mr. MAGEE. How close to the ground did you cut the timber there?

Mr. KELLY. Just as close as a French forester could get at it with a hatchet and make a spot above the ground.

Mr. MAGEE. You did not leave any stumpage?

Mr. KELLY. No stump. You would see a timber faller there instead of working on a springboard he was down on his hands and knees.

Mr. MAGEE. How close did they get to the ground, in inches?

Mr. KELLY. As low as 4 inches. You take a big-butted tree, with the roots growing on it, and we used to have men go around and saw in all around the tree and then take axes and hew it down before they felled it. The stuff was like churned butter.

Mr. MAGEE. In what parts of France, if I may ask, did you find any spruce?

Mr. KELLY. In the eastern part, along the Swiss border, in the Department of Aisne and in the Jura. These spruce forests run right up to the Swiss frontier.

Mr. MAGEE. You mentioned the spruce as being artificial; you mean planted trees?

Mr. KELLY. Yes. All of the forests in France, except the oak, have been planted.

Mr. MAGEE. How old were those forests, if you know, where you found spruce trees 3 feet in diameter?

Mr. KELLY. We sawed one forest at a place called LaCluse, in the Department of Aisne, and it was planted by the Jesuits in the sixteenth century.

Mr. MAGEE. Pretty tall trees?

Mr. KELLY. Well, I measured one there one time that was about 4 feet in diameter and about 140 feet long, belonging to some French contractor there.

Mr. MAGEE. What distances would they plant them?

Mr. KELLY. They planted them very thick, just about as thick as a stand could be, and then they kept constantly thinning them for wood. Those forests, a great many of them, are owned by the communes, or little towns there, and are under the supervision of the communes, and they get their wood supply from them. Any defective tree, or crooked tree, or a tree that shows rot or fork, they thin them out. They cut so much out of the forests every year, what they call the expectation of the forest.

Mr. MAGEE. A forest is under careful supervision all the time?

Mr. KELLY. Oh, yes, indeed.

Mr. MAGEE. I think that is all.

Mr. FREAR. I omitted one question. There was an order or something of the kind, I believe, issued in the army that they should encourage singing among the soldiers. At least that was one of the rules. Did you have anything to do with that? Was it attempted?

Mr. KELLY. No.

Mr. FREAR. Well, there wasn't any attempt, was there, in your camp to indulge in singing in order to create promotions among the officers?

Mr. KELLY. No.

Mr. FREAR. There was nothing of that kind?

Mr. KELLY. No.

Mr. FREAR. Carols or ballads?

Mr. KELLY. No.

Mr. FREAR. Nothing of that kind?

Mr. KELLY. Not that I ever saw.

Mr. FREAR. I have had handed to me by some one else, and I understand that it is against the objection of the witness, some letters, and I ask that they be read into the record. I think these letters are such that they ought to be presented, and I desire to offer them for the permanent record and in connection with this testimony at this time:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, January 4, 1919.

Lieut. Col. GEORGE H. KELLY,
Office Chief of Engineers, Washington, D. C.

DEAR SIR: I am forwarding you herewith your discharge from the Engineers, and wish to convey to you my appreciation of your efforts in behalf of your country during the recent emergency. The Engineers of the United States have

by their patriotic and self-sacrificing conduct well merited greater thanks and appreciation than it is possible for me or any other man to give them. I am sure, however, that when it is possible to relate in full the efforts and accomplishments of American Engineers, both overseas and in this country, that the people of the United States will show appreciation of their efforts in no uncertain terms.

2. That you have been one of these Engineers and have contributed your part toward this successful accomplishment constitutes in itself an honor greater than any official expression of opinion. Permit me, however, to extend to you my personal thanks and those of the Corps of Engineers for your efforts and assistance.

Very respectfully,

W. M. BLACK,
Major General, Chief of Engineers.

The other letter is signed by Maj. Gen. W. C. Langfitt, chief engineer of the American Expeditionary Forces, addressed to Lieut. Col. George H. Kelly, Engineers, Portland, Oreg.

Lieut. Col. GEORGE H. KELLY,
Engineers, c/o Chief Engineer, Washington, D. C.

MY DEAR COLONEL: As the work of the Engineer Department is rapidly drawing to a close I desire to express to you my appreciation of your loyal and energetic work in this department. The battalion of forestry troops under your command was among the earlier arrivals, and the promptness and energy with which they took hold of the work in the forests of the Landes showed a spirit deserving special commendation. Your later work at the headquarters of the Division of Construction and Forestry, directing the operation of the whole forestry enterprise, showed an ability to overcome difficult problems and to stimulate and maintain a standard of accomplishment which contributed heavily to the success of the operations.

Sincerely, yours,

W. G. LANGFITT.

This letter was dated June 1, 1919. I desire to make a brief statement for the record. I have been asked to call Davis, who was court-martialed here, and I would have done so and tried to make an appointment at one of the previous hearings, which he failed to understand. I will say that he desired to appear here, and the committee would have been glad to have heard him if it had been possible, but because of the number of witnesses and the brief time that was given us for the hearings it was impossible to have him present. This statement is made in justice to him.

Mr. FREAR. I ask that the following statement be inserted at the conclusion of G. H. Kelly's testimony taken in Portland, and as a conclusion to the Portland message:

EXHIBIT 37, SEPTEMBER 16, 1919.

Hon. FREDERICK W. GILLET,
Speaker House of Representatives, Washington, D. C.:

The subcommittee investigating aircraft production is in receipt of several telegrams, letters, and other communications criticizing the members on the grounds that both sides of the spruce-production controversy have not been a fair and unbiased hearing. The undersigned have been in attendance at every meeting of the committee in Seattle and Portland and unhesitatingly state that the conduct of the members has been fair from every point of view. Gen. Disque was given a full and fair opportunity to present all facts and figures he desired. He was before the committee three and one-half days, and as many of his witnesses, about a score, were called as could be heard without unduly delaying the proceedings. In our opinion the criticism of the committee is the result of a well-developed and well-directed propaganda which has been in evidence ever since the committee reached the Pacific coast. All acts of

the committee have been particularly fair and a most exhaustive examination has been made of each witness, and a thorough investigation has been the result, notwithstanding an opposition encountered, engineered without question by interests anxious that this committee shall not learn the true state of affairs that existed in the Spruce Production Division and Corporation.

WALTER H. LEE,
Official Reporter.

EARL FIELD,
Assistant Official Reporter.

ARTHUR FAIRBROTHER,
Providence Journal.

BEN H. LAMPMAN,
Portland Oregonian.

HENRY M. HANZEN,
Portland Telegram.

(Whereupon the committee adjourned, subject to the call of the chairman.)
