INDEX.

	Page.
Accounts of Spruce Production Corp., testimony re.....	1886-1888
Aeroplanes:	
American, lack of in France, Thomas Committee report on.....	1354-1357
Amount of lumber necessary for construction.....	1660
De Haviland 4's, number of at fighting front in France.....	1524
Lack of American abroad.....	1177-1182-1524
Protection for 91st Division in France, testimony of Capt. Wm. O. McKay, re.....	1027
Aeroplane support, lack of American abroad.....	1177-1182
Aircraft Board:	
Members of mentioned in testimony of Hon. Oswald West.....	1762
Pacific coast branch, members of.....	1494
Airplane lumber:	
Cost of.....	1582-1593
Percentage of from logs.....	1538
Aircraft Lumber Co.:	
Estimated output of spruce per month by selective logging methods, in connection with contract in conjunction with Warren Spruce Co.	1017-1018
Operations and organization of with reference to Warren Spruce Co.	1015-1019
Airplane Spruce & Lumber Co.:	
Analysis of cost of rived spruce cant production on cost-plus contract, table re.....	1590
Cost of analysis of railroad constructed by, table re.....	1594-1595
Logging operations, cost, analysis of, table re.....	1601
Alaska, railways, cost of.....	1473
Allies:	
Distribution of spruce and fir to.....	1162, 1677-1679, 1695-1697
Lumber, need for.....	1911-1913
Lumber shipped to, table re.....	1908
American International Corporation:	
Investigation of by Mr. Guy George Gabrielson.....	1427-1428
Telegrams to and from Col. B. P. Disque re business connections.....	1683
Amsinck Co.:	
Connection with Siems-Carey-Kerbaugh Corporation.....	1422-1425
Relation of Mr. Brice P. Disque to.....	1422-05
Amsinck & Co. (Inc.) stock owned by American International Co.....	1427
Annual production of spruce.....	984-987
Archibald, Lieut. Norman S.:	
Examination of, by Hon. James A. Frear re lack of aeroplanes and aeroplane support abroad.....	1181, 1182
Examination of, by Hon. Clarence F. Lea re lack of aeroplanes and aeroplane support abroad.....	1180-1182
Examination of, by Hon. Walter W. Magee re lack of American aeroplanes and aeroplane support abroad.....	1177-1182
Armistice, lumber ready for mills at signing of.....	1393
Aston, Mr. Taggart:	
Examination of, by Hon. James A. Frear re construction of Port Angeles & Grays Harbor Railroad in connection with spruce production.....	1215-1217
Examination of, by Hon. Clarence F. Lea re construction of Port Angeles & Grays Harbor Railroad in connection with spruce production.....	1218-1220
Examination of, by Hon. Walter W. Magee re construction of Port Angeles & Grays Harbor Railroad in connection with spruce production.....	1218

Ayer, Mr. N. E.:	Page.
Examination of, by Hon. James A. Frear re spruce and fir production and shipment to Allies.....	2271-2280
Examination of, by Hon. Clarence F. Lea re spruce and fir production and shipment to Allies.....	2275-2278, 2280
Ball, Mr. Walter E.:	
Examination of, by Hon James A. Frear re spruce production and railroad construction in Toledo (Oreg.) region.....	1698-1727
Examination of, by Hon. Clarence F. Lea re spruce production and railroad construction in Toledo (Oreg.) region.....	1715, 1718-1726
Examination of, by Hon. Walter W. Magee re spruce production and railroad construction in Toledo (Oreg.) region.....	1712-1726
Barde & Sons, M., advertisement re sale of Government property.....	2249-2251
Beals, Mr. A. G., letter to Secretary of War re obstacles to spruce production.....	1940

Bellingham Chamber of Commerce, telegram from re witnesses on spruce production.....	1526
Benson, Mr. Amos:	
Cruising operations in connection with spruce production and railroad construction.....	2029-2054
Examination of, by Hon. James A. Frear re spruce production and railroad construction.....	2030-2035, 2038, 2040, 2051
Examination of, by Hon. Clarence F. Lea re spruce production and railroad construction.....	2028-2054
Examination of, by Hon. Walter W. Magee re spruce production and railroad construction.....	2051-2053
Mention of, in connection with inspection of Siletz region and spruce production on Wessel tract.....	1716, 1719, 1752, 1797
Report re railroad construction in Siletz region.....	1625-1626
Bliss, Gen. Tasker, letter to and from Gen. Belin re decreased shipments of spruce to France.....	2263
Blodgett, Mr., letter and proposal of, to Col. B. P. Disque re sale of Blodgett tract to Government for spruce production purposes.....	1900, 1901
Blodgett spruce tract:	
Alsea Southern Railway for transporting spruce from, built by Warren Spruce Co. and operated by Aircraft Lumber Co.....	1016
Options on.....	1893-1905
Price, quantity of lumber on, and desirability of.....	1997-2000
Proposal for sale of, to Government for spruce production purposes.....	1900, 1901
Purchase of, after signing of armistice.....	952-954, 981-984
Spruce, fir, and other timber on.....	1894-1899
Warren Spruce Co., proposal of, for purchase of.....	1905-1907
Bonus offered for lumber production.....	1373
Boxes, manufacture of, from waste wood from logs used for aeroplane manufacture.....	969
Box lumber, contract of Fisher Story-Yaquina Bay Lumber Co. for.....	1799
Bratnober, Mr. John E.:	
Examination of, by Hon. James A. Frear re price of lumber and labor difficulties in connection with production of spruce.....	1192-1196
Examination of, by Hon. Clarence F. Lea re price of lumber and labor difficulties in connection with production of spruce.....	1192-1196
British Columbia, spruce production operations in, testimony re.....	1249-1265, 1908-1946, 2008
British Government. (See Great Britain.)	
Brown & Bro., Walston H., mention of re proposal to furnish Clallam County spruce.....	1457
Brumby, Mr. P. S.:	
Examination of, by Hon. James A. Frear re spruce production, and railroad construction in connection with Blodgett tract.....	1893-1904
Examination of, by Hon. Clarence F. Lea re spruce production and railroad construction in connection with Blodgett tract.....	1901-1904

Brumby, Mr. P. S.—Continued.	Page.
Examination of, by Hon. Walter W. Magee re spruce production and railroad construction in connection with Blodgett tract.....	1895-1897, 1901-1904, 1905
Butler, Mr. William C.:	
Affidavit re disconnection with conference of Puget Sound loggers relative to spruce production.....	2124
Examination of, by Hon. James A. Frear re Siems-Carey-Kerbaugh Corporation contract for spruce production and railroad construction in Oregon.....	1019-1056, 1065, 1070, 1071, 1073-1075
Examination of, by Hon. Clarence F. Lea re Siems-Carey-Kerbaugh Corporation contract for spruce production and railroad construction in Oregon.....	1032, 1033, 1038, 1041, 1048, 1056-1075
Examination of, by Hon. Walter W. Magee re Siems-Carey-Kerbaugh Corporation contract for spruce production and railroad construction in Oregon.....	1038, 1040, 1041, 1043, 1044, 1046-1048
Cain, John, letter to Col. B. P. Disque submitting proposal of Siems-Carey-Kerbaugh Corporation for spruce production and railroad construction	1491-1492
Campbell, Mr. C. C.:	
Examination of, by Hon. James A. Frear re depository for original contracts for Spruce Production Corporation, and procedure for internal checking of cost-plus contractors.....	2204
Examination of, by Hon. James A. Frear re financial operations of Spruce Production Corporation.....	2124-2147
Examination of, by Hon. Clarence F. Lea re depository for original contracts of Spruce Production Corporation and procedure for internal checking of cost-plus contractors.....	2198-2200
Examination of, by Hon. Walter W. Magee re depository for original contracts of Spruce Production Corporation and procedure of internal checking of cost-plus contractors.....	2203
Salary of as superintendent of cut-up plant and sales agent for Spruce Production Corporation.....	2138-2141
Camps, spruce production, mistreatment of soldiers in	1075-1088
Carrigan, Mr. M. J.:	
Examination of, by Hon. James A. Frear re construction of Port Angeles and Grays Harbor Railroad, Siems-Carey-Kerbaugh Corporation contract, and spruce production in Northwest.....	1220-1222, 1226, 1228, 1235
Examination of, by Hon. Clarence F. Lea re construction of Port Angeles & Grays Harbor Railroad, Siems-Carey-Kerbaugh Corporation contract, and spruce production in Northwest.....	1236-1243
Examination of, by Hon. Walter W. Magee re construction of Port Angeles & Grays Harbor Railroad, Siems-Carey-Kerbaugh Corporation contracts, and spruce production in Northwest.....	1224-1228
Test re railroad construction for spruce production purposes read into the record.....	1442-1445
Cecil, Mr. George H.:	
Examination of, by Hon. James A. Frear re spruce production and railroad construction.....	2117-2124
Examination of, by Hon. Clarence F. Lea re spruce production and railroad construction.....	2118-2124
Examination of, by Hon. Walter W. Magee re spruce production and railroad construction.....	
Letter to Col. B. P. Disque, transmitting Nelson report on quantity of spruce available on Hoko River and adjacent areas.....	1571-1572
Chamberlain, Hon. George E., letter re business connection of Mr. Russell Hawkins	2285
Chinn, Mr. E. B.:	
Examination of, by Hon. James A. Frear re violation of wage schedule in connection with Siems-Carey-Kerbaugh Corporation contract.....	1128, 1129
Examination of, by Hon. Clarence F. Lea re violation of wage schedule in connection with Siems-Carey-Kerbaugh Corporation contract.....	1129
Letter to Col. B. P. Disque re spruce contracts.....	1563-1664
Chattel mortgage, Siems-Carey-Kerbaugh Corporation in favor of United States Government	1150-1154

	Page.
Chitwood camp, operations and mismanagement at.....	1734, 1735, 1753-1755
Circulars issued to lumber producers asking estimates for production.....	1386
Claims, Spruce Production Corporation, settlement of, in connection with operations of.....	959-961
Clallam Bay:	
Difficulty of logging operations in connection with.....	1946-1954
Rafting in connection with spruce production.....	1447-1558, 1948
Towing conditions on.....	1985, 1986, 2017, 2018
Clallam Bay region, extension of railroad in.....	1569-1577
Clallam County: Summary of reasons for selection of Lake Crescent railroad route to Clallam County spruce.....	1481-1482
Clatsop district, services of soldiers in.....	2069
Coffin, Mr. Howard E.:	
Letters to and from Mr. David C. Whitney re release of Mr. Russell Hawkins for work in spruce production.....	2282
Recommendations to by Mr. Russell Hawkins re spruce production and railroad construction.....	2286-2302
Statement of re conduct of spruce production operations by Maj. Charles R. Sligh, deposition of Edward L. Wallace re.....	1686
Telegram to, from Col. B. P. Disque re securing Clallam County spruce and railroad construction in connection therewith.....	1457-1458
Commandeering proceedings against Goodyear Timber Co.....	1568-1569
Commercial lumber:	
Percentage produced in spruce production operations.....	2001-2002
Willapa Lumber Co., terms of contract for purchase of.....	2130-2138
Commission for sale of Government property.....	2249
Contractors:	
Cost-plus, for rived spruce cant production, table re.....	1599
Cost-plus, interest on advances to by, spruce production corporation table.....	1603
Cost-plus, logging operations by, analysis of, table re.....	1600
Cost-plus, spruce production and railroad construction by, table of operations of cost analysis.....	1594-1615
Contracts:	
Airplane and box lumber, Fisher Storey-Yaquina Bay Lumber Co., testimony re.....	1799
Approval of, by Col. B. P. Disque.....	2163-2164
Cost-plus, amount of.....	2164
Cost-plus contractors, money received by.....	2178-2197
Cost-plus, inability of small loggers to obtain.....	1252
Cost-plus, railroad construction and spruce production tables re.....	1594-1615
Hammond Lumber Co., spruce logs and railroad construction.....	2167-2172
Merrill & Ring, for spur railroad.....	1388
H. S. Mitchell for operation of cut-up plant at Vancouver, Wash.....	1543-1545
Salvage of logs along right of way of Lake Pleasant railroad.....	977-981
Siems-Carey, cost of railroad construction by, table re.....	1603-1615
Siems-Carey-Kerbaugh Corporation, for railroad construction and spruce production.....	1015-1075, 1437, 1438, 1428-1522, 1570-1663
Siems-Carey, statement and extracts from diary of Col. B. P. Disque re.....	1534-1536
Spruce, cancellation of for.....	1581-1583
Spruce, letter to Col. B. P. Disque from Chinn re.....	1563-1564
Willapa Lumber Co., for commercial lumber, terms of.....	2130-2138
Cost-plus contractors:	
Amounts received and profits of.....	2178-2197
Average cost of logs produced by.....	2175
Procedure of internal check with.....	2199-2200
Cost-plus contracts. (See Contracts.)	
Cost-plus and independent operators, percentage of lumber produced by.....	1555-1566
Crescent Lake Railroad:	
Clearance of right of way.....	2081
Cost of.....	2084
Route to connect with Milwaukee, report on.....	1460-1470
Working shifts on.....	2082

	Page.
Crown Willamette Paper Co., interest of Maj. Leadbetter in.....	1931
Crusing operations: Benson, Mr. Amos, in connection with spruce production and railroad construction.....	2030-2054

Director General of Railways. (See McAdoo.)	
Directors of Spruce Production Corporation, list and duties of.....	948, 949
Disque, Col. B. P.:	
Administration of Jackson prison (Mich.).....	1433, 1843-1862
Cut-up plant recommended by.....	1367
Examination of, by Hon. James A. Frear re spruce production and railroad construction.....	1358-1425, 1429-1519, 1663-1695
Examination of, by Hon. Clarence F. Lea re spruce production and railroad construction.....	1481-1519, 1533-1653, 1681, 1685, 1686, 1694
Examination of, by Hon. Walter W. Magee re spruce production and railroad construction.....	1432-1522, 1534-1653, 1655-1694
Extract from letter to Secretary of War re availability of spruce by extension of Milwaukee railroad.....	1441
Letter to from John Cain submitting proposal of Siems-Carey Kerbaugh for spruce production and railroad construction.....	1491-1492
Letter to from Geo. H. Cecil transmitting Nelson Report, quantity of spruce on Hoko River and adjacent areas.....	1571-1572
Letters to and from Mr. Russell Hawkins re proposal for spruce production from Fawcett Creek tract.....	2293
Letter to Maj. Leadbetter re spruce production and use of troops in.....	1937
Letter to from Pacific Northwest Loggers' Bureau re spruce contracts.....	1563-1564
Letter and proposal from Mr. Blodgett re sale of Blodgett tract to Government for spruce production purposes.....	1900
Letter to and from Mr. Mark E. Reed re duties and relations with Spruce Production Corporation.....	1987, 1988
Limit of approval of contracts.....	2163
Memo to Maj. Leadbetter re spruce production operations.....	1938-1940
Mention in letters from Pendleton re testimony on spruce production in United States and British Columbia.....	1523-1524
Newspaper item re defense of, by Mr. Geo. S. Long.....	1428
Newspaper quotation re remarks of, before Portland Ad Club.....	1527-1528
Organizer of Loggers' Loyal Legion.....	958
Relation to Amzinck Co.....	1422-05
Resolution re work of, clipping from the Oregonian re.....	1300, 1301

Disque, Col. B. P.—Continued.	Page.
Statement and extracts from diary of, re Siems-Carey contract for spruce production and railroad construction.....	1534-1536
Statement of Gov. Sleeper re conduct of Jackson prison by.....	1688
Suggestion of promotion for at banquet to Mr. Ryan.....	1890
Telegrams to and from American International Corporation re business connections.....	1683
Telegram to Howard Coffin, re securing of Clallam County spruce.....	1457-1458
Telegram to, from Pliny Fisk re contract for spruce production by H. S. Kerbaugh.....	1484
Telegram to Leadbetter re general spruce situation.....	2230, 2231
Telegram from Gen. Menoher re production of spruce and fir in British Columbia.....	1662
Telegram to Ryan re investigation of Spruce Production Corporation.....	1430
Telegram to and from Mr. Ryan re business connections.....	1683
Telegram to Secretary of War re construction of railroad to Lake Crescent.....	1440-1441
Telegrams to and from Charles A. Stone re business connections of American International Corporation.....	1683
Tentative contract for railroad construction rejected by Mr. Ryan.....	2202
Testimony re Mitchell contract.....	1542-1543
Troops recommended for use in lumbering operations.....	1369
Vancouver Chamber of Commerce resolution in defense of, failure of.....	1429
Donlin, Mr., mentioned in connection with Siems-Carey Kerbaugh Corporation.....	1667, 1668
Donovan, Mr. J. J.:	
Attitude toward investigating committee.....	1361-1362
Examination of, by Hon. James A. Frear re spruce production and railroad construction in connection therewith.....	963-965, 968-970, 972-1004
Examination of, by Hon. Clarence F. Lea re spruce production and railroad construction in connection therewith.....	947-1003
Examination of, by Hon. Walter W. Magee re spruce production and railroad construction in connection therewith.....	967, 968, 970, 971, 981, 996-1001
Loggers' Loyal Legion, testimony re organization and duties of.....	956, 957
Purchase of Blodgett tract for expansion of spruce production.....	952-954
Salvage of logs along railroad constructed for production of spruce.....	950
Settlement of claims in connection with operations of Spruce Production Corporation.....	959-961
Testimony re Howes report in connection with Spruce Production Corporation.....	965-968
Douty, Mr. Frederick A.:	
Examination of, by Hon. James A. Frear re spruce production operations.....	2215, 2224-2246
Examination of, by Hon. Clarence F. Lea re spruce production operations.....	2239-2243, 2247
Examination of, by Hon. Walter W. Magee re spruce production operations.....	2224-2248
Representative of spruce manufacturers of Oregon, attendance at conference with allied nations re spruce production.....	2224
Telegram from Col. B. P. Disque to Maj. Leadbetter re spruce operations of.....	2230
Downey, Maj. L. C., letter re approval of contracts by Col. B. P. Disque.....	2164
Eaman, Mr. Frank D.:	
Examination of, by Hon. James A. Frear re spruce production and railroad construction; and administration of Jackson (Mich.) prison by Col. B. P. Disque.....	1849-1868
Examination of, by Hon. Clarence F. Lea re spruce production and railroad construction; and administration of Jackson (Mich.) prison by Col. B. P. Disque.....	1868, 1866-1868
Examination of, by Hon. Walter W. Magee re spruce production and railroad construction.....	1866-1868
Member board of control of Michigan State prison at Jackson, Mich.....	1843
Eastman, Mr. Watson:	
Examination of, by Hon. James A. Frear re spruce production and contracts therefor.....	2078

WAR EXPENDITURES.

SUBCOMMITTEE No. 1 (AVIATION) OF THE SELECT COMMITTEE ON EXPENDITURES IN THE WAR DEPARTMENT, HOUSE OF REPRESENTATIVES, *Seattle, Wash., August 23, 1919.*

The subcommittee met at 10 o'clock a. m., pursuant to adjournment, Hon. James A. Frear (chairman) presiding.

Also present: Hon. Walter W. Magee and Clarence F. Lea.

Mr. FREAR. Mr. Donovan, we will hear you now.

TESTIMONY OF MR. J. J. DONOVAN.

(The witness was sworn by Mr. Frear.)

Mr. DONOVAN. Mr. Chairman, may I say just a word?

Mr. FREAR. We would rather conduct our examination in our own way. Now, Mr. Lea has been invited to begin the examination, and that is to prevent statements being made that sometimes interject matters that are not properly to be introduced as evidence, opinions, and things that would not be properly brought in; and we have adopted that plan from the start and endeavored to conform as well as we could to ordinary investigating practices. Then if, afterwards, when we have completed the examination, there is something that you want to add or state to the committee we would rather have it come at that time. But these preliminary statements are not desired by the committee and are never accepted by investigating committees.

Mr. LEA. Mr. Donovan, where do you reside?

Mr. DONOVAN. At Bellingham, Wash.

Mr. LEA. How long have you resided in Washington?

Mr. DONOVAN. More than 30 years, continuously.

Mr. LEA. How old are you?

Mr. DONOVAN. Sixty.

Mr. LEA. What is your business?

Mr. DONOVAN. Civil engineer and lumberman.

Mr. LEA. I wish you would state your experience as an engineer and lumberman, and, in a general way, your relation to the lumber industry in Washington.

Mr. DONOVAN. I am a graduate civil engineer of an eastern institution, of the Worcester Polytechnic. I practiced my profession actively with the Northern Pacific Railway in the West for between six and seven years, and then became chief engineer of various small railways in Montana and in Bellingham, in Whatcom County, and in British Columbia. I gave up that work in 1906 to give my whole time to lumbering, particularly giving my time to the construction

of railways and the management of the woods, and I have continued that ever since.

Mr. LEA. At the present time you are interested in both logging and milling, are you?

Mr. DONOVAN. Yes, sir.

Mr. LEA. And the place of your plant is at Bellingham?

Mr. DONOVAN. We have a number of plants; Bellingham is the main plant. The Bloedel-Donovan Lumber Mills is the title of our company.

Mr. LEA. All in the State of Washington?

Mr. DONOVAN. All in the State of Washington; yes, sir.

Mr. LEA. Now, you were engaged with these railroad companies in the construction of railroads, were you, as an engineer?

Mr. DONOVAN. Yes, sir.

Mr. LEA. What is the capacity of your mill at Bellingham?

Mr. DONOVAN. We have three mills at Bellingham and one at Skykomish; our capacity is 600,000 feet of lumber in eight hours.

Mr. LEA. In the one mill?

Mr. DONOVAN. In all the mills.

Mr. LEA. Combined output, or the output of each mill?

Mr. DONOVAN. Combined output.

Mr. LEA. Are you acquainted with Col. Disque?

Mr. DONOVAN. Yes, sir.

Mr. LEA. When did you become acquainted with him?

Mr. DONOVAN. I met him, together with half a dozen other gentlemen, in Portland, Oreg., on the occasion of his first visit to the coast, as I understood it, being either the latter part of October or early in November of 1917.

Mr. LEA. Where did you meet him at that time?

Mr. DONOVAN. I met him at the Benson Hotel.

Mr. LEA. Was it in any relation to spruce production?

Mr. DONOVAN. It was on a call for a few gentlemen to meet Col. Disque and endeavor to explain the lumber situation.

Mr. LEA. What was the occupation of these men that met with Col. Disque at that time?

Mr. DONOVAN. They were all lumbermen.

Mr. LEA. All men engaged there on the Pacific coast in the lumber industry?

Mr. DONOVAN. Yes, sir.

Mr. LEA. And what resulted from that meeting, if anything, or what followed it, as far as this enterprise was concerned?

Mr. DONOVAN. Col. Disque came from Portland within a day or two to the Sound and, I understand, had consultations at Tacoma and at Seattle with other lumbermen. I did not attend the Seattle conference and I only saw him for a short time at Tacoma. Then he went back East.

Mr. LEA. What, if any, official relation do you have in reference to the Spruce Production Corporation?

Mr. DONOVAN. I am a director of the Spruce Production Corporation.

Mr. LEA. When did you become a director?

Mr. DONOVAN. The first meeting of that corporation was a year ago, two days ago; it was on the 21st of August, 1918.

Mr. LEA. You were one of the original directors, were you?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Were there any other men connected with the lumber industry of the Pacific coast who were members of the directorate, or were directors, at that time?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Who were the other members?

Mr. DONOVAN. One was Mark Reed, of Shelton; another was Amos Benson, of Portland.

Mr. LEA. In a general way, will you state the experience and qualifications of these men in the lumber industry?

Mr. DONOVAN. Mr. Benson's experience I am not familiar with, but he is considered a lumberman. Mark Reed is one of the heaviest loggers, has one of the largest camps, and has been engaged in the business about as long as anyone in the State of Washington. His headquarters are at Shelton, Wash.

Mr. LEA. What were the general duties of the board of directors of the Spruce Production Corporation?

Mr. DONOVAN. The same duties that directors would have in any corporation.

Mr. LEA. And how often would the board hold meetings?

Mr. DONOVAN. The regular meetings, once a month. I think one, or possibly two, of those regular meetings have been passed; but, on the other hand, there have been a number of special meetings to dispose of special questions as they arose.

Mr. LEA. Did you attend most of those meetings?

Mr. DONOVAN. I think I have attended all but one; possibly two.

Mr. LEA. Can you, for the information of this committee, state to what extent Col. Disque conferred with the practical lumbermen of the Pacific coast in carrying out the work of spruce production?

Mr. DONOVAN. He was in almost constant conference with them.

Mr. LEA. And were the relations between the board of directors and Gen. Disque harmonious or not?

Mr. DONOVAN. They were very harmonious.

Mr. LEA. Did the lumbermen concur with him in the plan of operation that was followed; that is, the lumbermen on the board of directors?

Mr. DONOVAN. Since that corporation was organized, yes; they may have had differences prior to the organization on some points.

Mr. LEA. That was under the Spruce Production Division, was it, prior to that time?

Mr. DONOVAN. Yes.

Mr. LEA. Were you associated with the Spruce Production Division?

Mr. DONOVAN. Only as other lumbermen were associated with it, in the endeavor to help. I had no official position.

Mr. LEA. When did the riving operations begin?

Mr. DONOVAN. They began before I was on the corporation. They began, I think, early in 1918; probably in January; perhaps even earlier. I am not familiar with them except in a small way.

Mr. LEA. And did the riving operations continue for any considerable time after the Spruce Production Corporation was organized?

Mr. DONOVAN. They continued, but not on a large scale.

Mr. LEA. Will you briefly explain what is meant by the riving operation and what, if any, reason there was for that method of operation?

Mr. DONOVAN. Going into the woods and selecting special trees, cutting them down, taking the butt log which was cleared and split up into pieces that could be hauled out over narrow or imperfect roads to railways or to water, where it could be floated.

Mr. LEA. And what was the reason for proceeding by that method instead of the usual custom of logging?

Mr. DONOVAN. The endeavor to get quickly cleared spruce from places where otherwise it could not be had. It was a temporary expedient.

Mr. LEA. Were these operations conducted where there were ordinary means of transportation, or not?

Mr. DONOVAN. Not to my knowledge.

Mr. LEA. Were you consulted in reference to the contract with Mr. Erickson for the removal of the logs from the woods to the road to Lake Pleasant?

Mr. DONOVAN. Yes, sir.

Mr. LEA. State whether or not you agreed to giving Mr. Erickson that contract, and the reasons for that.

Mr. DONOVAN. Yes. We all agreed, because the contract was to salvage the logs along the right of way, estimated at 30,000,000 feet, and we estimated that if they were saved promptly, at the present price of logs, under that contract, we would retrieve somewhere between \$100,000 and \$150,000 of the cost of that railway for the Government.

Mr. LEA. Were those logs spruce logs or logs of general character?

Mr. DONOVAN. General character.

Mr. LEA. And they were cut down simply to clear the right of way?

Mr. DONOVAN. Exactly.

Mr. LEA. What were the terms of sale; how much was the Government to receive for these logs?

Mr. DONOVAN. I do not recall the details of that; the contract will show for itself.

Mr. LEA. Were you consulted with reference to the Siems-Carey railroad contract?

Mr. DONOVAN. No, sir.

Mr. LEA. That contract was executed before the Spruce Production Corporation was organized; is that so?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Were you on this railroad at any time that construction work was being carried on by the Siems-Carey Co.?

Mr. DONOVAN. Yes, sir.

Mr. LEA. I wish you would tell the committee what you saw as to the methods of work and carrying on the operations in reference to the railroad.

Mr. DONOVAN. I was there in the last week of September. I went up there from this city because of certain discussions, which were referred to yesterday, among the loggers; and I went from Port Angeles to Lake Pleasant, I started to go on the loop, but it was a very rainy day and I did not go very far, and I came back to Port

Angeles. I saw as much as was possible in a hasty trip of that kind, being actually away from Port Angeles about two days. I saw the same class of construction carried on that I had seen when I was in charge of the west half of the Cascade Division of the Northern Pacific 30 years before.

Mr. LEA. What did you see, as to the efficiency and quality of the work that was conducted there by the Siems-Carey Co.?

Mr. DONOVAN. The quality of the work and the speed with which it was conducted were the best I have ever seen. As to efficiency, the character of the men and the conditions under which they worked did not make for economic efficiency.

Mr. LEA. Who are Siems & Carey; what is that company; who do you know about the contractors who compose it?

Mr. DONOVAN. Mr. Siems is dead. He was alive at this time. His father, Peter Siems, built up a contracting company that had much to do with the construction of the Great Northern and other railways and had a very high reputation for being able to do work. Mr. Carey I know little about, excepting that I have been told that he had worked on the Panama Canal, and that he had contracts in China.

Mr. LEA. Of what character was that contract?

Mr. DONOVAN (continuing). And Mr. Lerbaugh, the other member of the firm, I never met but once, and I understood at that time that he had had extensive work on the Pennsylvania Railway, and one remark he made which impressed me was that he had as many as 40 steam shovels at work at one time on Pennsylvania construction; but that is all I know about him or his work.

Mr. LEA. Was this China contract to which you referred, according to your information, a railroad contract?

Mr. DONOVAN. Railway and canals.

Mr. LEA. What, if any, information are you able to give the committee as to the reasonableness or unreasonableness of the cost of constructing this railroad at that time and under the conditions then prevailing?

Mr. DONOVAN. I was told the first shovel was struck in the work on the 12th of July, and I was there—I have not any memorandum—the last week in September. The amount of work negotiated in that time could only have been done by covering the work with men and crowding it in a way that does not make for cheap work. It was necessarily very expensive, crowded and hurried in the way that it was.

Mr. LEA. Will you state a little more explicitly what you mean by the increased cost that would come on account of the speed required to build this road?

Mr. DONOVAN. For two reasons: One was that every important cut and tunnel, and there were two tunnels, had to be worked three shifts, in order to get there; and the other was that the labor, much of it, consisted of private soldiers detailed for work that they were not particularly qualified to do.

Mr. LEA. They were inexperienced in that line of work?

Mr. DONOVAN. Inexperienced in that line of work.

Mr. LEA. What, if any, relation did the amount of timber on the right of way have to do with the total cost?

Mr. DONOVAN. That in a way was the least of their troubles, although clearing the timber in any railway construction in this country is a heavy item in the cost; but it was not extraordinary.

Mr. LEA. Does the performance of that work at night materially decrease results in proportion to the expenses?

Mr. DONOVAN. It does not if you have had five or six months' training for your crews, but with green crews it materially decreases the amount of material that you can handle. It takes months to bring a crew for night work to the same point of efficiency as a day crew. It can be done, and is done on all big work.

Mr. LEA. Did you have any opportunity of observing the logging operations of the Siems-Carey Co.?

Mr. DONOVAN. No, sir; only the preparations.

Mr. LEA. What knowledge have you as to the preparations?

Mr. DONOVAN. I saw the maps and plans and the machinery, and would say that the preparations seemed to me very complete.

Mr. LEA. You did not visit that locality while they were operating with the logs?

Mr. DONOVAN. At that time they were only preparing to operate. That was in September; they expected to deliver logs the 1st of December, but their logging spurs were well under way, including this 70-mile loop, and their plans, as shown me, were complete.

Mr. LEA. What was the 70-mile loop? Just explain for the record.

Mr. DONOVAN. That was the logging railway which was part of the second contract; they themselves were building that as part of the cost of these 250,000,000 feet of flitches which they were to produce for the Government, and it swung around and made a circle in this district which had been selected as the best spruce district in the State of Washington; and from that loop the line led into Lake Pleasant and thence on over this Government railway, which was the first contract, to Port Angeles; but from the loop spurs were thrown out in every direction leading into the particular sections where the spruce predominated.

Mr. LEA. What was the length of the loop?

Mr. DONOVAN. I didn't go around it. I said 70 miles. That is the figure that is in my mind, but that may not be correct. There were 130 miles of railway planned at that time for the logging part of it.

Mr. LEA. Are you in a position to give us any information as to whether or not they had practical men to aid them in carrying out the logging operations?

Mr. DONOVAN. I did not know their men, but Mr. McFarland, who was reputed to be their logging superintendent, bears an excellent reputation generally in this country.

Mr. LEA. As what?

Mr. DONOVAN. As a logging superintendent.

Mr. LEA. A man of experience, is he?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Do you know where the Blodgett tract is located?

Mr. DONOVAN. I never have seen it, but I know where it is.

Mr. LEA. Were you consulted as to its purchase?

Mr. DONOVAN. I advised its purchase.

Mr. LEA. Will you briefly state to the committee the facts in reference to that purchase and your connection with them?

Mr. DONOVAN. The first effort was to buy the spruce alone from Mr. Blodgett in order to have that stumpage disposed of without condemnation.

Mr. LEA. To begin with, if you will state where the Blodgett tract is.

Mr. DONOVAN. It is in southern Oregon on one of the logging railways built by the Spruce Production Division and the Spruce Production Corporation, and the railway leads into and feeds the so-called Toledo mill from the south side of the river. The Toledo mill is on the north side of the river.

Mr. LEA. That tract of timber, as I understand it, was purchased after the armistice?

Mr. DONOVAN. All the arrangements were made before the armistice. The negotiations had been going on for several months.

Mr. LEA. Mr. Blodgett was the owner of that tract, I presume?

Mr. DONOVAN. I suppose so. It was understood that the title was to be perfect.

Mr. LEA. What was the reason for completing the purchase after the armistice was signed?

Mr. DONOVAN. In order to give value to the railway that had been constructed.

Mr. LEA. A railroad had been constructed for the purpose of removing the timber from this tract?

Mr. DONOVAN. Yes; and other tracts.

Mr. LEA. About what was the extent of that railroad?

Mr. DONOVAN. As I say, I never was down there. I think it was something like 20 miles.

Mr. LEA. What were your reasons for advising this purchase, if any, other than what you have stated? How about the cost of the tract?

Mr. DONOVAN. Well, I considered the price low, and a good purchase from a commercial point of view. We would have had to pay about somewhere between four and five hundred thousand dollars for the spruce alone. It would cost something over \$2 a thousand. And we got the entire tract at a cost of about 80 cents a thousand for all the timber that was on it. If I were not connected with the Spruce Corporation I would like to have bought it myself. It is a good buy for anybody to-day.

Mr. LEA. So your judgment was that the railroad and the timber together was a valuable property, but the railroad without the timber was not very valuable, is that the idea?

Mr. DONOVAN. Exactly, sir.

Mr. LEA. Were you consulted by Col. Disque in reference to the plan of expansion of the railroad plan of operation in order to produce spruce?

Mr. DONOVAN. In a general way; yes.

Mr. LEA. That plan was adopted before the corporation was organized, I believe?

Mr. DONOVAN. Yes. Col. Disque had special advisors whose duty it was to advise on those things more closely than the other loggers. The principal one from this State was Mr. Mark Reed.

Mr. LEA. He was the gentleman you have referred to already?

Mr. DONOVAN. Yes.

Mr. LEA. In view of the demand for spruce timber that was made by the aircraft service, what, in your judgment, was the necessity for this program of expansion?

Mr. DONOVAN. Because the demands of the Government were far and away beyond what any of us here ever thought was going to be required.

Mr. LEA. To begin with, you people here on the coast had nothing to do with program?

Mr. DONOVAN. No, sir. We were told to deliver the goods.

Mr. LEA. It was your part to respond to their demand?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Now, do you know of any other way of meeting those demands without a program of expansion involving railroad construction?

Mr. DONOVAN. No, sir; I do not.

Mr. LEA. Do you know of any practical lumberman who has suggested any plan of meeting those demands without railroad expansion?

Mr. DONOVAN. They all called for railway expansion. That was necessary, but there were differences of opinion as to how that expansion should be made.

Mr. LEA. Did you have anything to do with the determination to adopt the selective logging plan?

Mr. DONOVAN. No, sir.

Mr. LEA. Did that work progress far enough to give any practical basis on which to judge of its success or failure?

Mr. DONOVAN. Yes, sir; it did.

Mr. LEA. Now, I wish you would give the committee your information upon that subject.

Mr. DONOVAN. I do not wish to take the time of the committee with hearsay. I did not go into any of the places where there was selective logging, but Mr. E. S. Grammer, who is a member of the Spruce Production Corporation, is personally familiar with that. I would prefer that you should get the statement first hand.

Mr. LEA. Is he a practical logger?

Mr. DONOVAN. He is the president of the Admiralty Logging Co., and one of the most practical loggers in the Northwest.

Mr. LEA. Where is Mr. Grammer?

Mr. DONOVAN. He has an office in this city in the Walker Building.

Mr. LEA. I would like to have him as a witness if we can get him.

Mr. FREAR. We will call him.

Mr. LEA. Did you have anything to do with the construction of the Toledo mill and the Port Angeles mills?

Mr. DONOVAN. No, sir.

Mr. LEA. When was their construction agreed upon, do you know?

Mr. DONOVAN. I do not know the dates when those things were agreed upon.

Mr. LEA. Have you visited the Toledo mill?

Mr. DONOVAN. No, sir.

Mr. LEA. Have you visited the Port Angeles Mill?

Mr. DONOVAN. Only to pass it by at the time I went up there in September, 1918.

Mr. LEA. Do you know the general character of the plans for its construction and operation?

Mr. DONOVAN. Yes.

Mr. LEA. What is your judgment, as a practical milling man, as to whether or not it was advisable to construct that mill at Port Angeles?

Mr. DONOVAN. I opposed the construction of that mill, as an individual, as a lumberman.

Mr. LEA. And for what reasons?

Mr. DONOVAN. Because I, in common with most other lumbermen, thought we had mills enough on the Sound to take care of the logs.

Mr. LEA. And that was true, wasn't it?

Mr. DONOVAN. The Seims-Carey people, who had undertaken to furnish 250,000,000 feet of flitches in 18 months from May 12, I think it was, did not think it was true, and so they built the mill.

Mr. LEA. Now, looking back at the transaction, do you still entertain the same judgment as to whether or not it should have been constructed, assuming that the program was to be carried out, that is, the production program?

Mr. DONOVAN. The mill was really in the nature of insurance. The question was whether the emergency warranted further insurance than the mills on the Sound could give.

Mr. LEA. Now, will you explain a little further what you mean by that, Mr. Donovan?

Mr. DONOVAN. That mill was located right at the point where the logs from the railway past Lake Crescent came into the Sound, and they could saw the logs without any towing or taking any risk. Excepting for the big mill of the Puget Sound Saw Mills & Shingle Co. at Port Angeles the logs would have to be brought across to mills on this side of the Sound, or to the mills—would have to be towed from Port Angeles.

Mr. LEA. So that the avoiding of towing was what you regard as the important consideration in the construction of that mill?

Mr. DONOVAN. It is the one that I suppose the people who decided that consider important.

Mr. LEA. Well, what, if any, importance did the establishment of a cut-up plant in connection with it have to the wisdom of constructing it?

Mr. DONOVAN. If the mill was to be constructed at all then the addition of a cut-up unit was the proper thing. That part of it I approved of. That came up after I came on the board.

Mr. LEA. I wish you would give the committee your information in reference to the success or failure of the cut-up plant work.

Mr. DONOVAN. Where, at Vancouver?

Mr. LEA. You are familiar with the Vancouver operation, are you not?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Yes; in reference to that plant. In the first place, that was the only cut-up plant in operation, was it?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Now, if you will tell the committee about its work and whether or not it was a success or failure, and why?

Mr. DONOVAN. The cut-up plant was built in order to get straight-grained material that was vital for the proper construction of airplanes, and that plant was built to take the rived spruce and the

flitches that were furnished by any mill that could furnish them, and cut that material to the best advantage. They had the special machinery and specially trained men, and of all the various operations that were conducted that should be entirely free from criticism, because they did good work. It was entirely justified.

Mr. LEA. How as to the value of the product from the cut-up mill, as compared with the product of the ordinary sawmill?

Mr. DONOVAN. They saved a larger percentage of the straight-grain spruce.

Mr. LEA. That is, there was more usable timber, proportionately, came from the cut-up mills than the other mills?

Mr. DONOVAN. Yes.

Mr. LEA. I presume you haven't any exact figures on that?

Mr. DONOVAN. I have not. They can be given, however.

Mr. LEA. Well, we will try to get those at Portland. I presume those will be available at Portland.

Mr. DONOVAN. Col. Stearns can secure them for you.

Mr. LEA. What is your general idea about the returns that should be received from the sale of this Siems-Carey Railroad to Pleasant Lake?

Mr. DONOVAN. Well, that is a hard question to answer, Mr. Lea.

Mr. LEA. I was only asking for a general idea as to what it should bring.

Mr. DONOVAN. Somewhere from a third to one-half of what was actually expended on it. .

Mr. LEA. What would you consider its reproduction value at this time? I do not mean any figures, but the basis of determining its reproduction value.

Mr. DONOVAN. Reproduction value not much over half what it cost.

Mr. LEA. How do you arrive at that conclusion?

Mr. DONOVAN. Reproduced without being in a rush; reproduced with efficient men. I say "efficient;" I mean efficient in producing the proper number of shovelful of earth per man per day.

Mr. LEA. I presume an efficient reproduction of that road would require a greater length of time for its construction, materially so, wouldn't it?

Mr. DONOVAN. Three times the length of time that was taken.

Mr. LEA. Do you know what the plan of operation was? Whether they worked from one end or from various points?

Mr. DONOVAN. They worked from every point they could get at, and they had a fine highway there that enabled them to get at it.

Mr. LEA. From different points?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Well, were construction operations going on at the same time at various portions of the road from one end to the other?

Mr. DONOVAN. They were when I was there in September. It must have been practically from the beginning to make the showing that they did.

Mr. LEA. Now, Mr. Donovan, what, if any, relation did you have to the organization of the Loggers' Loyal Legion?

Mr. DONOVAN. That was discussed at the very first meeting in the Benson Hotel, in Portland, when Col. Disque first came out here.

Not under that name; the name came later. But the idea was to try and form some kind of an organization where the workmen could be consulted and where an appeal would be made to their loyalty and patriotism to produce the necessary lumber. And later, after it was organized, as a result of conventions of employers and employees, and the pledge agreed upon and the badges and the method of organization, I served a year ago for six months on the so-called central council of the Loyal Legion. That was the ultimate organization, where 12 employers and 12 employees met every 90 days in Portland to settle all questions that might come up, being brought up from the locals in the plants and from the district organizations that existed in 12 different districts. I represented the eighth district, as an employer, and that organization, from the day that the Loyal Legion was started down to the 1st of July of this present year, carried on the lumber business both in the camps and in the mills without a single strike or loss of a single day's work, and to the mutual satisfaction of the men and of the employers. It was one of the greatest accomplishments, considering the conditions when Col. Disque took hold of this matter, that was accomplished here during the war.

Mr. LEA. What were the labor conditions at the time Col. Disque took hold of the operations here?

Mr. DONOVAN. They were very bad.

Mr. LEA. Will you explain more specifically what you mean by that?

Mr. DONOVAN. Just as soon as the war started the I. W. W. became active in the woods. Whether there was a connection between them and the German propaganda is not for me to say.

Mr. LEA. Were any acts of sabotage committed in this territory?

Mr. DONOVAN. Numerous acts of sabotage.

Mr. LEA. Of what character were these acts?

Mr. DONOVAN. Driving spikes in logs, blowing up donkey engines, burning forests, putting emery in bearings, anything to delay production—interfere.

Mr. LEA. Did you have any experiences of that kind with reference to your operations?

Mr. DONOVAN. Too much of it.

Mr. LEA. What did you have in your own experience?

Mr. DONOVAN. We had a very bad fire, interfering greatly with our production, that was set by an I. W. W. We had a donkey engine blown up and a man killed. I can not prove that that was done on purpose, but I think it was. And we had an average of a spike in a log in our mill at least once a week, wherein the ordinary course of procedure we would get a spike naturally once in six months or a year.

Mr. LEA. What is the result of a spike in a log in that way?

Mr. DONOVAN. It sends the saw flying frequently in pieces around about the mill, to the great danger of the men. Fortunately we never had anybody killed or hurt, but we had numerous saws spoiled.

Mr. LEA. Were there any other particular acts that you now recall?

Mr. DONOVAN. Those are enough.

Mr. LEA. Were there any fires set on board ships that went out of this harbor or the sound?

Mr. DONOVAN. One ship that loaded for China at our dock was reported on fire at sea from an incendiary bomb placed on board at Bellingham. I do not recall the name of the ship.

Mr. LEA. The conditions such as you have referred to, were they localized at any particular plant, or was that a general condition that prevailed here?

Mr. DONOVAN. It was a general condition all over the Northwest. I will say right here, though, that not over 20 per cent of the men were involved, but that 20 per cent that was involved made chaos.

Mr. LEA. You mean to say that the other 80 per cent were loyal men?

Mr. DONOVAN. They proved it later in the Loyal Legion.

Mr. LEA. The object of this Loyal Legion was to combat and correct that condition?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Who was instrumental in initiating this organization?

Mr. DONOVAN. It was Col. Disque's organization.

Mr. LEA. And about what was the total membership as it finally developed?

Mr. DONOVAN. It comprised practically all the loggers and mill-men of the Northwest—Washington, Oregon, and part of Idaho. It did not extend into California. About 130,000 men.

Mr. LEA. Did the mill men harmonize with that movement or not?

Mr. DONOVAN. They did.

Mr. LEA. So for those months the laborers and the mill men co-operated?

Mr. DONOVAN. They did.

Mr. LEA. What, if any, information have you in reference to the settlement that was made with England of the salvaged value of these properties?

Mr. DONOVAN. The final settlement was made at Washington without consultation with our corporation, but I had occasion to go to Washington City last December, shortly after the armistice. While there I was introduced to Col. Beckett, the English officer representing the English Government in all the lumber dealings. After that meeting he requested that I should take an hour or more to talk with him, and he offered to meet me anywhere I desired. I said, "I will meet you at your office." I made the engagement and met him there and talked over matters pretty fully. He was very desirous of knowing how much the cost would be of the lumber. He mentioned the fact that it had been invoiced at high prices. I told him that that meant nothing, that under our organization each of the Allies was to pay the cost, and the United States, whatever it might be, in proportion, but not under the amount of money invested, but in proportion to the amount of lumber that was delivered to each of the Allies and to the United States, and that whatever had been billed against England or any of the other Allies would be corrected to conform to the final settlement. I made that entirely clear. He was entirely satisfied with that, but he did persist in questioning me in many and various ways to find out what that ultimate cost would be. I told him the truth; that no man could tell at that time. He then called in Capt. Thompson, and introduced Capt. Thompson to me.

Mr. LEA. Who was Capt. Thompson?

Mr. DONOVAN. Capt. Thompson was his aide. He stated that he thought perhaps it would be advisable for Capt. Thompson to come out to the west coast. I told him I certainly thought it would be, that we would like to have Capt. Thompson see what the situation was for himself. A month or six weeks later I met Capt. Thompson in the office of the Spruce Production Corporation in Portland, and we had a pleasant chat. We did not go into the business details there, because that at that time was the business of other people, but he expressed himself as well satisfied with the information that he was getting. That is all I know about the settlement with England.

Mr. LEA. But you candidly told him the facts as you knew them, did you?

Mr. DONOVAN. I did, yes, sir.

Mr. LEA. You know of no reason for the suggestion that England was in any way deceived about this matter?

Mr. DONOVAN. England was not deceived.

Mr. LEA. Mr. Donovan, have you any information as to what has been done in reference to the settlements of claims against the Spruce Production Corporation?

Mr. DONOVAN. Yes, I have had to do with all of them.

Mr. LEA. I wish you would give the committee the benefit of your information and explain the process of adjustment.

Mr. DONOVAN. May I refer to some notes? I will be brief.

Mr. LEA. Yes, certainly. This is an important thing that we have not touched on yet.

Mr. FREAR. Yes, sure.

Mr. LEA. Take your own time. We want to know the facts about that.

Mr. DONOVAN. I will not need much time. Immediately after we realized that all these things had to stop—they were stopped, I believe, the day after the armistice—various boards of experienced men were formed to consider and dispose of the claims that naturally must arise. I am not positive whether one board handled all the claims excepting Siems-Carey or not, but there was a special board for the Siems-Carey proposition. That was the biggest and most complicated of all, and there was a special board to handle that and a special report made.

Mr. LEA. Now, suppose we take up the others first, or use your own judgment about it.

Mr. DONOVAN. Those boards had hearings, received the claims, and when they had finally arrived at a decision filed the report, accompanied by all the important papers, for the consideration of the corporation, and at the meetings of the corporation those were all—the findings were read in every case. The full record was examined as carefully as the members of the board saw fit, and then we approved or disapproved or sent back for further information the various claims.

Mr. LEA. I see. So then I understand that this committee was to investigate the report, but final determination was with the board of directors of the Spruce Corporation?

Mr. DONOVAN. Yes, sir. They were simply acting as our agents to bring the facts before us in condensed form. Now, we considered 237 claims, aggregating \$6,993,504.19. We disposed of all of them. Fifty-nine of them were disallowed without any allowance whatever. The disallowances of those claims amounted to \$1,528,366. There were 158 claims allowed. The gross amount of those claims as presented was \$5,557,000. I haven't the odd dollars and cents. They were allowed to the extent of \$1,594,194.33. There were two firms that were not satisfied and have brought suit in court. Those are the Siler Lumber Co., which is suing the corporation for approximately \$250,000, and the Hanify Lumber Co., which is connected with the other company, and is suing for approximately \$40,000.

Mr. LEA. What are those suits for?

Mr. DONOVAN. Suits for expense which they claimed to have incurred that they should be reimbursed for.

Mr. LEA. You just go ahead and then I will ask you some questions when you have stated it in your own way.

Mr. DONOVAN. We had a considerable number of gentlemen come before us that came before the boards appealing from the contract boards, as we called them, to see whether we would not overrule the contract boards. We did not do that in any instance, but since those claims were settled that I have referred to here we have had 44 claims filed under the so-called Dent Act. Out of that 44 we have as yet settled only 6. The corporation is still functioning.

Mr. LEA. Those six have been allowed, is the idea.

Mr. DONOVAN. No, sir. Those six aggregated \$111,746.14. Fifty-seven have been disallowed in full. On one we have allowed \$9,089.16.

Mr. LEA. How much was that?

Mr. DONOVAN. \$9,089.16.

Mr. LEA. So, including the two lawsuits, you have about 40 claims pending; is that the idea?

Mr. DONOVAN. Yes. Now, if I may be permitted to say it at this time, my understanding of the principal object of the corporation was first to protect the United States against loss in just such a contingency as arose with the sudden stoppage of the war, and divide that loss proportionately among the people who got the benefit of our protection; and the other was to enable any of those gentlemen who were dissatisfied to sue in our own courts and not have to go through the long process of the United States Court of Claims. Those are the two main reasons for the existence of this corporation.

Mr. LEA. To explain these claims a little further, I wish you would make a statement as to the character of these claims, endeavoring to get it in the record so that a person who is entirely unfamiliar with this will understand the nature of the claims and why they arose.

Mr. DONOVAN. Those claims have arisen from every cause under the sun. It would take me until night to explain to you the variety of claims and the peculiar state of mind that some of those gentlemen were in. We will say they were all honest, but claims have arisen, in large sums, simply because of a conversation perhaps between some man and some lieutenant who had no authority. Claims have arisen because of the general bulletin sent out on calling on the

whole industry to supply all the spruce and fir suitable for airplanes that was possible. Men have gone to work, bought machinery and gone in, without saying a word to the Spruce Production Corporation, and then have come back and demanded to be reimbursed for their entire expenses. In one case, I remember where they had secured no material whatever, where they had no contract of any kind whatsoever, and yet came before us and claimed we were morally bound to pay these bills. That is the extreme case, and from that up through all the phases to what seems to be pretty nearly a legitimate claim. As you see, we threw out altogether only 59 claims up to the time when we had to consider the Dent Act claims. We allowed nearly 160, but we allowed them in less sums, and in many cases the gentlemen were not satisfied, but they said, "We will accept this settlement." We tried to settle those things as fairly as could be done between man and man, with due regard to the rights of the people of the United States, and that is the motive that actuated this corporation from the beginning.

Mr. LEA. Did the Dent Act restore some claims for consideration which had previously been rejected?

Mr. DONOVAN. Yes.

Mr. LEA. Have you the number where settlements have been made and been accepted by the claimants?

Mr. DONOVAN. I don't know; that is all recent.

Mr. LEA. That is, there may be claims that you have determined, the settlements of which have not been accepted by the claimants.

Mr. DONOVAN. Yes. I don't know how many of those claims we have rejected have now passed the time when they can file suit.

Mr. LEA. There two lumber suits I presume are on the allegation that these lumber companies have been damaged by reason of the failure to use extensions made with a view of meeting your program; that is the general idea?

Mr. DONOVAN. Yes, generally. I don't recall the detail of their allegations; I haven't read their complaints—

Mr. LEA. But that is the general—

Mr. DONOVAN (continuing). As filed in court.

Mr. LEA. That is the general foundation of those claims, isn't it?

Mr. DONOVAN. The general foundation, yes.

Mr. LEA. Now, you think that that in substance explains the situation in reference to claims?

Mr. DONOVAN. Yes, sir.

Mr. LEA. A question was raised here about what is meant by the degree of a curve. Will you briefly explain that, for the record?

Mr. DONOVAN. It really means the length of the radius that swings the circle, that makes the curve. Another way to measure it is by the number of degrees, 360 in the circle, altogether, that is cut out by a cord a hundred feet long. If 10° of that circle is covered by a cord a hundred feet long, it is a 10° curve, and it would be 3,600 feet around it. You divide the 360 into the parts a hundred feet long and that—

Mr. LEA. Simply the extent of the deviation from a straight line?

Mr. DONOVAN. Exactly.

Mr. LEA. Measured in degrees or on a percentage basis?

Mr. DONOVAN. Exactly, or in terms of the radius.

Mr. LEA. Mr. Donovan, you heard the testimony here in reference to the cost of constructing railroads on the peninsula and elsewhere in this section, didn't you?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Now, what is your judgment as to the fairness of those costs compared with the necessary cost of constructing the Pleasant Lake Railroad, under the circumstances under which it was constructed?

Mr. DONOVAN. I think those figures are correct, but I do not think the comparison is fair.

Mr. LEA. And will you state why?

Mr. DONOVAN. The conditions are entirely different.

Mr. LEA. In what respect?

Mr. DONOVAN. Method of construction and the character of the road that was secured when the work was complete. I have had to build all kinds of railroads, from the cheapest kind of logging railways to the best kind of transcontinental railways, and there is no logging railway that I know of in that list that was presented that has to handle over 100,000,000 feet per year, and there are not over two or three of them that handle that much. This railway that was being built along Lake Crescent was built to handle not less than 500,000,000 feet per year. It required an entirely different character of construction. There is no comparison.

Mr. LEA. In other words, it was to carry five times the traffic of the best of these other roads?

Mr. DONOVAN. The best of them; yes, sir.

Mr. LEA. You are a member of the American Society of Engineers, I believe?

Mr. DONOVAN. I have been for 30 years.

Mr. LEA. Are you familiar with the Northwest Loggers' Association?

Mr. DONOVAN. Moderately.

Mr. LEA. Is that a selling or an operating organization?

Mr. DONOVAN. It is a selling organization.

Mr. LEA. They have a capital stock, have they? What is their plan of organization?

Mr. DONOVAN. I don't know. Our firm was a member at one time, but we withdrew. I think it is simply a loose association for selling and for hiring men.

Mr. LEA. And not for the purpose of conducting practical operations?

Mr. DONOVAN. Excepting as each individual conducts their operations. They have no central organization for operating.

Mr. LEA. Did you have any connection or interest in the proposition of the loggers to take over the Siems-Carey logging contract?

Mr. DONOVAN. I had interest in it as being interested in its success or failure, but I had no part in it.

Mr. LEA. Will you state to the committee the facts in reference to that matter as you know them?

Mr. DONOVAN. About the middle or the latter part—I think about the 18th or 20th of September—I heard that some gentleman had undertaken to speak in the name of the loggers of the Northwest and say that they wanted to take over the Siems-Carey logging opera-

tions, and the matter was brought to my attention in Portland by Col. Disque.

Mr. LEA. And did you advise with him about that?

Mr. DONOVAN. I advised him to consider it very carefully and before accepting to see that the men who undertook it could carry out what they undertook.

Mr. LEA. Did you have any further information in connection with the negotiations?

Mr. DONOVAN. Yes, sir. I requested that there be a full meeting of the loggers. My information was that only seven men undertook to speak for the entire loggers in the Northwest. And there was such a meeting here a few days afterwards, in the Smith Building, in this city. At that meeting 50 gentlemen were present.

Mr. LEA. Were you there?

Mr. DONOVAN. Yes, sir.

Mr. LEA. I wish you would tell us what took place.

Mr. DONOVAN. There was discussion of the whole situation for between two and three hours, and then the thing was voted down with only seven men voting for it. Among the men who spoke against it, who are recognized as of standing, was Mr. Jess Ives, of this city—

Mr. FREAR. Was a record made of the proceedings?

Mr. DONOVAN. I don't know whether there was or not. It was an informal meeting. I think Mr. Joe Irving was the presiding officer—of Everett; Mr. Charlie Cobb, who said that he had been over on the peninsula and seen what was going on; Mr. E. S. Grammer and many other gentlemen.

Mr. LEA. Did Mr. Cobb make any statement as to what he saw on the peninsula?

Mr. DONOVAN. Yes; he did; pretty strong statements.

Mr. LEA. What did he say?

Mr. DONOVAN. He said things were going on over there all right and we had better let them alone.

Mr. LEA. Who is Mr. Cobb; what is his experience and occupation?

Mr. DONOVAN. Mr. Cobb is looked upon as the nestor of the loggers of the country. I believe he disputes that title with Mr. Bill Chisholm.

Mr. LEA. How long has he been here engaged in the logging industry and the milling?

Mr. DONOVAN. I would not dare to say what the people say here, because you might think I was joking. They say he has been here since Puget Sound began.

Mr. LEA. Well, in making this statement did he refer to the logging operations or the railroad operations, or both?

Mr. DONOVAN. Logging operations had barely begun. He referred more particularly to their general accomplishment. He said they were making good. And it was as a result of that meeting and what he said that I, within two or three days after, went over there to see for myself. Everybody here, Mr. Lea, no matter how they may have differed on details, was extremely anxious that the Government should get what it wanted. The Government was asking for a great deal more than some of us thought was necessary, but it said it wanted it, and we were going to get it, and we did get it.

Mr. LEA. So that the proposition of these loggers was, in effect, that they should take the contract away from an established strong contractor, who was carrying on the work, as you believed successfully, and place it in the hands of a new organization?

Mr. DONOVAN. Yes, sir. There was no question but that the new organization could ultimately do the work. That was not the point. The point was that there would be a loss, as we estimated, of not less than 90 days in "swapping horses," and that was the thing that killed that proposition.

Mr. LEA. And it was not any reflection upon the purpose of the loggers.

Mr. DONOVAN. Not the slightest reflection.

Mr. LEA. And that is the conclusion that the loggers themselves reached, wasn't it?

Mr. DONOVAN. That is what a majority of them reached.

Mr. LEA. What is your judgment as to the necessity and wisdom of the selective-logging plan; that is, your present judgment? What I mean, not as an economic proposition, but assuming that you were to meet the program requested, what is your judgment of the wisdom and necessity of that plan?

Mr. DONOVAN. I thought, when it was first proposed, that it was impossible. I have changed my mind. I think that for the emergency that confronted us, to get the 500,000,000 feet on that Siems-Carey contract, and also to get what was proposed in other places, that it was necessary; and I have learned since that it was carried on by our own Army in France, and that it was carried on successfully in other portions of this State and in Oregon by the Spruce Production Division. But don't misunderstand me. I have not personally seen selective logging.

Mr. LEA. As an economic proposition there is no doubt about it being an expensive method, is there?

Mr. DONOVAN. Very expensive and very dangerous to the rest of the timber from the fire risk.

Mr. LEA. Mr. Donovan, you were frequently called in contact with Gen. Disque, were you?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Have you seen anything or do you know of anything that leads you to doubt his motives in these transactions?

Mr. FREAR. That is really the province of the committee. I haven't any objection; but I was wondering whether matters like that should go in. I have not any objection, if you want to put it in.

Mr. LEA. Of course, I know it is only calling for his judgment.

Mr. FREAR. I mean that that could never be permissible in any other body. It is so indefinite, there would be no chance to examine into the details. The general reputation in the neighborhood, and all those things, are permissible. I haven't any objection if you feel—

Mr. LEA. I do not regard it as a matter of great importance. But, to make it a little more specific, do you know of any instance in which Gen. Disque was anyway connected with any deception or fraudulent or criminal act?

Mr. DONOVAN. No, sir.

Mr. LEA. Mr. Donovan, in carrying out the spruce operations here, as you saw them and knew them, did politics have anything to do with it?

Mr. DONOVAN. Absolutely nothing.

Mr. FREAR. And from what information do you say that?

Mr. DONOVAN. We never thought of politics; we wanted to get the spruce.

Mr. LEA. And, regardless of politics, you all cooperated together, did you?

Mr. DONOVAN. Yes, sir.

Mr. LEA. Mr. Donovan, are you familiar with what is known as the Howes telegram?

Mr. DONOVAN. Only as a friend telegraphed me about it.

Mr. LEA. You have seen a copy of it, have you?

Mr. DONOVAN. No, sir; I have seen only what purports to be a copy of what related to me personally.

Mr. LEA. Now, is there anything that you desire to say in relation to the references made to yourself in that telegram?

Mr. DONOVAN. Yes; and I wish to know, first, what that Howes telegram is, and I want to know how it got before this committee, and I want to know why my name was dragged into it when I was 3,000 miles away.

Mr. LEA. Of course, I can only partially answer that question. As I understand it, the Howes telegram was sent back——

Mr. DONOVAN. I don't wish to delay the committee.

Mr. FREAR. The Howes telegram is in the record.

Mr. LEA. I know nothing, except this, that it was embodied in the Ray report.

Mr. FREAR. Yes.

Mr. LEA. And the Ray report was turned over to this committee by the Secretary of War. He asked us to take that report——

Mr. FREAR. And in addition——

Mr. LEA. —And the information came to us in that way. Of course this committee had nothing to do with inspiring that telegram, and I only call your attention to it in justice to yourself, to explain the references to you.

Mr. FREAR. Let me interject there just an explanation of what this Howes report is. There was an Intelligence officer in the Army who came out here to Portland and made an investigation. He was accompanied by other officers, and finally Col. or Maj. Howes, in the Army, in the Intelligence branch, formulated a telegram, based upon what he believed to be his investigations and the investigations of his other officers, including Lieut. Carrigan, and that telegram, which gave certain advice to the Intelligence officer at Washington, was forwarded and turned over to the Secretary of War. It is that telegram, which was rather lengthy in character, that is known as the Howes telegram, sent by Maj. Howes after his investigation at this point. In Ray's report, of which Mr. Lea speaks, Ray criticized him for sending that telegram, and Gen. McIntyre's letter, which I read here two or three days ago, said it was a proper thing for him to do. Whether or not his judgment was right, it was proper for him to advise his superior officer of what he believed was a fact. Now, the investigation, of course, was entirely apart from that and developed facts in which Ray practically found most of the matters unfounded or of no importance if true, and that has been also put in the record, I think, and that is the history which I am putting in here briefly, so that you will know the connection of this committee.

Mr. LEA. Yes.

Mr. FREAR. As Mr. Lea says, it was simply turned over en masse with other papers.

Mr. LEA. And just one word further, in which I think Mr. Frear will concur: That the Howes telegram caused the Secretary of War to order an investigation of the spruce production on the Pacific coast, and that the Ray investigation resulted on order of the Secretary of War, pursuant to the Howes suggestion.

Mr. FREAR. That is right; and with this further supplemental statement, that the intelligence officer at Washington appointed a Maj. Ray, in the Regular Service, to make an investigation of charges made by another major, Maj. Howes, in the same department, and in that investigation contemplated a report upon his equals in rank, as well as his superiors. That is, I am presenting the entire proposition as it confronted Maj. Ray, who came out here and took the testimony—I don't know whether it was all testimony or not; some of it, I think, was just statements.

Mr. LEA. And I think, further, that Mr. Frear would concur with me, in reference to this committee, to say that we are not here asserting the correctness of that report.

Mr. FREAR. Not the slightest degree. Everything is to be passed upon by ourselves.

Mr. DONOVAN. I thank you very much, Mr. Chairman, for this explanation. My personal matters are of small moment, and I am not fearful of the effect of anything that Maj. Howes or anyone else can say among people who know me, but your investigation is national, your report will be published widely, and my understanding is that some of those are published.

Now then, a friend sent me—and I will be as brief as I can—this:

Received to-day from our Washington correspondent following statement made at spruce-production investigation—

This is dated August 8—

spruce production investigation hearing yesterday in reading from report of Maj. Howes, of Intelligence, made last November, "claim J. J. Donovan, director of Spruce Corporation and former stock owner of Port Angeles & Southern Railroad, which was bought by Milwaukee, and close friends of Ryan's, holds contract with Siems-Carey-Kerbaugh cut 500,000,000 feet spruce, which company contracted to log at alleged profit of \$10 per thousand." Please wire immediately your version. We will not print unsupported charges.

Mr. FREAR. Just a moment. That telegram of Howes's contained several hundred words, in regard to the general scope of his investigations throughout this district, and this memorandum from which you have read, I assume, consisted of a few words in that telegram which related to yourself. The committee simply inserted the whole telegram without any discussion or any comment at the time.

Mr. DONOVAN. Now, I am a director of the Spruce Corporation. I never had anything to do with the Port Angeles Railway. I never met Mr. Ryan but once, until he came to this city at the time when the Spruce Corporation was formed. That once was because we are both members of the Foreign Trade Council of the United States, and I met him at Pittsburgh at the convention two years and a half ago. It so happened that his work had been largely in Montana, and my early engineering work was in that State—I had charge of the

engineering for the Northern Pacific in that State for one year—and we naturally talked in a friendly way, for about half an hour. That comprises the extent of my acquaintance with Mr. Ryan until he came to this city as head of the air service. Here I met him at some length twice, and for a moment, a third time.

Now, then, the assumption seems to be here that I was personally using my position on the Spruce Corporation to help carry over some deal with the Milwaukee and also to obtain for my company a contract that would be very favorable. I have answered everything except the last part of it, I believe.

I did wire a very strong telegram to my friend, Mr. Hadley, of the House, asking him to explain the situation to the Chief of the Intelligence Department, and to say that when I am in Washington next month I would demand a personal interview and proper retraction from Maj. Howes. Gen. Churchill can't find that Maj. Howes is in the service and can't find that my name has been used. Mr. Hadley's letter is here, but I will not cumber the record with it unless you want it. I will be content with the statements I am making. I will give you, for such use as you see fit to make, all that I know in regard to this contract I have referred to.

Mr. FREAR. Which contract is that?

Mr. DONOVAN. That is the contract referred to in the Howes telegram, where he intimates that I was holding a contract from Siems-Carey-Kerbaugh.

Mr. MAGEE. Have you seen exactly what the Howes telegram says in reference to this Mr. Donovan?

Mr. DONOVAN. All I know about it is this that I have read.

Mr. MAGEE. I think we have a copy of the telegram. I suggest that you read that over and see exactly what it says.

Mr. LEA. I think that is a good suggestion.

Mr. MAGEE. I don't remember, myself, but I think you ought to have that telegram and read it. I think we have a copy of it here, haven't we, already in the record?

Mr. LEA. Yes, if it is agreeable.

Mr. MAGEE. And then there is also in the record the report of Maj. Ray, who, as I understand, was designated by the War Department to make an investigation of the charges contained in this Howes telegram, and, if I recall rightly, Maj. Ray quotes what Howes said in reference to you, if there is a reference there, and I think there is, and then Maj. Ray makes his own comment on that part of the telegram. I advise you to get that part of it, too.

Mr. DONOVAN. I would be very pleased to, but I never saw Maj. Howes—

Mr. MAGEE. I don't just recall all the circumstances about it.

Mr. LEA. I was assuming that Mr. Donovan was informed as to what the Howes telegram was, and I think, in justice to him, he ought to see a copy of it before he testifies, because it contains things of which apparently he is not aware.

Mr. MAGEE. I don't remember the language. I think he ought to have the language before him.

Mr. LEA. So I suggest that we try to get that for him at noon and let him look it over and let him make any comment this afternoon, in view of what he learns about it.

Mr. MAGEE. It was a matter brought in because the Howes telegram was presented.

Mr. DONOVAN. Yes. That, of course, I could not know when I made my reply.

Mr. MAGEE. It was in that telegram there that we were examining.

Mr. DONOVAN. Just a word, Mr. Chairman, in regard to those papers which I have handed to you.

Mr. FEAR. I examined the Ray report in which you wrote a letter and Bloedel wrote a letter, and the whole thing was threshed out, and as far as we are concerned we have no investigation that we expect to follow up on that. We have not made any charges. If we do we will ask questions and it will be proper to answer, but as far as the Ray report is concerned and the Howes telegram, we have nothing to do with them except as they incidentally appear in here to show the matters that come before this committee. The whole thing has been threshed out, as I understand, unless we wish to go into it with the idea of cumbering up the record. The idea of cumbering up the record with every man who might have charges lodged against him on important or unimportant matters would be an unending job.

Mr. DONOVAN. I won't take over a minute, as my personal integrity is assailed.

Mr. MAGEE. Mr. Donovan, in this connection why don't you wait until you read Howes's telegram and read the comments made by Maj. Ray in reference thereto, and then after getting the exact language of the telegram and the remarks of Maj. Ray then make for the record any statement in reference thereto which you desire.

Mr. DONOVAN. You are very kind to suggest that I may have more time. I am trying to take as little time as possible in my personal matter.

Mr. MAGEE. The point I make is that unless we have in mind the exact language used—I assume you would like to know just the language used. In other words, this telegram which you may have read here may not be the language used in the Howes telegram referred to.

Mr. LEA. It contains a reference in regard to which this telegram is not informed, Mr. Donovan, and here is the only thing in regard to your suggestion: While the whole telegram is in full in this record I believe the comment of Ray is not. So there is a justification for Mr. Donovan's desire to have his estimation in this record, because the portion that contains his explanation of the Ray report is not in this record.

Mr. FREAR. You may do that this afternoon.

Mr. MAGEE. What he has got to say in reference to this statement might be in one statement altogether in preference to one statement now and the other in another statement afterwards.

Mr. DONOVAN. I doubt whether I care to say anything about myself personally, if you will permit me to explain this contract now.

Mr. FREAR. Certainly.

Mr. DONOVAN. There was an effort made by the strongest mills on Puget Sound to prevent the building of the Port Angeles mill. My partner, Mr. Bloedel, who is here, had charge of the negotiations with Mr. Scott and other gentlemen, representing six mills altogether, as fully set forth here, and endeavored to prevent the construction

of that Port Angeles mill by offering all our facilities for the cutting of spruce logs providing that the Government should furnish us with the men so that we could do that at night and not interfere with the production during the day. You will understand that all these other mills, big and little and all the camps, big and little were giving every bit of stuff they could to the aircraft production and were also giving much larger quantities to the shipbuilding industry, and those things for the general requirements of the Government were met, and the things which were vital to the aircraft production above everything else. We were told that wonderful things would happen if we could get material out. Six mills finally reached the point of a capacity of 1,250,000 feet in eight hours. We reached an agreement with the Siems-Carey-Kerbaugh people by which they undertook to cut the logs and get them on the cars at \$12 per thousand. I could not see that there was anything improper about that. The utmost profit we expected was \$2 per thousand, and that was problematical depending on the rising price of material and labor. If that was wrong then I was wrong. But it was an effort to use our mill capacity to help produce at a fixed price—not a cost-plus price, but a fixed price—certain things for a company that had taken a contract from the Government. That is all there is to it, and here is the whole record right here [handing papers to chairman].

Mr. FREAR. The only criticism that I have heard individually and which you might amplify is that at the same time you built the box factory, and you received from the timber that was not used for aeroplane purposes this additional supply, and it netted you \$4 a thousand. I do not know that this is right, but I wanted you to be able to see it; and that this box factory was built for the purpose of using what you call the commercial part of the log that was not used by the Government. I simply advised you that those matters have come to the committee's attention.

Mr. DONOVAN. The only part of that that is correct is that we built the box factory. We never cut a foot of lumber under this contract.

Mr. FREAR. I understand. What were you going to do?

Mr. DONOVAN. I do not know.

Mr. FREAR. You were going to cut the timber as provided by the contract, weren't you?

Mr. DONOVAN. Yes.

Mr. FREAR. You were going to get the benefit of all this lumber that was in addition to the Government lumber, weren't you?

Mr. DONOVAN. No, sir.

Mr. FREAR. That is what I want to know.

Mr. DONOVAN. The entire lumber was the property of the Siems-Carey-Kerbaugh Corporation to do what they pleased with.

Mr. FREAR. Was there any price fixed by which you could buy?

Mr. DONOVAN. No, sir.

Mr. FREAR. Was there any price fixed that any of these parties were to buy at?

Mr. DONOVAN. No, sir.

Mr. FREAR. What was to become of the surplus part of the log outside of that used for Government purposes?

Mr. DONOVAN. The Siems-Carey-Kerbaugh Corporation were to do what they pleased with it.

Mr. FREAR. Was there any contract made by you as to what you were to do with that part of the log?

Mr. DONOVAN. Not that I know of.

Mr. FREAR. Then what did you expect to do with that log after you had cut out the lumber to be used by the Siems-Carey-Kerbaugh Corporation?

Mr. DONOVAN. We expected that they would do with it exactly what the Spruce Production Corporation did with some of the lumber at the Vancouver cut-up plant—sell it to the highest bidder.

Mr. FREAR. Those logs were in your mill and in these other mills?

Mr. DONOVAN. Yes.

Mr. FREAR. And you were building a box factory for what purpose?

Mr. DONOVAN. To make boxes.

Mr. FREAR. Where did you expect to get your material?

Mr. DONOVAN. We, ourselves, cut 150,000,000 feet of logs per year.

Mr. FREAR. Was that a sufficient supply to supply this mill with spruce for the box factory?

Mr. DONOVAN. We use very little spruce on boxes; we use largely hemlock.

Mr. FREAR. That was not built in contemplation of the part of the log that was to be used under the Siems-Carey contract in any way?

Mr. DONOVAN. No, sir.

Mr. FREAR. That is a complete explanation and I think you are entitled to make that answer.

Mr. DONOVAN. I am glad you brought that out.

Mr. FREAR. You ought to have it. It is only fairness to you that it should be brought out.

Mr. DONOVAN. Now, before leaving the personal part of it, let me add that I have bought, or our company has bought, rather, from the salvage down at Vancouver a locomotive and a few cars. We have bought them at the same price that other people were offered them, and we have not had any commission or favor of any kind whatsoever in these purchases. I think it aggregated something like \$30,000. The principal purchase was a shay locomotive, a 70-ton locomotive, for which we paid \$20,000. That is the same as our people paid for similar locomotives. And we had bought in times of peace three or four years ago a locomotive of exactly the same type for about \$13,000. I think that locomotive cost the Government \$24,000, and as far as I know the clubs are thrown.

Mr. FREAR. I do not believe the members of the committee are interested in any locomotive. What they are interested in is knowing if you have bought any speeders.

Mr. DONOVAN. No, sir; we are not responsible for any speeders anywhere.

Mr. FREAR. My colleague here, Mr. Magee, was anxious to have that brought out.

Mr. MAGEE. I would say in reference to that, Mr. Donovan, that I was the only member of the committee who stuck to the speeder and I was not thrown off when it jumped the track.

Mr. DONOVAN. You may have had experience with them in the early days, the same as I have had.

Mr. FREAR. My colleague, Mr. Magee, is the only expert member of the committee on the subject of speeders.

Mr. DONOVAN. But to be serious, the paper this morning says that a woman yesterday was killed almost exactly where you were thrown off, on a speeder overtaken by a runaway car.

Mr. MAGEE. I think the results of that accident were very fortunate to the members of the committee.

Mr. LEA. There was one further line of inquiry I would like to make, and I do not know whether you are the man to ask it of or not. I would like to have the information for the record as to the housing and food conditions of the men engaged in these operations. Were you familiar with that feature of the work, or not?

Mr. DONOVAN. Only so far as it relates to our own operations as I observed on a hasty trip I made to Lake Pleasant.

Mr. LEA. When did you first have soldier labor?

Mr. DONOVAN. Early in 1918.

Mr. LEA. Do you remember about the exact date?

Mr. DONOVAN. No; I do not. I think perhaps in April, 1918. We had all together three detachments. We had two of them in the woods and one in the mills. We endeavored to prepare for them before they came. We had some difficulty in convincing the sanitary officers who came first to examine that everything was all right, but we did satisfy them finally, and we had no trouble with the soldiers or their officers. The first two detachments did good work. The third detachment perhaps justified some of the remarks of Mr. Chisholm yesterday. We sent back 15 or 20 men all together.

Mr. LEA. That was useless on the work?

Mr. DONOVAN. Well, they didn't understand it, or else they didn't want to.

Mr. LEA. How were those men housed?

Mr. DONOVAN. Our own men were all housed in the camps in wooden buildings, and they were fed by the company. They were paid exactly the same as civilians and treated in every way the same as civilians, excepting that they were under the discipline of their own officers when off duty. They were under our foremen when on duty.

Mr. LEA. In performing actual work in the spruce operations they were under civilian management?

Mr. DONOVAN. Yes.

Mr. LEA. And from a military standpoint they were under military officers?

Mr. DONOVAN. Yes.

Mr. LEA. What information have you about the food that they were given?

Mr. DONOVAN. They were given exactly the same food as our own men, and there was no complaint, with the exception of some complaint in the beginning by the men in our mill in Bellingham. There we leased a very good hotel and equipped it to the satisfaction of the officers at a very considerable cost. Those men were a lower grade of men than the first ones we had, and they found fault, and we had to make a number of changes before they were satisfied, although we were leasing the hotel. But we finally satisfied them.

Mr. LEA. On what basis were you paid? Did you supply the food yourself or at the expense of the Government for the soldiers?

Mr. DONOVAN. The Government, so far as I know, was at no expense for any of those soldiers on private operations other than the necessary expenses of the officers.

Mr. LEA. It is only in the cost-plus operation that the Government made an allowance for food. Is that right?

Mr. DONOVAN. I do not know about that. That was a military detail that I was not concerned with.

Mr. LEA. That was the thing that struck me yesterday that it was testified that there was a bad condition in this one mill. But, as I understand it, this first detachment of soldiers was sent to the woods. I think that that suggests that before we get out of here we ought to get information as to what the general conditions of housing and feeding of labor was, and that is the reason I asked you that question.

Mr. FREAR. Now, who is there that could give the information about that, from the standpoint of either side?

Mr. DONOVAN. My understanding is that there were over 230 detachments of soldiers scattered through Washington and Oregon, and I would prefer not to name anyone in this case, as I am not familiar with it. But there are many who had taken those trips.

Mr. LEA. Who could best furnish that information?

Mr. DONOVAN. Col. Stearns can give you a list and you can choose for yourself.

Mr. LEA. Wasn't there some one who had particular supervision over that work?

Mr. DONOVAN. Col. Stearns had charge of the soldiers and general supervision under Gen. Disque.

Mr. FREAR. As a matter of carrying out this same line of thought which is suggested by my colleague on the committee for ascertaining the housing and food matters, possibly you may aid us in regard to a letter I received last evening. I will read the letter into the record, because it is something upon which you may have some information. It was sent to my office in Washington and forwarded to me, reaching me yesterday [reading]:

SAN FRANCISCO, August 11, 1919.

CONGRESSMAN FREAR.

DEAR SIR: Have been reading quite a few articles in the San Francisco Chronicle regarding the investigation of the spruce division. As a discharged sergeant of the One hundred and twenty-first Spruce Squadron, of Bellingham, Wash., assigned to the Bloedell-Donovan Lumber Mills, would like to lay a few facts before you. We started out with 138 men, and then dwindled down to about 85 men. We were supposed to get civilian pay, and the only thing that was to be deducted was \$1.05 for board, insurance, and allotments. That was all right, but we were never given a statement to show deductions made. Twenty-five of us were detached and sent back to Vancouver to report for another job.

On leaving, the mill held back pay and forwarded to us a few weeks after. Each man was \$2 short on his check without any statement being made. In Bellingham we were boarded at an old hotel. We investigated the shortage by notifying the company and were told that \$2 a man had been taken out for two weeks to pay for lighting of the hotel. Remember when we started out everything was included in our board. I will leave it to your fair judgment how 85 men for two weeks could use up \$170 in electric lights. All lights were supposed to be out at 11 p. m., and I don't think you could find one-third of the men in quarters between 7 and 11 p. m. And most of the time we were on a night shift from 4 p. m. to 1 a. m. If such a deduction was made without our notice, I agree that other deductions were made, as the checks we received were pretty small. I wrote the Bloedell-Donovan Co. and received a very curt answer from them. The food they served us wasn't fit for a dog, and it certainly was a relief to get back to Vancouver Barracks and Uncle Sam's soup kitchens once more.

The spruce division certainly needs investigation, and I admire your grit for tackling the job. It might be worth your while to give the above company a call while you are in the Northwest.

Respectfully.

E. A. MADDEN.
1919 Vallejo Street, City.

Mr. FREAR (continuing). I read that into the record so you could make any explanation you desired. I received it last night and never saw it before. When we reached San Francisco I thought it was only proper that after your statement was out we could call him before us and see what the basis was for the statement he makes in the letter. That is directly in line with what the counsel has suggested about living conditions which were testified to by Mr. Chisholm yesterday.

Mr. DONOVAN. The statement in regard to the \$2 deduction I do not know anything about. If there was such a deduction made it was not made for lights. I do not know, however. I could get the information for you. It is the first I heard of it. It is the first I have ever heard from Mr. Madden. So far as the character of the hotel is concerned, I will be pleased to have you send somebody in whom you have confidence to examine the building yourself, as the building is still there. It is in private use now. But it was by all odds the best building that we could obtain. It was convenient to the mill and we spent a lot of money in getting it in thoroughly good shape. And it was satisfactory to every officer. There was a medical officer there all the time, and there was an inspector who came from Vancouver and examined it. His statement in regard to the food is absolutely false. That is one thing I can contradict. The food was good. I have eaten meals there myself. And as to the suggestion that we short changed men on their pay, that is a lie. That is all I have to say.

Mr. FREAR. This man wrote to your company and could not get a response, he said.

Mr. DONOVAN. Our company responds to every letter it receives.

Mr. FREAR. Then, of course, if he wrote he certainly received a letter.

Mr. LEA. He admits in the letter that he received a curt reply.

Mr. FREAR. Yes; that is what he said. I had forgotten that. How about his statement that it was an old hotel and they were compelled to pay \$170 for electric lights for two weeks.

Mr. DONOVAN. That statement on the face of it is false.

Mr. FREAR. The food question is what caused me to suggest the letter, as long as the matter was up. It was just received last night.

You sent a letter to the committee, Mr. Donovan, before we had even a chance to consider what our duties were to be, telling us that under certain conditions you would welcome us out here. I take it that that was not written with a disposition to find fault with the committee before you knew what we were undertaking. It was given publicity, as I understand, through the newspapers, and given to the press immediately after you wrote it to me, was it?

Mr. DONOVAN. I would consider that incident closed, sir, until the committee came. If you wish to reopen it I have all the papers here that show a sufficient excuse.

Mr. FREAR. My question is this: That a committee appointed by Congress to make an investigation was sent by unanimous vote of the House and by unanimous vote of the committee of 15 here to make an investigation and report. I received a letter from you. I assume as chairman of the committee, coming to me as chairman of the committee, which I understand had been given to the press, in which you laid special stress on the fact that when the committee came here unless certain conditions were understood, we would not be welcome

I wanted to know whether or not you represented the community as a whole when you gave that to the press, or what was the reason that you did give it to the press before you ascertained the facts?

Mr. DONOVAN. The reason that I gave it to the press was because on July 14, 1919, in the Post-Intelligencer, of this city, appeared a statement that there was a large waste of funds charged against the Spruce Division, and in the course of that dispatch it said: "According to a statement authorized to-day by Mr. Frear." I did not act on that until I had given it careful thought, and that night I sent a telegram to our representative in Washington, Mr. Hadley, and your statement having been given to the press, I gave my answer to the press.

Mr. FREAR. I understood your statement had been given first to the press, before my answer was offered, and that was the reason for giving it; and that was to the effect that it was immaterial to the committee whether we were welcome here or not. Congress had sent us here and we had no voice or no volition in the matter. We were here to ascertain facts as they came before us. It was a very unusual proceeding, and that was the reason that the attack made upon the committee was very unusual, because if you had inquired you would have ascertained immediately that there was no basis for any such statement given by any member of the committee. It would have been very unwise for a member of the committee to give out such a statement, and no member of the committee did give out such a statement, as I assured you in my letter.

Mr. DONOVAN. Your letter to me was the first communication I had direct. It was published by wire in the Oregonian four days before I ever received the letter. I stopped the press business before that.

Mr. FREAR. Hadn't you published your letter before that?

Mr. DONOVAN. Yes.

Mr. FREAR. Of course you had; that is the point.

Mr. DONOVAN. Let me file my telegram.

Mr. FREAR. We don't care for your telegram. We have your statement, and that is sufficient. You used to be engaged in Montana?

Mr. DONOVAN. Yes.

Mr. FREAR. What was your business there?

Mr. DONOVAN. Civil engineer.

Mr. FREAR. For what concern?

Mr. DONOVAN. For the Northern Pacific Railway and for the subsidiary companies that were doing business in Montana.

Mr. FREAR. Whereabouts were you in Montana at that time?

Mr. DONOVAN. My headquarters in 1882 and 1883 were in Missoula. My headquarters in 1887, when I went back to take charge of construction in Montana, were in the city of Helena, Mont.

Mr. FREAR. Missoula is incidentally the home of Mr. Ryan.

Mr. DONOVAN. So I have been told.

Mr. FREAR. You saw Mr. Ryan when he came out here, you say.

Mr. DONOVAN. Yes—

Mr. FREAR. On what business?

Mr. DONOVAN. The committee of reception for Mr. Ryan included my partner, Mr. Bloedell. He was unable to serve, and he asked me to serve in his place, which I did. Consequently I was with Mr.

Ryan the greater part of the day he was here. The chamber of commerce of this city asked me to make an address of explanation of the situation here, which I did. Because of that I sat near Mr. Ryan at the banquet at the Washington Hotel.

Mr. FREAR. When was that?

Mr. DONOVAN. That must have been in the latter part of July, 1918.

Mr. FREAR. About how long was he here?

Mr. DONOVAN. I think a day or a day and a half.

Mr. FREAR. What was he engaged in doing while here?

Mr. DONOVAN. He inspected the shipyards of this city and was in consultation with various people.

Mr. FREAR. Was he in the city all the time?

Mr. DONOVAN. I really do not know.

Mr. FREAR. Was he in consultation about aircraft matters?

Mr. DONOVAN. I presume so.

Mr. FREAR. He was director of aircraft at that time, and that would probably take more of his time and his interest than ship matters, wouldn't it?

Mr. DONOVAN. The ship matters was the effort of the chamber of commerce to show him the great industries of the city.

Mr. FREAR. What did he come out here for?

Mr. DONOVAN. I suppose to inspect the aircraft situation.

Mr. FREAR. That is what he was engaged in. The other was only incidental, due to the courtesies of the city.

Mr. DONOVAN. Yes. I believe he went down to the peninsula; that is my recollection, although I did not accompany him. Gen. Kenley, who was at that time the major general just back from France, and there was also a Capt. O'Neil here, I recall, and I also recall that Gen. Disque and Col. Stearns came up from Portland. I did not go to Portland with Mr. Ryan, but on the evening of the banquet, after the banquet was over, Mr. Ryan asked me to step back into the banquet room for a few minutes, and he there explained that he would like to have me serve on this corporation that was about to be formed. Gen. Disque had perhaps three weeks before suggested that I serve, and I demurred. Mr. Ryan added his request to that of Gen. Disque.

Mr. FREAR. That is to say you had just as much ambition to serve on that as some of the members of the committee had to undertake some of the duties necessarily imposed on them.

Mr. DONOVAN. Yes.

Mr. FREAR. And yet that was necessary; someone had to do it?

Mr. DONOVAN. I hesitated for a few moments; then Mr. Ryan said he needed the help of practical men and he said I was one, and perhaps the little flattery had the effect. At any rate I consented. That is the extent of my acquaintance with Mr. Ryan.

Mr. FREAR. I do not know that any criticism should be made against a man for accepting such a position.

Mr. DONOVAN. I did not know Mr. Ryan when he was in Montana.

Mr. FREAR. Did you know Mr. Edward Donlin?

Mr. DONOVAN. No, sir; I did not.

Mr. FREAR. You stated that when Mr. Disque first came here there was a call sent out for a few men to meet him. He was Maj. Disque at that time, was he?

Mr. DONOVAN. He was a colonel, I think.

Mr. FREAR. When Disque first came out here he was a colonel?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. You say there was a call sent out?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Who sent out the call?

Mr. DONOVAN. I really do not remember, excepting I remember that half a dozen were there, that E. S. Grammer, of this city, and Ralph Burnside, of Raymond, were two of the men.

Mr. FREAR. You do not know to whom the call was sent?

Mr. DONOVAN. No, sir; I do not. It was an informal conference.

Mr. FREAR. This board of which you speak, and on which you were placed together with Mr. Reed and Mr. Benson, of Portland, was in existence about 10 weeks before the armistice was signed, just the concluding weeks of the war. Is that right?

Mr. DONOVAN. The Spruce Production Corporation?

Mr. FREAR. Yes; of which you were a member.

Mr. DONOVAN. That is approximately correct. We organized on the 21st of August, 1918, and it took about six weeks, I think, before we really had perfected our organization and everything was all right at Washington.

Mr. FREAR. So that your term of service prior to the signing of the armistice, of actual work, was very limited?

Mr. DONOVAN. Very brief, yes, sir.

Mr. FREAR. You said there were differences in the Spruce Production Division. In what particular did you refer to differences; you need not go into detail; I mean just briefly.

Mr. DONOVAN. If I recall, what I had in mind at that time was the advisability of building these mills. That was the thing that there was a great difference of opinion about, whether those mills were necessary or not. The local people handling the logging and lumber business did not like to have outside parties come here and take what they thought was their work.

Mr. FREAR. That was not surprising, because of something further than selfish motives; these men were coming in without any previous knowledge or experience in logging or lumbering. That is true, is it not?

Mr. DONOVAN. Yes, sir; and I resented it myself just as much as any gentlemen who were my colleagues in the business until I saw what they had accomplished in September of 1918.

Mr. FREAR. Tell me what they had accomplished in September, 1918, in the nature of their lumbering operations; just briefly.

Mr. DONOVAN. They had secured their organization, as was explained yesterday. They had under construction at least 100 miles, and I was told 130 miles of logging railway and spurs. They had placed orders for, as I understand, 50 units of logging material with the Washington Iron Works, the Willamette Works, and the Crown Works, and they had bought a large quantity of cars from the Pacific Car & Foundry Co. of this city, and bought a large number of locomotives from the Lima Locomotive Works. They had undertaken the procuring of equipment and the laying out of railroads on a larger scale than any of us had ever dreamed of. That is what they had done, and they had it all well underway.

(Thereupon, at 12.10 o'clock p. m., a recess was taken until 2 o'clock p. m.)

AFTER RECESS.

The committee met, pursuant to the taking of recess, at 2 o'clock p. m.

Mr. FREAR. The committee will come to order.

TESTIMONY OF MR. J. J. DONOVAN—Continued.

Mr. FREAR. The Erickson contract, of which you spoke before lunch, you said was to take off the logs that were cut on the right of way?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. There can not be any criticism about that. What further did that contract provide?

Mr. DONOVAN. For one small tract of timber which Erickson had bought and for which he desired the right to take those logs from, that additional tract over the railroad, while he was picking up those on the right of way.

Mr. FREAR. In other words, Erickson could cut 20 or 40 or 400 or 4,000 acres, I assume, under his agreement; but you, if you had land right adjoining, would have been prevented from doing that?

Mr. DONOVAN. No, sir.

Mr. FREAR. Explain why not.

Mr. DONOVAN. In the first place, because his contract, so far as it related to additional timber, was subject to revocation on practically no notice.

Mr. FREAR. But that contract has been in force up to to-day?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. And under that contract he has been cutting timber, logging for himself, along Crescent Lake?

Mr. DONOVAN. I suppose so.

Mr. FREAR. We happened to see the evidences of it, and know. And so it is just as I said, that he can continue until some one cancels his contract in cutting his timber and logs?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Did you pass upon this contract yourself?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Did you have a lawyer advise you; I take it this was the board that passed upon it?

Mr. DONOVAN. The matter came up, recommended to the board, and the board approved it.

Mr. FREAR. Recommended by whom?

Mr. DONOVAN. I do not recall. It was by whatever officer was in charge down there at Lake Crescent.

Mr. FREAR. Who was that officer?

Mr. DONOVAN. I do not know.

Mr. FREAR. And then the board approved it without further advice?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Who was on the board besides yourself, the three gentlemen you mentioned, Mr. Benson, and yourself?

Mr. DONOVAN. Mr. Benson was off the board. The board as at present constituted is a little different from the way it was given. There are four lumbermen on the board, and three other gentlemen, one of whom, the president, is an Army officer.

Mr. FREAR. Would you not think this was a legal question involved, whether it was a right proposition for the Government to say to one party along this line of road, "You can have the right to log your timber, when, as a matter of fact, the other man has not that right"?

Mr. DONOVAN. No one else has asked for that right.

Mr. FREAR. But if they had asked for it you are in a position to say they can not have it; you are in a position to cancel this contract immediately, because of the peculiar powers conferred on this corporation, which give you the right to immediately cancel; is not that right?

Mr. DONOVAN. I think so.

Mr. FREAR. And it is under that that you get the power?

Mr. DONOVAN. Yes.

Mr. FREAR. You claim you have that power, your board?

Mr. DONOVAN. Yes.

Mr. FREAR. That you have the legal power?

Mr. DONOVAN. I think so.

Mr. FREAR. Have you a legal opinion to that effect?

Mr. DONOVAN. I do not know.

Mr. FREAR. There is an important principle involved, and I am not so particular in regard to the size of the contract, but there is a very large principle involved, and it would be valuable to the committee, possibly before we take any steps, to know whether or not you have got a legal opinion?

Mr. DONOVAN. I do not know.

Mr. LEA. Just a suggestion: I do not believe there can be any doubt about the right under the articles of incorporation.

Mr. FREAR. There is this right, that the officers can all be removed from this corporation if they overstepped the bounds that were expected in dealing with the assets of the Government, because it is governmental property.

Mr. DONOVAN. In that case they should be.

Mr. FREAR. So that is the way it can be reached if it can not be reached by having these officers inquire of proper legal authority what is right to do. I do not know what your powers are; I know they are very large. We have had evidence of that as we examined the record. We have no such power with any other public organization; they would not have the right to discriminate.

Mr. DONOVAN. We are not discriminating.

Mr. FREAR. You are taking the only one man, and it is only his goods that you are shipping.

Mr. DONOVAN. No one else has asked.

Mr. FREAR. Do you expect to turn this over to anyone else, to give them the same rights? There is the question for you.

Mr. DONOVAN. We will consider that question when it comes up.

Mr. FREAR. That is not the question. If it is a question of right, will you give it to them?

Mr. DONOVAN. Certainly we will.

Mr. FREAR. Then why didn't you say so?

Mr. DONOVAN. May I interject just this: We were willing to strain a point in order to get those logs picked up and get something—

Mr. MAGEE. That is not the point, Mr. Donovan. What Mr. Frear is referring to is the taking of logs from private property and using a Government railroad for transportation. Now, there are two propositions involved which are matters of policy: First, whether in granting this right you could deny it to some other applicant, which I assume that you could not, and in that event the forest on each side of the railroad might be destroyed, which would affect also the values of the property of other people holding property in that locality. In addition to that, it might be the policy of the Government, which in my legal opinion has the sole right to decide this proposition—that is my legal opinion about it—to extend the national forest reserve to take in some of these additional timber lands. So that it seems to me that an important question like this, involving a matter of policy, is one for the Government to determine. The question of your right to get the logs removed that were put upon the sides in clearing the track, there is no question about that, but this question of permitting personal and private property owners along the railroad to use the Government railroad for that purpose, I should want pretty conclusive authority to convince me that you had that right. As I said yesterday, if you haven't had a legal opinion upon the matter, I think you ought to get it.

Mr. LEA. If I could make a suggestion, I think there is a misapprehension here of the situation. From a legal standpoint the spruce-production corporation is organized as a private corporation under the laws of the State of Washington. The articles of incorporation give the board of directors powers at least as broad as are ordinarily given to private corporations.

Mr. MAGEE. I understand all about that, but this is a governmental agency.

Mr. LEA. But they have the power given to them by law that is ordinarily given to a private corporation to contract, lease, buy and sell, and manage their property.

Mr. MAGEE. That is the position taken. I will take the responsibility of calling the attention of the Secretary of War to the matter. I think it is a matter of very great importance. The question of their authority ought to be settled.

Mr. FREAR. On the theory just advanced—

Mr. DONOVAN. May I say a word of explanation?

Mr. FREAR. I was going to say, on the theory just advanced, this corporation which has assumed, whether properly or not, in the past extraordinary powers in some of its dealings, this corporation is in a position to deal exclusively with one individual, without the power of revision, if this principle stated is correct in regard to a governmental agency.

Mr. LEA. But they have not chosen to do so. They have not made any.

Mr. FREAR. It is immaterial whether they have chosen to do so or not. If they have the powers of a private corporation they have that right.

Mr. LEA. Just as every such corporation has.

Mr. FREAR. The question comes up in regard to a governmental agency, if they have that right. But we do not accomplish anything by thrashing that out here.

Mr. LEA. It is purely a moot question. There is no practical question involved.

Mr. FREAR. There is a very strong practical question involved, that the action of that man is destroying to-day the general appearance of that side of Lake Crescent and putting a blotch upon the landscape there. That is something that I do not believe ought to be done unless it is done in a proper way, and the Government ought not to lend its assistance to that purpose.

Mr. DONOVAN. If a mistake has been made it should be corrected, but since the question of the power of the directors has been raised, permit me to say this: I explained this morning how it was that I happened to go on this board at the time when the gentleman referred to asked me to go on the board. I said in almost so many words that I did not care to go on a board where the real power would be in the hands of an officer of the United States and we would be simply there as figureheads. I was assured that it was expected that every member of that board would exercise their business discretion the same as on any other corporation in the State of Washington, and under that condition I went in and I tried to exercise that power.

Mr. FREAR. I would like to make a statement in the record. I would like to ask anyone who is in this room who keeps passing notes to members of the committee to give the notes to all of the members of the committee, if they are Government employees. I desire to have that entered in the record.

Mr. LEA. You are welcome to this note.

Mr. FREAR. I do not care about that note. I have seen at least 20 notes that have been passed here by different people. We are supposed to be members of a committee, and we are supposed to be above that, and I know that every member of the committee is above it. It is just as objectionable to have these notes handed to us from anyone as it would be in the case of a judge on the bench.

Mr. DONOVAN. Pardon me, Mr. Chairman, these notes are not at my suggestion.

Mr. FREAR. Oh, I know that.

Mr. LEA. Isn't it a fact that notes have been handed to different members of the committee during this proceeding?

Mr. FREAR. There was one note handed to me this morning, and I was very sorry that that incident came about, because I do not feel that we are in a position to have those things done. I have seen a dozen notes handed from that jury box.

Mr. LEA. As far as I am concerned, I am willing to get information from any source.

Mr. FREAR. We will move the table if we have to do so, so that any notes will have to be carried by any Government agent to be placed in the hands of any member of this committee, and bring them into conspicuous attention. If the agents of the Government have anything to do with it every member of this committee should be equally advised.

Mr. WALKER. Mr. Chairman, I am sure that anything that I pass to the committee I am willing to give to any member or all the members of it.

Mr. FREAR. My suggestion is that it would be just as well not to hand anything to the members of the committee while they are engaged in the hearing.

Mr. LEA. I want to state in this connection that this gentleman, Mr. Walker, handed me a note saying that the Judge Advocate General had passed upon and approved the charter and by-laws of this corporation.

Mr. FREAR. Oh, sure, of course he had. That is the value of that.

Mr. MAGEE. My contention is that it is a matter of national importance, which I have tried to point out. It might be that the Government would be willing to do that, but it seems to me that the attention of the War Department and of Congress ought to be called to such an important matter of policy. I deem the extension, for instance, of the national forest preserves of very great importance, not only here in the State of Washington but to the country at large. In determining a policy of that kind, it seems to me that the authority of the corporation could be clear. That is the only point I make. I do not say that you have not got the authority, but I am simply suggesting that it seems to me to be the part of wisdom for your board to satisfy itself and get the opinion of competent legal authority in the premises.

Mr. FREAR. I suggest further in the record, in connection with a layman writing a note to a member of the committee, that the action of the Judge Advocate General in passing upon the charter or the by-laws of an organization has nothing whatsoever to do with the activities of that organization and the method in which they act under them, unless he has specifically passed upon the contract for that line of work.

Mr. MAGEE. Nor with this question.

Mr. LEA. Here is the proposition in language as plain as can be written in English; the board of directors are given authority to carry out such a transaction as this, as clear as legal language can convey authority. It is conveyed, and I think it is all piffle to be raising any question about it.

Mr. FREAR. And you approve of the action of this board in doing this work? Let us have it on the record.

Mr. LEA. I do, under these circumstances.

Mr. FREAR. That this man be permitted to log his own private property in addition simply because he happens to have a contract. He is given this special privilege at a time when these properties were for sale to log his own property.

Mr. LEA. In connection with the fact that he was salvaging Government property and in order to realize on that property the making of this contract was an essential thing and a common-sense thing to do.

Mr. FREAR. Not essential at all, because that property could have been sold to any man at a certain price, determined upon the competitive bids that ought to have been accepted. You are familiar with the Blodgett tract?

Mr. DONOVAN. Only by the maps and the records.

Mr. FREAR. You have never been down there?

Mr. DONOVAN. I have never seen it personally.

Mr. FREAR. You said that that property was bought after the armistice?

Mr. DONOVAN. The transaction was completed after the armistice.

Mr. FREAR. On December 2?

Mr. DONOVAN. I haven't the date.

Mr. FREAR. I think that is right.

Mr. DONOVAN. I haven't the date closely in mind. I think that is probably correct.

Mr. FREAR. The reason given is that negotiations had been going on for several months. Was Mr. Blodgett willing to sell, did he want to sell, according to the correspondence on file in your office and in his office?

Mr. DONOVAN. The earlier part of the correspondence I am not familiar with. The latter part, where there was a question as to whether he would pass title to the land, first, whether he would pass title to any timber except the spruce, and, finally, whether he would pass title to the land itself, which were the negotiations brought to my attention, did not indicate any unwillingness to sell the property. He did hold the right, retained the right, as I remember it, the mineral rights under the surface.

Mr. FREAR. That is retained by most of them, isn't it, in most all cases?

Mr. DONOVAN. Not out in this country.

Mr. FREAR. Was the threat made to commandeer his timber?

Mr. DONOVAN. I do not know whether it was or not, but it certainly would have been commandeered if he had not sold it.

Mr. FREAR. That is just the point. And he knew that?

Mr. DONOVAN. I presume he did.

Mr. FREAR. And you forced him into a position where he had to sell that in order to sell the railroad built, that is right?

Mr. DONOVAN. No.

Mr. FREAR. Didn't you say this was their object, simply to sell the railroad?

Mr. DONOVAN. I was bought because Mr. Blodgett named a price on the whole that was very much more favorable than the price on a part, and taking that and putting it with the railroad made a commercial proposition of it.

Mr. FREAR. Yes; but didn't you say in your direct examination that it was bought to sell the railroad?

Mr. DONOVAN. That, perhaps, is true.

Mr. FREAR. I do not think there is any doubt about it. Other witnesses have so testified and I suppose it is true.

Mr. DONOVAN. Mr. Blodgett always had the right to go into court.

Mr. FREAR. And a club was held over his head that the property was to be commandeered until he signed the contract?

Mr. DONOVAN. The spruce production corporation held a club over the heads of the entire industry where they were unreasonable.

Mr. FREAR. Where they were unreasonable? Where they didn't want to let their particular piece of property go you didn't commandeer it at all. You commandeered Blodgett's timber way down there for the purpose of what, or you threatened to eventually sell the railroad, because the necessity for the use of spruce had all passed

by, hadn't it, and he entered into a contract under duress, and then after that had occurred, on December 2, after being forced into that position by the Government.

Mr. DONOVAN. The agreement had been reached before the armistice.

Mr. FREAR. Oh, surely. He was forced, under the right of commandeering that you had, to enter into the agreement, but he didn't want to—all the correspondence states that, does it not? Why should he want to sell for 80 cents on the dollar this valuable land that you speak of?

Mr. DONOVAN. No; not 80 cents on the dollar.

Mr. FREAR. I mean 80 cents a thousand. Isn't that it? That, I think, was your testimony.

Mr. DONOVAN. He was a free agent.

Mr. FREAR. No; he was not a free agent. Why do you say he was a free agent, when you said you threatened to commandeer it. If they threatened to commandeer your timber would you be a free agent?

Mr. DONOVAN. I would have the right to go to the courts of the United States.

Mr. FREAR. Not in the slightest degree, under this condition, excepting to determine what the reasonable value should be.

Mr. DONOVAN. That is all you would go for, anyway. He had to sell the timber, I will admit that.

Mr. FREAR. Yes; he had to sell the timber, and he couldn't fight the Government. You sat in the position of the Government; you said, "Sell it so that we can build a railroad out here now and sell the railroad."

Mr. DONOVAN. The railroad was built.

Mr. FREAR. Well, "So we can sell the railroad that we built up there before we had anything closed." it was just like that. In one instance you are a Government agency and you can commandeer this man's property, while in another instance, the case of Erickson, you are a private corporation and you can deal with him in a private way if you want to, give him a special advantage. In the case of Blodgett you took his property. It is a wonderful power that is possessed here. I am not questioning it, I am not questioning but what there may be such interpretation of the charter and the by-laws, but I submit that in a time of peace that is a dangerous power to put in the hands of anyone, is it not?

Mr. DONOVAN. I never met Mr. Blodgett.

Mr. FREAR. I know.

Mr. DONOVAN. Yes; it is a dangerous power. I will answer your questions first, and then permit me to explain.

Mr. FREAR. Certainly.

Mr. DONOVAN. I never met Mr. Blodgett, and I do not know that the word "commandeer" was ever used to him, but I presume that it was, because I know there were negotiations had and at first he only wished to sell the spruce timber by itself and at a price that in view of the risk of fire and so on and cutting it out showed that he did not value the remainder at very much. We thought it was best to take the remainder, and as the armistice had been signed there certainly would have been no attempt made to commandeer if Mr. Blodgett had seen fit to refuse.

Mr. FREAR. If his contract was made it was binding, no matter under what terms. But I will suggest that the testimony taken in Chicago is what we had reference to, when it relates to the Blodgett contract.

Mr. DONOVAN. Exactly.

Mr. FREAR. That was his own attitude in regard to it.

Mr. DONOVAN. I have no knowledge of that testimony.

Mr. FREAR. It came before our committee. In regard to this selective logging proposition—I will not go into that; the time is over and it is all past. The question was asked of you if railroad expansion was necessary at this time. Now, railroad expansion might mean a thousand and one things, because it is not a very definite term as so used, but every one who gets out logs, and I understand that you do, with other reputable business men—you have to build railroads to get out logs, and you do that at all times?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. If you are going to get out a larger yield than usual you put more railways into the various districts and employ more men; is that true?

Mr. DONOVAN. Yes.

Mr. FREAR. That was a situation that was presented here, that if these loggers were logging, say, 100,000,000 feet—I believe they logged 317,000,000 feet of spruce the year before, anyhow, in just ordinary times, notwithstanding all the labor troubles; that is the record—and they logged 317,000,000 feet in 1916. Now, if their capacity had been doubled by additional roads and additional help, for instance, if some of this 30,000 men who were down there at Vancouver had been sent out to help the loggers in their operations, they could double the work, could they not?

Mr. DONOVAN. They could, probably, if they doubled the men, have doubled the amount of timber that they put out.

Mr. FREAR. If they tripled the number of men—that is, if they only had a limited number of men—if they had 30,000 men handed to them suddenly, or 50,000, if they were given all the men that were needed, and with the additional road facilities, why, they would have been able to still further increase, wouldn't they? That is a natural and logical result?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Now, these men had grown to a force of 28,000, and 1,000 officers, according to the testimony of the president of this corporation, and they were turned out suddenly at the time that these new cost-plus contract people came in, and the Siems-Carey-Kerbaugh people came in, and 4,000 men were turned over to the Siems-Carey-Kerbaugh Co. people, according to the testimony here?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Now, if those men had been turned over to any other company or a number of companies that could have used them, the output of logs would have been much larger?

Mr. DONOVAN. The only difference would have been, sir, that the output from the other companies, all of the loggers being opposed to selective logging, would have been that the whole forest would be swept clean, which is the method that we have all of us always pursued here until selective logging was brought up as a result of this emergency.

Mr. FREAR. Tell me where selective logging has been adopted in France? You spoke of that. What class of timber was it and what has been the experience, so far as you have been able to learn? First, what kind of timber was logged in France—what sized timber?

Mr. DONOVAN. Timber that was from 65 to 75 years old, so I have been told by the engineer officer with whom I talked.

Mr. FREAR. What dimensions?

Mr. DONOVAN. Some of those trees were perhaps 2 feet in diameter; very few in excess of that.

Mr. FREAR. Well, but the spruce here is of what dimension?

Mr. DONOVAN. Anywhere from 4 to 10 feet in diameter.

Mr. FREAR. Yes. What other experiences were given you of selective logging—have been told to you?

Mr. DONOVAN. Experiences in the southern part of this State under the Spruce Production Corporation, with which I am not personally familiar, and which I would prefer you would obtain through the other gentleman whose name I have given you.

Mr. FREAR. All you know is what you have heard?

Mr. DONOVAN. Yes.

Mr. FREAR. And this European situation was entirely different?

Mr. DONOVAN. Entirely different.

Mr. FREAR. So that it had not been determined, so far as any testimony before the committee has appeared yet, that it was practicable—although it might have been possible—but that it was practicable to have indulged in selective cutting.

Mr. DONOVAN. Exactly.

Mr. FREAR. It is not a question of economy alone, but it is a question of whether it is practicable, the ruination of forests, the question of fires, you say. There are other uses for the forests. You were furnishing here timber for shipbuilding purposes, and it was very important to get those, that is true, is it not?

Mr. DONOVAN. Certainly.

Mr. FREAR. And you could not afford to take the chance of destroying whole forests, either by fire or by this selective logging method which had never been attempted on any scale, except, as you say, in Europe, as far as you know. You could not attempt to do that and destroy the forests in this effort to get out the particular logs.

Mr. DONOVAN. The expense would be very great, but the refuse could be taken care of and the fire danger stopped. But it would cost a lot of money.

Mr. FREAR. It would not only cost a lot of money, Mr. Donovan, but it would require a tremendous force of men to engage in all these various activities, and was it possible to get them throughout this section—didn't it necessarily increase the force of men many times?

Mr. DONOVAN. No, sir.

Mr. FREAR. Now, let us see; you are engaged in selective logging, it naturally takes more men, does it not—and I am not a logger and I haven't any practical experience, and let me confess that to start with—it naturally takes more men to take out one tree from an acre than it would proportionately to take out a hundred.

Mr. DONOVAN. Yes, sir; very much.

Mr. FREAR. Now, the gradations between that are what would determine the number of men it would require in addition to the ordinary number of men. Next, when you take out the one tree or the number of trees, there is a large amount of wastage and a large amount of débris, I take it, brush and so on.

Mr. DONOVAN. Yes.

Mr. FREAR. Something that is beyond what is ordinarily taken there, isn't it.

Mr. DONOVAN. I agree.

Mr. FREAR. Now, that takes an additional number of men, proportionately, I mean, more than the usual number for the same amount of timber that is taken out?

Mr. DONOVAN. Yes.

Mr. FREAR. So it does take more men, and a considerable number of men in cases, than what it does for the ordinary method of logging to get out the same amount of logs?

Mr. DONOVAN. That is correct, sir.

Mr. FREAR. I think we agree. I do not think there can be any—it is difficult, of course, in time of war, when we are drafting men and taking them to the front as quickly as we can—excepting this small bunch of men who were here and who you say were inexperienced, many of them—it is hard to get those men when they are needed over there in the trenches, and we were putting them there as fast as we could. I happen to know about some of those, boys who had seen military life, had graduated from military institutes, and had been through, in one case that comes to my mind, five years of military training, who went in as a first lieutenant and fought all through Château Thierry and came out as a first lieutenant—it comes very close to me—and yet you see majors and colonels here who were 'way back 6,000 miles from the seat of danger. I am not criticizing the necessity for all this work, as a member of this committee, but I do wish to bring the other side of the picture before you people, which seems not to have been understood. It is easy to recommend distinguished-service medals for the men back here 6,000 miles from the front, but when these titles are given to young men who never saw actual service, the way they were given to a thousand officers up around here through the timber, don't you think, yourself, that there may have been a wrong or an exaggerated viewpoint of the importance of their labors compared to the men who were working in the shipyards or working any other place to help carry on the war?

Mr. DONOVAN. I think every citizen who is worth his salt agrees that we can never thank sufficiently the young men like those you mention, who risked their lives, and so many thousands of whom gave their lives in France; but I happen to know, Mr. Chairman, by personal conversation, intimate conversation with many of these men, that the young men who put on the uniform here and got commissions as second and first lieutenants, and the very few Regular Army officers who came here, they wished a thousand times to be on the fields of France and risking their lives rather than here, and came here and did their work because they were told that was their duty.

Mr. FREAR. That may be true in some cases.

Mr. DONOVAN. These men were not slackers.

Mr. FREAR. Oh, I do not claim they all were. There were many inexperienced men here, however, who were put on the job that knew nothing about it. They were drafted and sent here. There were other men who volunteered, were there not? Were there any relatives of the commanding officer, do you know?

Mr. DONOVAN. I do not know.

Mr. FREAR. You do not know anything about that?

Mr. DONOVAN. No. There may have been.

Mr. FREAR. Well, don't you know anything about it?

Mr. DONOVAN. I remember seeing a young officer—I do not remember his rank.

Mr. FREAR. A major?

Mr. DONOVAN. I do not remember his rank—that I think was a relative of Gen. Disque. I do not recall his name. I think he was from some point in the East.

Mr. FREAR. Well, it was just about as near to France as it was here at that time. He turned his head in the proper direction, but there was not a major's gold leaf that could have been placed upon his shoulders, probably, as easily there as here. Is that true?

Mr. DONOVAN. I do not know.

Mr. FREAR. You said you opposed the construction of the mill there as a lumberman, and others did, and I can see the reason why, because it was announced, wasn't it, that when the Siems-Carey-Kerbaugh contract was given for the construction of that mill it was with the expectation on their part that they were to remain in the lumbering business?

Mr. DONOVAN. I did not hear that announcement, but common sense told us that that would be the case.

Mr. FREAR. That is right, and didn't Mr. Ryan in his statement, in his letter, which has been read into the record several times, say that that was one of the elements that entered into the reasons why they were willing to take the contract?

Mr. DONOVAN. I do not know that.

Mr. FREAR. You do not know that?

Mr. DONOVAN. I do not know that.

Mr. FREAR. That is a natural tendency?

Mr. DONOVAN. Certainly.

Mr. FREAR. Now, these men under this peculiar contract that was given here were given not only the road at Government expense, given the exclusive right to reach into all this timber, naturally if they had this mill here they would be pretty nearly the whole thing afterwards?

Mr. DONOVAN. Well, they had that road until the end of the year 1919.

Mr. FREAR. 1918?

Mr. DONOVAN. 1919. They were to have their contract complete in December of this present year.

Mr. FREAR. I see; yes.

Mr. DONOVAN. After that they had no rights on the Government railway than as the Government saw fit to give them any future contracts.

Mr. FREAR. That is true; that is true. The Director of Aircraft could have canceled their contract the next day at any time, could he not?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Yes, sir; he had the sole control over that railroad, didn't he?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. That is right. What is the risk in towing of which you speak? Suppose they had taken it down to Clallam Bay, what would be the risk in towing from Clallam Bay?

Mr. DONOVAN. It is much less than I supposed, according to the testimony of yesterday.

Mr. FREAR. It was not a very great risk if they never lost a raft during their whole experience?

Mr. DONOVAN. Well, our own company has lost three with a much smaller experience, but that was very many years ago.

Mr. FREAR. The assumption is reasonable, in taking the comparative cases, that one company pay more particular attention to their method of rafting, which was the important factor. The conditions of weather and everything else must have been practically the same?

Mr. DONOVAN. I am not questioning in any way the testimony in regard to the towing.

Mr. FREAR. I think that was the testimony in regard to Merrill & Ring; that they had only lost 3 out of something like 400, and that was only a partial loss.

Mr. DONOVAN. I think you stated it was less than 1 per cent. I think those figures are correct.

Mr. FREAR. So that the loss in rafting was not very large. It could have been ascertained by anyone inquiring here. Any business man would naturally inquire the first thing, "What has been the experience of men engaged in this business?" Wouldn't you think so?

Mr. DONOVAN. Yes.

Mr. FREAR. We all would.

Mr. FREAR. You said about the railway out there—the Siems-Carey-Kerbaugh road—what do you estimate it is worth?

Mr. DONOVAN. I said that the reproduction cost, under present conditions, would probably not be much over half of what the actual money paid was, even though labor to-day is higher than it was then, because the element of rush is removed, and that road has been put in there prior to the development of the country, and we must consider how many years it will be before that country can be developed to the point where it will give traffic. Now, that would require investigation, and I have not made that investigation; but I don't believe the road will bring half what it cost.

Mr. FREAR. Half what it cost?

Mr. DONOVAN. No, sir.

Mr. FREAR. Your statement is that it could be reproduced for half what it cost?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. That would be in the neighborhood of \$60,000 a mile?

Mr. DONOVAN. Fifty-five.

Mr. FREAR. Or \$55,000 a mile. That is, you figure that at \$110,000?

Mr. DONOVAN. Those were the figures in the testimony.

Mr. FREAR. Isn't it more than that?

Mr. DONOVAN. I haven't checked that.

Mr. FREAR. And, of course, you are not figuring in that overhead expense, many other things that naturally can't be reached, all you are fixing is the things that are particular charges that have come through the Siems-Carey-Kerbaugh Corporation, I assume. For instance, by way of explanation: You have a Government agent, who is doing this work, who is looking after some branch of their work, and he is being paid by the Government, his charges didn't go in there.

Mr. DONOVAN. I don't know whether they did or not.

Mr. FREAR. Well, now, let's find out. There is a very important thing to find out, in determining the valuation of this road. Did you take any portion of the overhead charges down in Portland?

Mr. DONOVAN. That, sir, you will have to ask the comptroller at Portland.

Mr. FREAR. As a director of the company, I supposed you knew.

Mr. DONOVAN. Many of those details I do not know.

Mr. FREAR. Well, the assumption is, when I said sixty-five or sixty thousand dollars a mile, which is the average rate of valuation of the Milwaukee Road throughout this whole section, that I was not very far off. What do you think is the value of that road today?

Mr. DONOVAN. I have not investigated that country, excepting for my flying trip the two days last September, and I am not qualified to answer.

Mr. FREAR. What will you use that road for, unless you use it for a part of a transcontinental system or some big railway, tell me?

Mr. DONOVAN. To bring out the timber that is in that district.

Mr. FREAR. To bring out the timber that is in that district. Now, the testimony of Mr. Lightner was, yesterday, that from Clallam Bay a 14 or 15-mile road could be built, under ordinary circumstances, for about \$300,000, that would bring it out just as quickly, over a 15-mile haul.

Mr. DONOVAN. Mr. Lightner was mistaken in that.

Mr. FREAR. I may have misquoted him, but you give me the facts that show where the mistake exists.

Mr. DONOVAN. I only question as to the bringing it out in the same time.

Mr. FREAR. But he says here, when you once start it, he says, it keeps going and keeps moving constantly, just as fast as it can be brought out.

Mr. DONOVAN. I am not seeking to discredit Mr. Lightner. He is a personal friend of mine.

Mr. FREAR. I know you gentlemen are all personal friends and all reputable men, and I assume that, and your answers indicate it. But I say this, and this was the suggestion made by him: It makes no difference, excepting for the first two or three weeks, when you start it, after you once have got your rafts moving and carrying it out—his testimony is that carrying to the mills is made as rapid by water as by rail, because it is constantly moving, it only comes at the initial delay. Isn't that right—as fast as it can be cut, it is logged?

Mr. DONOVAN. It is a question of the character of the railway, when you are speaking of figures, as to whether you can move the trains as frequently and as rapidly; and Mr. Lightner stated that

he would save a dollar a thousand by way of his road over the Lake Crescent route. I think Mr. Lightner is mistaken, because I, myself, made a contract for hauling 200,000,000 feet of logs for a distance of 28 miles, on the Northern Pacific Railway, for a dollar per thousand as the gross charge. After the Government took over the railway, then the rate was raised to \$1.25, and it is at that rate they are being handled to-day.

Mr. FREAR. On what road?

Mr. DONOVAN. On the Northern Pacific.

Mr. FREAR. Oh, you have the Northern Pacific, which is a case, as you have just clearly demonstrated to the committee, entirely different from this. As you have said, there is no settlement here, it must come from a lumbering region, all the support for the road is from the logging facilities that are there, not from passenger traffic, not from miscellaneous freight traffic. So all the profits that come back to the man who buys this road must be from the logs that are hauled, and to be hauled on an average 40 miles; that is true, isn't it?

Mr. DONOVAN. Thirty-six.

Mr. FREAR. Well, but you don't get the logs at 36 miles?

Mr. DONOVAN. You get some—

Mr. FREAR. Thirty-six miles at Lake Pleasant.

Mr. DONOVAN. You get a very considerable logging area at 25 miles.

Mr. FREAR. Just a little on the side, but the big tract, for which this road was built, and where the hopes of Siems-Carey-Kerbaugh and other are concerned, is that tract beyond Lake Pleasant, isn't it?

Mr. DONOVAN. On the loop.

Mr. FREAR. On the loop.

Mr. DONOVAN. That is the main tract. That is the main—well, it is the main body of timber, at any rate.

Mr. FREAR. Now, as I said—and we will go back to it—we have got to haul those logs approximately 40 miles; if you don't right on the start, you will very soon. The man who buys that road is not buying it for six months or a year, he is buying it as an investment from which he is to make profits, and he has got to haul those logs, as a proposition to him, 40 miles to begin with, and maintain that road. Now, if it is true—I am willing, for the sake of putting a fair question, to put it in that form—if it is true that you can build a road from Clallam Bay 15 miles, and strike that timber, for \$250,000, as testified, in ordinary times, or even \$500,000, as he said, as an outside figure, during war times, isn't it a much better proposition for any man who wants to make an investment to step right out there and put the road up from Clallam Bay and begin shipping out.

Mr. DONOVAN. No, sir.

Mr. FREAR. Well, now, tell me why?

Mr. DONOVAN. The Clallam Bay road was finally to handle 100,000,000 feet a day—or 100,000,000 feet a year; your Lake Crescent road was finally to handle 500,000,000 feet a year.

Mr. FREAR. Yes.

Mr. DONOVAN. The area has been commonly spoken of as having 6,000,000,000 feet.

Mr. FREAR. Yes.

Mr. DONOVAN. If you can move that 6,000,000,000 feet five times as fast over one railroad as over the other, you are warranted in a very much larger investment in one road than in the other.

Mr. FREAR. But that is not the situation that confronts us to-day. I am asking you, as a practical man and as a business man, isn't it a cheaper proposition or a better proposition, for any man who wishes to get that timber out, to build a road up from Clallam Bay to-day, at \$500,000, which is nearly double the real cost of construction, and which is as good a road for all logging purposes as this, practically—this Kerbaugh road—instead of paying \$2,000,000 for this road, in order to haul cars 40 miles—I am cutting the \$4,000,000 in two, a your suggestion?

Mr. DONOVAN. The answer would be yes, with just one limitation.

Mr. FREAR. All right, give us the limitation, then.

Mr. DONOVAN. To make it just as good a road.

Mr. FREAR. Oh, no.

Mr. DONOVAN. That is what you said, sir.

Mr. FREAR. Oh, no, I said a road that was just as good for logging purposes. Of course, if you are going to use it for a transcontinental road, if you are going to use it for an extension of a transcontinental railway, I admit we will stand on common ground there as to the character of road that has been put up. I am speaking about getting these logs out and what that road is worth to you as a logger, to-day.

Mr. DONOVAN. If I understand, sir; the meaning of transcontinental, it does not apply to any road down on the peninsula.

Mr. FREAR. Well, it comes pretty nearly applying to the Milwaukee which was trying to get in there ahead of the Northern Pacific and the Northern Pacific was trying to get in ahead of the Milwaukee and they are known as transcontinental roads.

Mr. DONOVAN. No transcontinental trains will ever run on any of those tracks down there; they are on the wrong side of the sound.

Mr. FREAR. Well, you and I would have said, if we had lived in the time of Columbus, that they would not ever have airplanes.

Mr. DONOVAN. I quite agree.

Mr. FREAR. We never know what the future will be.

Mr. DONOVAN. It is the local traffic in that country, whether it is timber, coal, copper, agricultural products, or whatever it may be, seeking outlet at Port Angeles or Port Townsend and then transhipping across the sound, that gives value to those roads.

Mr. FREAR. Yes. If that is all, then there is no local traffic there, and there is none to be had in the immediate future, so that would confront you when you went to buy that road.

Mr. DONOVAN. Six billion feet of timber.

Mr. FREAR. Outside of the timber, I mean.

Mr. DONOVAN. Some of us have been mistaken as to what is under the ground. We have just opened a splendid coal mine at Bellingham that lots of us have been walking over for the past 30 years, and the men who have come in are going to make a fortune.

Mr. FREAR. But you haven't bought any of your timber land with the prospect of getting some coal mines, and these people over here

haven't, and that is a very untenable proposition in regard to this road—in regard to any coal mines that may be over there.

Mr. DONOVAN. They are not buying any railroad on account of coal mines, on the peninsula.

Mr. FREAR. That is right. They had a good highway to work from and you were very fair about that. I mean, the county road or State road.

Mr. DONOVAN. It is the Olympic Highway.

Mr. FREAR. So that it is just as easy to build from a half dozen places as any?

Mr. DONOVAN. Oh, that is—I don't claim to know about this route that Mr. Lightner testified about, or Mr. Chisholm, excepting by hearsay. I haven't been on the ground. I might change my mind if I went there, but to me the real reason for building by way of Lake Crescent is that they could get at it and build it quickly.

Mr. FREAR. In other words, it might have cost \$200,000 a mile if they hadn't had that county road?

Mr. DONOVAN. If it had been built in the same time. Time was everything.

Mr. FREAR. As Col. Disque, time was the essence?

Mr. DONOVAN. Yes, sir; that is correct. I am glad we two agree with Col. Disque on one thing.

Mr. FREAR. We might agree on others.

Mr. DONOVAN. I think we will before we are through.

Mr. FREAR. I realize you had some troubles out here with your labor situation—that is, the committee realizes that—and that you did some things to meet the situation, and everything is commendable along that line, as we all know. Some of those propositions were started before Gen. or Col. Disque got here, were they not, or do you know as to that?

Mr. DONOVAN. Which propositions?

Mr. FREAR. The propositions of getting the loggers together and getting this logging situation together with the men—that was not originated by Col. Disque—that had been brought up in the month of September, back before he got here, is that not true? And it had been considered and plans of organization were being worked out?

Mr. DONOVAN. We had organized, trying to meet the I. W. W. situation, in a protective league, which has been mentioned here, about which, if you will ask Maj. Grammer when he is on the stand, he can explain more fully, as he was the chairman, and we had mastered the worst phases of the situation by September.

Mr. FREAR. I understood that.

Mr. DONOVAN. August, two years ago, was the time when everything was on fire.

Mr. FREAR. I understood that. Yes, that is the situation that comes to us from reports that we have.

Mr. DONOVAN. Yes, that is correct.

Mr. FREAR. I mean written reports.

Mr. DONOVAN. We were not helpless.

Mr. FREAR. No, that is right; you were taking care of the situation here. That is, of course, it was well to improve it as well as you could, and did undoubtedly do some service toward that end. It is true, is it not—and it has no immediate bearing—that whenever

anything occurs, and we are all in a nervous tension, we naturally ascribe it to anything where public suspicion points, and, as I said, when nails appeared or saws were broken and they brought nails appeared, fires occurred, whether by accident or otherwise, the I. W. W. was a very convenient thing for our suspicions to lodge on, and seriously?

Mr. DONOVAN. Unfortunately, Mr. Chairman, there was so very much more of all those things at that time, that there could be no mistake; we were up against the real thing.

Mr. FREAR. You were up against the real thing. You spoke first about a fire there; you said you had a fire, caused by the I. W. W.

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Who was it that set the fire; did you find out?

Mr. DONOVAN. Do you care to go into details with that?

Mr. FREAR. Briefly. I mean, did you know it was set by the I. W. W.?

Mr. DONOVAN. Briefly, a Finlander, a good worker, getting the highest wages being paid at that time for the class of work, which was, I think, \$5.50 a day, was out with a small crew doing what we call "high rigging." There were six men in the crew. He went out into the brush. He came back in. At noon he called for his time. He went out there just a few minutes before noon. He got his time, his money, took his I. W. W. badge out of his pocket and pinned it on his hat and faced the foreman and went off down the track. An hour and a half later, the fire alarm was given, and the place where he had gone was all on fire. I called on the sheriff of Skagit County to arrest that man, and I said I would be responsible in every way, financially and otherwise, if a mistake had been made. I did that by telephone. The sheriff went up, looked around; meanwhile, the man was sliding away out of the country, and he didn't take any action. I felt that that fire was surely started by that man, and on purpose. I had only circumstantial evidence. That is only a sample, but you will find—

Mr. FREAR. That is the only fire that you had any evidence, in your own matters, as you said?

Mr. DONOVAN. We had plenty of fires; some of them very mysterious.

Mr. FREAR. Where you attributed them to the—

Mr. DONOVAN. That is the only one that in my own mind was certainly set on purpose.

Mr. FREAR. The donkey engine that was blown up?

Mr. DONOVAN. The donkey engine that was blown up was a case where the only way that we could attribute the explosion—the engine was inspected, it was comparatively new, and on the day in question it had had very little to do. This was another case of an engine on the "high rigging," which all loggers know means that the engine has very little to do. The engineer himself was a skilled man, of excellent reputation, and yet that engine blew up, and the only way we can account for it is that the valve—the water glass had been turned and that that showed water, which it undoubtedly did, when there was none in the boiler, not enough to keep it from exploding.

Mr. FREAR. For the sake of—

Mr. DONOVAN. I will admit that might have been accidental.

Mr. FREAR. For the sake of agreement, I am going to agree with you that it might have been done purposely, but men, corporations particularly, under the circumstances do have enmities on the part of the men, we all know that. The I. W. W. may be an incident to it, but that came long before the I. W. W. was organized, whether they carried badges or not, and that is something that has always existed and probably always will, to a greater or less extent.

Mr. DONOVAN. That is true.

Mr. FREAR. So that you had these two or three cases—and maybe you had more than your share—and maybe others. We know that the I. W. W. conditions did exist, because I have heard that men were found with both the I. W. W. badges and the four “L” badges on their person at the same time.

Mr. DONOVAN. That is possible. We do claim, however, if you will pardon me for saying it, to have good relations between our men and ourselves.

Mr. FREAR. Well, I think that is true, and I think your four “L” association did a good work. I believe this committee and the country fully appreciates that that is true.

Now, getting back to Col. Beckett and England, of course, if your railroad out here is worth \$60,000 a mile, as I understand is your estimate of it, if it sells for anything like that—

Mr. DONOVAN. Pardon me. You have to diminish that by the time that will be required to develop it up to that earning power. I don't know that it is worth \$60,000.

Mr. FREAR. Well, what would you say it is worth?

Mr. DONOVAN. I don't like to guess on a thing that I don't know about.

Mr. FREAR. All right, then. I don't know as it is worth while.

Mr. DONOVAN. No.

Mr. FREAR. I was going to say—

Mr. DONOVAN. Probably \$40,000.

Mr. FREAR. Well, if it is worth 10 per cent, and that is what it is put upon this estimate that has gone to England—if it is worth 10 per cent, it is worth \$400,000 altogether?

Mr. DONOVAN. Approximately.

Mr. FREAR. That is the basis of the settlement with England. If the Clallam Road, which you have got to go back to in order to get relations or a road from Pysht, if you choose, or any other place where you can run up there—if the Clallam or the Pysht road can be built for that amount and can haul the logs for a less amount than \$400,000, that is going to be the standard that is going to be put before the average man who wants to get into that tract.

Mr. DONOVAN. Yes, sir.

Mr. FREAR. So, for logging purposes, that road would then be worth practically the 10 per cent, according to the estimate?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Naturally, as an excellently built road, a strong, good road, it is worth more than that for a company that has ambitions to put it through to Grays Harbor, or anything of that kind, and sometime eventually, as we know with all these small roads, they get absorbed in the large roads. Sometime that road ought to have a large valuation to a company that could use it for general transportation purposes, as well as the logging. That is true?

Mr. DONOVAN. Yes; that is true—that statement—but if I were going to reach Grays Harbor, I would reach it from another way.

Mr. FREAR. Well, what direction would you take?

Mr. DONOVAN. I would come in from the main line of the Northern Pacific, from Gate City, the way the road comes in now.

Mr. FREAR. But you know they wanted to do it, but, as the testimony appears here, they understood the Milwaukee had received \$5,000,000, and that is the reason they were stalled on it?

Mr. DONOVAN. I don't know anything about that.

Mr. FREAR. Well, that was not the fact. I want to have the record show it was not the fact, but they understood that because of the Siems-Carey-Kerbaugh people going in there. But from Grays Harbor it is a good many miles up there, and they have the Quinault Reservation which they can go through before they reach the Pleasant Lake region.

Mr. DONOVAN. That is the great reserve timber district of this section?

Mr. FREAR. Yes; it is, and probably of the country.

Mr. DONOVAN. Yes, sir.

Mr. FREAR. That has not been reached. You refer to the whole western side of the peninsular?

Mr. DONOVAN. I refer to the whole Northwest. There is a lot down in Oregon. We will say Washington.

Mr. FREAR. I mean the large stand of timber that now remains is up in this section—

Mr. DONOVAN. In the State of Washington.

Mr. FREAR. And I think Grays Harbor has the largest mills in the country, haven't they?

Mr. DONOVAN. They have a lot of large mills.

Mr. FREAR. A very large lumbering center?

Mr. DONOVAN. Yes.

Mr. FREAR. Of course, if that road should sell for \$40,000 a mile, then we ought to make good to the countries with which we are making settlement of 10 per cent at \$10,000 a mile.

Mr. DONOVAN. In justice; yes. In law, whatever the department at Washington—whatever kind of a settlement they made. My testimony was this morning that I had explained, as clearly as I could, to Col. Beckett, then, what the situation was. I didn't know that he was going to make a settlement prior to our getting our salvage values. We have already, I believe, salvaged—sold about \$3,000,000 worth of material.

Mr. FREAR. There was a meeting, I believe, it appears in the testimony, and you have also mentioned it—a meeting of the loggers here in this city, where the question came up of taking over the Siems-Carey-Kerbaugh contract.

Mr. DONOVAN. Yes, sir.

Mr. FREAR. Well, you know—you were here yesterday—you know the character of the proposition as it was presented to the loggers at that time?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. It was a different proposition, entirely, from the Siems-Carey-Kerbaugh proposition, was it not?

Mr. DONOVAN. Yes, sir.

Mr. FREAR. And, consequently, it didn't look half as inviting to the man that was on the ground here as it would to the man who had practically a guarantee on the contract?

Mr. DONOVAN. No, sir; naturally it would not.

Mr. FREAR. That is true. And when these loggers met, and they are all men of high standing, I take it, no matter whether they were for or against the proposition, those things were considerations, the way the matter was presented to them in the telegram that came here from Portland.

Mr. DONOVAN. Certainly.

Mr. FREAR. Do you know whether there was a meeting held before the night on which these loggers held their meeting?

Mr. DONOVAN. I don't understand.

Mr. FREAR. The loggers had the meeting when you said the majority of them voted against taking over the Siems-Carey-Kerbaugh contract. Was there a meeting held in the Washington Hotel the night before?

Mr. DONOVAN. If there was, I don't remember it.

Mr. FREAR. Were you there the night before?

Mr. DONOVAN. I have no recollection of it. We were having a good many meetings, Mr. Frear, on a good many subjects.

Mr. FREAR. I was going to follow it up that Mr. Carey was there, and some others, but of course it is immaterial, so far as the committee is concerned, if you don't know. You stated that politics had absolutely nothing to do with the spruce. What did you mean by that? That was a question that was asked you.

Mr. DONOVAN. Simply that all the loggers and mill men of Puget Sound were trying to help the Government get what it wanted, and we didn't think of each other's politics at all.

Mr. FREAR. Has there ever been any such suggestion come from any source, so far as you know?

Mr. DONOVAN. No, sir.

Mr. FREAR. So that you don't understand why such a question should have been asked—if there was any politics that had anything to do with it—any more than politics in fighting the war, or politics of a man over in the trenches; business men were doing business and doing their best, patriotically, to carry on the war, I assume, here; you never stopped to find the politics of a man who was engaged in that, did you?

Mr. DONOVAN. I didn't know the politics of the men on the Spruce Production Board, excepting as they were personal acquaintances. I happened to know Maj. Griggs was a Democrat. I happened to know that Maj. Grammer was a Republican.

Mr. FREAR. Consequently, you were between two fires?

Mr. DONOVAN. No; I was on the Republican side.

Mr. FREAR. Then, like this committee, you were in the majority. And politics ought not to have interfered there any more than here; is that right?

Mr. DONOVAN. They didn't.

Mr. FREAR. That is all.

Mr. MAGEE. You understand, Mr. Donovan, that it was intended to do selective logging in this tract, by the Siems-Carey-Kerbaugh Corporation?

Mr. DONOVAN. Yes; that is what was decided on.

Mr. MAGEE. And to take out only the spruce?

Mr. DONOVAN. Yes.

Mr. MAGEE. Now, you mentioned riving operations; that including selective logging, did it?

Mr. DONOVAN. Yes; that was selective logging, but without proper transportation of the riving you would simply have the selective tree split up so that they could get it to proper transportation. When I say proper, I mean railway or water.

Mr. MAGEE. That is what I want to get at; split up the logs, say.

Mr. DONOVAN. Yes.

Mr. MAGEE. For my own information, how did they split it?

Mr. DONOVAN. In some cases they used powder on them, although that was avoided because of the injury to the fiber.

Mr. MAGEE. You mean, split it in two. Suppose you had a log of timber with a 4 or 5 foot base?

Mr. DONOVAN. They tried to split that in four pieces, in quarters.

Mr. MAGEE. And then take out a quarter at a time?

Mr. DONOVAN. Yes.

Mr. MAGEE. To the spur of the road?

Mr. DONOVAN. To the railway or some river bank where they could dump it.

Mr. MAGEE. At this time was any portion of this loop built around this tract—70-mile loop?

Mr. DONOVAN. No, sir; no rails were on it, but the grading was getting on. When you say at that time I presume you mean when I was over there in September.

Mr. MAGEE. I mean at the time the armistice was signed, or along about that time.

Mr. DONOVAN. That I do not know, sir.

Mr. MAGEE. What time were you there?

Mr. DONOVAN. I was there the last time I went in September.

Mr. MAGEE. There was not any road built then around the loop?

Mr. DONOVAN. The grading was going on.

Mr. MAGEE. How much of the grading had been done?

Mr. DONOVAN. I do not know. There was a large force of men at work.

Mr. MAGEE. You do not know what part of the grading had been completed?

Mr. DONOVAN. No, sir; I do not.

Mr. MAGEE. Do you know whether or not any spur tracks had been laid at that time?

Mr. DONOVAN. The track laying had just begun and had been laid out from Joyce, I think, 2 or 3 miles. They were just getting started in the last week of September on track laying.

Mr. MAGEE. I mean up around the timber there?

Mr. DONOVAN. No, sir; because all the rails had to be brought in from Joyce. They had to haul them in over the Milwaukee line.

Mr. MAGEE. So at that time there had been no track completed for operation, either in the loop or any spur roads into the tract itself?

Mr. DONOVAN. No, sir; there were no rails. The rails had not reached Lake Crescent at that time.

Mr. MAGEE. Now, on this road the only traffic which exists there, or the only material for traffic is timber, is it not?

Mr. DONOVAN. That is all that shows up at present.

Mr. MAGEE. There is no settlement through there of any consequence?

Mr. DONOVAN. No, sir.

Mr. MAGEE. There is a pretty heavy forest, is there not, in most places?

Mr. DONOVAN. Yes.

Mr. MAGEE. You said something about a special board being appointed to adjust the Siems-Carey, claim?

Mr. DONOVAN. Yes.

Mr. MAGEE. Do you know anything about the claims presented by the corporation, and how many of them there were?

Mr. DONOVAN. That board had to pass on all of the accounts of the Siems-Carey people. That work being cost plus was necessarily done under the inspection of the officers appointed by the Spruce Production Division and confirmed by the Spruce Production Corporation. It was a question of determining the accuracy of those accounts and whether they were all proper.

Mr. MAGEE. And on each of the contracts—the railroad contract and the spruce contract?

Mr. DONOVAN. Yes.

Mr. MAGEE. And this special board was appointed to take up the claims or proposed adjustment under each of those contracts?

Mr. DONOVAN. It was really to audit the accounts.

Mr. MAGEE. Has that board made a report to the corporation?

Mr. DONOVAN. Yes; it has.

Mr. MAGEE. Has the directors acted upon it?

Mr. DONOVAN. The final action has not been made. It is a question of completing the audit. The report you can obtain from the comptroller of the corporation in Portland.

Mr. MAGEE. No action has been taken by the directors upon it yet?

Mr. DONOVAN. It has not reached the point where any definite action is necessary.

Mr. MAGEE. Have you seen this special report?

Mr. DONOVAN. Yes, sir.

Mr. MAGEE. Did they report a lump sum due the Siems-Carey Co. on each contract?

Mr. DONOVAN. I would have to refresh my memory on that, sir.

Mr. MAGEE. I think that is all.

Mr. LEA. Is there any point on the peninsula where the terminal rates apply?

Mr. DONOVAN. I have understood they apply to Port Townsend and Port Angeles, but I do not know. I never had occasion to find out. They apply on this side of the sound to a number of different points along the sound.

Mr. LEA. Can you tell us about what would be the difference between a port that enjoys terminal rates and one that does not—what is the difference?

Mr. DONOVAN. The difference is that if a port does not enjoy terminal rates, the local—whatever may be fair from that port to the various points effected—will be added onto the terminal rates. There

was a time when our own city of Bellingham was in that condition and we had to pay the local from Seattle. But we no longer do that. We are now on the same basis.

Mr. LEA. You spoke about once having been opposed to building the mill. Did you change your opinion in reference to that or not?

Mr. DONOVAN. To this extent, that possibly as insurance, in view of the magnitude of the operations, it may have been justified. I think the other mill could have taken care of the logs.

Mr. LEA. I suppose you mean by insurance that by having a larger mill capacity available you are more assured of getting at your product; is that what you mean to convey?

Mr. DONOVAN. What I mean is that if we were in the place of the Siems-Carey people, who had undertaken to deliver 250,000,000 feet of spruce flitches before the end of this present year, I might have felt that I wanted a mill of my own; and they apparently felt that they wanted two mills—one at Lake Pleasant and one at Port Angeles. You see, if the armistice had not come—if the war had continued until the 1st of July, for instance, as nearly all of us thought it was sure to do up to 30 days before the armistice—then they did not want to depend entirely on outside mills. We felt that they were safe. We felt that we were willing to make cast-iron contracts such as that I offered in evidence this morning, guaranteeing the millmen of Puget Sound to handle their logs under Government inspection and produce the goods. But they thought differently. They went ahead, and they built the Port Angeles mill nearly to completion, and they got started on the Lake Pleasant mill. Do I make myself clear?

Mr. LEA. Yes; I understand your meaning, but I did not to begin with. Did you have anything to do with the establishment of the Toledo mill?

Mr. DONOVAN. No, sir.

Mr. LEA. Do you know what, if any, necessity existed for that mill.

Mr. DONOVAN. The outlet from that district was by a branch of the Southern Pacific Railway that comes from the Coast Range Mountains. The first intention was to bring the logs to Portland and have them sawd in the Portland mills. It was found, however, that this railroad, which was built about 25 or 30 years ago, had very small tunnels—smaller probably than any other in the country—and that it was not a feasible proposition to bring an economic load of logs through those tunnels; and that is the reason for building the Toledo mill.

Mr. LEA. About how far is that from Portland?

Mr. DONOVAN. I have never been down there, but it is perhaps 60 or 70 miles by rail.

Mr. LEA. That is all.

Mr. MAGEE. As I understand, you have several hundred mills functioning here in this State and Oregon?

Mr. DONOVAN. Yes; but of that number there were only about 35 on salt water that were capable of entering into contract with the Siems-Carey people—

Mr. MAGEE. I mean entering into contract with the Government?

Mr. DONOVAN. Yes.

Mr. MAGEE. These mills had their machinery and equipment?

Mr. DONOVAN. Yes.

Mr. MAGEE. And if the Government could not have made satisfactory arrangement with any or a sufficient number of these mills, the Government had the power to commandeer them and operate them itself.

Mr. DONOVAN. They could do just the same with any of those mills as has been suggested they might do with Mr. Blodgett.

Mr. MAGEE. Is there any doubt in your mind if there was not sufficient mills and machinery for the Government that they could not commandeer them and get out spruce enough to give practically every man in the light Army an airplane?

Mr. DONOVAN. The Government undoubtedly had power to take the mills?

Mr. MAGEE. It is generally conceded that the amount of spruce that goes into an airplane is from five hundred to a thousand feet?

Mr. DONOVAN. Exactly. But what has become of the 143,000,000 feet we sent away? That should have made 143,000,000 airplanes.

Mr. MAGEE. I do not know. But it has already appeared in evidence here, Mr. Donovan, that in a pursuit or fighting plane produced by American manufacturers the Army plane produced by American manufacturers that was in service overseas that up to the 2d of August, 1918, only some 213 GH-4's observation plane was over on the front, and by reason of the fact that the gasoline tank was placed between the pilot and the observer, without being protected, so that it was vulnerable to German incendiary bullets which if it pierced it would set the whole machine on fire, that they were called by Eddie Rickenbacher and other boys at the front, "Flaming coffins"; that those were the only machines of American manufacture that ever got on the front. And I wonder, as you do, what really became of all the spruce which you did produce. But the point I want to get at is whether in your opinion, there is any doubt in your mind that there were at the time sufficient mills functioning here and sufficient equipment in those mills to produce all the spruce that the Government could possibly need in the production of airplanes?

Mr. DONOVAN. I think we had mills sufficient. Now, if you will pardon me, I hope you will find out why this spruce did not get to the front. But please do not place the blame on us, as we did our very best.

Mr. MAGEE. Oh, no; I think you did your part. I am very much impressed with what you did, and I want to commend you and all of you who were interested in that for your patriotism and what you did do. I have not any doubt of that at all, and I do not think the committee has.

Mr. DONOVAN. Thank you, sir.

Mr. MAGEE. What you have suggested here is very pertinent and very important, and I hope we shall be able to get the information which you have suggested.

Mr. DONOVAN. I certainly hope you will.

Mr. MAGEE. That is all.

Mr. LEA. You realize though that all the lumber that was produced for both the Allies and our own airplanes were built of it, don't you?

Mr. DONOVAN. My understanding is that we supplied practically all the lumber that was needed for the Allies' planes—England, France, and Italy.

Mr. LEA. And the Allied airplane kept in the air, including over 5,000 that were furnished to America, were built of spruce principally produced here in Oregon and Washington?

Mr. DONOVAN. That is our understanding, although I do not know that is so.

Mr. LEA. And for over 13,000 airplanes built in the United States, you furnished the spruce?

Mr. DONOVAN. I do not know how many were built in the United States, but I know we did furnish the spruce.

Mr. FREAR. Do you want to be understood as testifying affirmatively to the questions that you have just been asked?

Mr. DONOVAN. I qualified in every case.

Mr. FREAR. I know you did. I know you endeavored to keep the record straight. The training planes were built largely of fir, were they not?

Mr. DONOVAN. Yes.

Mr. FREAR. And not spruce? The statement of Mr. Magee that there was not a single fighting plane at the front, you have understood that repeatedly, that that is true?

Mr. DONOVAN. I have been told that.

Mr. FREAR. The Secretary of War has so testified before this committee. And that there was not a bombing plane of American manufacture, and that we bought from the Allies or rented approximately 500 machines. There were 740, as I recollect, including the 213 of GH-4's, and those were observation planes.

Mr. DONOVAN. And yet I think, Mr. Chairman, that the Hughes committee showed by their testimony that at no time was there an actual delay in any American factory for lack of American wooden material. That is what we are proud of. They thought at one time that there was danger and that there was only a week's supply, but we did not fail them.

Mr. FREAR. The next question that I want to bring out—and let me say that Mr. Hughes was blocked on every side with the program, that there were delays of various kinds which were explained to the satisfaction of some people and not to the satisfaction of others. I am not prepared to go into that yet. But do you mean to say that there was no spruce or airplane material furnished by any other country than this country?

Mr. DONOVAN. No; I did not say that.

Mr. MAGEE. The English furnished a great number of planes before we got into the war.

Mr. DONOVAN. Sixty-five per cent of all we produced were sent to those Allied countries—England, France, and Italy.

Mr. FREAR. But those countries had been in the war four years, and you people were sending the stuff over there simply as a commercial proposition?

Mr. DONOVAN. Yes.

Mr. FREAR. We had been in for 20 months, from April, 1917, to November, 1918, and we can not cover up the fact and we can not close our eyes to the fact that when there was not a bombing plane or fighting plane and only 213 De Haviland 4's reached there, that there must have been some fault somewhere along the line, when one of those trees out there, or a dozen of those great trees would have supplied pretty nearly the De Haviland planes that you have.

Mr. DONOVAN. I am not excusing that at all. I am only trying to say that we furnished all that we were asked to furnish.

Mr. LEA. The only point I was making was that it is not a fair inference in reference to the spruce production to talk about 213 planes when the United States made over 16,000 from this lumber.

Mr. FREAR. Not all from this lumber, but from fir spruce.

Mr. LEA. I mean from the lumber on the coast.

Mr. FREAR. And from lumber from Maine and from the South and other places where fir is produced.

Mr. LEA. Yes. It don't amount to anything. I am not excusing the failure to make the planes, but it is no worse on the Pacific coast.

Mr. FREAR. These fir planes were training planes, elementary planes, of course, which were a good thing. But if a man had a wooden gun to train with in order to be a soldier, it would be all right, but when he came to fight he would have to have a fighting machine or a bombing machine. And those machines that we took were taken over from the Allies, who were sorely pressed themselves four years

Mr. DONOVAN. May I explain in regard to this Madden letter, the letter that was put in of the sergeant who complained to our company?

Mr. FREAR. Surely, any statement you have to make I would be glad to have.

Mr. DONOVAN. I telephoned our office after leaving here, and they were unable to find out about the \$2 charge because our office does not run Saturday afternoon. But I did find this from my partner, Mr. Bloedel; and that was that out of that 150 men we had at that mill and in that hotel there was a group of 25 who were the subject of consultation between the foreman of the mill and the officers and who were changed around repeatedly in an endeavor to find some place where they would fit. We finally concluded that they were "culls," in the language of Mr. Chisholm. We loggers agree on some things. And they were sent back to Vancouver Barracks, and this man Madden was one of them. I will look up the matter of the \$2, and I will try to send you a photograph of that hotel which was at one time the best in the city, in order to clear that up. It is not worth much time.

Mr. FREAR. Do you believe that the criticism lies against the officers down at Portland who had raised this man Madden to the position of a sergeant—from a private to a corporal, and then up to a sergeant—and made him what they supposed was a young soldier of some special attainments? Does the criticism lie here? Here is a noncommissioned officer, and it would take sometime to get up to that position if he is any good.

Mr. DONOVAN. I won't try to work that out.

Mr. FREAR. There were a couple of checks handed me about five minutes ago as I stepped out here by a soldier who said one of them represents his pay for two weeks from the Siems-Carey Co., and the other represents his pay for three days. You and I could not hardly be supposed to subsist at the Washington Hotel or any other first-class hotel on the returns given on those checks.

Mr. DONOVAN. I do not have to bear Siems-Carey troubles.

Mr. FREAR. One of these checks, dated October 1, 1918, runs to J. A. Mallory. And by the way, Mallory has just stated, and he

agreed to go on the stand, if necessary, but I told him it was not of particular importance.

Mr. LEA. I think that he is important as a witness if there is any significance to those checks.

Mr. FREAR. I do not know that there is. J. A. Mallory was a soldier at Whiskey Creek, working for the Siems-Carey Co., and the check shows 7 cents for the period from August 2, 1918, to August 21, 1918. That was the balance due him. Now he is fair enough to say this: I said, "How could that come about?" He said, "They could charge us anything they wanted to at their stores, and that was all the money handed to me, 7 cents, for practically two weeks' service." And the other, of course, was a little better. This check was for 65 cents for three days. These have not been cashed yet, as he is holding them as souvenirs.

Col. STEARNS. That report came to my office that prices were high at those stores, and I had an investigation made right away, and Maj. Sawyer made an investigation on that point and I have his report from the different organizations. We figured that they were very proper prices charged.

Mr. FREAR. One of these checks was dated three days before the signing of the armistice, and the other one was one month and three days before. The Siems-Carey Co., according to the president of this Spruce corporation, states that the prices charged by these people to soldiers who were working there were proper and reasonable.

Mr. LEA. This don't indicate what wages the soldier received, or what the other side of the balance was, and they are practically without significance, without further testimony, and I suggest that we let them go out unless we call the witness in regard to them.

Mr. FREAR. I am not going to put them in. But this committee is perfectly helpless to get hold of these records. Can you get the records, Col. Stearns, in regard to this, as to what purpose this was for?

Col. STEARNS. Yes.

Mr. FREAR. Get them for the committee so that we can use them when we get down to Portland.

Mr. LEA. Suppose we read the checks into the record.

Mr. FREAR. The check to Mallory is dated October 1, 1918, Camp Piedmont, No. 3, for 7 cents. The other one is dated November 8, 1918, for 65 cents, for services rendered from October 1 to October 3, 1918. This is a subcontractor—Palmer, Pierson & Woods, working on the railroad.

Mr. DONOVAN. May I express my regret that there should have been some misapprehension on my part in the middle of July which led to some exchange of compliments between you and myself, and to say that Mr. Fairbrother of the Providence Journal assured me this noon that you were entirely blameless in that matter, and he wished me to make that note to the committee.

Mr. FREAR. Let me say that Mr. Fairbrother is as helpless and innocent in regard to it as either you or I. But neither of us was in a position to place the responsibility. It is a third party, and he explained it all to me at the time.

Mr. DONOVAN. I wish to thank you and the other members of the committee for the opportunity you have given me and for the

fairness of the examination. One word further, and that is that whatever the testimony may be, or has been so far, from different gentlemen who are connected with the logging or lumber industry of the Northwest, I want to repeat and reiterate that every man here to the best of my knowledge and belief, the employers and employees, united and tried to do good work for the Government. We did not have any Huns in our mills or camps among the responsible men. The thing I mentioned a little while ago, that we produced in one year 143,000,000 feet of this airplane lumber, and a much greater amount of ship timber, and everything that the Government asked for from us it has gotten. And that is what I am proud of. We did work together, and we have met these conditions here and these needs. We did not pull back and it did not interfere with our product. I think you will find some places that while mistakes may have been made that they were honest mistakes. But we were trying to do the best we could for the United States and its people.

Mr. FREAR. If you want a statement of the situation as presented at the present time, I think it is fortunate that this committee has come here, if for no more than to give the loggers of the Northwest a chance to place their position fairly before the country. They did seek to help in every way they could. The testimony is that they went every time they could go and offered their services where they would be considered, but that they did not get the treatment to which they were entitled. I am not blaming you for it, but that is their statement and it is for the committee to weigh the value of it. Thank you, Mr. Donovan.

(Witness excused.)

TESTIMONY OF MR. H. A. LIGHTNER—Recalled.

Mr. FREAR. When you were before the committee yesterday. Mr. Lightner, I think you testified in regard to a matter that escaped me as to its force at that time, and I wanted to be sure that I had that right. You were talking about a logging railway from Clallam Bay to that spruce that has been under discussion near Pleasant Lake and you stated in substance, as I remember, that a railroad could have been built in ordinary times for getting out the logs for \$250,000, or at that time could have been built for half a million dollars. That is the figure that you used, is it not, substantially?

Mr. LIGHTNER. I figured that out, and we figured the line would cost \$25,000 a mile under ordinary conditions, and if we had to rush it that would make another \$25,000 added to it.

Mr. FREAR. If the line was to be built to-day, what would it cost?

Mr. LIGHTNER. I consider that line would cost between \$20,000 and \$25,000 to-day.

Mr. FREAR. If a line was built in there to Clallam Bay to take out this timber and the timber was brought down and logged at Clallam Bay or Pysht Creek, what would be the effect on the freight rates as compared to hauling it down this road that is now in existence, 40 miles—well, it would be 60 miles or more, to Port Angeles, would it not?

Mr. LIGHTNER. I just figured that out while Mr. Donovan was giving his testimony, and if I am wrong, I believe Mr. Sawyer is here in

the room and he will correct me. I think the road that is under discussion is 36 miles long.

Mr. FREAR. Yes; and you would have to get to Port Angeles.

Mr. LIGHTNER. I think it is 18 miles farther to Port Angeles. Mr. Sawyer is here and he can give that.

Mr. SAWYER. That is substantially right.

Mr. LIGHTNER. That makes 54 miles.

Mr. FREAR. That the logs would have to be hauled?

Mr. LIGHTNER. From Lake Pleasant to Port Angeles.

Mr. FREAR. What would be the difference in using your logging equipment or similar equipment at Clallam Bay for shipping in these logs to the mills on the Sound?

Mr. LIGHTNER. It is our honest judgment that we can haul logs from the so-called Lake Pleasant district and deliver them to the Seattle market for approximately a dollar less than by the other route.

Mr. FREAR. Than by this 56-mile route?

Mr. LIGHTNER. Yes; and we do not figure that road as a common carrier. If it was converted into a common carrier the cost would be greater.

Mr. FREAR. The rates made by the railroad would be greater?

Mr. LIGHTNER. Yes; as I understand it, the rates to-day from Joyce to Port Angeles, or from Twin to Port Angeles, is about \$1.87 a thousand.

Mr. FREAR. A dollar a thousand difference in the freight rate in favor of the Clallam Bay route?

Mr. LIGHTNER. Yes. We figure we can save a dollar a thousand by hauling it over the Hoko route; not only our timber, but the timber in the vicinity of Lake Pleasant.

Mr. FREAR. And that would be how much on, say, 500,000,000 feet of logs, which was the proposal for a year.

Mr. LIGHTNER. That would be \$500,000, would it not?

Mr. FREAR. That is \$500,000, as I understand it. That would be half a million dollars, which could be saved in a year on the proposal there. So that when he was calculating to get these logs, unless he had something else in view to remove that timber, he could do it far more economically, or it would be a better business proposition for him to go in from either Clallam Bay or the Pysht Creek route, than to haul over that 56 miles, in your judgment?

Mr. LIGHTNER. That is the way we feel, and if anybody would ask us to buy that timber as a logging proposition and a milling proposition, we would put it up to them that way.

Mr. FREAR. I thought I understood that yesterday, but I was just trying to get the thing clear so that there could not be any question about it. That is all, unless you have something further to add.

Mr. LIGHTNER. If I may have just a minute I would like to say that Mr. Donovan has made a remark about that railroad down the Hoko, and its capacity. I am just as friendly to Mr. Donovan as he is to me, and I think he is a fine man, but I believe he admitted that he had not been down in the Clallam country and he was somewhat surprised that we did not have losses, and I might state in that connection that if you will inquire you will find that the British munitions board towed logs in just the same way across Queen Char-

lotte Sound all last year, and that was spruce. One of the tugs they were using was a tug our company used which was hired by the munitions board. I talked to the captain about that and my understanding was that he lost two rafts, but he did not stop for anything.

Mr. FREAR. Where did that come from?

Mr. LIGHTNER. From Vancouver Island.

Mr. FREAR. What were they cutting spruce up there for?

Mr. LIGHTNER. For the British airplane stuff.

Mr. FREAR. They did get some airplane stuff out themselves?

Mr. LIGHTNER. Yes, sir. Now, my judgment is that we had planned that road to haul on a single track just as heavy a train as it was possible to haul on logging railroads, or any other kind of railroads hauling logs, and just as fast as they could haul them.

Mr. FREAR. In other words, do you mean to say that you could have got the logs out by that road that you have been speaking of as fast as logs could have been gotten out on this 56-mile line?

Mr. LIGHTNER. We planned it so that we could run our trains to the maximum speed that a logging train could be hauled.

Mr. FREAR. Well, it is true that the other locomotive runs faster upon the tracks such as they have there; that is, on these general tracks; but you had the shorter haul?

Mr. LIGHTNER. Yes, sir.

Mr. FREAR. A short haul of only 15 miles compared to the 56-mile haul.

Mr. LIGHTNER. Yes, sir.

Mr. FREAR. You could haul out as fast as they could on the other line.

Mr. LIGHTNER. I do not see why not.

Mr. FREAR. All you need is a few spurs to let one train pass another.

Mr. LIGHTNER. I will put it better than that. We can put a double track up there cheaper than the other road, I think.

Mr. FREAR. So you have not any fears but what you can get your timber out?

Mr. LIGHTNER. I have no fear of the railroad capacity at all.

Mr. FREAR. Or of competition, no matter whose hands it goes into.

Mr. LIGHTNER. No; I think that is the cheapest way to get that timber, and I think a good many timber owners would recommend that. I would like to say that I spent a year at Clallam Bay in a tent; I lived there just to become familiar with the conditions of the country. That was the first year we opened down there, and I have been down through that country, across Lake Crescent and down the straits practically every 15 or 20 days since that time. So I have studied those water conditions, and this is a matter of judgment.

Mr. FREAR. Did Col. Disque come down and discuss any of these matters with you or get your views?

Mr. LIGHTNER. To my knowledge there has never been an actual survey made up the Hoko River by any other people than the Milwaukee, and that was done, as far as I know—

Mr. FREAR. That was the Hoko around to Forks?

Mr. LIGHTNER. To Forks; yes.

Mr. FREAR. Around to Forks on that road, down to Grays Harbor; that was proposed?

Mr. LIGHTNER. I may be wrong in this statement, but in connection with the spruce production I do not think any road was ever surveyed up there by anyone other than ourselves.

Mr. FREAR. That appears upon the map we had of the Milwaukee road. What I was going to say was that you were here the closest operators to this tract of timber, the timber that was attracting the attention of people in New York and Washington and San Francisco, and, as the records show, it was stirring them up, that here was a tract of undeveloped timber and you were the closest operators, and you tried to see Col. Disque and he was told when he could see you, but you were never called in consultation, were you?

Mr. LIGHTNER. We missed him that day; we saw Mr. Hutchinson.

Mr. FREAR. Did you ever see Disque afterwards in regard to this business?

Mr. LIGHTNER. No, we never saw him; only in the condemnation matter; but to my knowledge we never talked to him directly about this. Mr. Donovan has raised a question. I hate to be personal in testimony of this kind, but I am giving him this in just the way that I would do with my own partner if I thought he was wrong about something; I would tell him. Mr. Donovan did not realize that on the Chicago, Milwaukee & St. Paul road at the Elwha River there is quite a big curve, and I do not believe that the Milwaukee road can haul over 30 cars of logs over that road.

Mr. FREAR. That is after you pass Joyce, going into Port Angeles.

Mr. LIGHTNER. Yes, sir. I will put it another way. The road that we would plan on can haul just as many logs as they can haul over that piece of road. Maybe Mr. Sawyer will be good enough to tell us about that. Maybe he knows what the maximum amount of logs is that is hauled up there.

Mr. SAWYER. Our calculations were based on 35-car trains.

Mr. LIGHTNER. My testimony yesterday was 30. I said I thought 30, but 35 cars was the average train of logs, and we could have hauled that as a maximum load over this road.

Mr. FREAR. Over this short road?

Mr. LIGHTNER. Yes.

Mr. FREAR. That would be 15 miles, compared to the 56 miles around by the Lake Pleasant, Lake Crescent, and Port Angeles road. You say that you and Mr. Donovan are passing compliments to each other and so on. Let me say that you forgot a very essential part when you spoke of curves. The members of this committee are particularly interested in knowing how they will affect a speeder. [Laughter.]

Mr. LIGHTNER. Our curves on our road were not serious; we planned them to run fast trains.

(Witness excused.)

TESTIMONY OF CAPT. WILLIAM O. McKAY.

The witness was sworn by Mr. FREAR.

Mr. MAGEE. Where do you reside, Captain?

Capt. McKAY. Seattle, Wash.

Mr. MAGEE. And how long have you resided here?

Capt. McKAY. Practically all my life, sir.

Mr. MAGEE. What has been your business?

Capt. McKAY. I have been an automobile man.

Mr. MAGEE. And you were in the service in the World War?

Capt. McKAY. Yes, sir.

Mr. MAGEE. When did you enter the service?

Capt. McKAY. May 12, 1917.

Mr. MAGEE. And how long were you in the service?

Capt. McKAY. I was in the service until the 14th day of May, 1919.

Mr. MAGEE. This last May. And you served overseas?

Capt. McKAY. Yes, sir.

Mr. MAGEE. How long?

Capt. McKAY. About nine months.

Mr. MAGEE. You were in the battles in the Argonne Forest?

Capt. McKAY. Yes, sir.

Mr. MAGEE. What division were you in?

Capt. McKAY. The Ninety-first Division, sir.

Mr. MAGEE. Your rank was captain?

Capt. McKAY. I was a lieutenant in the Argonne and I was made a captain afterwards.

Mr. MAGEE. Now, the committee would like to know just what airplane service and airplane protection your division had, from your own knowledge and observation in the Argonne forest in those battles?

Capt. McKAY. I was liaison officer of the Third Battalion, Three hundred and sixty-fourth Infantry, in the battle of the Argonne. My duties were to see that my particular battalion was connected up with the airplane. During the Argonne battle, which lasted about nine days—that is, my division was in the battle that long—there was one plane—I believe it was No. 10—and that was the only American plane I saw, and we saw very little of that. There were times when we would see plenty of German planes, and, as a matter of fact, before we went into the battle we had read in the Stars and Stripes all about what the airplanes were doing, especially the American aviators, and we expected some assistance from them, and we received very little. The Germans would come over and shoot us up practically whenever they felt like it. We would be dug in the side of a hill, and they would come and rake us out on one side and then the other with their machine guns.

Mr. MAGEE. From their airplanes?

Capt. McKAY. From their own airplanes; yes, sir.

Mr. MAGEE. Do you know what kind of planes they used; whether they were fighting planes or not?

Capt. McKAY. The Germans?

Mr. MAGEE. Yes; in doing this.

Capt. McKAY. I could not say whether they were fighting planes or not. I do know that No. 10 would patrol along the side and would come up at about 9 o'clock and go back at about 4 o'clock, and as soon as it would leave the German airplane would stay on duty an hour longer, and as soon as our plane would leave it would take a parting shot at us and go home, too.

Mr. FREAR. They were planes that carried guns and shot you up?

Capt. McKAY. Yes, sir.

Mr. MAGEE. How many men are there in a division?

Capt. McKAY. About 30,000. We then only had the Infantry in the Ninety-first Division.

Mr. MAGEE. Was that the only airplane that was connected in any way with the division?

Capt. McKAY. That is all I know about.

Mr. MAGEE. In all those days of battle?

Capt. McKAY. Yes.

Mr. MAGEE. That was the only airplane of any kind?

Capt. McKAY. That is the only American airplane I saw during the Battle of the Argonne.

Mr. MAGEE. What I want to know is if there was any other airplane than the one you have described connected with your division?

Capt. McKAY. That was the only one. In fact, one day we reported back that we were shot up by an American airplane, and it was the truth. An American airplane shot us up and we reported that back, and our commanding officers would hardly believe it, but they sent a French fighting plane out to pick that particular plane that was shooting us up. I believe they believed that a German was flying an American plane at that time.

Mr. MAGEE. There appears to be a propaganda, as nearly as I can get at it, started perhaps by a good many good people in this country, trying to impress upon the people of this country the wonderful efficiency of the United States in this aircraft production and in the aircraft service. Now, what we are interested in is to get just exactly, so far as we can get it, what protection from airplanes our boys had in their service overseas, and we want to get it from the boys here who were there and who know. As I understand it, this was the only airplane that was in any way connected with your division, of American manufacture or otherwise?

Capt. McKAY. It is the only one I know of. I do not know what was under the command of the general commanding the division. That is the only American airplane I saw.

Mr. MAGEE. Was there any other airplane connected with the work of your division; that is, to protect you in any way?

Capt. McKAY. Not that I saw.

Mr. MAGEE. The chairman asks me whether your division had losses. I hate to ask the question, because I know the losses were so heavy that they are more or less appalling.

Mr. FREAR. For your division the losses in the Argonne were great, but how much did your division suffer from casualties?

Capt. McKAY. How did they suffer?

Mr. FREAR. To what extent, in casualties, so far as you know?

Capt. McKAY. Well, I can tell you better as to one particular company. That company, Company L of the Three hundred and sixty-fourth Infantry, went into battle. When they went into battle I believe they had 134 men. They lost over half that number.

Mr. FREAR. What were those men being paid?

Capt. McKAY. They were paid the salary of privates, corporals, and sergeants.

Mr. FREAR. Yes. Now the enlisted man was getting how much a month?

Capt. MCKAY. He was getting about \$30 a month.

Mr. FREAR. And his commutation. They had no insurance against accidents?

Capt. MCKAY. No; they carried Government insurance.

Mr. FREAR. If they carried Government insurance, it was taken from their \$30.

Capt. MCKAY. Yes, sir.

Mr. FREAR. But they did not have anyone under a cost-plus contract to pay their accident insurance, as was paid on some of these contracts in the States of Oregon and Washington, did they?

Capt. MCKAY. No.

Mr. MAGEE. Now, Captain, tell the committee, from your own knowledge and observation, what the English Army had.

Capt. MCKAY. Well, in the Argonne we in the Infantry—and I speak for practically every man that has been under fire, and I think you will find every man will tell you the same—did not think very much of the American Air Service. I have seen a German come over, and just before we went into the Argonne I have seen a German come over and take a good look all around, and I do not know whether it was a French plane or an American plane, but whichever it was, he took a look at the German plane and beat it.

Things like that gave us no confidence in the American airplanes. I have told that to American aviators and they said they did not have the proper type of airplane; but when we got into Belgium we were under the British air service. I have seen the Germans start to come over. I do not know that they were German planes, except the only way a man could tell they were German airplanes was from the direction they came, and I have seen German planes start to come over and the British would immediately take the air and the Germans were driven back. We never were shot up once while I was in Belgium by a German plane.

Mr. MAGEE. When you had the protection of the British air service, you mean?

Capt. MCKAY. Yes, sir.

Mr. MAGEE. Now, is there any further fact in connection with the air service as a protection to troops overseas that you can give the committee?

Capt. MCKAY. I think I can give you a concrete example that will make you understand the situation better than anything else. I have seen a German come over during the battle of the Argonne and knock down three balloons and go back without anybody doing a thing to him.

Mr. MAGEE. There was nobody there to go after him?

Capt. MCKAY. Nobody went after him; if there was anybody there, he did not go after him.

Mr. MAGEE. Did you see anybody around there with an airplane to go after him?

Capt. MCKAY. No; I did not at that particular time.

Mr. MAGEE. Down in the Argonne were you next to the English?

Capt. MCKAY. No, sir; we had on the left of the 91st Division the 32d Division, and on the right was the 37th Division.

Mr. MAGEE. Do you know any men living here in Seattle who saw service overseas, who were aces, or took part in the air fighting there?

Capt. McKAY. I think there is a Lieut. Paul Coles. I do not know whether he was an ace or not.

Mr. MAGEE. Do you know what his address is?

Capt. McKAY. No, sir; I do not. He went to the University of Washington. There is also Lieut. Esterbrook. I believe he has been in the British service and the American service. I believe he is an ace.

Mr. MAGEE. Can you think of anyone else?

Capt. McKAY. I do not know of any more aviators, but I know a captain of infantry who was in my same battalion, in the city.

Mr. MAGEE. What is his name?

Capt. McKAY. Capt. Pandey.

Mr. MAGEE. Was there not some aviator residing here who was captured by the Germans?

Capt. McKAY. Yes; there is a Lieut. Archibald.

Mr. MAGEE. He resides here?

Capt. McKAY. Yes, sir.

Mr. MAGEE. I think that is all.

Mr. LEA. Did you see any French or British planes during this battle?

Capt. McKAY. The battle of the Argonne?

Mr. LEA. Yes.

Capt. McKAY. Yes, sir; I saw a Frenchman, as I said, one time.

Mr. LEA. What I meant was besides that French plane you mentioned.

Capt. McKAY. You see, the fighting planes are pretty high up and you can not tell what they are way up above unless they come down; but generally there would be a patrol of fighting planes around the Germans. The Germans always used them, and that is why we claim we did not have protection. The Germans always had a flight of five machines for observation, and that flight of five machines would come over every once in a while, and we did not see any American machines very close down. Then there would be a flight up higher, fighting up high, and we could not tell what they were unless they dropped.

Mr. LEA. You say you could not tell what nationality they belonged to, the machines up there?

Capt. McKAY. No, sir.

Mr. LEA. Did you see any up there at all outside of this one American and one French plane?

Capt. McKAY. Did we see machines up there?

Mr. LEA. Yes.

Capt. McKAY. Oh, yes; we saw them up there, ten or twenty thousand feet up.

Mr. LEA. It was the practice during the war for the Allies to assign their air service to different sections, was it not, indiscriminately; that is, the English might defend Americans or the French might come to the assistance of the Americans?

Capt. McKAY. I do not know very much about that.

Mr. LEA. Do you know what the relative number of machines of the Central Empires was as contrasted with the Allies?

Capt. McKAY. I believe I have seen figures, and I think we had, or were supposed to have, a great many more at the end of the war.

Mr. LEA. The Allies were supposed to have more than the Germans?

Capt. McKAY. Yes; I have been told by aviators that Germany always concentrated her airplanes where they were needed.

Mr. LEA. About how far across there was the front, do you know, the battle front at that time, the complete western front?

Capt. McKAY. The complete western front—that push of ours, you see; I could not tell you exactly, it was over—I believe that push was over a 25-mile front at that particular place.

Mr. LEA. What I meant was the complete front across from the sea to Switzerland.

Capt. McKAY. I have heard it, but I have forgotten.

Mr. LEA. I just want to get a general idea.

Capt. McKAY. Well, it would be a guess on my part.

Mr. LEA. I believe that is all.

Mr. FREAR. It would be a pretty hard circumstance, wouldn't it, Captain, for one American aviator to cover 25 miles of territory on a battle front when the troops were engaged and do the service that would be expected of airplanes?

Capt. McKAY. Yes, sir. This aviator that I speak of, this plane that I speak of, covered a kilometer front which was assigned to our division, a kilometer of front.

Mr. FREAR. What is the meaning of the word "kilometer"?

Capt. McKAY. It is five-eighths of a mile.

Mr. FREAR. He stayed in that section—sector?

Capt. McKAY. Yes; but his was an observation plane, you see.

Mr. FREAR. It was not a fighting plane?

Capt. McKAY. No; I think his duties were not to fight, because each nation—we had a man traveling up and back of our lines and the Germans had, too. These machines would not fight, but as I say, the Germans also had a flight of about five machines that would protect this other German plane, and it would allow this German plane to harass us and would keep other planes away, and every once in a while one of that flight of five would come over and pick off one of our balloons and attack the Infantry.

Mr. FREAR. How low would they fly; that is, when they were using their machine guns?

Capt. McKAY. How high?

Mr. FREAR. Yes, ordinarily?

Capt. McKAY. Oh, they would come down ordinarily about as low as this roof.

Mr. FREAR. As near as that?

Capt. McKAY. Yes, sir; and sometimes they looked nearer.

Mr. FREAR. Is that so. And they were using their machine guns on the soldiers?

Capt. McKAY. Yes, sir.

Mr. FREAR. That creates what kind of a sensation in the man who is helpless; I mean on the nerves of the soldiers, on the morale of the soldiers?

Capt. McKAY. Well, it is pretty bad at first, but after you go three days with very little to eat, with a can of tomatoes and a little water, and you do not get any sleep, and you are in shell fire, you do not mind it very much.

Mr. FREAR. After that kind of a time, after you had been through all those hardships, you would not have minded it so much if you were put down in one of Merrill & Ring's logging camps in the awful conditions that have been related here?

Capt. McKAY. No, sir. I want to make you gentlemen understand that the officers always had the best of it, they got the best of everything. I was fortunate enough to be an officer, but our men suffered an awful lot of hardships and we fought with poor equipment.

Mr. FREAR. We knew some facts about the conditions over there, although we are not so familiar with the situation on the coast here.

Mr. MAGEE. The fact is, that your division had no airplane protection service whatever?

Capt. McKAY. We certainly did not have enough, sir. We lost men because we did not have it.

Mr. MAGEE. Did you have any?

Capt. McKAY. We had very little. All that we had was this observation plane that protected us.

Mr. MAGEE. You did not have a fighting plane to protect you?

Capt. McKAY. No, sir.

Mr. MAGEE. Nor any plane to—

Capt. McKAY. I never saw an American fighting plane go down after the Germans and shoot them up in the trenches like the Germans would shoot us up, and we were pretty close to the Germans and I happened to be in the front line all the six days of the Argonne battle.

Mr. MAGEE. And there was no plane in your division to fight or chase the German planes when they came over to shoot you up?

Capt. McKAY. No, sir.

Mr. MAGEE. That is all.

Mr. LEA. What length of time did you suffer this loss—how many days?

Capt. McKAY. Well, we went over the top the morning of the 26th and we relieved—the 26th of September, and we were relieved the 4th day of October.

Mr. LEA. It was the fighting through the forest during that time, wasn't it?

Capt. McKAY. Yes, sir. Probably you recognize the towns of Verry, Cheppy, Ecclesfontaine, and Mont Foncon was on our fight.

Mr. LEA. You were constantly in battle from the 26th of September until the 4th of October?

Capt. McKAY. Yes, sir.

Mr. LEA. That is all.

Witness excused.

(Thereupon at 4.30 p. m. the committee adjourned until Tuesday, August 26, 1919, at 10 o'clock a. m.)

SUBCOMMITTEE NO. 1 (AVIATION)
OF THE SELECT COMMITTEE ON EXPENDITURES
IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES,
SEATTLE, WASH., August 26, 1919.

The subcommittee met at 10 o'clock a. m. pursuant to adjournment, Hon. James A. Frear (chairman) presiding.

Also present, Hon. Walter W. Magee and Clarence F. Lea.

Mr. FREAR. Mr. Magee, I believe you wished to make a brief statement?

Mr. MAGEE. I would just like to have it noted in the record that in one of the Sunday morning papers there appeared a statement that while I was questioning Capt. McKay I declared that a propaganda campaign was now under way to convince the people of the United States that American aviators accomplished great things in France. Now, I think an erroneous conclusion was inferred from what I said, because I certainly did not wish to say anything from which any inference could be drawn disparagingly to American aviators in France.

We all know that the American aviators we had there were among the best in the world, and that the names of many of them will be remembered and revered as long as time shall endure. What I was trying to find out, and I thought I made myself absolutely clear in questioning Capt. McKay, was whether our boys in service overseas had sufficient and adequate airplane protection, and I will have noted in the record exactly what I did say, to wit, found on page 2014 of the typewritten record of the hearings:

Mr. MAGEE. There appears to be a propaganda, as nearly as I can get at it, started perhaps by a good many good people in this country, trying to impress upon the people of this country the wonderful efficiency of the United States in this aircraft production and in the aircraft service. Now, what we are interested in is to get just exactly, so far as we can get it, what protection from airplanes our boys had in their service overseas, and we want to get it from the boys here who were there and who know.

Mr. FREAR. It ought to appear in the record somewhere in some form that this committee and all the members have taken occasion to go over the railroad built by the Siems-Carey-Kerbaugh Co., and in addition to show what information the committee now has about existing conditions on the peninsula, in order to indicate their individual knowledge regarding matters as disclosed by the testimony.

Briefly stated, on Monday a week ago, August 18, this committee went to Port Angeles and took a trip along the line of the Siems-Carey-Kerbaugh Co., from Crescent Lake to Lake Pleasant. On the same day the committee drove in automobiles from Lake Pleasant, which is in the neighborhood of the timber tract which has been mentioned in evidence on several occasions, and went down to Clallam Bay, which it has been testified is 14 or 15 miles, or would be, by railway from the timber to Clallam Bay. We then returned to the highway which leads to Pleasant Lake and then drove down to Pysht River and its entrance into the straits. We then drove back to Crescent Lake and took the speeder the next morning down to the junction of the Milwaukee, about 18 miles west of Port Angeles, and from there went west on the Milwaukee road as far as to Twin, but did not examine the remaining 5 or 6 miles which lead to Deep Creek, and then returned to Port Angeles.

In other words, the committee has been over all of the line of the Siems-Carey-Kerbaugh road and has been over all the line of the Milwaukee road excepting 5 or 6 miles from Twin to Deep Creek. The committee has also driven down to Clallam Bay and also down Pysht Creek to the straits. We did not return from the Milwaukee road from Joyce to Port Angeles, Mr. Magee reminds me; but that is an old section of the railroad about 14 miles in length, as has been testified.

TESTIMONY OF MR. WILLIAM C. BUTLER.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Where do you live, Mr. Butler?

Mr. BUTLER. Everett, Wash.

Mr. FREAR. What position, if any, do you occupy in a business way?

Mr. BUTLER. I have a variety of business activities.

Mr. FREAR. Just briefly indicate. You are president of the First National Bank?

Mr. BUTLER. Yes; president of the First National Bank, treasurer of the Lyman Timber Co., managing director of the Sultan Railway & Timber Co., treasurer of the Puget Sound & Baker Railroad Co. I guess that will do.

Mr. FREAR. Well, go on; I have a reason for asking these things.

Mr. BUTLER. I am connected with a number of shingle mills and fish canneries.

Mr. FREAR. And logging industries.

Mr. BUTLER. And logging industries.

Mr. FREAR. What was your position in connection with this logging organization that has been testified to by Mr. Chinn and others?

Mr. BUTLER. I was on the committee having the matter in charge for the Loggers' Information Bureau.

Mr. FREAR. You are related to Dr. Nicholas Murray Butler?

Mr. BUTLER. Yes, sir.

Mr. FREAR. What is the relationship?

Mr. BUTLER. Brother.

Mr. FREAR. Brother of the president of Columbia University?

Mr. BUTLER. Yes, sir.

Mr. FREAR. How long have you lived here, Mr. Butler?

Mr. BUTLER. Since 1892.

Mr. FREAR. At Everett?

Mr. BUTLER. At Everett since 1893.

Mr. FREAR. And you have been engaged in these various industries how long?

Mr. BUTLER. In the logging business since 1895.*

Mr. FREAR. You are familiar with the general conditions regarding the logging business, are you?

Mr. BUTLER. Yes, sir.

Mr. FREAR. And were from the beginning of the war to the signing of the armistice, in relation to the production of spruce for Government purposes?

Mr. BUTLER. I think so; yes, sir.

Mr. FREAR. Will you briefly relate to the committee the circumstances that led up to the aircraft organization or corporation which undertook, without profit to itself, to log spruce on the Blodgett tract in Oregon, and state to us briefly all the conditions surrounding that agreement and what was accomplished, if anything, and the reasons that caused your company to undertake that work? This is the matter that was testified to by Mr. Frost, who was the general manager, as he stated to the committee.

Mr. BUTLER. I was interested as a member of the Loggers' Information Bureau, the attention of which had been directed by some-

body, presumably perhaps the Spruce Production Division, of the necessity of finding some one to log the Blodgett tract.

Mr. FREAR. The Blodgett tract is situated in Oregon about 24 or 25 miles south of Yaquina Bay.

Mr. BUTLER. Yes, sir.

Mr. FREAR. Near the ocean.

Mr. BUTLER. Yes. It was first called to our attention as a matter of profit. After some consideration, the members of the Loggers' Information Bureau thought the opportunity was one for patriotic service, so, after some of our number had been on the ground we decided to undertake the work without profit. To that end the corporation was organized known as the Aircraft Lumber Co.

Mr. FREAR. Just mention several gentlemen connected with it, to indicate the character of those who formed the corporation.

Mr. BUTLER. Including representatives of 20 so-called independent loggers such as the Thomas Irvine Lumber Co., the Sultan Railway & Timber Co., the Merrill & Ring Logging Co., and others of that character.

Mr. FREAR. The Merrill & Ring Lumber Co. is one of the largest that operates in that country?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Whereabouts are they located?

Mr. BUTLER. They are operating in King County, Wash. King County is the county in which Seattle is located. That organization was formed with a capital stock of \$100,000. It was incorporated and officers were elected, and its directors interviewed the Spruce Production Corporation, and as a result—

Mr. FREAR. Just a moment. Whom did they interview?

Mr. BUTLER. We had hoped to see Col. Disque. We assumed when we were leaving for Portland that we were to meet Col. Disque, but when we arrived he was absent.

Mr. FREAR. Col. Disque was at that time president of the corporation at Portland?

Mr. BUTLER. Yes, sir. And we met a number of officers, Maj. Hitchcock and Maj. Eastman and half a dozen others whose names I do not recall. As a result there was finally executed on the 10th day of September, or finally agreed to on the 10th day of September, a contract, a copy of which I have before me.

Mr. FREAR. That was September, 1918?

Mr. BUTLER. The 10th day of September, 1918; yes, sir.

Mr. FREAR. Just give briefly the terms of the contract, not including all the details of the contract.

Mr. BUTLER. The logging was to be selective, the operator, or the Aircraft Lumber Co., was to have full charge of all logging operations, including the operation of the Alsea Southern Railroad.

Mr. FREAR. That was the road that was put through from the Yaquina to this tract in order to put out the logs?

Mr. BUTLER. That was the sole purpose of that road.

Mr. FREAR. It was built by the Warren Spruce Co.

Mr. BUTLER. Built by the Warren Spruce Co., and under construction at the time this contract was being negotiated. Necessarily operations under this contract had to be delayed until this railroad was fully completed., in view of the fact that that section was prac-

tically without usable highways, so that it would be impossible to move any machinery in or out without a railroad. Going on about the contract, the logging was to be under our specific direction. We were to operate the railroad and we should exercise due diligence, etc. We were to plan to put in 10,000,000 feet of spruce a day, beginning with the month of April, 1919. It must be understood, of course, that we were to begin to log on the 1st of November, but this input was to be reached. We were under obligations to reach it by the 1st of April. We were in a position to provide a very substantial quantity of the necessary equipment, including donkey engines, logging locomotives, and things of that kind, and were furnishing such equipment.

Mr. LEA. When you said 10,000,000 feet a day you meant 10,000,000 a month?

Mr. BUTLER. Ten million feet a month, I should have said.

Mr. FREAR. That briefly covers the principal points in the contract, does it, in your judgment?

Mr. BUTLER. We were to receive reimbursement of our costs, plus the sum of \$20.

Mr. FREAR. For the whole work?

Mr. BUTLER. For the whole contract.

Mr. FREAR. Let me ask you, up to that time had you any knowledge or any experience in the matter of selective logging, or did any of your company composed of 20 logging or contract companies have any knowledge of selective logging at that time?

Mr. BUTLER. None whatever, so far as I am aware. To indicate our position about the necessities of the case of selective logging operations, Mr. Frost, as manager of the company, figured that to be safe it would be necessary for him to have at the outset 21 logging units. That would figure out on the basis of 10,000,000 a month about 500,000 feet of input a month, and in a 25-day month that would figure about 20,000 feet per donkey to the day. We had hoped, of course, that it would not take all that, but we felt our responsibilities in this matter and we were anxious to make a record, so we provided what we thought would be ample machinery.

Mr. FREAR. Under your contract there was no guaranty as to the amount of logs that would be brought out?

Mr. BUTLER. Absolutely no guaranty at all. Apparently they were perfectly willing to depend on the fact that we represented loggers' organizations that had long logging experience and that we would do the best we could.

Mr. FREAR. Did you know of any company that ever had guaranteed under this selective logging contract that they would be able to fulfill the terms?

Mr. BUTLER. I never knew of any company that had a selective logging contract before.

Mr. FREAR. So that you knew nothing about any terms as to a guaranty or otherwise?

Mr. BUTLER. There was no guaranty under this contract of any kind, sort, or description. I want to add here that when our employees found out that the companies had taken this contract without profit we had numberless requests for assignments of our men to go down there and be allowed to work on that job. It was a very popular move with our employees, who wanted to push it along.

Mr. FREAR. You had no difficulty in getting labor for your work?

Mr. BUTLER. I think our labor would have gone there en masse if we had encouraged it.

Mr. FREAR. Because of the spirit that actuated all of the people in connection with it?

Mr. BUTLER. Yes, sir.

Mr. FREAR. What was accomplished under that agreement?

Mr. BUTLER. The Alsea Southern Railroad was to have been finished on the 1st of October, we understood; at the time of the signing of the armistice it was still uncompleted, and we had nine logging units loaded on the cars waiting to go in. We had our general organization complete, the spurs, the surveys of the logging spurs had been completed. We had at the time the armistice was signed places for the immediate operation of seven sides.

Mr. FREAR. Spur tracks?

Mr. BUTLER. Spur tracks. The tracks were not in; the spar trees had been selected and prepared, and we had a great quantity of movable bunk houses and everything ready to get right in the minute the rails were down into the tract.

Mr. FREAR. How many logs had been cut at that time?

Mr. BUTLER. The record shows that we had felled and bucked about 4,000,000 feet.

Mr. FREAR. Before the railroad was completed?

Mr. BUTLER. Before the railroad was completed.

Mr. FREAR. What was the expense to your people in getting those 4,000,000 feet and putting through these spur tracks and all; that is, this arrangement so far as your company went?

Mr. BUTLER. Our manager, Mr. Frost, advised the executive committee that there had been no question but what he could have been logging within 30 days after the railroad was completed, and in our settlement with the Government, which is now concluded, the entire disbursement for all that work, including the money which we put into it which has been returned and the disbursements made on our account, represented \$90,000.

Mr. FREAR. That covered all expenses?

Mr. BUTLER. That is what I understood, covered everything in connection with our operation.

Mr. FREAR. How many men did you have in there?

Mr. BUTLER. The number of men we had in there was about 25 or 40, because we could not get our camps in, our portable houses could not go in until they went on the railroad, and such men as we had were living in the Warren camps.

Mr. FREAR. But you had cut 4,000,000 feet of spruce?

Mr. BUTLER. Felled and bucked that much.

Mr. FREAR. That was on a somewhat different contract from the Siems-Carey contract, where something over \$4,000,000 had been advanced for their operations on their spruce contract?

Mr. BUTLER. I should think so; yes, sir.

Mr. FREAR. All right. Just go on and tell us. That is the conclusion as to the aircraft?

Mr. BUTLER. That is the end of the aircraft.

Mr. FREAR. When the armistice was signed, of course the work was discontinued and the machinery that had been leased was returned?

Mr. BUTLER. And financial adjustments were made and the incident was closed.

Mr. FREAR. Will you take up now, briefly, the relations of the loggers, generally speaking, with this Spruce Division, which existed prior to the Spruce Corporation, and what efforts, if any, you put forth to furnish spruce to the Government for airplane purposes?

Mr. BUTLER. Immediately it was known that the Government was in need of spruce for its airplane program, and knowing that this country possessed substantial resources and magnificent stands of spruce, the entire industry to the last man became interested and instituted inquiries and tried to find out what could be done.

Mr. FREAR. Will you permit an interruption at that point? You stated that the contract for the aircraft corporation was entered into with the Government in September, 1918?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Our entrance into the war began in April, 1917, a year and six months or thereabouts before?

Mr. BUTLER. Yes, sir. The fact of that date is as humiliating to the industry as it must be to the country at large.

Mr. FREAR. That was 18 months before. Just bring down, if you will, any explanation about what part you people were endeavoring to perform in helping the production of spruce?

Mr. BUTLER. As early as the summer of 1917 the West Coast Lumbermen, I understand, at their convention or at one of their meetings, voiced the interest of the industry and tendered their good offices and assistance in the development of any program that the Government might develop. I personally attended the meeting in the fall of 1917, at which the logging industry of the State was represented almost to the last company and at the meeting I met, I think, perhaps Mr. Grammer, who was chairman; but we met Mr. Hawkins, who was a representative of the Government's efforts in spruce production at that time.

Mr. FREAR. Mr. Hawkins from Portland?

Mr. BUTLER. From Portland, and with him was, I understood, Lieut. Col. Disque. The lieutenant colonel made some remarks and the industry was appealed to, and we all expressed our interest and desire to help. We had a roll call asking each man to speak for his company and state how much his company was producing and how much additional it could produce in case the Government furnished additional machinery if necessary. It all went as cheerfully as a wedding bell.

Mr. FREAR. At what time was this, and where?

Mr. BUTLER. That was the meeting we had in the business room at the Washington Hotel in Seattle. The date of it I do not recall; it must have been November or December, perhaps.

Mr. FREAR. Of 1917?

Mr. BUTLER. Of 1917.

Mr. FREAR. That was the first time any organized effort on the part of the Government had been made, apparently?

Mr. BUTLER. That was the first time. Now, I am personally familiar with some negotiations which were had by some of the individual loggers and know of one incident which I think this committee should be advised of. One of our most representative railroad men, in conjunction with the Nestor of loggers, Mr. Cobb—

Mr. FREAR. The gentleman who was testified about the other day?

Mr. BUTLER. Mr. Donovan referred to him in his testimony the other day. They interested themselves and spent considerable time and some money investigating this matter of the immediate production of spruce, because it was beginning to get on the nerves of the industry that there was not anything being done. Their efforts were more or less voluntary. They located this particular body of spruce which was afterwards developed by this Siems-Carey Co.—they did not locate it, but came in contact with it.

Mr. FREAR. This timber near Lake Pleasant?

Mr. BUTLER. Yes, and both of these experienced gentlemen, after some investigation and discussion, including two fruitless trips to Portland to see Lieut. Col. Disque, finally wrote a letter which was dated on the 17th day of February, 1918, making, as I understand it, a distinct proposal to furnish 80,000 feet of spruce cants per day at a price which they estimated at \$85 a thousand.

Mr. FREAR. 80,000 at \$85 a thousand?

Mr. BUTLER. That is my recollection.

Mr. FREAR. Just briefly state what are these spruce camps?

Mr. BUTLER. This particular operation, I believe, involved the riving, splitting of a log, and bringing it out in pieces, in any weight that could be handled.

Mr. FREAR. That is a very difficult operation, is it not? That is, I mean it takes a great deal of labor?

Mr. BUTLER. It is practically all labor, of course.

Mr. FREAR. What have you to say as to the size of such a contract, or such an agreement?

Mr. BUTLER. It was considerably more than the ordinary logging proposition, but, coming from these gentlemen, indicated that they were going into it in an active way. It was not to represent their individual efforts, they were going to have an organization and attempt to do it in a large way. For the transportation, as I understand it, they figured on the Government furnishing the trucks. It was to be trucked out. This letter to which I refer, dated the 17th day of February, 1918, was addressed to Col. Disque, or to Col. Disque's office at Portland, and is still unacknowledged.

Mr. FREAR. Have you the letter there?

Mr. BUTLER. I have not the letter here, but I would like the privilege of furnishing a copy of the letter. The original is doubtless in the files in Portland.

Mr. FREAR. Can you give me just briefly the substance of it?

Mr. BUTLER. Well, the substance of the letter was that they proposed to furnish 80,000 feet a day of these cants at a price estimated at \$85 a thousand, delivery to begin within 40 days.

Mr. FREAR. Who were the parties?

Mr. BUTLER. Mr. Charles Cobb and Mr. J. C. MacFee.

Mr. FREAR. What occurred?

Mr. BUTLER. The letter was sent to Portland, and, after these gentlemen had made fruitless efforts—had made two trips to Portland specifically to see Col. Disque, and not being able to find him, they sent him this letter and that terminated the incident. It was closed because the letter was never acknowledged or replied to.

Mr. FREAR. That is to say, so far as you know, they did everything they could in order to bring this to the attention of the Government officials?

Mr. BUTLER. Mr. Cobb told me personally that he came to the conclusion that he did not think Col. Disque wanted any spruce, and he packed his grip and went to southern California, and dropped the matter.

Mr. FREAR. Now, what occurred subsequently in regard to the movements of the loggers as a body in their efforts to get in touch with the officials down there at Portland, and to help in procuring spruce logs for airplane purposes?

Mr. BUTLER. The loggers on Puget Sound have for some time maintained what they call the Loggers' Information Bureau. With that bureau the so-called independent loggers are pretty generally affiliated. What I mean by an independent logger is, as has been brought out previously in the testimony, a merchant logger, who owns the stumpage, logs the timber, and sells his logs. He has no interest or connection with any further manufacturing of the logs into lumber. In other words, these loggers, the merchant loggers, have no mill affiliations. Among the members of this organization, the people who took this aircraft contract—they always tried to do everything; tried to stimulate in every way the production of spruce. We were concerned that the spruce was not coming out, and we would read in the newspapers three times a day that the war was going to pot because the Government couldn't get any airplanes because it couldn't get any spruce.

Mr. FREAR. This is the same organization concerning which Mr. Chinn testified?

Mr. BUTLER. Yes, sir.

Mr. FREAR. He was, I believe, the manager or president, or something?

Mr. BUTLER. Yes, sir. The next activity that we noted, or the real activity of the spruce division in this country in a large measure, was connected with the Siems-Carey contract, the announcement of which was made some time early in June, although their contract was signed in May. Of course not only the loggers connected with our bureau but all the loggers were very much concerned as to just what this was. Nobody knew Mr. Siems or Mr. Carey or Mr. Kerbaugh, although some of us had known of Mr. Siems's father as a railroad contractor and understood that the young man was following in the footsteps of his father. But they were totally foreign to railroad construction in this immediate vicinity, and they absolutely had not been identified in any way with the spruce business or the lumber business so far as we could then ascertain or since. We were interested, therefore, as to what the situation really was and as to whether it was going to result in getting any spruce. We tried to obtain a copy of the contract, naturally. A matter of this kind was of the greatest possible interest.

Mr. FREAR. That is, a copy of the Siems-Carey contract?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Which had been made with this Spruce Corporation?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Or the Spruce Division?

Mr. BUTLER. It would seem that it was a matter of large public interest, especially to an old and well-established industry, so the first step, of course, was to see the contract. Our most vigorous efforts continued for months, and they have not brought the contract. The best that we have been able to do, with the assistance of United States Senator Poindexter, after six months of continued effort, was to get a condensed statement as to what the contract contained signed by the Assistant Secretary of War, Mr. Crowell.

Mr. FREAR. What efforts did you make to get this contract, that is, to whom did you apply and what was done?

Mr. BUTLER. Mr. Chinn, on behalf of the bureau, applied direct. At our meetings with these different officers we asked to have it presented. At the second meeting, to which we will refer later, we invited Mr. Disque, whom we expected to be with us, to bring a copy of the contract with him, all fruitlessly, of course.

Mr. FREAR. What reason was given, or was there any explanation given for the failure or refusal to produce a copy of the contract?

Mr. BUTLER. It was not the policy of the department to make public the document.

Mr. FREAR. That was the statement made?

Mr. BUTLER. That was the reason given, I believe.

Mr. FREAR. By whom?

Mr. BUTLER. I would not be able to testify positively as to who made that statement, except that I do know that Senator Poindexter wrote me that in response to his request upon the War Department to be furnished with a copy of the contract, the reply was made that they could not furnish him a copy of the contract, but if the Senator would come up they would show it to him.

Mr. FREAR. That was from Washington?

Mr. BUTLER. That was from Washington.

Mr. FREAR. That was the Aircraft Board?

Mr. BUTLER. That was the War Department itself. The correspondence seemed to have been conducted by Mr. Crowell, Assistant Secretary.

Mr. FREAR. Of the War Department?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Now, what occurred after your failure to secure a copy of the contract?

Mr. BUTLER. Of course our failure to obtain the information simply whetted our desire to have it, especially as it was the foundation stone of the lumber business and the logging business for the next few months. We wanted to see what it all meant.

Mr. FREAR. Now let me ask you a question at this point; who was Siems-Carey-Kerbaugh, so far as you people knew? Were they operators out here on the coast or had they had any experience in lumbering or logging, so far as you knew?

Mr. BUTLER. Not that we knew of; no, sir.

Mr. FREAR. What did you ascertain later?

Mr. BUTLER. We have not been able to find out that they ever had had any experience until they attempted this operation, that is, so far as logging and lumbering is concerned.

Mr. FREAR. That is what I mean.

Mr. BUTLER. After our failure to obtain the terms of the contract, or a copy of the contract, it simply made it necessary for us to sit

down and wait and see what was going to happen. There wasn't anything else we could do.

Mr. FREAR. In other words, you had offered your services repeatedly down here; that is, the members of your association?

Mr. BUTLER. The whole industry, Congressman Frear, was organized and willing and anxious, and simply waiting for somebody to tell them to do something.

Mr. FREAR. Then the first you heard was that Siems-Carey-Kerbaugh had received this contract?

Mr. BUTLER. Absolutely. It came out of a clear sky. This important matter was given to interests that were entirely foreign to this section and to the business, and we did not know anything about them.

Mr. FREAR. Had there been any effort on the part of Disque or any other person connected with the corporation to have your people undertake any large contract for the production of spruce? If so, what were they?

Mr. BUTLER. Not to my knowledge.

Mr. FREAR. All right. What occurred after you had communicated with Senator Poindexter?

Mr. BUTLER. We accepted the situation as we found it. Of course, we could see that railroad construction was going on, and could find out what their plans were from what was being done over there. We were particularly disturbed with the extravagances of their expenditures and the resulting demoralization which was already beginning to appear in our own operations.

Mr. FREAR. In the industry?

Mr. BUTLER. In the industry.

Mr. FREAR. In what respect? You have suggested extravagances, in what respect were they apparent?

Mr. BUTLER. Well, our labor, of which there was a constantly diminishing supply in view of the draft, was already short. They began to hear the stories of the enormous wages paid and the enormous earnings made on contracts and subcontracts in the construction of that work, with the result that it was almost impossible to hold the men in the industry. They all wanted a piece of it, naturally.

Mr. FREAR. They all wanted to get the extra pay?

Mr. BUTLER. They all wanted the extra pay. The result was that there was a bidding for the labor. There was not enough to go around, and there was a constant bidding, and naturally the Government set the pace. That was the result of it.

Mr. FREAR. The Government, as a matter of fact, never set any pace, so far as the committee understands. Who was it that was acting?

Mr. BUTLER. The spruce division, or—

Mr. FREAR. That is, these people in Portland were fixing the figure?

Mr. BUTLER. Yes, sir.

Mr. FREAR. They were setting the pace?

Mr. BUTLER. Yes, sir.

Mr. FREAR. All right.

Mr. BUTLER. Along in September Mr. Chinn, as the chairman of the Loggers' Information Bureau, called a meeting to consider a

proposition that was submitted, as I understand it, by the Spruce Production Division, and the purpose of the meeting was set forth in a letter signed by Col. Disque, dated September 20, and which is already, I think, in the record. The purport of it was that the Government had entered into two contracts with the Siems-Carey-H. S. Kerbaugh Corporation, which provides for the construction of a railroad into Lake Crescent, and the second contract calls for a large monthly production of spruce, fliethces, etc. It goes on to say, "to carry out this second contract it will be necessary for this company to bring out from Clallam County a minimum of approximately one and one-half million feet of spruce logs daily."

Mr. FREAR. This is a letter written by the Spruce Production Corporation?

Mr. BUTLER. This is a letter written from the Spruce Production Division, the Bureau of Aircraft Production.

Mr. FREAR. Written by whom?

Mr. BUTLER. Signed by Brice P. Disque, colonel, Air Service, United States Army, commanding.

Mr. FREAR. To whom?

Mr. BUTLER. Addressed to the loggers of Puget Sound.

Mr. FREAR. Under what date?

Mr. BUTLER. September 20, 1918.

Mr. FREAR. Continue, please.

Mr. BUTLER. "To carry out this second contract, it will be necessary for this company to bring out from Clallan County a minimum of approximately 1,500,000 feet of spruce logs daily, after the 1st of January next. Their estimates call for approximately 50 sides to do this logging, and they have placed orders for the necessary logging machinery."

Mr. FREAR. Fifty sides, does that mean 50 spurs?

Mr. BUTLER. Not necessarily 50 spurs, but it means 50 separate units.

Mr. FREAR. Where you have a donkey engine working?

Mr. BUTLER. Yes, sir.

Mr. FREAR. I am trying to get it so we will have an understanding.

Mr. BUTLER. A side is a yard engine and a loading engine, one to bring the logs in, and the second one loads them on the car. "They feel confident that they can build up an organization that will be satisfactory to them, and that this organization will be able to produce all the logs which they will require to fulfill their contract." Now, I would like to call the attention of the committee to two statements in that second paragraph. They approximate that 50 sides will be necessary, will be all the machinery necessary, and that they will build up an organization that will be able to produce all the logs which they will be required to fulfill their contract. This contract, you understand, is the second Siems-Carey contract, calling for the production of 250,000,000 feet of spruce fliethces—

Mr. MAGEE. It is what is called the spruce contract?

Mr. BUTLER. The spruce contract. In other words—I will defer that. He goes on—

Mr. FREAR. What comment were you going to make upon that?

Mr. BUTLER. I thought the comment that I was going to make I would defer to some other time.

Mr. FREAR. All right.

Mr. BUTLER (continuing the reading): "It seems quite apparent that in view of the present draft legislation that the man power of Puget Sound will not be sufficient to carry on the present logging industry, and also supply sufficient labor to care for 50 additional sides." I would like to call the attention of the committee to that statement. I will refer to it again. "I also think it is true"—

Mr. FREAR. You are now reading from the letter again?

Mr. BUTLER. Yes, sir. "That if this enterprise goes forward as now planned, your district will be flooded with logging machinery at the close of the present war, which will react on the value of your present equipment." Right there, let me interpolate that we were not so much concerned about the value of our present equipment, but we were very much concerned about the increased productive capacity without any compensating increase in the milling capacity, because our market was logs.

Mr. FREAR. It would affect all industrial conditions, wouldn't it?

Mr. BUTLER. Yes, sir.

Mr. FREAR. That is, directly or indirectly?

Mr. BUTLER. Yes, sir.

Mr. FREAR. That is, if you had a great deal of productive capacity with the failure to market your logs?

Mr. BUTLER. Any excess of productive capacity necessarily meant an excess of production, and necessarily a demoralized market.

Mr. FREAR. That is what he referred to?

Mr. BUTLER. Yes.

Mr. FREAR. Excepting that he confined it to yourselves?

Mr. BUTLER. I will refer to this again, with your permission. "I have therefore requested the Siems-Carey, Kerbaugh Co. to first make an offer to the loggers of Puget Sound to contract their logging operations rather than follow their present plans of purchasing new equipment and creating a new organization."

Mr. FREAR. What is your understanding of that. "to contract"?

Mr. BUTLER. My understanding of that is that it was to be the policy of the department to disrupt the natural conditions in the industry as little as possible. The only trouble with the colonel's statement is that he ought to have found out that a long while before.

Mr. FREAR. I was trying to get the meaning of the term "contract." I assumed that was it, but it was a little indefinite.

Mr. BUTLER. Yes. "They came." "They" meaning the Siems-Carey, Kerbaugh Co.—

Mr. FREAR. You are reading from the letter?

Mr. BUTLER. Now I am reading from the letter, "They came to Portland on my request and agreed heartily to adopt my suggestions, although they stated that so far as they personally were concerned, they would much rather carry out their present plans."

Mr. FREAR. That is, their present plan of working under their contract?

Mr. BUTLER. Proceeding as independent operators, duplicating all this machinery at Government expense and building up an organization which only could be built up by robbing some other organization which was already functioning.

Mr. FREAR. In existence?

Mr. BUTLER. Yes.

They have authorized me—

Reading again from their letter—

they have authorized me to make the following proposition to you, which I have considered carefully, and consider a very fair offer; namely, that they will be willing to enter into a contract with either one or several large logging companies, which you may form, agreeing to pay a rental of 10 per cent and depreciation of 15 per cent per annum on all logging machinery and equipment which concerns may furnish, at their present agreed or appraised value; that they will pay all of the logging expenses of every kind and nature, and pay a profit of \$1 per thousand for all logs produced.

Their proposed contract is to contain a provision that they may cancel the same or insist upon a change in management if the output is not satisfactory, or if the operation is extravagant in their opinion. They also agree to pay all expenses incident to moving equipment into the district as well as returning same to its present location at the termination of their contract. In case the contract is canceled for cause, they are to have the option of retaining all of the equipment on the agreed rental basis if they care to do so.

With reference to that statement in there, "extravagant in their opinion," right there, I would like to know what that word means with those people.

This company is required to carry on selective logging operations, bringing out only the No. 1 and 2 logs, which may reduce the output per side to a certain extent.

Time is of the essence of this offer and my understanding is that the same will be withdrawn within 15 days if not accepted prior to that time.

Mr. FREAR. That is the end of the letter?

Mr. BUTLER. Signed, "Brice P. Disque, colonel, Air Service, United States Army, commanding."

Mr. FREAR. I want to ask one or two questions in reference to that letter. This was a letter sent to your organization authorizing your people to do the logging for the Siems-Carey, Kerbaugh Co., from which they were to make up the 250,000,000 feet of fitches?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Did they have any such independent contract, or do you know?

Mr. BUTLER. No, sir. Their contract, so far as I am aware, was limited to the spruce contract and the railroad contract.

Mr. FREAR. That is to say, was there any logging contract that you have ever heard of?

Mr. BUTLER. No, sir.

Mr. FREAR. As separated from any contract for the production of fitches?

Mr. BUTLER. I never have seen any, sir.

Mr. FREAR. Now, Mr. Disque, as you read the letter says that this is a fair offer?

Mr. BUTLER. Yes, sir.

Mr. FREAR. An offer of \$1 a thousand, with a certain amount for depreciation, and so on. Do you know his experience as a logger, or as a business man generally, on which he could base such judgment?

Mr. BUTLER. I think he has had none, sir.

Mr. FREAR. He said he had considered it carefully. Had he considered it with any of the loggers that were operating here, so far as you know?

Mr. BUTLER. Not to my knowledge.

Mr. FREAR. Not with your organization, any how?

Mr. BUTLER. No, sir.

Mr. FREAR. And that represented a large organization, I take it, here on the coast?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Now, there was a condition here, for instance, taking paragraph 5, "Their proposed contract"—that is, the loggers' contract—"is to contain a provision that they may cancel"—that is, that the Kerbaugh Co. may cancel—"The same or insist upon a change in management if the output is not satisfactory, or if the operation is extravagant in their opinion." In other words, what opportunity had you for determining what you could do, what expenditures you could make, under such a statement as that?

Mr. BUTLER. Of course, we did not think that was a very reasonable suggestion.

Mr. FREAR. Had you ever heard of such a contract being made in all of your logging operations, or lumbering operations, before this time?

Mr. BUTLER. Not by an experienced man with an unexperienced man; no sir.

Mr. FREAR. "In case the contract is canceled for cause, they are to have the option of retaining all of the equipment on the agreed rental basis, if they care to do so." That is, they were to commandeer all of the property that you had, providing at any time you had accumulated it, if I understand correctly, and if they desired at that time to do so they could take it over. Is that right?

Mr. BUTLER. That is, the machinery that we had devoted to or taken over to that enterprise.

Mr. FREAR. Yes; for the purpose of this logging?

Mr. BUTLER. Yes, sir.

Mr. FREAR. What have you to say in regard to the terms of the contract—that is, independent of this right of cancellation and the other conditions which surround it? Is \$1 per thousand for all logs produced a fair proposition?

Mr. BUTLER. On the assumption of selective logging, I think it is rather absurd. Nobody knows what it means, to begin with.

Mr. FREAR. That is, you mean to say that nobody knows what the expense means?

Mr. BUTLER. The expense is indefinite, but your compensation is based on the daily output, and if your selective logging means 10,000 feet a day that would mean \$10 a day. Of course, if you got a 100,000 feet you would get \$100 a day.

Mr. FREAR. You were not to make the selection for the logging?

Mr. BUTLER. It would be a contract to call for selective logging; the operations were to be conducted on the selective-logging basis—the selective-logging plan.

Mr. FREAR. Some one could go out and select the logs?

Mr. BUTLER. Select the trees.

Mr. FREAR. Select the trees; that is what I mean.

Mr. BUTLER. Yes, sir.

Mr. FREAR. And under this contract you would go on and log those trees that had been selected?

Mr. BUTLER. Yes.

Mr. FREAR. That is, two or three trees might be taken in an acre, or maybe 20 trees?

Mr. BUTLER. Yes.

Mr. FREAR. But you would be expected to take those trees that were marked?

Mr. BUTLER. Yes.

Mr. FREAR. That was the understanding?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Had there ever been a contract of that kind before to your knowledge, prior to that time?

Mr. BUTLER. No, sir; not to my knowledge; that is, not in this country. Of course, they carry on such operations abroad, where the timber—you can carry most of it around on your back.

Mr. FREAR. The testimony here by Mr. Donovan was that that timber was from 2 to 2½ feet in diameter. These timbers here were up to what size?

Mr. BUTLER. I think up as high as 10 feet.

Mr. FREAR. Ten feet in diameter, some of that spruce?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Now, you wanted to make some statement, I believe. I just wanted to bring out the points that I have suggested there.

Mr. BUTLER. A meeting was held on the 21st day of September to consider this letter. That was immediately after the receipt of this letter. The meeting was rather numerously attended, so well attended, in fact, that I, who came in a little bit late, had to stand up in the rear of the hall at the beginning of the meeting.

Mr. FREAR. Where was that meeting held?

Mr. BUTLER. The meeting was held in one of the little auditoriums in the L. C. Smith Building. I think Mr. Joseph Irving was chairman of the meeting, and present we had as representing the Spruce Production Division, or the Spruce Board, Major Hitchcock, Major Eastman, and Major Sawyer, all of whom were there in uniform. First, let me say that along in July and August things were not going particularly well in the logging business.

Mr. FREAR. 1918, you are speaking of?

Mr. BUTLER. 1918. Operations were somewhat disturbed, primarily due to the labor conditions, intensified by the railroad construction under the Siems-Carey contract, and it was manifest that all of the machinery which had been in operation would probably not be able to continue to run, because there were not going to be men enough to go around.

With this situation, the spruce board, which had the matter in hand, had a general supervision over the whole industry, in a way, were preparing, and I think had prepared to classify these different logging operations into what they called essential camps and nonessential camps. That is, a camp that was producing logs containing a substantial percentage of spruce, or logs which were of that growth, or log logs which were valuable for shipbuilding, should be allowed to continue, and those camps which were producing cedar or hemlock or small logs, which were not valuable in the Government's program, should be classified as nonessential and should be discontinued.

When I arrived at the meeting, Maj. Hitchcock was talking. He went on to recite how about the conditions—the labor conditions, the

Government had discontinued it—was going to discontinue its ship-building program, reducing the demand for lumber, making the outlook for our industry rather dubious, and thought that it would be to the interest of the loggers, rather than have their plants idle through the natural conditions of supply and demand in the district—that they should take over and accept this contract which was proposed. In other words, we should take a subcontract—the industry, as the members of the bureau, should accept a subcontract under this Siems-Carey-Kerbaugh Co., so-called spruce contract. Now, the essence—

Mr. FREAR. Just a moment right there. Had any of your loggers or companies ever had any conference with the Siems-Carey-Kerbaugh Co., or any of the individuals, with reference to the taking over of this contract?

Mr. BUTLER. Some of our members may have, personally.

Mr. FREAR. With reference to taking over this contract?

Mr. BUTLER. Not to take over the contract.

Mr. FREAR. That is what I mean.

Mr. BUTLER. But to take a subcontract—

Mr. FREAR. So the first thing that came to your attention regarding taking over this contract, in response to your communication, was the letter from Col. Disque?

Mr. BUTLER. So far as relates to my personal knowledge and my company's; yes, sir.

Mr. FREAR. In which he stated as you have stated?

Mr. BUTLER. I understand some of the members of the association had carried on negotiations privately and independently with Siems-Carey—been trying to induce them to go over there.

Maj. Hitchcock emphasized the importance of the Siems-Carey-Kerbaugh spruce contract, and said, in no uncertain language, that should occasion require or necessitate, all of the resources of their department would be put behind that contract to assist them in carrying it out, even going so far as to state that a labor differential in their favor would be installed, if necessary. In other words, they would be given the right to pay a higher rate of wage than any of these other independent companies.

Mr. FREAR. Was there anything said about a—and I am asking for information—about their right of commandeering, at that time?

Mr. BUTLER. Of course, everybody appreciated that—we were now discussing the Siems-Carey matter—of course, everybody appreciated the Government had full right in this matter, but Siems-Carey could not commandeer anything.

Mr. FREAR. Had they ever made such a proposition before, that there would be differentials permitted by your organization, had these officers at Portland ever given you any encouragement or suggestion that you would be permitted, in logging for spruce, as separate from ordinary commercial work?

Mr. BUTLER. My particular camps were not much of a factor, practically no factor at all in the spruce end of it. We were getting out timber valuable for the shipping program.

Mr. FREAR. I see.

Mr. BUTLER. There could have been no remaining doubt in the minds of any of the loggers assembled at that meeting that it was

one purpose of this division to see that that Siems-Carey-Kerbaugh contract was carried out, if it was humanly possible, and all the rest of the industry to the contract notwithstanding.

Maj. Eastman didn't say very much. Mr. Sawyer didn't say very much. But the concensus—the opinion of the lawyers which I think I voiced in the presence, perhaps—I don't know when—but it was very manifest that the whole tenor of the meeting was, to these companies represented, "You either take this contract or get out of business." That is what it meant, and, of course, it didn't make a real hit.

Mr. FREAR. How do you come to that reasoning?

Mr. BUTLER. Well, they had priorities already on all classes of material. Now, if they were going to handle us with a labor differential, we were only entitled to what was left over; it would not have been enough to have done anything.

So I think then, as the meeting progressed, I have an idea that we either adjourned for luncheon or else the officers retired and we continued our discussion many hours. Mr. Hitchcock, or Maj. Hitchcock, asked that our attitude in this matter be communicated to him later in the day, and that he would hold himself in the neighborhood to receive it.

Mr. FREAR. Was Maj. Hitchcock a logger, so far as you know?

Mr. BUTLER. Not to my knowledge.

Mr. FREAR. Who was he?

Mr. BUTLER. Maj. Hitchcock was one of the higher officers in the bureau there.

Mr. FREAR. From where?

Mr. BUTLER. I understood that he was a lawyer, from Cleveland. I don't know what his business is, but I understood he came from Cleveland.

Mr. FREAR. Cleveland, Ohio?

Mr. BUTLER. After much discussion, which continued well along in the afternoon, the members of the Loggers' Information Bureau, who were the only loggers present at that meeting, sent this telegram or communicated this notice to Maj. Hitchcock, and I was on the committee that called on Maj. Hitchcock and saw him with Maj. Sawyer in, I think, the office of the latter, in the same building.

At a meeting held in the fall of 1917, the Lumbermen's Protective League, of which the undersigned is a member, the services of themselves, their organization, and their equipment, was unanimously tendered to the United States for the winning of the war and in the filling of its requirements on lumber, and more particularly in its plan to increase the production of spruce and other airplane material.

We, the Loggers' Information Association of Puget Sound, having a joint input of 1,000,000,000 feet per year, in meeting assembled, again tender to the United States Government direct our services, organizations, and equipment, without profit, in the logging and opening up of the spruce tract of Clallam County on the Olympic Peninsula.

We consider as unnecessary and detriment to a large and important industry, the continuation of the operation of the so-called Siems-Carey Co., and ask that it, in the public interest, be canceled.

That was communicated to Maj. Hitchcock, and he expressed his disappointment, and, I suppose, returned to Portland.

Mr. FREAR. In other words, your organization, with an output, as I understand, of over 1,000,000,000 feet a year, had been confronted with the Siems-Carey-Kerbaugh contract, given to men none of

whom were loggers, by the head of the organization down here at Portland, who had no business experience—that is, I mean along the line of lumbering and logging—and you were dealing with Mr. Hitchcock, who was a lawyer from Cleveland, Ohio, and, with that situation before you, you sent this letter?

Mr. BUTLER. Yes.

Mr. FREAR. Let me take this.

Mr. LEA. Have you that letter?

Mr. BUTLER. I don't know whether it was a telegram. I communicated it in person to Maj. Hitchcock, who was waiting in the room above. It might have been confirmed; probably was confirmed by letter or telegram.

Mr. FREAR. I wanted to ask: It appears that the general production of logging reaches several million feet a day, does it not, in Oregon and Washington?

Mr. BUTLER. Yes.

Mr. FREAR. So that your organization, which was only one of a number, produces 1,000,000.000 feet of that total product?

Mr. BUTLER. Those are the figures; yes, sir.

Mr. FREAR. I am just getting the——

Mr. BUTLER. It is not our organization, it is the members who affiliate with the organization, who make the production.

Mr. FREAR. But they were the members up here on the Sound?

Mr. BUTLER. Our membership is limited to the so-called merchant loggers on the Sound.

Mr. FREAR. These were just the Sound loggers?

Mr. BUTLER. There are similar organizations, in fact, in the Columbia River district, the Grays Harbor district, and also in the British Columbia district.

Mr. FREAR. What next occurred?

Mr. BUTLER. That was the end of the meeting and that was the conclusion. There was a good deal of indignation expressed, very properly, in my judgment, because, among other things, they submitted, I think, a form of contract.

Mr. FREAR. Who submitted that and when?

Mr. BUTLER. I think this was a part of the negotiations, a part of—everything was submitted by these gentlemen in uniform.

Mr. FREAR. Now, was that submitted at the same time that Col. Disque wrote you, or at what time, or by this Maj. Hitchcock, or by whom and when?

Mr. BUTLER. Maj. Hitchcock represented Col. Disque and he did all the speaking to the bureau at this meeting.

Mr. FREAR. Yes; but I mean when was this contract of which you speak—when was that submitted, and by whom?

Mr. BUTLER. I am trying to find out. [Examining papers.] I do not find the form of contract here, but I have among my notes that the form of contract was such—I think we went over it, the meeting went over it in detail—what I would say here would be subject to correction as to this—Carey was to furnish the stumpage, cars, and supplies and pay a dollar a thousand profit——

Mr. FREAR. This was in this proposed agreement whereby your people were to undertake the logging?

Mr. BUTLER. Yes, sir.

Mr. FREAR. That was offered. Just read slowly, so that the reporter can get it.

Mr. BUTLER. The form of contract provided Carey furnish the stumpage, cars, supplies, pay a dollar a thousand profit, 10 per cent rental, 15 per cent depreciation. This note I made at the time interests me—all disbursements to be made by Carey; the loggers to handle no money.

Mr. FREAR. Disbursements of what character?

Mr. BUTLER. Beg pardon?

Mr. FREAR. Disbursements of what character?

Mr. BUTLER. All characters. In other words, any of these independent loggers accepting the contract under the suggestion of these gentlemen would operate under such a contract as I have just read, and would not be allowed to handle any money at all; in other words, the Siems-Carey Co. would pay the pay rolls and pay for the supplies and pay everything and everybody.

Mr. FREAR. They had a 7 per cent-plus contract anyhow, didn't they?

Mr. BUTLER. Yes, sir; but, of course, they were—the interesting point about it was the loggers were to do the work and if they were good and did a good job they were to get a dollar a thousand, but they were not to handle any money or do any other old thing.

Naturally, as most of these logging operations are rather substantial, and, in some cases, even large enterprises, the suggestion didn't meet with very friendly feeling.

Mr. FREAR. Is there any suggestion in that regarding guaranty?

Mr. BUTLER. None whatever.

Mr. LEA. Suppose we put that in evidence. You have a copy of the contract there, have you?

Mr. BUTLER. I would like to ask, if I may be permitted: Mr. Chinn, have we got a copy of that proposed contract?

Mr. CHINN. It is right there.

Mr. BUTLER. Is it?

Mr. FREAR. Is this another letter that you have before you?

Mr. BUTLER. Didn't we have a form of contract submitted at the first meeting?

Mr. CHINN. No, sir.

Mr. BUTLER. We discussed the formation, though, did we, at the first meeting?

Mr. CHINN. No; there was no—Gen. Disque's first letter outlined the conditions; that is the letter which you read.

Mr. FREAR. You have a second letter from Gen. Disque or Col. Disque?

Mr. BUTLER. That comes between the first meeting and the second meeting.

Mr. FREAR. Yes. Now, that letter Mr. Lea suggests might be put in the record here, also both letters, for that matter.

Mr. BUTLER. I think you already have it. This is the letter dated September 20.

Mr. LEA. That letter is in already.

Mr. FREAR. Let's put the other letter in, the subsequent letter.

Mr. BUTLER. I might be permitted to say, in fairness to the industry, that in this whole spruce production—

Mr. LEA. Suppose we get this letter in here while we are on that subject.

Mr. FREAR. Yes; let's introduce the second letter that you have there.

Mr. BUTLER. Do you want me to read it?

Mr. LEA. No; just give it to the reporter.

Mr. FREAR. I think that would be a good idea, to read it and to take it down. Read it slowly, so that it can be taken down, or is it very long?

Mr. BUTLER. No; it is not long.

Mr. FREAR. Well, read it slowly, and then we can get the terms of it as you read it.

Mr. BUTLER. This is in a little ahead of the story, though. This is a letter dated Leon Building, Portland, Oreg., September 24, 1918.

Mr. FREAR. What was the date of the other?

Mr. BUTLER. September 20, 1918.

Mr. FREAR. Four days later; yes.

Mr. BUTLER. Addressed to the Loggers' Information Association.

In accepting your patriotic offer made on the 21st day of September, 1918, at a meeting held in Seattle, Wash., wherein you agree to furnish all the necessary equipment and to log without profit the spruce tract in Clallam County on the Olympic Peninsula, I wish to call your attention to the fact that the equipment which you are to furnish will of necessity have to be the best equipment which your district can furnish, and in an amount sufficient to produce a minimum of 500,000,000 feet of No. 1 and No. 2 spruce logs within the year 1919, fairly proportioned over each month, commencing with January, 1919. Second—

Mr. LEA. This letter is in evidence, isn't it?

Mr. FREAR. I think it is, now. We need not put that in. I recognize it.

Mr. BUTLER. I want to say here, in justice to the industry, that this whole proposition of furnishing spruce was entirely a logging proposition. After the logs were produced and put in the water, the cutting of the log was simplicity itself, there is no problem involved whatever, except having the lumber manufactured in exactly the way that the designers of the airplane contemplated. There is no problem about it.

Mr. FREAR. Could that be done by the ordinary mill?

Mr. BUTLER. Yes, sir; unquestionably.

Mr. FREAR. Let me ask a question or so regarding this letter that you have read. This was introduced, I believe, by Mr. Chinn, was it not?

Mr. BUTLER. Yes, sir.

Mr. FREAR. The same letter. I had forgotten it. This is not—

Mr. BUTLER. Perhaps I have given you the wrong letter—September 24.

Mr. FREAR. I have it. You had made a proposition to log, without profit, according to this letter?

Mr. BUTLER. Yes, sir.

Mr. FREAR. In this spruce tract of Clallam County?

Mr. BUTLER. The Loggers' Information Association, yes, sir.

Mr. FREAR. Yes; that is what I mean, speaking for them, and it was in reply to that, that Mr. Disque or Col. Disque, on September 24, wrote you, according to the letter that was filed by Mr. Chinn,

which you started to read. The first proposition is that you are to furnish the best equipment. If I recollect, the last letter I was just reading was to the effect that if Siems-Carey-Kerbaugh Co. wanted to cancel the contract, they could take over all your equipment?

Mr. BUTLER. Such as we had supplied, yes, sir.

Mr. FREAR. Yes; such as you had supplied. Five hundred million feet of No. 1 and No. 2 spruce logs, by selective logging, was to be furnished within the year 1919, according to this statement, and fairly proportioned over each month. What would you say as to the size of such a contract or such an agreement for selective logging?

Mr. BUTLER. No responsible loggers, of course, would undertake it.

Mr. FREAR. That is, if he had to place up a forfeit or a guaranty or a bond, you mean?

Mr. BUTLER. I don't think he would take it—I don't think, with the interests at stake—the importance of furnishing this spruce to the Government in its war plans was such that no responsible logger would have undertaken such a contract on any basis—he would have gone in there and done the best he could, and that is all he could have done.

Mr. FREAR. But it says here, under the second provision—

During the first three months of the coming year, I feel quite sure that you can only count upon 15 working days in each of these months.

Mr. BUTLER. Yes, sir.

Mr. FREAR (continuing). Speaking about the proposition he puts up to your organization—

which means that, to provide necessary minimum output, you will have to have at least 65 sides immediately available—
and he tells about the engines you will have to have.

Mr. BUTLER. I would like to call attention to the difference in the procedure. The Aircraft Co. were going to produce 120,000,000 feet, and we were providing 21 sides to do the work. They were proposing—

Mr. FREAR. How many million feet were you to provide?

Mr. BUTLER. We were to put in 10,000,000 feet a month.

Mr. FREAR. That would be 120, yes.

Mr. BUTLER. These gentlemen were proposing to put in, with selective logging, 500,000,000 feet, with 65 sides, and I want to call your attention to the fact that between the date of the 20th and the 24th the number of sides, under the written statement of the general, necessary, has increased. In the letter of the 20th, when he was making this proposal that we should take this contract from the Siems-Carey, he thought it would only take 50 sides. The minute that we had suggested that we would take it, the demand made increased, within four days, to 65 sides.

Mr. FREAR. If you were putting in 21 sides down in your lumbering or in your logging operations down below Yaquina, on the Blodgett tract, to get out 120,000,000 feet it would take nearly 100 sides—

Mr. BUTLER. It is just the difference between a responsible operation and an irresponsible one.

Mr. FREAR. That is, showing, if your estimate was correct on the 120,000,000, it would have taken over 80 sides, in any event, to have covered 500,000,000 on the same basis, would it not?

Mr. BUTLER. Yes, sir.

Mr. FREAR. And he had before suggested 50?

Mr. BUTLER. Yes.

Mr. FREAR. Indicating what, as to his general knowledge of the business?

Mr. BUTLER. Well, my personal opinion is that both parties that made that spruce contract didn't know what they were talking about.

Mr. FREAR. This is a contract of very great importance, not only for the carrying on of the war activities—that is, in production of spruce for airplanes—but for every purpose, for the protection of the loggers as well, for the protection of business, and for the protection of the Government.

Mr. BUTLER. There is one very reassuring feature about the whole matter, and that is that the whole industry here, especially those gentlemen who have been experienced, were practical and know—that no one in connection with this whole industry in the Northwest is in any way concerned, or could possibly have been concerned, in this contract. If those gentlemen were their advisers—if their advice had been sought—such a contract would never have been entered into. I feel perfectly confident of that statement.

Mr. FREAR. This is the letter, as I now recollect, in which he compliments your association upon the patriotic action of its membership, which was not apparent, as I understand, from the 7 per cent cost-plus contract made with the Siems-Carey organization, and in the letter he says: "I will also permit the payment of a reasonable compensation to men actually engaged in the management of this organization." That is, your organization.

Mr. BUTLER. Yes, sir.

Mr. FREAR. That is, he was going to permit this.

Mr. BUTLER. Well, we were glad of that.

Mr. FREAR. Yes. He was a captain in the service, or an ex-captain, when he came into the service, was he not, as you understand it?

Mr. BUTLER. I never heard of him except as a lieutenant colonel, I think, when he first appeared here.

Mr. FREAR. When he was here?

Mr. BUTLER. Yes.

Mr. FREAR. I think the record shows that he was an ex-captain when he started in. He says, "Gentlemen: Inclosed herewith suggested form of agreement to be signed by the loggers." Then there is a short suggested agreement here; you are familiar with that?

Mr. BUTLER. Yes.

Mr. FREAR. Just a short one.

Mr. BUTLER. Do you want me to read it?

Mr. FREAR. You may read it into the record; yes.

Mr. BUTLER (reading):

We, the undersigned, hereby agree to lease to the —— company the number of complete sides containing 11 by 13 or larger yarding engine, geared locomotives and railroad rails set up in our respective names, at a rental of 10 per cent per annum and 15 per cent per annum depreciation on appraised value of equipment and a rental of 12 per cent on appraised value of railroad rails; and further agree that the duly authorized representative of the above company,

acting with the representative of the spruce-production division, shall have the right to choose from all the equipment which I own the number of sleds, engine and camps appearing below, the only limitation to this being that the complete unit must be taken.

Mr. FREAR. Now, what consultation or agreement did he have with any of the members of your organization who proposed to make this voluntary contract without cost to the Government prior to his making that proposition to you, as far as you know?

Mr. BUTLER. None, except such as he may have thought he had through his representatives at the meeting held on the 21st, three days before.

Mr. FREAR. Were those conditions discussed at that time by him?

Mr. BUTLER. I think that at the first meeting they discussed the form of a contract in case one should have been entered into.

Mr. FREAR. Now, he gives you 10 days there, is it, in which time is the essence?

Mr. BUTLER. Time is not the essence of this particular document.

Mr. FREAR. It seems to have been, because the opportunity was withdrawn.

Mr. BUTLER. That was in this telegram, but it was not in this particular paragraph.

Mr. FREAR. I mean it is in that letter of the 24th, after the telegram.

Mr. BUTLER. The time was put in the telegram of the 22d—September 22.

Mr. FREAR. And was to be withdrawn at what time?

Mr. BUTLER. Within 12 days. The impression that the meeting of the 21st made on me as a logger and business man was that had the Siems-Carey people been present in person they could not have been any more vigorously represented than they were represented by the gentlemen in uniform.

Mr. FREAR. Was it in the realms of possibility under this proposition which was put up to you, a safe measure for any business man to undertake?

Mr. BUTLER. Quite impossible.

Mr. FREAR. And for your whole organization that had the output of a 1,000,000,000 feet of logs taken together, what would you say as to that?

Mr. BUTLER. Quite impossible. Nobody would have seriously considered it on any such basis, of course.

Mr. FREAR. What occurred after that?

Mr. BUTLER. After this meeting had disbanded, that is the meeting of the 21st of September, and we had made our communication to Maj. Hitchcock, the next happening was the receipt of the telegram which is already in the record.

Mr. FREAR. Just what was the substance of that?

Mr. BUTLER. The substance of it was that Col. Disque would accept our proposition if agreeable to Mr. Carey, and if we would agree to guarantee them 500,000,000 feet a year, and if we would agree to have Siems-Carey operate the railroad, etc.

Mr. FREAR. It is a short telegram, is it not?

Mr. BUTLER. Yes.

Mr. FREAR. Then read it into the record, because there are some important propositions there.

Mr. BUTLER [reading]:

If agreeable to Carey accept loggers' proposition on same basis Frost contract, except operation main line railroad. The Government to acquire all stumpage and own logs, and eliminate from Carey contract all interest in logging operations. This will require modification of Carey contract, probable cancellation, and making new one for them to operate that main line railroad, and saw such portion of logs as we agree upon as understood by Hitchcock and Carey. Express to Carey my deep appreciation his patriotic attitude in the matter. Before closing we must have assurances that loggers will form into one company and guarantee same log input as Carey is no wobligated to produce as to time and quantity and definite arrangements made as to equipment assigned and so forth within 12 days. Also assure logging operators that we appreciate their action and will certainly bring their patriotic action to the attention of the Washington Government.

Mr. FREAR. He speaks of the Washington Government. What kind of a government does he mean?

Mr. BUTLER. I suppose he meant the War Department.

Mr. FREAR. Or did he mean the Government itself as distinguished from the operations of this organization here in Portland?

Mr. BUTLER. I presume he meant his superiors.

Mr. FREAR. He expresses gratitude to Carey.

Mr. BUTLER. Yes.

Mr. FREAR. What is the connection in there?

Mr. BUTLER. I presume Mr. Carey was to permit us the honor of putting in those logs.

Mr. FREAR. He speaks of a guarantee as you read there, that you must make to furnish this 500,000,000 feet of logs.

Mr. BUTLER. Yes.

Mr. FREAR. With all of these conditions of furnishing the best equipment and taking over the equipment if they chose, and all that.

Mr. BUTLER. Yes.

Mr. FREAR. Was there any such guarantee that you recall or that you know? You have seen this Siems-Carey contract?

Mr. BUTLER. My information about the Siems-Carey contract is very largely confined to the condensed statement of Assistant Secretary Crowell. While I have seen the Siems-Carey contract I do not feel that I am familiar enough with it to make any statement.

Mr. FREAR. He gave these people the sole right of cancellation at any time that they wanted by this contract that they were to put over with your people. That was evidenced in the preceding letter.

Mr. BUTLER. Yes.

Mr. FREAR. Now, go on with your explanation.

Mr. BUTLER. I would like now to analyze this telegram.

Mr. FREAR. All right.

Mr. BUTLER. The whole proposition, of course, must be acceptable to Mr. Carey. That is condition one. The second proposition is that it shall be on the basis of the Frost contract. The Frost contract is the Aircraft Lumber Co. contract.

Mr. FREAR. That has just been made out.

Mr. BUTLER. That has just been made. Of course, I presume that the details were fresh in the minds of his organization. Now, in the Frost contract there was no guaranty, and it was explained in our negotiation of that contract that the very essence of it was that we as loggers insisted on operating the railroad.

Mr. MAGEE. This Aircraft Lumber Co. contract was made with the Government, was it not?

Mr. BUTLER. No; it was made with the same organization.

Mr. FREAR. Was that the one that was a cost-plus contract?

Mr. BUTLER. Somebody has told me that there was an airplane contract which was a cost-plus contract—some operation in Grays Harbor. This is different altogether. This is the Blodgett contract we have been speaking of.

Mr. LEA. Which you had with the Spruce Production Corporation?

Mr. MAGEE. Has this Frost contract been described?

Mr. BUTLER. Yes; the Frost contract is the Aircraft Lumber Co. contract.

Mr. MAGEE. Has it been described in the evidence just exactly what it is?

Mr. BUTLER. I am prepared to submit a copy of the contract if you desire it. I think at the beginning of my testimony I referred to that. I do not recall exactly whether it went into the testimony.

Mr. FREAR. What would be the effect for a logger to enter into a contract for spruce production for logging when some other party had the right of immediate cancellation of the contract and had the entire control of the railway?

Mr. BUTLER. We were as loggers willing only to operate under that condition, providing that we were doing business with the United States Government or its representatives direct. We would not submit to it for a minute from any cost-plus operator.

Mr. FREAR. Could you do so where another party held the railroad in its power, and with the right of cancellation of your contract at any time and taking over of that property and equipment?

Mr. BUTLER. No. Now, I will go on with the telegram, with your permission. [Reading:]

Eliminate from the Carey contract all interest in logging operations.

Now, I have seen the skeletonized contract, and I know of no provision in that Carey contract regarding logging at all. My understanding is that it is for the furnishing of flitches. Whether it refers to the detailed logging operations I do not know. There is certainly no reference to it in the sketetonized form.

Mr. LEA. Do you know of any way of getting flitches without logging?

Mr. BUTLER. No; I do not.

Mr. FREAR. How could you take out the logging proposition from the contract that did not provide that it was? Is that the answer to it?

Mr. BUTLER. Yes. [Reading:]

This will require a modification of the Carey contract, probable cancellation, and making a new one for them to operate the main-line railroad and sawing such portion of the logs as we agree upon as understood by Hitchcock and Carey. * * * Before closing we must have assurance loggers will form into one company and guarantee same log input as Carey is now obligated to produce, as to time and quantity and definite arrangements made as to equipment, etc.

Now, in all our discussions, and especially the discussions at the meeting held on September 21st, we were impressed by the representatives of the spruce division that the Siems-Carey people were

obligated and had a bond and guarantee to do this thing. I ask now as a matter of information and as a matter of fact as to whether there was any such bond or any such guarantee? There is certainly no provision in any contract that I have seen.

Mr. FREAR. That is, you produced 250,000,000 feet of fitches inside of 18 months.

Mr. BUTLER. Yes.

Mr. FREAR. That, of course, is for the committee to determine.

Mr. BUTLER. Speaking now for our loggers' association, we ask information on that point, as to whether there is now or ever was any financial guarantee or assurance that would be forfeited in case of their failure to deliver!

Mr. FREAR. The committee would be prepared to submit to you the same evidence that it has in its hands with the copy of the contract.

Mr. BUTLER. Much has been made of the fact that there is a mortgage of \$6,000,000 given to secure all the property in Clallam County, the idea being that the contractors of large financial responsibility were behind it. As a matter of fact, in the skeletonized analysis of this contract, as forwarded by the Assistant Secretary of War, this security and this mortgage is simply for the return of money which was advanced, and there does not anything appear in this record, as far as I can find out, that the Siems-Carey Corporation ever advanced a dollar.

Mr. MAGEE. This contract made with the corporation created under the laws of the State of Maine, as I understand. Of course, there would be no personal liability as far as the corporation is concerned in entering into such a contract.

Mr. BUTLER. I submit that there has been a studied effort made to convey to the logging industry of this State that the contract given to these gentlemen was secured and guaranteed by substantial bond.

Mr. FREAR. That is, you mean to say that there was prior to that time?

Mr. BUTLER. Yes.

Mr. FREAR. Let me read a provision from the Siems-Carey contract relating to the railroad of which you have just spoken. It says here that the "Government will provide sufficient cars suitable for the transportation from the seller's mill." That is the Siems-Carey Corporation, reading from article 3. [Reading:]

of the spruce fitches herein contracted for, and will use its best endeavors to furnish sufficient cars suitable for transportation from said mill of the seller's product sold to others than the Government.

The Government would provide the cars to the operator, and the railroad, so far as anything appears in the contract, was to remain in the Siems-Carey Corporation, and that is the company over whose line you were required to log?

Mr. BUTLER. Absolutely; yes.

Mr. FREAR. Proceed.

Mr. BUTLER. After receiving this telegram just put in the record and after it had been studied and thought over in conjunction with the offer of Col. Disque, and all of that which I have just testified to being in our minds, a general meeting of the industry was then called to consider the proposition.

Mr. FREAR. Were you aware at that time that the Siems-Carey Corporation had a supplemental agreement for advanced payments from the Government upon their cost plus contract?

Mr. BUTLER. We had no information at that time except such information as was trickling out here from Washington, D. C. There was no information possible at this end of the line at all, and whether our information was correct and conclusive we could not tell.

Mr. FREAR. There was a mortgage, you said, of \$6,000,000?

Mr. BUTLER. Yes.

Mr. FREAR. I have here what purports to be a copy of a contract for advanced payments entered into on the 31st day of May, 1918, between Siems-Carey-H. S. Kerbaugh Corporation and Pliny Fisk and Wilbur C. Fisk and H. L. Denny, copartners, doing business as Harvey Fisk & Sons, and the United States of America, acting by the officer whose name appears below. It refers to the contract for spruce fitches, and it provides herein that \$6,000,000 may be advanced on this contract, the first \$1,000,000 immediately, the second \$1,000,000 on demonstration that \$750,000 had been expended, including the approval for the purpose of the principal agreement; and the third \$1,000,000 on demonstration that \$1,700,000 had been expended; and so on up to \$6,000,000. Now, this was signed by the Siems-Carey Corporation, by C. P. Siems, president, and by George M. Clark and Pliny Fisk for Harvey Fisk & Sons. For the United States of America there is a dash and I do not know whether that was signed, and I have just inquired. I do not know what the facts are in regard to it. It refers to a mortgage. Now, there was a mortgage recorded, as I understand?

Mr. BUTLER. Yes; there is a mortgage on record.

Mr. FREAR. Where?

Mr. BUTLER. In Clallam County, I believe.

Mr. FREAR. You have a copy of it there?

Mr. BUTLER. No, sir.

Mr. FREAR. Was there any suggestion given by Col. Disque or anyone else to your people that apart from this proposition that was made to you there should be any payment in advance or any opportunity to aid you in preparing for this contract that was to be made without expense to the Government; that is, without profit to yourself?

Mr. BUTLER. No, sir.

Mr. FREAR. Nothing whatever?

Mr. BUTLER. No, sir.

Mr. FREAR. All the load was turned over on your shoulders with these conditions?

Mr. MAGEE. I might call your attention, Mr. Chairman, to page 5 of this agreement. It says:

(a) The demand note of the contractor for \$6,000,000, of even date herewith, bearing interest at the rate of 6 per cent per annum, payable to the order of the Secretary of War on behalf of the United States at his office in Washington, D. C., and indorsed by Pliny Fisk and Harvey Fisk & Sons.

(b) Bond in the sum of two millions in form and with surety as may be approved by War Credits Board and conditioned on the performance by the contractor of his obligations under this agreement.

(c) Mortgage or mortgages to the Secretary of War on behalf of the United States of America on all the property now owned or hereafter acquired by

the contractor in form satisfactory to the War Credits Board. The contractors shall furnish opinion or opinions from counsel, approved by the War Credits Board, that the title to the property described in the mortgage or mortgages is vested in the contractor, and that the mortgage or mortgages constitute a valid lien thereon under the laws of the State where the property is situated.

Mr. LEA. What is this you are reading from?

Mr. MAGEE. This supplemental agreement?

Mr. FREAR. The statement shows—that is the statement of assets and liabilities furnished the committee by the Spruce Corporation—that \$750,000 was advanced under some agreement or contract with the Siems-Carey Co. under their spruce contract for getting out that spruce?

Mr. BUTLER. Yes.

Mr. FREAR. Now, my suggestion, is, was any offer ever made to your people who were to do this without compensation, who were to get out the logs without compensation—was there any offer made on the part of the Government to advance one dollar?

Mr. BUTLER. I think if you will consult or review my testimony this morning, in which I have attempted to be quite fair, you will find that there has never been any helpful suggestion coming from the board to our organization along those lines.

Mr. FREAR. That covers it.

Mr. BUTLER. Then the general meeting of the industry was called. At that time invitations were sent out to practically everybody interested in the logging business, whether they were identified in operating in conjunction with mills or not. We wanted to have everybody present, the whole industry. The response was general and the day the meeting was held everybody was there. All the proceedings of the meeting of the week before were recounted to the gentlemen, and the matter of General Disque's telegram was submitted, and the question was for the meeting to decide—the general industry, not alone the loggers' association, but everybody—what they were going to do about it. Representing the loggers' association, my personal attitude was that having made the offer we should go along with the negotiations. While the meeting was large, most of the talking, as is usually the case in such meetings, was done by not a very large number of men. One of the first speakers was Mr. Grammer. Mr. Grammer is identified with one of the various large lumber enterprises on Puget Sound and has had much experience, and was afterwards a major in the service.

Mr. FREAR. Was he on this advisory committee or some other committee that Mr. Donovan testified to? I am speaking of Mr. Grammer.

Mr. BUTLER. Not to my knowledge. And after some general discussion, the burden and purport of which was that the whole proposition was new, he had not heard about it, and had not had time to think about it, but he was inclined to be against it and was against it. Mr. Donovan came in, and Mr. Donovan is also a very large operator. Mr. Donovan at once took a position most violently antagonistic. He was against it and his company would not put a dollar into it and would not have anything to do with it.

Mr. FREAR. Was Mr. Donovan upon this board of directors of this corporation?

Mr. BUTLER. I think at that time he was. Discussion became more or less general and motions were made and withdrawn and substituted and finally boiled down to a proposition, in effect. I guess it is a little difficult to find out what the exact motion was. Those that were in favor of going ahead and taking this contract from the Government direct and eliminating the Siems-Carey Corporation as far as the logging was concerned, was put to a vote, and seven voted in favor of it and 15 voted against it, and 19 did not vote at all. There was only one thing surprising about it, and that is that there were seven that voted for it, in view of the facts which have been set forth in this room this morning.

Mr. BUTLER. Who were the seven? Can you mention any?

Mr. BUTLER. There was just one curious incident in connection with the seven, and that is that it was testified here and seems to be a matter of some importance that the nestor of the loggers, Mr. Cobb, voted against taking a contract. But quite curiously Mr. Cobb's partner in the only logging enterprise, was one of the seven.

Mr. FREAR. What was his name?

Mr. BUTLER. Alexander McEwan.

Mr. FREAR. What was your attitude?

Mr. BUTLER. My attitude, as I was trying to explain, was that I was trying to be consistent. I was in favor of going ahead.

Mr. FREAR. If you had gone ahead, you would have taken an enormous financial risk, would you not, in view of the situation that has been presented, or would you?

Mr. BUTLER. No. Of course, we could have gone ahead in a sense, but we very soon would have had to have found an entirely different ground on which to proceed. You understand, of course, that we were anxious to get this spruce; everybody was anxious to get this spruce.

Mr. FREAR. And you were ready to take over the Siems-Carey contract?

Mr. BUTLER. No; our attitude was that we were willing to go ahead and log the same body of spruce covered by the Siems-Carey contract, under the same conditions as the Frost contract.

Mr. FREAR. Without any compensation to yourselves?

Mr. BUTLER. Without any compensation to ourselves.

Mr. FREAR. That is, this Frost contract in regard to the Blodgett timber?

Mr. BUTLER. With all these whereas and conditions eliminated, just go over there with our equipment and organizations and experience, and in this new enterprise of selective logging do the best we could.

Mr. FREAR. All right. What further have you in mind?

Mr. BUTLER. I would like to make a general statement regarding the effect of this whole contract. As I have outlined, we were short of employees, of man power. We had plenty of machinery, which machinery we were all willing and anxious to put at the disposal of the Government in getting this spruce in Clallam County. We had been for months, were then, and always were. The Siems-Carey contract at its inception meant if they went ahead on the plan, which they proposed, a needless and expensive duplication of machinery already in existence and already available, which applies with more

force to the logging equipment than to the mills. Manifestly, if there were not enough men to operate our logging mills and we were going to be shut down in a classification of the industry into the essential and nonessential camps, the purchase of 50 or 65 additional sides would simply add chaos to the confusion, provided the industry—already short of men—had to furnish men for the additional expanded machines. What the percentage of the expansion is can be very readily appreciated. The members of our loggers' association represented only about a hundred of sides.

Mr. FREAR. All told?

Mr. BUTLER. All told, and yet we produced this general result. Now, they were duplicating that to the extent of 65 sides. The result is at once manifest. Labor conditions were absolutely shot to pieces. There was an immediate excessive demand for labor that could not be filled. There was bidding for labor, accompanied by reduced efficiency, and the result was, instead of hastening the production of spruce—and with the colonel, you know, time was the essence of the contract—it simply added such confusion that it would not but delay the actual production of spruce logs. Now, all these mill men and the loggers on Puget Sound who are not identified with our bureau are largely identified with the mill men, and they were very much excited because they were going to build two mills. The construction of those two mills would only have increased the sawing capacity from 6,000,000 feet per day to 6,500,000 feet per day of eight hours.

Mr. FREAR. That is on the Sound?

Mr. BUTLER. That is reachable by salt water. While they were going to increase the logging machinery or the log producing capacity by 65 per cent, at a time when the loggers were begging and willing and anxious to take their own machines and their own organizations and go over there and go after the spruce on any old basis for nothing, if necessary. It meant possibly that these operations, which were the only activity of the spruce board in this section, the only real activity—the rest was more or less perfunctory—their one action simply was to create chaos and trouble for themselves and the industry, which was struggling and wanted to help them.

Mr. MAGEE. What do you say about the route from Lake Crescent to Lake Pleasant; what was the necessity of that? That is, in getting into this tract?

Mr. BUTLER. Mr. Magee, speaking for myself personally, that is a most humiliating situation as an American. In war time and when the urgency and the demand for spruce is supposed to be paramount for our military program, to find out through a contract that the gentlemen or the department charged with the duty of coming out here and getting this absolutely essential product for the manufacture of these airplanes, comes out with a contract the very first clause of which reads, "Beginning from a point on the Chicago, Milwaukee & St. Paul Railroad."

This country is full of spruce. The officer comes out here with millions, with the authority of the United States Government behind him, and his activities are limited with one leg tethered to a point on the Chicago, Milwaukee & St. Paul Railroad. Could any-

thing be more humiliating? Is it any wonder that the logging industry lost confidence in Col. Disque by that very first official act?

Mr. MAGEE. What do you say as to the necessity of that route to get in to that timber, or the reasonableness of it or not?

Mr. BUTLER. I say this, Congressman Magee, there is a problem; there is that spruce. It is located west and north of Lake Pleasant. You submit the problem of getting that spruce from where it is grown and putting it into the market in the quickest, shortest possible time, eliminating the expense right here, in the shortest possible time, and there is not an experienced logger on earth; there is not one logger; there never was a logger that would have built this line from this junction into Lake Pleasant—not one.

Mr. MAGEE. Then is the building of that line, the construction of that railroad at a very large governmental expense, in your mind, a clear conviction of the inefficiency and incompetency of those who recommend it and made its construction possible?

Mr. BUTLER. Absolutely conclusive. I can go a little further. Col. Disque—I would like to say that I have never seen Col. Disque but once and have had no business relations with him whatever, and my judgment is purely affected by his action with reference to the logging industry with which I am in daily touch—Col. Disque had been out here for six months.

Mr. FREAR. You mean, in the West?

Mr. BUTLER. I mean out in the Northwest. I do not know whether he had been out here or not, but he had been charged with this work for six months. He had the entrée to every office, to every operator; they opened their books and would have told him all they knew and helped him in every way possible, and after six months of studying the situation he comes out here and begins to get spruce, tethered to a point on the Chicago, Milwaukee & St. Paul Road.

Mr. FREAR. Do you know whether he had ever been to Clallam Bay?

Mr. BUTLER. I do not know.

Mr. FREAR. To Pysht River, where large logging operations have been undertaken by some of the largest operators in the country?

Mr. BUTLER. I do not; no, sir. The natural procedure would be for a man who was looking for spruce, to find out those who have been producing spruce. Had he gone to these gentlemen, the Merrill & Ring Co. or the Goodyear Lumber Co., all of the information which you gentlemen have gathered in two or three or four days, would have been at his command in ten minutes. But, as far as I understand, he did not do anything about it; he never saw them.

Mr. FREAR. The testimony of Mr. Lightner, the manager of the Goodyear people, and also of Mr. Chisholm who supplements it, is to the effect that a road built from Clallam Bay to this timber would have been about 14 or 15 miles in length; that it could have been constructed for from \$300,000 to \$500,000; that it had been surveyed by different surveyors and it was possible to get that out in the shortest time from any point along the coast; that the process of logging or lumbering was by rafting from Clallam Bay; that not one raft had ever been lost by the Goodyear Co., which had handled hundreds of millions of feet of logs; that another point of entrance was from Pysht Creek, where the Merrill & Ring operators have been

doing business for many years; that the distance from there would be about 21 miles, as I now recollect, to this timber, or possibly a little farther, and that would be connected then with the Milwaukee road.

Mr. Frost has testified before the committee that surveys were made by himself, or he was interested in them, by Thomson acting on the part of Clallam County and others, to show that that was an expeditious way of getting it out either to Pysht Creek, where these logging operations are conducted by the Merrill & Ring people, or to get to the Milwaukee Road down to Deep Creek, 6 miles from Pysht. There are two propositions as offered; the railroad as built required a haul from Lake Pleasant down to Port Angeles of about 54 miles, 36 of which were coming down to Joyce and 18 miles from Joyce down to Port Angeles. In other words, a 56-mile haul was contemplated by the Siems-Carey-Kerbaugh Co. under this contract, under their railway contract and their spruce contract, whereas they could have gone in at an expense of \$300,000 to \$500,000 and gotten in 14 to 15 miles from Clallam Bay. I ask you if you have any knowledge—and I am asking purely for information—of logging operations, if logging operations are ordinarily conducted at a distance of 56 miles, here in the West?

Mr. BUTLER. That is an unusually long haul; most of the hauls are very much shorter than that.

Mr. FREAR. Here was to be a joint price arranged between the Milwaukee Road—which, however, is now under Government operation—and also this independent road which was being built by the Siems-Carey-Kerbaugh Co.: and the testimony of Mr. Lightner was that from actual freight under ordinary conditions when the Milwaukee makes this charge there would have been a saving of \$1 per thousand on every thousand feet of logs hauled down to Clallam Bay and rafted from there to the various mills, compared to the actual cost that was necessary in using this Siems-Carey-Kerbaugh road.

With those facts in mind, as the testimony thus far appears before the committee, what is your judgment about the necessity of this road?

Mr. BUTLER. There was absolutely no necessity; there was no necessity for it whatever. I want to emphasize in amplification of your question the fact that it is not denied that this road could have gone in from Clallam Bay and been 15 or 16 miles long, and what objection could there have been to constructing that road, in view of the fact that time is of the essence? It certainly would have taken less time to have built 16 or 20 miles than it would to have built 36 miles, building tunnels and cuts and I do not know what. In addition to that it must be recalled that after the logs got to Port Angeles, if they are objecting to towing, after the logs reached Port Angeles if it was possible to complete the terms of this contract and supply 250,000,000 feet of fitches, a great percentage of those logs after they reached Port Angeles would have to have been towed anyhow.

Mr. FREAR. Necessarily? These mills could only accommodate a portion, as I understand.

Mr. BUTLER. Absolutely.

Mr. FREAR. What about the necessity for building those mills that Siems-Carey Co. built?

Mr. BUTLER. Every mill on Puget Sound was running eight hours a day with a cutting capacity of 6,000,000 feet a day for the salt-water mills, and they could have been amplified two and one-half times by running 24 hours. It must be understood, again referring to the gentleman's communication, that 500,000,000 feet of logs for the Siems-Carey contract provision, 250,000,000 feet of flitches would require them to handle a great many more than 500,000,000 feet of logs in one year; they would have had to have handled 800,000,000 and perhaps a billion.

Mr. FREAR. And that was the output of your entire loggers' association under ordinary conditions?

Mr. BUTLER. Under ordinary conditions. I will give you another idea, if it has not occurred to you; the Siems-Carey contract in this whole proposition has been a dead weight on the Government spruce program in the Northwest. Instead of helping it has been a positive drawback. Months of time could have been saved, millions of dollars could have been saved. Another point we loggers want to know is why they did not get some spruce; eighteen months here, and no spruce. It is all very well to have an elaborate policy to get spruce 10 years from now, but the Government wanted spruce then.

Mr. MCGEE. How was it possible for the man in charge, with no experience in this business at all, in the face of all the facts you have suggested, with 400 mills with ample machinery and equipment on hand to supply the Government with all the spruce required, how was it possible to put through a proposition of this kind and the wasteful expenditures involved?

Mr. BUTLER. We loggers of Puget Sound are waiting for the answer. To our minds there is only one answer; an enterprise of this kind and the procedure of this kind could only have been possible through the conception and fostering care of some most potent political influence.

Mr. MCGEE. In other words, as I understand it, speaking plain English, the construction of the road and the wasteful expenditure it involved were done primarily for commercial considerations. Do you say that?

Mr. BUTLER. My opinion is that the production of spruce was not the primary object of this expenditure. I would like to amplify that by saying the primary object in the shortest possible time.

Mr. FREAR. Are you aware of the fact that it was a matter of general knowledge that the Milwaukee was seeking to get around to Grays Harbor?

Mr. BUTLER. Of course, they are over there and they want to develop that Peninsula, naturally.

Mr. FREAR. Was that a matter of common knowledge?

Mr. BUTLER. It was a matter of common knowledge that they had extended their line over there, and had further prepared plans for its amplification.

Mr. FREAR. Have you been over there and seen this?

Mr. BUTLER. I have been over there.

Mr. FREAR. To Clallam Bay and seen these various places?

Mr. BUTLER. Yes.

Mr. FREAR. Do you know where the Deep Creek route was planned?

Mr. BUTLER. Only in a general way. I have not been there sufficiently to testify to that.

Mr. FREAR. As to the question of distances, whether or not it is a fact that by the road by Crescent Lake and Pleasant Lake, down through Forks, as has been testified here, and shown on the maps, that it would make a short cut by some 32 miles or more?

Mr. BUTLER. Oh, yes; indeed.

Mr. FREAR. And if the Government could be brought into this plan to complete the road, a very expensive piece of road, it would be of value to-day, or after these operations are over, only to a railroad that could make use of that extension?

Mr. BUTLER. That is the only possible use I can see.

Mr. FREAR. Because of the fact that it would otherwise mean a 56 mile haul for logs?

Mr. BUTLER. Yes, sir.

Mr. FREAR. And whereas Mr. Lightner and others have testified they could not compete with the railroad shipping for Clallam Bay.

Mr. BUTLER. I would like to suggest something which might have been done. As the chairman has pointed out, 18 months have elapsed, and practically the program has not begun to unwind.

Mr. FREAR. That was up to September?

Mr. BUTLER. Up to September. The operations of the Siems-Carey contract required the use of a great many soldiers. Perhaps in a general way you might say the work could not have been done unless the soldiers had been furnished. In other words, this Government gave a contract to Siems-Carey on a cost plus basis, furnished all the money and then turned around and furnished all the men; and to find the men they had to go 3,000 miles down to New York and draft the men who could make an affidavit that he had never seen a spruce tree.

Mr. FREAR. A man who took charge of operations?

Mr. BUTLER. Yes. What could have been done when the spruce was not coming out was the Government could have canceled that contract, as it had a perfect right to do. Here was the logging industry waiting to go right in and do the work, and the Government itself could have built the railroad with soldiers as a Government work and it would not have had to pay anybody any profit, and to cover the point that you gentlemen raised, if it was a military road it could have been done without anything but military pay.

Mr. MAGEE. But, as I understand, you had your mills on the coast and you had your machinery. If the Government could not have made satisfactory arrangements with the mills it could have commandeered them. Why was it not possible, if the Government needed an increase in the amount of spruce, to have obtained that increase months, or perhaps more than a year, before the fall of 1918? Was that possible?

Mr. BUTLER. It was absolutely possible. All that was necessary would have been to encourage the extension of the activities of companies all ready headed into the belt. Now what happened in British Columbia? One gentleman walked up there, one military man walked up there and saw the loggers and told them what they wanted. They had no thousand officers.

Mr. FREAR. For Great Britain's supply?

Mr. BUTLER. Yes; they did not have any trouble. They turned it over to the industry, and with a small place like Canada with remote distances they got 35,000,000 feet of spruce.

Mr. MAGEE. Within what time?

Mr. BUTLER. Within 11 months. They left the industry just as they found it; it was not all torn to pieces.

Mr. FREAR. Your mills here in Oregon and Washington, according to the undisputed facts, produced 317,000,000 feet of spruce in 1916 and 1917. That is, that was all the commercial timber that had been brought out. What could have been done if the assistance had come to you and the money was offered in a case of this kind, in increasing additional hours, etc.?

Mr. BUTLER. We would have done all that experience and equipment and activity could possibly do.

(Thereupon, at 12.40 o'clock p. m., a recess was taken until 2 o'clock p. m.)

AFTER RECESS.

Mr. FREAR. Mr. Butler, I believe you mentioned McFee's name this morning?

Mr. BUTLER. Yes, sir.

Mr. FREAR. As the partner of Mr. Cobb?

Mr. BUTLER. An associate of Mr. Cobb's in this particular suggestion.

Mr. FREAR. This was the matter you referred to, was it?

Mr. BUTLER. Yes, sir.

Mr. FREAR. This is a copy of the letter, and you received this—

Mr. BUTLER. I got that from Mr. McFee's office. The original, no doubt, is in Portland.

Mr. FREAR. What is his business?

Mr. BUTLER. He is a railroad contractor.

Mr. FREAR. Mr. McFee is here

Mr. BUTLER. Yes, sir.

Mr. LEA. I haven't read the letter, but I presume it would be better to call the witness to testify instead of taking his letter. It would be the usual and ordinary way of doing. I never heard of this man's name before, and I do not know what the letter contains, but I would suggest that that is the orderly procedure.

Mr. FREAR. I have not an officer here, but I will see that he gets here to get Mr. McFee.

Mr. LEA. I might look this over.

Mr. FREAR. I will get him here in a few minutes if he is in town, and if he is in Portland I will have him there. There is no question but that letter came from his office.

(Mr. Lea examines letter.)

Mr. FREAR. You might read this letter, Mr. Butler. It is agreed that it will be accepted just for the purpose of showing what it contains. It is some proposition made by Mr. McFee to Mr. Hitchcock.

Mr. LEA. My suggestion that I made a moment ago, if the reporter has it, was based on a misapprehension of what the letter was.

Mr. FREAR. I take it there was no answer to that letter, was there?

Mr. BUTLER. Mr. McFee advised me that he never even had an acknowledgement of this.

Mr. FREAR. You might read it into the record. You know the materiality of it better than I do. Who is it addressed to?

Mr. BUTLER. It is addressed to Capt. Hitchcock, care of Col. Disque:

SEATTLE, WASH., February 7, 1918.

CAPTAIN HITCHCOCK,

Care of Col. Disque, Yeon Building, Portland, Oreg.

DEAR SIR: As requested by you in your office last week, I submit the following estimate of cost, etc., of delivering rived spruce at Clallam Bay.

Our approximate estimate of spruce delivered on cars at Seattle is \$85 per thousand. It might be that this is considerably high, however, we believe it is conservative and safe. We estimate that 40 days from the date of the signing of the contract we can be delivering some spruce in the water at Clallam Bay and this time would be required in preparing the present roads and building new roads; 30 days later than that we think we would be putting in 80,000 feet per day and probably could increase the output above that as the work developed.

We are ready to start in and crown this work as fast as possible at once and pay our bills, and for all money paid out each month we will be reimbursed the following month, plus 7 per cent for our profit, assuming that the Government will furnish what trucks are necessary and men to do the work. We would, of course, use a certain number of experienced men we have, along with the men furnished by the Government.

You will recollect that in our conversation I told you that there was approximately 260,000,000 of spruce in this piece and that approximately between 45,000,000 and 50,000,000 would be suitable for aeroplane stock. I inclose herewith a map of Clallam County, showing where the spruce is located that we contemplate taking up.

This estimate is based on auto-truck transportation. By building a railroad up the Hoko the timber could be taken out much cheaper after the railroad was built by the heavy grades, and it would take six months to complete it. I understand that you are anxious to get quick delivery of this spruce.

If this plan seems favorable to you wire us here, and we will immediately come down and go into detail if you wish.

Yours, truly,

HENRY & McFEE.
By J. G. McFEE.

That is the letter to which there was no acknowledgment.

Mr. FREAR. Now, for the benefit of the members of the committee, who do not know the terms and their effect as distinctly as you do, will you please state, just briefly, what that contemplates; that is, what the proposition meant?

Mr. BUTLER. That contemplates the production of spruce, rived spruce, by auto-truck delivery. I am informed by Mr. McFEE, or he told me some time ago, that his plan contemplated trucking out on auto trucks to the Goodyear road and shipping it into Clallam Bay.

Mr. FREAR. That is near Clallam Bay?

Mr. BUTLER. Yes; this is right back—this is practically the same tract that we have been talking about.

Mr. FREAR. This is from that tract near Lake Pleasant, on north of Lake Pleasant?

Mr. BUTLER. Yes; up in that vicinity.

Mr. FREAR. Now, he made this proposition and there was no reply?

Mr. BUTLER. No reply.

Mr. FREAR. That was in February, 1918?

Mr. BUTLER. February, 1918. One of the advantages of this suggestion was that work could really have begun at once, as it involved only the building of 2 miles of wagon road. It contemplated trucking on 6 miles of county road already there, and the plan contem-

plated putting logs or planks longitudinally along the road and running the trucks on the planks.

Mr. FREAR. Who did you say Mr. McFee is?

Mr. BUTLER. He is an experienced railroad contractor, of strong financial responsibility and large experience.

Mr. FREAR. He lives here in Seattle?

Mr. BUTLER. He lives here in Seattle.

Mr. FREAR. And has for how many years?

Mr. BUTLER. He was with the firm of Shepherd & Henry; he was with them as a boy, when they built the Great Northern Railroad, and he has done a good deal of railroad work, I think, for the Milwaukee road. I have here the certified copy of a real and chattel mortgage executed by Siems-Carey, H. S. Kerbaugh Corporation.

Mr. FREAR. That was the one referred to this morning?

Mr. BUTLER. Yes, sir.

Mr. FREAR. I will offer that in evidence and have it set out in full in the record.

(Document received in evidence and marked Exhibit O-Butler.)

76824

Indexed File No. 3.

REAL AND CHATTEL MORTGAGE.

This indenture, made and entered into this 20th day of June, 1918, by and between Siems, Carey-H. S. Kerbaugh Corporation, incorporated under the laws of the State of Maine (hereinafter called the mortgagor), of the one part, and Newton D. Baker, Secretary of War of the United States of America, as trustee, on behalf of the United States of America (hereinafter called the trustee), of the other part,

Witnesseth, that the mortgagor for and in consideration of the sum of \$6,000,000 to it paid (or to be paid), by the United States of America, does by these presents grant, bargain, sell, convey, and confirm unto Newton D. Baker, Secretary of War of the United States of America, and his successors as trustee, on behalf of the United States of America, and his or their assigns, all property purchased by it in the performance, or in connection with the performance, of its contract with the United States of America, approved by the Hon. John D. Ryan, May 28, 1918, relating to the production of spruce fitches, both real and personal (including, without limiting the generality of the foregoing, licenses to cut timber, easements and contract and property rights of any nature whatsoever), whether now owned or hereafter acquired by the mortgagor, together with all and singular the tenements, hereditaments, and appurtenances thereto, to have and to hold to the use of the trustee, his successors and assigns, forever, but upon trust to secure the payment of \$6,000,000, together with interest thereon at the rate of 6 per cent per annum from date until paid, according to the terms and conditions of a certain demand note, of even date herewith, made by the mortgagor, payable to the order of the Secretary of War on behalf of the United States of America, with interest at the rate of 6 per cent per annum from date until paid, and these presents shall be void if such payment shall be made according to the terms and conditions of said note.

And the mortgagor, for itself, its successors and assigns, doth covenant with the trustee, his successors and assigns, as follows:

1. To pay the said principal and interest in accordance with the terms of the said demand note.

2. To keep the buildings now or hereafter erected on the premises herein mortgaged, reasonably insured in so far as the mortgagor may be able by the use of reasonable diligence and efforts to insure the same, and to have the interest of the trustee in said property under this mortgage, noted on all policies of insurance.

3. To pay all taxes and assessments which may be assessed or levied or imposed upon the said property within at least 30 days after the same become due or payable, and to produce on request of the trustee, the receipts for such payments.

4. To keep all buildings, machinery, plant, and railroads on the said property in good and substantial working order and repair.

5. Not to place any lien or encumbrance on, nor suffer any lien or encumbrance to be placed on any of said property (excepting purchase money, mortgages, or encumbrances).

6. And in the event of any failure to effect and pay for such insurance or to pay such taxes and assessments, as aforesaid, or to keep the buildings in substantial repair, as aforesaid, that then, and in either or any such event, the said trustee or his successors or assigns may effect and pay for such insurance and pay such taxes and assessments and put such buildings in good and substantial repair, and the sum or sums so paid shall be deemed a part of the principal debt hereby secured and shall bear interest at the same rate, and the same shall be immediately due and payable and collectible with, and in the same manner as the said principal debt.

And further, that the mortgagor, its successors and assigns, shall from time to time, and as and when additional properties in substantial amounts shall have been acquired by it, and at any time on request of the trustee or his representatives or of any person deriving title thereunder, execute and do all such assurances, supplemental mortgages, deeds, and things for further or more perfectly assuring to the trustee, his successor, and assigns, the said property hereby mortgaged and as may be necessary or required to carry out the intention of this instrument that all property, both real and personal (including licenses to cut timber, easements, and contract, and property rights of any nature whatsoever), whether now owned or hereafter acquired by the mortgagor, shall be mortgaged to the trustee, his successors, and assigns, to secure the payment of the said demand note above mentioned.

In case default shall be made in the payment of the principal or interest of the said demand note or any part thereof when the same shall become due and payable according to the terms thereof, or in the performance of any covenant herein contained to be performed by the mortgagor, then the trustee, his successors, and assigns, is hereby empowered to sell the said property or any part thereof, with all and every of the appurtenances or any part thereof, in the manner prescribed by law, and out of the money arising from such sale to retain the whole of said principal and interest, whether the same shall be then due or not, together with the costs and charges of making such sale, and the overplus, if any there be, shall be paid by the party making such sale, on demand, to the said mortgagor, its successors and assigns.

Nothing herein contained shall be construed to prevent or interfere with the mortgagor performing its contract with the United States, approved May 28, 1918, as aforesaid, and doing of all things necessary to that end.

In the event that the said Newton D. Baker, or any successor trustee hereunder, shall at any time prior to the discharge of this mortgage, cease to be the Secretary of War of the United States of America, he shall thereupon be deemed to have resigned as trustee hereunder, and his successor in office as such Secretary of War shall become and be the trustee hereunder and shall, without further deed or instrument, succeed to, and be vested with, all of the right, title, and interest of the retiring trustee in and to the property hereby mortgaged and all of the right, power, and authority of the retiring trustee to enforce the security of this mortgage to the same extent as though he had been specifically named herein as such trustee.

In witness whereof the mortgagor, the said Siems, Carey-H. S. Kerbaugh Corporation has caused its corporate name to be hereunto subscribed and its corporate seal to be hereunto affixed by its president and assistant secretary in triplicate original on the day and year first above written.

[SEAL.]

SIEMS, CAREY-H. S. KERBAUGH CORPORATION,
By C. P. SIEMS, *President*.
JOS. F. HOFFMAN, *Assistant Secretary*.

Signed, sealed and delivered in presence of:
W. E. HANNA.

STATE OF NEW YORK,
County of New York, ss:

I, William E. Hanna, notary public in and for the State of New York, county of New York, do hereby certify that on this 20th day of June, A. D. 1918, before me personally appeared C. P. Siems and Joseph F. Hoffman, to me known to be the president and assistant secretary, respectively, of the Siems,

Carey-H. S. Kerbaugh Corporation, the mortgagor that executed the within and foregoing instrument, and acknowledged the said instrument to be the free and voluntary act and deed of said corporation, for the uses and purposes therein mentioned, and on oath stated that they were authorized to execute said instrument and that the seal affixed is the corporate seal of said corporation.

In witness whereof I have hereunto set my hand and affixed my official seal the day and year first above written.

[SEAL.]

W. E. HANNA,
Notary Public, Kings County, No. 5.

Certificate filed in New York Co., No. 18.

[Form 2. No. 73616—Series B.]

STATE OF NEW YORK,
County of New York, ss:

I, William F. Schneider, clerk of the county of New York, and also clerk of the supreme court for the said county, the same being a court of record, do hereby certify that W. E. Hanna, whose name is subscribed to the deposition or certificate of the proof or acknowledgement of the annexed instrument and thereon written, was at the time of taking such deposition or proof and acknowledgement a notary public acting in and for the said county, duly commissioned and sworn, and authorized by the laws of said State to take depositions and also acknowledgments and proofs of deeds or conveyances for land, tenements, or hereditaments in said State of New York. That there is on file in the clerk's office of the county of New York a certified copy of his appointment and qualification as notary public of the county of Kings with his autograph signature. And further, that I am well acquainted with the handwriting of such notary public and verily believe that the signature to said deposition or certificate of proof or acknowledgment is genuine.

In testimony whereof I have hereunto set my hand and affixed the seal of the said court and county this 21st day of June, 1918.

[SEAL.]

WM. F. SCHNEIDER,
Clerk.

STATE OF NEW YORK,
County of New York, ss:

C. P. Siems and Joseph F. Hoffman, president and assistant secretary, respectively, of the Siems, Carey-H. S. Kerbaugh Corporation, the mortgagor in the foregoing mortgage named, being first duly sworn on oath depose and say that the foregoing mortgage is made in good faith and without any design to hinder, delay, or defraud creditors.

C. P. SIEMS.
JOS. F. HOFFMAN.

Subscribed and sworn to before me this 20th day of June, 1918.

[SEAL.]

W. E. HANNA.

Filed for record by W. B. Stratton, June 28, 1918, at 8:30 a. m.

J. W. WARREN, *Auditor*,
By R. D. McLAUGHLIN, *Deputy*.

STATE OF WASHINGTON,
County of Clallam, ss:

I, R. D. McLaughlin, deputy auditor of Clallam County, State of Washington, do hereby certify that the within and foregoing is a full, true and correct copy of a real and chattel mortgage from Siems, Carey-H. S. Kerbaugh Corporation to Newton D. Baker, trustee, as the same appears of record and file in this office.

Witness my hand and official seal this 21st day of August, 1918.

[SEAL.]

R. D. McLAUGHLIN,
Deputy Auditor of Clallam County, Wash.

Mr. FREAR. This purports to be a real and chattel mortgage, according to its title. The portion that we care to specifically mention reads as follows:

This indenture, made and entered into this 20th day of June, 1918, by and between Siems, Carey-H. S. Kerbaugh Corporation, incorporated under the laws of the State of Maine (hereafter called the mortgagor), of the one part, and Newton D. Baker, Secretary of War, of the United States of America, as trustee, on behalf of the United States of America (hereinafter called the trustee), of the other part,

Witnesseth, that the mortgagor, for and in consideration of the sum of \$6,000,000 to it paid (or to be paid) by the United States of America, does by these presents grant, bargain, sell, convey, and confirm unto Newton D. Baker, Secretary of War of the United States of America, and his successors as trustee, on behalf of the United States of America, and his or their assigns, all property purchased by it in the performance, or in connection with the performance, of its contract with the United States of America, approved by the Hon. John D. Ryan May 28, 1918, relating to the production of spruce fitches, both real and personal (including, without limiting the generality of the foregoing, licenses to cut timber, easements, and contract and property rights of any nature whatsoever), whether now owned or hereafter acquired by the mortgagor, together with all and singular the tenements, hereditaments, and appurtenances thereto, to have and to hold to the use of the trustee, his successors and assigns forever, but upon trust to secure the payment of \$6,000,000, together with interest thereon, at the rate of 6 per cent per annum from date until paid, according to the terms and conditions of a certain demand note of even date herewith, made by the mortgagor, payable to the order of the Secretary of War on behalf of the United States of America, with interest at the rate of 6 per cent per annum from date until paid, and these presents shall be void if such payment shall be made according to the terms and conditions of said note.

I will pass over the following provisions, which seem similar to those ordinarily found in mortgages, to the last provision, which reads:

Nothing herein contained shall be construed to prevent or interfere with the mortgagor performing its contract with the United States, approved May 28, 1918, as aforesaid, and doing of all things necessary to that end.

In the event that the said Newton D. Baker, or any successor trustee hereunder, shall at any time prior to the discharge of this mortgage cease to be the Secretary of War of the United States of America, he shall thereupon be deemed to have resigned as trustee hereunder and his successor in office as such

Secretary of War shall become and be the trustee hereunder and shall, without further deed or instrument, succeed to and be vested with all of the right, title, and interest of the retiring trustee in and to the property hereby mortgaged, and all of the right, power, and authority of the retiring trustee to enforce the security of this mortgage to the same extent as though he had been specifically named herein as such trustee.

In witness whereof the mortgagor, the said Siems, Carey-H. S. Kerbaugh Corporation has caused its corporate name to be hereunto subscribed and its corporate seal to be hereunto affixed by its president and assistant secretary in triplicate original on the day and yeard first above written.

It is certified by R. D. McLaughlin, deputy auditor of Clallam County, Wash., and appears in proper form. That is the mortgage of which you were speaking this morning?

Mr. BUTLER. That is a direct mortgage given to secure the payment of a specific obligation. It has nothing to do, as I read it, with the performance of this contract.

Mr. FREAR. I understand that there is a supplemental agreement of some kind which provides for the advance payment. I presume this mortgage was given to secure those advance payments?

Mr. BUTLER. Yes.

Mr. FREAR. Have you anything further to suggest to the committee, Mr. Butler, that occurs to you, before concluding?

Mr. BUTLER. The only thing I would like to suggest again would be to reiterate the situation which existed in the industry. Everybody, even official representatives of the Spruce Corporation, agreed that in their judgment, as experienced lumbermen, there was no need nor necessity for the construction of the mills.

Mr. FREAR. That is, the two mills?

Mr. BUTLER. The two mills that were built.

Mr. FREAR. At Port Angeles and Lake Pleasant?

Mr. BUTLER. At Port Angeles and Lake Pleasant. Speaking for the loggers, the individual loggers who have no mill connection, we want to say that the antagonism against the bringing in of this additional machinery was quite as unanimous as it was on the part of the mill men to build these two additional mills, and at all times there was enough logging machinery and enough mills to provide for any wants the Government might have.

Mr. BUTLER. The mill men—

Mr. FREAR. What disposition did the mill men show toward complying with any requests, as far as brought to your attention?

Mr. FREAR. By the Government?

Mr. BUTLER. Had been ready, willing, and anxious, as far as I understand, to hold up the hands of the Government in every way. The only point that I want to make a distinction on is the fact that as mill men their antagonism may have stopped, as opposed to this Siems-Carey contract, when their interest stopped. When their interest as mill men stopped the opposition was transferred to the loggers, because they were threatened from the other end. So that the loggers, for which I have the honor to speak, were just as much opposed and just as unanimous in opposition to all this duplication of machinery as the mill men could possibly have been toward the construction of two additional mills. So that if a man who was a mill man—we as loggers do not quite understand why his antagonism should have stopped after the construction of the mills. Why should not it be general enough to include the interests of the

loggers who were threatened? Now, I take it that your opposition to the attitude, which was also expressed by Disque, according to the statement in his letter about overflowing the district with machinery, was not a selfish opposition at all, as you have indicated, but because of the conditions which would be invited by such action, and that you have evidenced your own desires and your own purposes through the taking of the contract for the logging of the Blodgett tract, without any recompense, and also your proposition to take up the general logging that the Siems-Carey Co. were expecting to undertake?

Mr. BUTLER. Exactly.

Mr. FREAR. Without any opposition whatsoever?

Mr. BUTLER. Exactly.

Mr. FREAR. And that was the proposition that you presented.

Mr. BUTLER. Exactly.

Mr. FREAR. In a general way, and I ask you from your experience and your knowledge of the business for so many years, what do you say of the method of procedure that was adopted in trying to secure the cooperation of the loggers and the manufacturing interests by those who were out here representing the Government at that time?

Mr. BUTLER. Well, apparently there was a desire to cooperate or to have the industry cooperate, but when it got to the point of actually doing something, why the relationship developed into one of indifference. They couldn't get anywhere.

Mr. FREAR. Where was the evidence of a desire to cooperate?

Mr. BUTLER. Every logger—

Mr. FREAR. I mean on the part of those representing the Government.

Mr. BUTLER. Perhaps I misunderstood your statement.

Mr. FREAR. Yes. I am referring now to those who were at Portland who represented the Government in this spruce production corporation, of whom you have spoken several times as the "Government"?

Mr. BUTLER. There was no evidence at any time of fair and hearty cooperation in Col. Disque's office with the loggers associated with the Loggers' Information Bureau here, representing the big end of the industry on Puget Sound. That is, so far as I am aware.

Mr. FREAR. I do not know whether I have asked you, Mr. Butler, about the building of railroads. You have been, I believe, a practical logger, that is, I mean you have had interests in practical logging, you have paid the bills and all that for the parties you have intimated in the past.

Mr. BUTLER. Yes.

Mr. FREAR. And built how many miles of railroad, or what number of miles have you built?

Mr. BUTLER. Well, I have built many miles. I suppose it must be hundreds in the 20 years I have been in business.

Mr. FREAR. You haven't anything over there on the —

Mr. BUTLER. No operation in Clallam County.

Mr. FREAR. Whereabouts have these roads been built?

Mr. BUTLER. Snohomish and Skagit.

Mr. FREAR. That is in this neighborhood?

Mr. BUTLER. Snohomish County and Skagit County, the two counties immediately north of King County.

Mr. FREAR. That is in the State of Washington?

Mr. BUTLER. Yes, sir.

Mr. FREAR. What is the general formation of the ground there; that is, how does it compare with the country in Clallam County?

Mr. BUTLER. The usual logging ground, flat valley with side hills and rolling country, and finally going up higher and steeper as you get back.

Mr. FREAR. What kind of timber?

Mr. BUTLER. The usual stand—fir, cedar, and hemlock.

Mr. FREAR. The same size as the fir found over in Clallam County?

Mr. BUTLER. The spruce in Clallam County is rather larger than the general timber we have here, but we use our heavy machinery here and our heavy locomotives just the same. We use the same heavy equipment as over there.

Mr. FREAR. Your equipment and rails——

Mr. BUTLER. Would be identical.

Mr. FREAR. What was the average cost, in a general way, of your railways prior to the war, prior to the year 1918, I mean?

Mr. BUTLER. Oh, sometimes as low as ten or eleven thousand dollars a mile. We never built anything at any time at more than \$15,000 a mile.

Mr. FREAR. What kind of rails did you put in?

Mr. BUTLER. We used invariably 60 pound.

Mr. FREAR. Sixty-pound rails?

Mr. BUTLER. Yes, sir.

Mr. FREAR. What size locomotives did they carry?

Mr. BUTLER. Well, our largest locomotive is 90 pounds.

Mr. FREAR. And that was sufficient to answer all the purposes there for how many years?

Mr. BUTLER. Well, we are gradually getting heavier machinery, of course, year after year; but the rails are still serving their purpose; that is, the weight rail. There has been no necessity for a change.

Mr. FREAR. For a change of rail?

Mr. BUTLER. For a change of rail yet.

Mr. FREAR. Did you build anything in 1918?

Mr. BUTLER. Our construction in 1918 is included in the statement, the composite statement, which was filed here by Mr. Chinn. We were one of the companies that reported.

Mr. FREAR. What is the largest amount that you can tell for railway that was built?

Mr. BUTLER. We never in all my experience, I never had any costing more than \$15,000 a mile.

Mr. FREAR. That is, in your experience with your logging companies?

Mr. BUTLER. Yes, sir.

Mr. FREAR. Is there anything else that you think of that I have overlooked?

Mr. BUTLER. I do not think so.

Mr. LEA. How long have you resided in Washington?

Mr. BUTLER. Since 1892.

Mr. LEA. Were you engaged in any logging operation before you came to the Pacific Coast?

Mr. BUTLER. Not as a logger.

Mr. LEA. How long were you as a logger engaged in logging operations on the Pacific coast?

Mr. BUTLER. I have been connected with logging operations ever since—within two or three years after I came here I began to do a little work.

Mr. LEA. You began to personally do logging, did you?

Mr. BUTLER. I did not personally log; no, sir.

Mr. LEA. Didn't you ever do any logging yourself?

Mr. BUTLER. If you mean with my hands; no, sir.

Mr. LEA. Or superintend the logging operations?

Mr. BUTLER. I always superintend them.

Mr. LEA. Actively in the woods?

Mr. BUTLER. Yes, sir; as manager for companies, treasurer and manager.

Mr. LEA. So actual logging operations, you never carried on any in your life?

Mr. BUTLER. No, sir; I am not a lumberjack, if that is what you mean.

Mr. LEA. If you were going to take this contract from the Government, were you intending to do the logging yourself or get somebody else to do it?

Mr. BUTLER. I could do it, but I intended to have my organization do it.

Mr. LEA. You would have gotten a practical man to do it, would you not?

Mr. BUTLER. I already had the practical men.

Mr. LEA. Do you know of any reason why, if Siems-Carey secured this contract, or as they did have it, why they could not also procure practical men the same as you could, without doing it themselves, personally?

Mr. BUTLER. Exactly; that is exactly what I testified. They did get the practical men and began bidding up the labor. They did not create them. We have educated our men.

Mr. LEA. I may have misunderstood you, but I understood you to criticize letting the contract to them because they personally were not loggers?

Mr. BUTLER. That is one reason; yes, sir.

Mr. LEA. But you yourself are not a logger.

Mr. BUTLER. Well, in the narrowest sense, perhaps not, but when a man is in business 20 years he is presumably a logging operator. Perhaps that is better.

Mr. LEA. You are a financier of logging operations, but not a logger?

Mr. BUTLER. Well, I suppose I will have to accept—

Mr. LEA. So Siems-Carey had the same opportunity that you had to hire practical men?

Mr. BUTLER. Except that I had 20 years' experience behind me in this particular business.

Mr. LEA. If this organization with which you were affiliated had secured this contract what part of its work did you expect to perform?

Mr. BUTLER. I presume if the association had taken the contract that we would have each subscribed the necessary machinery to an amount large enough to handle the contract. If it was 10 per cent each of us would have subscribed 10 per cent, if possible.

Mr. LEA. That was to be your only connection with the operation?

Mr. BUTLER. No; I expected to be connected with it. The Aircraft Lumber Co.—I was chairman of the executive committee and looked after it. I expected to do the same with this.

Mr. LEA. What was your position with the company organized—for the purpose of carrying on this work?

Mr. BUTLER. What do you mean?

Mr. LEA. The Airplane Co.

Mr. BUTLER. The Aircraft Co. I was on the executive committee; I think I was chairman of it.

Mr. LEA. You had no position carrying compensation on that organization?

Mr. BUTLER. No, sir.

Mr. LEA. Who was going to finance that corporation?

Mr. BUTLER. What corporation?

Mr. LEA. The Aircraft Co.

Mr. BUTLER. Why, we had \$100,000 which we had subscribed and were going to put in, and we assumed that would finance it.

Mr. LEA. Was any of that paid up?

Mr. BUTLER. It was subject to call. I think 25 per cent was paid up; yes, sir.

Mr. LEA. But only \$25,000 had been paid up for handling a \$25,000,000 contract?

Mr. BUTLER. Yes.

Mr. LEA. The Aircraft Lumber Co. wasn't going to take over the Siems-Carey contract, they only proposed to take over the logging.

Mr. BUTLER. No; the Aircraft Lumber Co. was organized to operate in the Blodgett tract, and that is the end of their activities.

Mr. LEA. What I referred to was with reference to the logging operation up here. Was any company organized for the purpose of carrying on logging operations on the peninsula?

Mr. BUTLER. No, sir. By these interests?

Mr. LEA. Yes.

Mr. BUTLER. No, sir.

Mr. LEA. You had never gotten that far with the effort?

Mr. BUTLER. It was such—if you will refer to the telegram of Col. Disque, it was such that one corporation was formed. That was one of the impracticable suggestions; it was not possible and it was not necessary.

Mr. LEA. Now, you were on the executive committee of the company which was going to do the logging in the Blodgett tract?

Mr. BUTLER. Yes, sir.

Mr. LEA. And that was to be selective logging, was it?

Mr. BUTLER. Yes, sir.

Mr. LEA. What did you think about the practicability of selective logging?

Mr. BUTLER. I didn't think very highly of it, but we were perfectly willing to do the best we could.

Mr. LEA. You thought that was not the right way to do it?

Mr. BUTLER. That was what they wanted done, and we were ready to try it.

Mr. LEA. What in your judgment was the way to do it, if you had followed your own judgment about it?

Mr. BUTLER. If we had followed our own judgment, we would have logged the land clean.

Mr. LEA. Now, I understood you to say that a donkey engine—is it, that could take out about 25,000 feet of logs a day?

Mr. BUTLER. No.

Mr. LEA. What amount did you state?

Mr. BUTLER. No. I said that we figured on—we were going to put in—we were equipping the Aircraft Lumber Co. to put in 10,000,000 feet of logs per month, and that to do that work we were providing 21 logging engines. That would mean that each logging engine would have to put in about 500,000 feet a month. Figuring a month is 25 days—working days—it would give a daily output for each logging engine in selective logging 20,000 feet.

Mr. LEA. Twenty thousand feet per engine?

Mr. BUTLER. We figured that that was a safe computation.

Mr. LEA. And who had charge of the construction of the Alsea Railway?

Mr. BUTLER. The Warren Spruce Co. had on a cost-plus operation.

Mr. LEA. It was to be completed by the 1st of October?

Mr. BUTLER. I think that is according to the terms of the contract; yes, sir—our contract.

Mr. LEA. Did you deliver any spruce logs to the Government during the war?

Mr. BUTLER. I think we delivered some spruce logs—not to the Government; we delivered all the spruce logs we had, on their directions, I think, to the Anacortes Lumber & Box Co.

Mr. LEA. For what purpose; was that for airplanes or other work?

Mr. BUTLER. We don't know.

Mr. LEA. And what quantity did you deliver?

Mr. BUTLER. In our operations, as I have previously testified, spruce was incidental, a very small amount. Our operations were very largely in the long timber for shipbuilding.

Mr. LEA. And you are not able to state any figures as to what you did deliver during the whole war?

Mr. BUTLER. Of logs?

Mr. LEA. Of spruce.

Mr. BUTLER. Spruce?

Mr. LEA. Yes.

Mr. BUTLER. No, sir. It is a very small amount.

Mr. LEA. The Government was willing to take all that you would deliver, weren't they?

Mr. BUTLER. The Government took nothing. We delivered—

Mr. LEA. The Spruce Production Corporation?

Mr. BUTLER. The mills took the logs.

Mr. LEA. Yes. Any operator or any logger that had a log that was suitable for this purpose could sell during the war?

Mr. BUTLER. Of course.

Mr. LEA. All that was produced?

Mr. BUTLER. Absolutely.

Mr. LEA. So that no man was handicapped from doing all that he wanted to do and was able to do during the war?

Mr. BUTLER. No, sir; that is, until the forces began to be disorganized, that is quite true.

Mr. LEA. Well, the forces began to be disorganized at the time of the trouble in 1917, didn't they?

Mr. BUTLER. Well, they had been disorganized, but they were getting together in pretty good shape again.

Mr. LEA. Did your capacity increase or decrease after that date?

Mr. BUTLER. At what date?

Mr. LEA. Of the mills, did the capacity to produce spruce increase or decrease after 1917, say August, 1917?

Mr. BUTLER. After August, 1917?

Mr. LEA. Yes.

Mr. BUTLER. In August, 1917, they had the I. W. W. troubles, and after that, just about the time the strike was adjusted and things were beginning to run again, this spruce corporation became active and we had the eight-hour day put in. When the eight-hour day went in, of course the production was reduced.

Mr. LEA. After this Spruce Production Corporation was organized, did the production of spruce increase or decrease?

Mr. BUTLER. I think it probably increased, due to the stimulation of the higher price.

Mr. LEA. It did increase?

Mr. BUTLER. Yes, sir; naturally increased.

Mr. LEA. And it increased 500 per cent, didn't it?

Mr. BUTLER. If it started with nothing and went to 400, it was 400 per cent.

Mr. LEA. From the time this organization went into the field. If the loggers were not increasing more, who was giving the increased product?

Mr. BUTLER. The loggers, you understand, the spruce—the production of spruce—until this airplane demand sprung up, the production of spruce was purely incidental.

Mr. LEA. That is correct.

Mr. BUTLER. The logging of spruce was not a real business. When there was a market for these logs stimulated, by the high price which the Government was offering quite irrespective of other foreign governments, were offering high prices for spruce, naturally every logger who had spruce immediately began to develop and go into his spruce to market it. That was a general condition which affected every logger, not only in Oregon, but just as well in British Columbia as well.

Mr. LEA. Well, every logger had that inducement, didn't he, to produce more?

Mr. BUTLER. Yes, sir.

Mr. LEA. And he availed himself of it as best he could?

Mr. BUTLER. Yes, sir.

Mr. LEA. Now, as I understand it—has a settlement been made with the Aircraft Corporation?

Mr. BUTLER. My understanding is it has.

Mr. LEA. And what was the total amount paid?

Mr. BUTLER. I think that the accounts were balanced on the basis of the payment and receipt of \$90,000.

Mr. LEA. Your company accepted that payment?

Mr. BUTLER. That is the statement that Mr. Frost issued to us, I think.

Mr. LEA. Did your company actually deliver any logs to the Government during the war?

Mr. BUTLER. Since we could not get on the ground, through the failure of the Warren Spruce Co., to get it—deliver the road, we did not; no, sir.

Mr. LEA. And you got \$90,000 without delivering anything to the Government?

Mr. BUTLER. Oh, we didn't—

Mr. LEA. I am not condemning that, but that is just the fact.

Mr. BUTLER. No; we didn't get anything. We didn't get anything except our bills paid.

Mr. LEA. You were reimbursed for what you paid out?

Mr. BUTLER. And the Government took the property.

Mr. LEA. In the expectation that you would deliver the goods, of course.

Mr. BUTLER. Oh, we didn't get any money. The Government paid the bills and took the property. The money that we had paid into the treasury of the company, after the bills of the company had been paid, the companies who subscribed were reimbursed the amount that had been called in on their subscription. the account was balanced and the incident was closed.

Mr. LEA. You anticipated that if you continued your contract, if the war had continued, that you would have assisted the Government in labor and materials for all that was expected to be paid you, didn't you?

Mr. BUTLER. As we were acting as direct Government agents, they were simply paying our bills; we were giving our services for nothing.

Mr. LEA. There was no financial injury to the Government then, in your transaction, was there?

Mr. BUTLER. No, sir.

Mr. LEA. That is what I mean. There was no injustice in it?

Mr. BUTLER. No, sir; I hope not.

Mr. LEA. Now, at the meeting of loggers at which Mr. Cobb took a part, what if anything did he say as to the method of Siems-Carey in following out their contract?

Mr. BUTLER. He said he thought they were building a good railroad.

Mr. LEA. Did he say whether he had seen it or not?

Mr. BUTLER. He said that he had seen it.

Mr. LEA. And how long since you have been up over that railroad?

Mr. BUTLER. The Siems-Carey Railroad?

Mr. LEA. Yes.

Mr. BUTLER. I have not been up over the Siems-Carey railroad.

Mr. LEA. Not at all?

Mr. BUTLER. No, sir.

Mr. LEA. Weren't you up there and examined the operation that Siems-Carey carried on?

Mr. BUTLER. No, sir.

Mr. LEA. Well, then, how are you qualified to come here and inform this committee as to the extravagances or competency of their operations?

Mr. BUTLER. Simply from the general knowledge of the conditions.

Mr. LEA. You mean the lack of knowledge, don't you?

Mr. BUTLER. No, sir.

Mr. LEA. How do you know the facts that would be of any information to this committee, without having seen or known what you were talking about?

Mr. FREAR. Let me interrupt here.

Mr. LEA. Let the witness answer.

Mr. FREAR. No; I want to interrupt here. That is not a fair question, because I asked the witness a question——

Mr. LEA. I will withdraw the question and ask another.

Mr. FREAR. I asked the witness this question. I asked him in what did the extravagance consist, and he mentioned it, and it was purely on the question of the difference in the cost of employees; he said it destroyed the labor market. And now you ask him a question and say "How do you know?" He told you, frankly, what he knew.

Mr. LEA. Isn't the witness able to answer for himself?

Mr. FREAR. Yes; he is, but you are misleading him—trying to.

Mr. LEA. I am not afraid of his being misled.

Mr. FREAR. Neither am I, very much, nor of any such attempt.

Mr. LEA. So, when you came here this morning and attempted to inform this committee that Siems-Carey and Kerbaugh conducted their operations in an expensive, wasteful, and extravagant manner, you did so without ever having seen what they had done, or without any opportunity of any personal observation of the matters concerning which you testified, so far as the acts were concerned.

Mr. FREAR. That is what you did say, in substance, and the exact statement that you made to the counsel or to the committee when that question was asked you on the direct examination.

Mr. LEA. I did not so understand. I thought he was talking about something he knew what he was talking about.

Mr. FREAR. No; he gave his statement about it. He knows more than you or I on this subject.

Mr. BUTLER. I would like to answer the question. I have sat here three or four days and I have listened to the cost of constructing railroads. The testimony in this case that that railroad cost \$113,000 a mile is the answer.

Mr. LEA. Well, now, suppose you give us the answer to the question that was presented to you.

Mr. BUTLER. What is the question, sir?

(Question read by the stenographer.)

Mr. BUTLER. I know of the acts here in the labor market, I knew all about those.

Mr. LEA. Well, about the operations up there?

Mr. BUTLER. Mr.——

Mr. LEA. We just want to be candid.

Mr. BUTLER. I want to be candid with you, Mr. Lea. These operations were not secretive. This is an open country. There are means of travel and communication, people are going and coming every

day. What was going on over there was common knowledge; it was street-corner—the extravagance—the wild extravagance was street-corner gossip.

Mr. LEA. Here is what I am asking, Mr. Butler: This committee, if it can ever be helped in ascertaining the facts, must rely upon the testimony of those who can testify to what they know. Now, what good does it do our committee, in the way of information, for a witness to come in here and base his suggestions upon common rumor? If that is common knowledge, there are, presumably, witnesses who are capable of testifying to the facts. Now, I simply wanted to have it in the record—the extent of your knowledge, and, of course, your opinion or conclusion from that is another matter.

Mr. BUTLER. I very carefully said, I think, that I had not been there.

Mr. LEA. Well, then we understand each other.

Mr. FREAR. Did you want further to amplify your answer there?

Mr. BUTLER. Not at present, sir.

Mr. LEA. Did you have any arrangement to finance any of the loggers who proposed to take over the work on the peninsula?

Mr. BUTLER. It didn't come to that; no, sir. The question hadn't yet arisen.

Mr. LEA. Did you expect to finance any of those loggers?

Mr. BUTLER. I didn't think that was in the problem at all; no, sir.

Mr. LEA. You didn't expect to furnish them any finances to carry on the operations?

Mr. BUTLER. No, sir. Most of them were amply able to carry them on without the slightest effort.

Mr. LEA. They didn't require any advancements from the Government to carry on the operations with their own machinery?

Mr. BUTLER. No; not in the last analysis; no, sir.

Mr. LEA. Mr. Frost was associated with the Oregon proposition, wasn't he?

Mr. BUTLER. Yes, sir.

Mr. LEA. And what salary was Mr. Frost to get in the Oregon operations?

Mr. BUTLER. \$12,000 a year.

Mr. LEA. A thousand dollars a month. That was the Mr. Frost who testified here that he was doing that work as a labor of love, or something to that effect, wasn't it?

Mr. BUTLER. Well, his efforts were being conducted—

Mr. LEA. Doing it as a matter of patriotism.

Mr. BUTLER. May I amplify the reply?

Mr. FREAR. Surely; go on.

Mr. BUTLER. These operations—most of these companies—practically all of the companies who joined in that operation were companies more or less prosperous. The individuals who owned the companies were not particularly, in the last analysis, dependent on their income from these particular operations. Mr. Frost was not in that category. Mr. Frost has to have a salary, and it would be unfair to Mr. Frost to ask him to leave his company and his salary and go down there and serve the Government without compensation. The compensation as fixed was considered modest and moderate, in view of the qualifications of Mr. Frost to do the work.

Mr. LEA. I have no fault to find with that. I do not want to be understood otherwise. I think it is a better policy for a man to be well paid for what he does, in any line. Mr. Frost was competent—

Mr. BUTLER. I don't think it is fair to Mr. Frost, after the splendid part that he has played, to have any aspersion of any kind cast on his motives in this matter.

Mr. LEA. Now, this 10 per cent and 25 per cent that was proposed to be paid to the loggers was based—the 10 per cent rental was simply on the value of their equipment, wasn't it?

Mr. BUTLER. Yes, sir.

Mr. LEA. And the 15 per cent depreciation was simply on the value of the equipment?

Mr. BUTLER. Yes, sir.

Mr. LEA. Was the question of a nonessential enterprise of industry during the war—did that proposition affect your company at all?

Mr. BUTLER. No, sir; that hadn't come up at the time. If there were any such plans by the spruce board, they hadn't been manifest at the time the Aircraft was formed, as far as I am aware of.

Mr. LEA. There was not any expectation on your part that you would be prevented from working on account of conducting a non-essential enterprise?

Mr. BUTLER. No, sir; so far as I know. It didn't influence my motive.

Mr. LEA. You were engaged in the lumber industry right through the war?

Mr. BUTLER. Yes, sir.

Mr. LEA. Now, the Spruce Production Corporation board of directors contained a number of men who are practical mill and logging men, didn't it?

Mr. BUTLER. Yes, sir.

Mr. LEA. And do you know whether Col. Disque, during the progress of his work out here, consulted with practical men and loggers and advised with them?

Mr. BUTLER. I hope that he did; but in this particular—in the one, the real—the one real activity, apparently he did not, because Mr. Donovan has testified that he did not approve. I saw by the press that Mr. Mark Reed in an interview said he was entirely opposed. So that in this particular matter they did not approve of it.

Mr. LEA. Do you know whether he did—you, of course, don't know whether he consulted with others or not?

Mr. BUTLER. No, sir.

Mr. LEA. When did you first learn of the Siems-Carey contract?

Mr. BUTLER. When it was made public in the press.

Mr. LEA. Do you remember about what date that was?

Mr. BUTLER. Some time in June, I think, or July.

Mr. LEA. Now, as the matter finally developed, were the loggers willing to tent their outfits, or not?

Mr. BUTLER. In which operation?

Mr. LEA. In the peninsula operation?

Mr. BUTLER. They hadn't got that far—oh, perhaps—I didn't finish that story. After the loggers had voted in that second meeting not to take over the Siems-Carey contract or to do the logging in case the Siems-Carey contract was cancelled, there was another reso-

lution put through, in which the—I think the motion was made by Mr. Reed, that we tender our machinery and services to the Government again. That motion was passed.

Then, I think further, that a committee was appointed to see what loggers would furnish machinery to go into the Siems-Carey operations. That committee was formed of men not favorable to taking over the Siems-Carey contract, and what they did is mere hearsay; but I understand they didn't do anything.

Mr. LEA. Have you a copy of that resolution here?

Mr. BUTLER. I think so [examining papers]. "It was moved by Mr. Ives, seconded by Mr.——"

Mr. LEA. If I could just look at it a minute, please?

Mr. BUTLER. Yes; that last one. [Handing paper to Mr. Lea.]

Mr. LEA. This is a part of the minutes of the meeting?

Mr. BUTLER. This is a part of the minutes of the meeting; yes, sir.

Mr. LEA. Well, we will offer this in evidence; that is, we will see if it relates to this matter [examining paper].

Mr. BUTLER. I think it is already in.

Mr. LEA. I believe this resolution is not in. Who is Mr. Irving, whose name is signed to this?

Mr. BUTLER. Mr. Irving was the chairman of the meeting.

Mr. LEA. I would like to place in the record the "Minutes of general meeting of Puget Sound loggers, held September 27, 1918, 10.30 a. m.," etc., and just let the reporter copy it into the record.

Mr. FREAR. No objection, I think, on the part of any member of the committee; not on my part.

Mr. LEA. I don't think there is.

(The following is a copy of the minutes above referred to:)

MINUTES OF GENERAL MEETING OF PUGET SOUND LOGGERS HELD SEPTEMBER 27, 1918,
10.30 A. M., 726 L. C. SMITH BUILDING, SEATTLE.

Meeting was called to order by Joseph Irving; the following were present:

Maj. Eastman (Spruce Productive Division), Maj. Sawyer (Spruce Production Division), Mr. Chinn. Mr. Draham, Mr. Siler, Mr. Eddy, Mr. Webb, Mr. Bordeaux, Mr. Hopple, Mr. Stephens, Mr. T. D. Merrill, Mr. Anderson, Mr. Chapman, Mr. Lewis, Mr. Bridge, Mr. Butler, Mr. English, Mr. Donovan, Mr. McFadon, Mr. White, Mr. Duggan, Mr. Stetson, Mr. Brown, Mr. Merklejohn, Mr. Dempsey, Mr. Jerome, Mr. Bruce, Mr. Cobb, Mr. Grammer, Mr. Reed, Mr. A. F. McEwan, Mr. W. H. McEwan, Mr. Ephendahl, Mr. McCoy, Mr. Ives, Mr. Spencer, Mr. Warren (Snoqualmie Lumber Co.), Mr. Barker, Mr. Lightner, Mr. Johnson, and Mr. Holmes.

Chairman Irving read a communication from Col. Disque relative to the Siems-Carey, Kerbaugh Co. relinquishing that portion of their contract covering spruce logging in Clallam County, the logging to be done by those now engaged in logging in this section.

After extended discussion, motion was made by Mr. Ives that it was the sense of the meeting that the Siems-Carey, Kerbaugh Co. continue to build the railroad and do the logging as contracted, so that the progress of the work will not be disturbed. Mr. Webb offered as a substitute motion, which was seconded by Mr. Reed, that a standing vote be taken to indicate those who wished to participate in taking over the logging portion of the contract direct from the Government, which would involve construction of logging spurs and tracks. The vote stood affirmative 7, negative 15, not voting 19.

It was moved by Mr. Reed, seconded by Mr. Ives, that it was the sense of the meeting that those present are willing to have their equipment turned over to the Government on any equitable basis if it is found necessary. Carried.

It was moved by Mr. Ives, seconded by Mr. Eddy, that a committee of three be appointed to confer with the Siems-Carey, Kerbaugh Co., and Col. Disque, or his

representatives, as to their requirements in the line of equipment and ascertain from the Puget Sound loggers what equipment of this type is available and will be offered. The committee as appointed is Messrs. Webb, Eddy, and Ives.

There being no further business, the meeting adjourned.

(Signed)

JOSEPH IRVING.

Mr. LEA. Now, was any meeting held subsequent to this time in which this matter was discussed?

Mr. BUTLER. Not to my knowledge.

Mr. LEA. Do you know of any further resolution which was adopted by the loggers' association in reference to the work on the peninsula?

Mr. BUTLER. No, sir.

Mr. LEA. Now, was the equipment of these loggers offered to the Government pursuant to this resolution?

Mr. BUTLER. Well, that resolution has been passed 40 times and every time the loggers got together.

Mr. LEA. Was it offered to the Government?

Mr. BUTLER. It was made——

Mr. LEA. Or to the Spruce Production Corporation?

Mr. BUTLER. It was made in good faith. I don't know what the officers did pursuant to it.

Mr. LEA. As a matter of fact, wasn't it offered to the Government and it was arranged that the control of the equipment of the loggers would be taken by Siems-Carey in the performance of their contract?

Mr. BUTLER. Not to my knowledge. Certain no such arrangement covering any of our machinery.

Mr. LEA. Were not the loggers willing that that should be done—that such equipment as they could spare would be used in performing the Siems-Carey contract—wasn't that the understanding?

Mr. BUTLER. I knew of no such arrangement; no, sir.

Mr. LEA. That was agreeable to the loggers, wasn't it?

Mr. BUTLER. I think many loggers—I can't speak for all of them—I think many loggers would not have anything to do with Siems-Carey under any circumstances; do anything for the Government, but absolutely nothing for Siems-Carey.

Mr. LEA. There was a good deal of bitterness on account of their being regarded as a competitor and interloper in the industry, wasn't there?

Mr. BUTLER. Not at all; not at all. Here was an industry that was ready and responsive, and themselves organized and standing and waiting for a year.

Mr. LEA. They were organized only as individuals but not as a single corporation or body, weren't they?

Mr. BUTLER. Mr. Lea, if any one man had come up here, who was authorized by the Government, and told this industry what they wanted, whether it was the Fourth of July, 1917, or Christmas Day, 1918, the industry would have done exactly that, without any incorporation at all. You understand, it is not necessary to incorporate. I can send my machinery in there and operate three or four sides, an entirely independent unit; I don't have to have any relationship with my neighbor.

Mr. LEA. I know; but on the question of taking over this Siems-Carey contract, here was a responsible firm that had agreed to do

this work, and, as I understand, to begin with the loggers' association, said "Cancel that contract. We won't promise to do what that company has agreed, but we will promise to do what we can."

Mr. BUTLER. There are several statements made there that there is not anything in the record, as far as I know, to justify it. You say they are responsible—

Mr. LEA. I was basing it on this information—oh, you mean about the Carey company?

Mr. BUTLER. They are not a responsible firm, as far as we know. They didn't put in a dollar. No information has ever been given as to the capitalization of the Siems-Carey-Kerbaugh Co., or whether they had any money in it at all.

Mr. LEA. They put up security for \$6,000,000, did they?

Mr. BUTLER. They did? They put up a note. I will give you a note any time for \$6,000,000 if you will lend me the money.

Mr. LEA. Before they could get the money from the Government they had to give security satisfactory to the Government?

Mr. BUTLER. They didn't. They give the \$6,000,000 note.

Mr. LEA. They had to give, in addition to that, such security as was satisfactory to the War Industries Board—

Mr. BUTLER. The only security they have given up in this whole transaction, as I read the record, is \$750,000 in United States Government bonds.

Mr. LEA. Do you know about the reliability of the Siems-Carey Co., or simply don't know?

Mr. BUTLER. I don't know anything.

Mr. LEA. Well, then you haven't any information to give to this committee as to whether or not they were reliable?

Mr. BUTLER. I am not attempting to give any. You said they were reliable and I was asking you if they were. I refused to assume it any more than you did.

Mr. LEA. Then you are simply unable to help the committee on that question, aren't you? The agreement in reference—was the one dollar profit proposition reference to the Blodgett tract?

Mr. BUTLER. Yes.

Mr. LEA. That was to be based on the amount that was delivered I presume?

Mr. BUTLER. On the amount?

Mr. LEA. Yes.

Mr. BUTLER. It was not to be based on anything. It simply meant that after the transaction was all over—there was no dollar a thousand in that. One dollar per annum. It was simply a dollar a year proposition.

Mr. LEA. Was that to be without profit?

Mr. BUTLER. Absolutely without profit. No profit, whatever.

Mr. LEA. Now, I don't know as I understood you, Mr. Butler, in reference to saying that the Siems-Carey had no logging contract. What is your point in reference to that?

Mr. BUTLER. Siems-Carey, as I read the skeletonized contract, furnished as I said, was a contract to furnish the Government with 250,000,000 feet of fitches.

Mr. LEA. Yes.

MR. BUTLER. Now, I don't see anything in there that necessarily involves their cutting down one tree or sawing it; they can furnish it—they can go out and buy it, if they could.

MR. LEA. Do you see any objection to that form of contract?

MR. BUTLER. Do I see any objection to it?

MR. LEA. If the Government get the flitches, what is the objection, whether they buy them, or whether they produce them?

MR. BUTLER. I don't know of any reason why the Government should appoint or give a man a blank check, as a purchasing agent, and pay him \$7 profit, when they can go out and do it just as well themselves.

MR. LEA. You have no objection to the method, but it is only as to the compensation; is that it?

MR. BUTLER. I think it is a profiteering contract of the worst kind.

MR. LEA. Outside of the question of the compensation, have you any objection to that form of contract?

MR. BUTLER. I haven't any objection to that, the only objection—

MR. LEA. I just wanted to know what your objection was.

MR. BUTLER. The only objection I have to that contract is that I think the people who made that contract, as I testified this morning, had little conception of what is involved. I think it was a proposition that the man who took it and the man who gave it didn't realize what it all really meant.

MR. LEA. Of course, that is only your opinion.

MR. BUTLER. It is the opinion that is justified by the testimony which has been introduced.

MR. LEA. Well, of course, what I wanted to know is the point of your objection. Do you know whether Col. Disque consulted any loggers in reference to that enterprise up on the peninsula?

MR. BUTLER. The Siems-Carey?

MR. LEA. Yes; the logging feature of it?

MR. BUTLER. I don't know anything about it. I have not been able to see or hear of a logger that he consulted before he gave them the contract, who approved it.

MR. LEA. Did you understand that the Siems-Carey contract contained a provision by which the Government could cancel it if they failed to comply with it?

MR. BUTLER. Yes, and I have often wondered why they didn't.

MR. LEA. And you, as I understand it, were not willing to enter into a contract of that kind with the Government?

MR. BUTLER. Yes, sir; we had a contract of that kind with the Aircraft Lumber Co.

MR. LEA. Well, I understood you to say here this morning that you would be willing to enter into a contract with Siems-Kerbaugh, that would contain a cancellation clause.

MR. BUTLER. No; I said I would not—

MR. LEA. When the proposition was made by the Government that the loggers take over the logging portion of the Siems-Carey contract, did you have any objection to doing that, so far as the cancellation provision was concerned?

MR. BUTLER. Not so far as the Government was concerned; no, sir.

MR. LEA. Well, the Spruce Production Corporation.

Mr. BUTLER. Not so far as the Spruce Production Corporation speaking for the Government; no, sir. In other words——

Mr. FREAR. Just a moment. What were you going to say, "in other words" what?

Mr. BUTLER. In other words, we were perfectly willing to rest our case when we were dealing with the Government direct, but we would certainly have no contractual relationship which gave Siems-Carey the opportunity to say whether we would do this or do that. We presumed we were experienced, and we knew they were not.

Mr. LEA. When the offer was made to the loggers for you to deal directly with them, that objection as to the cancellation clause was eliminated, wasn't it?

Mr. BUTLER. Cancellation clause—with the Siems-Carey?

Mr. LEA. No; after Siems-Carey were eliminated.

Mr. BUTLER. They were not eliminated.

Mr. LEA. When the offer was made to eliminate them——

Mr. BUTLER. They could not have been eliminated unless you agree to A, B, C, D, E, F, G.

Mr. LEA. Now, as a matter of fact, did you want this contract of Siems & Carey?

Mr. BUTLER. I was perfectly willing—no; I didn't want it. I wanted my companies and I wanted my machinery to be put at the disposal of the Government to get out that spruce.

Mr. LEA. After Col. Disque sent his message saying that they would accept the loggers' proposition, didn't a man with whom you were associated call you up on the telephone and say "Jesus Christ! our bluff has been called"?

Mr. BUTLER. Not to my knowledge.

Mr. LEA. Didn't you talk with a man on the phone, who made a remark similar to that?

Mr. BUTLER. I don't recall any such remark as that; no, sir.

Mr. LEA. Wouldn't you recall it, if it was made?

Mr. BUTLER. I think I would; yes, sir.

Mr. LEA. Who, about that time, did call you up?

Mr. BUTLER. I could not tell you.

Mr. LEA (continuing). From Seattle and immediately inform you about Col. Disque's proposition, or call your attention to it?

Mr. BUTLER. I could not tell you, sir. I will say this: I have many calls in a day, but I don't think anything of the kind occurred, that I can recall. In that meeting—the first meeting, I pointed out to the gentlemen, when we were preparing this resolution, that it was quite likely that we would be called upon, and I wanted to understand that this was not "hot water," that it was quite likely that we would be called upon to do it, and to be prepared to do it. You ask about the bluff called. That proposition of Col. Disque's, contained in that telegram of September 28, was a "stall," cold, and we knew it.

Mr. LEA. Why didn't you take it up, then?

Mr. BUTLER. What?

Mr. LEA. Why didn't you take it up?

Mr. BUTLER. Why?

Mr. LEA. Yes.

Mr. BUTLER. One reason was because he sent his men, in whom he had confidence—he sent them to our meeting, and it was their influ-

ence, as much as anything else, that prevented this thing from having a fair hearing.

Mr. LEA. I want to know whether or not you can state absolutely as a fact, whether or not one of your associates did not say that "Jesus Christ! our bluff has been called"?

Mr. BUTLER. Do you mean to infer that we, in a serious Government matter, were "playing horse"?

Mr. LEA. I am not inferring at all; I am simply asking a question.

Mr. BUTLER. I have no knowledge of any such telephone conversation; don't recall anybody ever having called me up and said anything of that kind, or anything like it.

Mr. LEA. Can you state who was the first one from Seattle that did call you up and tell you, in substance, that the colonel had accepted the loggers' proposition?

Mr. BUTLER. No, sir.

Mr. LEA. Don't know anyone of your associates that called you from Seattle and communicated with you over the telephone about that subject?

Mr. BUTLER. The matter you raise is one that is a point which is entirely new and something that I don't know whether there is any base or foundation for it or not. The whole thing is—there was no necessity for anybody calling me up; the thing had to be done in conference.

Mr. LEA. I was simply asking if you can recall, if you can tell the committee now, if you can tell the first one that called you on the phone from Seattle. Can you tell us one of your associates that shortly thereafter did call you?

Mr. BUTLER. I don't recall anybody calling me up on that subject at all, sir. I certainly don't recall any such message as you seem to know of, or seem to think you know of.

Now, I want to say right here, as long as the question you raise—or you have been coached—excuse me, you have been coached—you raise a question of good faith in this matter—I want to say that the loggers of Puget Sound have had enough, quite enough, of humiliation in connection with this whole matter, and I think it is quite uncalled for.

Mr. FREAR. It is insulting, that is what it is. Nothing has ever been more so that has been put over here.

Mr. BUTLER. I want to go further and tell you further that it is a common rumor, and is generally believed, that the men that Col. Disque sent to that second meeting were in conference with Mr. Carey the night before, came up there to prevent exactly—absolutely to prevent that proposition.

Mr. LEA. I am simply asking for the fact, that is all.

Mr. FREAR. And it is an insulting remark he has been placing in the witness's mouth, to a man who has given his services free, and against a body of men who have given their services free; to come with such a disreputable remark and put it in the witness's mouth—

Mr. LEA. I don't understand I have placed any remark in the witness's mouth.

Mr. FREAR. But you did, that is the purpose—of a man of this class.

Mr. LEA. Well, I am not passing on the class of the witness at all, I simply ask him the question.

Mr. FREAR. It is an unfair question.

Mr. BUTLER. I want to say, again, I think the suggestion is unworthy of the member of any committee.

Mr. LEA. Well, you are entitled to your opinion. I am not asserting an opinion, I am simply asking whether or not that is a fact.

Mr. BUTLER. I reply that I have no recollection of it at all, and I don't think it is a fact. If I could tax my recollection, I would say it is not a fact.

Mr. FREAR. Five minutes has been occupied on that very proposition, by the clock. Inside of 10 minutes, I am going to call another witness; if this line of cross examination is continued, I will go on with my other witness.

Mr. LEA. I have already concluded my examination, as I have already informed you, on that question.

Mr. FREAR. Well, on the entire examination.

Mr. LEA. That would be in pursuance of your policy to only permit one side of this evidence to be presented.

Mr. FREAR. Just a moment. The record has shown that in no legislative investigation, to my knowledge, heretofore, has any man attempted to cross-examine witnesses in the manner that has been pursued by this counsel, because he is simply acting as counsel. We care not what the inference may be, we desire to get the facts, we are going to get them, if we can, but here is a gentleman, the witness, who stands as high as any man, undoubtedly, in this community, the brother of one of the most prominent men in the United States, a high-class man, a man who gave all his time—not of the class of men that came from Portland, but a man who gave all his time and his money to a proposition of this kind, and showed what he was willing to do with the Blodgett tract, and I say he is insulted by language of that kind. For one, I am very tired of it, and I don't propose to sit here and listen for an hour to such cross-examination.

Mr. BUTLER. Mr. Chairman, I will be glad if you will allow him to pursue the same just as far as he wants to.

Mr. FREAR. But the time of this committee is consumed, as well as your time, by such frivolous cross-examination, and we can't spend the time, if we are going to conduct the investigation in an intelligent way. It is not for you to pass upon—I am sorry to say.

Mr. LEA. Were your loggers willing to take over the Siems-Carey contract, so far as the logging operation was concerned, on the terms of the Siems-Carey contract?

Mr. BUTLER. The telegram which was sent to Col. Disque, and the reply, if you will read the phraseology of Col. Disque's reply, was the loggers—the information operators offer to take the contract without profit.

Mr. LEA. Yes.

Mr. BUTLER. At cost.

Mr. LEA. Yes; I know. My question, though, is—

Mr. BUTLER. In his reply, he said "you are directed to accept the operators' offer, on the basis of the Frost contract," and then he proceeds to make the fence higher, and higher, and higher with conditions which were not in the Frost contract—evidence, to my mind, that there was absolute bad faith.

Mr. LEA. No, but you don't catch what my question was. My question is, were you loggers willing to take over the logging features of the Siems-Carey contract, upon the terms that Siems-Carey took it?

Mr. BUTLER. We had no idea what the terms were there, or nobody else.

Mr. LEA. Were you willing to take a contract for 250,000,000 feet of flitches?

Mr. BUTLER. We were not in the flitch business; we were in the logging business. We would have been willing to have done everything possible. We would have been willing to take any reasonable contract from the Government to take out the logs.

Mr. LEA. Would you have been willing to have made a contract to take out 500,000,000 feet of logs according to the terms of the Siems-Carey contract?

Mr. BUTLER. If it was according to the terms of the Siems-Carey contract, and do it in—according to selective logging?

Mr. LEA. Yes.

Mr. BUTLER. No, sir.

Mr. LEA. You spoke about the operation of the railroad. Do you know whether the Siems-Carey contract provided for the operation of the railroad by them?

Mr. BUTLER. I don't know, sir.

Mr. LEA. But I understood this morning that you thought that if the loggers took over the logging contract, they would be at the mercy of Siems-Carey on the operation of the railroad.

Mr. BUTLER. That was one of the provisions that Col. Disque made in accepting our proposition, that the Siems-Carey would continue to operate the railroad. That was not our suggestion, but his suggestion.

Mr. LEA. Do you know if any contract was ever made by the Spruce Production Corporation, or by the Government, by which Siems-Carey were to operate this railroad?

Mr. BUTLER. No, sir.

Mr. LEA. So, so far as you know, they were not to operate the railroad?

Mr. BUTLER. All the information that we ever had, sir, regarding the spruce contract, was that they were to furnish the flitches, and, under the contract as I read it, they could have gone out and bought them; they need not have run anything.

Mr. LEA. All they had to do was to deliver the flitches.

Mr. BUTLER. All they had to do was to deliver the flitches.

Mr. LEA. Except they did have to deliver them from Clallam County?

Mr. BUTLER. No, I don't know as even that is necessary.

Mr. LEA. That is specified in the contract. I guess there is no dispute about that. Now, this morning you spoke about some loggers' association having only one hundred sides. What association was that?

Mr. BUTLER. The Loggers' Information Bureau.

Mr. LEA. You spoke about tethering this road to the Milwaukee road. At that time this road was operated by the Government?

Mr. BUTLER. That does not make any difference. The thought I wanted to convey this morning was that anybody who was sent

out to get spruce should get spruce. It did not make any difference whether the road was operated by the road or not.

Mr. LEA. Your criticism was not that it was the Milwaukee or any other road?

Mr. BUTLER. No. If I send an agent out to get spruce in a time of the Government's desperate necessity I think it is an infamy to hold him in any way. Let him get the spruce wherever he can get it.

Mr. LEA. You said it was necessary to construct railroads in order to get the spruce?

Mr. BUTLER. Exactly, but it is not necessary to limit it in any way. When you send an agent to bring something, you want to give him an opportunity to get it.

Mr. LEA. Did you have any other objection to using this road any more than any other road under the circumstances?

Mr. BUTLER. My particular criticism in the matter was, I would not have cared if it had been the Northern Pacific road, that the agent allow himself to be tied up when he was sent out to get spruce, and the Government wanted the spruce.

Mr. LEA. The road that you spoke of up Hokko Creek was how long?

Mr. BUTLER. From 15 to 18 miles.

Mr. FREAR. Fourteen to fifteen miles was the testimony.

Mr. LEA. And Mr. McFee said it would take five or six months?

Mr. BUTLER. Of course, Mr. McFee had not any survey and did not know how soon it was going to be done.

Mr. LEA. The Canadian spruce production you referred to was the total spruce production and it was not a question about whether it was for aircraft lumber or not?

Mr. BUTLER. It was in compliance, as I understand it, with the Government request, whatever it was.

Mr. LEA. You do not know as to the quality of the lumber, do you?

Mr. BUTLER. No, sir.

Mr. LEA. I think that is all.

Mr. FREAR. I am simply going to ask you one or two more questions. In any private business what would be a reasonable compensation for Mr. Frost?

Mr. BUTLER. I think Mr. Frost, with his peculiar temperament and reputation as a successful logger, would have no trouble at all: I think the compensation allowed, especially in war times, was not enough.

Mr. FREAR. He took that position with all the responsibility that it entailed, representing you gentlemen in a contract that involved how many million dollars?

Mr. BUTLER. Well, it was to put in a 100,000,000 feet in a year and nobody knows what it would cost. It has been estimated that selective logging might cost as high as \$50. That would be \$5,000,000.

Mr. FREAR. Is there any reason why, when a man takes a position of that kind, to work for the Government in giving them the benefit of their services, giving their best energies for patriotic motives, why a man like that should be criticized either directly or inferentially?

Mr. BUTLER. I think it is a scandalous proceeding.

Mr. FREAR. You gentlemen were engaged in showing your good faith, as I take it, in the logging of the Blodgett tract free of any expense to the Government outside of the actual expenses incurred?

Mr. BUTLER. I do not believe even the Democratic member of the committee could imagine that it would not take some money to carry that work on.

Mr. LEA. I just want to say in regard to Mr. Frost that I did not intend to say he was not worth the money paid him, and I would not be justified in making any such statement, and I did not intend to say it.

Mr. BUTLER. I am very glad to hear you say that, and I would be glad if you would strike that remark from the record.

Mr. FREAR. It was not common sense, with men who had an organization, to ask them blindly to accept such a proposition as proposed by Disque, and Disque knew you would never take it. That is the type of man who was sitting down in Portland dealing with business men, and the proposition was put up to you with the knowledge that the cancellation by Siems-Carey & Kerbaugh, with all the conditions that were placed in their hands. You are now criticized for a telephone call and profanity, and insulting suggestions are placed in your mouth, and it comes from somebody here. I do not know him, but that is the type, just what has been here heretofore, and you gentlemen have been called and driven down by a class of men who said that they were the Government. They mistake their own authority; they mistake the position they occupy.

Mr. BUTLER. Might I make just one concluding remark? Speaking for the loggers, it is a matter of the very greatest congratulation that the testimony as far as presented indicates that no logger, no mill man, nobody in this industry is in any way involved or concerned with the activities of the Spruce Production Board so far as they relate to these Siems-Carey contracts. We will never quit being thankful for that. Now, I want to say, as I said this morning, the proposition of the giving of these contracts, the very peculiar mysteriousness of their being given, the fact that the men giving the contract were quite as unappreciative as the men who take it, knew not what they were doing. They knew, however, that 7 per cent on \$25,000,000 was \$1,750,000. In addition to that they came out here and camouflaged the situation; they told us about their responsibility and their bond. Is there a bond? Was there ever a performance bond? There is only one answer. The answer is, Mr. Chairman, that the people who were able to obtain this contract enjoyed very singular political support, not only in its securing, but in its execution, all the way along the line. The whole activity of this Spruce Division is centered on this Siems-Carey contract in this district. Anyone who runs can read; and what is the result? The execution was conducted with singular devotion to the interests that obtained it, with the result—what is the result? Is it not a shame? The result is we see the man entrusted with this grave responsibility playing with business men, playing with the dire necessities of his Government; we see him, however, promoted from lieutenant colonel to colonel. He goes back to the East with a distinguished-service medal, and the gold star of a general on his collar—but no spruce.

Mr. FREAR. You have left out one thing that I want to speak about, and the question was brought out by the gentleman who just examined you, in regard to the conjunction of this road with the Milwaukee road. The Milwaukee road had decided to build up

toward Pysht, according to the undisputed testimony. The Secretary of War agreed to the route and he indorsed the recommendation of certain officers, as well as your airplane associations, and others, that that was the proper route, then inside of a period of 30 days and much less, as far as we can gather, between April 24 and the time it was adopted, at a hearing—and prior to that time—with the president of the Milwaukee Railroad, at which Early was present, and the engineer of the Milwaukee road was present, the plan was shifted suddenly. Then they put an engineer from the Milwaukee road in charge and they kept him there, and he is now back in his Milwaukee job. That is no reflection, but I am showing the situation. The Siems-Carey contract was subject to a cancellation clause so that the men at the head of the aircraft could have canceled it in a moment and thrown those men out, and the man who had all the cards in his hands was a member of the Board of Directors and a member of the executive committee, and he had one of the finest contracts in the world with the Milwaukee road. Is not that true?

Mr. BUTLER. Yes.

Mr. FREAR. So it did mean something to the Milwaukee road.

Mr. BUTLER. We as loggers have considered this matter simply from the standpoint of supplying the Government with spruce. Our plants were ready if they had been called on. If they had come to us for the spruce they could have gotten the spruce. Thank you, gentlemen.

Witness excused.

TESTIMONY OF JOSEPH A. MALLERY.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. How old are you?

Mr. MALLERY. Twenty-three years old.

Mr. FREAR. Where do you live?

Mr. MALLERY. Well, I suppose it would be at Cathlamet, Wash.

Mr. FREAR. Were you enlisted in the service, or how did you come in?

Mr. MALLERY. I was a private in the One Hundred and Thirty-eighth Production Division, drafted at Vancouver, Wash., on the 29th day of July.

Mr. FREAR. Did you live at Vancouver then?

Mr. MALLERY. No; in Cowlitz County, at that time.

Mr. FREAR. You were the Mallery whose time checks were mentioned in the evidence the other day, one for 7 cents and the other for 65 cents, I believe?

Mr. MALLERY. Yes.

Mr. FREAR. A statement has been furnished in regard to your compensation by the Spruce Production Corporation of Portland, Oreg. The 65 cents was the balance due you from the subcontractor, as I understand, for two and one half days, October 1, 2, and 3, and the 7 cents was the balance due for 112½ hours at 40 cents, from September 9 to 20, 1918. That is right?

Mr. MALLERY. That is correct.

Mr. FREAR. In this statement there appears another item; Army pay, $2\frac{1}{2}$ days at \$1, \$2.50; Army ration allowance, $2\frac{1}{2}$ days at 40 cents, \$1. That is correct; it is credited to you?

Mr. MALLERY. No; that is taken out of my pay.

Mr. FREAR. Other items are: Board, $3\frac{1}{2}$ days at \$1.05, \$3.85.

Mr. MALLERY. That is taken out of my pay.

Mr. FREAR. They took out of your pay the Army ration allowance, and board, which made \$3.85?

Mr. MALLERY. Yes; they took \$1.05 for board, \$1 for $2\frac{1}{2}$ days' Army pay, making \$2.50; and \$1 for Army ration allowance at 40 cents a day for $2\frac{1}{2}$ days.

Mr. FREAR. Here is an item of $2\frac{1}{2}$ days that you were working. The charge made by Siems-Carey Co. is for $3\frac{1}{2}$ days' board; that is a day extra, is it not?

Mr. MALLERY. Yes; that can be explained by the fact that one day was used in packing and being transported to another camp.

Mr. FREAR. That ought to be $2\frac{1}{2}$ days so far as the Carey balance against the credit is concerned?

Mr. MALLERY. Yes.

Mr. FREAR. That would be \$2.10, and the Army ration allowance two days and a half at 40 cents, making \$1. So \$3.10 was the subsistence charge against you for the two and a half days you were there?

Mr. MALLERY. Yes.

Mr. FREAR. On the next item, board at camp, 13 days, two meals, \$1.05. Did you not have over two meals a day?

Mr. MALLERY. We had three meals a day. I do not understand that.

Mr. FREAR. That made \$14.35, and the Army ration allowance for 12 days at 40 cents was \$4.80. In other words, you paid nineteen dollars and some odd cents for the 13 days you were in camp; that was board and subsistence?

Mr. MALLERY. Yes.

Mr. FREAR. How many men were there in camp with you?

Mr. MALLERY. Those checks are from two different camps. In the first camp I think probably there were about 30, and the second camp, roughly estimating, would be between one hundred and two hundred.

Mr. FREAR. Doing what?

Mr. MALLERY. In both camps they were engaged in grading on the railroad.

Mr. FREAR. What railroad was that?

Mr. MALLERY. The railroad going from Joyce to Lake Pleasant?

Mr. FREAR. Known as the Siems-Carey road?

Mr. MALLERY. Yes.

Mr. FREAR. What did you have there for the food that was mentioned here; what kind of food did they give you?

Mr. MALLERY. I will tell you of a particular incident that happened at Palmer Pierson & Woods camp No. 3, at Lake Crescent in the latter part of August.

Mr. FREAR. When, 1918?

Mr. MALLERY. Yes.

Mr. FREAR. Working on this railroad?

Mr. MALLERY. On this railroad, at the same time I received this check.

Mr. FREAR. During the time this check covers?

Mr. MALLERY. Yes. Complaint has been made repeatedly by different privates and by delegations to Lieut. Lord that the condition of the food was intolerable. There were several counts. The first was that the garbage was not taken care of, and there was a manure pile near by where there were piles of manure covered with flies. It was in the latter part of August, and they were so thick that you had to fight your way through, and there were no screens or fly paper of any kind. In the morning it was chilly and the flies would fall into your food. They were cooked into the food and you could not eat a meal without having flies in everything. Protest was made to the commanding officer time and time again, and he would always say, "I will see what I can do."

Mr. FREAR. Who was he?

Mr. MALLERY. Lieut. Lord at that time. Another count was that the potatoes were sour, half of the time, the bread was invariably musty and sour. It was the milling flour that was prevalent at that time. Pierson, a member of the firm, excused it by saying he ate it. I remember one particular incident, when he was standing outside of my own shack and somebody brought a piece of bread out, and nobody had anything to say about the bread, but Pierson saw it and he consequently seized an opportunity to scold about I. W. W'ism, I think.

Mr. FREAR. In what way?

Mr. MALLERY. He said it was agitation, to bring out sour bread.

Mr. FREAR. Did the officer ever take any action with regards to that first incident you mentioned?

Mr. MALLERY. Well, I am coming to that shortly. I spoke up, having a little more nerve than the rest, and he was saying, "What is the matter with this bread?" and I said if you do not think there is anything the matter with it, you eat it.

Mr. FREAR. Who was that?

Mr. MALLERY. I said that to Pierson, one of the contractors. I said, "If you think it all right, eat it," and I repeatedly told him that before the crowd. It was taken over to the doctor who was there, and the doctor said it was sour and unfit to eat. As a result of that I was called out in front of the regiment, later, and severely reprimanded.

Mr. FREAR. By whom?

Mr. MALLERY. By Lieut. Lord, and it was understood everything was to be set right; that he was looking out for us, and that we were to keep our mouths shut; but nothing was ever done. Shortly after that, three or four days—

Mr. FREAR. Within the time that is covered by this time check?

Mr. MALLERY. Yes. Shortly after that the food continued to get worse. They had no fresh vegetables nor fruits with meals, but in the commissary you could buy apples for 5 cents apiece. There was no use going into all these details, for the simple reason that 150 men are not going to be affected by the same trivial thing, and 150 men can not take common action without organization, and it was impossible to organize in the Army. But one morning the break-

fast was so bad that they all got up and refused to eat, with the exception of half a dozen or ten.

Mr. FREAR. How many were there?

Mr. MALLERY. I could not state exactly. There were recruits from different places. I should say there were between 100 and 200 men.

Mr. FREAR. That were there?

Mr. MALLERY. Approximately.

Mr. FREAR. What occurred?

Mr. MALLERY. They went out on the job. Naturally the first sergeant was greatly agitated, and Lieut. Turner that noon called the men all together and told them that he sympathized with them perfectly and that if Lieut. Lord did not take the thing into his hand he would himself.

Mr. FREAR. Who said that?

Mr. MALLERY. Lieut. Turner. He said he recognized we were absolutely justified, he says:

Go back to-day at noon and eat, and go back to-night, and then if nothing is improved, and we can not make any agreement, I will see later what I can do for you, but I want you to understand I am for you.

Mr. FREAR. What was his first name?

Mr. MALLERY. Earl O. Turner, commanding officer of the One Hundred and Thirty-eighth Spruce Squadron, and he later was commanding officer of the Whiskey Creek camp, where I also worked.

Mr. FREAR. The Disque Junction, so called?

Mr. MALLERY. Yes. That is one incident.

Mr. FREAR. What became of that; did they improve the conditions there as to the food?

Mr. MALLERY. That I am not in a position to say, for the simple reason that I, with several others, was considered unfit to associate with the remaining soldiers, and we were sent to general military headquarters, and I do not know whether any improvement was made, but I have been told by people who have continued to stay there that they did make some improvements to keep some of the flies out, although no screens were provided, and that there was some improvement in the food, though that is a matter of hearsay with me.

Mr. FREAR. What about the clothing?

Mr. MALLERY. The clothing was issued to us, and all the clothing we ever had, up until the 138th Squadron arrived in Vancouver, in January, I believe, or the very last of December, were the cotton clothes issued for summer wear. That is, one pair of cotton trousers, two old shirts, a cotton jacket; they issued us a pair of overalls and jumper, fatigue clothes, two summer-wear union suits, cotton, I think; two pairs of socks, and shoes, and a pack—two blankets, a bed roll, and cot; a mess kit and toilet kit. We never had a stitch of wool, excepting the shirts, during the cold weather in the mid-winter months, until we had come out of the woods to be discharged in Vancouver, in January.

Mr. FREAR. The winter months of 1918?

Mr. MALLERY. In those months of 1918, when the flue epidemic was raging and the hospital facilities at Joyce and Port Angeles were overstrained.

Mr. FREAR. This was during the winter?

Mr. MALLERY. This was during the winter that I am speaking of.
Mr. FREAR. I have understood the doctors—you had physicians there, didn't you?

Mr. MALLERY. Yes.

Mr. FREAR. What relief was given to a man from working on this Siems-Carey, Kerbaugh Railroad in case he was sick?

Mr. MALLERY. As late as the latter part of December, when the logging operations, as we understood, had largely ceased, we were compelled to work every day, rain or shine, tamping up and grading on the Siems-Carey right of way, and the only excuse a person could have to go on sick leave was that he had a fever. I will give you a particular incident that happened to me. Naturally we had just simply regulation Army tents with the Army regulation stove, and we had no facilities for drying clothes, and you know the amount of rainfall in the winter out in the country, raining some every day. We had no facilities for drying clothes, and there was naturally considerable cold and neuralgia. I caught a bad cold and had neuralgia, and one particular bad day when it was raining hard—this was in December—I went to the orderly tent and I asked the second lieutenant, Lieut. Rector, if I could be excused that day and go on sick call. I told him I had neuralgia, and it was the truth. About 10 o'clock the medic came around. The medic is a man who knows absolutely nothing about medicine, and he gets his qualifications from being in the Medical Corps, and about all he knows how to do is to take temperatures. He took my temperature and he did not find that I had a fever, and at noon the commanding officer came to my tent and said I would have to go out to work that noon or—I forget just what the threat was, some military proceeding. You have to have a temperature, and the Army physicians appeared to back up the commanding officer. The commanding officer showed his stand particularly in that case.

Mr. FREAR. Who was the commanding officer?

Mr. MALLERY. In this case Lieut. Earl O. Turner. Then there was a man by the name of Schmalzl, who said, "Lieutenant, it is rather a peculiar position to be in to feel that in case you should fall sick in this country, that you could not lay off until a fever had developed." He said, "Yes." These are not his exact words, but substantially to that effect. He said, "Yes; there has been a disagreement between the military authorities and the civil authorities on this job." And he conveyed the impression that he would conduct things in a much different fashion but for the fact that Col. Disque backed up the civil authorities in their demands. and whenever a man laid off the civil authorities in Camp D immediately came and found out what was the matter and insisted on all the men being out all the time. He practically dictated the policy in all of the camps. This is not any joke; it was common knowledge among the men that they felt that Disque absolutely did not back the military authorities in the sanitary and other regulations, and that the commanding officers were mighty good fellows and wished to help us, but that they were powerless to do anything for us.

Mr. FREAR. Because of the contractors?

Mr. MALLERY. Because the contractors were backed by Col. Disque. The Army officers gave out the impression repeatedly to different people that they were powerless.

Mr. FREAR. Did you hear that matter discussed by the officers, or did you get that from the men?

Mr. MALLERY. Both. Lieut. Turner himself in both cases of the food said he was with us, and he said that he was with us, and stated it plainly, in definite English, that there was a disagreement between the military and civil authorities.

Mr. FREAR. Tell about your clothing. You said that it got wet; did you have a change of clothing?

Mr. MALLERY. We had a change of clothing because we bought extra clothing; but no change of Army clothing, unless you consider the fatigue clothes a change.

Mr. FREAR. How much outside clothing did you buy with the 7 cents you got for the 20 days' service, or were you provided with it in advance?

Mr. MALLERY. We bought our rain clothes and other clothes out of the wages that were allowed, the best we could.

Mr. FREAR. You did not have any wages after the 20 days' service?

Mr. MALLERY. We had a wage amounting to about 75 cents a day. A general order, as I understand it—in fact, I believe that I have read in the general order that \$3.20 was the minimum wage, and as has been brought out, \$1 was taken out of that for Government pay, 40 cents for Government ration allowance, and \$1.05 for your board. That will leave 75 cents out for your expenses, to buy your clothes, and other incidental expenses.

Mr. FREAR. That is, do I understand that after you took out your board—what else was there—did you get your dollar a day from the Government in money?

Mr. MALLERY. Your dollar a day came to you from the Government, minus the allotment that you may have made and your insurance money?

Mr. MAGEE. Didn't you get civilian pay?

Mr. MALLERY. When we started for the Olympic Peninsula from Vancouver the examining officer says, "Is there any reason why you can not make 8 or 10 dollars a day," and we said, "None in the world." We understood that we were to receive civilian pay if we were doing the same work that a civilian was doing, we would receive the same pay. Consequently from that basis they said, "You can buy your own clothes," and the Government never furnished anything but cotton. There was also a provision in the general order which said that \$3.20 would be the minimum, and I feel safe in saying that 75 per cent of the men received the minimum.

Mr. FREAR. That is, that were working where you were?

Mr. MALLERY. Now, that does not apply to everybody. I will say this, that the truck drivers and the men working on the telephone lines, and some of those things—

Mr. FREAR. Specialized work.

Mr. MALLERY. Specialized work. They did get big money, between \$100 and \$200.

Mr. FREAR. What kind of work were you doing?

Mr. MALLERY. I was in six different camps, and probably did six different kinds of work.

Mr. FREAR. During what period, how long?

Mr. MALLERY. From September until after Christmas.

Mr. FREAR. September 6, 1918, until after Christmas?

Mr. MALLERY. Yes.

Mr. FREAR. What were you doing, as a rule? Just give the committee some facts.

Mr. MALLERY. As a rule, the biggest part of the labor was consumed in throwing up grades.

Mr. FREAR. How?

Mr. MALLERY. Throwing up the railroad grade.

Mr. FREAR. With what?

Mr. MALLERY. With shovels.

Mr. FREAR. That is, you were shoveling on the railroad.

Mr. MALLERY. Shoveling on railroad.

Mr. FREAR. In all seasons?

Mr. MALLERY. In all seasons. But later, after the rails had been put on, then we used a slightly different type of shovel to bolster up the track and tamp ties and finish the work. But it was substantially shovel work from beginning to end.

Mr. FREAR. What is your education, where have you been educated? I speak of that because you talk clear and clean cut.

Mr. MALLERY. I received a high-school education at Castle Rock.

Mr. FREAR. Where?

Mr. MALLERY. Washington, and have had a year at Reed College, and a summer at the University of Washington. I am now principal of the high school at Cathlamet, Wash.

Mr. FREAR. What part of this education had you before, when you were there in the camp?

Mr. MALLERY. All but the summer at the University of Washington.

Mr. FREAR. And your training as principal here.

Mr. MALLERY. Yes.

Mr. MAGEE. What do you mean when you say you had 75 cents left, do you mean out of the \$3.20 minimum?

Mr. MALLERY. Yes, that is what I mean. You can figure it up for yourself. You can subtract \$1.05, \$1, \$0.40; 75 cents left.

Mr. FREAR. What pay did you receive from the Government?

Mr. MALLERY. That was from the job. Now, then, here you get your 40 cents allowance. then the dollar that I paid the Government—

Mr. FREAR. That was for rations?

Mr. MALLERY. Rations. Out of the dollar I paid for my Government pay. I paid \$30 a month to the Government and got \$8 50. That was with insurance and allowances taken out.

Mr. FREAR. Who did you have the insurance for?

Mr. MALLERY. I had the insurance in my wife's name.

Mr. MAGEE. You mean that was under your soldier's pay?

Mr. MALLERY. Under my soldier's pay.

Mr. FREAR. You had how much money left?

Mr. MALLERY. \$8.50.

Mr. FREAR. I understand you to say that you are a graduate of a high school and married?

Mr. MALLERY. Yes.

Mr. FREAR. And you were doing this peonage service here with the Siems-Carey outfit, and you got 7 cents, if I recollect those figures right, for 20 days' pay, over and above your income.

Mr. MALLERY. Yes. Now, there is something about the 7 cents. Of course, each one of them, each of these camps had a commissary, commonly called by the soldiers "robissary," for obvious reasons. We never at any of the camps could receive or were able to receive an itemized account of our commissary bills. In some months, perhaps, it amounted to considerable, but in other months it amounted to very little. Practically the only thing the men bought was tobacco. At Camp D, Whiskey Creek, I know of one—

Mr. FREAR. That is Disque Junction?

Mr. MALLERY. Yes; that was our address, was that. I know of one case that perhaps might be apropos. George E. Lefferty, of Albany, N. Y., a railroad trainman, worked on the railroad as a trainman for something less than a week. He brought back meal tickets that he had used in the eating house and turned them in at the eating house at Camp D, and finished the month at Camp D as a regular laborer. At the end of the month he received a check for less than the amount of his meal tickets.

Mr. FREAR. How much, approximately?

Mr. MALLERY. I can not say definitely, but it was four dollars and some cents.

Mr. FREAR. That is, for the month?

Mr. MALLERY. For the month.

Mr. FREAR. Now, were you boys given military training? If so, in what particular, how were you benefited physically, and what did they do for you over in this camp to make better men of you?

Mr. MALLERY. There was no military training whatever except at military headquarters at Joyce, and that was very, very slight. In the camps there was none whatever. They had reveille and retreat in some of them. In some of them not. I never stood an inspection while I was in the woods, and never knew a Government inspector to be in any of the camps. Particularly they were scarce in Palmer, Pearson & Wood's camp, where they had the flies and the like.

Mr. FREAR. Did you ever drill with arms, guns?

Mr. MALLERY. I never did.

Mr. FREAR. You drilled with shovels alone?

Mr. MALLERY. Yes.

Mr. FREAR. Why were you not made a lieutenant, or a captain, or a major, do you know—you had an education—instead of giving you a shovel why didn't they give you something that you were fitted to handle?

Mr. MALLERY. Well, when I first went to Vancouver I was put in the receiving company, checking up clothing slips, and I presume that I could have continued there as long as that company was there, but I requested to be transferred to a company that was sent out on active duty. I will say further that later on it was promised by the officers that there would be a division sent over to France from the Spruce Production Division, on or about the first of the year, and the sentiment of the men was taken and it was practically unanimous, as the commanding officer will testify—or should—that

the men all wanted to go. Their sentiment was any place rather than here.

Mr. FREAR. That is, they would rather take a chance in the trenches than over here on that railroad?

Mr. MALLERY. Yes; all of them.

Mr. FREAR. What about the general conditions that you saw? You were in six camps, you say?

Mr. MALLERY. I was in six camps.

Mr. FREAR. What were the general conditions in those various camps, did they differ?

Mr. MALLERY. They differed greatly. I will say that no two camps were alike. Some jobs, the biggest part of them, the general tendency was \$3.20. They kept that constantly in mind.

Mr. FREAR. That is, income.

Mr. MALLERY. Yes; but there were some exceptions. I was at Piedmont, working at the Log Cabin Hotel.

Mr. FREAR. Where is that?

Mr. MALLERY. That is at the near end of Lake Crescent, toward Port Angeles, where the officers stayed. The men there were treated probably as well as any place that I saw. But we worked 10 hours a day, 7 days a week, and when they settled with me I protested the amount, and in the inventory they gave me they figured my wages at 30 cents an hour. Ryan, the civilian that was in charge of transportation on Lake Crescent, gave me the statement.

Mr. FREAR. You were working 10 hours a day?

Mr. MALLERY. Ten hours a day. That was in November, part of the time after the armistice was signed.

Mr. FREAR. They kept you on the same job, building the railroad?

Mr. MALLERY. No, this job was doing everything that Capt. Martin wanted done at the Log Cabin Hotel, which was taken over, as we understand, by the Government for the convenience of the officers going through the country.

Mr. FREAR. Were you practically an orderly, or what?

Mr. MALLERY. Just a common laborer.

Mr. FREAR. Just a common laborer?

Mr. MALLERY. Yes, sir.

Mr. FREAR. How did you work 7 days a week?

Mr. MALLERY. By working Sunday.

Mr. FREAR. They had you work Sundays as well as the other days?

Mr. MALLERY. We were compelled to work Sundays as well as other days. We petitioned not to work Sundays, but it was not allowed. There the sergeant did not pretend to have charge of about six or eight men that were detailed there, but we took our orders directly from Ryan.

Mr. FREAR. And he was a civilian?

Mr. MALLERY. He was a civilian.

Mr. FREAR. Did you have different subcontractors at all these places, or were you under the same subcontractor at times, or how?

Mr. MALLERY. Under different subcontractors. The first camp I was in was under Rojott, Fobert & Winters. That camp was probably as well as any that we were in, although they had no latrine facilities.

Mr. FREAR. No what?

Mr. MALLERY. No latrine. Then the next I was under Palmer, Pearson & Woods. They were subcontractors. Next I worked on the ferry transporting the Government trucks across Lake Pleasant, until it was sunk. Then I worked at the Log Cabin Hotel, which was right there, and last I went to Whiskey Creek, Camp D. After the armistice was signed and the major part, as we understood, of the logging operations had ceased we were expecting, fully expected to be shipped out any moment, but we were compelled to work, rain or shine, on the grade from then until Christmas or after.

Mr. FREAR. That was after the armistice was signed?

Mr. MALLERY. That was up until——

Mr. FREAR. They continued with you on the grade, working there shoveling on the railroad?

Mr. MALLERY. Yes. There was no excuse that you could get off, whatever. Sickness was not sickness unless you had a fever.

Mr. FREAR. What kind of teacher's certificate do you hold?

Mr. MALLERY. Second grade.

Mr. FREAR. And you are now principal of the high school at what place?

Mr. MALLERY. Cathlamet.

Mr. FREAR. When did you receive that appointment?

Mr. MALLERY. I was assigned that this spring, I think in April.

Mr. FREAR. That is, after you got out you went to the University first, did you, or what?

Mr. MALLERY. No; I taught three months after I got out of the Army. I happened to strike a job just after I got out.

Mr. FREAR. Where did you teach?

Mr. MALLERY. At Ariel, Wash. That is in Cowlitz County also.

Mr. FREAR. What branches did you teach?

Mr. MALLERY. It was just a common grammar school.

Mr. FREAR. I know, but what branches did you teach there, when you gave up this job of shoveling, this educational position that was given you by Siems-Carey-Kerbaugh, what did you then undertake to teach in the school where you were? What kind of grade school was it?

Mr. MALLERY. It was a rural country school. It was the best I could do on the spur of the moment.

Mr. FREAR. What did you teach there?

Mr. MALLERY. The common branches, reading, writing, arithmetic, grammar, geography, history, drawing, and the like.

Mr. FREAR. That is, you taught all those branches at that time?

Mr. MALLERY. Yes.

Mr. FREAR. And they kept you, notwithstanding the education, the training that you had which suited you for that kind of work, they kept you working with a shovel?

Mr. MALLERY. Yes, sir.

Mr. FREAR. Under the conditions that you have described?

Mr. MALLERY. Yes.

Mr. FREAR. So that the questionnaire that is put out, so far as this branch of the service is concerned, did not seem to be of much benefit to the men, did it?

Mr. MALLERY. It did not apply.

Mr. FREAR. Did it apply in any respect, outside of the men who were chosen to drive trucks, or something of that kind?

Mr. MALLERY. Those are the men that occurs to me. I do not know of any except telephone linemen, although the telephone linemen were very scarce and men were selected from a camp at random who never had any experience at all in telephone work, and they made \$8 a day on that job, and if they hadn't just accidentally been picked they would have got \$3.20 on the grade.

Mr. FREAR. That is all.

Mr. LEA. Mr. Mallery, as I understand it, you wanted to go over to France because you wanted to do your part as a patriotic citizen, wasn't that it?

Mr. MALLERY. There were two motives which actuated all the men. Foremost in our minds, that is, most often voiced, was any place rather than here. Second, naturally we wanted to go to France.

Mr. LEA. Would you if conditions here had been all right, would you have preferred to have been in France or here?

Mr. MALLERY. I would have preferred to have been here.

Mr. LEA. But the men generally were loyal and patriotic, were they not?

Mr. MALLERY. Undoubtedly, absolutely.

Mr. LEA. Any case of disloyalty was a rare thing?

Mr. MALLERY. I never heard of an instance. The average man working out there wanted to do the best he could to help his country.

Mr. LEA. And he was willing to serve wherever proper authority assigned him?

Mr. MALLERY. Yes.

Mr. LEA. Were you down at the meeting when they promised to let the men go to France?

Mr. MALLERY. This promise was made by the various commanding officers at some formation of their squad.

Mr. LEA. Of these six camps that you were in, about how many of them were there where the bad conditions prevailed to which you have referred?

Mr. MALLERY. The two cases that I referred to were the worst.

Mr. LEA. In what camps were those?

Mr. MALLERY. Palmer, Pearson & Woods camp No. 3, and Whiskey Creek, camp D.

Mr. LEA. Who was the contractor at the Whiskey Creek camp?

Mr. MALLERY. That I do not know.

Mr. LEA. How long were you out there in this service?

Mr. MALLERY. From September 6 until after Christmas. That is, on the peninsula itself.

Mr. LEA. When did you go into the service?

Mr. MALLERY. July 29.

Mr. LEA. How old are you?

Mr. MALLERY. Twenty-three.

Mr. LEA. Now, explain this bill; you were charged \$1.05 a day for your board?

Mr. MALLERY. Yes.

Mr. LEA. The Government stood that expense to the contractor, didn't it?

Mr. MALLERY. As I understood it—

Mr. LEA. The money did not pass into your hands, but the Government would pay the contractor under which you worked, is that the way it was handled?

Mr. MALLERY. I understood it that the contractor paid the Government, under whom I worked, a dollar.

Mr. LEA. He paid you your wages, as I understand it, and part of that was held out in payment of your account, on account of your board?

Mr. MALLERY. Yes; turned over to the Government and the Government then turned it back to me.

Mr. LEA. So that was a legitimate offset here, wasn't it?

Mr. MALLERY. Absolutely.

Mr. LEA. And the relative allowance was the same class, wasn't it, it was paid the same way?

Mr. MALLERY. Yes.

Mr. LEA. Now, from your experience out there with the men, did you work along with civilians?

Mr. MALLERY. Yes; often.

Mr. LEA. How much were the civilians paid for doing this same work?

Mr. MALLERY. The first camp I was in, Rajotte, Fobert & Winters, camp 3, there were more civilians than soldiers. There were about 30 soldiers. The civilians were mostly Italians, but some Swedes. The Italians who were working by the day were making, I believe, \$5, but many of them took contracts to grade a certain length of right of way and those generally made more than that.

Mr. FREAR. That was a station?

Mr. MALLERY. A station; yes.

Mr. LEA. They paid more on a contract than they would for working by the day?

Mr. MALLERY. I believe that was the general experience. It is altogether possible to make less, but I believe the general experience was that they made more by contract.

Mr. LEA. The ordinary laborers, the ones doing the same kind of work you were doing, what did they get?

Mr. MALLERY. \$5.

Mr. LEA. Now, from your practical experience out there what do you think of the contention that soldiers on this job should only be paid the same as they were paid in France, a dollar a day?

Mr. MALLERY. I do not understand what you are driving at.

Mr. LEA. Well, the contention has been made here that you soldiers out there, because you were soldiers, should have been paid only the same as the soldiers were paid in France, and that you should not have been paid civilian wages. I wanted to get your judgment on that.

Mr. MALLERY. My judgment is that we were entitled to civilian pay, and the reason for that is that notwithstanding the fact that we were soldiers and doing no greater service than those in France, we were let out to private contractors, the same as prison labor, for instance, and consequently those people owed us as much money as if we were civilians, and we were therefore entitled to it.

Mr. LEA. You were really doing civilian work, were you?

Mr. MALLERY. Yes.

Mr. LEA. And you were just as deserving of that pay as any man who was not wearing the uniform?

Mr. MALLERY. That was our contention.

Mr. LEA. You did not volunteer for the spruce work, did you?

Mr. MALLERY. No. There were men taken from Camp Lewis and from different places who were overseas men. There were men in the spruce production camps from every State in the Union, and every class of men, from street sweepers to college professors.

Mr. LEA. Did they give you any option at all to begin with as to whether you should go into this service or another service?

Mr. MALLERY. No, sir; I was inducted directly. I had no choice.

Mr. LEA. What was that first service you went into? You spoke of some other employment that you had for a while.

Mr. MALLERY. That was at Vancouver. That was just what they call fatigue work. It was in the receiving company checking clothing slips, a sort of office work.

Mr. LEA. There is another thing here, if you could tell us about it. You spoke of some officer that seemed to be fair about this matter with you there.

Mr. MALLERY. Yes.

Mr. LEA. Now, do you know of any officer that you think wanted to give you a square deal who is now out of the service that we could get to testify in reference to this matter?

Mr. MALLERY. I believe that you could get the man I am speaking of; I think he is out; E. O. Turner.

Mr. LEA. Do you know his address?

Mr. MALLERY. No; but he was commanding officer of the One hundred and thirty-eighth during the time I was speaking of, so you can probably get that.

Mr. FREAR. You were asked if you would prefer to be here and you said "Yes." That was your answer?

Mr. MALLERY. Yes.

Mr. FREAR. Probably if the three members of Congress who are sitting before you had the same ideas, unless age might have disqualified them, they would have been in France, isn't that true, if the suggestion had anything to do with your presence?

Mr. MALLERY. I presume so.

Mr. FREAR. You are a married man, you say?

Mr. MALLERY. Yes.

Mr. FREAR. And you were married at that time?

Mr. MALLERY. I was married at that time.

Mr. FREAR. The question was asked of you, and it was suggested that there was an improper thought carried with it, about paying soldiers a dollar a day here. You would rather have been doing something in France than to have been working under the conditions you were working there, wouldn't you?

Mr. MALLERY. Absolutely.

Mr. FREAR. And the soldiers who were over in France, they were only getting a dollar a day?

Mr. MALLERY. Yes.

Mr. FREAR. And that is what you would have gotten there, but you would have been willing to have taken your time and performed your part in a patriotic way over there at a dollar a day, and you would have felt that you were getting somewhere with it and receiv-

ing some kind of recognition by your Government by being placed there?

Mr. MALLERY. Yes.

Mr. FREAR. Instead of being placed in this peonage camp down there of the Siems-Carey-Kerbaugh Co.

Mr. MALLERY. I frequently heard the sentiment voiced that no kick would have ever been made if we had been working on the railroad grade directly for the Government. We would have been willing to have done it for the dollar a day, but the impression that everyone that I came in contact with myself had was that the wages simply went to Siems-Carey.

Mr. FREAR. It was a condition that existed?

Mr. MALLERY. Yes; and for that reason we felt altogether differently about it.

Mr. FREAR. I want to say frankly that we are not trying to fix the responsibility for that that I know of now, but it is a condition that has been brought before us. This statement is correct, substantially, so far as you know. You do not know anything about what the charges were?

Mr. MALLERY. I would say they are all correct, except I do not remember what the commissary items are. They may or may not be correct. I will say this, that we never could get a statement of our commissary bills at any of the places, although we asked for them.

Mr. FREAR. I will offer this in evidence.

(Document received in evidence and marked "Exhibit P—Mallery.")

Mr. FREAR. Why did they give an Italian who had had no training or no knowledge here—all he could do was use a shovel—why did they give him \$5 a day and give you \$3.20? Was that ever explained to you satisfactorily or unsatisfactorily?

Mr. MALLERY. In the first place, Rajott, Fobert & Winters, it was explained like this. We fully expected the \$5 because it had been promised to us.

Mr. FREAR. By whom?

Mr. MALLERY. And we were to pay our clothes, because of that, and something leaked out that we were not to get the \$5. We do not know what the source was, but we immediately investigated and it was true that it was not contemplated that we should get the \$5, and naturally we protested.

The plea was that if we would do the same kind of work—"You are inexperienced; you do not know how to handle a shovel. If you will do the same amount of work, we will give you the same wages," but I never knew of anybody getting the same amount.

Mr. FREAR. That is, no man with the training that he had over there in building that railroad was able to qualify as an expert so he could get \$5 a day?

Mr. MALLERY. None of us were qualified as expert shovelers.

Mr. FREAR. I think that is all.

(Witness excused.)

TESTIMONY OF J. W. LINDSAY.

The witness was sworn by Mr. Frear.

Mr. FREAR. State your name.

Mr. LINDSAY. J. W. Lindsay.

Mr. FREAR. What is your business?

Mr. LINDSAY. Lawyer.

Mr. FREAR. Where is your home?

Mr. LINDSAY. Port Angeles, Wash.

Mr. FREAR. How long have you lived there?

Mr. LINDSAY. Seven years.

Mr. FREAR. I call your attention to an organization or company that was formed for the purpose of building a railroad from Port Angeles down around Crescent Lake, and you were interested, as I understand, to some particular extent in getting the franchise and in the work that was connected with that road. That is true?

Mr. LINDSAY. Yes, sir.

Mr. FREAR. Will you please just state to us, so as to bring it before our attention, just how that road was organized; just what occurred and just what happened to your organization?

Mr. LINDSAY. The Port Angeles & Grays Harbor Railroad was the name of the company. The idea was to build a railroad from Port Angeles to Grays Harbor. It was organized on the 8th day of January, 1917. At that time we had probably 40 different surveyors and surveyors' crews in the field surveying the line from Port Angeles to the Hoh River. We established one camp at the Hoh River to survey there and one camp just west of Port Angeles and one camp at Lake Crescent. At that time the company was incorporated by myself, my law partner, and Mr. John Cain. We were the board of trustees.

Mr. FREAR. What was your law partner's name?

Mr. LINDSAY. J. W. Redden. Mr. Cain was elected president of the company and I was elected general counsel. Mr. Redden was vice president.

Mr. FREAR. Did you fix the date?

Mr. LINDSAY. This was on the 8th day of January, 1917, that we organized.

Mr. FREAR. That was before our entrance into the war.

Mr. LINDSAY. That was before we entered the war. At that time we had some parties in San Francisco interested with us and were furnishing part of the money to pay the expenses of the surveying crew. The surveying was completed from Port Angeles to the Hoh River, a distance of 74 and a fractional mile.

Mr. FREAR. What was the route, briefly?

Mr. LINDSAY. It went through Port Angeles up to the Elwha River, about 7 miles west, followed the Elwha River south about 3 miles, and turned west and went up Indian Valley to Lake Sutherland.

Mr. LINDSAY. Then on the north side of Lake Southerland to what is called East Beach, on Lake Crescent, and then turned south and went on the south side of Lake Crescent.

Mr. FREAR. East Beach—that is at the head of the lake?

Mr. LINDSAY. At the northeast corner of the lake. Piedmont is at the northwest corner. The survey line crosses the highway going to the Sol Duc Hot Springs, about 3 miles west of Fairhome.

Mr. FREAR. Which side of the lake did your line run on?

Mr. LINDSAY. On the south side. Then we followed down the Sol Duc River from Lake Crescent to Lake Pleasant and down about a mile north of Forks.

Mr. FREAR. Lake Pleasant and the lake in itself that has been in discussion here as the extension of this Siems-Carey Railroad?

Mr. LINDSAY. Yes.

Mr. FREAR. Then from Lake Pleasant?

Mr. LINDSAY. Southwesterly going about a mile north of the village of Forks, and then we turned south down to the Bogaschiel River, and then from the Bogaschiel River to the Hoh River.

Mr. FREAR. And that was a distance of how far from Port Angeles?

Mr. LINDSAY. Seventy-four and a fraction miles.

Mr. FREAR. You say that was to be one sector of a road purposed for Grays Harbor from Port Angeles?

Mr. LINDSAY. Yes. I think it was February 9, 1917, that the city council of the city of Port Angeles granted us a franchise over the streets and alleys such as we desired. The survey was completed, I think, and the work was completed in June, 1917, and the office work was completed about the 1st of August, 1917.

Mr. FREAR. Now, before I forget it, your survey led you to the south side of Lake Crescent instead of to the north side?

Mr. LINDSAY. It did.

Mr. FREAR. On the north side of Lake Crescent, where the Siems-Carey road is located, are tunnels and large cuts in the side of the mountain or hill there, as I remember, with that road?

Mr. LINDSAY. Yes; there are some.

Mr. FREAR. What was your reason for locating on the other side of the lake?

Mr. LINDSAY. It was a less expensive road and easier to grade.

Mr. FREAR. Was that the understanding that you had and those who were associated with you?

Mr. LINDSAY. That was the engineer's advice.

Mr. FREAR. That is on the south side of Lake Crescent?

Mr. LINDSAY. Yes.

Mr. FREAR. This survey was made around and then down to the other end of Lake Crescent and then down the Sol Duc River after you got to the crest?

Mr. LINDSAY. Yes. The Siems-Carey survey came on our survey, I should judge, about 3 miles west of Lake Crescent and followed our survey to Lake Pleasant. In fact, their stakes were right beside our stakes.

Mr. FREAR. You say their stakes were alongside your stakes; that is, on the right of way as finally adopted?

Mr. LINDSAY. Yes.

Mr. FREAR. All the way, or crossing and recrossing, or what?

Mr. LINDSAY. After they came onto our line about 3 miles west of Lake Crescent, from there to Lake Pleasant they were on our right of way, with the possible exception of a mile at Lake Crescent. I am not sure about that. But there was about 19.9 miles of the Siems-Carey road constructed upon our right of way, which was adopted by the board of directors of our line. It was adopted in March and in June, 1917.

Mr. FREAR. In March, 1917, before our declaration of war, and then afterwards, you say, in June?

Mr. LINDSAY. In June the completed line was adopted, and in June by the board of trustees, as the line was constructed.

Mr. FREAR. Now, what occurred with your company and its privileges, etc.?

Mr. LINDSAY. Mr. Kane went east to New York in July after the surveys had been completed to assist in financing the line. He was in New York until, I think, the 1st of October. About the 1st of August, or maybe in July, I received a telegram from Mr. Helm, who was connected with us and was a sort of a promoter, and who was in New York at the same time as Mr. Kane.

Mr. FREAR. What is Mr. Helm's first name, if you know?

Mr. LINDSAY. Franklin Helm.

Mr. FREAR. Is that the man whose name appears with Mr. Pliny Fisk and Mr. Kerbaugh—the same gentleman?

Mr. LINDSAY. Yes; the same fellow. I got a telegram from him to meet this aviation commission that came west here. I think it was composed of Italian, French, English, and American aviators, and urged the necessity of getting into the spruce belt of the Olympic Peninsula and see what they could do. I wired him and got a telegram that they would meet me at Tacoma. Our chief engineer and I went to Tacoma and took it up with them. They were so very busy that they said to us, "We are going to take a trip to Camp Lewis, and if you will get into the same car with us we will talk this matter over on the way." Mr. Rixon, the chief engineer, who had charge of the survey work, and I got into the car and went to Camp Lewis, and in the car was Mr. F. A. Douty, of Portland, a mill man. We presented the proposition of the spruce situation and our engineer's report to some of these men, and said to them that we could complete a line if we got the consent of the Government.

Of course, they had no authority. But Mr. Douty said to me at that time, "I have been in touch with some English capital, and if you will hand me your surveys and your engineer's report, I will take them up with them, and it may be that they will become interested in your railroad." About two weeks after that the spruce council of defense, consisting of loggers from the loggers and lumbermen of these two States—of Oregon and Washington—had a meeting in Portland. Mr. Helm and Mr. Kane at this time were in Washington, D. C., attempting to interest the Government in getting in there and getting this spruce; and he telegraphed for me to go to Portland and present the figures on the spruce situation to this council of defense and to get their indorsement or recommendation to the Government for us to go on and construct this line. I went to Portland and met with them. Mr. George Long, I believe he is the head man of the Weyerhaeuser syndicate, was chairman of the meeting, and, of course, called upon the different loggers and lumbermen to give their knowledge of the spruce situation and the possibilities of getting out the spruce in the different localities of Oregon and Washington. I was called upon to state what I knew about the spruce situation. I gave them a résumé of the spruce situation on the Olympic Peninsula. We have a complete cruise of the spruce and location of the spruce there.

Mr. FREAR. That includes this tract that is over near Lake Crescent that has been in discussion considerably?

Mr. LINDSAY. Practically all the spruce in Jefferson and Clallam Counties west of the lake. So I disclosed to them the great quantity of spruce there, and I said nothing about the railroad that we had surveyed at that meeting. Mr. Long asked me how it could be gotten out. I answered him that a railroad might be built from Clallam Bay into the spruce belt, or run from Port Angeles, reaching the Government spruce in about 8 miles from Port Angeles, going through the forest reserve. There was some spruce there.

Mr. FREAR. That was some other body of spruce?

Mr. LINDSAY. Yes. And he asked me how long it would take to complete the railroad from Port Angeles into the spruce belt. I said, in ordinary railroad building it would take from eight months to a year. His answer to me was that the Government did not want to have anything to do with any proposition that would take a year. After lunch they were going to have an executive session, and, of course, I not being a logger or lumberman, did not stay, though I said to Mr. Long, "I will be pleased to meet with you this evening at your hotel." He said, "All right, meet me at 9 o'clock at the Portland Hotel." So I did. And at that time I disclosed to Mr. Long our railroad survey and the work that we had done up to that time, and what we were doing in Washington, and that we would like to get this spruce council of defense to recommend to the Government that we be permitted to go forward and build this line and finance it. I said to him, "We are not asking the Government for a dollar, but we want the permission to go forward and build it." He says, "Well, Mr. Lindsay, if it will take you a year, the Government won't do anything, and we can not make that recommendation." Then he asked me something about other lines of road up there—the Milwaukee—and what the general situation was. And he finally said to me that "Well, if a railroad is to be built in there to this spruce, the Milwaukee can build it better than you people can." I concluded that was about time for me to quit talking, and that ended that conversation.

Mr. LEA. To what spruce was that that this conversation referred?

Mr. LINDSAY. On the Olympic Peninsula.

Mr. FREAR. The Pleasant Lake spruce?

Mr. LINDSAY. It is in Clallam and Jefferson Counties. About the 21st day of December, 1917, I received a letter from Mr. Douty, who was in Washington, D. C., to meet him at Portland about the 25th of September; that he had received a cablegram from a man by the name of Mr. Huson, whom he had put this matter up to—that is, the financing of it.

Mr. FREAR. Who is Mr. Douty?

Mr. LINDSAY. Mr. Douty is a lumberman of Portland and has a mill there.

Mr. FREAR. A man of some affairs?

Mr. LINDSAY. He is a man of large affairs. He was then furnishing lumber to Mr. Huson at that time, and had been for a year or two shipping by the way of Galveston or some port in the South. He advised me that he had received a cablegram from Mr. Huson that Mr. Huson would furnish us \$3,000,000 to build this railroad,

on condition that we would make a contract to furnish \$20,000,000 worth of lumber within five years after the close of the war.

Mr. FREAR. Five years after the close of the war?

Mr. LINDSAY. Yes.

Mr. FREAR. Had you any estimates up to that time from your engineers as to the cost of construction?

Mr. LINDSAY. We did.

Mr. FREAR. What were the estimates, briefly?

Mr. LINDSAY. From Port Angeles to the Hoh River, 74 miles of construction, \$29,000 a mile; construction and equipment, \$40,000 per mile.

Mr. FREAR. The construction was \$29,000 and the equipment added brought it up to \$40,000?

Mr. LINDSAY. Yes.

Mr. FREAR. Who was your engineer or engineers?

Mr. LINDSAY. Mr. Theodore Rixon was chief engineer, and Mr. L. M. Rice, of the L. C. Smith Building, was consulting engineer. I think they estimated the cost from Port Angeles to Lake Pleasant—the construction and equipment—to run about \$45,000 per mile.

Mr. FREAR. What was the construction alone?

Mr. LINDSAY. I should judge about \$35,000. That was the hardest end of the work around the lake.

Mr. FREAR. What was the equipment? That would only make the equipment \$10,000.

Mr. LINDSAY. The equipment sufficient for the needs of that locality. When I received Mr. Douty's letter announcing this cablegram I immediately telegraphed him, and also telegraphed Mr. Cain in New York City, to get in touch with Mr. Douty. So they did, and Mr. Douty went to New York and made arrangements to take charge of the financial end of the concern, and about the 1st of October he and Mr. Cain returned to the coast. Mr. Douty went over the line and went out as far as Forks. At that time the plans were to build a mill at Port Angeles, where the Government mill now is at the same location.

Mr. FREAR. Who was to build that?

Mr. LINDSAY. Mr. Douty. That was part of the program. And saw the lumber up there, and that was to be shipped to Mr. Huson at the close of the war.

Mr. FREAR. Who was to build a mill? Was he to build it himself at his own expense, or what?

Mr. LINDSAY. No; that was part of the comprehensive scheme.

Mr. FREAR. Part of the general plan; I see.

Mr. LINDSAY. And Mr. Douty was very enthusiastic over the proposition. But during the war time we were supposed to cut spruce for the Government. They came back here in October, and Mr. Douty and Mr. Kane and myself returned to New York and Washington, leaving here the 4th day of November. We were trying to organize the combination there of about \$6,000,000. Walson H. Brown, the banker, of New York, became interested also, in connection with Mr. Huson, of London. And we were there for about two months carrying on negotiations for the completion of the financial arrangement, and trying to get the Government interested in permitting us to go forward with the construction of the railroad.

Mr. FREAR. How far did you get along? What did you do?

Mr. LINDSAY. We had the consent of Gen. Carmack, who had charge of the English affairs, that he would do all within his power to have the money credited to the English Government here, if Mr. Huson would make arrangements there, so that it would save us the exchange in bringing the money over; and he showed a very willing disposition to do all he could. Mr. Douty had mainly charge of this end of it. I was looking after the organization of some logging companies in connection with this comprehensive scheme; so the detailed work in Washington, D. C., was largely done by him, although later on about the 15th of December he and I went to Washington, D. C., from New York.

Mr. FREAR. That is December, 1917?

Mr. LINDSAY. I think it was about the 15th or 16th. We went down Saturday, and on a Monday we took it up with several of the departments. We first went to the forestry department. Pardon me, I am going back a little. About the 1st of December, 1917, Mr. Douty and I prepared a statement in typewritten form about our comprehensive scheme to get into the spruce, showing the organization of the railroad, the organization of these different logging companies that I had just incorporated while I was in New York.

Mr. LEA. When was that?

Mr. LINDSAY. About the 1st of December, 1917. Setting out the situation as we then had it in hand, and stating to the Government that if there was no appropriation to pay for the cruising of the timber in the forest reserve that we would advance the money to the Government and the Government would pay us back by taking out of the timber as we logged it from the Government reserve; and at the same time we made an application for timber on the Government reserve.

Mr. FREAR. Where is the Government reserve? Where do you strike it?

Mr. LINDSAY. Lake Crescent is in the Government reserve.

Mr. FREAR. The southern side of Lake Crescent?

Mr. LINDSAY. Yes.

Mr. FREAR. Is all of Lake Crescent in the Government reserve?

Mr. LINDSAY. Yes.

Mr. FREAR. Both sides of it?

Mr. LINDSAY. Yes; both sides. We strike the Government reserve about 7 miles southwest of Port Angeles and we went up Indian Valley and we went through a considerable portion of the Government reserve. On the south side of the lake it was practically all Government reserve where our survey was made. And we mailed that about the 1st of December, 1917, to the forestry department at Portland, Oreg. Mr. Douty and I got into Washington, D. C., about the 15th or 16th of December, 1917, and we went up to the forest reserve office and disclosed the spruce proposition and discussed it with the head man there whose name I can not now recall.

Mr. FREAR. That was in Washington?

Mr. LINDSAY. Yes.

Mr. FREAR. In what department was it?

Mr. LINDSAY. The forestry department. And we began to tell him the proposition that we had made to the Portland forestry office, and he said to me, "I have got it right here. Here it is right on

the table. I received that from Portland this morning." We had received a telegram a few days before from Portland that, being the major proposition, they would have to refer to the Washington office. So we discussed the proposition and he said to us, "We do not know the exact condition of the spruce situation on the Pacific coast there or in your country, but we have a large number of men out now and within 30 days we will have the matter pretty well checked up." Then he said, "We could talk further with you people, but until that report comes in from the field we can not do very much." This was on Monday morning, I think, and that morning a telegram came from Col. Disque. I do not know whether it was Mr. Leadbetter or the spruce committee of Washington, D. C. At any rate the substance of the telegram was that there was a man by the name of Mr. Douty at Portland who was acting very queer and he ought to be investigated.

Mr. FREAR. That came to you while you were in Washington?

Mr. LINDSAY. That came to me that Monday morning in Washington.

Mr. FREAR. You do not know whether it was sent by Disque or Leadbetter?

Mr. LINDSAY. I do not know to whom it was sent, but it was signed by Disque and sent to the Aircraft Board. Leadbetter was just elected to the board a few days before that. Mr. Douty's mill at that time at Portland had been commandeered and was cutting spruce for the Government, and we were doing all we could to further the interests of getting spruce for the Government.

Mr. FREAR. What was the occasion for sending such a communication; what was Douty doing? He was trying to help along with this railroad project, was he not?

Mr. LINDSAY. He was doing everything in the world possible. His mill was commandeered for cutting spruce, and we were spending our money helping to get out spruce and advancing money to the Government to pay for cruising it.

Mr. FREAR. He was there in Washington with you?

Mr. LINDSAY. Yes; we were together.

Mr. FREAR. Trying to do what? Trying to get the railroad through?

Mr. LINDSAY. Trying to get it into the spruce.

Mr. FREAR. All right. What was done about that investigation of Douty, if you know?

Mr. LINDSAY. I do not think anything was done. In fact, there was not anything done. That was done to break our combination up and prevent us from doing anything.

Mr. FREAR. That is, you think it was sent for the purpose of prejudicing your case there that you were trying to put through?

Mr. LINDSAY. It was damnable, to say the least.

Mr. FREAR. Now, what occurred after that? That was in what month, by the way?

Mr. LINDSAY. That was about the 16th of December, 1917, and in fact I think while I was in Washington, a week or 10 days before that, and Mr. Huson had sent three parties over from London to confer with us on this railroad proposition and lumber proposition, and who also were on their way to Japan.

Mr. FREAR. Where did you meet them; in New York?

Mr. LINDSAY. They came from London and we met in New York and went over the proposition. They were representing Mr. Huson and his company, of London. While we were in Washington the head man of these three came there that same day that this telegram came in from Portland.

Mr. FREAR. That is, the telegram in reference to Douty?

Mr. LINDSAY. Yes. And he advised us that he had just received a cablegram from Mr. Huson in London stating that the English Government was becoming antagonistic to letting Mr. Huson send the money over here at that time, and he feared that he would not be able to do it.

Mr. FREAR. What was Mr. Huson's position, if you know?

Mr. LINDSAY. As near as I know, he was a wholesale lumberman in Glasgow and London. He had organized a large syndicate there to handle lumber after the war.

Mr. FREAR. What occurred after that—after they notified you about the trouble they were having in London?

Mr. LINDSAY. We concluded that we had better return and await developments.

Mr. FREAR. Return here to Seattle?

Mr. LINDSAY. Yes; I returned home and Mr. Cain returned home.

Mr. FREAR. Mr. Cain lives in Seattle?

Mr. LINDSAY. No; Cain lives in Port Angeles. Mr. Cain arrived home several days before I did. I think I returned the 1st day of December, 1918. At that time Mr. Cain had gone to Portland. After we had left New York Mr. Helm and Mr. Pliny Fisk, whom we interested in the proposition, got in touch with, I think, Mr. Kerbaugh—I was not there and I am just giving you what they told me—Mr. Kerbaugh, of Siems-Carey-Kerbaugh Corporation, and went over this proposition with them and urged them to come in and talk it over and build a line into the spruce belt and then do a lumber business and railroad business after the close of the war.

Mr. FREAR. That is to say, if I get this right, that the proposition was to build in there, so afterwards they would have an established traffic or business?

Mr. LINDSAY. Yes; that is the idea; and they would have a railroad there for general purposes and logging purposes and a mill at Port Angeles. And Mr. Kerbaugh came out and looked over the situation and came to Port Angeles and went down to Forks and looked at the timber and discussed the proposition with Mr. Rixon, and went back, and such arrangements were made that they were to take over our railroad and build a line. Mr. Fisk was interested with them. We were to surrender the control of it and receive about \$60,000 of the money that we had already spent in surveys and other expenses out of the plan when we turned the railroad over to them.

Mr. FREAR. Was \$60,000 to be the sole payment or was that just part of the reimbursement?

Mr. LINDSAY. I think possibly Mr. Helm may have had some interest in the proposition. What the details were I have never been able to get to this day, and I do not know.

Mr. FREAR. Just give us the idea as best you can.

Mr. LINDSAY. Anyway, we turned over our maps and tracings and data, the timber, railroads, and everything else that we had, there in New York, which was a complete set.

Mr. FREAR. Who did you turn them over to?

Mr. LINDSAY. To the Siems-Carey-Kerbaugh Co.—either to them or Mr. Fisk. But it came into their possession, and in figuring on this proposition they used our surveys and all the data we had.

Mr. FREAR. How do you mean, figuring on it?

Mr. LINDSAY. Looking the proposition over to see whether it was a profitable one or a feasible one to become interested at all in.

Mr. FREAR. What did you turn over to them?

Mr. LINDSAY. The engineer's reports, the surveys, the data upon all the timber. We had the cruise of all the timber in Jefferson County and Clallam County—the class and kind and quantity—which any business man would want to know what was there in order to go into a comprehensive scheme of this kind.

Mr. FREAR. Naturally. What was done?

Mr. LINDSAY. I received a good many telegrams from Mr. Helm, and he went to Washington, I think, during the latter part of January or the early part of February.

Mr. FREAR. That is, from New York.

Mr. LINDSAY. Yes. He and Mr. Fisk. I understand Mr. Fisk was in Washington a great deal of time presenting this thing to the Government—the idea of getting in there and getting the spruce; and I think they had several meetings with the Government at our Commercial Club.

Mr. FREAR. That is, your Commercial Club in Port Angeles.

Mr. LINDSAY. Yes, in Port Angeles. And telegraphed Secretary McAdoo and Mr. Loyett.

Mr. FREAR. Who was Lovett?

Mr. LINDSAY. He was formerly president of the Union Pacific Railroad, and at that time was regional director of railroads—both in Washington. The telegram was to the effect 95 per cent of the people of Clallam County favored the line constructed around Lake Crescent instead of the Milwaukee line.

Mr. FREAR. Instead of the continuation of the Milwaukee line?

Mr. LINDSAY. Yes. That it was a cheaper route, and would serve the people much better than the continuation of the Milwaukee line.

Mr. LEA. Whose telegram was that?

Mr. LINDSAY. The Port Angeles Commercial Club's telegram endorsing the comprehensive scheme that we were trying to pull through. And I think I telegraphed Mr. Fisk at one time while he was at Washington, D. C., some data that Mr. Helm wanted while he and Mr. Fisk were in Washington. It resulted finally, as far as I am familiar with the facts, in that Siems-Carey-Kerbaugh became interested, and Mr. Cain was in Portland during the months of February and March at the request of Mr. Helm and Mr. Fisk and Siems-Carey and negotiating back and forth from Portland with our organization at Washington and New York.

The final upshot of it was that, I think, Mr. Fisk and the Siems-Carey, Kerbaugh Co. reached some tentative arrangement with the Government to build a road from Joyce around the north side of Lake Crescent, using the 20 miles of our line west.

Mr. FREAR. That is, west of Lake Crescent down to Lake Pleasant?

Mr. LINDSAY. Down to Lake Pleasant. We had a comprehensive survey of the north side of the lake as well as the south side.

Mr. FREAR. You had surveyed both sides?

Mr. LINDSAY. Both sides, and we furnished them, and I think they furnished the Government with all the data we had. In other words, we had an open book.

Mr. FREAR. Your survey ran from the east side of Crescent Lake, but it did not run up to Joyce?

Mr. LINDSAY. It did not. I think the tentative arrangement, as I understood it, was for Siems-Carey to get 200,000,000 to 300,000,000 feet of spruce, and the location of the line had not been settled at that time. As I understood it, the Milwaukee were pulling hard for the Deep Creek line and we were pulling hard for our line.

Mr. FREAR. I see.

Mr. LINDSAY. Showing to the Government all the good points of both lines. They were, and so were we, and trying to convince the Government that, from a war-measure standpoint, our line was the one to be built.

Mr. FREAR. I understand. Now, what occurred?

Mr. LINDSAY. We sent a man by the name of Horseman to Portland to talk the situation over with Mr. Disque and urge him to come up and look over the country, to go over the Milwaukee line and our proposed line, and judge for himself which was the most feasible route for the Government to recommend; and Mr. Horseman, I think, said to Mr. Disque, so he told me, that Mr. Disque was surrounded by people who were not giving him good advice. So he said to Mr. Horseman, "I will make you a promise that I will not recommend any line until I come and look it over, but it will be about three weeks before I can make the trip." He never did come there, and in about two weeks after he made this statement, the reports came out in the papers that he had recommended the Milwaukee Deep Creek line. I wired that fact to Washington to Mr. Helm, and later on this line that was built was finally recommended by Col. Disque. What occurred at Washington during that time I am not familiar with.

Mr. FREAR. What portion of this line was a portion of your line, if any?

Mr. LINDSAY. Nearly 20 miles. Our engineer has measured it, and he told me it is about 19.9 miles.

Mr. FREAR. Did you send to Gen. Disque in the month of April, or thereabouts, a statement in regard to your railroad?

Mr. LINDSAY. We put in a claim to the United States Spruce Production Corporation setting out the situation in full.

Mr. FREAR. I have some papers that came to me here.

Mr. LINDSAY. I have some papers here; I have a copy of our whole statement. It is now pending before the Spruce Production Corporation, at Portland.

Mr. LEA. There has been no determination of that yet?

Mr. LINDSAY. No.

Mr. FREAR. Let us introduce it, then, and while it will take several pages of the record I do not see that there would be any objection.

Mr. LINDSAY. It is our case, that the Government should pay us for what they took.

Mr. LEA. I presume that is a claim for taking your right of way and surveys, etc.?

Mr. LINDSAY. Yes; this is an exact copy of the claim of the Port Angeles & Grays Harbor Railroad, filed at Portland, Oreg., with the United States Spruce Production Corporation, claiming damages for the taking of our railroad right of way, and the use of our maps, surveys, data, etc., in the preliminary work of determining the location of the railroad and the actual construction of the railroad, except that the name of the notary public who verified these, and his seal are not attached. They are all sown to.

(The paper above referred to was marked "Exhibit Q. Lindsay, August 26, 1919," and is copied in the record, in full, as follows:)

EXHIBIT Q.

UNITED STATES SPRUCE PRODUCTION CORPORATION,
Portland, Oreg.

SIR: The Port Angeles & Grays Harbor Railway Co. hereby presents a comprehensive plan of said company, together with its claim against the United States Government for injury and damages sustained by it by reason of the construction of that portion of the Government railroad from Muller's Pass to Lake Pleasant, in Clallam County, Wash.

Said company was incorporated under the laws of the State of Washington on the 8th day of January, 1917, with the avowed purpose and intention of constructing and operating a railroad between Port Angeles, Clallam County, Wash., and Grays Harbor County, in said State. To that end engineers were immediately employed to survey and locate two lines through the city of Port Angeles and one line from said city to the Hoh River, in Jefferson County, said State, a distance of approximately 75 miles. The surveys were completed from Port Angeles to the said Hoh River in the month of June, 1917. Upon application of said railway company the city of Port Angeles, in February, 1917, by ordinance, granted a franchise for 50 years to said railway company to conduct its lines over the streets and alleys in said city.

That there was great need for such a railway is evidenced by the fact that it would tap a large amount of territory in the United States Forest Reserve and permit the Government to market great quantities of its overripe and deteriorating timber. That the timber tributary to said railroad and which would be hauled to market over said line is shown by the report of L. M. Rice, our consulting engineer, hereto attached and made a part hereof. Arrangements were well under way for financing the construction of said railroad before its organization and the commencement of survey work. Before the completion of said surveys war was declared, and at the request of the Government all financing and construction of new enterprises, other than those necessary as a war measure, were stopped. In the meantime, the Government, in order to develop the spruce production in Chllam and Jefferson counties, constructed a line of railroad from Joyce to Lake Pleasant, over 20 miles of which is constructed over our line, surveyed and adopted by the board of trustees of said railway company, being that portion from Mullers Pass to Lake Pleasant. The taking and occupying of that portion of our line by the Government and the construction of a line from Mullers Pass to Joyce, connecting there with the line of the Chicago, Milwaukee & St. Paul Railroad, made the construction of the line so surveyed by the Port Angeles & Grays Harbor Railway Co. undesirable, useless, and valueless.

Under a well-known rule of law, the surveying and adoption of a line by the board of trustees of a railroad company gives to that company a preference right for several years as against any person or railroad company, to the use of the line so surveyed and adopted, and the Government alone could construct a railroad line over said adopted line without the consent of the Port Angeles & Grays Harbor Railway Co.

"* * * It is perhaps the general rule that when a railroad company in good faith surveys and locates a line of railway, and proceeds with reasonable diligence to procure a right of way thereover and to construct its road, the courts will protect its survey from the encroachments of another road."

(*Columbia Val. R. Co. v. Portland & Seattle R. Co.*, 49, Wash. 88, 92; vol. 22, R. C. L. P. 832, No. 86.)

We beg to submit our claim for damages sustained by the Port Angeles & Grays Harbor Railway Co. for the taking of about 20 miles of a right of way and for damages sustained by the said railway company because of the construction of the said Government line of railroad as follows:

Actual cost of survey on the line of the railroad from Port Angeles to the Hoh River, \$25,000.

As before pointed out, the adoption of this line of railroad by the Government and the construction of the railroad was undertaken by the only public body which had any right to take our property from us. We had up to that time spent, including promotion expenses, attempts to finance, etc., a total of approximately \$40,000. We paid the city of Port Angeles for a franchise through that city \$500 in cash.

When the Government built the line from Muller's Pass to Lake Pleasant the balance of our entire line of railroad was rendered valueless. There is no reason for building a line of railroad from the city of Port Angeles to Lake Crescent. It would not serve any purpose whatsoever and the entire expense of condemnation proceedings covering lands west of Lake Pleasant and east of Muller's Pass has been thrown away, as a result of taking from us all the middle portion of the railroad. Likewise the franchise payments to the city of Port Angeles have also been thrown away. In the same manner our entire expense has been likewise rendered valueless and we submit that in all equity the Government can do no less than pay back to our stockholders the \$40,000 which was invested by them to good advantage and the return to them of their property in as good condition as they found it.

It is manifest, of course, that this project was undertaken as a business venture. The affidavit of Mr. Cain evidences the fact that the Milwaukee Railroad was ready to take over this project on such terms as would enable us to market the logs which we could secure in the river valleys to the west of Lake Crescent. The project, however, was of such commercial value that the stockholders of the railroad refused to accept such a proposition. The Government, in taking your portion of our line of road have not only rendered valueless all the money which has been spent by the company, but have deprived the stockholders of their reasonable expectation of profit in the future. In a word this project, in the shape in which it was at the time the Government took it, was of greater intrinsic value than the \$40,000 which has been spent on it. Commercially this property is a valuable proposition, and this fact should be taken into consideration by the Government in arriving at a conclusion for this settlement.

1. The Government, in building their spruce road, invaded the territory of the Port Angeles & Grays Harbor Railway.

2. They had the use and benefit of surveys, profiles, maps, and data of said Port Angeles & Grays Harbor Railway.

3. Twenty miles of the Government spruce road is built on the rights of way of the Port Angeles & Grays Harbor Railway.

4. So far not one penny has been paid by the Government for the use of such maps, surveys, data, and rights of way of said Port Angeles & Grays Harbor Railway.

5. We respectfully request the Government to put the Port Angeles & Grays Harbor Railway back in as good a position as it was in before the Government found it necessary to take it over as a war measure, and to allow a fair compensation for the use of the project.

Dated at New York City, N. Y., this 5th day of May, 1919.

PORT ANGELES & GRAYS HARBOR RAILWAY,
By JOHN CAIN, *President*.

STATE OF WASHINGTON,
County of King, ss.

John Cain, being first duly sworn, on oath deposes and says:

That at and during all the times hereinafter mentioned affiant was, and still is the president of the Port Angeles & Grays Harbor Railway Co., a Washington corporation. That about the month of May, 1916, affiant decided to undertake the building of a line of railroad from Port Angeles to Grays Harbor, in the State of Washington, for the greater portion of which line a pre-

liminary survey had previously been made. That affiant discussed the proposition fully with Mr. Chris Morganroth, who then was and still is the United States district forest ranger with headquarters at Port Angeles, Wash., and who furnished very comprehensive maps showing the timber on the national forest reserve tributary to the line of the proposed railroad, including the amount, classification, and quantities. That affiant procured Mr. Theodore F. Rixon, a well-known engineer, to prepare and approximate estimate, together with maps and general data, showing resources, cost of road and rights of way, including a right of way through the holdings of the Clallam Lumber Co., a Michigan corporation, owning large bodies of timberlands in Clallam County, and for which corporation Mr. Rixon then was and still is local agent.

That about the middle of June, 1916, affiant took up with the mayor and city council of Port Angeles the question of obtaining railroad franchise through said city, covering the entire water front. That on June 27, 1916, the city council signed an agreement assuring the granting of city franchises, a copy of which said agreement is hereto attached, together with copy of a letter from the mayor of Port Angeles dated July 1, 1916. That during this time affiant also took up with the commercial club of Port Angeles the appraisalment of property within said city which the railroad company would require for terminals and rights of way, and that attached hereto is a copy of the findings of the committee of the commercial club of the city of Port Angeles pursuant thereto. That affiant also secured assurances from Mr. James Campbell, of Seattle, who has large timber interests in Clallam and Jefferson Counties, that affiant could procure free rights of way wherever the line of said railroad crossed the lands controlled by Mr. Campbell.

That after compiling all of said data, affiant took a trip East for the purpose of arranging necessary capital to carry through the undertaking, and received sufficient encouragement from persons who then were and now are sufficiently able to carry out the whole undertaking; that as soon as the surveys were completed and rights of way secured that they would see to the financing of the proposition. That on this trip affiant discussed with Mr. Wood Beal, of the Clallam Lumber Co., the carrying out of this project, and was assured by Mr. Beal, who as affiant now recollects was secretary of the Clallam Lumber Co., that he could secure free rights of way across the entire holdings of the Clallam Lumber Co. That Mr. Beal also stated to affiant that he feels sure the Clallam Lumber Co. would assist in financing the railroad.

That finally in December, 1916, arrangements were made for the surveying of the said line. On January 8, 1917, the Port Angeles & Grays Harbor Railroad Co. was incorporated and L. M. Rice, a well-known consulting engineer of Seattle, with offices in the L. C. Smith Building, was employed as consulting engineer for said line and Mr. Theodore F. Rixon became its chief engineer. Several crews of engineers were placed in the field and the line located from Port Angeles to the crossing of the Hoh River, a distance of 74 miles, and said line was adopted by the board of trustees of said railroad company, which had been incorporated as a common carrier, as the line of said railroad.

That there has been expended in the actual engineering expenses in making the surveys of said railroad \$25,000. That a tracing of the profiles of said railroad was delivered to Mr. Kelleher, who was the chief engineer for Selms-Carey-H. S. Kerbaugh Corporation in the construction of the present Government railroad from Joyce to Lake Pleasant in said county. That on statements of Mr. Carey and Mr. Kerbaugh the officials of said Port Angeles & Grays Harbor Railway Co. were induced to believe that said company would be made whole for said surveys, and relying thereon, said tracing was delivered and, as affiant is informed and believes, was used by engineers and contractors in the construction of said Government railroad in Clallam County. That the fact that the Government had built its line from Muller's Pass over the line of the Port Angeles & Grays Harbor Railway Co., a distance of about 20 miles to the westward, and has made a connection with the Chicago, Milwaukee & St. Paul Railroad at Joyce, has left the line of the Port Angeles & Grays Harbor Railway which remains practically useless, although the extension from Lake Pleasant to the Hoh crossing might be worth something some day to the persons operating and owning the present Government line as far west as Lake Pleasant. That said survey was delivered in good faith; that the Government has received benefit thereof; and that affiant's said com-

pany has been necessarily prevented from carrying out its said project, as a result of the action of the Government.

That not one cent has been received in payment therefor, neither the cost of the surveys, nor any other expenses in connection with said project, nor any compensation for those who devoted their entire time in connection therewith. That affiant personally devoted his entire time for 15 months to said project and has never received therefor a dollar in salary.

That before said surveys were completed, the Chicago, Milwaukee & St. Paul Railway Co. through Mr. R. M. Calkins, who was then their general manager and now the president of the road, in the office of said L. M. Rice, in the city of Seattle, offered to complete the said railroad as their own railroad and to give the persons interested in the project at that time such a rate on their logs and timber as would result in the transportation of the said logs and timber product more cheaply to the owners and promoters of said Port Angeles & Grays Harbor Railway Co. than we could afford to operate the railroad for if we had it built. That this offer was declined and is suggested at this time that the Government may see that the project could have been profitably handled by said Port Angeles & Grays Harbor Railway Co. at any time, if the Government had not practically taken over the project and rendered it useless to said railroad company.

JOHN CAIN.

Subscribed and sworn to before me, this 13th day of February, 1919.

Notary Public in and for the State of Washington, residing at Seattle.

PORT ANGELES, WASH., June 27, 1918.

JOHN CAIN, Esq.,
Port Angeles, Wash.

DEAR SIR: We the undersigned mayor and members of the city council of the city of Port Angeles, Clallam County, State of Washington, hereby promise and agree in consideration of the performance of the obligations herein contained on your part, so far as they relate to the city of Port Angeles, which said obligations are as follows, to wit:

That upon proper application being made by yourself in your own behalf, or in behalf of yourself and associates, we, the said mayor and members of the city council of said city of Port Angeles, will on or before the 1st day of November, 1918, or as soon thereafter as possible, grant to you, or to your associates or assigns, certain franchises permitting you or them to build, equip, and operate a standard-gauge railroad over, across, and upon the following streets and alleyways in said city of Port Angeles, viz.:

Beginning at the intersection of Victoria and Liberty Streets and running in a westerly direction along said Victoria Street to the intersection of Victoria and Front Streets. Thence west along Front Street to Lincoln Street, crossing Lincoln Street near the intersection of Front Street, also crossing the alley in block 16 of Norman R. Smith's subdivision of the townsite of Port Angeles; thence along First Street on the south side thereof from, at, or near lot 7 in block 31, N. R. Smith's subdivision of the townsite of Port Angeles, to Oak Street; thence diagonally across Oak Street to the alley in block 33; thence along the said alley crossing Cherry Street to Valley Street, crossing Valley Street diagonally to Second Street; thence west along the south side of Second Street to Pine Street, crossing Pine Street and the alley in block 49 to Cedar Street, crossing Cedar Street diagonally to Third Street, west on Third Street to K Street, including Third Street North, with the right to cross, use and occupy such other streets and alleyways as may be necessary in order to reach the sand spit located at the head of Port Angeles Bay. Also to grant a franchise or lease to such portion of said sand spit as may be necessary for the proper operation of said railroad along and upon said sand spit when same has been properly surveyed and the line definitely located by the engineers of said railroad, such lease or franchise not to conflict in any manner with any lease or franchise already granted to any other person, company, or organization. Also a franchise on Cedar Street from Third Street North to the north line of Cedar Street. Also a franchise on

Valley Street from the boulevard to the north line of said Valley Street, Said franchises to be granted upon the following conditions, to wit:

1st. The faithful performance by the grantees of all the conditions herein set forth.

2d. Said grantees to have commenced actual construction of said railroad not later than November 1, 1916, and to have said railroad completed to trans-continental connection not later than November 1, 1912.

Witness our hands this ——— day of June, 1916.

E. J. WALTON, *Mayor*.

CITY OF PORT ANGELES,
OFFICE OF THE MAYOR,
Port Angeles, Wash., July 1, 1916.

Mr. JOHN CAIN, *City*.

MY DEAR Mr. CAIN: With reference to the matter of a right of way through the city of Port Angeles for another railroad, I beg to say that I shall be pleased to lend you any assistance in this connection that I can consistently with my duty to the city. I will approve any franchise granted to such proposed railroad by our city council which would not jeopardize the best interests of our city.

I am confident that all our people fully appreciate the immense value to our city and the Olympic Peninsula of another railroad, and feel that all the citizens of this community should give their energetic and loyal support to the enterprise.

I wish to express to you my personal appreciation of your efforts in connection with this matter, and sincerely hope your work may be crowned with success.

Very truly, yours,

E. J. WALTON, *Mayor*.

LAW UNION & ROCK INSURANCE CO. (LTD.), OF LONDON,
Port Angeles, Wash., July 1, 1916.

PORT ANGELES COMMERCIAL CLUB,
Port Angeles, Wash.

GENTLEMEN: The committee appointed to estimate the cost of a railroad right of way crossing the following described property, beg to report that in their opinion said right of way could be obtained at a price approximately \$40,000.

The following is a list of the property affected: Block 16, lots 1, 2, 3, 13, 14, and 15; block 33, lots 11 to 30; block 34, lots 11 to 20; block 49, lots 1, 2, 3, and 11 to 17; and blocks 135, 136, and 137.

Respectfully submitted,

H. M. FISHER,
E. J. WALTON,
CHAS. L. HAGGITH,
Committee.

STATE OF WASHINGTON,
County of Clallam, ss:

Theodore F. Rixon, being first duly sworn, on oath deposes and says that he was the chief engineer of the Port Angeles & Grays Harbor Railway, a railroad corporation of the State of Washington, having been appointed to that position about the 1st of January, 1917; that immediately thereafter he commenced the survey and location of the said railroad for said company, from Port Angeles, Clallam County, Wash., to the Hoh River in Jefferson County, Wash.; that said line as located by him was afterwards adopted by the board of trustees of said company as and for the line of the road of said railway company; that the length of said line was approximately 74 miles; that of this distance

all that portion of the line between Port Angeles and Lake Pleasant in Clallam County was finally located except a portion between a point about half a mile west of Lake Crescent, Sol Duc Divide, and a point about 1 mile east of the second crossing of the Sol Duc River, which was approximately 3 miles east of Lake Pleasant; over this portion a preliminary line was run and a projection made, and adopted by the board of trustees; that the Siems, Carey-H. S. Kerbaugh Corporation about the 1st of July, 1918, made a survey over, across, and along the line of the projected and located line of the said Port Angeles & Grays Harbor Railway; that the survey crews of the Siems, Carey-H. S. Kerbaugh Corporation used the preliminary line of the said Port Angeles & Grays Harbor Railway, taking advantage for a greater portion of this distance, of hubs and brush cutting put in and cut out by the surveyors of the Port Angeles & Grays Harbor Railway; that the greater portion of said preliminary survey was used by the Siems, Carey-H. S. Kerbaugh Co. in order to save time and was the only means of saving valuable time in completing their survey; that nearly all of said location of said Siems, Carey-H. S. Kerbaugh Co.'s line is located and is being built on the projected and located line of said Port Angeles & Grays Harbor Railway from a point about half a mile west of the Crescent Sol Duc Divide, and that the first crossing of the Sol Duc River is identical with that located by the Port Angeles & Grays Harbor Railway; that all of said Siems, Carey-H. S. Kerbaugh Co.'s location, with but very few exceptions, is laid out and is being built upon the 100-foot right-of-way projected and located by the Port Angeles & Grays Harbor Railway; that recently affiant was over said line in the company of Frank King, the head cruiser of the James D. Lacey Timber Co., of Seattle; that said Frank King was present when affiant took down location stakes herein-after referred to by affiant, and that affiant on that occasion called the attention of Mr. King to the identity of the said hubs and stakes; that by said examination on the ground affiant knows that Sta. L. 430 plus 63 of the Siems, Carey-H. S. Kerbaugh Co.'s location is identical with P. 2101 plus 47 of the Port Angeles & Grays Harbor Railway, the same being used; that Sta. IA 30 plus 25.4 P. T. of Siems, Carey-H. S. Kerbaugh line equals Sta. 1545 plus 40 of the Port Angeles & Grays Harbor Railway, both hubs being identical.

That Sta. L. 430 plus 67.8 triangle, equals and is identical with L. 1545 triangle of the Port Angeles & Grays Harbor Railway; that L. 451 plus 36.1 of the Siems, Carey-H. S. Kerbaugh Co. equals and is identical with L. 1524 plus 33.6 of the Port Angeles & Grays Harbor Railway; that L. 455 plus 20 P. O. C. of the Siems, Carey-H. S. Kerbaugh Co. is the same hub which was also used by the Port Angeles & Grays Harbor Railway, but at the time the affiant examined the stakes on the ground, the stake of the first survey had been pulled up and thrown away and affiant did not have his notes with him; that L. 459 plus 04, of the Siems, Carey-H. S. Kerbaugh Co. equals and is identical with L. 1516 plus 65.8 of the Port Angeles & Grays Harbor Railway and that all of the Siems, Carey-H. S. Kerbaugh Railway location west across Tyee Prairie and about one mile further west thereof are identical with the survey of the Port Angeles & Grays Harbor Railway until the point is reached where the Siems, Carey-H. S. Kerbaugh Co.'s logging road branches off to the Dickie River and away from the line of the Port Angeles & Grays Harbor Railway to the westward.

That the entire distance of this survey of the Port Angeles & Grays Harbor Railway thus taken over and appropriated approximates about 1048 plus 29.2 stations of approximately 19.9 miles; that of this amount about 242 stations were on, over, or identical with the 100 feet right of way of the located line of the Port Angeles & Grays Harbor Railway, or about 4.6 miles.

That affiant was one of the men who negotiated with the United States Government on behalf of the Siems, Carey-H. S. Kerbaugh Co. in the consummation of the negotiations which resulted in the present business relations between them; that during the negotiations with the United States Government it was always contemplated by the men conducting the negotiations that if an agreement was finally reached the railroad would be built along at least a portion of the line of the Port Angeles & Grays Harbor Railway and the contract of the Government, and the draft of the contract which the Government approved was based upon the assumption that the line would be built into the west end of Clallam County, substantially upon the line located by the Port Angeles & Grays Harbor Railway, as aforesaid.

That affiant is an agent of the Clallam Lumber Co., the owner of a tract of land through which said line of railroad passes almost exclusively down the

Sol Duc Valley; that the company by which affiant is employed had promised the stockholders and officers of the Port Angeles & Grays Harbor Railway that said company would furnish a right of way through the lands down the Sol Duc Valley; that said Port Angeles & Grays Harbor Railway instituted many condemnation suits for the acquisition of the right of way over many other portions of said right of way principally between Lake Crescent and the city of Port Angeles, and no condemnation proceedings were actually begun against the Clallam Lumber Co. for the reason that affiant and all parties concerned knew that the promise of the Clallam Lumber Co. could be thoroughly relied upon; that during said negotiations with Col. Disque, he was particularly insistent that the Government should be assured, among other things, of the furnishing of a right of way down the Sol Duc Valley; and that affiant filed a written letter, as agent of said Clallam Lumber Co., advising him that such right of way would be obtainable from said lumber company; that by reason of the official position of affiant with both the Clallam Lumber Co. and the Port Angeles & Grays Harbor Railway, it was never necessary technically to protect a right of way through the lands of the Clallam Lumber Co., and for this reason no such technical legal rights were obtained as otherwise would have been procured; that after the negotiations of affiant on behalf of said Siems, Carey-H. S. Kerbaugh, Mr. W. F. Carey and Mr. H. S. Kerbaugh came to Port Angeles and went down the Sol Duc Valley and along the line of the projected railroad as now located; that upon that visit a personal arrangement was made with the Siems, Carey-H. S. Kerbaugh Co. whereby affiant advised them that he believed the entire survey, including all overhead costs, franchises, and corporation costs, were worth and could be obtained from said Port Angeles & Grays Harbor Railway for the sum of \$60,000. That from that day it was always understood that Siems, Carey-H. S. Kerbaugh Co. intended to take over the survey and pay up all outstanding bills and a reasonable price for the survey of company, etc. That upon the statement being made to Mr. W. F. Carey, he said he believed the amount asked was reasonable and asked the name of the person who had furnished the money. That he was told it was a Mr. Heyneman, and that thereupon Mr. W. F. Carey said that he should be reimbursed all that he was out upon the project. This conversation took place at affiant's house while Mr. W. F. Carey and Mr. H. S. Kerbaugh were looking over the country. That another conversation took place between W. F. Carey and affiant in the presence of Mr. Donlan, who also has been interested in the Siems, Carey-H. S. Kerbaugh Co., in a Pullman car while traveling from Portland to Seattle; that on this occasion affiant repeated to Mr. Carey that all the outstanding labor bills, amounting to about \$5,000, would have to be paid immediately. This Mr. Carey stated would be promptly taken care of.

That upon this understanding affiant handed to Mr. Kelliher, then chief engineer of the Siems, Carey-H. S. Kerbaugh Co., his tracing of the profile of the line of the Port Angeles & Grays Harbor Railway, containing all estimates of yardage, alignment, and curves, at his request; that subsequently many blue prints of this profile were made and were used by the Siems, Carey-H. S. Kerbaugh Corporation; that one of the said blue prints was used by one of the construction contractors in letting subcontracts, and that said blue prints were seen by affiant in his possession, and acknowledged to be such when asked by affiant; that said tracing is still in the hands of Mr. Kelliher. That on another occasion affiant in the presence of Chris Morganroth, forest ranger of the Olympic National Forest, at Fairholm, on Lake Crescent, saw one of said blue prints of said profile one morning in the possession of one A. L. Johnson, who was one of the contractors for the Siems, Carey-H. S. Kerbaugh Co.; that said Johnson on that occasion asked affiant where to build camps; that affiant showed said Johnson where the same should be built; that said Chris Morganroth has informed affiant that on another occasion he saw one of the blue prints in the possession of Mr. Wilson, who was assistant superintendent of construction on the west end of said railroad; that affiant was not present and that Mr. Morganroth, as an employee of the Government, does not wish to be placed in the position of witness in the presentation of claims against the Government by which he is employed, but affiant states that upon application by the Government, Mr. Morganroth will confirm these allegations. Affiant also states that Mr. Morganroth has personal knowledge that at the time he saw said profile in the possession of Mr. Johnson and Mr. Wilson, no other survey on the line of said railroad was in existence other than the survey of the Port Angeles & Grays Harbor Railway.

That the portion of said railway line so taken over and used by the Siems, Carey-H. S. Kerbaugh Co. was the center portion of the entire railway of the Port Angeles & Grays Harbor Railway, and that the eastern portion and southern portion of said railway have been rendered entirely valueless by said action as the Siems, Carey-H. S. Kerbaugh Co. by the constructing the road down the Sol Duc Valley have controlled all strategic points over the Sol Duc Crescent Divide and other steep rocky points which can not now be avoided except at the outlay of prohibitive sums of money; that in the judgment of affiant, Siems, Carey-H. S. Kerbaugh Co. could not have surveyed at the present time for less than \$400 per mile for preliminary survey and \$600 per mile for location; that in the judgment of affiant the cost of the survey over that portion of Port Angeles and Grays Harbor Railway appropriated and taken over by Siems, Carey-H. S. Kerbaugh Railway, if made at the time of its appropriation under the circumstances hereinabove set out, would be worth \$8,880; that the actual cost of the survey of that portion appropriated was about \$6,890; that furthermore, no part of said money has ever been paid by said Siems, Carey-H. S. Kerbaugh Co., although promises to that effect were repeatedly made to affiant.

That said Chris Morgenroth was present at the home of affiant upon the occasion of the visit of Mr. W. E. Carey and Mr. H. S. Kerbaugh, above referred to; that said Chris Morganroth will also confirm the statement of affiant that it was contemplated that Siems, Carey-H. S. Kerbaugh Co. would adopt the line of the Port Angeles & Grays Harbor Railway from Mullers Pass westward and build from the end of the Milwaukee road from Joyce down to the Lyre River at Piedmont, and would continue the line again from Fairholm up to Mullers Pass either by ferry across the lake or a line of railroad along the north shore of Lake Crescent, and that this plan was always contemplated by all parties in the conversation regarding the purchase of the rights and property of the Port Angeles & Grays Harbor Railway by Siems, Carey-H. S. Kerbaugh Co., as aforesaid.

THEO. F. RIXON.

STATE OF WASHINGTON,
County of Clallam, ss:

J. W. Lindsay, being first duly sworn, on oath deposes and says that at and during all the times hereinafter mentioned the affiant was and now is an attorney at law, regularly engaged in the practice of his profession at Port Angeles; that affiant was one of the original incorporators of the Port Angeles & Grays Harbor Railway Co., and at all times was and still is a stockholder therein; that at the incorporation of the company the affiant became its trustee, secretary, and general counsel, which positions he has at all times since retained; that immediately upon the organization of the company steps were taken to procure a survey of its line of road; that Theodore F. Rixon, who has been for many years an engineer practicing his profession in the State of Washington, was appointed chief engineer for this railway, which position Mr. Rixon still occupies; that under the direction of the board of trustees Mr. Rixon began a survey locating the line of said railway from the city of Port Angeles around the south shore of Lake Crescent and down the Sol Duc Valley to various points in the west end of Clallam and Jefferson Counties in the State of Washington; that said road was finally located over the greater portion of the route, and preliminary surveys were made over such minor portions of the line as were not finally located. Upon report being made by Mr. Rixon of the line of road, the board of trustees, on the 18th day of June, 1917, adopted and permanently located a line of railway 100 feet in width to be constructed by this company upon the line thus surveyed and located by Chief Engineer Rixon; that a franchise had thereafter been obtained from the city of Port Angeles, which was one terminus of said railway, and said franchise was duly and regularly accepted by the company, as shown in the minutes of the meeting of the board of trustees of said company on the 13th day of February, 1917; that immediately upon the location of the line of said railway by Mr. Rixon and its adoption by the company as aforesaid, affiant as general counsel of the company was instructed by the board of trustees to take immediate steps to procure the right of way of said railway; that Mr. Rixon at that time was and still is the agent and representative in Clallam County of the Clallam Lumber Co., through whose lands the said right of way passed about 23 miles; that the chief engineer knew that no difficulty would be experienced in obtaining right of way for 23 miles, and therefore affiant was not instructed to start condemnation proceedings; that

there were other pieces of said road over which rights of way could be obtained, as the company knew from negotiations with the owners of the land, any of whom were anxious to have the line built, developing that section of the country, and that for such lands no condemnation proceedings were started, but that the company instructed affiant and affiant did begin condemnation proceedings for various pieces along the right of way which it was reasonably anticipated would have to be condemned, and accordingly affiant began 14 condemnation suits for the acquisition of property lying between Port Angeles and Mullers Pass, and three suits covering real estate needed for the right of way at points west of Mullers Pass; that in all of said suits service was had either by publication or personal service upon all defendants shown of record to have any interest in the lands described in the petitions in said condemnation suits; that appearances were filed in some instances, and said condemnation proceedings are still pending in the superior courts of Clallam and Jefferson Counties; that steps were prosecuted in good faith at all times for the purpose of raising money to finance the said road and carry out the project; that the inability of the company to immediately finance the road was occasioned in part by war conditions and in part by regulations regarding the obtaining of money and materials for new railway enterprises, to which regulations the Government has required uniform compliance; that steps were taken to obtain finances for the road from foreign capitalists. An attempt was made to appraise the Federal Government of the value of this line of road in the prosecution of war work, and negotiations of various kinds were conducted to that end; that L. M. Rice was the disbursing officer who disbursed most of the funds of the company; that some of the expenses of the company were disbursed by the affiant, such as office expenses, stenographic expenses, and legal expenses, including court costs in the condemnation suits; that the money for the expenses above enumerated disbursed by affiant was a portion of the general expenses of the company; that the amount of such expense totals \$7,406.50.

J. W. LINDSAY.

Subscribed and sworn to before me this ——— day of February, 1919.

Notary Public in and for the State of Washington, residing at Seattle.

Mr. LEA. Your idea is that the substance of this case is presented in that exhibit?

Mr. LINDSAY. Yes.

Mr. FREAR. We are not trying out their case, but simply presenting the facts as one of the incidents that is connected with this transaction. You have practically supplied everything that you wanted to place before the committee, except this matter of identification. Is there anything else that occurs to you?

Mr. LINDSAY. Some time in July or August, 1918, we learned that there was some doubt about constructing a mill at Lake Pleasant. I came down one morning and met the secretary of the commercial club at the post office, and I said, "What are you doing toward trying to get the Government to locate the mill at Port Angeles?" He said they had not done anything. I said, "The thing seems to be in the air about Lake Pleasant not being the proper place for it. I wish you would come with me to the commercial club and call a meeting of the citizens and tender a free site at Port Angeles." So he did, and the president of the commercial club called a meeting at 11 o'clock that day and we telegraphed Mr. Carey and also Col. Disque that Port Angeles would furnish free site for the mill at Port Angeles, if it did not cost over \$30,000. We heard nothing from that for about a week, and then they indicated that they would come down and meet us on a certain day and go over the different sites we had in Port Angeles. It resulted in looking them all over and selecting the site where the mill is now built. So they wanted a certain number of

acres and certain parts which would cost us \$36,000, and we entered into an agreement which was rather one-sided. We signed up the agreement, guaranteeing clear, free title at a cost to the citizens of Port Angeles of \$36,000, and they were to pay \$11,000.

Mr. FREAR. Who?

Mr. LINDSAY. Siems-Carey & Kerbaugh, because we then went \$6,000 beyond what our original proposition was, and we were afraid we could not raise the additional money. So we entered into tentative arrangements, probably a hundred of the business men of Port Angeles guaranteeing free and clear title to this property; but in our guarantee it was conditional that if the mill was not constructed and put in operation the title of that property should be conveyed back to the Citizens National Bank as trustees for the citizens of Port Angeles.

Mr. FREAR. What is the status of that now?

Mr. LINDSAY. We conveyed complete title to Siems-Carey & Kerbaugh, and they turned it over to the Spruce Corporation. The citizens of Port Angeles would like to have their agreement fulfilled.

Mr. FREAR. Was that a trustee's deed, or what?

Mr. LINDSAY. It is a straight deed.

Mr. FREAR. Was that all there was to it.

Mr. LINDSAY. Straight deeds went from the different owners to Siems-Carey & Kerbaugh.

Mr. FREAR. Where was this condition evidenced?

Mr. LINDSAY. In a statement that about 100 of us citizens signed and filed with Siems-Carey guaranteeing that if they would come there we would get this title.

Mr. FREAR. Does it appear anywhere in the evidence, in the deeds?

Mr. LINDSAY. No.

Mr. FREAR. What would be the legal status of it, so far as you understand?

Mr. LINDSAY. They accepted the conditions of that, and I take it that probably a court of equity would hold that if the mill was not completed they should convey it back.

Mr. FREAR. You have that contract?

Mr. LINDSAY. Yes; the people of Port Angeles do not want it conveyed back; they want the mill completed and finished, and would be only too glad to forget about it if the mill is finished.

Mr. FREAR. What was done about it after the armistice was signed?

Mr. LINDSAY. They stopped work.

Mr. FREAR. Did they have any machinery in there?

Mr. LINDSAY. I understood there was machinery in there and that there were 10 car loads of machinery on the tracks at Port Angeles. The mill was dismantled and the material taken out and shipped to Vancouver.

Mr. FREAR. So that all you have—

Mr. LINDSAY. Is the framework of the mill.

Mr. FREAR. That is the mill that the committee saw on the day they were up at Port Angeles; it is over at the right as we approached the city from the land side?

Mr. LINDSAY. That is the one. The people of Port Angeles paid \$36,000 for that.

Mr. FREAR. And that property is in the hands of the Spruce Production Corporation?

Mr. LINDSAY. It is.

Mr. FREAR. It was built by Siems-Carey Co., but, under the cancellation clause, as I understand it, it goes now to the Government, which takes it over under the clause in the contract which so provided?

Mr. LINDSAY. The board at Portland, Oreg., has made a statement, and I think Gen. Disque has made it, to the commercial club, that if the mill was not completed and operated they would pay the money back. Of course, we want the title back; we do not want the title to that valuable mill site go to somebody who is going to tie up one of our best mill sites.

Mr. FREAR. What is the number of buildings there at Port Angeles; what is the value of them?

Mr. LINDSAY. I do not know.

Mr. FREAR. It runs into a good many thousand of dollars?

Mr. LINDSAY. Probably a couple of hundred thousand dollars; maybe more.

Mr. FREAR. Of course values are largely determined upon the usage to which they are put, and you say the machinery is all out?

Mr. LINDSAY. Yes.

Mr. FREAR. Is there anything else you think of just now, before we adjourn?

Mr. LINDSAY. I do not think of anything just now.

(Thereupon, at 5.30 o'clock p. m., an adjournment was taken until to-morrow, Wednesday, August 27, 1919, at 10 o'clock a. m.)

SUBCOMMITTEE NO. 1 (AVIATION) OF THE
SELECT COMMITTEE ON EXPENDITURES IN THE
WAR DEPARTMENT, HOUSE OF REPRESENTATIVES.
Seattle, Wash., Wednesday, August 27, 1919.

The subcommittee met at 10 o'clock a. m., pursuant to adjournment, Hon. James A. Frear (chairman) presiding. Also present: Hon. Walter W. Magee and Clarence F. Lea.

TESTIMONY OF J. W. LINDSAY—Continued.

Mr. FREAR. At the conclusion of the hearing yesterday I asked if there was anything further that you had to offer and told you to let me know this morning. Please tell me of any conditions that were brought about by any other railway interests affecting the action of your campony there, either by sending men to you for employment or in attempting to interfere in any way with the efforts of your company to organize this railroad that you have spoken of that goes from Port Angeles down past Lake Pleasant to the Hoh River.

Mr. LINDSAY. A short time after our survey had been started a young man by the name of Jean Myers, who had been employed by the Milwaukee Railroad for the last six or seven years, came to our chief engineer and wanted a position. He said the Milwaukee had no work for him to do, and he was an old acquaintance of our chief engineer's, and he gave him a position. He was down there a couple of weeks, and that matter came up to the officials of the company and they requested the chief engineer to discharge him. He then went back to work for the Milwaukee railroad.

Later on a man by the name of Mr. Barklill came to Port Angeles and said that he wanted to get out of city life and thought that Port Angeles was a good place to come to. He said he would be glad to come in my office and assist in the legal work of our railroad. I had been acquainted with Mr. Barklill seven or eight years. He was a very fine young man, but I told him I thought my partner and I could handle the legal work for the time being.

Mr. FREAR. What became of him?

Mr. LINDSAY. He went back; he is working with the Milwaukee yet, in their legal department. Mr. Calkins came to our consulting engineer, Mr. Rice, somewhere in the spring of 1917 and tendered his services to finance the line and assist us in any way he could. He is now president of the Milwaukee railroad, succeeding Mr. Byrum. You will find me corroborated in this statement by Mr. Cain's statement of our claim before the Government.

Mr. FREAR. In this connection, a copy of the affidavit of Mr. Cain which was offered in evidence last night, is among these papers. I do not desire to introduce all these papers which I have here, but I will read briefly from John Cain's affidavit, which is in relation to this same matter. Who was Mr. Calkins?

Mr. LINDSAY. At that time he was traffic manager of the Milwaukee railroad and had been for a great number of years. Since the Government took over the railroads and Mr. Byrum was appointed regional director—

Mr. FREAR. Byrum, who had been president?

Mr. LINDSAY. Yes. Mr. Calkins has been elected president of the Milwaukee Railroad, and is now president.

Mr. FREAR. In Cain's affidavit of February 13, 1919, he says [reading]:

That before said surveys were completed the Chicago, Milwaukee & St. Paul Railway Co., through Mr. R. M. Calkins, who was then their general manager and now the president of the road, in the office of said L. M. Rice, in the city of Seattle—

Rice was your engineer?

Mr. LINDSAY. Our consulting engineer.

Mr. FREAR (continuing reading):

offered to complete the said railroad as their own railroad and to give the persons interested in the project at that time such a rate on their logs and timber as would result in the transportation of the said logs and timber product more cheaply to the owners and promoters of said Port Angeles & Grays Harbor Railway than we could afford to operate the railroad for if we had it built. That this offer was declined, and is suggested at this time that the Government may see that the project could have been profitably handled by said Port Angeles & Grays Harbor Railway Co. at any time, if the Government had not practically taken over the project and rendered it useless to said railroad company.

From that and from your own statement as an official of the company, it appears that Mr. Calkins, who is now the president of the road, at that time offered to take over and build the road for your people.

Mr. LINDSAY. He did.

Mr. FREAR. Do you know about what time that was?

Mr. LINDSAY. I think it was the spring of 1917; just the exact month I am not prepared to say.

Mr. FREAR. In relation to this whole affidavit, I see he fixes it as beginning in May, 1916. That affidavit gives a résumé of the conditions.

Mr. LINDSAY. I might say in connection with this, after these different overtures were made to Mr. Rice and myself and our chief engineer, we deemed it advisable that we confer with the Milwaukee Railroad, with the idea of connecting with them at the west city limits of Port Angeles, and Mr. Helm visited Mr. H. B. Earling, the vice president of the railroad, with the view of running over their line into Port Angeles and then over our franchise. Of course, Mr. Earling said he was very glad to make traffic arrangements of that kind with us if we got that far.

Mr. FREAR. I am asking you if you know anything about the Milwaukee Land Co. and any of the people who were connected with them. The statement has been made, both in the Ray hearings and elsewhere, that the people connected with the Milwaukee Railroad organization—

Mr. LINDSAY. The Milwaukee Land Co. is the town-site and timber-holding company of the Milwaukee Railroad. As I understand, the officials of the Milwaukee Railroad are the officials of this Milwaukee Land Co. I understand the profits of the land company go into the railroad earnings.

Mr. FREAR. The testimony occurs, either directly or indirectly, in the Ray hearings, and it appears in the Spruce Production Corporation's statement, that the Milwaukee Land Co. has some 19,000 acres of timberland in Clallam County.

Mr. LINDSAY. They have a great deal, I think.

Mr. FREAR. And much of it is along this line of railroad that is projected to Pleasant Lake, according to the description on the map?

Mr. LINDSAY. They have some timber west and south of Pleasant Lake, also.

Mr. FREAR. That would take them in the direction of Grays Harbor?

Mr. LINDSAY. Yes.

Mr. FREAR. And your road was projected and it was surveyed to Grays Harbor?

Mr. LINDSAY. To Hoh River, 75 miles.

Mr. FREAR. But eventually to Grays Harbor was the proposal?

Mr. LINDSAY. It was.

Mr. FREAR. And that was true of the Milwaukee Road, which runs around by Pysht?

Mr. LINDSAY. Our survey ran into and over some of the survey of the Milwaukee Railroad, south of Forks.

Mr. FREAR. That would be west of Pleasant Lake, and south?

Mr. LINDSAY. Yes; between Forks and the Hoh River we ran over considerable of their line. As a matter of fact, they had bought some right of way in there.

Mr. FREAR. The Milwaukee Road had?

Mr. LINDSAY. Yes.

Mr. FREAR. Let me fix it in the minutes. The Milwaukee Road had bought some of this right of way between Pleasant Lake and Grays Harbor?

Mr. LINDSAY. They had, and I started a condemnation suit against the Milwaukee Road at the crossing of the Hoh River in behalf of

our company at the time we surveyed our line there. There is practically only one available crossing of the Hoh River, and they owned that land, and I started a condemnation suit immediately so that we could get across the Hoh River.

Mr. FREAR. That is about how far from Port Angeles?

Mr. LINDSAY. That is 75 miles.

Mr. FREAR. And between Port Angeles and Grays Harbor, over on the Pacific coast?

Mr. LINDSAY. Yes.

Mr. FREAR. I desire to read an affidavit from John Cain, under date of January 7, to Franklin Helm, Holly Hotel, New York. John Cain was one of the officers of your company?

Mr. LINDSAY. He was president of the company.

Mr. FREAR. I will read that in evidence; it is short.

Mr. LEA. In order to straighten out the record, this was not certified by the notary public, but I understand there was a notary's certificate.

Mr. LINDSAY. Yes.

Mr. FREAR. This is a telegram from John Cain to Franklin Helm, who was also an officer working for your company?

Mr. LINDSAY. Mr. Helm was not an officer; he was the financial promotor of the company.

Mr. FREAR. In New York and Washington?

Mr. LINDSAY. Yes.

Mr. FREAR. The telegram reads as follows:

JANUARY 7, 1918.

FRANKLIN HELM,

Holly Hotel, New York, N. Y.:

Attorney and I two hours' conference with Col. Disque. He is favorable to our proposition, ready sign 50,000,000 contract, but without authority to commandeer mills or timber. Bill introduced in Congress which he hopes will pass in next two or three days; would sign contract now if we wish and agree to adopt conditions of bill as soon as passed; he realized its necessity. Is pleased with our proposition. He suggests we confer with Angeles Mill Co. to either buy their mill or have them saw our timber, or we put in a mill. He will help us with machinery. He will furnish an officer to go with us to help negotiate; present bill gives him all authority to commandeer, which he is willing to use for us. See long night letter to Brown from Bristol Rixon—

He is your engineer?

Mr. LINDSAY. Our chief engineer.

Mr. FREAR (continuing reading):

Rixon and I were misinformed regarding his present authority to commandeer. Suggest Rixon and man from Disque department take up negotiations with Angeles mill. If we control it, there is nothing for that road west of Angeles but our product. Col. Disque knows where there are 40 miles 40-pound rails. Thinks rails procurable. Large spruce track on Bogachiel. Owners ready to sell. Will look up owners' address and wire you. Think you can contract on cutting basis. Will correspond with Whitmore—

Who is Whitmore?

Mr. LINDSAY. I do not know.

Mr. FREAR (continuing reading):

Have letters from several people offering small tracks cheap. Rixon starting to Angeles to-morrow. Wire me what you wish me to do. Have not heard from funds you sent.

JOHN CAIN.

This telegram was dated January 7, 1918. He is referring, is he, to your line that runs around Port Crescent?

Mr. LINDSAY. Yes; he was at Portland at that time.

Mr. FREAR. And he is referring to your line which ran south of Port Crescent?

Mr. LINDSAY. He was.

Mr. FREAR. And on April 24 the Secretary of War, according to Gen. McIntyre's letter, wrote that he was in favor of the Deep Creek route, which was the Milwaukee direct line past Deep Creek, and that was the letter that was read here in the evidence.

The next is a telegram to you, J. W. Lindsay, Port Angeles, Wash., under date of August 7, 1919, signed by Franklin Helm and John Cain, and reads as follows:

AUGUST 7, 1917.

J. W. LINDSAY,
Port Angeles, Wash.:

You and Rixon go immediately to Seattle meet delegation, Mr. Allen William C. Chadeayne, superintendent wood production, Curtiss Aeroplane Co., in the National Forest Service; also representative of the French and Italian commission. They are looking for aeroplane lumber. The Allies require more spruce than is now produced by the present mills. You and Rixon show them the spruce timber on the Hoh. Insist on some of them accompanying you on peninsula trip. Spruce aeroplane timber is worth \$135 delivered. If they will agree to make advances on half of our railroad bonds, we can agree to contract with them to deliver spruce lumber in sufficient quantities that the saving in the costs in one year would be enormous. Assure them that we will agree to deliver spruce lumber in 10 months at a price not to exceed \$30 per thousand f. o. b. Port Angeles. Have Rixon impress upon them the amount of high-class spruce lumber that we can furnish. We have railroad contractors ready who guarantee date of completion of railroad; half of the necessary money available. We do not desire to make big profits out of the country's needs. Look for delegation at Hotel Washington or chamber of commerce. Wire Rutherford to meet you. Do your work quietly.

FRANKLIN HELM.
JOHN CAIN.

That telegram was sent August 7, 1917, and in it he states, "We will agree to deliver spruce lumber in 10 months at a price not to exceed \$30 per thousand," and also, "We have railroad contractors ready who guarantee date of completion of railroad; half of the necessary money available."

That was back in August, 1917.

Mr. LINDSAY. That is the telegram I testified about yesterday that I had received, and I met this commission at Tacoma and took the trip with some of them, Mr. Chadeayne and Mr. Douty. That is the time I met Mr. Douty. Mr. Rixon and I were together on the trip to Camp Lewis, and that was the time Mr. Douty said he might be in a position to assist in the financial arrangements.

Mr. FREAR. Who was Rutherford?

Mr. LINDSAY. Rutherford is a man living at Vancouver, Wash. He was interested with us more in looking up timber owners.

Mr. FREAR. Was he interested in your railroad?

Mr. LINDSAY. He was not; he was a friend of ours.

Mr. FREAR. The next is a short telegram from Franklin Helm.
[Reading:]

WASHINGTON, D. C., *January 13.*

JOHN CAIN,
Multnomah Hotel, Portland, Oreg.:

F. R. Howe, International Harvester, was appointed to help Disque. He left New York for Portland Tuesday. Coffin wired him and Disque to carry through

the contract; that they had commandeering rights, but to be doubly sure they will reconstruct Chamberlain's bill immediately. Leadbetter don't favor Port Angeles deal, claiming it will take months before we will be producing. You should have Rixon return to Portland by Monday to impress Howe. Will advise you further by Monday.

FRANKLIN HELM.

That was under date of January 13, 1918. Where was Mr. Helm at that time?

Mr. LINDSAY. Mr. Helm was then in Washington, D. C., or New York.

Mr. FREAR. Who is Howe?

Mr. LINDSAY. I do not know.

Mr. FREAR. He speaks of "Howe, International Harvester."

Mr. LINDSAY. I do not know him.

Mr. FREAR. The next is a telegram under date of April 14, 1918, to Franklin Helm, New Willard Hotel, Washington, D. C., signed by John Cain. [Reading:]

APRIL 14, 1918.

FRANKLIN HELM.

New Willard Hotel, Washington, D. C.:

Parties left yesterday 10.15 Milwaukee train. Deal closed satisfactorily. Contractor's name, Siems, Carey-H. S. Kerbaugh (Inc.) Co., now being organized in the East, which I presume you are fully advised. Believe it to advantage that I be on directors' board; however, will leave that to you. I like all three men. Donlan, who came with them from Montana, fully understands both branches lumber industry and a good dealer. Hope you will protect my two years' salary while I have been working on this deal. Mailed you special-delivery letter to New Willard. Learned they asked Rixon why it is people out here did not take this proposition. The fact, people here are busy working out their own problems and are absolutely opposed to opening up this section with all the forest reserve which they have no way to control and with which they can not hope to compete. Suggest not contracting any timber other than forest reserve at this time, except that contained within the spruce area. Your telegram from New York to-day just received. I wired you Friday night, care Pliny Fisk. I did not give details, as they thought it inadvisable to wire. I understand there is a full working arrangement between Siems, Carey, Fisk, and you. Contract 300,000,000 cants; prices, 60 and 100, Nos. 1 and 2. Sorry you did not receive my New York telegram. Reach me Port Angeles. If you want me East, wire me.

JOHN CAIN.

It says "suggest not contracting any timber other than forest reserve at this time except that contained within the spruce area." Do you know what was referred to as the "spruce area"? Was it this tract over there near Lake Pleasant that has been discussed?

Mr. LINDSAY. It was around Lake Pleasant and the Hoh River. There was a great deal of spruce in there owned privately. At that time we had been in communication with a good many of the owners with a view to buying their tracts of timber in connection with the railroad company.

Mr. FREAR. That is, you had been negotiating with these owners in reference to purchasing their timber?

Mr. LINDSAY. Quite a few of them; yes. But our main plan at that time was to get through the forest reserve, because the spruce was a little heavier in the forest reserve than it was in the privately owned timber.

Mr. FREAR. I will read another telegram into the record. [Reading:]

PORTLAND, OREG., March 7, 1918.

FRANKLIN HELM,

New Willard Hotel, Washington, D. C.:

Your confidential wire received. Have personally canvassed local situation to-day and find Bristol has everything up to final point but awaits Brown's assurances. Bonds and guaranty required by Government. Met David at train this morning on his way to New York. Expecting arrive Monday; straighten his affairs about your contract. States does not know how he can take Fisk without releasing Brown. My opinion situation if Brown will not go ahead have Brown release Bristol as attorney and have Fisk wire Bristol similar firm authority and arrangements; then entertain no doubt if Brown goes out both Rixon and Bristol can be fully relied on work with us on new proposal. If Brown and Fisk alone are to go on jointly with the present deal, then have Fisk definitely wire Bristol that effect, and also whether contract if Government shall be with Walston H. Brown Construction Co. or with Brown and Fisk or with whom and who will furnish unquestioned guaranty for advances as required by Government. Matter in such situation required quick and positive action without further delay. David assures me prefer deal with you and Fisk. Brown wires Rixon Fisk in deal with us.

JOHN CAIN.

Who was Brown? What relation did he have to the matter?

Mr. LINDSAY. Well, Mr. Walston H. Brown—I testified yesterday that we were in negotiations in New York to furnish three and one-half millions in connection with the English syndicate headed by Mr. Huston.

Mr. FREAR. About this time, March 7, there was a switch around from Brown to Fisk, was there not?

Mr. LINDSAY. Yes, sir; I do not know what the situation in New York was at that time, but it appeared that Mr. Brown was hesitating and Mr. Helm was handling the New York end of it, and then they made this switch to Mr. Fisk.

Mr. FREAR. Fisk, as has been testified, is—

Mr. LINDSAY. He is a banker in New York.

Mr. FREAR. He is a banker in New York, the man who financed the McAdoo tunnel scheme and many other large pieces of public work?

Mr. LINDSAY. Yes; New York interests. When I was in New York we had some negotiations with Mr. Fisk at that time, but there was nothing definite.

Mr. FREAR. This telegram is signed by Theodore Rixon. He is over at Lake Pleasant, where we were the other day?

Mr. LINDSAY. Yes.

Mr. FREAR. He sends this telegram to Franklin Helm, New Willard Hotel, Washington, D. C. [reading]:

Expect to arrange meeting with Disque to-morrow. Goodyear Co. operating at Clallam Bay. Be here the last of this week from East with Mr. Lacey and are going to try to secure a spruce contract and 500,000 from department toward extending their logging road into Hako 14 miles.

That relates to a proposed railway from Clallam Bay up the Hoko River?

Mr. LINDSAY. Yes.

Mr. FREAR. That would be 14 miles.

Mr. LINDSAY. The Goodyear Logging Co. has a railroad now from Clallam Bay, a logging railroad, out probably 15 or 20 miles from Clallam Bay. They have been logging there for several years, and they proposed to extend their line from there into the spruce.

Mr. FREAR. Into this spruce tract that has been under discussion here?

Mr. LINDSAY. Yes.

Mr. FREAR. Well, a road from Clallam Bay, it has been testified, would only be 14 or 15 miles from the bay, where the Goodyear Co. is logging up to the spruce tract?

Mr. LINDSAY. Well, of course, they gradually get into the spruce. They were in some spruce then, but the heavy spruce is about that distance, I presume.

Mr. FREAR. That is what this relates to, this telegram?

Mr. LINDSAY. It does.

Mr. FREAR (reading telegram):

On account of so much unsatisfactory references from Brown and so much misunderstanding very important you arrange bond for advances and have your bonding company wire Disque that they are prepared to furnish bond covering advances on spruce contract. Disque will not advance a cent toward building a railroad, but we will arrange a price on spruce so that we can afford to build. It must be a straight spruce contract and we must be in position here to close. Several times in past we could have closed had we been ready. It is our opinion if the Government do any financing of roads the Milwaukee through their influence with Lovett will get the preference and the decision will be reached back there. Therefore important we close spruce contract in advance Lovett's action. This in our opinion can be closed in two or three days if you have bonding company wire Disque and ourselves. You overlooked sending funds John Cain.

THEODORE RIXON.

Who was Lovett?

Mr. LINDSAY. Lovett was the regional director, succeeded by Mr. McAdoo.

Mr. FREAR. Mr. McAdoo was at that time—

Mr. LINDSAY. The Secretary of the Treasury.

Mr. FREAR. And the railroad administrator?

Mr. LINDSAY. No. After Lovett went out—pardon me, I guess McAdoo was regional director and Mr. Lovett was next in order.

Mr. FREAR. What do you mean by regional director, Mr. Lindsay? Wasn't McAdoo the railroad administrator?

Mr. LINDSAY. Possibly that is it.

Mr. FREAR. And Lovett held a position under him?

Mr. LINDSAY. Next to him. Lovett was up to that time—until he took that position he was president of the Union Pacific Railroad.

Mr. FREAR. Now, the suggestion is made here in this telegram to Helm at the New Willard Hotel, Washington, that if you can complete the arrangements there that they must look after this spruce contract at once; if there was any question about financing the road, the Milwaukee Road would get the preference in putting it through, as I have read it here. That is a fair interpretation of the telegram?

Mr. LINDSAY. That was the sentiment of it.

Mr. FREAR. That they had a large advantage?

Mr. LINDSAY. We believed so, at least.

Mr. FREAR. This is a short telegram from Franklin Helm, under date of May 28, 1918, from New York, to John Cain, Seward Hotel, Seattle [reading]:

I presume you are helping Carey all possible. What have you done with town site. Will it be possible to option land around Crescent? This is important. Don't fail to try this. Wire me what you buy this land for. Cover entire water front of the bay and such lands fit for mill or industrial site. Regards.

What mill and what site did that relate to, if you know?

Mr. LINDSAY. I think the site at Lake Pleasant.

Mr. FREAR. I was wondering whether it was Lake Pleasant or Port Angeles.

Mr. LINDSAY. Lake Pleasant.

Mr. FREAR. That is, you were going to have a mill at Lake Pleasant?

Mr. LINDSAY. That was the talk at that time.

Mr. FREAR. That was the contemplation?

Mr. LINDSAY. Yes. Our previous plan had been to put a mill at Port Angeles.

Mr. FREAR. The next telegram is to Col. Brice P. Disque, sent by John Cain—this is a letter [reading]:

Col. BRICE P. DISQUE,

*Aviation Corps, Spruce Division, United States War Department,
Yeon Building, Portland, Oreg.*

SIR: I have the honor to submit next subjoined in three sheets the proposal and application of Messrs. Selms, Carey-H. S. Kerbaugh, contractors, of New York City, N. Y., for logging and delivering 300,000,000 spruce logs Clallam County for the Government, as well as railroad facilities. You gave me an interview before when this matter was in somewhat different shape and I now request that you accord me a personal interview upon this proposal, in order that an understanding may be immediately reached.

Very respectfully,

JOHN CAIN.

The date does not appear, but that was after Siems, Carey-Kerbaugh had taken over this proposition?

Mr. LINDSAY. It was after January 1, 1918.

Mr. FREAR. In other words, after you people were wiped out of any spruce contracts or railroad?

Mr. LINDSAY. Yes.

Mr. FREAR. There is one more that is under date of March 8, 1918, signed by John Cain, that I wish to introduce [reading]:

FRANKLIN HELM,

New Willard Hotel, Washington, D. C.:

Brown second reference so far unsatisfactory. Try and arrange satisfactory guarantees for advances as required by Government. Unless quick action, we are liable to lose out. You know who is after this proposition. Possibly they are influencing Brown's references. It is my opinion that is what happened. We are in position to close immediately, providing we qualify. Wire me as early as possible situation. A trip to St. Paul advisable, unless you succeed immediately.

By the way, Mr. Cain is now in New York?

Mr. LINDSAY. He is.

Mr. FREAR. You have been expecting him at any time to come west?

Mr. LINDSAY. I will know in a day or two.

Mr. FREAR. Tell me, if you know, in regard to this: "We are liable to lose out. You know who is after this proposition. Possibly they are influencing Brown's references." Do you know who they had reference to there?

Mr. LINDSAY. The Milwaukee Railroad.

Mr. FREAR. That was under date of March 8, 1918. Do you know who David is? I see his name in these telegrams.

Mr. LINDSAY. I do not. I was not at Portland at that time.

Mr. FREAR. I will read this short telegram of March 11:

WASHINGTON, D. C.

JOHN CAIN,

Oregon Hotel, Portland, Oreg.:

See telegrams to Bristol and push matters vigorously, advising me fully hereafter. Bristol has met with Disque. Please telegraph name of contractor you mentioned as being prepared to make contracts to complete road within six months. Rixon should remain there until this matter is settled. If David or Fisk telegraphs Bristol to close contract for an additional 20,000,000 feet of spruce, so that additional advances can be had, can be consummated.

Do you know the amount of spruce that was in question to be produced?

Mr. LINDSAY. No; not exactly.

Mr. FREAR. It varies here, I see, and speaks of twenty million additional.

Mr. LINDSAY. Between two and three hundred million.

Mr. FREAR. Here is a telegram, dated at Portland, Oreg. [reading]:

MARCH 27, 1918.

T. F. RIXON,

Stevens Hotel, Seattle, Wash.:

If possible, be here to-morrow. Bring all data amount of spruce, both privately owned forest and State. Disque wants that data before signing contract. Also like to see our line location and reasonable assurance of right of way. If you can't be here to-morrow, wire me, and I will meet you next day either in Seattle or Olympia. Advisable you come, if you can, providing you have such data.

JOHN CAIN.

Those are only a few of many telegrams and letters that have passed between your company and the people who were in Washington and also Seattle?

Mr. LINDSAY. A very small percentage of them.

Mr. FREAR. From those telegrams, and as it appears at different times, the Milwaukee Road was a road that was interested in your right-of-way proposition to this extent; they agreed, as you say, to finance your road, if necessary; is that right?

Mr. LINDSAY. Through this Mr. Rice—Mr. Rice made the statement to us that Mr. Calkins made that statement. That is included in Mr. Cain's affidavit there.

Mr. FREAR. Now, when Cain telegraphed that you know who the parties are, or he telegraphs to that effect, and you say it was the Milwaukee Road that were trying—that was what Mr. Cain referred to?

Mr. LINDSAY. Yes; the Milwaukee Road.

Mr. FREAR. Is there anything else you think of?

Mr. LINDSAY. I would like to have in the record this statement; Mr. Carey has made the statement—

Mr. FREAR. Of Siems-Carey-Kerbaugh Co.?

Mr. LINDSAY. Yes; that when we asked that they pay for the data we furnished, our surveys, blue prints, profiles, and all our engineering work to them, he made the statement that they had not used them and did not want to use them.

Mr. FREAR. Carey made that statement to whom?

Mr. LINDSAY. He made that statement to me at one time, and to Mr. Cain and several of our parties. Several contracts were made

to do the grading on this 20 miles that they went over our adopted line, and the Siems-Carey-Kerbaugh Co. delivered to the proposed contractors blue prints of our line.

Mr. FREAR. Who delivered those?

Mr. LINDSAY. I presume the engineer of the Siems-Carey-Kerbaugh organization.

Mr. FREAR. But I mean who delivered them from your company, who had possession of them?

Mr. LINDSAY. Of course, we turned them over to Siems-Carey-Kerbaugh.

Mr. FREAR. Who is "we"?

Mr. LINDSAY. The Port Angeles & Grays Harbor Railroad.

Mr. FREAR. What individual?

Mr. LINDSAY. Mr. Helm, of New York, and Mr. Fisk. In other words, Mr. Helm had the complete survey, data, blue prints, and tracings. When Mr. Fisk became interested, of course those were turned over, and when the Siems-Carey-Kerbaugh Corporation was organized, of course we delivered the whole data to them, assuming that they were part of our organization. After they got in and got the contract they repudiated any connection with us. What the occasion was I do not know. That is something that happened with Mr. Fisk in New York. I have never been able to learn what the trouble was.

Mr. FREAR. What do you know or understand about the Siems-Carey-Kerbaugh Co., or any of those companies, the stockholders, what do you understand about them?

Mr. LINDSAY. I would like to finish this, please, Mr. Frear. Several firms used our blue prints, and the chief engineer used our blue prints and profiles of the 20 miles of right of way in letting contracts. One of the contractors was Johnson McDermott. Afterwards Mr. McDermott became a client of mine and told me that the blue prints submitted to them had the printing of the Port Angeles & Grays Harbor Railroad on them, and in taking that contract they figured from our blue print of the survey work.

Mr. FREAR. That is, they used your data for the purpose of letting their contracts?

Mr. LINDSAY. And they ruined our entire comprehensive scheme and refused to pay us a cent for it. The whole proposition up to date that I have testified to and covered, I think Mr. Cain and myself and those who have been associated with us, that it has cost us about \$150,000 in actual cash, without any money for services.

Mr. FREAR. This money, a good share of it, was put up by whom?

Mr. LINDSAY. Well, I put up some, Mr. Cain put up some, and Mr. Heyneman, who was originally with us, and Mr. Helm has put up a great deal. I think Mr. Fisk put up some money.

Mr. FREAR. Where did Mr. Heyneman live?

Mr. LINDSAY. San Francisco.

Mr. FREAR. He is a young man?

Mr. LINDSAY. Yes.

Mr. FREAR. He went into the Army?

Mr. LINDSAY. Yes.

Mr. FREAR. And while he was in the Army this condition arose, did it?

Mr. LINDSAY. It did.

Mr. FREAR. That is, that these people took possession of your right of way and started construction, is that right?

Mr. LINDSAY. Yes. He withdrew from further financing because he had to go into the Army.

Mr. FREAR. To what extent had he financed your company up to that time?

Mr. LINDSAY. About \$75,000.

Mr. FREAR. That is, Heyneman had put in about \$75,000?

Mr. LINDSAY. Yes. And this taking of this 20 miles ruined our entire comprehensive scheme.

Mr. FREAR. I asked you about Siems-Carey-Kerbaugh, about their stock; who were their stockholders, the owners, so far as you heard of any?

Mr. LINDSAY. Personally I do not know. Mr. Cain was in New York about two months ago, and upon his return to Port Angeles he told me he had been advised in New York that some company that John D. Ryan was connected with owned a large block of stock of the Siems-Carey Corporation. That is only hearsay.

Mr. FREAR. We may inquire further into that.

Mr. LEA. Is Mr. Cain the Seattle attorney?

Mr. LINDSAY. No; he is not an attorney at all.

Mr. FREAR. That is Mr. Cain—C-a-i-n?

Mr. LINDSAY. K-a-n-e is the Seattle attorney for Siems-Carey. Mr. Cain is the president of our company. The names of both men are pronounced the same, but spelled differently. I might suggest one point: The day that that telegram was received in Washington regarding Mr. Douty, Mr. Douty and I went up to see Maj. Leadbetter. He was on the Aircraft Board. It was about 4 o'clock in the afternoon and he refused to talk with Mr. Douty. Mr. Douty tried to make an appointment with him, and he said he couldn't tell when he could meet him.

Mr. FREAR. Douty and Leadbetter were both from Portland?

Mr. LINDSAY. Yes. Mr. Douty is a very high-class man.

Mr. FREAR. A man of large business affairs?

Mr. LINDSAY. A man of large business affairs, and a gentleman.

Mr. FREAR. Did he give any reason?

Mr. LINDSAY. None whatever. He turned white and seemed to be very angry.

Mr. FREAR. In one of those telegrams, as I recollect it, it states that Leadbetter was rather opposed to the Port Angeles proposition. Do you know why?

Mr. LINDSAY. No; I do not.

Mr. LEA. Do you know of any further activities of Leadbetter in reference to this enterprise?

Mr. LINDSAY. I do not. I might suggest this: At the time Mr. Leadbetter was a candidate for this position Mr. Douty, I think, favored another party.

Mr. LEA. I see.

Mr. LINDSAY. Mr. Douty favored Maj. Sligh. Mr. Douty had been working in Washington with Maj. Sligh for two or three months after he got into this matter with us, and thought a great deal of Maj. Sligh, and when this vacancy came on Maj. Sligh was a candidate, and Mr. Douty's associations with him in furthering this

spruce proposition led him to give what little support he could toward Maj. Sligh for this position. Maj. Leadbetter won out in the matter, and it seemed that Maj. Leadbetter resented the fact that Mr. Douty, who was a Portland man, would oppose him and support Maj. Sligh.

Mr. LEA. I see, some personal matter between them?

Mr. LINDSAY. A personal matter.

Mr. LEA. So far as you know, did Leadbetter have any interests on the peninsula, either one way or the other?

Mr. LINDSAY. I do not know of any, one way or the other.

Mr. LEA. So as far as his relations were concerned they were personal rather than in relation to this enterprise?

Mr. LINDSAY. I think so.

Mr. LEA. I presume there can not be any question but what the Milwaukee Railroad would be benefited by having a spur tapping this country? What I mean is the timber belt back there on the peninsula?

Mr. LINDSAY. Yes; their main line would be benefitted from Port Angeles east.

Mr. LEA. Any railroad company that got access to that from either direction would be greatly benefited in the matter of tonnage, wouldn't it?

Mr. LINDSAY. Oh, yes.

Mr. LEA. Now, yesterday you spoke something about the Milwaukee wanting the Deep Creek route. Did your company ever consider going up parallel with the Sound or in that general direction?

Mr. LINDSAY. Not this present company. The company that I organized about seven years ago, that was taken over by the Milwaukee looked into that situation.

Mr. LEA. What company was that?

Mr. LINDSAY. It was organized in November, 1911, called The Seattle, Port Angeles & Lake Crescent Railway.

Mr. LEA. You were attorney for that company, were you?

Mr. LINDSAY. I was attorney, and one of the board of directors. I organized the company.

Mr. LEA. What, if any, facts did they find as to the practicability of that route.

Mr. LINDSAY. We surveyed the line from Port Townsend through Port Angeles to Piedmont, on Lake Crescent, and at that time the plan was to eventually extend the line from Piedmont, on the north side of the lake where the Government route now is. Later on the Milwaukee made arrangements with us to take over the line. We had put up the money for the surveys. But before they took it over they wanted us to ascertain from our engineers what the prospects would be to build where they now are instead of going around Lake Crescent, so we sent our chief engineer, Mr. Donovan, who has been with the Milwaukee ever since, and our locating engineer, Mr. Hunter, over that line—the Deep Creek Line—to Lake Pleasant. They reported that it was not a feasible line to build.

Mr. LEA. Did they give any reasons?

Mr. LINDSAY. Yes. The line if built would be very crooked, a great many bridges going over deep gorges, and it would be in serious danger of slides. There was one hill, I believe, near Pysht, called the Soapstone Hill, that would have to go on the north side

of that hill and the whole hill was sliding. It would be very difficult to maintain a main line there.

Mr. LEA. So it was the determination that the most practical route to reach Lake Pelasant country from Port Angeles was by Lake Crescent, is that right?

Mr. LINDSAY. That was the engineers' determination at that time.

Mr. LEA. And you purposed to build your route in that direction?

Mr. LINDSAY. We did.

Mr. LEA. As I understand the position of your company now, in its claim, is that the Government made use of your work in locating and establishing its road and that you should be compensated for it?

Mr. LINDSAY. We feel that we ought to be compensated for what we have done.

Mr. LEA. Had you purchased any rights of way in the territory covered by the road as it is now?

Mr. LINDSAY. We had arrangements with the Clallam Land Co., which owned practically all the right of way of that 20 miles taken by the Government road, that if we built in there they would give us that right of way, providing we would simply pay for what timber was cut.

Mr. LEA. How does the amount of timber tonnage available to these routes compare; that is, the one along your route compared with the one along the Deep Creek route?

Mr. LINDSAY. I think the tonnage along our route is much greater, for this reason; the Milwaukee has the timber pretty well cut toward Pysht. There is only a few miles there, and the Merrill & Ring Co. have a road at Pysht, and have taken out a great deal of timber in there.

Mr. LEA. A large part of that timber is already under plan of development?

Mr. LINDSAY. Has been taken out, and there has none been taken out on the route that we have.

Mr. LEA. To what extent is tonnage available on the south side of the Crescent route, before you get to Lake Pleasant?

Mr. LINDSAY. Very heavy tonnage.

Mr. LEA. Will you just state what that is?

Mr. LINDSAY. It is fir, spruce, hemlock, and cedar.

Mr. LEA. And just at what locations?

Mr. LINDSAY. Well, up Indian Valley, before you come to Lake Crescent, there is a large body of privately owned timber, and forest reserve timber, and there is some timber around the lake, but it is not very heavy. After you get over on the Sol Duc River I think we strike the heaviest timber in the county.

Mr. LEA. Which side of this route is that timber, or is it on both sides?

Mr. LINDSAY. It is on both sides, but mainly on the south side of our line, back up in the forest reserve.

Mr. LEA. It is your judgment, as I understand from the testimony and investigation there, that if a railroad was to be built to tap this Lake Pleasant country from Port Angeles, it should go substantially along this route; that is, the general route by Lake Crescent.

Mr. LINDSAY. I think that would be the most feasible route for a railroad over in that country.

MR. LEA. Are you able to inform the committee as to the relative distance of the two roads; that is, by the Crescent route as compared with the route on the Sound side—the straits side, rather?

MR. LINDSAY. Well, I think the Crescent route is a little shorter.

MR. LEA. You reach the common point at Lake Pleasant in a shorter distance by going by Crescent Lake?

MR. LINDSAY. Yes. The amount of saving—the distance that would be saved I am not able to state, offhand.

MR. LEA. That is approximately, I presume; that is, you intend simply to state it approximately?

MR. LINDSAY. Oh, 5 to 8 miles, something along there.

MR. LEA. In these negotiations that you had in trying to get your railroad established, and in the endeavors of you and your company in community to develop the peninsula, what, if any, opposition have you encountered?

MR. LINDSAY. Well, directly we felt that the Milwaukee Railroad was the greatest opponent, and the millmen at Seattle and Tacoma, or what we call the up-sound mill owners.

MR. LEA. And what has been the opposition of the millmen; will you explain that?

MR. LINDSAY. We felt, from things that have happened now and then that are hard to put in concrete facts, that they were opposed to the construction of mills at Port Angeles, and I was naturally wanting to develop Port Angeles.

MR. LEA. What reason would there be for that opposition of the millmen?

MR. LINDSAY. The only reason I can give is that they would naturally want to hold that timber back for their future use.

MR. LEA. How about the suitability of that location at Port Angeles for a mill—that is, the one that was selected by the Government?

MR. LINDSAY. One of the best in the State.

MR. LEA. And why do you say that?

MR. LINDSAY. Well, it is right on the Straits there—a splendid location, level, and ships can sail right in to the dock, from the ocean, and load.

MR. LEA. How deep is the water there?

MR. LINDSAY. Get out a little way in the bay there and it runs 75 feet. You would have to go out probably a quarter of a mile with a dock to get into about 30 or 35 feet of water—somewhere in that neighborhood.

MR. LEA. Well, to get back to the disposition, as you regard it, of the millmen who oppose the establishment of a new mill, is it based on the idea of avoiding competition, or any particular objection to that location? I simply want to get your viewpoint on this.

MR. LINDSAY. We naturally reached the conclusion that they don't want competition.

MR. LEA. What has been the position of the loggers in reference to the development of the peninsula?

MR. LINDSAY. I don't think that applies to the loggers, because there are two or three large logging firms have been logging in Clallam County and shipping logs up-sound to these mills. The Merrill & Ring Co. and the Goodyear and Puget Sound Mills & Timber Co. are the three big logging firms in Clallam County that have been selling logs to the up-sound mills.

Mr. LEA. Your community made a large contribution to the location of this mill at Port Angeles, didn't it?

Mr. LINDSAY. \$36,000.

Mr. LEA. What is your judgment, knowing the practical conditions there, as to the sale of this Government property on the peninsula; what course should be pursued, in your judgment?

Mr. LINDSAY. We want it sold; we want it developed. We think we are entitled to have it developed. We shall urge, very strongly, that the Government put this matter in use; if not themselves, to somebody else, at the earliest possible moment. That is the sentiment of 98 per cent of the inhabitants of Clallam County.

Mr. LEA. That is, that community desires transportation facilities, do they?

Mr. LINDSAY. They do, and they want the mill operated.

Mr. LEA. Is there any permanent prospect for this road, other than timber?

Mr. LINDSAY. As the timber is removed, they develop a great deal of farming and berrying. There is some very fine land in those valleys, that makes very fine pasture land, dairy farms, when the timber is off; in fact, around Port Angeles and east of Port Angeles, where the timber has been taken off, we have the best farming community in the State of Washington; very large dairy farms there.

Mr. LEA. In which direction does that country extend from Port Angeles?

Mr. LINDSAY. Well, this part I just speak of is east of Port Angeles, and in part west, a few miles, around Joyce and in that neighborhood.

Mr. LEA. That is all.

Mr. FREAR. Several matters have been brought out that I wish to ask you about. It has been asked if you would like to have a mill at Port Angeles. Of course you would.

Mr. LINDSAY. Sure; civic pride.

Mr. FREAR. If you were a business concern and built a mill at Port Angeles, that would cut up 250,000 feet of lumber a day, and expected to bring in on the railroad 1,500,000 feet of lumber a day, according to the plan of the Siems-Carey-Kerbaugh Corporation, what would you do with the extra 1,250,000 feet of logs, if you were going to have that cut up quickly?

Mr. LINDSAY. You would have to send them upsound?

Mr. FREAR. Sure you would.

Mr. LINDSAY. To the mills?

Mr. FREAR. So that that mill would only cut up a small proportion of the 1,500,000 feet that they proposed to bring in every day?

Mr. LINDSAY. A very small proportion.

Mr. FREAR. That was the situation that was contemplated there, was it not?

Mr. LINDSAY. Yes. The mill they constructed there, or partly constructed there at Port Angeles, would not cut up the quantity that they proposed to bring in on the railroad.

Mr. FREAR. If they brought in the amount that they proposed, it wouldn't cut up over about 20 per cent of it, would it?

Mr. LINDSAY. Just about.

Mr. FREAR. So that about 80 per cent of all the logs that were brought into Port Angeles would have had to have been shipped out, dumped off the cars, after being hauled 56 miles from Lake Pleasant, and then dumped out into the water and sent to the sound mills?

Mr. LINDSAY. Yes.

Mr. FREAR. Would that have been a profitable proposition, from any standpoint, in view of the fact that the testimony here is uncontroverted that 14 miles to 15 miles from Clallam Bay a railroad would have immediately tapped this timber tract near Pleasant Lake, and they could have shipped the logs as the Goodyear Co. are now shipping them—upsound?

Mr. LINDSAY. They could have shipped from Clallam Bay about as well as they could from Port Angeles.

Mr. FREAR. Exactly.

Mr. LINDSAY. I say ship; I mean tow.

Mr. FREAR. Yes; I know. And with the addition of only 14 miles haul, instead of 56 miles, which it would have been around by Lake Crescent.

Mr. LINDSAY. Yes; they could have done that.

Mr. FREAR. So that the proposition, from a business standpoint, is unmistakable that the only place to have shipped was Clallam Bay if you expected to get those logs out quickly?

Mr. LINDSAY. That was from the Government's standpoint at that time. We didn't press that point with the Government.

Mr. FREAR. I am speaking to you as a man who knows the conditions. What the motive may have been by the building of this Siems-Carey-Kerbaugh Railroad down to Lake Pleasant, and thence, as you proposed, down to the Hoh River; you don't know anything as to that?

Mr. LINDSAY. I do not.

Mr. FREAR. I am bringing the practical logging proposition to you, that you could have logged, as Mr. Lightner says, at a dollar a thousand cheaper, by the Clallam Bay route, irrespective of the cost of the roads, at a dollar a thousand cheaper than you could by way of Port Angeles?

Mr. LINDSAY. I think that is true.

Mr. FREAR. Lake Pleasant is almost, I think you testified, on a direct route from Port Angeles to Grays Harbor if a line was to be put through that way.

Mr. LINDSAY. It has got to go through there.

Mr. FREAR. And it is probably shorter than it would be around by the straits, around by Pysht and around that way—Deep Creek?

Mr. LINDSAY. The exact mileage I can't say, but it is shorter.

Mr. FREAR. Yes; because one goes in a westerly or northwesterly direction for a short distance, whereas Grays Harbor is south of west, and the other breaks off quickly and runs down to Lake Crescent, which is south, and then in a southwesterly direction to Pleasant Lake; is that right?

Mr. LINDSAY. That is true.

Mr. FREAR. You spoke about the logging, the logs that are available, and you said the Milwaukee had disposed of most of their logs—that is, they have disposed of their logs near Deep Creek and Twinn?

Mr. LINDSAY. Deep Creek and Twinn.

Mr. FREAR. Those logs are sold, or most of them?

Mr. LINDSAY. Yes.

Mr. FREAR. So that they haven't the same interest in developing that part now that they had before?

Mr. LINDSAY. I think in that particular locality they have but very little timber.

Mr. FREAR. Mr. Scott is logging that now, is he not?

Mr. LINDSAY. He is.

Mr. FREAR. Cleaning it up?

Mr. LINDSAY. He is. The Puget Sound Mill & Timber Co. are logging it.

Mr. FREAR. Yes; I understand. You had an engineer, or two engineers, who went out, and they saw that hill there at Pysht Creek, and they said it was a bad place to build around; there was a slide there?

Mr. LINDSAY. Yes.

Mr. FREAR. Aren't there slides over there on the northern side of Lake Crescent?

Mr. LINDSAY. Quite a good many.

Mr. FREAR. They have had some experience with them; they just cleaned out one before we went over.

Mr. LINDSAY. Yes.

Mr. FREAR. And this Pysht Creek route was the one that was placed in Moody's—or do you know that, whether it is placed in Moody's Financial Record as the proposition under which the Milwaukee is trying to finance their bonds?

Mr. LINDSAY. I don't know.

Mr. FREAR. And hold up their securities. I think you will find it is so in 1918. This Deep Creek route is the one, is it not, or do you know, that the Secretary of War, on April 24, urged upon Gen. Disque as the route to be pursued, so far as his judgment went?

Mr. LINDSAY. I never heard that except the statement you made here.

Mr. FREAR. Well, it has been the testimony here, in Gen. McIntyre's report. That is all.

Mr. LEA. In speaking about the question of shipments, you didn't take into consideration the establishment of a mill at Lake Pleasant, did you?

Mr. LINDSAY. In our original proposition?

Mr. LEA. Yes.

Mr. LINDSAY. No; we were going to establish a mill on this same site that the Government had at Port Angeles. Mr. Douty had selected that as a very desirable site.

Mr. LEA. So far as finished lumber was concerned, there was no point of shipment west of Port Angeles, was there, by railroad east? Yes; there was, too; the Milwaukee road was the only road there that had have transcontinental connections.

Mr. LINDSAY. They were the only road.

Mr. LEA. So the Lake Pleasant country could not be connected with the East by rail except through the Milwaukee road?

Mr. LINDSAY. Either the Milwaukee road, through Port Angeles, or a road built to Grays Harbor, was the only way they could make connection.

Mr. LEA. And about how far was it from Grays Harbor to Lake Pleasant?

Mr. LINDSAY. Let's see, I should judge about 100 to 110 or 115 miles.

Mr. LEA. And what, if any, connection has this Port Angeles mill with the Milwaukee; that is, the location as it is?

Mr. LINDSAY. It is right on the Milwaukee main line out of Port Angeles, east.

Mr. LEA. You spoke about the expense of towing from Clallam Bay. Now, did you intend to give your judgment on the question of whether the excess would be one dollar a thousand or not?

Mr. LINDSAY. I don't know just what the towing rate from Clallam Bay to Seattle is; I don't know just what the rate is, but I think it is a little more than from Port Angeles to Seattle.

Mr. LEA. Your idea was that it would be a cheaper method of transportation by water from Clallam Bay than it would from Port Angeles?

Mr. LINDSAY. No; I think my statement was that it would be cheaper to tow from Clallam Bay than it would be to ship by rail to Port Angeles and then tow from Port Angeles to the up-sound mills.

Mr. LEA. The water transportation, you thought, would be cheaper than rail transportation for that proportion of the distance?

Mr. LINDSAY. Yes.

Mr. LEA. That is all.

Mr. FREAR. About this Pleasant Lake mill: Supposing that Pleasant Lake mill could manufacture 250,000 feet of lumber a day, in addition to Port Angeles, and this railroad was expected to carry, for the Siemens-Carey-Kerbaugh contract, a million and a half feet of logs per day, there would still be a million feet of logs, or two-thirds of the entire supply, that would have to be dumped into the water at Port Angeles and then sent to the Sound?

Mr. LINDSAY. That is true.

Mr. FREAR. That is all.

Mr. MAGEE. You spoke of a third large lumber company here—the Goodyear Lumber Co. and the Merrill & Ring Co., and what was the other company you mentioned?

Mr. LINDSAY. The Puget Sound Mills & Timber Co. They have a large mill at Port Angeles. They also are loggers. Merrill & Ring are not sawmill men; they are loggers. The Goodyear people are loggers, and not sawmill men.

Mr. MAGEE. You said that you were in favor of the Government disposing of its properties here promptly. Would you be in favor of the Government selling this Crescent Lake Railroad to the Chicago, Milwaukee & St. Paul Railroad Co. for a small percentage of its cost?

Mr. LINDSAY. You can't sell it to anybody for anywhere near what it cost.

Mr. MAGEE. Well, that doesn't exactly answer the question.

Mr. LINDSAY. It doesn't. All the people of Clallam County are very anxious to see our county developed—

Mr. MAGEE. Well, that doesn't answer the question. I will put it in another form: Are you in favor of the Government giving this railroad to the Chicago, Milwaukee & St. Paul Railroad Co.?

Mr. LINDSAY. No; I am not.

Mr. MAGEE. Isn't it your judgment that if the Government sells it to this railroad company that the Government ought to get the fair and reasonable value of the property?

Mr. LINDSAY. They ought to get the fair value.

Mr. MAGEE. There is no question about that, is there?

Mr. LINDSAY. No.

Mr. MAGEE. That is all.

Mr. FREAR. That is all.

TESTIMONY OF E. B. CHINN—Recalled.

Mr. FREAR. Mr. Chinn, you have a statement there, of which you spoke the other day in your testimony, which relates to the difference in the prices paid to labor and which caused, as you said, some disturbances in the industrial field. Will you please state briefly what it is?

Mr. CHINN. You asked me to submit this to your committee, and I have it here. In brief, there is a statement at the end here which includes the entire matter [reading]:

The foregoing are specific instances of violations of the wage schedule as established and bulletined by the Spruce Division—

Mr. FREAR. Wasn't this submitted in the Ray report, or placed in the Ray report?

Mr. CHINN. Yes; I believe it was.

Mr. FREAR. All right.

Mr. CHINN (continuing reading):

and enforced against the lumber industry. They are only a small part of the statements that could have been obtained, but as they seemed to bring no results when transmitted to Portland the practice was discontinued. Attached letter from Maj. Abbey, chief of staff, indicates the lenient attitude of the Spruce Division toward the contractors and subcontractors. Above statements made to employment manager of Loggers' Information Association.

Then there are specific instances here, giving the names of the men making the statements. Of course, that would involve looking all over the Northwest to find those men, but they are known and can be—

Mr. FREAR. This was submitted in the Ray report, as I remember. There were a number of illustrations given—

Mr. CHINN. Yes; but the names of the men were not given at that time; we withheld that information for ourselves, but it is submitted to you in full.

Now, Maj. Abbey's letter is next here, and if you care to have me read an extract from it to give you an indication of the attitude—

Mr. FREAR. Read it.

Mr. CHINN. I am leaving out the opening paragraphs:

The bulk of your complaints have been with reference to the Siems-Carey-Kerbaugh Corporation. While these are continually bobbing up, it is, nevertheless, true that many of the matters have been adjusted satisfactorily. The Siems-Carey-Kerbaugh Corporation insists now that they are adhering to the wage scale in every particular.

While there is, perhaps, little excuse for anyone violating the schedule, it should be remembered that the Siems-Carey-Kerbaugh operation is handled largely by subcontractors, and these subcontractors frequently seem to be irre-

sponsible, and much of the trouble has come through them. About 5,000 men have been put to work by the Siems-Carey-Kerbaugh people in 50 different camps, so it will be seen that there is considerable magnitude to the operation.

You may rest assured that this office is doing everything possible to enforce the wage scale and shall continue to do so and solicits a continuation of the support of your association.

Mr. FREAR. How many pages are there there, about, in that statement?

Mr. CHINN. Three.

Mr. FREAR. Is that all?

Mr. CHINN. Yes, sir; and the letter is four.

Mr. LEA. The 50 camps referred to, was that on the railroad, or the logging operation together, do you know?

Mr. CHINN. I don't remember that there is any reference to 50 camps in here—in Maj. Ray's letter—or Maj. Abbey's letter.

Mr. LEA. Yes.

Mr. CHINN. I don't see that it makes any reference to 50 camps there.

Mr. LEA. I may have misunderstood you.

Mr. CHINN. Possibly so. It says, if I remember, about 5,000 men.

Mr. LEA. "In 50 different camps."

Mr. CHINN. Oh, 50 different camps; yes. He evidently refers to the camps along the Siems-Carey right of way; that would be my idea of it.

Mr. FREAR. Well, we will just introduce that. It is short.

Mr. LEA. These references to particular persons who have given this information are based on the representation given to your organization?

Mr. CHINN. Yes, sir.

Mr. LEA. By them, or by some one for them; is that the idea?

Mr. CHINN. You will find a footnote there which I read on next to the last page.

Mr. LEA. Oh, yes.

Mr. CHINN. I think that covers the situation.

Mr. LEA. All right; thank you.

(Document referred to was marked "Exhibit R," Chinn, August 27, 1919.)

TESTIMONY OF JAMES H. KANE.

(The witness was sworn by Mr. Frear.)

Mr. MAGEE. You reside where?

Mr. KANE. Seattle.

Mr. MAGEE. How long have you resided here?

Mr. KANE. For 15 years—16 years.

Mr. MAGEE. You are an attorney and counselor at law?

Mr. KANE. Yes, sir; practiced here during that time.

Mr. MAGEE. And you have been counsel for the United States Spruce Production Division and Spruce Production Corporation?

Mr. KANE. Yes; I was employed by Siems-Carey, H. S. Kerbaugh, shortly after they came here, to look after their legal matters, and I think I was employed about the first of June a year ago, and looked after all their matters, including the acquiring of the right of way, and all other legal matters that came up, the acquiring of timber and mill sites, etc.

Mr. MAGEE. Have you been counsel for the Spruce Production Corporation?

Mr. KANE. Only as I was attorney for the Siems-Carey people.

Mr. MAGEE. I mean, you haven't been retained by the Spruce—

Mr. KANE. No; never been retained by the Spruce—

Mr. MAGEE. By the Spruce Production Corporation or the Spruce Production Division, which preceded it?

Mr. KANE. No; except in this, that since the Siems-Carey people have closed up their operations and gone away from here, there are some matters still left unfinished in the right of way, as always will be true; that is, it will take a little time to close it up, and I am looking after those matters for the Spruce Production Corporation, under the direction of the general counsel at Portland.

Mr. MAGEE. Who is the general counsel?

Mr. KANE. Mr. Murphy.

Mr. MAGEE. For the Spruce Production Corporation?

Mr. KANE. Yes.

Mr. MAGEE. Now, are you familiar with the acquiring of the title, or whatever rights were acquired for the construction of what is known as the Lake Crescent-Lake Pleasant Railroad from junction with the Chicago, Milwaukee & St. Paul to Lake Pleasant?

Mr. KANE. Yes, sir.

Mr. MAGEE. Now, will you go on and tell the committee just what the condition is in respect to the title of the right of way occupied by the railroad company?

Mr. KANE. There is about 36 miles of railroad there and I—

Mr. MAGEE. That is from the—

Mr. KANE. From the junction where we start a little below Joyce up to Lake Pleasant.

Mr. MAGEE. Junction with the Chicago, Milwaukee & St Paul?

Mr. KANE. Yes. We run through a number of different holdings. Some of them were large holdings and some of them were small individual holdings, lots 100 or 300 feet wide.

Mr. MAGEE. Can you give us the amount of some of the larger property holdings?

Mr. KANE. The larger property holdings were the Clallam Lumber Co. and the Puget Sound Saw Mills & Timber Co. Those were the two largest holdings. Now, I might tell you this, that all of that right of way has been acquired by negotiations with the property owners, without condemnation proceedings, except about five pieces of property that they acquired the title and took it in the name of Siems-Carey, H. S. Kerbaugh Corporation. Before Siems-Carey Corporation left here, a deed was made by that company, conveying all of the titles which it acquired to the United States Spruce Production Corporation, so that every title that is acquired on that right of way now has been conveyed to and is vested in the United States Spruce Production Corporation.

Mr. MAGEE. By one deed?

Mr. KANE. By one deed.

Mr. MAGEE. From the Siems-Carey-Kerbaugh Corporation?

Mr. KANE. Yes.

Mr. MAGEE. Has that deed been recorded?

Mr. KANE. I delivered the deed to the Spruce Production Corporation, and I think it has been recorded; my understanding was that it had been.

Mr. MAGEE. It has been delivered?

Mr. KANE. Yes.

Mr. MAGEE. To the Spruce Production Corporation?

Mr. KANE. Yes.

Mr. MAGEE. Were all these lands in one county?

Mr. KANE. All in one county.

Mr. MAGEE. Clallam County?

Mr. KANE. Clallam County.

Mr. MAGEE. Now, in reference to the lands mentioned in this deed to the Spruce Production Corporation from the Siems-Carey-Kerbaugh Corporation, are there any liens of any kind or nature—

Mr. KANE. There are no liens.

Mr. MAGEE (continuing). Mortgage, or otherwise, on any of the lands described in that conveyance?

Mr. KANE. There is no lien or mortgage on any of those lands. The title was free and clear when we got it from the different owners; took, in many instances, some negotiations to clean up the title, as there was little defects in it here or there, and we got a merchantable title in all cases, and that title has been conveyed to the United States Spruce Production Corporation in the same way, subject, however, to this: At the time that the Siems-Carey-Kerbaugh Corporation did this, after they secured this contract from the Government, the Siems-Carey Corporation executed a mortgage to the Government or its agent.

Mr. MAGEE. That is the mortgage described here.

Mr. KANE. Yes; the six-million-dollar mortgage. And, of course, every piece of property that went into the name of Siems-Carey was affected by that mortgage, because it was a mortgage that took effect after acquiring the property as well as prior.

Mr. MAGEE. Outside of this mortgage which was given to the Government by the Siems-Carey Co. as security for the note of \$6,000,000 mentioned in the mortgage, no other mortgage lien, tax lien, or other lien upon the property mentioned in this deed from the Siems-Carey Co. to the United States Spruce Corporation existed, did it?

Mr. KANE. That is correct, with the single exception of the taxes that accrued thereon after we acquired the property. Any property that we acquired prior to February, 1919, we had to pay the 1918 taxes thereon, which fell due in 1919.

Mr. MAGEE. So that the time when the deed was delivered to the Spruce Production Corporation was February, 1919, about the time when this deed was delivered to the Spruce Production Corporation?

Mr. KANE. Our deed was delivered to the Spruce Production Corporation subsequent, I think, to February. It might have been about that time. But those taxes accumulated against that property for the 1918 taxes, and naturally went on to the Spruce Production Corporation to pay, because we acquired title for the Spruce Production Corporation.

Mr. MAGEE. Whatever taxes accrued prior to February, 1919, were paid?

Mr. KANE. I think they were paid by the Spruce Production Corporation; I have been so advised that they were adjusted.

Mr. MAGEE. Now, you mentioned some portion of this railroad right of way which has not been acquired.

Mr. KANE. I would like to tell you about this piece. There is one piece, the Muller estate—a very small piece of property—that was owned by an old man up there, and he suddenly disappeared and was lost and we finally determined that he was dead. His estate is in the process of probate—being probated. And there are two heirs claiming heirship to it—an adopted son and an adopted daughter. Title can not be acquired to that until that estate is probated and finished.

Mr. MAGEE. Where is that land located?

Mr. KANE. That is at Mullers Summit, about 2 miles beyond Lake Crescent.

Mr. MAGEE. How much of the right of way of the railroad would those lands comprise belonging to this estate—what distance?

Mr. KANE. It is a very short distance across the piece. I would say not to exceed a quarter of a mile. Maj. Sawyer knows about that; I have forgotten just exactly, but about a quarter of a mile. We ran right close to the old home of Muller, ran through their orchard, and paid them about \$600 and cleaned up that title.

Mr. MAGEE. And that is under adjustment?

Mr. KANE. That is under adjustment, and I will have no trouble in doing that when I get the title clean. There is another piece of property, the Eckert estate. Mr. and Mrs. Eckert both died in about a week of each other, leaving this estate and it is being probated in Clallam County. That is along Lake Crescent.

Mr. MAGEE. How much of the right of way in distance would those lines comprise?

Mr. KANE. That is about a hundred feet across their property. We took a hundred feet in width. There is the Silvia property up at Lake Pleasant, which comprises part of the terminal grounds. We went in on that ground and damaged some of it by virtue of the operation, and took a great portion of it for terminal operations, and I have a map in my office now showing just how much of that we are taking and what it will cost us about for the total amount of land taken. It will cost us about, for the total amount of land taken and the damage done to the timber taken, both from Arthur Silvia and his mother, somewhere about \$3,400. We have got no definite agreement on that, but the title is not in good shape and the heirs are scattered, and I have drawn the documents and they are being forwarded from place to place to clean up the title on that. The next piece of property is the Kline estate. I have the title to one-half of that, and here has been a partition suit brought which is being prosecuted in Clallam County, by which they have vested the title in a party there with whom I have made arrangements to acquire the other half for \$75. So that is closed. The other only piece remaining.

Mr. MAGEE. Where is this last piece which you spoke of?

Mr. KANE. That is very close to Joyce; in the vicinity of Joyce. They have 80 acres there and we cross one 40.

Mr. MAGEE. What distance on the railroad?

Mr. KANE. We cut across the corner of the 40, and we are paying at the rate of \$20 an acre for the land taken.

Mr. MAGEE. How much do you expect to pay to close that up?

Mr. KANE. \$75. I have paid \$75 for the other half, and I will pay \$75 for the other half still required. There is only one piece remaining, and that is the Puget Sound Mill & Lumber Co. property. I came here the other day when Mr. Scott was testifying and did not hear all of his testimony on the title to that property. During the time we were proceeding up there to acquire this railroad right of way I took up with the Puget Sound Mills & Timber Co., one of the first people I negotiated with, the right to cross their land, and it was very difficult to agree with them on a right of way or to come to any agreement with them. But we finally came to a definite positive agreement that we would pay them \$20 an acre for the land that we had taken, and the regular rate for the timber cut upon their property. That was finally agreed upon. And then we asked them for an abstract of the property. After long negotiation we got the abstract and I examined it, and considerable objection was made to the title as a number of items had to be cleaned up. There was a mortgage upon that property held by the Peabody-Houghteling Co., of Chicago. We had to give a release of the mortgage on that portion of the property which we took. Weeks had passed, and I have my file here showing the correspondence that I had with the attorney for the Puget Sound Mills & Timber Co. on that question urging them to get that release for us.

I was unable to get it. I finally sent to them and got the address of the Peabody-Houghteling Co., in Chicago, and I wired them myself asking them why we could not get the release. They wired back and said that their delay was caused entirely by the Port Angeles people—the Puget Sound Mills & Timber Co.—and said that they were waiting for information from them. I then went to Scott and his attorney again to find out what information the Peabody-Houghteling people wanted, and I personally furnished it, and after furnishing that the release of the Peabody-Houghteling Co. was sent here and is still deposited in the bank waiting for us to pay this money. Then after our work was completed Mr. Scott and his people raised another objection which was raised for the first time, and that was that now since this railroad was built through their property, and we built it over part of an old logging road which they had and had taken up their tracks for all intents and purposes and had abandoned the land. They wanted pay for it. We told them that according to the report of our engineer we would pay them a reasonable compensation for the roadbed taken. Then they insisted and are now insisting upon an agreement with the Spruce Production Corporation, to the effect that they will have some rights over this railroad whenever they decide to log that land; if it gets into the hands of a private owner that that private owner will have to buy that road, with the understanding that they have the right to log over the road if they want to do it, with that limitation secured to them. Frankly, I have not been in favor of giving that to these people, because it is putting a cloud upon their title. I think that the fact that the railroad is in there and in that location, whether it is a private individual or a public carrier—if it is a public carrier

of course it has got to carry their goods for them, and if it is a private individual he will be glad to carry it for a reasonable compensation. But I do not care to cloud the title. I want to say that I have had more trouble with that piece of right of way than I have had with half of the rest of it.

Mr. MAGEE. How much trackage is involved in this claim of the Puget Sound Co. in miles?

Mr. KANE. I can show you the map.

Mr. MAGEE. Approximately.

Mr. KANE. I do not want to give it definitely, but I think we ran over about somewhere around 3 miles of their property.

Mr. MAGEE. That is, the Lyre Canyon?

Mr. KANE. Yes. I want to say that those are the only loggers or the only timber holders that we agreed to pay or had to pay anything to for the land itself. I bought from the Clallam Lumber Co. their holdings for several miles from the head of Lake Crescent on over toward Lake Pleasant, and paid nothing for the land, but got the fee in the deed, but just paid for the timber that was on the land.

Mr. MAGEE. I supposed here they had, as you suggest, some road of their own?

Mr. KANE. That was the contention they made.

Mr. MAGEE. In whole or in part, as I understand, did you appropriate that?

Mr. KANE. We only appropriated a small portion of that.

Mr. MAGEE. What I wanted to get at was the condition of the title.

Mr. KANE. Precisely.

Mr. MAGEE. Now, how much, approximately, is involved in this claim?

Mr. KANE. You mean the claim of the Puget Sound Mills & Timber Co.?

Mr. MAGEE. Yes; that is, I do not want an admission, if the matter is pending, but what is the amount of their claim?

Mr. KANE. We have agreed with them now upon their timber. The value of that timber that we cut we have agreed with them for \$20 an acre on the right of way, and we have practically agreed on the amount of the roadbed taken. The only thing that is left unsettled is what kind of an agreement we will give them for the right to use the road in future logging.

Mr. MAGEE. How much is approximately involved in the adjustment of this?

Mr. KANE. I would say offhand \$5,000 or \$6,000. I would like to verify that if it is important.

Mr. MAGEE. It is only an approximation that I want. Now, in these matters of title which you have described, and you have described all which have not been adjusted.

Mr. KANE. Yes. All of these titles that are to be acquired are being acquired in the name of the United States Spruce Production Corporation and not in the name of the Siems-Carey-Kerbaugh Corporation, so that this deed running now has been paid, the deed we expect to have signed there; instead of the grantee being the Siems-Carey-Kerbaugh Corporation it is the United States Spruce Production Corporation.

Mr. MAGEE. The contention is that the title to the complete right of way of this railroad shall be vested ultimately in the United States Spruce Production Corporation?

Mr. KANE. Yes.

Mr. MAGEE. Now, what would be the aggregate amount of these portions of the roadbed as to which the title has not yet been adjusted—\$7,000 or \$8,000?

Mr. KANE. Yes; more than that. It would be about \$10,000, possibly.

Mr. MAGEE. Do you know, Mr. Kane, approximately what amount you have paid for the titles already secured?

Mr. KANE. Yes; I can tell you. We have paid about \$70,000.

Mr. MAGEE. So that would make the amount paid and to be paid for the acquisition of the title to that roadbed complete from its junction with the Milwaukee Railroad to Lake Pleasant in the neighborhood of \$80,000, approximately.

Mr. KANE. Yes.

Mr. MAGEE. Was there any other fact in connection with these titles which you think the committee ought to know about?

Mr. KANE. No; I can not think of anything in relation to the titles. I think it is as a whole satisfactory in regard to the title to the right of way. There is just one title on that right of way—I want to say this: There is 1 inch that we can not get. We had to take one tax title up there, and our practice in selling tax titles out here under the statutes of this State is that when a piece of property is sold for taxes they start in at the west and sell until they get over here near the other end, and then they always leave 1 inch on the one side or the other that is not sold, and that inch is in the way, and I do not know how to find a way to get it. But I do not think we will ever have any trouble about that.

Mr. MAGEE. Is that a provision of the statutes of this State?

Mr. KANE. Yes; when property is sold for taxes they start in and sell so many inches and so many inches until a bidder turns up to take the title and pay the taxes for the property.

Mr. MAGEE. That is all.

Mr. LEA. Does that \$80,000 include the timber on the right of way?

Mr. KANE. All the timber on the right of way, and that was the bulk of what we had to pay for; that was the biggest item we paid to the Clallam Lumber Co., because we ran through some very valuable timber and paid for that at the regular rate, but paid nothing for the land.

Mr. LEA. What difference did you pay for the timber?

Mr. KANE. We paid \$3 for fir, cypress, and cedar and \$1 for hemlock.

Mr. LEA. Do you know about what the quantity of timber is that you produced on the right of way—I mean that can be turned over?

Mr. KANE. That can be turned over? I think the Spruce Production Corporation is salving probably all of it at the present time.

Mr. LEA. You do not know the quantity of it?

Mr. KANE. No; I would not want to give the figures on the quantity.

Mr. LEA. You have negotiated for the titles?

Mr. KANE. I have.

Mr. LEA. About how many separate landowners are there on that right of way?

Mr. KANE. Forty-five, I think. I have got the numbers on my map right here; 45, I think.

Mr. LEA. So the right of way cost over \$2,000 a mile?

Mr. KANE. About that.

Mr. LEA. Now, you spoke of the impediments that were placed in the way of the Government enterprise at this end of the road. Was there any reason or opinion that you can give to the committee to enlighten us as to the reason for that?

Mr. KANE. None at all; absolute stubbornness on the part of the Puget Sound Mills & Timber Co. There was no reason for the delay in this, and there was no reason for the opposition we got there.

Mr. LEA. They have a mill located at Port Angeles?

Mr. KANE. Yes.

Mr. LEA. Do you know about how large a mill that is?

Mr. KANE. Yes; it is a large mill. That mill was built by Mr. Michael Earles, who owned that property and afterward sold it to the Charles Nelson Co., who now hold it, and they have a capacity there, I think, of about 250,000 feet. It is a nice mill and a good mill.

Mr. LEA. And they opposed the location of another mill that might become a competitor.

Mr. KANE. They did very seriously. Mr. Scott was one of the strong moving factors in the opposition to the building of either the mill at Lake Pleasant or the mill at Port Angeles.

Mr. LEA. A good deal of the opposition that had developed after the Government's enterprise has come from millers and loggers adversely affected, has it not?

Mr. KANE. That is my experience in handling the business up there; entirely so.

Mr. LEA. When did you become acquainted with the Siems-Carey people?

Mr. KANE. About the 1st of June, 1918.

Mr. LEA. Did you know any of them prior to that time?

Mr. KANE. No, sir.

Mr. LEA. What information is there that you could give the committee about the membership of that company?

Mr. KANE. I knew of Siems and Carey before and I knew of Mr. Kerbaugh, but I had never met any of them previous to that time. Mr. Chester Siems, who was Mr. Carey's partner, was the son of Mr. Peter Siems, of St. Paul, a very prominent railroad contractor in this country and had been for years before he died. Chester Siems and W. F. Carey formed a partnership several years ago and carried on railroad construction work and did a great of it, and did a large amount of work on the Grand Trunk in Canada, and generally. Carey had been with Mr. Siems, the old man, I think, for sometime before he died, and they have done a great quantity of railroad construction work all through this country, particularly the western part of the country. I knew of their operations in China, and I knew that they had a contract there to build a number of miles of railroad and some canal work, and I knew that Mr. Carey had been for awhile on the Panama Canal. I do not know very much about Mr. Kerbaugh, except the fact that he was a rail-

road contractor in the East. At the time he came here it was brought to my attention that he at one time had the largest contracting outfit, I think, of any contractor in the world, as I understood.

Mr. LEA. Which one was that.

Mr. KANE. Mr. Kerbaugh.

Mr. LEA. Do you know anything about their financial responsibility?

Mr. KANE. I know that they qualified for the Government for something over a million dollars, and I know that Mr. Siems since died, and that his estate is something around a couple of million dollars. Of course, I do not know that of my own knowledge, and I do not like to testify to hearsay, but I understand it was a pretty big estate.

Mr. LEA. That company whose membership had devoted their lives to contracting work, and was one of the great contracting firms of the country, is that true?

Mr. KANE. Yes; there is not any question about it. I will say this, that on that railroad when these men came here to take this job that it was considered an impossible task within the time limit. It was told around on the street corners, and every place, that they were undertaking something that was absolutely impossible; nevertheless when the armistice was signed they were ahead of their time.

Mr. MAGEE. Has this got anything to do with the question of title? I called the witness on the question of title only, and that is the only thing that I am interested in.

Mr. FREAR. You are simply pursuing a line of examination that is unnecessary.

Mr. LEA. Don't blame me, blame the witness.

Mr. MAGEE. I want to get the testimony in and get away. I don't care for hearsay. If you have got any facts that you want to get, make him your own witness. I have called him on the question of title, and I would like to have him confine himself to the purpose for which I have called him.

Mr. LEA. I don't regard this as any personal matter. I am just a member of this committee, and I am a very humble member, and I simply wanted the facts as far as we could get them.

Mr. MAGEE. I called him on the question of title. This may be material to the question of title, but it does not seem so to me. You have gone over it about 14 times already.

Mr. LEA. No other witness has told us anything about who Siems-Carey-Kerbaugh were. In the first place, I want to get your initials, Mr. Kane?

Mr. KANE. James H. Kane. And in that connection I want to distinguish it from the other name, C-a-i-n, that has been mentioned here. I am not related to him in any way.

Mr. LEA. Is there any other matter that you wanted to say anything about while here?

Mr. KANE. I would not want to come here and volunteer to make a statement. There are a lot of things I know about this operation, but I do not want to offer myself as a voluntary witness here. I do not know that there is anything that is material that has not been covered by the other witnesses.

Mr. LEA. On what particular features are you informed about the operation?

Mr. KANE. I spent all my time on this work, practically from the beginning up to the time, and for some time after, the armistice was signed. I knew the way the work went on and the rapidity of it. I knew the difficulty that they encountered in carrying on the work, and the efforts that were put forth to turn out the fitches there for the Government. And along those lines I would like to say that in the testimony that I have heard here, that this spruce contract that the Siems-Carey Co. had has always been referred to as a cost-plus contract, and I think that is in error.

Mr. FREAR. How do you know that has always been referred to as a cost-plus contract? You have not been present here all the time?

Mr. KANE. I said when I was present.

Mr. FREAR. Who referred to it as a cost-plus contract?

Mr. KANE. I have heard these cost-plus contractors referred to all the time.

Mr. FREAR. Who has referred to a cost-plus contract of the Siems-Carey-Kerbaugh Corporation? Name one person who has so testified.

Mr. KANE. I have never heard the spruce contract referred to while I was in the room. I have heard it referred to as a cost-plus contract.

Mr. FREAR. By whom?

Mr. KANE. I have heard you, Mr. Chairman, speak of them as cost-plus contracts.

Mr. FREAR. You mean the railroad contract, and not the spruce contract.

Mr. KANE. You did not let me finish.

Mr. FREAR. You say the spruce contract has always been referred to as a cost-plus contract. It has never been so referred to in my hearing, and I have heard every witness.

Mr. KANE. Then I am in error.

Mr. MAGEE. The chairman explained it at the time.

Mr. KANE. Then I was not here when the explanation was made. But when I was here the other day, and Mr. Chinn was testifying on this logging operation or these logging operations, they were referred to as being favored as cost-plus contractors.

Mr. FREAR. They never became such until the cancellation of the contract?

Mr. KANE. Of course not.

Mr. MAGEE. The evidence speaks for itself, and there is nothing you could say that would enlighten us on that.

Mr. KANE. No; but to that extent I felt it was an error to refer to that work as cost-plus work up to the time the contract was canceled.

Mr. MAGEE. The contract is here, and it has been stated at least three or four times in my hearing that they did not take a cost-plus contract, caused by the signing of the armistice.

Mr. KANE. Every time I was present he always gave you the impression that it was a cost-plus contract.

Mr. MAGEE. In reference to this right of way, there is not any reason, is there, why Mr. Scott or the Puget Sound Co. should be called stubborn or criticized because they were making a claim for

Mr. KANE. Not at all, sir.
property taken by the corporation that required this right of way?

Mr. MAGEE. And every claim which has been made by the company, as I understand from you, Mr. Kane, has been recognized, even to the claim for the portion of their railroad to be taken, and is under adjustment?

Mr. KANE. Yes. But I say that because of my experience in dealing with them and in acquiring this right of way I have had my own troubles much more than anything else.

Mr. MAGEE. Lawyers may differ. And it seems to me from what developed here that your criticism, and your designation of them as stubborn was uncalled for in view of the fact that they were only making a claim for property taken.

Mr. KANE. That is a matter of opinion, purely, on that question, I will agree with you.

Mr. MAGEE. There is no ground for criticism.

Mr. KANE. I would not say that; no, sir.

Mr. MAGEE. You think they should be called stubborn?

Mr. KANE. Not on that question, but on the method of handling it. I would reserve my opinion on those questions.

Mr. FREAR. Just one question—on that thought which was brought out, and which you was testifying to here. It appears here in evidence that 4,000 soldiers were turned over to the Siems-Carey-Kerbaugh Corporation to help put through that railroad operation, and they had many civilians, and priority was given to them by the Government, so that they had a clear field in their operation, and that naturally was not understood in advance by the people who were contemplating the difficulty of building a railroad of that kind; they did not know that, and you did not know it, I assume.

Mr. KANE. I did not know that they would have those soldiers offered.

Mr. FREAR. And those special privileges which are not in controversy are not criticized. But I mean that that all had to do with the expedition with which the railroad was built.

Mr. KANE. May I answer that as I see it?

Mr. FREAR. Yes.

Mr. KANE. I am satisfied that the Siems-Carey people did not request any soldiers to be put upon this job.

Mr. FREAR. I am not speaking of that. I am not going into this at all. I am saying that you said here that people did not believe it possible. I am not bringing in the physical situation or that all of these soldiers were sent here. That is immaterial, and we are not criticizing that.

Mr. KANE. I think that did not aid at all in doing that work, because I think the men could have been obtained for that work from civilian life. But if they had been taken from civilian life to do that, it would have crippled other industries that were also necessary in carrying on war activities at the time. In other words, my judgment on that is this: I have not anything except my judgment, and what I noticed developed at the time—that a great many of those laboring men who are accustomed to this kind of work prefer to work on railroad work, rather than in shipyards, if they can get even the same pay for it.

Mr. FREAR. The only point that came to my mind was that because they gave them the soldiers and everything they wanted, including the priorities, and they gave them three shifts of men of eight hours

each, and naturally for that reason there was expedition in the building of the railroad. That is unquestioned, is it not?

Mr. KANE. Well, what was—

Mr. FREAR. Do you know of any other railroad where they have put in three shifts of men of eight hours each?

Mr. KANE. No, not in my experience, because I have never had railroad experience.

Mr. FREAR. So the people who are commenting on this, base that upon their own judgment and their own information.

Mr. KANE. I do not know what they based it on.

Mr. FREAR. Is it not natural? A man bases his judgment upon what he knows and what he hears. You are going into the realms of about what Siems-Carey did there. We do not question that they had the right, but you made the remark that here were these people who did not think it was possible to do that work. They had all the soldiers and priorities they wanted, and they worked shifts three times a day. No company had ever done that, but it was because of the war necessity, and that was the explanation of why it was done expeditiously?

Mr. KANE. I think not. I think they could have done that without the soldiers.

Mr. FREAR. We admit they could have done that.

Mr. KANE. I suppose they contemplated that when they took the contract. What I say is that the railroad men, the contractors and the loggers and everybody else said it was absolutely impossible; but when the armistice was signed it did not appear to be impossible but very probable. I think that covers it.

(Witness excused.)

TESTIMONY OF MR. E. S. GRAMMER.

(The witness was sworn by Mr. Frear.)

Mr. LEA. Where do you reside, Mr. Grammer?

Mr. GRAMMER. Seattle.

Mr. LEA. How long have you lived here?

Mr. GRAMMER. I have actually lived in Seattle 12 years; I have been in the vicinity over 30 years, about 32 years.

Mr. LEA. What is your occupation?

Mr. GRAMMER. I am what they call a logger.

Mr. LEA. How long has that been your occupation?

Mr. GRAMMER. Well, sir, I have been in the logging camps in some capacity practically all the time for 32 years.

Mr. LEA. Did you have any connection with the spruce operations in behalf of the Government that have been carried on here in the West?

Mr. GRAMMER. I did.

Mr. LEA. What was your connection with them?

Mr. GRAMMER. Well, at the present time I am a member of the board of directors of the Spruce Production Corporation.

Mr. LEA. When did you become a director?

Mr. GRAMMER. I believe it was in March of this year.

Mr. LEA. And before you became a member what, if any, connection had you with this operation?

Mr. GRAMMER. I was district supervisor of the Grays Harbor district.

Mr. LEA. What was the nature of your work as district supervisor?

Mr. GRAMMER. It was my business to look after the Government's interests in so far as spruce production was concerned in that district.

Mr. LEA. About when did you become connected with that?

Mr. GRAMMER. I went on duty the 1st of October, 1918.

Mr. LEA. Now, I wish you would briefly tell us about that enterprise down there.

Mr. GRAMMER. At the time I went to the harbor there was one company operating on a rather small scale, called the Airplane Spruce & Lumber Co., which had been incorporated, and they were at that time operating four or five camps. In three of the camps they were producing some logs. One of them developed into a construction camp about that time, to prepare to haul logs later.

Mr. FREAR. Name it, to save time.

Mr. GRAMMER. That camp was what we called—we had them numbered; they were numbered A, B, C, D, etc. I believe that was one of the A camps. As a matter of fact, it had been in operation for some time and had just about logged out. They had been getting some fitches in that camp, and in order to open other timber up it had to be opened in a different way, and about that time they started construction work in that camp to open new timber. At another camp, which was a railroad camp, they were producing logs and also doing a great deal of construction work that would go a few miles farther into the spruce belt where there was a good stand of spruce timber. That was railroad construction that I have reference to. That was on the Elk River.

There was another camp that was producing logs, which was one of the A camps, situated in what they call Grass Creek. That continued to produce logs until about the time the armistice was signed, when they had hauled all the spruce there was at that particular point. That was not a railroad camp. There was in operation what were called the C camps. That was a railroad-extension proposition, where a railroad was being built that would tap the Olympic Forest Reserve, and also the Quinault Indian Reservation. That extension was under construction when I went to the job. There were several camps; that is, there were several places where men were quartered, some three or four, for the purpose of carrying on that work.

Mr. LEA. And with what success was the work being carried on there at that time?

Mr. GRAMMER. Well, that is not for me to say, because I do not know what took place prior to my arrival on the job.

Mr. LEA. After you went there what did you find out about that?

Mr. GRAMMER. When I went there I found the work was in progress; that there were men and tools on the ground, and, going as I did in charge of the proposition, I took things as I found them and got as busy as possible to see if we could get the construction work ahead as rapidly as possible and at the same time to produce logs in the camps where it was possible to produce logs; and I think it is the consensus of opinion that the work went ahead satisfactorily and the people that saw that it was done.

Mr. LEA. Were you acquainted with Col. Disque?

Mr. GRAMMER. Yes, sir.

Mr. LEA. When did you meet him?

Mr. GRAMMER. I think I met Col. Disque in November, 1917.

Mr. LEA. Is that when he first came out to the coast.

Mr. GRAMMER. About the time when he came out first. He may have been here a month or two before that; I am not sure.

Mr. LEA. You became well acquainted with him, did you?

Mr. GRAMMER. I did become well acquainted as months and months went by.

Mr. LEA. As your operations were carried on, were you consulted with reference to them by Col. Disque?

Mr. GRAMMER. Which operations do you have reference to?

Mr. LEA. I mean the general operations here in Washington and Oregon.

Mr. GRAMMER. Regarding the same point where I was working?

Mr. LEA. In reference to the line of work that you were conducting?

Mr. GRAMMER. You mean as a private individual?

Mr. LEA. No; in your connection with this operation were you consulted by him with reference to the work that you were doing?

Mr. GRAMMER. You mean for the Government?

Mr. LEA. Yes.

Mr. GRAMMER. Yes, sir.

Mr. LEA. In other words, to what extent did you advise with him about this work in operation?

Mr. GRAMMER. You mean in connection with the Grays Harbor work at the time that I was——

Mr. LEA. No; I mean the general operation—its various phases.

Mr. GRAMMER. Prior to the time that I went to the Harbor I, along with many other loggers and lumbermen here, discussed this situation, I think, in about all of its phases that would occur to the industry at that time. I think so.

Mr. LEA. And after you became a member of the board of directors did you attend the meetings?

Mr. GRAMMER. I have attended two.

Mr. LEA. And did you confer with Gen. Disque and with the directors as to the management of the Spruce Production Corporation?

Mr. GRAMMER. I became a member of the Spruce Production Corporation after Gen. Disque's resignation, I believe.

Mr. LEA. I see.

Mr. GRAMMER. I never attended a meeting when he was present.

Mr. LEA. Have you any information that you could give the committee as to the housing conditions and the question of food for the men; are you posted in that phase of the work?

Mr. GRAMMER. I have some knowledge as to the housing of the men and the kind of food that was supplied by the Airplane Spruce & Lumber Co. in that district where I was supervisor.

Mr. LEA. With that company was Mr. Frost connected?

Mr. GRAMMER. No, sir; a different corporation.

Mr. LEA. I will ask you to tell us about that district where you were superintending, in that respect.

Mr. GRAMMER. So far as the housing was concerned, the men used Army tents, I would call them; they were these little A tents. I

suppose they were Army tents, and so far as I know they were new when they came on the job, or practically so.

Mr. LEA. Did they have board floors or not?

Mr. GRAMMER. Yes, sir; they had good board floors.

Mr. LEA. And how about the food that was furnished to the man, as you observed it?

Mr. GRAMMER. The food was of the same character, so far as I could see, and quantities, and practically the same condition as was generally furnished in the Puget Sound district for the men who worked in the logging camps by private operators.

Mr. LEA. What type of kitchens did they have?

Mr. GRAMMER. As a rule, they had board floor and tables and benches, where they could be seated, the ordinary utensils for eating, and with a roof, in some cases tenting or fly, you might call it, or maybe the two of them; in some cases a combination of tent and shingles or shack, whatever it might be, with the sides boarded or tented, as the case might be.

Mr. LEA. About how many men were in this district where you were superintendent?

Mr. GRAMMER. I can hardly answer that question, because I do not know exactly. The Airplane Spruce & Lumber Co. had a certain number of men working for them, and there were others—I do not know whether I understood your question, whether you referred to men or soldiers.

Mr. LEA. No; I meant the total number of men employed in that district?

Mr. GRAMMER. In the lumber industry?

Mr. LEA. Yes; in connection with spruce production.

Mr. GRAMMER. Well, that is a pretty hard question, because that was a spruce district, and a great many men in there, in practically every camp, you might say, in the entire district in Grays Harbor County, were there to get spruce, and that would mean, you might say, how many men were working in the district.

Mr. LEA. I wanted to know approximately the size of the district?

Mr. GRAMMER. In Grays Harbor County that was the chief activity.

Mr. LEA. Were they doing selective logging or general loggings?

Mr. GRAMMER. There was some of both being done.

Mr. LEA. Did you have any connection with the selective logging as carried on by the Spruce Production Corporation?

Mr. GRAMMER. The Airplane Spruce & Lumber Co. in my district were doing selective logging.

Mr. LEA. With what success?

Mr. GRAMMER. Based on the opinion of many loggers and men who usually said that it was impracticable and could not be done, I say it was done with very fine success.

Mr. LEA. That is, you believe that it was a result-producing enterprise, do you?

Mr. GRAMMER. I do, sir; the same as you can gather a few apples off a tree quicker and cheaper than you can gather all of them, and the same as you can take a portion of the ice off a lake cheaper and quicker than you can take it all off, etc.

Mr. LEA. Is that your impression, based on your experience?

Mr. GRAMMER. I saw selective logging done there in a way which I think was beneficial to the spruce-getting plan.

Mr. LEA. In other words, it produced more spruce, and more promptly?

Mr. GRAMMER. I can not say it produced more spruce, but it produced more spruce of the particular grade that the Government wanted, at a less price than you could get it for—less money and in a shorter time than you could get it if you took all the other spruce and all the other timber out with it.

Mr. LEA. In what business were you engaged prior to coming with the spruce-production operation for the Government?

Mr. GRAMMER. Logging.

Mr. LEA. On your own behalf?

Mr. GRAMMER. I am associated with the Puget Milling Co. in conducting the Admiralty Logging Co.'s work.

Mr. LEA. Where is their plant located?

Mr. GRAMMER. Between Seattle and Everett.

Mr. LEA. How large an enterprise was that?

Mr. GRAMMER. We produce about a hundred million feet of logs annually.

Mr. LEA. And what was your particular duty in connection with that company?

Mr. GRAMMER. I am general manager.

Mr. LEA. Is there any other matter here that you deem pertinent, that you would like to give us some information on?

Mr. GRAMMER. Selective logging, I think, as I remember the reports that come in, would be about 25,000, 30,000, or 35,000 feet a day. Those are supposed to be number 1 and 2 logs. The way the selective logging was carried on, it developed that it was necessary to select the tree, and men who were skilled in the business were sent into the forest to select those trees and mark them, so that when the timber fellows came right away they would see whether a tree was marked or not. In case the tree was marked, they would cut that tree. That was to facilitate the work as it would go along. Also you had the judgment of what was supposed to be an expert in selecting the tree that would be proper to handle. You know, I have heard some of the testimony here, not to comment on anybody's testimony, but I studied this proposition very closely from the beginning, and I have seen a commission or two from Washington regarding spruce, and they would meet sometimes with lumbermen and timber holders, and probably I would be one, and they would ask for information, maybe, about spruce.

Mr. FREAR. I wanted to finish with this witness, and of course this is rambling into the fields of uncertainty, and it will take quite a while, and we want to meet at 10 o'clock. You are going into the question of commissions that came from Washington, and I can not see the relevancy of that before this committee.

Mr. GRAMMER. I have to give that in order to qualify for the remarks that I want to make.

Mr. FREAR. All right then, go on; take your own time.

Mr. GRAMMER. And even in those meetings there would be something said about war and how important it was and all that, and is not spruce to be had, and so forth. Most any man in a large area would say, "Yes, I have got spruce." "Well," they would say, "how much have you got?" He would answer, "Well, I have got a lot of spruce, etc., buildings, and all that." But the man who made

that statement did not know whether he had a spruce tree; he believed that he had. Probably he did not know that he had one spruce tree that would make one wing beam, because we did not know—and I was one of those men—what a wing beam was. We did not know that it had to be straight grain, and so forth. The spruce trees sometimes grow and twist, and if you go out and cut a lot of spruce trees down that would be any size that they happened to grow; still they would not make the straight grain stock required by the Government.

Mr. FREAR. We understand all that. We have been through a good deal of it, but go on if you want to.

Mr. GRAMMER. Yes, sir. We had to be educated as to what it meant to get spruce. We thought we could just run out and get spruce, but we found out that there was a difference between the timber we had and airplane stock. There were mills that undertook to cut out spruce logs that got such a small percentage of wing beam stock that it would not have justified the mills continuing to, you might say, destroy the logs. It was necessary then that it should be a matter of education, straight down the line. The full truth of the thing regarding selective logging was that it was thought it could not be done. It could not have been done at the prices prevailing or that ever had prevailed in this industry as a commercial proposition; but we thought we would have 18 months before the war was closed, possibly, that the spruce would be needed in large quantities, and so forth, and we were falling down and falling down rapidly. When I say "we" I mean the lumber industry because we had discovered—

Mr. FREAR. Now you are opening up a tremendous field, which I am perfectly willing to go into. I am going to show why you have fallen down, and I do not object to that line; but I want you to know you are opening a new line here.

Mr. LEA. It is a matter that we want to go into. We have had too many men who did not know what they were talking about.

Mr. FREAR. They did not know what they were talking about? They knew what they were talking about just as much as this man does.

Mr. LEA. We do not get anywhere by getting wrathful over these common things that come up.

Mr. FREAR. This is not testimony, and it could not be offered in any court of justice.

Mr. LEA. Yesterday it was claimed that the men were talking about timber only from rumor, and here is a man who was a director of the Spruce Production Corporation and was selected for this enterprise because he was a logger of 30 years' experience and he is telling what he has learned from his experience, and I would like to have him given the privilege of going ahead and candidly telling us as to his knowledge and not from hearsay.

Mr. FREAR. The only point is that it is going to take so much time. But I will say that the opening you make about having fallen down simply opens up a wide field, and I have got to show why you fell down, that the loggers failed to receive the assistance, why you did not do what ought to have been done, and all that requires a long investigation to go into.

Mr. LEA. That is an essential part of the inquiry here.

Mr. GRAMMER. If my testimony is not wanted I am not anxious to give it.

Mr. FREAR. You were just asked if there was anything further that you have to say.

Mr. GRAMMER. This is what I have to say regarding the matter, and if I can not say that I will not say anything.

Mr. FREAR. I say it would be better to take the matter up by questions and answers rather than having you go on with this long dissertation. . •

Mr. GRAMMER. If you want to know the truth as I see it, I am willing to give it.

Mr. FREAR. Can you tell us of the conditions any better than the gentleman who preceded you?

Mr. GRAMMER. That has not been the question in my mind. I wanted to tell the truth.

Mr. FREAR. Of course, it is not a question of your telling the truth; it is only a question of judgment.

Mr. LEA. Here we have a witness who says something a little favorable to the War Department, and he ought to have the privilege of going ahead, without being harassed and insulted, and there is no use for you and I to contend with each other.

Mr. FREAR. You can not use that language—"harassed and insulted"—undisputed. The worst insult and harassment before this committee at any time was offered by the member of the committee who has just spoken to a witness the other day. I have not any objection to the testimony of this witness, excepting that it ought to be by question and answer. The witness has been asked to make a speech, and that may take an hour or two hours, when this is the last day of these hearings in Seattle. I think it is only fair to the committee that the witness should be asked questions, instead of asking him to go ahead and state anything else he may happen to know. If it is insisted that he shall open up this new field, we will stay here to-night if necessary. It is not that I object to the testimony of the witness, but it is to the way in which he is asked to testify.

Mr. GRAMMER. I am not going to testify under oath to try to meet the time-tables of the several different roads.

Mr. FREAR. You are going to testify just the way this committee wants you to testify, as far as time is concerned. I understand that time-tables have nothing to do with your arrangement.

Mr. LEA. Now, what was the question pending there?

(The stenographer repeated the last part of the witness's statement, as follows:)

It could not have been done at the prices prevailing or that ever had prevailed in this industry as a commercial proposition, but we thought we would have 18 months before the war was closed, possibly, that the spruce would be needed in large quantities, etc., and we were falling down and falling down rapidly. When I say "We" I mean the lumber industry, because we had discovered—

Mr. LEA. Now, what did you find out, Mr. Grammer?

Mr. GRAMMER. That we had discovered?

Mr. LEA. Yes.

Mr. GRAMMER. That the kind of spruce necessary to supply the Government's wishes was so thinly located, you might say, in the

timber, that it was necessary to just go and take the particular trees that would produce what the Government wanted, instead of pursuing the custom here of taking all of the trees that might grow on the ground. That was a justification which I think most of the loggers condemned, in a way, from a commercial standpoint, but thought it would be justified under the war emergency. Construction work was done, some of it not completed, because the necessity for completing it was forced off by the signing of the armistice. It is a fact that in the district where I was supervising that in a very few weeks the output of the Government's operation there would have increased materially, because we believed that it was necessary to do that thing, and we were making arrangements so to do—that is, to produce more spruce logs.

Mr. LEA. Were you connected with the spruce-production operation at the time the riving program was adopted?

Mr. GRAMMER. No, sir.

Mr. LEA. You had nothing to do with that?

Mr. GRAMMER. The Lumbermen's Protective League, which has been mentioned here once, was an organization of the loggers, the millmen, the men in the lumber industry; that is, the operators in Washington, Oregon, and Idaho, organized for a certain purpose. We used to meet frequently, about the time that this spruce work was being installed, and in those meetings there would be anywhere from 80 or 90 to 100, up to probably 200 or 225 men, maybe, in some extreme cases, and these questions would sometimes be discussed. That is, in a broad way, a man would talk about the war, etc., and maybe he would get a little bit off the subject and make a speech, like I was supposed to be making here a while ago. In one of those meetings there was a committee appointed, of lumbermen, and the committee authorized—there were five of us, I think—to go to Col. Disque, or have a meeting with him and advise with him regarding the situation here, for their services, or the services of the industry in any way that we could serve the Government, and to make any suggestions that we thought he would like to hear in connection with the spruce program. That committee was appointed and it happened that I was appointed chairman of that committee. We went to Portland and conferred with Col. Disque regarding the problem that was before him, etc. We were courteously received, and the conference lasted until late in the night. Remarks that I made—I happened to have a copy of some notes that I used in talking to him regarding the spruce proposition at that time, which were practically O. K.'d by the committee that was with me. These notes were based on the consensus of a good many opinions which had been expressed by lumbermen in these several meetings prior to the time that we had this consultation with Col. Disque just mentioned.

Mr. LEA. Do you remember what date that was?

Mr. GRAMMER. I do not remember the exact date, but I believe that it was in the month of December, 1917.

Mr. LEA. Can you give us the substance of those recommendations that were made by the lumbermen to him at that time?

Mr. GRAMMER. I have a copy here. These are just crude notes, taken down.

Mr. LEA. Can we put that into the record, is that your idea? Are they complete?

Mr. GRAMMER. They are just notes, just rambling notes.

Mr. LEA. Well, this, in substance, states the position of the lumbermen at that time, does it?

Mr. GRAMMER. I think it does.

Mr. LEA. Suppose we just put this in the record.

Mr. FREAR. That is a very unusual proceeding, to say that here is a memorandum prepared as the consensus of opinion of men. until we find out more about it.

Mr. LEA. I just suggested that to save time.

Mr. FREAR. He can go on and tell what there is there. That is the proper way.

Mr. LEA. Will you go ahead?

Mr. GRAMMER. There has been testimony here as to whether Col. Disque consulted with practical men after coming here before he launched this proposition. I will say that that evening in this conference that I read these notes, as I may be privileged to read them here, and he commented on these notes with this committee that had been selected by this Lumbermen's Protective League. At that time Col. Disque requested a copy of these notes, with which he was supplied, and what action he took is now common knowledge. I said, to begin with, in these notes—I had in mind that three sources should be expected to produce the desired material—that is, to get out spruce for the Government. First, the sawmill now in operation, figuring, of course, that the sawmills had some logs supply and would get some spruce. Second, the small portable mill to be installed to cut aircraft spruce only that might be plucked out after the lumber was cut to place in transportation, going into the timber to keep from hauling the logs and such part of the tree as would not make aircraft spruce. Third, the riving of flitches by shingle-bolt cutters, farmers, and others. That was to stimulate the proposition and try to keep it to capacity. Another thing that we thought should be done was to waive the trespass of privately owned as well as State, school, and national forest reserve timber. To define a reasonable stumpage to be paid by the Government for any spruce cut and removed from any land. To compose a set of rules to govern the removal and payment of spruce stumpage and lumber and riven bolts or flitches. Designate specifications, price to be paid for each piece, points of delivery, dates for inspection, and minimum quantity that would be accepted from an individual.

Labor agencies to deliver all men applying for work in the lumber industry to the spruce-production camps under penalty for violation. You see how absurd some of these would be now, but it was the recommendations we had in mind at that time. No laborers should be allowed to leave the job until discharged. Probably you would say for cause. Applicants should sign an oath of allegiance to the Government. That meant applicants for labor in the spruce camps. Appropriate rules of discipline should be strictly enforced at all points where force account is in order. Secret service should be provided to report sabotage, derelictions of duty, pro-German influence, etc. A standard wage per hour should maintain. Grades for railroads should be constructed to spruce bodies which could be brought in next year. An instructor should be provided for each half dozen mills cutting aircraft stock to teach the sawyers how to cut the logs to produce most and require them to do so. Those were

some of the things which we thought at that time as lumbermen should be done by the Government in order to produce the required aircraft material. I think at that time it was supposed that the spruce required would be somewhere, as I remember, from six to ten million feet a month, or whatever could be gotten. Col. Disque commented on one or two of these propositions. At that time he told us frankly that he did not have the authority to follow these recommendations. One of the things I remember distinctly, to which I replied, he said, "You could not keep a man on the job if he didn't want to work," that that was contrary to American principles. I remember the answer which I gave him, if this is interesting to the commission.

Mr. FREAR. It is all right; I am throwing the door wide open now.

Mr. GRAMMER. The answer I made was, "Well, Colonel, our previous wars have been carried on by volunteer soldiers, and men can volunteer before they go into these woods to do this very patriotic work. I, for one, will volunteer." So he said it might be gotten by along that line, or some comment of that kind. Now, this very crude proposition gives this commission some idea of what the lumbermen that were here on the job at that time thought of getting out spruce for the Government.

Mr. LEA. What is the explanation of this last suggestion you read?

Mr. GRAMMER. An instructor should be provided for each half dozen mills cutting aircraft stock to teach the sawyers how to cut the logs to produce most—I mean aircraft stock, of course—and require them to do so.

Mr. LEA. What was the problem of sawing spruce logs to meet the aircraft program as contrasted with the sawing as it had theretofore been conducted on the coast?

Mr. GRAMMER. I am not a millman and I can only speak from hearsay.

Mr. LEA. Can you give an explanation about that?

Mr. GRAMMER. In cutting commercial lumber they cut in order to get the maximum number of feet out of a log, whether the log was cut across the grain or not, except, probably, in cutting some vertical grain, flooring. In cutting spruce logs for airplane stock it seemed that it was necessary to direct the saw so the saw would run parallel with the grain. That, it seems, was not understood by many sawyers in the mills and was not the custom, and it was probably easier and swifter to cut the log in the old commercial way rather than to cut it in such a way that it would produce straight grain flitches or material for the Government.

Mr. LEA. Did that cause any delay or different operation than to cut it with the grain?

Mr. GRAMMER. Again I would have to speak from hearsay. They told me that it did, that it would cause a delay.

Mr. LEA. Would it necessitate shifting the log while it was being sawed?

Mr. GRAMMER. I think it would depend to some extent on how the carriage or machinery was placed in the first place.

Mr. LEA. Now, briefly, what took place about the riving operation?

Mr. GRAMMER. I do not know so very much about the riving operation. There was in this meeting and in subsequent meetings much

said about what it would cost to rive the trees. The riving of spruce, it was thought, would stimulate the output. There was another feature, that it would be educational to the men engaged in getting out spruce, because in splitting you would see how the grain ran in the trees and you would thereby gain some knowledge of selecting trees later, even, that would go to the sawmill to be sawed into aircraft stock. I do not know from memory how many million feet of spruce flitches were produced. I know finally the proposition was not altogether—I might say largely—discontinued.

Mr. LEA. Now, the riving operations, were they conducted near a rail transportation or not, or were they conducted in both sorts of places?

Mr. GRAMMER. Well, as a rule, I think they were mostly near rail transportation.

Mr. LEA. What was the advantage in riving, if any, over any other method of getting those logs?

Mr. GRAMMER. A tree that was large might be rived into smaller pieces, so that the transportation feature would be much easier, so the transportation feature would be possible, you might say. You could not, maybe, with the facilities at hand, which sometimes would be meager—a team, for instance, or two—you could not transport a log that was 4 or 6 feet in diameter and 22 feet long, whereas in smaller pieces they could take it.

Mr. LEA. Now, is there any other information that you regard of importance for the committee to hear in reference to the matters that have been brought up here and on which you can give us specific information?

Mr. GRAMMER. It has been said that a large amount of construction work which was carried on was absolutely unnecessary.

Mr. LEA. What have you to say in reference to that?

Mr. GRAMMER. I have this to say, that such remarks as that were heard here after the signing of the armistice; but I did not hear such remarks, sir, prior to the signing of the armistice that I remember of. There is no question, of course, but what if we had known, and these men in this industry that have testified, and many others who might testify, had known that the Government wanted 143,000,000 feet of spruce only that would make airplane stock, and that is all they were going to need and then there would be no use for any more, why, it would have been gotten in a very different way and under different circumstances. I doubt whether it could have been gotten any quicker or not at any less expense. That is, when you figure the expense that was put upon the particular amount of logs that would come out. But there are a great many logs that were not sawn into flitches that was ready for the saw when the armistice was signed that became, you might say, scrap or salvage, that have not been taken into consideration. Some of these ambitious railroad projects—I call them ambitious—would not have been even surveyed, gentlemen, if the men in this industry had thought the armistice was going to be signed when it was, and you men would not be out here, probably, to investigate this proposition. But we thought the country was at war, and the whole cry was—many of our lumbermen in these meetings, and some of them I have seen here in this room, would talk about the honor of his American Republic which must be upheld, etc., and that one airplane was equivalent to—what was it, 1,500 or 15,000 soldiers; some

such basis as that—and “let us get the spruce and it doesn't make any difference what it costs. If it costs a dollar a foot, let us go and get the spruce. Let us build into Clallam County and build into the other counties, etc.”

That was the consensus of the opinions of most of the men that you would hear speak that were connected with the lumber industry, prior to the signing of the armistice. It didn't make any difference what it cost, but get the spruce, and get it in sufficient quantities. The spruce-production division or spruce-production corporation, the direct agent of the Government here to do this work, was getting orders, and I saw some of the telegrams. to produce this spruce in ever-increasing quantities, no matter what they were doing.

Mr. LEA. What was your judgment as to the advisability or necessity of constructing a road into Lake Pleasant, if large spruce production was to be provided in 1919?

Mr. GRAMMER. In reply to that, I want to say that I am not personally familiar with that locality. I have been to Clallam Bay some years ago. I have a general knowledge, and I examined also county cruisers' reports. I have seen a railroad alignment which I was told was a certain road in Clallam County, etc. I believe that there was large quantities of desirable spruce there for airplane purposes. Now, with that meager information, I, for one, would say absolutely yes; build the road and build it as quickly as possible, if we never use a stick of it. It is preparedness, and if we do need it, why, the people of the United States will say, “Why in the world didn't you get that spruce ready? You had time to get it ready.” I would say, “Yes; build it.” I think, sir, that you will find that many, many, many lumbermen were all of the same opinion—that that road should be built. As a matter of fact, I heard lumbermen express themselves that they were late in starting. But, of course, then it was war, now it is peace; and we can not compare peace conditions with war conditions.

Mr. LEA. Now, that is in substance what occurs to your mind to say at this time, or is there anything else of importance? Of course. I want to be as brief as we can and get at the facts, but we want you to have a chance to tell them.

Mr. GRAMMER. I want to say regarding the condition of the lumber industry that the Government sent agents here to get spruce at a time, and at the time that Col. Disque came here, the industry was very much disrupted regarding labor. It was having practically its first experience, you might say, with labor troubles; that is, organized labor troubles. There had been a little organization that had caused some trouble in shingle mills years gone by, but the lumber industry of the Pacific Northwest had never been organized under the A. F. of L. or any other organization, and we had a disorganized mass of men. A certain organization had organized a few men in several different localities in the industry, and those men, under certain tactics, had brought to bear on the minds of a great many men that were at work a condition which caused those men to stop work in the lumber industry. About the time that Col. Disque came into the field there were probably not to exceed 50 to 60 per cent of the laborers actually at work in the lumber industry that usually worked in that industry. At the same time the lumber industry was being called on by the Government for cantonment lumber, which took a good deal of lumber away from here, and it was up to these

50 or 60 per cent of the men that were working to supply that demand as well as the demands for shipbuilding timber, which came along a little later. Our industry as a whole was very much disorganized as an industry. At the time Col. Disque came here to get the spruce it was very much disorganized. And in connection with that work there was an organization started the name of which practically defines it. It was called the Loyal Legion of Loggers and Lumbermen. The idea was that on a 50-50 basis we would all be loyal to the country, and we signed a little pledge that we would show our loyalty by each of us doing all that we could to produce spruce lumber and the things that the Government would require. Now, these men that I mentioned awhile ago that had organized quite a few men in several different districts were very much opposed to this organization, the Loyal Legion of Loggers and Lumbermen, and refused to join it. That organization worked well during the war. It is still in existence, however, with a membership composed of both employers and employees.

Mr. LEA. Now, is there any other material feature that you think the committee ought to be informed about, Mr. Grammer, or that you could give us information on?

Mr. GRAMMER. I am willing to answer any questions that I can answer.

Mr. LEA. Well, I am not familiar with all your activities in reference to this matter, and I simply wanted to call upon your information, thinking you might give the committee any information that you thought might not have been supplied here that was important. If there is any such in your mind in addition to what you have already given, I wish you would give it.

Mr. GRAMMER. I want to say that during the war I never heard of any condition being imposed by the Government or the Government's agents that would prevent any man from getting any spruce log or lumber that would make airplane stock. Furthermore, I want to say that the Government agents, in so far as I know or came to my knowledge, encouraged men and corporations and those interested in the industry here to the end that they might get all possible of spruce and ship timbers.

Mr. LEA. Do you know of any case in which priorities were denied to men who wanted to produce spruce?

Mr. GRAMMER. I do not know of any such case.

Mr. LEA. Were any portable mills used? I notice you suggested portable mills.

Mr. GRAMMER. I don't know whether the Government made advances or bought and put in portable mills or not, but I know that there were some—well, practically portable mills, very small mills, that were easily installed—put in in Grays Harbor County.

Mr. LEA. That is all.

Mr. FREAR. What is your military experience?

Mr. GRAMMER. Very little.

Mr. FREAR. What has it been?

Mr. GRAMMER. I was commissioned from private life in the Spruce Production Division.

Mr. FREAR. What military experience had you had prior to that?

Mr. GRAMMER. I had none, except what you might get in school.

Mr. FREAR. What did you get in school?

Mr. GRAMMER. A little marching and drilling, and that kind of thing.

Mr. FREAR. Guns, and so on?

Mr. GRAMMER. Oh, no; I think we had broomsticks, or something like that.

Mr. FREAR. So that when you were appointed major by Col. Disque it was not with any reference to any military training which you had had prior to that time?

Mr. GRAMMER. No, sir.

Mr. FREAR. And when this captain came before us several days ago, who had been fighting in the trenches for a long period, as he said—eight days under fire—and he returned as a captain, with his long term of military training, compared to the training that you had had he would have been entitled, would he not, under any fair method of measurement, to a highly increased command, compared with yours in your military training?

Mr. GRAMMER. I have told you I was not familiar with military affairs. That is not for me to say.

Mr. FREAR. It is not for you to say? But you were entitled to higher titles than men who have been through that war and who have been fighting hard?

Mr. GRAMMER. I have not testified I was entitled to it.

Mr. FREAR. Did you recommend Disque for distinguished service?

Mr. GRAMMER. No, sir.

Mr. FREAR. Did he recommend you for distinguished service?

Mr. GRAMMER. Not to my knowledge.

Mr. FREAR. He recommended 20 people, did he not?

Mr. GRAMMER. I don't know.

Mr. FREAR. You are not familiar with that?

Mr. GRAMMER. No, sir.

Mr. FREAR. He made you a major, didn't he?

Mr. GRAMMER. Well, I don't know how that is done.

Mr. FREAR. Explain how it was.

Mr. GRAMMER. The commission, I think, came from Washington, signed by somebody—The Adjutant General or somebody.

Mr. FREAR. Did The Adjutant General know you?

Mr. GRAMMER. I don't think he did.

Mr. FREAR. So that he would not have made the nomination of you as a major unless he had had some influence brought to bear, would he?

Mr. GRAMMER. That I can't say. I guess there was a recommendation made.

Mr. FREAR. What is your judgment?

Mr. GRAMMER. Well, I should think that I had been recommended to him for such a commission.

Mr. FREAR. Surely. Now, by whom?

Mr. GRAMMER. I presume, sir, that it was by Col. Disque.

Mr. FREAR. That is right. Now, we get back to the point: So Col. Disque nominated you for a major in the Army and you received that title. When was that?

Mr. GRAMMER. When do you mean?

Mr. FREAR. When you received it?

Mr. GRAMMER. That I received—

Mr. FREAR. Your appointment as major?

Mr. GRAMMER. That I received the commission?

Mr. FREAR. Yes.

Mr. GRAMMER. It was late in October.

Mr. FREAR. What year?

Mr. GRAMMER. 1918.

Mr. FREAR. Oh, that is just before the signing of the armistice?

Mr. GRAMMER. Yes, sir.

Mr. FREAR. It could not have been over two or three weeks, then?

Mr. GRAMMER. I don't suppose it was. Two or three weeks, or something like that.

Mr. FREAR. Had you had any military title before that?

Mr. GRAMMER. No, sir.

Mr. FREAR. And no military experience before or since?

Mr. GRAMMER. Very slight. The same as other citizens have.

Mr. FREAR. What was it?

Mr. GRAMMER. I have told you.

Mr. FREAR. Well, but you have described none. What have you had of military experience before or since you were appointed to that position?

Mr. GRAMMER. Since I was appointed I had some experience.

Mr. FREAR. What doing?

Mr. GRAMMER. I have told you what my duties were.

Mr. FREAR. Yes.

Mr. GRAMMER. To act as district supervisor.

Mr. FREAR. Oh, I know, but I am asking for military training; what experience you had.

Mr. GRAMMER. Well, what do you want to know about it?

Mr. FREAR. What?

Mr. GRAMMER. What do you want to know about it?

Mr. FREAR. I want to know what military experience you have had before or since the signing of the armistice?

Mr. GRAMMER. Well, sir, I——

Mr. FREAR. You say you had the same as ordinary citizens. Tell me what, if any.

Mr. GRAMMER. That was prior to the time I was commissioned, I said. I had experience the same as other citizens have.

Mr. FREAR. What other citizens? I had 16 years. What have you had? I am a citizen, just an ordinary citizen.

Mr. GRAMMER. Well, distinguishing between the military and the citizen when I said civilian.

Mr. FREAR. You had no military training before or since?

Mr. GRAMMER. Probably I should have said civilian.

Mr. FREAR. You have had no military training, have you, before or since——

Mr. GRAMMER. Not in the strict sense of the word; no, sir.

Mr. FREAR. What have you in any other sense of the word?

Mr. GRAMMER. Well, sir, I have been commissioned as an officer in the United States Army.

Mr. FREAR. That doesn't——

Mr. LEA. Now——

Mr. GRAMMER. And performed my duties as such that were acceptable to the commanding officer and drew pay for it.

Mr. FREAR. Surely. I am asking what military training you have had before or since the signing of the armistice?

Mr. GRAMMER. Training?

Mr. FREAR. Yes; that was my question every time—military training or military experience.

Mr. GRAMMER. Well, I had military experience in connection with my duties.

Mr. FREAR. What were you doing?

Mr. GRAMMER. What doing?

Mr. FREAR. Tell me the military training or experience that you had, now, in connection with your duties from October to the signing of the armistice. That was about three weeks.

Mr. GRAMMER. My duties were to look after the interests of the Government.

Mr. FREAR. Oh, well, the Government—

Mr. GRAMMER. That was being done, sir, under the military directions of the Government, and I was an agent in that work and performed it to the best of my ability.

Mr. FREAR. The statement has been made here from nearly every one who is employed in the Spruce Corporation, no matter what their position was, that they were the Government. Tell me what you did as an individual showing any military training or experience.

Mr. GRAMMER. You mean march out on the—

Mr. FREAR. Military training or experience. You know what that is, whether it is marching or whether it is drilling, or what; tell us what you did.

Mr. GRAMMER. There hasn't been anybody training me in a military way, if that is what you have reference to.

Mr. FREAR. You were never trained in it and never trained anyone else?

Mr. GRAMMER. Not as an officer in the Army; no, sir.

Mr. FREAR. So you know nothing about that?

Mr. GRAMMER. I can't say I know nothing about it.

Mr. FREAR. What do you know, then?

Mr. GRAMMER. I have never actually done the work.

Mr. FREAR. Let's see, what do you know? What do you know?

Mr. GRAMMER. What do I know?

Mr. FREAR. Yes; about military training?

Mr. GRAMMER. Well, sir, I know that men wear a uniform; what I mean by that is that they have—each of them have similar uniforms.

Mr. FREAR. Did you wear one?

Mr. GRAMMER. That there are similar commands, that commands are given that numbers of the men understand at the same time and obey.

Mr. FREAR. You have seen that?

Mr. GRAMMER. I know that this usually leads up to the point where they become a combative force—

Mr. FREAR. And you have seen all that, you have seen that, you have been in camps where you have seen this done?

Mr. GRAMMER. I can't say I have been in camps where I saw it done.

Mr. FREAR. Well, then, how do you know it—simply because you have read of it or have heard of it?

Mr. GRAMMER. I have seen it done on the streets and in places where it was convenient to have——

Mr. FREAR. That is the best of your information?

Mr. GRAMMER. On ship deck, probably, in the Navy, etc.

Mr. FREAR. You were not commissioned in the Navy, of course?

Mr. GRAMMER. No, sir; but that is military, isn't it?

Mr. FREAR. Military; yes. And you had absolutely no training at any time in your life—military training or experience, have you——

Mr. GRAMMER. No, sir.

Mr. FREAR. And you were commissioned a major. You went into this board in March, 1919, you said, as a director?

Mr. GRAMMER. About that time; I think it was March.

Mr. FREAR. You are a logger?

Mr. GRAMMER. Yes, sir.

Mr. FREAR. A business man. That was March, 1918, I guess, wasn't it? Was it 1919? Did I get these figures right?

Mr. GRAMMER. I think in my testimony it was 1919.

Mr. FREAR. 1919, and that is long after the signing of the armistice.

Mr. GRAMMER. You said on the Spruce Production Board, didn't you?

Mr. FREAR. Yes. That is, the time you went in was 1919?

Mr. GRAMMER. Went into what?

Mr. FREAR. The Spruce Production Board, as director?

Mr. GRAMMER. That was in 1919.

Mr. FREAR. And then that is six months after the signing of the armistice?

Mr. GRAMMER. Yes.

Mr. FREAR. Oh, I mistook; I thought you were there during the service. You spoke—taking it down in the order—of the airplane company at Grays Harbor. You had some knowledge about that, did you?

Mr. GRAMMER. Yes, sir; for a couple of months; two or three months.

Mr. FREAR. What time; what months?

Mr. GRAMMER. October, November——

Mr. FREAR. That is just before the signing of the armistice.

Mr. GRAMMER. Yes, sir.

Mr. FREAR. Several weeks?

Mr. GRAMMER. Oh, yes.

Mr. FREAR. Mr. Polson was the man who had charge of the airplane—or president of the airplane company—was he not?

Mr. GRAMMER. President; one of the Polsons was.

Mr. FREAR. He was president of the company. You were not connected with this spruce production company during the time that they were engaged in getting out or working there on their railroads and working there in their spruce, prior to this short time in October, 1918. Did you know or did you learn that Mr. Polson, who was president, had met with very serious obstacles in trying to put this railroad through to the Quinault Reservation?

Mr. GRAMMER. I didn't know that he had.

Mr. FREAR. Did you know that Maj. Hitchcock, of Cleveland, Ohio, had been there on the job—or was it Hitchcock—for a long period and had been finally removed; did you hear that?

Mr. GRAMMER. No, sir; I never had heard it.

Mr. FREAR. And did you hear if anyone had been there on the job, representing the Government on this airplane project that Polson was conducting?

Mr. GRAMMER. In an official capacity, do you mean?

Mr. FREAR. In an official capacity?

Mr. GRAMMER. What particular capacity?

Mr. FREAR. Representing the Government, in charge?

Mr. GRAMMER. There were a number of men there, representing the Government.

Mr. FREAR. The one in charge.

Mr. GRAMMER. You mean in charge of the military?

Mr. FREAR. The one in charge at Polson's scene of operations, who had the direction of the general work there in putting in the railroad and getting out the spruce?

Mr. GRAMMER. There was a man by the name of Hutchinson that I—

Mr. FREAR. Maj. Hutchinson.

Mr. GRAMMER. That I succeeded as district supervisor.

Mr. FREAR. He was succeeded by you? He was failing, was he not, in getting things going there?

Mr. GRAMMER. That is not for me to say.

Mr. FREAR. Well, that is the reason that you were considered more competent and you were put in his place, was it not?

Mr. GRAMMER. I don't wish to be evasive, but I wish to tell you what I was told.

Mr. FREAR. All right.

Mr. GRAMMER. That Mr. Hutchinson was a very patriotic young man; wished to go to an officers' training corps, to join the artillery, and I was informed that he had resigned, and I saw a letter requesting—that is, a letter from him—requesting that his successor be appointed as quickly as possible, because he wanted to be at some point East by a certain date, in order that he might train for the work in the Army.

Mr. FREAR. And don't you know that there was a great deal of trouble on the part of Polson with this Hutchinson because he had failed to—or he had put so many obstacles in his way, in the construction of the road, due to ignorance or due to—probably not on purpose, but due to his lack of knowledge of conditions that would be familiar to you—didn't you hear that?

Mr. GRAMMER. I can't say I heard it as you testify to it.

Mr. FREAR. What did you hear? It is all in the testimony—the Ray testimony. What did you hear when you were there?

Mr. GRAMMER. I heard from one person that it was his opinion that this man Hutchinson was too young a man for the job that he had; that probably he had not arisen to the emergency of the occasion, or something to that effect. I never heard that there had been a lot of obstacles placed in anybody's way regarding the matter.

Mr. FREAR. Have you ever read the testimony in the Ray investigation?

Mr. GRAMMER. No, sir.

Mr. FREAR. Did you ever talk with Mr. Polson in regard to this Hutchinson?

Mr. GRAMMER. I have.

Mr. FREAR. In regard to his insisting upon the railroad being built with a certain plan of driving in the piling, and the delay that was caused by that very insistence on his part?

Mr. GRAMMER. I have heard Mr. Polson talk about it.

Mr. FREAR. Polson complained, didn't he, quite seriously?

Mr. GRAMMER. When talking to me he complained, I think, regarding the matter.

Mr. FREAR. And Polson was willing to work, providing he could do the work and providing that there was no needless obstacles. And didn't he testify in the Ray matter, and hasn't he told you, that he was delayed there for weeks and months by the action of this Hutchinson, who was unfamiliar with matters of this kind?

Mr. GRAMMER. Not in those words; he never told me that.

Mr. FREAR. What words? I mean in substance. Of course, I don't expect you to give the exact wording of the testimony that is in the Ray report.

Mr. GRAMMER. If it was him complained to me in—Senator Polson, I suppose you refer to. There are two men there that are very practical—

Mr. FREAR. He is a Senator? I didn't know that. Yes.

Mr. GRAMMER. He was president of the company.

Mr. FREAR. That was the airplane company?

Mr. GRAMMER. Yes, sir. This driving of the piles, I should say, if I know the particular place that they have reference to on the line, it was far enough ahead in the construction of the work that it need not delay anybody two minutes for doing much-needed work at the time I arrived on the job.

Mr. FREAR. When was Polson's contract entered into, do you know?

Mr. GRAMMER. Oh, I don't remember. I have seen it, but I don't remember.

Mr. FREAR. Was it in the spring of 1918?

Mr. GRAMMER. I don't know that even.

Mr. FREAR. Isn't it a fact that there was over six months there in trying to get that railroad together?

Mr. GRAMMER. That I can't say.

Mr. FREAR. How long a railroad was built, can you tell me? How long was the railroad—what length?

Mr. GRAMMER. Oh, it must have been approximately 10 miles. I walked over it, but I don't remember exactly the stations.

Mr. FREAR. Isn't there testimony and isn't it a fact that they were only a mile or a mile and a half from the timber?

Mr. GRAMMER. When?

Mr. FREAR. When the railroad operations stopped?

Mr. GRAMMER. When they stopped?

Mr. FREAR. From the Quinault Reservation, I believe.

Mr. GRAMMER. What do you mean by that?

(Question read by the stenographer.)

Mr. FREAR. The timber on the Quinault Reservation.

Mr. GRAMMER. Do you mean the railroad construction?

Mr. FREAR. Yes.

Mr. GRAMMER. Well, what part—

Mr. FREAR. By Polson?

Mr. GRAMMER. What part of the railroad construction?

Mr. FREAR. The part that Hutchinson was engaged on.

Mr. GRAMMER. And now I am not trying to evade.

Mr. FREAR. I know. I don't think you are.

Mr. GRAMMER. We had miles of grade ahead of the rails at times, and that kind of thing, and I don't know just what you call the railroad.

Mr. FREAR. The railroad that reached the Quinault Reservation—that was to reach the Quinault Reservation?

Mr. GRAMMER. Do you mean where were the rails laid to or where was the construction work?

Mr. FREAR. How far had they reached? You have testified here with reference to—

Mr. LEA. Do you mean the grading or rails?

Mr. GRAMMER. We had grade made up into the timber, so far as that is concerned.

Mr. FREAR. Surely.

Mr. GRAMMER. Where there was timber on each side.

Mr. FREAR. As I understood the testimony, and as I remember it—but I haven't seen it for a long time—it was to the effect that they got within a mile or a mile and a half of the timber, and, due to the delay and largely chargeable to Hutchinson, according to the testimony that was submitted in the Ray report—now, where was that mile or mile and a half, or do you know anything about it? Of course, you came in six months subsequent; I don't know that you do.

Mr. GRAMMER. It may be that that has reference to the easterly line of the Quinault Indian Reservation.

Mr. FREAR. Well, now, they built 10 miles there in something like how many months; six months?

Mr. GRAMMER. I don't know how long they were at it?

Mr. FREAR. This was an ordinary logging railroad, wasn't it, with piling?

Mr. GRAMMER. Yes; it was such a road as Mr. Polson builds on his works.

Mr. FREAR. And Polson was a man who conducted very large operations, didn't he?

Mr. GRAMMER. Compared with other loggers; yes.

Mr. FREAR. A very large logger. But his complaint was that he could not proceed because of the restrictions placed over him by Hutchinson; isn't that right?

Mr. GRAMMER. I don't know that.

Mr. FREAR. You don't know?

Mr. GRAMMER. No, sir.

Mr. FREAR. You never talked with him?

Mr. GRAMMER. Not on that.

Mr. FREAR. The delay. You don't know that that was charged by Polson?

Mr. GRAMMER. I know the Senator talked with me about delay, etc. You questioned me a while ago about certain piles.

Mr. FREAR. Well, that was one of the suggestions, as I remember it. I haven't read it for a long time. Hutchinson was very slow, and the insistence upon how this piling should go in, and he delayed the operation by reason of the conditions he put around Polson—now,

that is, as I remember it, the Ray testimony. I can get at these facts, if necessary, but isn't that the substance of it, or do you know the facts?

Mr. GRAMMER. I don't know the facts about it, you see.

Mr. FREAR. You came in long later.

Mr. GRAMMER. That was prior to my—

Mr. FREAR. I don't want to be unfair. I just want to know what I can find out in regard to that situation without sending down and getting certain witnesses up here. The Olympic Forest Reserve Railroad; what railroad was that, or was there any—

Mr. GRAMMER. The same road.

Mr. FREAR. That is the Polson road that was to be put up here to the Olympic Forest Reserve—that is, the Quinault Reservation.

Mr. GRAMMER. As I understand it, that ran through—no, sir; that ran through a portion of the Olympic Forest Reserve with this road, in order to get to the Quinault, or we expected to go in there.

Mr. FREAR. There is a fine stand of timber down there, isn't there—spruce timber?

Mr. GRAMMER. In places there is.

Mr. FREAR. That is true in any stand of timber, that it is in places, isn't it?

Mr. GRAMMER. Well, spruce, you know—you might say all over the forest here we have fir—

Mr. FREAR. Hasn't the Forestry Board, Cecil and Nelson, both made statements that that is an excellent stand of timber in the Quinault Reservation—spruce timber?

Mr. GRAMMER. I think they have.

Mr. FREAR. Well, it is; it is a good stand of timber, isn't it?

Mr. GRAMMER. Yes. I am not denying it.

Mr. FREAR. Well, now, the purpose was to get into that stand of timber there, and how far was that from Polson's line, can you tell, when he entered into the contract, or do you know?

Mr. GRAMMER. I don't know. I should say it was 8 or 10 or 12 miles, something long like that.

Mr. FREAR. And under ordinary conditions he ought to be able to build 20 or 30 miles, hadn't he?

Mr. GRAMMER. If he had men and material; yes.

Mr. FREAR. Surely. And if he had had, as you said—you were talking awhile ago about some case where every facility hadn't been granted. If he had had the men given to him, and if he had had proper management regarding the Government, and if he had had the priorities and everything furnished him as they furnished to this company over here, he could have done that, couldn't he, according to his own statement—sworn statement?

Mr. GRAMMER. There is one point in that I don't wish to O. K.

Mr. FREAR. All right; what?

Mr. GRAMMER. It infers that the Government didn't give him, etc.

Mr. FREAR. The Government is a Government of thousands of individuals. I am speaking about this Col. Disque and those under him.

Mr. GRAMMER. I see. I think that Senator Polson did all that he could to forward that road.

Mr. FREAR. So far as he was concerned?

Mr. GRAMMER. Yes, sir; and I think those that were engaged in forwarding it under him, connected with him, did all that they could.

Mr. FREAR. In his employ?

Mr. GRAMMER. Yes, sir.

Mr. FREAR. Yes.

Mr. GRAMMER. And in the Government's employ.

Mr. FREAR. And in the Government's employ, you think so. And yet he didn't think so, in his testimony, did he? And he is very strong in his position or in his criticism?

Mr. GRAMMER. I don't know what his testimony was.

Mr. FREAR. You never heard of it; never talked with him about it?

Mr. GRAMMER. I didn't know that he testified.

Mr. FREAR. Of course, as a matter of fact, you didn't know anything about it, because you came in six months later; that is true, is it not?

Mr. GRAMMER. Six months later than what?

Mr. FREAR. Later than the armistice. You didn't get in there until March, or when were you there? Or, no; you went in October. Now, this road was building when you were there?

Mr. GRAMMER. I have so testified.

Mr. FREAR. The road was building. Was it building rapidly at that time?

Mr. GRAMMER. Yes, sir.

Mr. FREAR. Did he have all the men he wanted?

Mr. GRAMMER. On that line that you have mentioned, yes; we had all the men that we could use.

Mr. FREAR. How fast was he building this road?

Mr. GRAMMER. As fast as you would usually expect that amount of men and equipment to build a road.

Mr. FREAR. How many miles a day or a month or a year were they building; at what rate?

Mr. GRAMMER. That is a question I can't answer the way it is put.

Mr. FREAR. How many feet; how many stations? Can you give the committee any idea of your method of measurement; how rapidly that road was being put through?

Mr. GRAMMER. The road, up to a certain point where the grade was finished, was under a certain percentage of completion, you might say, for a number of miles, and during the entire month of October we were adding to that percentage of completion.

Mr. FREAR. Yes.

Mr. GRAMMER. But I could not testify as to how many miles of road we were building.

Mr. FREAR. Well, now, how many hours a day were they working on this road?

Mr. GRAMMER. They were working eight hours.

Mr. FREAR. They were working over here on the Siems-Carey-Kerbaugh Road 24 hours a day?

Mr. GRAMMER. Not the same crews of men.

Mr. FREAR. No; not the same crew of men. I am speaking about what was done by what you call the Government, and by what other people would call the Spruce Corporation, as headed by Col. Disque.

Mr. GRAMMER. A part of the time I believe the men worked 10 hours. They worked 10 hours, I think, until the days shortened a little bit, and then they worked nine, and then, possibly, eight.

Mr. FREAR. Did they have a hundred men there or did they have a thousand?

Mr. GRAMMER. Oh, I should say they had a couple of hundred men there.

Mr. FREAR. They had a couple of hundred men. They had 4,000 men over here, working on the Siems-Carey-Kerbaugh road, working 24 hours a day; they had a couple of hundred men down there at Polson road, working 10 hours a day. That is a fact, is it?

Mr. GRAMMER. I think so. Do you want me to say why

Mr. FREAR. Surely. I am glad to have you amplify it any way you choose.

Mr. GRAMMER. The requirements per month by the Government for airplane stock were being met, and 1919 was supposed to furnish about 300,000,000 feet, which would increase the demands in the future much over what they were at that time. And this work, of course, would have produced a great deal of spruce during 1919, and it may be—I say “may be”—that the requirements were being filled at that time, and it was not deemed necessary to go to a larger expense in building that road in order to get it ready before it would actually be used. I say it “may be,” now, that is just my judgment.

Mr. FREAR. Let us analyze that, about that road that was put through at the expense of a few thousand dollars a mile. What different position was that in, regarding your statement, than a road over here that was costing \$115,000 a mile? Weren't all the conditions the same regarding the demand for airplane timber? Didn't it apply with equal force to the Quinault Reservation as they applied it here to the Pleasant Lake?

Mr. GRAMMER. The last question—I should think those conditions were about the same.

Mr. FREAR. So that the conditions under which they were both operating were the same, weren't they; and the same argument that would apply to the Siems-Carey-Kerbaugh Co. regarding the importance of getting out airplane spruce applied to Polson's company?

Mr. GRAMMER. I should think so.

Mr. FREAR. Surely; it seems so. And I was just asked by Mr. Magee to place in the record the county seat of Clallam County. That is Port Angeles, is it; or do you know? Naturally, anyone can probably testify to that.

Mr. LEA. Sure; that is a fact.

Mr. GRAMMER. I think it is Port Angeles.

Mr. FREAR. He wanted to have that to appear in the record. He asked me to make a note of it. Now, you have given quite a discussion on the subject of selective logging. Did you ever do selective logging yourself?

Mr. GRAMMER. You mean commercially?

Mr. FREAR. Any way; individually.

Mr. GRAMMER. I have worked where that was done.

Mr. FREAR. You what?

Mr. GRAMMER. I have worked as an employee where that was done.

Mr. FREAR. Where was this?

Mr. GRAMMER. New Mexico and in Arkansas.

Mr. FREAR. When was that?

Mr. GRAMMER. Oh, long ago; the eighties.

Mr. FREAR. What kind of timber?

Mr. GRAMMER. In Arkansas it was cypress, and in New Mexico it was pine.

Mr. FREAR. What is the size of cypress?

Mr. GRAMMER. Oh, it grew anywhere from a couple of feet up to 4 or 5 feet.

Mr. FREAR. Does cypress grow as large as that?

Mr. GRAMMER. Yes, I have cut many cypress trees——

Mr. FREAR. What kind of contracts were you working on there?

Mr. GRAMMER. What kind of contracts was I working under?

Mr. FREAR. Yes.

Mr. GRAMMER. I was cutting logs by the thousand.

Mr. FREAR. Were you getting out this cypress and leaving the others?

Mr. GRAMMER. Just certain cypress trees.

Mr. FREAR. What proportion of the trees were cypress?

Mr. GRAMMER. Oh, the cypress. You mean what was the proportion of trees in a cypress brake? All cypress, practically.

Mr. FREAR. So that you practically cleaned up the whole thing in your selective operations?

Mr. GRAMMER. We cut certain trees because of their value.

Mr. FREAR. How did you log there, with donkey engines, as you do out here?

Mr. GRAMMER. No, sir. Where I was cutting those trees, the back-water from the Mississippi River would float everything.

Mr. FREAR. So that you would cut a log and you dumped it right into the water?

Mr. GRAMMER. Yes, sir.

Mr. FREAR. Where was the place in Mexico or New Mexico?

Mr. GRAMMER. It was a few miles from Santa Fe, probably 20 miles.

Mr. FREAR. What kind of logging were you doing there?

Mr. GRAMMER. I was cutting logs by contract; pine logs.

Mr. FREAR. What is the size of the pine logs down there?

Mr. GRAMMER. That was timber that would run anywhere from 18 inches to 3 feet on the stump.

Mr. FREAR. Were the operations there with donkey engines?

Mr. GRAMMER. No, sir; the logs were hauled by oxen.

Mr. FREAR. So you did not have the railroad there. It was a different kind of logging?

Mr. GRAMMER. It was before this system was developed.

Mr. FREAR. A different kind of operation entirely?

Mr. GRAMMER. Yes.

Mr. FREAR. Up here when you were engaged in logging in your company where this great timber grows to 10 feet in diameter, you have to have donkey engines and railroad spurs, as they are called?

Mr. GRAMMER. We do use them; yes.

Mr. FREAR. Is it not done almost entirely?

Mr. GRAMMER. That is the system now employed.

Mr. FREAR. And it is the only system that could be employed in getting out the goods rapidly?

Mr. GRAMMER. Well, again I will have to qualify that.

Mr. FREAR. Go on; I am willing to accept it. I am getting information here.

Mr. GRAMMER. To handle a large body of timber you get away from the dumping ground, so to speak. The railroad in our present system will reach all of the timber and log it systematically cheaper, probably, than some other way. But near the dumping ground to the place you only have a quarter section of 40 acres, or something of that kind, and you can log that to the dumping ground much cheaper maybe by the old system with horses or mules than you could by putting in a railroad and donkey engine, because of depreciation.

Mr. FREAR. Certainly, that is a very short operation. But it is 54 miles, according to this railroad, from the dumping ground. In a case of that kind you have got to have some way of getting to it, such as spur tracks, donkey engines, and things of that kind, haven't you?

Mr. GRAMMER. Yes.

Mr. FREAR. So that in your selective logging operations it is under entirely different circumstances from anything you had ever been engaged in yourself; that is right, is it?

Mr. GRAMMER. Not entirely different, but it is a little different.

Mr. FREAR. Let us find out where we can get together. Whereabouts did you ever log any selective logging like they do here in this country?

Mr. GRAMMER. I have not, but they do not do selective logging here entirely different from anything I have been connected with.

Mr. FREAR. We will get to that further on. I am trying to find out in what particular your experience in selective logging is like that that is being done out here in this country. One place where you dump the logs into the water, because it is convenient, and the other where you put them on the oxcart because the oxen were there. Another method is employed here. Here you used railways and donkey engines—I believe that is your testimony, and I believe that is a fact. Now, where did your method of selective logging bear comparison with the method that is being used here?

Mr. GRAMMER. I think that practically every logger in this industry has at times gone ahead of his work and selected a few spars and some piling, if you please, or some other character of timber, maybe a few logs of a certain length, and then cut down just the trees they think that would make these spars or logs or piles of a certain required length, and hauled them to be loaded, and take them away to the dumping ground, leaving all the rest of the timber standing until such a time as their commercial work progressed. That is selective logging.

Mr. FREAR. I agree with your thought. But do you know of a case, in your experience, where 26,000,000 feet of selective logging was required to be brought in one month by any company?

Mr. GRAMMER. No.

Mr. FREAR. That is the proposition that we have been discussing here in regard to the Siems-Carey contract which related to 500,000,-

600 feet of logs, and part of the time 26,000,000 feet were to be cut out by selective logging. That is a matter that has been testified to, which these men said seemed impracticable, and they could not think it possible. Now, what other experience have you had, either directly or indirectly, in selective logging besides that in Santa Fe and in Arkansas? I am getting at the practicability of it.

Mr. GRAMMER. I have testified that we had airplane spruce. The lumber company was engaged in selective logging?

Mr. FREAR. What kind of selective logging have they been engaged in?

Mr. GRAMMER. When I was there we were taking out the spruce logs—the No. 1 and No. 2 logs.

Mr. FREAR. What method of operation were they using?

Mr. GRAMMER. The present system we have here—railways and donkey engines.

Mr. FREAR. You had to build in railways just the same as though you were going to log the whole tract, did you?

Mr. GRAMMER. Not the same; no.

Mr. FREAR. What difference?

Mr. GRAMMER. It did not require so many railroads.

Mr. FREAR. What would be the difference in procedure that would not require so many railroads?

Mr. GRAMMER. The difference in procedure would be this: There might be a large stand of fir or cedar not near the railroad. For commercial logging you would build a railroad into that, a few spruce trees very desirable would be drawn in by cable, to the road that is constructed.

Mr. FREAR. To the railroads?

Mr. GRAMMER. Yes.

Mr. FREAR. Now, let us see. You would have to bring them in to the donkey engine, wouldn't you? That engine was over on the railroad wasn't it?

Mr. GRAMMER. Yes.

Mr. FREAR. So you had to bring it in by the same procedure you would in logging the whole tract?

Mr. GRAMMER. What is sometimes done is to send the engine away from the railroad.

Mr. FREAR. Was that done down there?

Mr. GRAMMER. In some cases.

Mr. FREAR. How frequently, compared with the other system, the old regular system. I am asking for information.

Mr. GRAMMER. That depended altogether on railroad construction possibilities.

Mr. FREAR. How did they proceed there in getting selective logging? They dragged the logs up to the donkey engine, did they not?

Mr. GRAMMER. Yes.

Mr. FREAR. Then what did they do with them?

Mr. GRAMMER. They are loaded on the car.

Mr. FREAR. There were no cars here. The donkey engine would haul them into the wood?

Mr. GRAMMER. They took them with another donkey engine.

Mr. FREAR. You mean to say that you dragged the logs with one donkey engine, up to the engine, and then you would have another engine located at a distance and drag the logs from there on.

Mr. GRAMMER. Yes.

Mr. FREAR. How many cases can you speak of that you have ever seen that done?

Mr. GRAMMER. I have seen that done in two or three cases there.

Mr. FREAR. With the airplane people there?

Mr. GRAMMER. Yes.

Mr. FREAR. What kind of timbers were being taken out?

Mr. GRAMMER. Spruce.

Mr. FREAR. Was it generally spruce?

Mr. GRAMMER. Yes; it was generally spruce.

Mr. FREAR. They were cleaning it pretty nearly all up, weren't they?

Mr. GRAMMER. No; only cutting selective trees.

Mr. FREAR. Was that the place where Mr. Chisholm went past and saw you when you were engaged in operation, or do you remember?

Mr. GRAMMER. What Chisholm do you have reference to?

Mr. FREAR. The one who works for the Merrill & Ring Co.

Mr. GRAMMER. I do not remember. I know the gentleman well.

Mr. FREAR. You do not remember him out there in the forest?

Mr. GRAMMER. I do not remember having seen him on that operation.

Mr. FREAR. I will ask this; was it true that the timber was practically being cleared off instead of taking selective trees here and there?

Mr. GRAMMER. We were taking selective trees, I tell you.

Mr. FREAR. How much did you get out?

Mr. GRAMMER. I have testified from about 25,000 to 35,000 a day.

Mr. FREAR. How many men did you have on that operation?

Mr. GRAMMER. The usual number of men that work around the machines.

Mr. FREAR. The same number of men that you would have in taking out all the timber?

Mr. GRAMMER. The same distance, in commercial logging, yes.

Mr. FREAR. Do I understand that it would take as many men proportionately to pull out these occasional selective spruce trees as it would to log indiscriminately?

Mr. GRAMMER. Practically the same number of men.

Mr. FREAR. So that unless you had an enormous army of men to draw on you could not engage in this selective logging, could you?

Mr. GRAMMER. I could engage with the same number of men that you can in commercial logging.

Mr. FREAR. Do you mean to say that the same number of men can get out as many spruce trees, or other kinds of trees, by selective logging, as can be had in the general logging method?

Mr. GRAMMER. I did not say that.

Mr. FREAR. I want to get an understanding between us.

Mr. GRAMMER. I will explain this for both of us. You think that you are going to get me to say—

Mr. FREAR. Strike that out. That is not any answer. I simply want an answer—yes or no—and I have tried to be fair and honest.

I do not know whether I understood you or you understood me. I am not trying to mislead you at all.

Mr. GRAMMER. In answering this question, I wish to be clear. I do not mean to testify that men will go into an operation and do selective logging and only take certain trees and get as many thousand feet out in a day as they might get provided they take every tree that is on the ground; that is, if there is a large stand of timber on the ground. But if every tree happens to be a selective tree, there would be no difference.

Mr. FREAR. If only one tree out of a dozen trees was a selective tree, then, what as to the comparative number of men?

Mr. GRAMMER. I have already told you under that kind of condition about how many thousand feet they would get in a day.

Mr. FREAR. It takes a great many more men, does it not, under those conditions, to operate and get out the same amount of timber?

Mr. GRAMMER. It would take more men to get out 100,000 feet of spruce in selective logging in a day, providing there was only 15 per cent of the trees taken.

Mr. FREAR. And that is about the average of spruce?

Mr. GRAMMER. Yes. I did not mean to say "yes" to that, as I do not know what the average is that was taken in that district.

Mr. FREAR. I think it averages 15 or 20 per cent up there in the Pleasant Lake district.

Mr. GRAMMER. I do not know whether it does or not. I have never been up there.

Mr. FREAR. Have you ever been on the Siems-Carey Railroad?

Mr. GRAMMER. No, sir.

Mr. FREAR. You do not know anything about that situation?

Mr. GRAMMER. I can not say I do not know anything about it.

Mr. FREAR. Nothing, except what you have heard?

Mr. GRAMMER. That is all.

Mr. FREAR. Do you mean to say you thought it was necessary to put in the Siems-Carey Railroad?

Mr. GRAMMER. I thought it was necessary upon the Clallam County tract of spruce.

Mr. FREAR. That is not an answer. Did you think it was necessary to build the Siems-Carey Railroad?

Mr. GRAMMER. I thought it was necessary to construct some railroad.

Mr. FREAR. From where?

Mr. GRAMMER. I do not know.

Mr. FREAR. The testimony is here—and you have heard the testimony, I presume—the testimony is that it would take 14 miles to go from Clallam Bay up to this tract of spruce; that over the Siems-Carey Road it will take 56 miles of haul, even if they built both of their mills, and two-thirds of their logs will have to be rafted after they reach the tidewater. If you, as a practical logger, were going to get out such timber as quickly as possible, would you take a 14-mile route and build a quick railroad in there to get it out or would you take a route of more than 56 miles, when two-thirds of anything that you had had to be rafted?

Mr. GRAMMER. I will have to leave that to other men to testify to.

Mr. FREAR. That is a fair question, is it not?

Mr. GRAMMER. My experience has shown me in the timber industry here that it is very easy to mark out a logging proposition on paper, but when it comes to the solution of the proposition it is very necessary to make a thorough cruise of the proposition, as I understand it. But I do not think my judgment in the matter is worth very much.

Mr. FREAR. I do not think it is worth much. But we have had the testimony of Mr. Lightner, who is head of the company there. You recognize him as a fair and experienced man, do you?

Mr. GRAMMER. I heard his testimony. I did not know what his experience had been up to that time.

Mr. FREAR. You have never known of him as a logger and a man of business here?

Mr. GRAMMER. Yes, I have.

Mr. FREAR. His testimony has been supported by the testimony of Mr. Frost, excepting from another point. You know Mr. Frost, do you?

Mr. GRAMMER. Yes.

Mr. FREAR. Is Mr. Frost a reputable man?

Mr. GRAMMER. I am willing to make this statement—

Mr. FREAR. I am glad to have any statement you see fit to state. I am throwing the door wide open.

Mr. GRAMMER. The statement I wish to make is that the men that I have heard testify before this table I believe testified to what they thought to be the truth at the time.

Mr. FREAR. That is fair, and I would not expect you to make any other statement, because I understand your reputation is in like manner good. But it would seem to the man who is a layman and is not a logger—

Mr. GRAMMER. I do think, if you will let me go further in justification of that statement, Mr. Chairman, that all of the truth regarding this proposition would come out.

Mr. FREAR. Surely.

Mr. GRAMMER. And I think that men that come before this table should be allowed to tell in their own way what they know about it.

Mr. FREAR. That is not the way that any investigation or any court procedure under heaven is ever conducted, and you must understand that this committee must determine upon some rule of procedure, because if any speeches as made and as proposed by other witnesses, outside of yourself, were allowed the investigation would have unlimited scope.

Mr. GRAMMER. It is a big thing.

Mr. FREAR. Yes; but the questions will bring it out, either by one side or the other, and we want the truth, and only the truth, and I presume we are going to get at it before we get through. To get to the point, here is the situation that confronts the layman in regard to your testimony: If you mean that the Siems-Carey-Kerbaugh Railroad should have been built—I do not care at what expense, \$20,000 per mile or \$115,000 a mile, as it did cost—if you, as a logger, were going to get that timber out, would you have built that railroad, even if you could have built it for \$20,000 per mile from Joyce, if you were trying to get the logs out quick and in the best manner possible up at the section where it was built?

Mr. GRAMMER. It depends altogether on the incentive?

Mr. FREAR. Even with war conditions, the worst conditions that you can imagine?

Mr. GRAMMER. I think that I have answered that question.

Mr. FREAR. No; I want to know. With all conditions imaginable, can you as a logger—I want to get the record here—can you as a logger say it would have been the proper thing there, either for expedition or for economy, or for any other purpose, to have there to get these logs out 56 miles to Port Angeles, where two-thirds of them had to be shipped by water, located on the coast there, rather than to build a 14-mile road up to Clallam Bay?

Mr. GRAMMER. I think it would depend upon the possibilities of towing, contour, etc.

Mr. FREAR. It has been testified that a road could have been built there for about \$23,000 a mile, and it could have been built under war conditions for \$500,000. We have taken notice of the experience of the Goodyear Co. from Clallam Bay, where they have shipped, as I understand, hundreds of millions of feet. With that added condition, would you as a logger say it was advisable to build the Siems-Carey Railroad 40 miles back before it struck the spruce tract?

Mr. GRAMMER. I as a logger would say that if it had occurred to me that there was a better way I would have followed up what I thought was the better way. If that were the longer way—this road that was being built—I would build it that longer way. If it were the shorter way I would have built it the shorter way, taking into consideration all the time the amount of tonnage to be hauled, how rapidly it must be moved, etc.

Mr. FREAR. Would it have been possible—it has been so testified, and I want your opinion as an expert—would it not have been possible to have shipped all these logs out from the Pleasant Lake region, down to Clallam Bay, as rapidly or more rapidly than they were, if you had carried them 50 miles?

Mr. GRAMMER. There may have been a mountain range in there. I do not know anything about it, as I have not been there.

Mr. FREAR. That don't make any difference if the railroad is in there and it is capable of operation, and you have locomotives and facilities; it don't make any difference if there are 10 mountain ranges?

Mr. GRAMMER. If there is no adverse grade.

Mr. FREAR. The testimony is not over 2 per cent with loaded cars, not more than that. You are familiar with logging, of course. What kind of grades can be taken by these engines that are used for logging purposes—the geared engines? You can make a 7 per cent grade there, can't you, or more?

Mr. GRAMMER. Yes; 10 per cent with empties.

Mr. FREAR. Except that they have to be limited trains, of course?

Mr. GRAMMER. It is to be understood, however, that the capacity of the railroad is minimized largely by excessive grades.

Mr. FREAR. That is true. Let us get back, because I feel that I am entitled to a fair opinion, because you have made a statement and I want to see what you have based it upon, in regard to this Siems-Carey Railroad. The testimony here is that their highest grade is about 2 per cent. The testimony of Mr. Lightner in regard

to the Clallam Bay, and also Mr. Frost in regard to the Pysht Creek is that the highest grade is about 2 per cent, unless you make the mileage of 17 miles on Pysht Creek when it reaches 3 per cent. Two per cent is the same on one road as it is on the other.

Mr. GRAMMER. Service conditions being equal, yes.

Mr. FREAR. You do not want to testify this in regard to a condition of that kind without qualification, do you? Here are the conditions that are presented before you—

Mr. GRAMMER. Will you ask that question in a way that I can answer the question?

Mr. FREAR. I will be very glad to. That will shorten it for both of us and give us the light that we want. One railroad, the Siems-Carey Railroad, built 36 miles, or 40 miles approximately, to the spruce, requires the carrying of logs 56 miles, including the 18 miles additional over the Milwaukee road, before it gets to the Port Angeles Harbor. At Port Angeles Harbor there is a mill that will cut 250,000 feet of logs. Their proposition is to carry in 1,500,000 feet every day, which means that two-thirds to 80 per cent of those logs must be rafted from Port Angeles under the conditions that confronted the Siems-Carey Co., unless they sawed up the same over at Lake Pleasant mill, which would reduce the amount from 80 per cent to two-thirds. That is one proposition. The other proposition is that it was possible to build a 14 to 15 mile road from Clallam Bay, which could haul out, as they stated, all the logs that could be cut there as rapidly as cut, which road could be built more expeditiously, and that not one log had ever been lost by rafting; that a 2 per cent grade was the highest grade in either case. I ask you now can't you determine for yourself which road you would prefer to build if you were going to get those logs out?

Mr. GRAMMER. The way you put this question it seems that it would be quicker and easier and cheaper to take them over the shorter route. As a practical logger, that is the way I would take them out.

Mr. FREAR. Leaving the question of economy out of consideration, because it was carried on at a dollar a thousand cheaper, but the question of speed—and that was the big question and in time of war was a material question, and that is the one I address myself to in this question particularly. Do you know anything about riving?

Mr. GRAMMER. Very little.

Mr. FREAR. That was an expensive operation and was dismissed very quickly, was it not?

Mr. GRAMMER. No; they were still riving when the armistice was signed, but not to any great extent.

Mr. FREAR. I understand that it had practically been done away with because it had not only been found expensive but wasteful.

Mr. GRAMMER. It was being discouraged, but at the same time it seems to me there was some of it going on at Pysht Bay and on the rivers, where they would get some spruce, by some of the men probably that had entered into contract.

Mr. FREAR. There was not 5 per cent of all the timber that was being logged for airplane purposes—not 5 per cent that was got from riving, was there?

Mr. GRAMMER. I can not say; I do not know.

Mr. FREAR. As far as you know, in your judgment? You were employed there, were you not?

Mr. GRAMMER. In my district it was much less than 5 per cent while I was there.

Mr. FREAR. Riving is not only expensive but a very wasteful method of conducting operations, because of the waste not only of the tree itself but because of the *débris* that gets around the brush and the branches, causing danger from fire, which, of course, is a serious waste.

Mr. GRAMMER. The riving of spruce as carried on by the Spruce Production Division would hardly be regarded as being so very wasteful of the tree, in view of the fact that it was supposed to take all the tree that was needed for the special purpose by the Government.

Mr. FREAR. What was done with the heart of three?

Mr. GRAMMER. It was not of any use, and it was left.

Mr. FREAR. There is a limitation to our forest. We do not appreciate it possibly, but there is, is there not?

Mr. GRAMMER. There is a limitation, surely.

Mr. FREAR. And this method of riving simply meant the destruction of a tree to get out a very small part for airplane purposes. Is that right?

Mr. GRAMMER. Yes.

Mr. FREAR. And all the rest of the tree was wasted and left in the woods as it is to-day. That is right, is it not?

Mr. GRAMMER. Yes.

Mr. FREAR. And the brush and the accumulation that is left there make it more dangerous for fire—more than you would have in the general logging as ordinarily pursued; that is true?

Mr. GRAMMER. It would make some *débris*, which, of course, is combustible.

Mr. FREAR. That is one of the dangers that they have in selective logging, is it not?

Mr. GRAMMER. Yes.

Mr. FREAR. Now, you spoke about the volunteers who went into the woods to do this patriotic work. That is about like taking a commission as major or colonel or anything else by a man who has had no previous military experience to go down there and perform the work, was it not? Was there any more patriotism in that than there was for a man to go into the Army and fight?

Mr. GRAMMER. In what?

Mr. FREAR. Going into the woods to work?

Mr. GRAMMER. I do not think there was any more; no.

Mr. FREAR. Was there as much?

Mr. GRAMMER. Maybe I am not competent to judge regarding patriotism except by men's actions. I think it is usually understood that all men can not be fighters.

Mr. FREAR. I am not questioning regarding yourself. This is not personal.

Mr. GRAMMER. I understand. I was not thinking of myself at all.

Mr. FREAR. We come near being in the limitation of not being of any particular value in the trenches; but now I am speaking of the men who volunteered.

Mr. GRAMMER. I think, however, that any man that is in the country at the time that the Nation is trying to build up a military fighting force, which was done here, that will lend his services—and when I say lend his services I mean by ceasing some less important occupation and taking a more important occupation, to the end of building up the program—I think it is a patriotic act.

Mr. FREAR. Oh, certainly. But if you have got the choice of going in and fighting, as the needs of the Government require, when required, when we sent 2,000,000 men “over there” and were expecting to send 2,000,000 more, and if you had that proposition and you had the proposition of a man who was ordered sent to the woods, which would you think was the greater patriotic work? Answer yes or no.

Mr. GRAMMER. I did not know that men had this choice.

Mr. FREAR. Didn't you have employees here in the Army from every State in the Union?

Mr. GRAMMER. Yes.

Mr. FREAR. Brought here from New York and elsewhere?

Mr. GRAMMER. Yes.

Mr. FREAR. Brought here from 3,000 miles away, when they could have gone into the service? Is it not a fact that some of the officers were placed in the spruce service upon the influence of their own relatives instead of going over there to fight?

Mr. GRAMMER. Not to my knowledge. There may have been, however.

Mr. FREAR. Do you know whether it is a matter of fact that there were men working here in these positions who were related to the men in charge?

Mr. GRAMMER. I do not know that.

Mr. FREAR. Do you know Col. Disque's relatives?

Mr. GRAMMER. No, sir. I was introduced at one time to a man that was said to be his brother. I saw that man two or three times afterwards, but I do not know that we ever passed the time of day.

Mr. FREAR. It was testified here a moment ago that he had two or three relatives.

Mr. GRAMMER. That I do not know. I met this man, I think, in the hotel in Aberdeen, where I was introduced to him.

Mr. FREAR. You say you signed a pledge to show your loyalty?

Mr. GRAMMER. That was in connection with the Loyal Legion; that was to distinguish between the loyal employees and German propaganda and the men that stood for it.

Mr. FREAR. How many men were there that refused to sign this pledge?

Mr. GRAMMER. That is asking me a question that nobody can answer.

Mr. FREAR. From your own observation?

Mr. GRAMMER. Many refused; there were quite a number of men who refused.

Mr. FREAR. I was not aware of that. I thought that practically everyone was willing to sign.

Mr. GRAMMER. Oh, absolutely not.

Mr. FREAR. I understand that men were found with both badges, the Industrial Workers of the World and with Loyal Legion certificates in their pockets, sometimes?

Mr. GRAMMER. That may be. I have no knowledge of that.

Mr. FREAR. But it does not require a pledge to show loyalty?

Mr. GRAMMER. No, sir. As a rule, however, a man is proud of his loyalty. I do not know whether that is the right word.

Mr. FREAR. Glad to evidence his loyalty?

Mr. GRAMMER. Yes.

Mr. FREAR. I do not think there is a doubt of it. Is there anything more in my question that ought to be brought out in cross-examination? I have opened the door wide, and it takes a good deal of time; but I am glad to do it, because we will hold a night session, if necessary, so that we can get through with this investigation. Is there anything more that occurs to you that you want to testify to? I want the truth, as you say, and the whole truth to show here. That is the desire of the committee.

Mr. GRAMMER. I want to testify to the fact that I did not hear any rumor of anything regarding graft in connection with the Spruce Production Division, or the Spruce Production Corporation, before the signing of the armistice. I want to make this reservation on that, that I did understand that Mr. Hughes suggested in his report, a portion only of which I read, that further investigation be made of the spruce production operations. There was no charge of graft in that, as I remember; it was just a recommendation that this be carried on. I want to testify that I may not be able to call names, but such people as I communicated with, talked with, regarding the matter, when that statement was made, seemed to be surprised that an investigation would be made, seemingly with the idea in their mind that everything was above board and, so far as they knew, proper.

Mr. FREAR. Did you feel that way individually?

Mr. GRAMMER. I did.

Mr. FREAR. Do you now, from your knowledge of the things that have been developed by this committee?

Mr. GRAMMER. I will answer that this way, if I may.

Mr. FREAR. Choose your own way.

Mr. GRAMMER. I think this investigation is educational to the people, and that it is proper so long as it has been gone into, and that it should be carried on.

Mr. FREAR. I do not ask you to testify any more directly than that, but this investigation has developed the fact that a logging railroad, so called, at a cost of \$115,000 a mile, was built from Joyce to Lake Pleasant for the purpose of taking out logs, when it would require a 56-mile haul to dump them, a part of them, into the water at Port Angeles to be shipped elsewhere; and that that road in which the Milwaukee engineers helped to determine the route makes a very convenient short-cut down toward Grays Harbor from Port Angeles. Now, that is one of the things that has been developed, at least it is one of the theories here. If that road was built for that purpose as a commercial proposition, instead of a logging proposition to get out this spruce, do you think it was right and fair to the people and the Government and the taxpayers who were putting up the money to have it so constructed?

Mr. GRAMMER. I wish to answer that this way.

Mr. FREAR. Take your own way.

Mr. GRAMMER. And it is practically repeating. If there was a better way and a cheaper way, the road certainly should have been

built that way; but there are many conditions connected with this proposition and, as I told you, I have not been on the ground. I told you I had been to Clallam Bay, and when there I was looking for some spruce timber that was not connected with this thing at all, many years ago, and there was a man—I think he is located there yet—who was logging in that vicinity and was holding his logs in some river that comes in there—

Mr. FREAR. Clallam River, or the Hoko?

Mr. GRAMMER. One of those little rivers. There was a tugboat lying there, and I said, "What is the boat here for?" He said, "I have it here, and when the swells go down I am going to try to get the logs out." I asked him how long he had been in there with the logs and he said they had been there three weeks. As I remember, it was in the summer time and there was a swell coming in that would lift the gravel and back it up the stream, and his logs were being kept in.

Mr. FREAR. If you were informed that the testimony of Mr. Lightner was that there were only one or two days a month when any interference occurred and that they had never lost a raft of logs and that they could carry it on as expeditiously and regularly when they had once started as on the railroad, would you still feel that that one instance, when you say the tugboat was there, should govern your judgment?

Mr. GRAMMER. I would certainly be guided to some extent by Mr. Lightner's testimony as to that matter and would investigate it further.

Mr. FREAR. Were you in favor of the erection of a mill at Port Angeles?

Mr. GRAMMER. No, sir.

Mr. FREAR. You opposed it, did you not?

Mr. GRAMMER. No, sir; I was not consulted.

Mr. FREAR. You were not in favor of it?

Mr. GRAMMER. No, sir; I said I did not know about it and I did not oppose it because I was not consulted. I did not mean to say that I would have opposed it if I had been consulted, but I had no opportunity to oppose it.

Mr. FREAR. What else is there that you know in regard to the situation that you want to give to the committee?

Mr. GRAMMER. I think there is a point which you may have in mind that would probably be interesting, and that is this: In assembling the rails and the men, etc., for the construction of a railroad, especially when the rails and most of the material come from other points, it is considered a very beneficial thing among the loggers here, and I guess among all transportation men, to have a railway connection rather than a gridiron or a scow connection, for instance, both in assembling to build and also in tearing up and getting away.

Mr. FREAR. Who were the largest logging operators on the peninsula?

Mr. GRAMMER. Who are the largest operators?

Mr. FREAR. Yes.

Mr. GRAMMER. I suppose it is the Puget Sound Mills & Lumber Co.

Mr. FREAR. One of the largest is Merrill & Ring?

Mr. GRAMMER. That I do not know, but I presume so.

Mr. FREAR. They are supposed to be one of the largest firms in the country. What are their railroad connections that you have in mind?

Mr. GRAMMER. You were discussing this Siems-Carey road that has been discussed here, and I have been told it connected with the Chicago, Milwaukee & St. Paul.

Mr. FREAR. They have not any connection with the Chicago, Milwaukee & St. Paul, and they dumped their logs over in Pysht Bay.

Mr. GRAMMER. I did not know—

Mr. FREAR. You do not know about the Merrill & Ring situation?

Mr. GRAMMER. I did not know that.

Mr. FREAR. I think they are the largest loggers, according to the testimony, and it has not been denied. You will admit that the Goodyear people are large loggers?

Mr. GRAMMER. Yes.

Mr. FREAR. And they have no railroad connections, so far as logging operations are concerned. As a matter of fact, the object is to get the quickest way to get them to the mills?

Mr. GRAMMER. The cheapest way.

Mr. FREAR. Of course, as a matter of fact, it will cost a dollar more per thousand, according to the testimony for this Siems-Carey railroad, to get these logs out. I do not think there is anything more.

Mr. LEA. Where the question of speed was involved and you once had to put your logs on the train and had a railroad all the way to your milling point, under those circumstances I presume that the milling would be more expeditions than if divided into part railroad transportation and part water transportation, would it not?

Mr. GRAMMER. I think in a major operation that might be overcome, in so far as the mill is concerned, so that it might be supplied at all times.

Mr. FREAR. Would you consider the fact that two mills were contemplated up here on the Siems-Carey railroad and also the accessibility of the Puget Sound mills to dispose of the logs, would affect the question of the advisability of building the railroad?

Mr. GRAMMER. I do not know whether that was a consideration or not at the time of construction.

Mr. FREAR. You were not conferred with about that at all?

Mr. GRAMMER. Not about that point.

Mr. FREAR. Is there anything further you want to say in reference to that railroad?

Mr. GRAMMER. I would like to ask a question, if I may.

Mr. FREAR. We have given pretty good license; we have been two or three hours already.

Mr. GRAMMER. I might wish to modify an answer I made to one of your questions, which was very long.

Mr. FREAR. You can modify anything.

Mr. GRAMMER. When you said there was a maximum of a 2 per cent grade on each of these roads—

Mr. FREAR. Yes.

Mr. GRAMMER (continuing). You did not make it plain whether that grade was toward the dumping ground or adverse to it.

Mr. FREAR. It was under the same conditions, as I understand, in both cases.

Mr. GRAMMER. Then I do not wish to change my answer.

Mr. LEA. Mr. Grammer, have you any reason to believe there was any graft or crime committed by Gen. Disque or any officer of the Government or the Spruce Production Corporation in carrying on these operations?

Mr. GRAMMER. Not to my knowledge. Anything that came to my ears was words of praise, more especially of Gen. Disque and the attitude he took toward the lumber industry here, and the way he studied the question and propositions before he went into them, absolutely aboveboard, and I often heard the remark that he was a very broad, unusually intelligent man.

Mr. FREAR. He had no previous experience in this work?

Mr. GRAMMER. That was one of the points of contention brought out—

Mr. FREAR. Answer yes or no.

Mr. GRAMMER. I do not know whether he did or not.

Mr. FREAR. You do not know anything about it. With all the association you had with Disque you did not know that he had had no previous experience in logging?

Mr. GRAMMER. I have heard that he had not, but I did not know.

Mr. LEA. You were speaking about the number of feet gotten out per day, 25,000 to 30,000, down in the district where you were superintendent. That is, that much per engine?

Mr. GRAMMER. Per side they call it. As a matter of fact, it used to be quite the custom to set one engine at the railroad, and it would haul for a distance, and then put on another, and sometimes another. That is done now largely in the industry here still, and some men in this room are probably engaged in that kind of operation at this time.

Mr. LEA. And in selective logging they did get out 25,000 to 30,000 feet per side?

Mr. GRAMMER. That is my memory.

Mr. LEA. After you went down where this Polson railroad construction work was being carried on, was there any undue delay in the work proceeding after you were there and saw the work?

Mr. GRAMMER. Not that ever came to my attention.

Mr. LEA. Did Mr. Polson complain to you about the Spruce Production Corporation in any way failing to support the effort?

Mr. GRAMMER. I have heard him talk along that line.

Mr. LEA. What, in substance, was his complaint?

Mr. GRAMMER. And I remember very well my replies.

Mr. LEA. What were they?

Mr. GRAMMER. My reply to him was this, that we had this equipment and this opportunity to do. Now, let us do as rapidly as we can, to the end that we get these roads completed and get out the spruce. I do not remember, except in a general way, and I do not know that I could quote really three sentences that he said to me about the matter. I testified awhile ago about what he said about Hutchinson, etc.

Mr. LEA. Was that the substance, then, of the complaint to you?

Mr. GRAMMER. That was the substance of it. I have heard him say in speeches where he was addressing a few men, that he had

been delayed and that the spruce might have been gotten out quicker if something had taken place, which I do not remember.

Mr. LEA. I think that is all.

(Witness excused.)

TESTIMONY OF LIEUT. NORMAN S. ARCHIBALD.

(The witness was sworn by Mr. Frear.)

Mr. MAGEE. Where do you reside?

Mr. ARCHIBALD. Seattle.

Mr. MAGEE. How long have you lived here?

Mr. ARCHIBALD. For 25 years.

Mr. MAGEE. And were you in the service during the World War?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. And in what capacity did you serve?

Mr. ARCHIBALD. As pilot in the Air Service.

Mr. MAGEE. Did you have service overseas?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. In France?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. When did you go over?

Mr. ARCHIBALD. October, 1917?

Mr. MAGEE. And how long were you there?

Mr. ARCHIBALD. I was in France about 18 months.

Mr. MAGEE. Now, will you go on and describe for the committee your experiences and what you observed there in reference to the American airplane service in France?

Mr. ARCHIBALD. Well, when we first landed in France we were called up by the commandant, a number of us, and were told that there was absolutely no chance to train in France on account of lack of planes and there were rumors around the camp at that time that we might be sent back to the States to train, because there was no chance for us to train in France.

Mr. MAGEE. What time was that?

Mr. ARCHIBALD. That was in the last of November, 1917.

Mr. MAGEE. And the place?

Mr. ARCHIBALD. At Issoudon, and he selected 17 of us to train on the French Neuports as an experiment, because there were no preliminary training ships to train on, and out of probably 200 or 300 men there were 17 selected to do their preliminary training on the faster Neuport, and we were called the Suicide Club by the French, because of the idea of training on these ships. Out of that 17 about 6 of us made good, and it took us from then until the end of May to complete our training. We started training the 1st of December, 1917; it took about 7 months to complete our training, and after we completed our training we were sent back to the gunnery school at Cazeaux, and the officer at Cazeaux told us there was absolutely no chance to go to the front on account of the lack of planes, and that we could not get training for 3 or 4 months.

Mr. MAGEE. When was this?

Mr. ARCHIBALD. May, 1918. So he urged us, and practically forced us to volunteer to stay there and instruct; but four of us got out of that because we had trained on the Neuports and we were sent to Orly waiting to go to the front.

Mr. MAGEE. When were you sent to Orly?

Mr. ARCHIBALD. We were sent there the first part of June, 1918, and at Orly there were about 150 or 200 men all ready for the front who had completed their training.

Mr. MAGEE. Were they Americans?

Mr. ARCHIBALD. Yes, sir; in every respect ready to go to the front, but they could not go on account of lack of planes.

Mr. MAGEE. Did they have any planes?

Mr. ARCHIBALD. The men there were used to ferry ships that were accepted by the American troops to ferry them from the manufacturing plants to the different schools.

Mr. MAGEE. You say they could not go to the front because they did not have planes. Were there any planes for these 150 men?

Mr. ARCHIBALD. Evidently there were no planes for them to use at the front.

Mr. MAGEE. Well, go ahead; what else?

Mr. ARCHIBALD. In July there were about 10 of us sent to the front with the first pursuit group flying then over the sector at Chateau-Thierry, and at that time we were the only pursuit group at the front.

Mr. MAGEE. The only American pursuit group?

Mr. ARCHIBALD. The only American pursuit group.

Mr. MAGEE. That was in July, 1918?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. What do you mean by "group"? How many were there in a group?

Mr. ARCHIBALD. There are four squadrons in a group.

Mr. MAGEE. How many men in a squadron?

Mr. ARCHIBALD. There are 20 pilots in a squadron, but at no time was our squadron at full capacity. There were always less than 20 men to the squadron.

Mr. MAGEE. This group, then, would comprise 80 men?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. How many fliers would there be in the group?

Mr. ARCHIBALD. That would comprise 80 pilots in the group.

Mr. MAGEE. Then, what happened, as far as you observed?

Mr. ARCHIBALD. We had heard about American planes coming over, and everybody was waiting for them, thinking that when they did get there they would get a chance to go to the front, because there were hundreds of aviators ready to go to the front that were held back on account of lack of planes, and it was at the front that I got a glimpse of the first American plane, which flew over the air-drome and had a forced landing, because it got lost or something, and it turned over and was smashed, and the men there, and I know I for one, had my first view of an American plane.

Mr. MAGEE. What time was that?

Mr. ARCHIBALD. That was either the latter part of July or the middle of August; along in August, I think.

Mr. MAGEE. Was that the only American plan you saw there?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. In your whole service?

Mr. ARCHIBALD. Yes, sir; until when I was on my way home from France.

Mr. MAGEE. I mean prior to the armistice, November 11, 1918, that was the only American plane that you saw on the front?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. Do you know what kind of plane that was

Mr. ARCHIBALD. Yes, sir; it was a Liberty plane, DH-4.

Mr. MAGEE. Had you heard anything about this kind of plane there on the front?

Mr. ARCHIBALD. We heard that there was some at Romonantin.

Mr. MAGEE. What did they call those planes of that kind there?

Mr. ARCHIBALD. Observing planes.

Mr. MAGEE. Did you ever hear them called "flaming coffins"?

Mr. ARCHIBALD. Yes, sir; that was their name among all the fliers, "flaming coffins."

Mr. MAGEE. That was the DeHaviland Four?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. Now, go on with your experiences and your observations there.

Mr. ARCHIBALD. Well, I was at Chateau-Thierry in the month of August, and statistics showed that we lost 28 men in the month of August.

Mr. FREAR. Out of your group?

Mr. ARCHIBALD. Yes, sir; out of the group, which was a very large percentage for an air-service group. The last of August or the first of September we moved to St. Mihiel to be there at the time that the drive was to open on the 12th of September, but unfortunately I was only there four days, and I was taken prisoner on the 8th of September, and that limited my career of observation in France.

Mr. MAGEE. You were taken prisoner in the operations at St. Mihiel?

Mr. ARCHIBALD. Well, yes, sir; it really was not the operation, because the official drive did not open until the 12th, but I was at the St. Mihiel sector.

Mr. MAGEE. You were taken prisoner before the drive actually began?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. How did that happen; did you fly over the German lines?

Mr. ARCHIBALD. I was shot down by antiaircraft.

Mr. MAGEE. Over the German lines?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. What did you observe as to whether or not our men had adequate airplane protection there, whether there were sufficient aviators there to protect the men properly?

Mr. ARCHIBALD. No; they had not, sir.

Mr. MAGEE. Just describe what you saw with reference to that.

Mr. ARCHIBALD. Well, the only thing that I saw was our group, which was the only American chasse group at the front, and the chasse group were supposed to be the men that did the fighting, and one group can not do very much, because the limit of one patrol in a Spad machine is two hours.

Mr. MAGEE. You were flying with the French Spad?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. How many groups were necessary there to protect reasonably our men at the front?

Mr. ARCHIBALD. I could not say exactly how many would be needed, but I know it would be considerably more, a great deal more than were provided.

Mr. MAGEE. You know about the protection the French were given?

Mr. ARCHIBALD. I would probably say three or four groups at least on that sector.

Mr. MAGEE. In order to be given the same protection that the French airplane and the British airplane service gave, you mean?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. You were a prisoner for how long, Lieutenant?

Mr. ARCHIBALD. From September 8 until December 1, 1918.

Mr. MAGEE. And then you were released?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. What time did you get home?

Mr. ARCHIBALD. To the United States?

Mr. MAGEE. Yes.

Mr. ARCHIBALD. I landed in New York on the 2d day of March.

Mr. MAGEE. 1919?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. I think that is all.

Mr. LEA. Do you remember what day you first went to the front?

Mr. ARCHIBALD. The exact date?

Mr. LEA. Yes.

Mr. ARCHIBALD. I think it was the 23d of July, sir.

Mr. LEA. Do you know if any American aviators went over the lines before the 2d of August, 1918?

Mr. ARCHIBALD. Before the 2d of August?

Mr. LEA. Yes.

Mr. ARCHIBALD. In 1918?

Mr. LEA. Yes.

Mr. ARCHIBALD. American aviators or American planes?

Mr. LEA. American aviators?

Mr. ARCHIBALD. Yes, sir.

Mr. LEA. They did?

Mr. ARCHIBALD. Yes, sir.

Mr. LEA. What kind of machines did they go over in?

Mr. ARCHIBALD. I went across the line before the 2d of August, in 1918, in a French Spad.

Mr. LEA. So the machines with which you were working were foreign-made machines in the American service?

Mr. ARCHIBALD. Yes, sir.

Mr. LEA. What section were you on of the front?

Mr. ARCHIBALD. Chateau-Thierry.

Mr. LEA. You were on that section all the time?

Mr. ARCHIBALD. Yes, sir; until we moved up to St. Mihiel, and then I was in St. Mihiel sector.

Mr. LEA. As far as your information goes over there, there was never a time but what the Allies lacked machines and needed them, was there?

Mr. ARCHIBALD. No.

Mr. LEA. There was a shortage of planes for the Allies from the beginning to the end of the war?

Mr. ARCHIBALD. As far as I came in contact with any.

Mr. LEA. Yes. That is the general impression, is it?

Mr. ARCHIBALD. Yes, sir.

Mr. LEA. That is all.

Mr. MAGEE. You had reference to the French and the British in reference to the lack of airplanes, or was it the Americans?

Mr. ARCHIBALD. I had reference to the Americans, because I could not say—I did not come in contact with the French and British enough to know.

Mr. MAGEE. All that you know is that the American soldiers were greatly lacking in airplane service and protection?

Mr. ARCHIBALD. Yes, sir.

Mr. MAGEE. That is all.

Mr. LEA. But in response to that the planes were used, they were distributed among the Allies; sometimes a machine of one nation would defend the soldiers of another nation among the Allies?

Mr. ARCHIBALD. Yes.

Mr. LEA. And it was the common impression that England was also distressed for planes, wasn't it?

Mr. ARCHIBALD. Well, I do not know about that. The only thing I know is that there was an English aerodrome right close to us just for about a week, and that they had more planes than we had and they made many more patrols than we did.

Mr. LEA. Were English planes sometimes assigned to the American sector?

Mr. ARCHIBALD. No; they were not, sir.

Mr. LEA. That was true as far as your observation went?

Mr. ARCHIBALD. At our front, of course, there was—when I first went there to Chateau-Thierry there was an English air force there, but when we went to St. Mihiel I did not know of any English aviators there.

Mr. LEA. There were English aviators at the Chateau-Thierry front?

Mr. ARCHIBALD. Yes, sir; for a short while.

Mr. FREAR. I do not know that it shows in the record, but the testimony of the Secretary of War before the committee was that there was not a single fighting plane or bombing plane at the front at the time of the signing of the armistice. The testimony of Dr. Patrick was that there were 213 American-built De Haviland 4's, the ones that have been testified to, and those were all, outside of about 500 foreign planes of various types.

Mr. LEA. Well, there were 5,071 foreign planes delivered to the United States during the war?

Mr. FREAR. There were only 740 planes before the signing of the armistice, including about 500 foreign planes, in round numbers, and 213 De Haviland planes, as shown by the testimony.

Mr. LEA. Well, the testimony is in evidence.

Mr. FREAR. Surely.

Mr. LEA. I have the figures as stated in the evidence. It is in evidence that 5,071 planes were delivered to the United States by the Allies during the war.

Mr. FREAR. Whose testimony?

Mr. LEA. It was introduced at the time Gen. Menoher testified.

Mr. FREAR. Dr. Patrick testified there were 740 planes on the front.

Mr. LEA. On the front?

Mr. FREAR. Well, that is the place that I am speaking of, and that is what I stated, on the front at the time of the signing of the armistice. There were only five hundred and some odd foreign planes purchased from various governments, and there were 213 of these De Haviland 4's that Rickenbacher calls flying coffins, observation planes. (Witness excused.)

TESTIMONY OF HENRY SUZZALO.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. State your name, Doctor.

Mr. SUZZALO. Henry Suzzalo.

Mr. FREAR. You live in Seattle.

Mr. SUZZALO. In Seattle.

Mr. FREAR. How long have you live here, Doctor?

Mr. SUZZALO. A little over four years.

Mr. FREAR. What position do you hold and with what institution of learning?

Mr. SUZZALO. President of the University of Washington.

Mr. FREAR. You have taken a very active part in endeavoring to urge along the aircraft program, as we all know, during the year 1918 and prior to that time.

Mr. SUZZALO. My position as chairman and director of the State Council of Defense brought me in connection with that problem.

Mr. FREAR. You were anxious to expedite and urge along the program.

Mr. SUZZALO. Yes.

Mr. FREAR. That is understood. And in that connection you had much to do with the department at Washington and with the various officials there in bringing about what you believed would be an improvement in conditions?

Mr. SUZZALO. Yes, sir. While I had certain contacts, they chiefly arose through the strike situation and the attempt to solve the labor problem, as that had put the industry down. So that my connection was of two types: First, the attempt to get a widespread policy adopted by the Government, with rapid, effective action, and my contracts terminated with a report that I sent to an assistant in the War Department. My connection with the labor problem continued along until about the last of February.

Mr. FREAR. February, 1918?

Mr. SUZZALO. Yes, sir.

Mr. FREAR. Will you briefly give to the committee an idea of the conditions that confronted you here and what was done by your people, and yourself, particularly?

Mr. SUZZALO. The chief activity was in attempting to settle the labor dispute in the logging industry. The loggers had shut the mills down and of course that stopped the product of spruce, so we felt that the essential thing was to put the industry back upon its feet. We attempted by conferences under the auspices of the State council of defense to get the representatives of labor and the

employing interests together. Our diagnosis of the situation was that the men chiefly wanted the recognition of a basic eight-hour day. Many compromises were offered. The loggers and the mill-men, at the conclusion of the conference, stated that they were for an eight-hour day, but were afraid to go upon an eight-hour day with competition from the South. So that while they practically agreed with us as to what was necessary to set aside the discontent, the chief thing we could not agree upon was as to the method of bringing it about.

Mr. FREAR. That is to say, that the competition in one section of the country would directly influence their own business.

Mr. SUZZALO. They felt it would, permanently.

Mr. FREAR. And they wanted to have the same conditions imposed by the Government in all cases?

Mr. SUZZALO. Yes. Our conference broke up because we could not agree upon the method. The object was the same. The men wanted the eight-hour day and the employers apparently agreed, and sent such a telegram, I understand, to the Secretary of War or to some official at Washington. Those of us who were neutral, who were merely mediating, were also agreed that that was a desirable thing to do. Of course, we were interested in cleaning up the local situation.

Mr. FREAR. That is, you mean by the local situation——

Mr. SUZZALO. I mean the local strike.

Mr. FREAR. In these States?

Mr. SUZZALO. In these States.

Mr. FREAR. Oregon and Washington.

Mr. SUZZALO. But the employers simply felt that it could not be done with safety to the industry unless it was a universal eight-hour day. The next step was when the mediation commissioners came here, headed by Secretary of Labor Wilson. Secretary of Labor Wilson tried to bring about various compromises, just as the State council did, and failed. I went into conference with them after the failure, with Mr. Carleton Parker, who was sort of representing the War Department on the labor end here, and assisting me, and we tried to induce them to relieve the local situation, which was very important because we needed to supply the spruce, by doing what they had done in other industries, and that was putting an eight-hour clause, a universal eight-hour clause, in all Government contracts dealing with lumber. They did not know whether that would be possible or not, but when they left us we carried the idea that that is what they would probably try to do. Secretary of Labor Wilson did not commit himself, but we talked with Mr. Frankfurter, the secretary of the commission——

Mr. FREAR. And he was the Assistant Secretary of War?

Mr. SUZZALO. No; he was assistant to the Secretary of War, as I remember it, and I think he was chiefly in charge of labor difficulties affecting the War Department. I got the impression from him that he would try to bring that about. On that basis we kept calling the attention of the War Department to the need to do something to solve the situation. The industry was down. We were suffering from two things. The industry was down, and there seemed to us to be no constructive policy, no decisive action, up to January.

Mr. FREAR. That was January, 1918?

Mr. SUZZALO. 1918. On January 2, after many conferences running through the month of December, where I talked with almost everyone I could, people I personally knew and had confidence in, lumbermen, members of my faculty in the College of Forestry, millmen, laboring men, just as I could pick them up—sometimes the conferences were formal—and I wrote this up in a series of recommendations as to what I, as a layman, thought ought to be done, giving chiefly not my own views, but the consensus of opinion. This is presented in a document under date of January 2. I told Mr. Frankfurter I would prepare it, and asked him if he would get it to the attention of the people in the War Department. This he promised to do, and this document, under date of January 2, is the document that I sent him. I think that my whole view of the situation at that time was summarized in that document. If you want it read or entered in your record you can do just as you please.

Mr. FREAR. We can enter it in the record?

Mr. SUZZALO. I can read it if you want.

Mr. FREAR. I saw it in Washington before I came here.

Mr. LEA. Let the witness just refer to what he deems the essential things and let it go in evidence.

Mr. FREAR. Just without reading it all.

Mr. SUZZALO. I will glance over it and refer to the essential things. I felt that there had not been a progressive policy, or decisive policy. The first thing I did was to call attention to the fact that up to the time I had written the letter—we had then a smaller program than the one later adopted, which called for 50,000,000 feet, and from August to December they had only produced 12,500,000 feet. The first presentation, then, was one of fact. The causes of delay were three. The normal organization of the lumber industry could only supply about half our needs. Even this half supply was down because of industrial unrest. The industry has been crippled by strikes and industrial unrest since the middle of July. The Government has not moved with adequate resourcefulness and decisiveness in using extraordinary methods of logging and milling spruce so as to get the unusual supply needed. The policy, therefore, should be of two types: First, to restore the industry and bring the normal supply up; and, second, to have an additional policy which would supplement that normal supply. The situation called for extraordinary effort. Therefore I recommended the following policies. They are four in number. First, use the regular industrial logging companies in order that normal by-product supply of spruce logs be restored. This requires elimination of industrial discontent. Also to increase the quantity and efficiency of labor in the logging camps through use of more civilian and army workers. Again, to make an adequate price so as to stimulate enlarged and new logging camps, if necessary.

The second general recommendation was to encourage the present logging camps to develop their logging operations out of the usual direction. Now, what would be profitable industrially might not bring the largest stand of spruce, and so, of course, there would be a certain loss of money if they had to turn the direction of the logging toward the larger stands of spruce. That was the second policy. Of course, in order to do this they would have to provide for a higher price, because there would be a higher cost.

Then in order to do this thing effectively they would have to give the officer in command the power to commandeer and fix the price of stumpage so that he could permit companies to operate adjoining properties which did not belong to them, so as to get speed, which would involve commandeering private property, Indian reserves and forest reserves.

Mr. FREAR. As a matter of fact, the Indian reserves and the forestry, those were subject under the law to use at any time?

Mr. SUZZALO. Well, of course I did not know that. I merely plotted the policy. Second, to give Disque, who was then commanding, power to requisition rights of way over private and public property. I wanted that power, because we were wasting too much time going back and forth to Washington. I wanted that power locally. Give Disque power to commandeer all unused trackage and logging equipment not operating for spruce and ship timber needs.

Give Disque power to commandeer, in addition to stumpage, logs and lumber, so that materials do not escape into other industrial channels and so that over-supplies in one mill may be turned over to another mill for prompt manufacture.

The third large policy was to use the same existing industrial concerns to do selective spruce logging.

Then to supplement these three uses, one ordinary and two extraordinary uses of normal industrial concerns by the organization of riving companies, a still more expensive method, but this question because of much need and great haste.

That was the policy in brief. Now, I made certain recommendations with reference to the transportation problem, that as much could be done in the manufacture of spruce here so as to economize on transportation. There was some difficulty with transportation at that time, as you will remember. Cutting to blank sizes. The recommendation there was favorable to the cut-up mill below, so that things could be put in as near a final shape as possible.

Then in speeding up the policy I made the following recommendations:

Put one man in absolute charge of obtaining the necessary spruce. So that they would not be circulating around.

The present appointee, Col. Disque seems to be the right man. Stop further changes. Every change has meant a bad delay. Station him on the ground, in the center of the spruce field, where he can work with the conditions as they are from day to day. Give him unlimited power save in operating with general priority board, which must be at Washington, and hold him for results. This is the only way we can avoid a tragic defeat in our war program.

Some of the specific grants of power should be: Power to make and sign contracts at Portland without further red tape. Power to make payments at Portland out of a large appropriation directly at the disposal of the representative of the War Department. Quick payment is essential. Much of this work must be done by companies without much capital, and the capital they have must be turned over rapidly to get the work done. Power to work out all policies of management in getting supplies of spruce, and a general fund to buy equipment and supplies in the open market, and to cover overhead expenses. This fund must be flexible for quick action.

Power to make many forms of contract for spruce gotten under different conditions, or power to make cost-plus contracts. There was a disagreement of opinions as to which way should be selected, and I put in both ways, because there was that difference.

Then the power to commandeer, which I have already mentioned. The power to fix the price of stumpage, logs, and lumber. Adequate forestry engineering regiments to provide labor supply needed, and complete control over Vancouver Barracks, which should be given over to this single task.

The above requests involve an unusual organization and an unusual grant of power. But the spruce supply warrants this kind of extraordinary action. Let me call your attention to what will happen in the spring, when the expanded airplane plants reach their maximum of productive power at the end of a winter which leaves us with the lowest stock of spruce logs we have had since the strike came on us.

Mr. FREAR. That was giving practically a power possessed by no one but the President of the United States?

Mr. SUZZALO. Approximately.

Mr. FREAR. Giving the man the opportunity to become a czar in every respect, provided he stepped out; in fact, overruling the Secretary of War?

Mr. SUZZALO. And holding him responsible for results.

Mr. FREAR. Holding him individually responsible for results. Now, what correspondence or what conferences did you have in reference to the labor question, which became a very vital question, as I understand?

Mr. SUZZALO. This document ended my contact with the Government upon the question of policy and quick action. My further contact with the situation was exclusively upon the labor question. I think I have carried it up to the date of December, when the mediation committee came, and through this report. We kept urging upon Washington that they do something to settle the labor trouble.

Mr. FREAR. Will you please, Doctor, read from what you have and amplify as you go along, so that we will understand the situation that confronted you here and what suggestions were made?

Mr. SUZZALO. After the commission got home I waited until about the middle of January, 1918. There seemed to be nothing, so far as I could find out, being done to solve the discontent in the labor industry. So upon January 16 I had Mr. Parker wire to Mr. Frankfurter, in the War Department.

Mr. FREAR. Whom, I believe you testified, was an assistant to the Secretary of War?

Mr. SUZZALO. Mr. Frankfurter was an appointee.

Mr. FREAR. Assistant to the Secretary of War?

Mr. SUZZALO. Yes, sir. He wired to Mr. Frankfurter, and I wired to Secretary Baker and to Mr. Coffin, as follows, under date of January 16, 1918. [Reading:]

Inefficiency in production of spruce continues despite remarkable effort made by Col. Disque, of Signal Corps. Absolutely essential for Government to give Disque extraordinary powers and clean up labor inefficiency. Labor efficiency running about 30 per cent short, caused by discontent, which can only be eradicated in any degree by establishing of basic eight-hour day. Strongly urge establishment of universal eight-hour day in lumber industry by Executive order requiring basic eight-hour day clause in all Government lumber contracts.

Mr. FREAR. That is the first message that you have there in reference to this?

Mr. SUZZALO. Yes, sir, that is the first one bearing on this particular question. On January 17 I received the following reply from Secretary Baker, which indicates their policy. [Reading:]

Telegram received. Conditions in California and Pacific northwest in industry differ widely from those in other parts of the country and the considerations which justify an eight-hour clause in lumber contracts in the Northwest do not obtain elsewhere. The President is loath to use his power to establish an eight-hour day in Pacific Northwest, by Executive order, believing that much better feeling will exist and result be obtained if operators would establish this basis of their own accord, either voluntary or as a patriotic response to his request. Can you not join Parker in urging this on them?

It practically stated, as you see, that they did not feel like considering an universal eight-hour day, and suggested that we get the operators to establish one on a voluntary basis, or in patriotic response to his request.

Mr. FREAR. That is, the Government refused to enter into an universal eight-hour policy, but advised you people here locally to put it in force, notwithstanding the industrial condition which confronted every man who was engaged in the industry?

Mr. SUZZALO. That, in general, is my interpretation. They simply said, practically implied, that we should get it done locally. I presented that report to the chairman of the labor committee, I believe he was, of the employers' association, Mr. Bloedell. I had talked the thing over with Mr. Parker and I finally work out this constructive suggestion.

Mr. FREAR. Bloedel was a member of the firm of Donovan & Bloedel?

Mr. SUZZALO. Yes, sir. I thought I saw a chance to solve the question by compromise. And I think that compromise is suggested in my reply of January 26 to Newton D. Baker. I was not personally in favor of the Governor using this Executive order in putting on an eight-hour day, discriminating against the Northwest. Therefore, we worked out the plan of getting both the Government and the industry to leave the entire dispute in the hands of Col. Disque, and here is the telegram of January 26 to Baker. [Reading:]

Have had many personal conferences on your proposition that lumber operators voluntarily put on the eight-hour day or do so in response to President's patriotic appeal. Matter was finally laid before the leading operators in charge of labor policy at meeting of the industry yesterday. They informed me this morning that they are willing to leave the entire matter of the eight-hour day and all other labor issues in the hands of Col. Disque of the Signal Corps, and will accede to any requests which he may make as fast as his judgment decrees they are necessary. We feel that this understanding between the industry and the War Department's spruce representative will solve the situation as fast as is necessary for effective spruce production, and recommend that the War Department handle all problems bearing on spruce production efficiency through Col. Disque alone, giving him full power and holding him to complete responsibility.

On February 28 I had the following telegram from Disque. [Reading:]

Entire lumber industry Pacific Northwest goes on eight-hour basic day March 1. Decided last night in conference in this city.

And that stopped the whole trouble, because it stopped the dispute between the War Department and the industry.

Mr. LEA. What date was that, Dr. Suzzalo?

Mr. SUZZALO. February 28. Then I reported that to Baker.

Mr. FREAR. What was that report?

Mr. SUZZALO (reading):

After two days' session of a most representative gathering of loggers and lumbermen of Oregon and Washington, held at Portland, Monday and Tuesday, it was unanimously decided that each operator should send the following wire to his plant: "This camp or mill will go on an eight-hour basic day on the job March 1. Wages to be paid will be announced during the first week in March, after consultation with Government officials." Disque present at second day's conference, which disbanded with complete and hearty confidence in Disque and his management of affairs. Glad to report that our plan of adjustment has worked out exactly as we hoped when we made a recent compromise to leaving everything to Disque.

I wired a similar telegram to the Secretary of Labor.

Mr. FREAR. Did you get any response?

Mr. SUZZALO. Yes, sir; under date of March 2, 1918, from Secretary Wilson. [Reading:]

I am in receipt of your telegram 28th. Permit me to congratulate you, Col. Disque, and your other associates upon the great work you have accomplished in inducting the loggers and lumbermen of Oregon and Washington to put their camps and mills upon a basic eight-hour day. I have been convinced since my visit to Seattle that it was necessary for the lumbermen and loggers of the Pacific Northwest to meet the competitive labor conditions existing on Puget Sound if they hoped to secure workmen enough to carry through the Government program for spruce and Douglas fir. Even with the concession of the eight-hour work day, it will take some little time before a sufficient number of men can be attracted to the work. The lumbermen and loggers are also entitled to congratulations for the spirit they have shown in meeting a difficult situation.

Mr. FREAR. They did join hands there?

Mr. SUZZALO. Oh, yes.

Mr. FREAR. And bring that about?

Mr. SUZZALO. They joined hands in leaving it to Disque, and whatever Disque suggested they did.

Mr. FREAR. What else have you there?

Mr. SUZZALO. That terminated my connection with the labor situation.

Mr. FREAR. Have you any other correspondence there?

Mr. SUZZALO. Not on this topic.

Mr. FREAR. Is there anything in relation to a letter from Poindexter?

Mr. SUZZALO. I have a letter from Poindexter, which a number of us got. It was a protest against the contemplated discrimination against the Northwest.

Mr. FREAR. Have you it there?

Mr. SUZZALO. Yes, sir.

Mr. FREAR. Read it, please.

Mr. SUZZALO. I do not know what provoked this letter.

Mr. FREAR. This was only one link in what I have in mind, so that is the reason I am asking to have it read.

Mr. SUZZALO. This was written to Hon. W. B. Wilson, Secretary of Labor. This was sent to me for my information. Apparently this was written in response to a letter of Secretary Wilson, and perhaps I had better read that first.

Mr. FREAR. Read that first, please. Who signed it, please?

Mr. SUZZALO. W. B. Wilson, Secretary of Labor. Apparently Poindexter wrote me, and I haven't that first letter. [Reading:]

I am in receipt of your letter of the 19th instant, with telegram from the Seattle Chamber of Commerce and Commercial Club, relative to the report that the Government will require that the eight-hour day be established in the Pacific Northwest in the lumber industry, without its being established in this industry in the other sections of the country.

This is a subject that has had a great deal of attention and concern from me in all its phases. I studied it at first hand during the hearings and deliberations of the President's mediation commission held at Seattle and since my return from the West, and if the labor situation was the same in all of the lumber-producing sections of the country as it is in the Pacific Northwest, I would have no hesitancy in recommending to the President that the basic eight-hour day be applied to all of the lumber fields of the United States. So far as I am advised at the present time, no other lumber-producing district is situated as is the Pacific Northwest in its surrounding circumstances. Nearly all the large industries on the coast are being operated on an eight-hour workday, with time and one-half for overtime. The wage rate for all classes of labor is high as compared with the prewar period. These industries are absorbing large numbers of men. They will not go into the lumber industry on a 10-hour basis when they can secure an 8-hour workday in the immediate vicinity with as high or higher wages and more comfortable housing conditions and social surroundings. As a result the lumber industry in the Pacific Northwest is short of labor. The spruce production is not more than 50 per cent of the needs of the Government, and I am advised by Mr. Hurley that the Shipping Board is unable to get the fir it needs for shipbuilding purposes.

Under these circumstances I believe it is imperative that the Pacific Northwest lumbermen should accede to a basic eight-hour workday, with time and one-half for overtime. I know of no other way in which civilian labor can be obtained to secure the necessary production of lumber. In any event, civilian labor, in my judgment, will have to be immediately supplemented by volunteers from the cautionsments to promptly bring the lumber production up to the pressing needs of the Government. There is no other lumber-producing section in the United States that has to meet these conditions. It would be useless to maintain equality of competitive conditions if they are unable to secure the labor to produce the necessary material to compete with. The lumbermen of the Pacific Northwest are so situated that they must meet the competition for labor as well as the competition for trade, or else the United States Government can not be supplied with essential material to fill its imperative needs for aeroplanes and ships.

This is the situation as I found it in the Pacific Northwest, and which impels me to recommend to the President that the basic eight-hour day, with time and one-half for overtime, be instituted in that lumber field.

Now, the letter from Mr. Poindexter is a copy? These are not originals. [Reading:]

DEAR MR. SECRETARY: I am just in receipt of yours of 25th instant relative to the establishment of an eight-hour day in the North Pacific States alone, while no such restriction is made in some other parts of the country in the same grade of labor and kind of work.

I appreciate fully the difficulties which have confronted you, but do not think that any amount of argument can justify for a moment discrimination between different sections of such a fundamental proposition as hours of labor. There has been considerable labor legislation with reference to railroads, Government employees, Government contracts, etc., by the Federal Government and to the best of my recollection this is the first time it was ever proposed to discriminate in the favor or against a particular section of the country in this matter. The attempt to do so is bound to do more harm than good, create wide-spread dissatisfaction, not so much on account of hours of labor, but on account of discrimination. If there is one principle that needs to be adhered to above all others in this extraordinary measure being taken for the safety of the country in this war it is the principle of uniformity and equality of burdens and service required. I am taking the liberty of calling the President's attention to the matter.

It seems to me in your letter that you rather misapprehend the attitude of the employers of the North Pacific States in this matter. They do not object

to an eight-hour day and are perfectly willing, as you intimate they should do, to establish an eight-hour day in their work. They insist, however, that when they do so, or when they are required to do so, the same requirements shall be imposed upon every other section of the country. In other words, it is not the eight-hour day at all that they object to (on the contrary they are in favor of it), but it is the discrimination, which is rankly unjust, of requiring them to put in an eight-hour day, while relieving other sections of the country from this requirement. The discrimination affects employees as well as employers, and in that behalf it may be said that laborers in these industries in other parts of the country are entitled to the same consideration as those in the Pacific Northwest in the matter of the eight-hour day. The principle underlying and justifying the establishment of an eight-hour day is in no sense local or temporary, but permanent and of universal application.

I note your statement that the lumbermen of the Pacific Northwest ought to be ready to "meet competition for labor as well as for trade." This is exactly what they are willing to do and in doing so insist that so far as Government laws and regulations are concerned in meeting this competition they should not be handicapped by discriminatory and special impositions, but that the competition which they must meet should be subject to the same conditions. Of course you are familiar with the fact that the lumber industry of the Pacific Northwest, both employees and employers, are compelled to compete in their work with the same industry throughout the United States, and for that matter throughout the world, it being a national and international industry and trade lumber market.

I am very much in hopes you will give this matter further serious consideration before putting into effect any regulation as to hours of labor that is not applicable throughout the country.

With kind regards,

Very truly yours,

MILES POINDEXTER.

Then the letter that he wrote at the same time to the President, inclosing this correspondence. [Reading:]

HON. WOODROW WILSON.

DEAR SIR: I inclose herewith correspondence with the Secretary of Labor relative to the proposed establishment of an eight-hour day in the lumber industry of the Pacific Northwest. This would be a rank discrimination against a particular section. The lumbermen of the Pacific Northwest have no objection to an eight-hour day. They do object, however, to being discriminated against by having such a limitation of hours or labor imposed upon them and not imposed upon their competitors in the South and in other sections of the country.

I would appreciate it very much if you would give serious consideration to the matter as set out in this correspondence with the view of avoiding either favoritism on the one hand, or unequal burdens on the other.

MR. FREAR. Is that the end, substantially, of the correspondence that relates to this question of labor?

MR. SUZZALO. So far as is in my possession.

MR. FREAR. The situation, as I gather from that, is that Mr. Disque—Col. Disque at that time—was given power to put in force any proposition he saw fit, to commandeer.

MR. SUZZALO. I do not know about commandeering. I am merely speaking of the labor question.

MR. FREAR. You recommended that—

MR. SUZZALO. I recommended, but I don't know about that.

MR. FREAR. And he imposed it, as I understand it.

MR. SUZZALO. I don't know anything about the management; I would not care to testify on it.

MR. FREAR. A position that gave him power enough to bring about what you were all anxiously seeking to bring about—union of action, that is, in regard to the hours of labor, so as to expedite matters in the war activities here, whether they related to shipbuilding or to spruce—

Mr. SUZZALO. First—

Mr. FREAR. But the proposition was put up to the Secretary of War, and also to the Secretary of Labor, that this be made universal, so that the employer here, who was subject to the market in business, would be protected in his business—that is, so that he would not be destroyed or undersold or underbid by the people of other sections, where no such limitations were placed upon hours of labor; that is true?

Mr. SUZZALO. That was true with the employers.

Mr. FREAR. The Secretary of War, you say—at least you believe, after giving this power to Col. Disque—

Mr. SUZZALO. Col. Disque didn't have the power at that time.

Mr. FREAR. He didn't have the power at that time. Well, he placed it with you people, that you must make this decision yourselves here and that there was no industrial or universal recommendation that would be had. Now, I ask you, was this the case with any other activity here?

Mr. SUZZALO. None that I know of.

Mr. FREAR. The effect, just like it would be in any other business, like it would be in a railroad or anything else, would be that it would mean destruction to the person who endeavored to meet these conditions, unless all other competitors would be subject to the same conditions, would it not?

Mr. SUZZALO. Well, that is an economic question I would not pass on.

Mr. FREAR. An important economic question, that is what I am getting at; that is true, isn't it?

Mr. SUZZALO. They are on a basic eight-hour day, as I understand it.

Mr. FREAR. Who is?

Mr. SUZZALO. The local industry.

Mr. FREAR. I am not speaking of the local industry. You sell your lumber clear to the east?

Mr. SUZZALO. Yes; we do.

Mr. FREAR. A universal act, which would place all organizations under the eight-hour day, would be fair to the people here, as suggested by Senator Poindexter.

Mr. SUZZALO. It was my own view that the Government—if the Government exercised its general power—that the Government should not issue a discriminatory order. That is my own personal opinion.

Mr. FREAR. Yes; that is to say that they ought not to require this locality to be placed in that position, unless it was general.

Mr. SUZZALO. That was my own personal opinion.

Mr. FREAR. In other words, if the prices and conditions are the same here as they are throughout the central part of the country, and the lumber is brought into competition down there, these men here who are in business have a sufficient competition to make it a serious business proposition with them, because of the additional haul of the goods and the freight charges to pay on them.

Mr. SUZZALO. They sought—

Mr. FREAR. If, in addition to that, they are held down, even directly or indirectly to an eight-hour day, and the people of the Southern States, for instance, or elsewhere, can go into a 10, 12, or

any number of hours day, then the people here are discriminated against—that is, I mean the business, and that employs the labor—to such an extent that it may act to their serious disadvantage.

Mr. SUZZALO. They felt that very keenly, and were afraid to face the future with that discrimination.

Mr. FREAR. Do you know what the effect of that was?

Mr. SUZZALO. No; I don't. I haven't followed the market at all on the matter of lumber.

Mr. FREAR. That is all. I thank you very much.

Mr. LEA. The lumber market is very high to-day, though, isn't it?

Mr. SUZZALO. I understand so, but it is mere hearsay on my part.

Mr. LEA. Yes.

Mr. SUZZALO. I don't want to pass on expert questions that I am not competent to testify on.

Mr. LEA. I suppose you recognize this feature that was involved in the eight-hour question, so far as making it universal, that while by making it universal you might settle the eight-hour day problem in Washington, you might create another problem, just as difficult, in another section of the country that was not agreeable to it.

Mr. SUZZALO. My responsibility was to clear for spruce and long ship lengths, and I was looking at it from that angle.

Mr. LEA. And this plan did settle the problem here, didn't it?

Mr. SUZZALO. Yes, sir; it did settle the problem here.

Mr. LEA. That is all.

Mr. FREAR. That is all, Doctor. Thank you.

TESTIMONY OF JOHN E. BRATNOBER.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. What is your full name, please?

Mr. BRATNOBER. John E. Bratnober.

Mr. FREAR. You live in the city of Seattle?

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. Engaged in the lumbering business?

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. And interested in the lumbering business. I have been very anxious to secure some statement of the conditions of the lumber business back in the times of the war, that have been testified to here by Dr. Suzzalo, and I ask that you give me such information as can be had. Will you please tell me if you have any such statement?

Mr. BRATNOBER. I have a copy of the statement of the prices fixed by the price-fixing board, for both yellow pine and fir.

Mr. FREAR. The price-fixing board is what board?

Mr. BRATNOBER. That is the board in Washington.

Mr. FREAR. The board at Washington; yes. Have you got duplicate copies there?

Mr. BRATNOBER. I just have the two copies.

Mr. FREAR. You take one—

Mr. BRATNOBER. No; there are two separate; one is yellow pine and one is fir.

Mr. FREAR. Well, testify from those copies, if you will. Briefly describe to the committee what are the comparative lines of timber that correspond there in character, so that we can understand. You have had some business experience in the South, I understand?

MR. BRATNOBER. Well, I have had this experience, that we, in our wholesale yards and retail yards in the East, handled yellow pine, as well as fir, before I came West; but the prices that I have here are more with reference to lumber—building lumber rather than airplane lumber or ship lumber.

MR. FREAR. Well, that is immaterial. I mean just the same grade of lumber that you use. I don't mean aircraft or shipbuilding, but I mean these ordinary kinds of lumber, the lumber of the South and the lumber that you have here.

MR. BRATNOBER. Well, take the items of No. 1 here, No. 1 flooring, in yellow pine—

MR. FREAR. Where is that? That is in the South?

MR. BRATNOBER. That is in the South. The price is fixed at \$52 per thousand.

MR. FREAR. That is fixed by the Government board?

MR. BRATNOBER. Yes; and for the same thing in fir—this is the price at the mill.

MR. FREAR. Yes.

MR. BRATNOBER. The same thing in fir, the price is \$42.

MR. FREAR. That is, the price fixed by this board here is \$42, and for the South—

MR. BRATNOBER. That is the maximum price.

MR. FREAR. The maximum price for the South was \$52.

MR. BRATNOBER. Yes; and on what we term as No. 2 flooring, which is B and better in yellow pine, the yellow pine price is \$46, and our price is \$39.

MR. FREAR. That is, the price for fir is \$39.

MR. BRATNOBER. \$39.

MR. FREAR. No. 2.

MR. BRATNOBER. No. 2. On the item—I am just picking out the most common items—

MR. FREAR. Well, just two or three, for the purpose of comparison.

MR. BRATNOBER. Five-eighths by four ceiling, in yellow pine, the price is \$32.

MR. FREAR. What is that used for?

MR. BRATNOBER. That is for ceiling inside—

MR. FREAR. Yes. What was the first price?

MR. BRATNOBER. \$32.

MR. FREAR. \$32; yes.

MR. BRATNOBER. And for fir, the same grade, is \$28 at the mill.

And then passing on down to drop siding, in yellow pine the price is fixed at \$35, and in fir the price is \$31.

MR. FREAR. That is enough, in comparison.

MR. BRATNOBER. I was going to give you two or three items in common lumber, now.

MR. FREAR. Yes.

MR. BRATNOBER. On 2 by 4's the yellow-pine price was \$23.50.

MR. FREAR. \$23.50.

MR. BRATNOBER. And the same thing on fir is \$18.50.

MR. FREAR. \$18.50. That is a difference of about \$5.

MR. BRATNOBER. Well—

MR. FREAR. About 25 per cent.

MR. BRATNOBER. Well, it ranges about the same through the common lumber.

Mr. FREAR. Now, I think you have explained; but is yellow pine, the southern yellow pine, used for the same identical purposes as the fir?

Mr. BRATNOBER. These items that I have mentioned are; yes.

Mr. FREAR. So that, to return to your figures, the price fixed by the Government, where the time was unlimited, of labor, and conditions were such that the people there had the local advantage in freight rates and all, was \$52.

Mr. BRATNOBER. Yes.

Mr. FREAR. And the price that was given here, that the people here on the coast were allowed to charge, was only \$42?

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. In other words, there was a 20 per cent differential in favor of the southern manufacture as against the western manufacture?

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. Now, in the case of No. 2, the price was \$46 for yellow pine and \$39 for the fir timber?

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. That would be a difference of \$7 per thousand, or a difference of between 15 and 20 per cent?

Mr. BRATNOBER. Yes.

Mr. FREAR. It follows along in the same proportion.

Mr. BRATNOBER. About the same proportion. Some items of common lumber, it is greater than that.

Mr. FREAR. And the testimony has just been offered before this committee that the two Cabinet officers who were urged to make this rule universal—this rule of the eight-hour day—felt that it ought to be decided locally, and the lumbermen and the employees here were forced to come to a common agreement here, notwithstanding the rates fixed by the rate board showed this differential of 20 per cent in favor of the southern manufacturer under equal conditions.

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. That is all.

Mr. LEA. How did the prices allowed the industry here compare with the prices allowed or received before the war?

Mr. BRATNOBER. Well, these prices are somewhat higher than the prices previous to the war, because—they were somewhat higher on account of the higher basis of cost.

Mr. LEA. They are based on the basis of delivery—point of delivery or at the mill?

Mr. BRATNOBER. At the mill.

Mr. LEA. And are they higher than the prices were before the Government fixed the prices?

Mr. BRATNOBER. Yes; some items are higher.

Mr. LEA. They were not lower, were they?

Mr. BRATNOBER. No; I think not.

Mr. LEA. In any instance? Now, do you know how that is with reference to the prices on southern lumber as compared with the prior prices?

Mr. BRATNOBER. I don't know. I think—well, I know that the southern prices were considerably higher than they were previous to the war.

Mr. LEA. Yes. The southern prices were higher.

Mr. BRATNOBER. Yes.

Mr. LEA. Do you know whether that is ordinarily true with the prices of this yellow pine, compared with the prices here of fir?

Mr. BRATNOBER. You mean—

Mr. LEA. For instance, we will take, just for example, that 1 by 4 flooring. What is the price of that back East, as compared with your price here, ordinarily?

Mr. BRATNOBER. Well, that varied at times with the market. Sometimes it was the same and sometimes it was a little higher. We were always a little under yellow pine.

Mr. FREAR. That lumber price back there, generally speaking, is higher because it is nearer the eastern market; isn't that the situation?

Mr. BRATNOBER. Yes; that was true—

Mr. LEA. The western lumber industry is always under the handicap of the long shipment.

Mr. BRATNOBER. Yes, sir. A lot of this lumber that they used was used here locally—was used here on the Pacific coast.

Mr. LEA. There is no eastern lumber shipped in here, is there?

Mr. BRATNOBER. No; not that I know of.

Mr. LEA. And was any lumber shipped east for ordinary building purposes during the war?

Mr. BRATNOBER. You mean for the Government's use?

Mr. LEA. No; for commercial use.

Mr. BRATNOBER. Oh, yes; there was some shipped all the time.

Mr. LEA. Was there any for Government use?

Mr. BRATNOBER. Yes; lots for Government use.

Mr. LEA. Shipbuilding, etc.?

Mr. BRATNOBER. I don't know as to the shipbuilding. Our company shipped a number of carloads of timbers to the Atlantic coast, but I don't know whether they were used for shipbuilding or not.

Mr. LEA. Was there any handicap on Washington production on account of these prices?

Mr. BRATNOBER. Well, yes; I think there was. Not so much on that price, but on the quantity of side lumber of cantonment lumber that we received out here. You see, we only got a very small percentage of it out here, even at the lower price; the yellow pine got the greater percentage of the cantonment orders.

Mr. LEA. On account of the distance to the cantonments?

Mr. BRATNOBER. I don't know what the reason was.

Mr. LEA. I suppose, of course, that the local cantonments were supplied by the local market weren't they?

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. Now, if the administration, as represented by two Cabinet officers, objected to a universal rate or universal employment of the eight-hour law, but imposed it upon you people here, that would give the people who had no limitation whatsoever a great advantage, wouldn't it?

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. Was necessarily so in all lines of business and all occupations?

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. Now, as a matter of fact, it became a physical or a practical impossibility for the lumbermen out here on the coast, who

were so held to an eight-hour day, to compete with the men of the South in the same kind of lumber, who had no limitation?

Mr. BRATNOBER. Yes, sir.

Mr. FREAR. And yet this board—this War Industries Board, or Price-Fixing Board—did fix these prices on which they made their 20 per cent differential in favor of the South, and you had, in addition to that, the necessity of conforming to the agreement here for the eight-hour day, and they had no limitation there. I think we have it clearly.

Mr. BRATNOBER. Yes.

Mr. LEA. Does the price-fixing continue at the present time?

Mr. BRATNOBER. No, sir.

Mr. LEA. What date did it cease?

Mr. BRATNOBER. I think about shortly after the armistice was signed, or at the time the armistice was signed.

Mr. LEA. It was only a war order?

Mr. BRATNOBER. It was a war order; yes.

TESTIMONY OF CHARLES A. TURNER.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. What is your full name, Captain?

Mr. TURNER. Charles A. Turner.

Mr. FREAR. Where do you live?

Mr. TURNER. 1912 Rucker Avenue, Everett, Wash.

Mr. FREAR. And you have lived there how long, Captain?

Mr. TURNER. Approximately 10 years.

Mr. FREAR. You were in the service, were you, during the war?

Mr. TURNER. I was commissioned a captain in the aviation section of the Signal Reserve Corps from the Second Presidio Training Camp, November 7, 1917.

Mr. FREAR. Now, will you briefly state to the committee such matters as you have in mind and as you have suggested to us in correspondence, which I will appreciate very much; it will save me the necessity of questioning you along the line of your experience and general service.

Mr. TURNER. Before I make any statement, I would like to state that I didn't go into this Spruce Division because I wanted to get there. I was a line officer.

Mr. FREAR. You were in what branch of the service?

Mr. TURNER. I was from the Infantry Training Camp.

Mr. FREAR. I see.

Mr. TURNER. And—

Mr. FREAR. Where was the training camp?

Mr. TURNER. The Second Presidio Training Camp.

Mr. FREAR. Oh, yes.

Mr. TURNER. Presidio, San Francisco.

Mr. FREAR. Yes; you were assigned here, were you?

Mr. TURNER. After I was commissioned; yes, sir.

Mr. FREAR. After you were commissioned, you were assigned up here?

Mr. TURNER. But I would like the committee to understand that I was a line officer.

Mr. FREAR. You had no volition in the matter, I assume?

Mr. TURNER. No, sir; and I wanted to go with combat troops, but I was sent where I was sent, and so I went.

Mr. FREAR. Well, that is one thing about military discipline that we all have to comply with.

Mr. TURNER. I learned that in the old Regular Army 20 years ago.

Mr. FREAR. You had been in the Regular Army before?

Mr. TURNER. I was in there 1898 to 1900.

Mr. FREAR. That is, during the Spanish War?

Mr. TURNER. The Spanish-American; and that is the only thing that held me down when I got assigned to this job. I learned to obey orders then, disagreeable though they were, and I obeyed them this time.

Mr. FREAR. Tell me what the conditions were as you found them, and any statement that you have to make to the committee will be appreciated.

Mr. TURNER. I will try to be frank and fair in what I say, and I will start in. I reached Vancouver Barracks, or, rather, I reported for duty in Portland, Oreg., November 20th, 1917, in company with 105 other officers from the Second Presidio Training Camp. I was ordered to duty at Vancouver Barracks. Reported there the same day. Vancouver Barracks was at that time garrisoned by the Fourth Engineers and the Spruce Production Division was assigned to what was known as the North Cantonments. We had no men.

About the 10th of December, or a few days prior to that, we got 600 Michigan lumbermen. They were lumbermen on paper.

Mr. FREAR. What do you mean by that, Captain?

Mr. TURNER. I will explain that in a moment. I would like to add that I have lived in western Washington now for the last 16 or 17 years, and my duties have carried me out among a great many of the camps and around the mills here. I was the second ranking captain on the post there, and the first four of us on that list were assigned troops from these 600. I thought about that 600.

Mr. FREAR. That has nothing to do with those who were charging over in Turkey, once, on a celebrated occasion?

Mr. TURNER. No, sir. Some of my relations were in that original outfit in the Crimea. That is the reason I thought about this 600.

Mr. FREAR. I observed the connection. All right.

Mr. TURNER. I had 109 Michigan lumbermen assigned to me, and I ran them through that same night.

Mr. FREAR. Through what?

Mr. TURNER. A course of examination to find out what I got.

Mr. FREAR. Yes.

Mr. TURNER. One man of the 109 had been a foreman in a Michigan logging camp for 6 years, and 6 of the others had worked occasionally in the winter.

Mr. FREAR. Those were accidents?

Mr. TURNER. The 102 remaining were body polishers, wall painters, muffler assemblers, automatic-machine hands, and similar experts.

If my recollection is good, 13 of those men could not speak English. I thought that somebody had put something over on me. So I called on the captain of the Four hundred and first Squadron. Mine was the Four hundred and second Squadron. I called on Capt. Bradner to find out how he had fared. He had the same tale of woe

to relate. I then went down to the captain of the Four hundred and third Squadron—we were all in the Presidio.

Mr. FREAR. What were the names of these various captains?

Mr. TURNER. He is an Oregon man. I have not the roll now, but it is the Four hundred and third Squadron. He is an Oregon man, and Capt. Bradner was a California man. I journeyed down to the Four hundred and fourth. I think that was Capt. Dimond from Sacramento; and I found we were all in the same boat. When these men came they were not equipped properly.

Mr. FREAR. How do you mean?

Mr. TURNER. They were short of shoes and short of clothes, and they were short of raincoats.

Mr. FREAR. About what time was this?

Mr. TURNER. The early part of December, 1917. I left there the latter part of 1917. The pneumonia began to get them right away.

Mr. FREAR. What do you mean by that expression of the pneumonia beginning to get them right away? Do you mean that sickness followed?

Mr. TURNER. Sickness began immediately. My first man was warned, and the men were warned not to go out without their blouses on, and if their shoes were leaking to keep in as much as they could. Our first man of the Four hundred and second went out with pneumonia the first hour after he arrived.

Mr. FREAR. Were there any fatalities?

Mr. TURNER. Not that I know of. In the course of 10 days I had 10 men in the hospital. There was pneumonia, scarlet fever, and other things of like degree—the diseases that come from exposure and overcrowding. I tried to get clothes and shoes for those men. Every company officer does that if he is worth a whoop. But we did not have them. I do not believe that was a fault of Col. Disque or anybody in the division. It was solely and simply that the Army did not have the stuff. I marched my company in one day from drill—I only had about 100 men out that day—and 40 of my men had wet feet. The soles of their shoes were worn clear through. I went up to headquarters to get shoes, and there was nothing doing. There were no shoes. It was not the division commander's fault. We did not have them. I would like to add here and now that the time at Vancouver Barracks when we were in this predicament that that was the very time that the Secretary of War Baker issued his statement to the press that the men of the Army were equipped, in answer to Senator Chamberlain's charges in the Senate.

Mr. FREAR. What have you to say, Captain, about the employment of the men in the woods and the treatment they received, and anything that came under your observation?

Mr. TURNER. I left Vancouver Barracks with the Four hundred and sixteenth Squadron destined to Stillwater, Wash., the Cherry Valley Timber Co., about December 26. We were washed out and marooned here at Fort Lawton for a while, and while we were there I improved the occasion to get clothes from the quartermaster for these men. The men from the Four hundred and sixteenth Squadron were nearly all Pacific coast loggers of the Ninety-first Division. I have seen a lot in the papers about these men in the spruce division being one-armed and peg-legged and one-eyed, and so forth. My men were picked loggers, men from the Ninety-first and the Fourth Infantry

Regiment. I picked those men myself. There were hook tenders, chasers, choker setters, and whistle punkers.

Mr. FREAR. What is that?

Mr. TURNER. He is a signal man. I had five full crews from top to bottom. I even went down and got the company's former foreman and got him up there. We went out in the woods finally toward the end of January, after many mishaps—there was a big flood at that time, and we had lots of grief getting there.

Mr. FREAR. Where is its location?

Mr. TURNER. The Cherry Valley Timber Co. is at Stillwater, King County, Wash., about 32 miles from Seattle by automobile. That command remained with the company from January until and including December, 1918, logging during that time. We had no spruce in that camp. That was a fir camp and always had been a fir camp and never had produced any spruce.

Mr. FREAR. Just to get out fir?

Mr. TURNER. It was purely a fir camp.

Mr. FREAR. For shipbuilding?

Mr. TURNER. General logging.

Mr. FREAR. What size logs?

Mr. TURNER. At first our timber ran about 10 per cent No. 1.

Mr. FREAR. I mean the length of the logs and things of that kind.

Mr. TURNER. They cut a 40-foot standard log up there; that is their standard. They don't cut anything shorter than 24 feet. But the 40-foot is the standard log. At first it would run about, of the fir, approximately 10 per cent No. 1, and the fir up there in the beginning was averaging 40 per cent of the cut. About 30 per cent of the total cut, or perhaps a little better, was cedar and the remainder would be hemlock. We did get a little, 50,000 or 60,000 feet of No. 2 or No. 3 spruce, which was merely box stock and not used for airplanes. But several months we got none at all of that.

Mr. FREAR. What were those men used for—general logging for Government purposes for the purpose of doing spruce and shipbuilding business?

Mr. TURNER. Directly the logging output was entirely in the hands of the company management. The Army officer on the ground was a commanding officer and had absolutely nothing to say as to what happened to the logs. That was entirely, wholly, and solely in the hands of the civilian manager, which was a private firm.

Mr. FREAR. What were the conditions surrounding you there?

Mr. TURNER. With respect to what?

Mr. FREAR. With respect to the men, I do not know, and I am asking you just for whatever information you can give the committee in regard to the living conditions, etc.

Mr. TURNER. The living conditions in the Cherry Valley camp were satisfactory. That company a camp-car outfit which I would class as satisfactory. In all but a very few exceptions. They put a few too many men to the section more than the Surgeon General allowed and more than I would prefer to put in myself if I were running the camp. But speaking generally I would class that camp as a No. 1 camp so far as equipment is concerned.

Mr. FREAR. Yes.

Mr. TURNER. Now, when these men got out in the woods and started in to log—the men of the Four hundred and sixteenth Squad-

ron, when the got out in the woods on the job had to have experience, and many of them were from this immediate vicinity. I personally chose those men by reason of the fact that they were qualified because they were north-coast loggers from Washington, Idaho, Oregon, and Montana and were all experienced men. They began to grow dis:ontented with the fact that they were not turning out spruce. However, orders are orders, and it was necessary to hold them up and keep the traces so long as we were getting out what we were. We got out some ship timber; but we were not there for that purpose. We were there solely for signal corps and aviation section work.

Mr. FREAR. You were classed as an aviation command, weren't you?

Mr. TURNER. Precisely; yes.

Mr. FREAR. What proportion was ship timbers and general work and what proportion was commercial?

Mr. TURNER. I was called down here suddenly to-day, and I am unable to give you the exact cut.

Mr. FREAR. Just approximately. I do not care for it accurately.

Mr. TURNER. The proportion of ship timbers was not sufficient to justify the retention of the command on the job.

Mr. FREAR. Was it small, such as a quarter, or 25 per cent?

Mr. TURNER. No, sir; nothing like that.

Mr. FREAR. Ten per cent, would you say?

Mr. TURNER. It would not run 10 per cent.

Mr. FREAR. That is sufficient. I just wanted to get a general idea.

Mr. TURNER. The ship timber at that time called for long logs—over 40 feet, and it called for a heavy stick; and we were not in that class of timber. I think in one month or in the space of six weeks we got out about 300 long logs, 44 and over, and that was our best record. We kept on logging there into the summer, and the cut was miserably poor. In fact, we got in the standard timber. So along in July we realized that there was neither justification or excuse for the retention of Army loggers there.

Mr. FREAR. Who were you working under there?

Mr. TURNER. The Cherry Valley Lumber Co. Our cut then was really nothing more nor less than cleaning up; that is all it was. We got into a lot of old dry cedar, and I classed a lot of it as rubbish.

Mr. FREAR. How did you come to remain in that kind of work, if you know? You were assigned and put in charge, were you not?

Mr. TURNER. Yes; I was.

Mr. FREAR. Under whose orders?

Mr. TURNER. The division commander of the Spruce Production Division, Gen. Disque.

Mr. FREAR. He had assigned you to that work?

Mr. TURNER. He had.

Mr. FREAR. You were working on this job until you succeeded in cleaning up the situation?

Mr. TURNER. I was.

Mr. FREAR. Was there anything said about it?

Mr. TURNER. I reported the monthly input by species, by craft. Fir is graded 1, 2, and 3. Cedar goes in as one grade, hemlock as one; and I think two months we did have a little spruce, about 40,000 or 50,000 feet of No. 2 and 3. We never did have any No. 1.

Mr. FREAR. Did you call any special attention in these reports, or were they just files, or what?

Mr. TURNER. When we first went in there we had orders to submit recommendations, but after the first reports went in, which was for the month of January, and we only got there on the 20th, if my recollection is good, we were merely to submit the report of operations, if I remember right; and I carried out my orders in that respect. I believe you can find my report in the files down there. Now, it caused discontent of the gravest nature among the men.

Mr. FREAR. What were the soldiers paid?

Mr. TURNER. Straight loggers' wages—the logging scale.

Mr. FREAR. What was the logging scale?

Mr. TURNER. It would vary. At that time a hook tender got in the vicinity of \$7, if my recollection is correct, and the head loader would get about \$6.50. They had a sliding scale. There was a maximum and minimum that they would run up and down. A choker setter at first got about \$4.40, and later on, I think, they raised that to pretty close to \$5. Buckers and fallers had two or three scales. And on one occasion there was an uproar there at one of the camps when the men discovered that civilian workmen doing the same work had been given larger pay than the troops, and the officer in command called me in to settle the matter, and I settled it by stating that the troops would be paid the same as civilians if they were doing the same work, and if anyone was unsatisfactory to let me know and I would relieve them of their presence. I was only called upon to remove two or three. There were about 20 men and better that had their wages raised. I may say this much, that I have seen a great many loggers in a great many camps during my travels on Puget Sound, and I have never seen an outfit in numbers in any camp anywhere that could equal the men of the Four hundred and sixteenth Squadron.

Mr. FREAR. Your complaint very largely is that they were not doing the work to develop this aircraft program of getting out the spruce?

Mr. TURNER. That is the key to the situation.

Mr. FREAR. And that the work that they were doing was in part ordinary commercial logging?

Mr. TURNER. It was wholly general logging, as we call it on the sound.

Mr. FREAR. They were using soldiers for that purpose for this company?

Mr. TURNER. Yes.

Mr. FREAR. How many men did you say you had under you at the time?

Mr. TURNER. I went out with 129, but I heard of new men around there and I got them transferred, and I ultimately had 140 at that one camp.

Mr. FREAR. How long were you there with them?

Mr. TURNER. I left in December, 1917, and that Four hundred and sixteenth Squadron, at Stillwater, was made the One hundredth Spruce Squadron the 1st of September, 1918, and was denominated the One hundredth Spruce Squadron, and one of my junior officers was left in command of it, and I moved into Everett, as I had 10 or a dozen other detachments around in there.

Mr. FREAR. Why did they call it the spruce squadron if they were engaged in getting out fir and hemlock?

Mr. TURNER. My high command fixed my title, sir. I would like to say this, in this connection, that those spruce—I say it because they are all men from my own State and my own vicinity—that many of the Army loggers did not receive a fair deal at the hands of civilian overseers. There was a disposition to take advantage of the troops, as men in the Army could not quit. One of my best men came up to me and said, “When I first stepped into this camp the first thing they said to me was ‘I have got you now where you can’t quit.’”

Mr. FREAR. That is, the man who was the employer who said that?

Mr. TURNER. Exactly, and they rubbed it in on them.

Mr. FREAR. That was true, that they had them where they could not get out.

Mr. TURNER. I can bring you that man down here. He is one of the best men I have.

Mr. FREAR. Was there any distinction between him and yourself as far as that is concerned?

Mr. TURNER. I was in the same boat. I endeavored to see that these men of mine got a fair deal and I was kept pretty busy. I will tell you what happened as a result of this, “You can not quit” business. One crew that had been working at camp No. 3 Stillwater, men who were experienced loggers, found that the main line, that is a six-strand cable, had two strands parted in the eye where the hook is fastened on. They complained themselves and reported that to the hook tender, who was the only man there who was a civilian, and he refused to quit. The men were without recourse and they had to go on working. Presently the main line parted and whipped back, retracted an inch and five-eighths steel cable, and it struck one of my men. It comes back like some big snake, just like a whirling crowbar, twisting all over. There was a 12 by 15 donkey engine pulling on that line when it snapped and parted the line, and it got him here and here [indicating], and that man’s arm is gone and 20 per cent flexion left in his leg.

Mr. FREAR. What is the inference to be gathered from your remarks, that there was negligence on the part of those in charge?

Mr. TURNER. No inference, sir; there was negligence.

Mr. FREAR. Where was that negligence centered; who was responsible?

Mr. TURNER. The civilian foreman of the crew, the hook tender.

Mr. FREAR. What was done for this man, anything under your practices out here? Was he insured or anything of the kind?

Mr. TURNER. Yes. He was in the Army hospital at Fort Lawton—I took him in myself—from May 16, 1918, until April, 1919. He was then at the Letterman General Hospital in San Francisco. In September, 1918, they were going to discharge that man and turn him loose a beggar on the streets; and I went down there and used some language to that surgeon that he did not report. They sent me the forms up there to make out for his discharge and they did not get them back again, and I went down and saw the surgeon, and I also visited the post commander, and I told him that if they discharged that private in the shape he was in then that I would wire

Senators Poindexter and Jones of this State and would stand the general court-martial that I would get for doing it. They took him down to the Letterman General Hospital, and I had a letter from him the other day, and he is over here in Idaho now. He is out of the service.

Mr. FREAR. Did he receive any compensation or anything for these injuries?

Mr. TURNER. Some civilian swivel-chair warmer in Washington there decided that he is disabled, but he does not get any money. He does not get in under the war-risk insurance. He gets \$30 pension as a disabled soldier, although he paid for war-risk insurance. I have his letter at home. He does not get a sou.

Mr. FREAR. But if he had been a civilian and was injured, he would have had a right of action against the company for negligence?

Mr. TURNER. Under the State industrial insurance act he would have been taken care of. But as an ordinary soldier he took what he got, like the rest of us.

Mr. FREAR. What else have you got in mind, Captain?

Mr. TURNER. I have this in mind: I did not want people to think that everybody had treated the soldiers that way. As I said, I wanted to be fair. I had men with the Crown Lumber Co. at Mukilteo, Wash., A. A. Scott, manager; and Mr. Scott was prompt, fair, and businesslike in all his dealings. I had men with the Walton Lumber Co., of Everett. That firm produced as high as half a million feet of airplane fir a month, and dealings with that firm were very satisfactory. The Walton Lumber Co. deserves the thanks of Congress for what they did at a critical time in the way of getting out airplane stock without a soldier in the mill or camp from which they got their logs. They got their logs from the Ebey Logging Co., which had not a soldier in their camp at any time, and they got as high as half a million feet of airplane fir fitches a month.

Mr. FREAR. I wish to read, Captain, from a letter which you sent to Senator Poindexter of June 16, 1919, from one paragraph, and ask you to direct your testimony to that, if this is the case:

Three of my men were killed in one logging camp, one crippled for life, and 8 or 10 injured, this in a total of 130 men; and we did not produce 1 foot of airplane spruce in 12 months.

Mr. TURNER. That statement was correct.

Mr. FREAR (continuing reading):

One of the dead men was from Krupp, near Spokane; the crippled man formerly lived near Pasco. When an officer needlessly loses his men in battle, he is court-martialed for it. Shall we do less with the traitor who sends men to their death under the plea of producing airplane spruce at a camp which he knows before ordering them there contains no spruce?

Mr. TURNER. That is correct. I will address myself to that.

Mr. FREAR (continuing reading):

I happen to have seen the letter advising Col. Disque of the absence of airplane stock at the particular camp mentioned and to have recommended removal of troops therefrom, without avail.

Mr. TURNER. That is correct.

Mr. FREAR. Who sent you to the Stillwater camp?

Mr. TURNER. By order of Col. Disque of the Signal Corps.

Mr. FREAR. There are some other things in that letter that I will not read unless you care to testify to them. Would you care to have me do so? This was a letter to Senator Poindexter.

Mr. TURNER. You are at liberty to do so, sir.

Mr. FREAR. You say in this letter [reading]:

The writer has just received his discharge as captain from the Army Air Service after 6 months on the border and 13 months in the so-called Spruce Production Division, where he put in 12 months in the woods with 325 Army loggers for the alleged production of spruce for airplane stock, during which time the writer and most of his command never saw a spruce tree, but were engaged in commercial logging and lumbering for the private profit of private corporations and individuals.

That is correct, is it?

Mr. TURNER. Yes.

Mr. FREAR. You, by the way, had been down on the border serving there as well.

Mr. TURNER. Since I left the Spruce Division.

Mr. FREAR. You were down on the Mexican border?

Mr. TURNER. Yes.

Mr. FREAR (continuing reading):

I request that you have me called before the congressional investigating committee who are to go into the conduct of the aviation program. I am going to insist upon the prosecution of Gen. Brice P. Disque, his chief of staff, Maj. C. P. Stearns, and the collection of individuals and corporations who are with them, guilty of the blackest scandal of them all—the misuse of the peonage act—and put an end to this flagrant misuse of troops in any way in the future.

Mr. TURNER. That is correct. I will withdraw that statement in regard to the chief of staff, Col. Stearns, as the commander of the division is responsible. I do not intend that to apply to Maj. Stearns.

Mr. FREAR (continuing reading):

The public have been drugged by lying propaganda advertising the work of Gen. Disque and the Spruce Production Division; every bit of it is false as to the amount of spruce produced and the manner in which it was being done. Under cover of this, Gen. Disque's profiteering friends have exploited thousands of soldiers drafted or enlisted to serve against the enemy. I have production, or better lack of production, figures of two of the largest mills in the Northwest, supplied by Army loggers with logs which were cut into commercial timber. This is but one of many instances which can be uncovered. Union labor should know of Gen. Disque's \$2 per day wage scale. The rank I held was obtained at Presido officers' training camp, 1917, while the membership in the bar and 12 years' residence in our State of Washington will make it clear that I am not idly making empty charges.

Mr. TURNER. Yes; that is correct.

Mr. FREAR. You are a lawyer?

Mr. TURNER. I am. I have been a member of the bar of the State of Washington for the last 10 or 11 years.

Mr. FREAR. The rest of the letter relates to conditions elsewhere. Here is one other paragraph I will read:

Will you be good enough to obtain and forward me copies of the War Department's orders to Gen. Brice P. Disque, U. S. A., also the same officer as Col. Brice P. Disque, Signal Corps, governing the organization and uses of the Spruce Production Division? I desire them in preparing the case against above officer and others for violation of the peonage statute in ordering troops to work in places and keeping them there under threat of the Prussian court-martial system of the Army, where he knew there was no spruce timber being logged. A number of individuals are going to learn that American soldiers can not be sold into slavery for purely private commercial purposes without those guilty being brought to trial.

Mr. TURNER. That is correct. With respect to that \$2 a day wage scale, in November, 1918, we received a circular putting the men on a \$2 a day scale. Now, the net that they would receive, that would be \$2.35. It did not though by a later amendment apply to any but a limited number, but it did apply to some.

Mr. FREAR. But not to all of those men who were with you?

Mr. TURNER. Not by the amendment, no, sir. The first reading of that would indicate that they were all going on that, and I pretty nearly had a riot, the telephone was very hot to and from the district commander. I had 10 of them. I have seen some remarks about the propriety or otherwise of paying troops civilian wages on this job, and I want to stick up for my men on that. My men were in there working with civilians, many of those civilian foreigners, and a whole lot of them would not serve in the Army if they had been drafted—under conditions such as the American Army never before faced and I hope they never will face again—my men and my officers were most of them first-line troops, combat troops. We were not in these woods because we were afraid to face the music—all we asked was the chance—but we were stuck up here and we had to obey orders, but it was unfair to those men.

Mr. MAGEE. Do you not know that this man against whom you make these serious charges was a general?

Mr. TURNER. I do. I feel, sir, that I have been made nothing more nor less than a peon. I have seen them down in Mexico.

Mr. FREAR. You mean, by reason of the work to which your men were assigned?

Mr. TURNER. By reason of the work that I and my men were assigned to. I stand on the same plane with my men.

Mr. FREAR. One of the serious criticisms which you aim at the work is where a soldier and a civilian are employed in the same camp laboring together, and there, of course, this question of injustice would naturally arise if one was paid a different rate than the other.

Mr. TURNER. Exactly.

Mr. FREAR. But if you and your men were employed in the Army, working on a specific piece of work by yourselves, your men would be willing to do their part as a patriotic duty for the Government?

Mr. TURNER. If it was a Government job on a Government reservation we would face the music the same as the fellows on the other side and never say a word. I have gone into camps that were not up to the Surgeon General's requirements; they were not up to the Army requirements, but we had to get the stuff out. At Maj. Stearns's request I went down to Grays Harbor on an inspection trip. There was one camp I was called upon to inspect and when I came back I frankly told them, "If you send the Surgeon General down there he will condemn it, but the men on the other side are taking their medicine, and the spruce has got to be gotten out, so send the men down there." That was in South Bay, 45 miles southwest from Aberdeen. The Aberdeen Lumber & Shingle Co., a little concern, was down there; it went into the hands of a receiver later.

I may be considered severe in some of my language, but I want to be fair also in other respects.

Mr. FREAR. I understand, Captain. Were you a married man?

Mr. TURNER. Yes, sir; I have a wife and two children.

Mr. FREAR. And you did have during the war?

Mr. TURNER. Oh, yes. I went into the Army because our folks have been in every war.

Mr. FREAR. But you did not go into the war with the expectation of being assigned to log for some private individual or private concern for private purposes?

Mr. TURNER. No; I did not, and that is my object in bringing this thing up now, to forever put an end to such a situation as occurred up here. Never in the history of the American Republic have American troops been put out to work for wages for a private concern, and I will be too old to turn out again, but I want to make sure that when my boy goes such a thing will not happen again.

I would like to say this with respect to Col. Disque. The colonel is not to blame for all this mess, not all of it. One hundred and five of us came up from the second Presidio. We were trained as soldiers of Infantry and Field Artillery, and I think we were trained by regular officers. I respect the regular officer as a soldier. I served in the old engineer battalion where every officer was a West Point man.

Mr. FREAR. What is your age?

Mr. TURNER. I am 41.

Mr. FREAR. You were 39 when you went in the service?

Mr. TURNER. I was. I served in the old engineer battalion in the old Regular Army, when the Army was an Army, and every one of our officers was a West Pointer. They only took the first one or two or three, and sometimes they got as far as the fifth on the list. When I went out with that Army I was only a youngster, being under age; I was a corporal, but every one of us in the organization respected our officers—every one of them. I wish I could say as much to-day. I still have respect for the West Point officer as a soldier, and, Maj. Stearns, I would like you to understand that that respect will always endure, but at the same time in this matter I feel that both the officers and men were misused.

Mr. FREAR. In what particular, outside of the situation that you have presented to us, Captain?

Mr. TURNER. Briefly it is this, sir. I reached Vancouver Barracks in December; I got my first shipment of clothes for my men on the 21st of the next April.

Mr. FREAR. What were the men wearing in the meantime during the winter months?

Mr. TURNER. I was lucky. I had gotten some clothes from the Lawton quartermaster, but another detachment that went to Sultan was not so fortunate, and another detachment that went to Woodinville was not so fortunate.

Mr. FREAR. Were efforts made by the officers to get clothing for the men?

Mr. TURNER. Requisitions were made by the officers. I do not believe it was the fault of the division commander that they did not have the stuff; it was not to be had. We got a lot of officers in the Spruce Division after the first consignment, many of whom were no more fit to be officers than they were to be privates.

Mr. FREAR. Why not?

Mr. TURNER. I had one man. I have been a private myself—

Mr. FREAR. So have I.

Mr. TURNER. And I respect the private soldier, and I try to look at things when I handle him from the private's standpoint. I had one man, who was a hotel clerk, in handling logs——

Mr. FREAR. You mean an officer?

Mr. TURNER. Yes, sir.

Mr. FREAR. What was his rank?

Mr. TURNER. He was a second lieutenant. I had another one that I do not know ever did have a job. I would not hire him for anything.

Mr. FREAR. Did he come from a training camp or was he promoted from civilian life?

Mr. TURNER. I think one of them came from a training camp. The other, I believe, had served in the State troops on the Mexican line in the ranks. I had another officer that had been a policeman in the East.

Mr. FREAR. What was his rank?

Mr. TURNER. First lieutenant; and those officers that went back——

Mr. FREAR. Do you make any charges of favoritism?

Mr. TURNER. No, sir; they were ordered there. I do not believe the division commander had a word to say about the appointments.

Mr. FREAR. I mean in regard to making them officers.

Mr. TURNER. I do not know how they were made officers. I know I worked three hard months for my commission. I had another officer who was worse than nothing at all.

Mr. FREAR. That is a pretty hard statement, Captain. In what respect—absolutely incompetent, do you mean, or what?

Mr. TURNER. Yes, sir; incompetent and unreliable.

Mr. FREAR. How did he come to be made an officer?

Mr. TURNER. I am sorry to say that latter one in some manner got through a training camp. I do not know how.

Mr. FREAR. Then we can not blame people around here, but it belongs down in San Francisco or elsewhere for graduating men like that.

Mr. TURNER. The officers at the training camps are very hard pressed.

Mr. FREAR. You know, in timber they have the first grade and culls, as we have been informed.

Mr. TURNER. Yes; every variety. The officers at the training camps were largely regular officers, and they did their level best to sort out the wheat from the chaff, but the time was too short. I know it, because I was pressed into service in the office down there, and was there for a number of weeks.

Mr. FREAR. So a part of it is excusable by reason of the necessities of the case.

Mr. TURNER. And the press of duties; but the worst feature of this officer matter was this: These officers were all of them from a distance. They had never seen a fir tree or a spruce tree, and they were totally unused to woods work.

Mr. FREAR. That did not make any particular difference, as long as there was no spruce down there, did it, Captain, so far as their operations were concerned?

Mr. TURNER. Well, logging spruce and logging fir is pretty much the same, but the men got out of hand, and I can not put it better than to tell you that I had a Ford automobile, and the driver told me that on the 1st of September we had covered 20,000 miles.

Mr. MAGEE. How do you figure, if you had so many men here and elsewhere in the spruce division who were presumed to be working on spruce, that they would start in on another township and build a railroad that would cost \$115,000 a mile and go 40 miles to find a little spruce?

Mr. TURNER. I really can not answer that. I was a soldier obeying orders, and regardless of where they ordered me I would have to go, and would have gone, but I am out of the Army now.

Mr. MAGEE. Can you figure out a proposition of that kind?

Mr. TURNER. It can not be figured by any rule that I know of in mathematics or anything else, or business. Why my men were kept where they were is beyond understanding. The only thing I can credit it to is that in the haste and confusion they had so many men out and the headquarters was not familiar with the situation in the woods, and we were overlooked. That happens in the Army. Sometimes even a regiment is lost, and my men were merely one part of a large number.

There was one other thing that I wanted to put down here on this record, and I want to do it in fairness to some men whose homes are in the Northwest. I had in my company Clarence Anderson, a graduate of the University of Washington, in forestry, in 1912. Anderson was assistant supervisor of the Skyhomish National Forest, Wash. He had worked his way from a mill hand, down at Hoquiam. He had worked up from a piler, clear through. He not only was a mill man but a woodsman, and a good one. Anderson entered the Army a private, and he went out of it a private. I did my best to get him promoted, because he was one of the men we needed and needed badly, but it could not be done. I do not know why.

I had Charles H. Smith. Smith lives in Arlington, Wash., near where I live. He was the best half-miler in the Washington State College in 1915. He was assistant in charge of surveys, United States surveyor general's office, Olympia, Wash., at the time he went into the Army. I recommended him for a commission. He was the head loader. He was a skilled loader, that man; but nothing came of it.

I had Kenneth Emerson, a Harvard man. He was sales manager for Rucker Bros., and I recommended his promotion, and got him promoted to a sergeant, first class, but never could get him any higher.

I also had as a sergeant, William E. Hodgson, a camp foreman, and the best man I have ever seen in the woods; and another foreman, A. J. Gillespie. Both of those men should have been running camps for the Government down on the straits in the heavy timber. Why they were not sent there, I do not know.

Now, I am going to speak of a subject that is a very unpleasant one and a very painful one to me. I do not like to do it, but I am going to. The public is entitled to know all the truth connected with this division, and I would like the committee to know that in talking as I do I hope that in the future if this country gets into a war we will have something like an organization ready for it in the matter of promotions, promoting men from the ranks. You positively can not take outsiders and put them over men, without training those men that you make officers. I will give you one instance. It is, I think, the worst I know of in the service, and I am very sorry to have to

make this statement, but that is in the spruce division. We had a young man named Robert L. Stearns. I believe he was related to the chief of staff of the division. This is a very unpleasant matter to me, and it may be to others. That young man was an enlisted man in December; he was a second lieutenant in February; he was a first lieutenant about April; and he was a captain in June. That young officer was sent down to Lake Pleasant in charge of the Lake Pleasant subdistrict. He had 1,000 men put under his control. This is a very painful matter to me, but it is a duty. That promotion, gentlemen, broke the back of the morale of the spruce division; it absolutely broke the back of the division.

Mr. FREAR. Explain a little more definitely what you mean; for what reason?

Mr. TURNER. I had with me two Presidio second lieutenants; one was No. 1 on the list, and he stayed there a second lieutenant clear up until October, 1918, and the other I got promoted, I think, in May or June. These young officers came to me, and other young officers came to me. I had 11 junior officers in my command. I think it was the largest squadron in the Spruce Division. I had men in 11 detachments, although I was only a captain, and I had men all over the universe, 45, 50, 30, 20 miles, and other distances away, and I had nothing to complain of as to these junior officers but the unfairness to them.

Mr. FREAR. What was the capability of this young officer—anything exceptional?

Mr. TURNER. I only met the young officer two or three times, I think. I would class him as an ordinary intelligent young American.

Mr. FREAR. How old is he?

Mr. TURNER. I should say about 24.

Mr. FREAR. Do you know whether he had previous military experience or not, or previous military training?

Mr. TURNER. I do not; but this was in the Spruce Division. That one promotion almost cut the ground from under the feet of those junior officers. They were coming to me with their various complaints, and it was impossible to satisfy them.

Mr. FREAR. Do you know of any other illustrations, or do you want to go on further with that?

Mr. TURNER. No, sir; I think the unfairness of the system is manifest.

Mr. FREAR. Let me suggest to you, Captain, the case of a boy I know who was married; he graduated after three years from one of the first military academies of the country; spent two years in a university, with military training during both years; went into the service as a first lieutenant, fought all through Chateau-Thierry; was over there a year, and then came back as a first lieutenant. So you see that the situation they had here was not exceptional, and I happened to know very closely about this case.

Mr. TURNER. This particular case had such a damaging effect on the morale of many officers; it came under my own observation. The senior second lieutenant of the second Presidio training camp remained there a year as second lieutenant, while men were being appointed from civil life over his head. That was utterly destructive of discipline.

Mr. FREAR. What was it due to; what would bring it about? Was there anything here in the power lodged in what they call the Government here, this Spruce Corporation, that permitted that to be done, or what was it, as far as your observation went?

Mr. TURNER. It was this, sir: I inquired when I got back to Vancouver Barracks last December what system existed for promotions, how promotions were made, and I could not find out. I heard that not one man in all the thousands sent into the field was made an officer from the ranks. I do not know as to the correctness of that. I do know that scores were secured over in the Yeon Building.

Mr. FREAR. What do you mean by that?

Mr. TURNER. Men on office details were promoted.

Mr. FREAR. In Portland?

Mr. TURNER. Yes, sir.

Mr. FREAR. Where were those men taken from?

Mr. TURNER. Entirely from civilian life.

Mr. FREAR. Who gave them the promotions?

Mr. TURNER. The division commander.

Mr. FREAR. Who was he?

Mr. TURNER. Gen. Disque.

Mr. FREAR. Disque was the one who had charge of that?

Mr. TURNER. He did.

Mr. FREAR. Do you know what determined him in making his appointments?

Mr. TURNER. I have no means of knowing at all.

Mr. FREAR. Was it military training, or what, so far as you know?

Mr. TURNER. Quite a number of them down there came in from civil life. I had one first lieutenant assigned to me who was a man 47 years of age, who came down from South Carolina or Georgia, appointed ostensibly because he was a lumberman, and that officer was worthless; he was no good at all.

Mr. FREAR. I understand that you complain of the system and the method of promotion as they existed and anything that permits promotions to be made in that way?

Mr. TURNER. I do, sir.

Mr. FREAR. And you believe an officer ought to be trained either in a military way through the academy or elsewhere or raised from the ranks, as I gather?

Mr. TURNER. I most emphatically do.

Mr. FREAR. I do not know how far this committee can go into that.

Mr. TURNER. It is a gross injustice to the American private soldier to take a civilian and stick him up over those American boys with the threat of a general court over him for violation of the sixty-fourth article of war.

Mr. FREAR. In case he fails to obey the commands of his superior officer?

Mr. TURNER. The punishment for the violation of the sixty-fourth article of war, the willful refusal to obey an officer, is death in time of war. I had one of these officers that was sent out to me—we have a summary court system in the Army.

Mr. FREAR. What is that?

Mr. TURNER. For all minor offenses, like police court offenses in law. A man has a summary court charge made against him, and he

is given a hearing and is tried, and justice is done as the case merits. This officer I speak of had a system of his own.

Mr. FREAR. What was that?

Mr. TURNER. He just levied a fine of \$10 or \$5, or some other sum, and that ended it.

Mr. FREAR. What was done with the money?

Mr. TURNER. He was going to put it on the pay roll until I found out this was happening, and we got another officer there.

Mr. FREAR. Was he a civilian or an Army officer?

Mr. TURNER. He was from civil life, I believe.

Mr. FREAR. Well, now, is there anything more of importance? We have got to hurry along.

Mr. TURNER. The logging scale that was promulgated in February, 1918, contained a number of very grave—I hardly know what to term it; anyhow it was not entirely fair to the workmen involved. As an example, I would state that a locomotive fireman was given \$2.80, from which \$1.05 was taken, while at the same time a laborer down there was getting very much more than that. The result was that we had to put soldier firemen on the locomotives, because civilians would not stay. A signalman was given \$4 a day, while a choke setter, the hardest kind of work there is, gets the same pay. It had a most damaging effect, and I would like to state that had the officers in the woods been called on for their opinion of that scale before it went into effect, that could have been avoided. I had men that stated it would depopulate the woods, and our cut dropped 100,000 feet a day. It was necessary for me to assemble the command and announce that there would be no reduction in wages. It went down 100,000 feet a day.

Mr. FREAR. That was because of the change in the wages?

Mr. TURNER. Precisely; that was the scale of February, 1918. I would like to add that it was immediately corrected.

Mr. FREAR. I suppose they were endeavoring to do the proper thing.

Mr. TURNER. There is one other item and then I am done. When we got back to Vancouver Barracks last December there was 20,000,000 feet of lumber in the yard there.

Mr. FREAR. At Vancouver Barracks?

Mr. TURNER. Twenty million feet of lumber, or approximately that, was in the mill yard. Yet in the case of the largest detachment I sent down I got a report from my first lieutenant that he was turned out in the open, no tentage or anything, and he had to dismiss his command and let them go out and hunt rooms for the night. A condition such as that is manifestly unfair.

Mr. FREAR. You mean they did not provide quarters for these men?

Mr. TURNER. They could not even get tents. I do not know who was responsible for that, but it is probably incidental to the large number of troops that were coming in. But there is this much, gentlemen, in closing, that all the blame for this is not to be placed on any one man's shoulders. This is the second time I have been through this. In 1898 it was not quite so bad; it was not any too good then. But unless this country gets some kind of a plan and has a trained reserve of officers our American boys are going to go to their death just as they have in the past. You can not make

officers overnight, and you can not take inexperienced cubs and put them over regulars.

Mr. FREAR. What is your judgment in regard to taking soldiers and putting them into commercial walks of life?

Mr. TURNER. I have this to say, and I hope you will convey this to Congress. There should be a statute enacted making it a felony to put across any such scheme as was done in these spruce production camps.

Mr. FREAR. But here we had a situation where one man was practically in command of everything, empowered to do practically everything, and a very intelligent witness this afternoon said that he asked that he be given all kinds of power.

Mr. TURNER. I had nothing to do with the higher command, sir, but I will say this, that I never want to see my boy put out at any such task as I saw them put on, or any other of the members of our family. I did not get out and shoulder a gun this time in defense of the Republic, but I was put out as a slave, that is what I was put out as, and a herder of serfs, and I would like to urge upon your committee here that a statute be enacted forbidding that for all time to come. This is the first time in the history of the Republic that such a thing has happened, and it should be the last. I do not mind doing anything when it is necessary. When I went into the Army it was to take what I got. I obeyed orders. And in winding up I would like to introduce this letter to show that I was not a kicker in the service [producing letter]:

WAR DEPARTMENT,
Washington, D. C., July 5, 1919.

DEAR CAPT. TURNER: I beg to express to you on behalf of the War Department its appreciation of the excellent service rendered by you as an officer in the Law Enforcement Division of the Commission on Training Camp Activities. The work performed by you as fixed post representative of the division at Douglas, Ariz., shows ability of a high order, and has been most effective and commendable.

Expressing to you the thanks of the War Department and myself, I am,
Cordially, yours,

NEWTON D. BAKER,
Secretary of War.

Mr. FREAR. You do not ask for any higher class of testimonial, I suppose?

Mr. TURNER. I carried out my orders, gentlemen. They were disagreeable orders, and when I was doing it I made up my mind that if I got through with my life I was going to see to it that no further Americans would ever be imposed on in this fashion.

Mr. FREAR. We find here as a committee that the commanding officer recommended 20 of his subordinates for distinguished-service medals, as I understand it. Do you know anything about that?

Mr. TURNER. No, sir; I haven't heard any such thing as that.

Mr. FREAR. You were in the service, and you had served in a previous war. Did you get any such recommendation from the officers here?

Mr. TURNER. I never heard of anything of that kind; no, sir. I was out in the woods with my men all the time.

Mr. MAGEE. You haven't got the medal yet, anyhow?

Mr. TURNER. I would like to state this; I served with the troops in the field from the beginning to the end. I stayed with my men

out in the woods, and I stayed with them down in Vancouver Barracks in the mud and——

Mr. FREAR. That is what a good officer has to do to get the respect of his men.

Mr. TURNER. That is where a company officer belongs. I do not regret that no promotion ever came to me. That is the least of my troubles. I would like to give in conclusion my experience when I did get back to Vancouver Barracks.

Mr. FREAR. Just very briefly, Captain, because we are trying to get through and get away.

Mr. TURNER. When I got back I reported to a major there, that I believe was a sergeant when I left, and he in turn ordered me to report to a captain who was 110 numbers my junior, and who had been first lieutenant out of the second Presidio training camp with me and who came up with me. It was the conclusion of my service in the spruce production division, and I carried out my orders.

Mr. FREAR. Have you any examination, Mr. Lea?

Mr. LEA. I just want to get a better understanding of what you mean by peonage. Do you think that every soldier that was sent out into the woods to perform this work of spruce production was engaged in peonage labor?

Mr. TURNER. My remark, sir, related directly to the men of my own command.

Mr. LEA. Did you regard the soldiers who were working all over this section in that service as performing peonage labor or not?

Mr. TURNER. My own men were.

Mr. LEA. I asked you how you regarded the others. I simply want to get your position. Do you think that a soldier in a United States uniform, under the conditions of this war, should not have been assigned to spruce production work out here in the timber? That is what I was getting at.

Mr. TURNER. No, sir. I think they needed the spruce, and if he was ordered there it was for him to go.

Mr. LEA. And he performed his full duty when he obeyed the command?

Mr. TURNER. When he obeyed the command. It is the higher command that is responsible.

Mr. LEA. The soldier that wore the uniform here in the woods should not be charged with any slackerism simply because he wore a uniform?

Mr. TURNER. I would like to have somebody charge me with that.

Mr. LEA. Isn't that the way you feel about it?

Mr. TURNER. I do.

Mr. LEA. Now, you spoke about the camp where the men died. Was that at Stillwater?

Mr. TURNER. Where they were killed?

Mr. LEA. Yes.

Mr. TURNER. Yes, sir.

Mr. LEA. How many were there killed?

Mr. TURNER. Two instantly killed, and one died following injuries. That man, I want to put in the record, is Pvt. E. D. Middleton, of Marshfield, Oreg. Middleton had a wife and two children, and he did not claim exemption when the draft came. He had a third baby born while he was at Stillwater. That man received in-

juries and went to Vancouver Barracks and was operated on, and, I believe, he died of some complication that set in.

Mr. LEA. How were those two men killed?

Mr. TURNER. One by a falling tree. He was a buckler and a log rolled on him. That happens every once in a while. They were straight accidents.

Mr. LEA. In what way was the War Department to blame for that? I may have misunderstood this letter that was read here, Mr. Frear. Have you that letter?

Mr. FREAR. I haven't it right now.

Mr. TURNER. It was this: Those men were doing commercial logging.

Mr. LEA. How many men were there in the Stillwater camp?

Mr. TURNER. I had as high as 140 there.

Mr. LEA. Now, out of that whole 140 you mean that none of them were engaged in spruce production?

Mr. TURNER. None, sir. We had no spruce there.

Mr. LEA. For what period were they employed without being engaged in spruce production?

Mr. TURNER. They were ordered out from Vancouver Barracks. I can give you a reference to the order. I have it in mind. It is paragraph 3, Special Orders, No. 100, Headquarters, Spruce Production Division, Portland, December 22, 1917.

Mr. LEA. And continued to what date?

Mr. TURNER. That continued until they came back, in December, 1918.

Mr. LEA. Were they engaged in the production of fir during that time?

Mr. TURNER. Oh, yes; general help, fir, cedar, and hemlock.

Mr. LEA. Do you know for what purpose that fir was used?

Mr. TURNER. For general commercial purposes. Some of it went into ships, but the majority of it went into commercial lines.

Mr. LEA. Do you know of any of that fir that went for airplane use?

Mr. TURNER. Oh, some, I hope did; a cut of airplane fir from that is almost impossible to get, for the reason that the firm disposed of its logs as it saw fit. It sold them in the commercial logging market all around Puget Sound. It would be a very difficult matter to run that all down. In fact, it would be impossible, I think.

Mr. LEA. So you were engaged in a service where a large part of it went into commercial channels and some was probably used for shipbuilding, and possibly some for aircraft?

Mr. TURNER. Possibly. I would like to state this, that this airplane fir can not be obtained from small timber. It has to be a big stick, and it must be a clear stick. You can not cut airplane flitches from fir that is less than 40 inches, on an average. They take a slab off the side, and from the small stuff you can not make airplane fir.

Mr. LEA. I think that is all.

(Witness excused.)

TESTIMONY OF TAGGART ASTON.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. State your full name.

Mr. ASTON. Taggart Aston.

Mr. FREAR. Where is your home?

Mr. ASTON. I am living at Everett, Wash., temporarily.

Mr. FREAR. You have lived in Washington how many years?

Mr. ASTON. For about 18 months.

Mr. FREAR. Where did you live before that?

Mr. ASTON. In Seattle.

Mr. FREAR. You have lived in the State of Washington how many years?

Mr. ASTON. For 18 months.

Mr. FREAR. And where before that?

Mr. ASTON. In Vancouver, British Columbia, and California.

Mr. FREAR. What part of California?

Mr. ASTON. San Francisco, for some eight or nine years.

Mr. FREAR. What is your business?

Mr. ASTON. I am a consulting civil engineer.

Mr. FREAR. You were connected with this road that has been mentioned that was originally surveyed from Port Angeles down past Crescent Lake to the Hokko River?

Mr. ASTON. Yes, sir.

Mr. FREAR. You heard the testimony of Mr. Lindsay this morning?

Mr. ASTON. I did.

Mr. FREAR. He was an officer of that road?

Mr. ASTON. He was an officer of the Port Angeles & Grays Harbor Railroad, which was a subsidiary company of the Pacific Syndicate (Ltd.), of which I was the consulting engineer.

Mr. FREAR. You were the consulting engineer of the Pacific Syndicate?

Mr. ASTON. Yes.

Mr. FREAR. Just very briefly tell us what your position was, what kind of an organization you had, and how this other company became subsidiary, and anything that is important.

Mr. ASTON. The Pacific Syndicate was composed, when I went to them early in 1917, of four members. The money for its promotive work was supplied by a young San Francisco man. Through us the money was provided for the surveys for this Port Angeles & Grays Harbor Railroad. We put in a dummy company, with dummy directors, to carry through these surveys.

Mr. FREAR. That is the ordinary procedure in such cases?

Mr. ASTON. Yes. Of course all the stock in the company was allotted temporarily and could be taken back to the Pacific Syndicate at any time that they desired. I was informed in 1918 that somebody had brought surveys belonging to the Pacific Syndicate to New York and had used them to make a deal with the United States Government to secure a contract for a spruce railroad. Knowing the inner details of the syndicate, I knew that no such authority ever had been given, and we ourselves were not concerned with the contract. I afterwards learned that our surveys and our located line and blue prints had been used for the construction of this road without our authority.

Mr. FREAR. By whom?

Mr. ASTON. By Siems-Carey-Kerbaugh Co., acting on behalf of the Government, and that they had never obtained any authority from us. I went to see Mr. Carey late in August, 1918, and asked him about it, and he said they had no intention of using the surveys; they had not used them, and they were only crossing our right of way in one or two places—that is, ordinary crossings—but they were not using our right of way: they were not using our surveys, and did not intend to. Some weeks later I met Mr. C. C. Tinkler at the New Washington Hotel in Seattle. I had known Mr. Tinkler very well for many years, and he told me that he was the field manager for Siems, Carey & Kerbaugh, in charge of the Port Angeles railroad construction. I asked Mr. Tinkler to tell the truth about the matter, and he said they were using our plans and that they were building the line on our located line for a considerable distance. In other words, Mr. Carey told me a lie and Mr. Tinkler told me the truth. Since that I have seen affidavits which fully prove that they have been using the right of way, the located line, and plans which really belonged to the Pacific Syndicate, and had been using the Port Angeles & Grays Harbor Railroad for that purpose.

Mr. FREAR. That testimony in some respects was put in also by Mr. Lindsay?

Mr. ASTON. It was put in in some respects.

Mr. FREAR. Have you anything further?

Mr. ASTON. Yes; I wrote to Col. Disque on August 28, 1918.

Mr. FREAR. This last August?

Mr. ASTON. Yes. It is a short letter, and I will read his reply.

Mr. FREAR. All right.

Mr. ASTON. This letter is dated August 28, 1918 [reading]:

Col. BRICE P. DISQUE,

Chief of Spruce Production, Portland, Oreg.

DEAR SIR: Early last year surveys were made by the Pacific Syndicate (Ltd.), of Vancouver, British Columbia, through a subsidiary company, the Port Angeles & Grays Harbor Railway Co., which they had formed and through which they supplied the necessary money to survey and obtain rights of way for some 74 miles of a railway between Port Angeles and Grays Harbor, Wash. Neither this subsidiary railway company nor any person or persons, other than said Pacific Syndicate, had any right or authority to bargain or sell these surveys or any charters or rights connected therewith.

The writer, who owns 7 per cent of the stock of the Pacific Syndicate, heard some months ago that certain unauthorized parties were bargaining to sell or had sold these surveys to the United States Government through the Siems-Carey Co. I then called upon Mr. Carey who said that neither they nor the Government had bought or intended using these surveys in anyway, nor had they any intention of trespassing on the located line.

Dr. E. S. Rutherford, a member of the Pacific Syndicate, has since informed me that not only has he found that these surveys have been sold, apparently through the Siems-Carey Co., to the Government by parties who had not authority to sell and, whom he states, have already received money in payment therefor from the United States Government, but that this railway has already been graded over portion of the located line of the Pacific Syndicate, and that the line of our stakes was used after the numbers had been erased from these stakes and new numbers substituted.

Dr. Rutherford also informs me that an affidavit by a responsible civil engineer has been made to the effect that our blue prints of our profiles have been used by the contractors in constructing portions of the line, and that construction engineers using them were instructed to keep the matter secret.

If the condition of affairs, as stated to me by Dr. Rutherford, is correct then you will see that the matter is one of considerable gravity, demanding immedi-

ate attention and investigation, and that all moneys, profits, contracts, or emoluments which may have been conferred on parties wrongfully claiming to own the surveys and rights (through and by which they obtained concessions and contracts from the United States Government) should be taken from them by the Government and held for the rightful owners.

I shall feel greatly obliged for any enlightenment or information you care to afford me in the matter. I am,

Very respectfully, yours,

I received a letter from Col. Disque on September 2, which I will not take up your time by reading, because on September 9 I received a letter from Col. Disque in answer to my letter of August 28. It states [reading]:

1. In reference to your letter of August 28, in which you state that you had been informed that the Clallam County Railroad had been graded over a portion of the located line of the Pacific Syndicate and a line of their stakes used after the numbers had been erased from them, we beg to state that we are advised by our district supervisor that this statement is not true, and furthermore that our representatives have not used any portion of the survey in question but have run an entirely new line throughout. It is probable that in places between a point 2 miles west of Lake Crescent and Lake Pleasant the two lines are identical, but, if so, this is a coincidence and not due to our representatives having used your location.

Mr. FREAR. It was a pure accident?

Mr. ASTON. A pure accident, dropped from the clouds. Then I wrote him again pointing out that one of their prominent representatives had informed me that they had constructed the railroad over a portion of our survey. That was their manager, Mr. Tinkler. He told me the truth about it. I went on and said that I had not personally verified any statements, but I was sure his department would make the fullest investigation.

Should we find the allegations made to us to be substantially correct, then it is my purpose, with your assistance, to have the matter taken to Washington.

In reply to that, on September 16, he wrote me [reading]:

We are in receipt of your letter of September 13 in reference to the above subject.

As stated to you in our letter of September 2, we forwarded a copy of your letter of August 28 to our officer in charge of the construction of the Clallam County Railroad with the request for whatever information he could give us on the subject. Our letter to you of September 9 contained the information resulting from our investigation, and we are now forwarding a copy of your letter of September 13 to Maj. Mott Sawyer, our supervisor of the Clallam County operation for whatever action may be necessary.

In view of the fact that construction of the Clallam County Railroad and all negotiations for rights of way in connection therewith have been carried out by our contractors, the Siems-Carey-H. S. Kerbaugh Corporation, and in order to save time we would suggest that you take this matter up with them. Their address is 921 L. C. Smith Building, Seattle, Wash.

I did not take it up with them, because they told me a lie before and I did not suppose they were liable to tell the truth again.

Mr. FREAR. What else have you to place in the record that you were interested in, in regard to this or in relation to the investigation being conducted by this committee?

Mr. ASTON. I do not think there is anything.

Mr. FREAR. That substantially covers the matters, with what Mr. Lindsay has placed in the record, in regard to the conditions there?

Mr. ASTON. Yes, sir; substantially.

Mr. LEA. Your right of way was used beyond Lake Crescent to Lake Pleasant?

Mr. ASTON. Yes; for some 20 miles.

Mr. LEA. What is the situation, is it practicable there to build another railroad on another line or not?

Mr. ASTON. Those are the controlling points, and you can not get by, and in any case our operations were entirely spoiled by the building of this line, which we feel has been built in the interests of the Milwaukee Railroad, pure and simple, to put us out. They opposed us before, and strongly opposed us in our original operations, in getting our franchise, and I do not think there is any question about it. The hand of the Milwaukee can be seen all through this deal.

Mr. LEA. The Milwaukee had opposed your company?

Mr. ASTON. Had opposed our original promotion of this railroad.

Mr. MAGEE. Who pulls the strings for the Milwaukee? You say the hand of the Milwaukee has been seen all through this, who pulls the strings for the Milwaukee?

Mr. ASTON. My own personal experience of their operations against us was obtained when we were trying to get the franchise. That was in February of 1917, and they had all their agents—

Mr. MAGEE. You live up here in this locality, do you not?

Mr. ASTON. Yes.

Mr. MAGEE. And you have for a great many years?

Mr. ASTON. For 18 months I have lived in the State of Washington.

Mr. MAGEE. You had interests up there between Lake Crescent and Lake Pleasant?

Mr. ASTON. Yes.

Mr. MAGEE. You say they gobbled up your right of way, took it?

Mr. ASTON. The Siems-Carey-Kerbaugh Co., took our right of way.

Mr. MAGEE. And you say the hand of the Milwaukee is seen in all these operations?

Mr. ASTON. Yes, sir.

Mr. MAGEE. Now, I will ask you, if that is so, and you know it is so, who pulled the strings for the Milwaukee Railroad?

Mr. ASTON. I presume their agents.

Mr. MAGEE. Well, do you know?

Mr. ASTON. I know that one of their engineers was the engineer in charge for the Siems-Carey-Kerbaugh Co.

Mr. MAGEE. Can you give us the name of any person or persons who guides the hand or has guided the hand, as you designate it, of the Milwaukee Railroad in these operations?

Mr. ASTON. I can not give you any names, simply their agents.

Mr. MAGEE. How are we going to determine that fact unless we can get the names of some persons who are charged with doing this?

Mr. ASTON. I do not know of any persons who are charged with doing it.

Mr. MAGEE. And yet you say that the hand of the Milwaukee Railroad is seen in all these operations?

Mr. ASTON. Yes, sir; because the railroad, as they have built it, would benefit the Milwaukee Railroad, and would entirely shut us out. The location that has been made would benefit the Milwaukee

Railroad. The Milwaukee Railroad are the only people who would benefit by that railroad, because the railroad starts 18 miles out on their line. I have been informed that several of their engineers have been employed by the Siems-Carey-Kerbaugh Co.

Mr. MAGEE. Well, do their engineers control the policy of the road?

Mr. ASTON. Engineers can possibly give advice as to the location.

Mr. MAGEE. We would like to find out, if we can?

Mr. ASTON. I would like to find out the inner details of it, too. I only know that the road as built now, it would not be worth our while to take the road over now, because it benefits the Milwaukee Railroad.

Mr. MAGEE. You feel sure that this road never would have been built except for the guiding hand of the Milwaukee Railroad?

Mr. ASTON. It has all the appearances of that, because if they wanted to get into the spruce they could have extended the railroad around by Pysht Creek, but we had the shorter route and this, in effect, afforded them the means of getting our route, which they would have desired, because we would have been a heavy competitor of them, particularly if we had joined up with the Northern Pacific Railroad. Another reason is that the line was built for commercial purposes. If it was only necessary to build a line in there for logging purposes—it was apparently built with the intention of being extended—if it had only been built for logging purposes it would have been built at a very much less cost and in a very much less time.

Mr. MAGEE. In your opinion the road was built primarily for commercial purposes?

Mr. ASTON. In effect it is a road that has been built for commercial purposes. Otherwise it would have been built at a lower standard of road, shorter curves, which means a very much less cost. In other words, it is quite possible to build a road in a hurry by putting in sharp curves. I have personally received instructions in work that I have undertaken to go out and survey roads and construct them at the rate of a mile a day. To do so it was necessary to use very sharp curves.

Mr. MAGEE. It is your opinion, is it, that somebody wanted a road built at Governmental expense?

Mr. ASTON. That appears on the face of it, sir. I can give no other reason for building a road of such a high standard.

Mr. LEA. There was a big spruce supply to be tapped by building this road to Lake Pleasant, wasn't there?

Mr. ASTON. Yes.

Mr. LEA. And you had advocated the building of a road on this route for that purpose?

Mr. ASTON. Partly for that purpose and partly for extension to Grays Harbor. We had fully intended to extend it to Grays Harbor to connect up with the Northern Pacific.

Mr. LEA. Why didn't you construct your road by the Pysht Creek route? I want to get your reason, briefly.

Mr. ASTON. Because the route we had was shorter and cheaper, a cheaper route to get out of Port Angeles. If we had constructed it by the Pysht Creek route, we would have been paralleling the Milwaukee road for a great many miles.

Mr. LEA. So your criticism of this road is not that it would not reach spruce, but that it was built more expensively than required for temporary purposes?

Mr. ASTON. Yes, sir; absolutely. There is no question about that. (Witness excused.)

TESTIMONY OF M. J. CARRIGAN.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. What is your full name, Mr. Carrigan?

Mr. CARRIGAN. M. J. Carrigan.

Mr. FREAR. And where do you live?

Mr. CARRIGAN. In Seattle.

Mr. FREAR. And how long have you lived here?

Mr. CARRIGAN. I have lived here and at Port Angeles for 30 years. I have lived here about 16 years.

Mr. FREAR. You are one of the old residents here?

Mr. CARRIGAN. I was formerly mayor of Port Angeles, and formerly State tax commissioner of this State and former county commissioner of this county—King County.

Mr. FREAR. Have you held any other offices?

Mr. CARRIGAN. Those are the principal offices I have held.

Mr. FREAR. You are acquainted with John Cain, who has been named here to-day as one of the men with Mr. Aston and Mr. Lindsay, who were connected with this railroad.

Mr. CARRIGAN. Intimately, for 25 years.

Mr. FREAR. Some telegrams were put in evidence to-day, which went between these parties, between John Cain and the others. I wish to ask you—and don't answer until I have arranged the record—I wish to ask you if you had any conversations with John Cain in regard to this railroad and the influences that were behind the railroad, and what his version of the matter was?

Mr. CARRIGAN. Yes, sir; I have.

Mr. FREAR. In line with the questions just asked by Mr. Magee of the last witness.

Mr. CARRIGAN. Yes, sir; I have.

Mr. FREAR. Mr. Cain is now in New York, I understand?

Mr. CARRIGAN. Yes, sir.

Mr. FREAR. This committee has been trying to get in touch with him, but finds that he is too far away to do anything at this time. Subject to further confirmation, I ask you to tell the committee just what Mr. Cain's statement is to you in regard to these conditions and the influences behind this matter?

Mr. CARRIGAN. I had another proposition up, for a hard-surface road from Lake Crescent to Mora, as the speediest means of getting our spruce, before Col. Disque, and we made him a logging proposition to put logs in the water at Lake Crescent for \$40 a thousand, minimum of 300,000 a day, as rapidly as he wanted to increase it. Mr. Cain was working on another proposition, this railroad proposition, and we were at Portland a great deal, and in consultation with Col. Disque a great deal.

I have seen all these telegrams you refer to. I think I have seen every telegram Mr. Cain received from his eastern associates.

The Milwaukee—at the same time while I was trying to get Col. Disque to adopt this hard-surface road, Mr. Cain and his associates were trying to get them to adopt their railroad and logging proposal; the Milwaukee was also trying to get the Government to advance them \$2,500,000, for 10 years, without interest, or to take their bonds at 75 cents on the dollar, to extend their line from a point between Twin and Deep Creek by way of Pysht Pass to Lake Pleasant and the Hoh. The Milwaukee was pretty certain that they were going to get that contract, because they kept announcements going through the newspapers, every week or two, that they expected to start construction immediately, on the strength of a railroad contract being awarded to them by the Government. They were absolutely cocksure of that. Col. Disque had recommended that the Milwaukee be loaned this money, without interest, and the skids seemed all greased for a Milwaukee killing.

Mr. Cain was very much discouraged, feeling that the Milwaukee had finally gotten the upper hand, but his associate, Franklin Helm, who was the chief promoter of the Port Angeles & Gray Harbor Railroad, was in New York and hooked up with Pliny Fisk, of the banking house of Harvey, Fisk & Sons, of New York, and were working very hard to secure the contract, but things were not going well. And finally out of a clear sky came the announcement that the award had been made—in the first place they were working with Rogers, Brown & Bros., railroad contractors. The Milwaukee had sufficient strength to see to it that Rogers & Brown were not accessible to the Government as railroad contractors, which was one of the biggest firms in the country and very successful. So in all the negotiations with Helm and the Cain and Lindsay and Aston crowd Rogers & Brown, up to a certain point, had been their railroad contractors; they were going to be put in charge of this work. And saw the original telegram that came to Mr. Cain ordering him to substitute Siems-Carey first and later to add H. S. Kerbaugh to the contract, just then being formed at Portland, in connection with an attorney named Edwards, who was, he said to Col. Disque, in a logging contract which Col. Disque made Mr. Cain believe he was on the point of signing. So Siems-Carey-Kerbaugh were substituted for Brown. Neither Cain nor I understood why that was done at that time, but later, after the contract had been awarded and Siems-Carey had \$6,000,000 placed to their credit by the Government on a blanket mortgage that covered nothing, because they didn't have anything; the whole story came out to me through Mr. Cain, which he obtained through his associate, Franklin Helm, as to how the miracle had been worked.

Mr. FREAR. And how?

Mr. CARRIGAN. Now, the Milwaukee had absolutely the call on this contract up to a given point. It seemed that in earlier days the banking house of Harvey, Fisk & Sons, of New York, had financed Secretary William McAdoo, of the Treasury, in building the tunnels under the Hudson River—a very disastrous venture for Mr. McAdoo—it broke him and almost broke the house of Harvey, Fisk & Sons; they got through by the skin of their teeth, but that established a friendship between Fisks, and particularly Pliny Fisk, who was an active member at that time, and McAdoo that was never ended and is not ended to this day. When the life of the Port

Angeles & Grays Harbor Railroad proposition, both railroad and logging, was in the balance and Fisk had made up his mind they were licked he went to Secretary of the Treasury McAdoo, who was Director General of the Railroad Administration, and said to him, "Bill, I am vitally interested in securing a railroad contract in the Northwest for getting out airplane spruce for the Government. We have got the spruce, we have got the surveys, we are ready to build this road if we can get the Government's approval and get this logging contract. Now, I have simply got to have it. The skids were greased for the Milwaukee to get this contract, and I can't get a look-in without your intervention. You and I have fought and played and died together, been resurrected together, gone through hell's fire together, and you have got to come to the front and help me get this contract for my company."

Mr. FREAR. That is, Fisk said this to—

Mr. CARRIGAN. Pliny Fisk said this to Secretary of the Treasury McAdoo, who was also Director General of the Railroad Administration. And he made this last appeal, which is the only prop he had to lean upon, because up to that moment the Milwaukee had triumphed in all their negotiations, and they were relying upon John D. Ryan to turn the tide in their favor—Ryan, I think, being a director of the road and the man who electrified the Milwaukee road through the State of Montana, for the Milwaukee—and that was the big influence which they were counting upon, as I gathered from various intimate and Milwaukee sources, to secure them this contract. Then Fisk played his trump card, went to McAdoo and got McAdoo's active intervention, and it was on McAdoo's orders, or suggestion, however you choose to put it, that the contract was given to Siems-Carey-Kerbaugh for this logging operation on the Olympic Peninsula.

Mr. FREAR. Now, McAdoo had determined that the Milwaukee should not extend their line; he had done that by an order. I don't know whether you know that or not.

Mr. CARRIGAN. Yes. That was all a part of this negotiation; it didn't happen in a minute.

Mr. FREAR. No.

Mr. CARRIGAN. But, Mr. Chairman, the Milwaukee had a great deal of influence in this deal.

Mr. FREAR. Yes.

Mr. CARRIGAN. They felt that that was their territory, and they have resented, at all times, anybody else going in and opening up that splendid territory of the finest timber standing in America to-day. They have fought every effort to get in there, and so have the loggers of this State, generally speaking. The Northwestern Lumbermen's Association, they have all been opposed to opening up that territory, they have kept it on the reserve list; they have opposed anybody getting in there to make that timber available to the market; they have opposed the building of mills. That is why they were all unanimous in condemning the building of the mill at Port Angeles.

Now, it comes back to this: The Milwaukee was working hand-in-hand with the Northwest lumbermen, as far as killing the mill at Angeles was concerned. But they had a strong drag with the administration; they had a strong drag with Col. Disque; they had his

approval of their scheme; but when the final solution came—the proposition of Mr. Aston, Mr. Helm, and Mr. Cain was to build from Port Angeles by way of the Elwah River, Lake Sutherland, and the south shore of Lake Crescent to Fairholm, and thence down the Sol Duc River to Lake Pleasant, and thence on to the Hoh River, with spurs up to the headwaters of the Hoh, and dragging in through all the valleys the stuff to the main line.

Mr. FREAR. And, as he says, that was for the continuation of the line down to Grays Harbor?

Mr. CARRIGAN. Yes. They later expected to sell this road to the Northern Pacific, which ran to Moclips; so that it would give two lines, competing lines, through the Olympic Peninsula, and open up that vast territory. That was our plan.

Now, the Milwaukee having the strength it had, when McAdoo got into the game he thought it advisable to make a compromise, not permitting the Milwaukee to build westward, not permitting the new line to go into Port Angeles, and compete with the Milwaukee, but to make a compromise by swinging the road around the north shore of Lake Crescent to Joyce, which is about 3 miles from the lake, and tie in the Government railroad number one to the Milwaukee system at Joyce; the idea being that when the war was over and this emergency had ended, the Milwaukee would have not only a line with a physical connection with the Government railroad, and presumably the only line, too, but that road would be valuable. That was done on this theory: It is 20 miles from Port Angeles to Joyce, so, in round numbers, it will be 20 miles from Port Angeles to a common point on the lake equivalent to the point at Joyce. With railroad building material being scarce, labor being scarce, what was the sense in building an independent 20 miles of road when there is 20 miles of existing road to which this Government road could be tied in at Joyce? And on that theory the independent line to Port Angeles was eliminated and the physical tie made with the Milwaukee at Joyce.

On the further theory that a half loaf was better than no bread: If the Milwaukee could not get the Government money and could not get its line extended with Government aid, and the other fellows having to take the contract, needing the money possibly, the Milwaukee would be the final winner in having the Sol Duc territory, opened up at Government expense, tied into their line to the westward at Joyce. So that the line was useless to anybody else, and that is the compromise that was made, and that is exactly how it was made, Mr. Chairman, from the intimate narration of all the inside facts obtained direct from Mr. Cain, and I have seen the correspondence, I have read the original telegrams; I have read their contracts, and I know the facts around about all these different negotiations, that you haven't time to listen to now.

Mr. MAGEE. Where is Cain?

Mr. CARRIGAN. Mr. Cain is in New York at the present time, trying to get a settlement for the surveys and other things that they made, that the Government used—or Siems-Carey-Kerbaugh used—from a point west of Lake Crescent to Lake Pleasant.

Mr. FREAR. Let me say this, that without any knowledge of all these facts, until we got here on the ground, that that seemed the

only explanation and the only solution of this whole question, as you have given it right here.

Mr. CARRIGAN. Yes. Now, I have been out of the city or I would have come and volunteered this information before.

Mr. MAGEE. Where are those telegrams and correspondence which you speak of?

Mr. FREAR. We have introduced a lot this morning.

Mr. CARRIGAN. The last I saw them, he placed them in the possession of his attorney, Mr. C. A. Riddell, of the firm of Jones & Riddell, of this city. I helped Mr. Cain arrange his telegrams; helped him find them.

Mr. MAGEE. Have you seen those telegrams?

Mr. CARRIGAN. I have seen them all and read them all, sir.

Mr. MAGEE. Who are those telegrams from?

Mr. CARRIGAN. They are from Pliny Fisk, in large measure; Pliny Fisk and Franklin Helm.

Mr. MAGEE. They are from Mr. Helm and Fisk?

Mr. CARRIGAN. Yes; to Cain, who was in Portland. Then, either in New York or Washington, as occasion—

Mr. MAGEE. Mr. Helm didn't have the power to say where this railroad should go?

Mr. CARRIGAN. No.

Mr. MAGEE. Did you see any telegrams or correspondence from anybody who did have the power to locate this road?

Mr. CARRIGAN. I would not be apt to see any telegrams from Mr. McAdoo. He wasn't sending telegrams on that subject, I don't imagine.

Mr. MAGEE. All the telegrams and the correspondence which you have been mentioning were telegrams and correspondence sent and signed by Mr. Helm and Mr. Fisk?

Mr. CARRIGAN. Yes; to their associate, Mr. Cain, giving him the story of the development that was going on from day to day at Washington and New York.

Mr. MAGEE. Who determined the location of this road from Lake Crescent to Lake Pleasant?

Mr. CARRIGAN. I think it would naturally follow, the road being surveyed—

Mr. MAGEE. But who determined its location, do you know?

Mr. CARRIGAN. I think I have told you as near as I know.

Mr. MAGEE. No; I don't think you have told the committee who determine it. Who had the power to determine it, the authority to determine it?

Mr. CARRIGAN. If you would boil it down to the last analysis for power, my guess, I would say Col. Disque.

Mr. MAGEE. He had the power to determine where the road should be located and where it should go?

Mr. CARRIGAN. Yes; but—

Mr. MAGEE. I mean the official power?

Mr. CARRIGAN. Col. Disque didn't want the road to go where it went at all.

Mr. MAGEE. Did he determine that it should go there?

Mr. CARRIGAN. No; he didn't.

Mr. MAGEE. He decided it, didn't he?

Mr. CARRIGAN. He decided it because he was ordered to decide it.

Mr. MAGEE. Who ordered him to decide it?

Mr. CARRIGAN. You are asking something I wish I could answer in just as positive language as you want it answered. If you will let me answer this way—

Mr. MAGEE. You go right around in a circle when it comes down to the point of who actually ordered it.

Mr. CARRIGAN. I don't proceed in a circle at all.

Mr. FREAR. I don't think you do.

Mr. CARRIGAN. I tell you the best impression I have. If you will let me answer it my way, I will tell you. I think the road was located in its exact present location, the location determined by Mr. McAdoo, on his orders.

Mr. MAGEE. You say you think so?

Mr. CARRIGAN. From all the information I have.

Mr. MAGEE. Yes; but that might possibly do Mr. McAdoo an injustice.

Mr. CARRIGAN. It might.

Mr. MAGEE. Because that is your "think."

Mr. CARRIGAN. No; based upon information given me by Mr. Cain, who was intimate in all these negotiations; got it direct from Mr. Helm, who is associated with Mr. Fisk, the man in conference with Mr. McAdoo.

Mr. MAGEE. Can you give us the names of any men who know who directed Col. Disque to locate this road where it was located?

Mr. CARRIGAN. Of my own personal knowledge? I can't; no. How could I?

Mr. MAGEE. Do you think that Mr.—

Mr. CARRIGAN. If I had been mixed in this deal as close as Mr. Cain, I could tell you right off the bat. Mr. Cain told me who gave the orders. Mr. Cain told me how they got this contract. He told me how the compromise effected there was that this road would tie into the Milwaukee.

Mr. CARRIGAN. Mr. Cain was informed by Mr. Helm who gave the orders.

Mr. MAGEE. No; I don't want—

Mr. CARRIGAN. Mr. Cain was informed by Mr. Helm how they got this contract. Is that plain enough?

Mr. MAGEE. Well, what I am after is—

Mr. FREAR. Mr. Helm, then, ought to know for a certainty?

Mr. CARRIGAN. Surely.

Mr. FREAR. And Mr. Fisk ought to know for a certainty.

Mr. CARRIGAN. Absolutely.

Mr. MAGEE. What I want to know, Mr. Carrigan, is whether Mr. Cain, to your knowledge, ever came personally in contact with Mr. McAdoo or Mr. Ryan in reference to the location of this road?

Mr. CARRIGAN. He may have with Mr. Ryan; I don't know. I don't think he did with Mr. McAdoo, because Mr. Cain was kept at this end of the line.

Mr. MAGEE. Do you know whether or not he came in personal contact with Mr. Ryan or had any correspondence with Mr. Ryan in reference to the matter?

Mr. CARRIGAN. I don't think he would. I think he would steer absolutely clear of Mr. Ryan. Mr. Ryan was trying to queer his game. Mr. Ryan was for the Milwaukee. He wasn't trying to put

any water in Mr. Cain's wheel; he was trying to take the water away from his wheel. So he would have nothing to do with Ryan.

Mr. MAGEE. Is it your judgment that Mr. Helm would know who directed Col. Disque to locate this road?

Mr. CARRIGAN. Yes.

Mr. MAGEE. And anyone else?

Mr. CARRIGAN. And Mr. Fisk, absolutely.

Mr. MAGEE. You think either one of those gentlemen would be able to give that information?

Mr. CARRIGAN. Outside of the first-hand information? Yes, sir; I do, beyond any question.

Mr. FREAR. Here is another situation that arose in connection with what you have stated: Mr. Ryan, of course, has these connections which you say with the Milwaukee road?

Mr. CARRIGAN. Yes.

Mr. FREAR. Mr. Ryan at this time was superintendent of aircraft?

Mr. CARRIGAN. Yes.

Mr. FREAR. That is, of production?

Mr. CARRIGAN. Yes.

Mr. FREAR. He was in a position to determine and cancel any contract which had been made, without notice, and Siems-Carey-Kerbaugh Co. had a \$25,000,000 spruce-production contract?

Mr. CARRIGAN. Yes.

Mr. FREAR. They also had this railway contract. A cancellation would mean that some one else would be substituted in their place?

Mr. CARRIGAN. Yes.

Mr. FREAR. Could there be any greater control placed in the hands of one man than vested in the superintendent or the director of aircraft, so far as you can judge, who had that power?

Mr. CARRIGAN. No; excepting that they recognized a higher power.

Mr. FREAR. Yes.

Mr. CARRIGAN. Which was William G. McAdoo.

Mr. FREAR. Yes; and the road, as put through there to-day, who will buy that road?

Mr. CARRIGAN. God knows. The Milwaukee.

Mr. FREAR. That is all.

Mr. CARRIGAN. It was built with the idea; and, my friend, Maj. Mott Sawyer here, a Milwaukee man, taken either out of Spokane—or superintendent of Tacoma, I think, at the time—went into the spruce division and was immediately put in charge of railroad construction; a derved competent man, let me tell you.

Mr. MAGEE. So that the major can tell us who gave the order to Col. Disque to locate the road?

Mr. FREAR. He probably would not know that.

Mr. CARRIGAN. I don't know that Maj. Sawyer could. He is a gentleman, a fine railroad man, a Milwaukee man, every drop of blood in his body, and was put in charge there, and he has built a magnificent railroad, no better in this country; any man that looks at that road must take off his hat to Maj. Sawyer as a railroad constructor.

Mr. FREAR. Now, he is back with the Milwaukee?

Mr. CARRIGAN. I don't know. He ought to be, if he isn't.

Mr. FREAR. I understand so. So it comes all back to this: Who is to buy that railroad as constructed—who was to buy that railroad as constructed?

Mr. CARRIGAN. So far as—

Mr. FREAR. Ray finds in his report that the Milwaukee will probably buy it for 50 per cent, or thereabouts; something to that effect.

Mr. CARRIGAN. Yes.

Mr. FREAR. Now, that is the situation which confronts us to-day.

Mr. CARRIGAN. Yes.

Mr. FREAR. There is no other railroad company to buy it.

Mr. CARRIGAN. Who else would buy it? Who could buy it? What would they do with it?

Mr. FREAR. That is the question, exactly.

Mr. MAGEE. I presume that Col. Disque would be able to tell who gave him the order.

Mr. CARRIGAN. I understand; yes, sir. Col. Disque could tell you why he was turned down and why his recommendation—about the only one he ever made that was not carried out—was not adopted; Col. Disque certainly could tell you.

Mr. MAGEE. Did you ever talk with Col. Disque on the proposition?

Mr. CARRIGAN. I did; many times.

Mr. MAGEE. Well, did Col. Disque ever state to you that he changed his mind or located the road here because some one ordered him to do it?

Mr. CARRIGAN. Col. Disque told me, sir, in one talk with him: I said, "Colonel, I understand that you have recommended"—now, I was very much interested in promoting a plan for getting out airplane stock that would beat anybody's game, being under the fool impression that time was the vital element in this whole undertaking. I submitted a proposition to Col. Disque by which we were to dump the airplane stock into Lake Crescent at the rate of 300,000 feet a day, over a hard-surfaced road, running as high as 200 trucks, equivalent to a double-line road, to have that road ready for operation by the first of June, 1918; and he thought very well of it. He said, "I know your plan is all right; I know you can log spruce by truck, because I have seen it done in the Northwest." We could carry on a truck—5-ton truck—5,000 feet of spruce; with a trailer loaded to capacity, we could carry, and it was estimated, the loggers suggested, you could put on 7,000 feet.

Mr. MAGEE. Put on a 10-foot log?

Mr. CARRIGAN. Yes; surely. That is all that a railroad truck will carry, Mr. Chairman. We could put them on the trucks and take to Lake Crescent, dump them there, put them into a boom, and tow them 10 miles to Piedmont, at which point the Milwaukee railroad, through its engineer—district engineer, I presume you would call him—speaking in behalf of the railroad company, assured me that I could assure Secretary Baker that the Milwaukee road would extend its line to Piedmont, which is a point on the lake about 3 miles—the nearest point to the Milwaukee—they to come down the head of the Lyre River into Piedmont, take the logs from the lake there by crane, put them on the cars, and shoot them into the mill at Port Angeles or distribute them anywhere they wanted to, any mill on the Sound. The colonel had it under advisement for a long time, as most things were.

Mr. MAGEE. We want to know why Col. Disque located this road.

Mr. CARRIGAN. Well, I was trying to get a decision of the thing I was concerned in and had taken some of the best loggers in the country down there, made him a formal proposition for logging, to be backed up by a \$250,000 cash bond. Michael Earles was the logger who was the spokesman that I took down there, at Col. Disque's request. And while this was up, I said to colonel, "Colonel, I hear you have recommended the Milwaukee's plan of extension be adopted." Now, mind you, the Milwaukee's plan contemplated getting down to the spruce district, to the Hoh, in 18 months, and here a war was on, men being killed by the thousands on the western front for lack of airplanes, and talking about 18 months to take building a railroad to get spruce. Disque said, "It is absurd." This is in the early stage of the game. I am telling about the high spots. And he didn't seem to think anything at all about the Milwaukee scheme, because it was not immediate enough.

Mr. MAGEE. And that scheme was what; to get there by what way; by the Deep Creek route?

Mr. CARRIGAN. Well, Deep Creek route, Pysht Pass, Lake Pleasant, and on down to the Hoh, and they wanted 18 months to complete the road. And Disque wanted airplane spruce, and that didn't meet his requirements. But later, as the negotiations went along from month to month, I heard that Col. Disque had recommended the Milwaukee's proposal, and I told him, I said, "Colonel, I hear you have recommended the adoption of the Milwaukee plan." "No," he said, "I haven't at all." I said, "I got it on what seemed to be rather good authority." "Well," he says, "it is not so; I haven't." Well, as a matter of fact, he had.

Mr. FREAR. Recommended the Deep Creek route?

Mr. CARRIGAN. Yes. Now, what was it you asked me?

Mr. FREAR. It doesn't make any difference which way the Milwaukee comes, whether around by Deep Creek or by Lake Crescent, except Lake Crescent is a much shorter route?

Mr. CARRIGAN. In any analysis made of this matter, this proposition is Milwaukee only.

Mr. MAGEE. The question was whether or not Col. Disque ever told you who ordered him to change the route and locate the road where it was located and build it—

Mr. CARRIGAN. Are you asking seriously? Do you think that Col. Disque, who was an absolute czar out here, more difficult to see than President Wilson—do you think he would tell me, an ordinary civilian, who had compelled a change of his own mind here?

Mr. MAGEE. I am simply asking if he did.

Mr. CARRIGAN. He did not.

Mr. MAGEE. Then, that answers the question. That is what I have been trying to find out.

Mr. FREAR. You have made it very clear. I think, Mr. Carrigan.

Mr. CARRIGAN. And Col. Disque, after I had put this proposition up to him, he said, "Now, Carrigan, your road is all right, your logging by truck is all right, but what assurance have I that if we adopt your scheme that I would get any logs?" I said, "Colonel, you have been telling me all along"—will you let me go back and tell you some other interesting stuff?

Mr. FREAR. Yes.

Mr. CARRIGAN. I have been out of town. I have been keeping close track of this inquiry, through the newspapers, and there are some things that you apparently have been trying to get that you haven't gotten.

Mr. FREAR. Tell us anything that bears on this matter.

Mr. CARRIGAN. You are trying to find out who turned the trick—

Mr. FREAR. Yes.

Mr. CARRIGAN. For Siems-Carey-Kerbaugh Co.

Mr. FREAR. Yes.

Mr. CARRIGAN. I have told you.

Mr. FREAR. Yes.

Mr. CARRIGAN. Now, I attended all the meetings of the Northwest Lumbermen's Association at Tacoma and at Portland and in Seattle, and one day—it was, we will say, in March, 1918—there was a big meeting, attended by possibly 200 of the big loggers and lumbermen of this coast, at the parlor of the Tacoma Hotel. Col. Disque was present. Col. Disque was intensely interested at that time in trying to solve a very difficult problem. He came up here absolutely ignorant of the job he was assigned to—admitted it; didn't make any pretense that he was a logger, and he didn't know a spruce tree from a white rhinoceros, but he was anxious to learn, he was anxious to perform, apparently, at that time, and he was impatient with these restraints put on him; there were labor troubles, I. W. W. troubles, there was opposition from the lumbermen, there was a difficulty in finding out where this spruce was, it seemed to be a difficult thing to find; and I told him one day; I said, "Colonel, the people are getting damned good and tired of your continual excuses, which I know you are making in good faith, about not being able to get spruce."

"You are being advised by men who do not propose to get you the spruce and you are listening to their advice and you are never going to get it if you are listening to the organized lumbermen of the State at the present time." He said, "Why do you say so? They are the biggest men in the country. They have got the organization, the timber, and everything we need. Why can't I get them to give me the spruce?" I said, "I will tell you why. You can not get them to. Those men are all big, splendid men, with plenty of money and equipment and timber, but they are in the commercial logging business, they understand their business and they are only going to log the way they understand, and the way they have to log if they do not go bankrupt. They are going to take their timber out as they come to it. Now, Colonel, there is no such thing in this country as a stand of spruce. There is no such thing, and if anybody tells you so he is simply misinformed or lying. The spruce is scattered among the cedar and fir and hemlock forests, a tree here and there. You take the average stand in what they call the spruce country"—

Mr. FREAR. We understand that. Just state what the conversation was.

Mr. CARRIGAN. This is what I was telling him. Now, I said, "That being true, these men are going to take out the timber as they come to it. They are not going to mess up their woods and create a great fire hazard and build miles of logging road that they do not need. They will give you such spruce as they come to and

that is all they will give you." That is the truth, Mr. Chairman, and that is what they were up against, and they were right in that respect. But I knew if he was depending on the lumbermen to get that spruce he would never get it in the world. I am going back to this meeting at the Tacoma Hotel. Col. Disque was there and was all animated with a desire to solve this problem and to get out the spruce. That was in March, 1918. And he then put out his famous proposition for the rived spruce and made an impassioned appeal to the farmers of the State to bring in spruce, no matter in what quantities, but to bring it in on the theory that with a little here and a little there you would get very much finally. That was up for discussion. Now, this meeting was called for the purpose of trying to solve the spruce problem. A little bit was said about that and the prominent loggers there, Mr. Boedell and Mr. Chinn and Mr. Donovan and Mr. Polson were there.

Mr. FREAR. I think we have been all through with this matter.

Mr. CARRIGAN. Yes. But they were at this meeting and did more or less of the talking. Well, the meeting was fairly under way, and the discussion started not in connection with airplane spruce, but fir logging, ship timbers, and the wage scale. Col. Disque sat there in great patience for about an hour, and he finally got up and said, "Gentlemen, this meeting was called for the purpose of trying to solve the spruce problem." Col. Disque listened to all this, and they got to talking about everything but spruce—talking about labor troubles and every other thing. And he finally said, "Gentlemen, this meeting was called primarily for the purpose of discussing how you could serve the Government in getting out aeroplane spruce. They are calling upon me for 11,000,000 feet a month. Last month, the highest month since I have been on the job, we got 4,500,000 feet; that is, January, 1918. Do you know what happened last month? The production fell down to 2,500,000 feet." And he said, "Now, we are here to talk spruce, and I want you to confine your talk to spruce. I am not interested in your wage scale and your ship timbers. My job is to get airplane spruce, and I want you to help me to get it." Well, it was fine. Everybody was going to help. The next day I was over in Portland to see the colonel about this hard-surfaced road from Lake Crescent to Moro. I said, "Colonel, I sat all through yesterday's session at Tacoma. What did you get out of it?" He said, "I got everything but an intense interest in helping to solve the problem of getting out spruce. They were more concerned in the wage scale, the price of fir and ship timbers, and preferential orders for shipment of rails than they were in spruce."

"Now," he said, "Carrigan, what I want out of this, I told them, is not patriotic speeches. What I want is spruce, and by God I am going to get it." He was smoking a pipe, sitting at his desk, all worked up with the failure of the meeting to approach a solution. He said, "Carrigan, I have asked for orders from Washington to do two things—to commandeer the timber and to put our own men in the field in logging it. Some day some of these people will wake up with a jolt. I am going to get the spruce, and I am going to do what you and others have been urging all along. All the data that you have given me has been checked. You have got the goods in Clallam and Jefferson Counties, and I am going to get the goods. I am going to stage the biggest spruce production in your country." I call that my

country, because I lived down there for 15 years, and I know every road and every trail in the country. "That is where my problem is going to be, and I do not believe it will ever be solved until I can get into that country. I am going to try to cooperate with those loggers and lumbermen, but I am going to do it out of no misapprehension. I know I have got to solve this problem myself, and I know now where the spruce is, and I am going to do everything I can to get it, and as soon as I receive the orders enabling me to commandeer it and make them get it out, then we will get the spruce; when I can get that jurisdiction and get that transportation into your north-western section of the country, Clallam and Jefferson Counties, and I know I will get all we want and my troubles will be over." That is the history of it.

Mr. LEA. That was the solution of the problem, was it not, to go into that district?

Mr. CARRIGAN. Absolutely.

Mr. LEA. You were associated with this other company that was fighting to go in there—Mr. Cain's company?

Mr. CARRIGAN. No. Saving life was the important thing in getting out aeroplane spruce for aeroplanes on the front, and if we could only save a month in time and save one human life it was worth the effort. So I evolved a scheme, which was the quick and conclusive scheme, of hard surfacing the road from Lake Crescent to Mora. Mora is on the Quillayute River and is 41 miles from Lake Crescent. If you can figure the road that Maj. Sawyer built down the Sol Duc River you will come to Mora 1 mile from the Pacific Ocean. There are a number of rivers, the Calawah and the Bogachiel and their branches that come into the Quillayute River at Mora. My plan was to put on a hard surfaced road and put on the trucks and put the loggers every where you could along these streams, and then carry the heavy percentages of trees and chuck them into the river and float them down to Mora, where all these streams come together. All of these streams empty there; put that big rafting station there, lift your logs out of the basin with a crane, and put them on your trucks there and take them to Lake Crescent and dump them into the lake and tow them from there into the mills. That would beat any scheme that anybody could devise for speed and certainty.

Mr. FREAR. From what point was this to go; to get the logs from where?

Mr. CARRIGAN. Just from the point that Maj. Sawyer was headed for.

Mr. FREAR. Here is the suggestion that has come before the committee; that this timber is within about 15 miles of Clallam Bay.

Mr. CARRIGAN. I am perfectly familiar with that. I read that and I laughed when I read it, for this reason: There is a fine pocket of fir at the headwaters of the Hoh.

Mr. FREAR. This is the timber they are speaking about, that is in question—the Pleasant Lake River.

Mr. CARRIGAN. I know.

Mr. FREAR. That is, it lies about 15 miles from Clallam Bay.

Mr. CARRIGAN. You must understand that country. That country is an empire. That little spot is just as a postage stamp compared to the area of timber they were trying to reach, with an awful lot of other stuff.

Mr. FREAR. This circle?

Mr. CARRIGAN. Oh, that circle was taken out of a lot of other material. Mr. Lightner's proposition was to have the Government advance him \$500,000 to build a logging road up to this place on the Hoh. That was all right; that would have taken that out.

Mr. FREAR. Mr. Lightner never asked for that.

Mr. CARRIGAN. Mr. Charlie Patton did, for Mr. Lightner.

Mr. FREAR. The proposition was to build a road 15 miles in length and then to strike the same timber as would be struck by the Siems-Carey Road, and it was the proposition suggested by Lightner and was his plan that they could carry that timber down and dump it into the bay, as they are doing at the Goodyear Co.

Mr. CARRIGAN. That was all right as a unit in the big scheme.

Mr. FREAR. It was a quick means of getting it down with only 15 miles of railroad.

Mr. CARRIGAN. But that did not solve the problem. We supposed the war would last for two or three years, and all of the discussion and plans were made for a two-year war. Mr. Lightner's scheme was all right, but it was only a drop in the bucket. That bunch of stuff at the head of the Hoh did not answer the requirements. There would be a 75-mile tow—

Mr. FREAR. And they never lost a raft in the history of their business; that is Mr. Lightner's sworn statement.

Mr. CARRIGAN. I have seen the beach from Clallam Bay to Port Angeles absolutely strewn with logs.

Mr. FREAR. Whose logs were they?

Mr. CARRIGAN. I would not say from what company.

Mr. FREAR. That is his company, and only three rafts of logs were ever broken in the Merrill & Ring Co.; that is, from Pysht; that is all the testimony before us.

Mr. CARRIGAN. Then, I will say that God was good to Merrill & Ring and Mr. Lightner. I have known those straits for 30 years, and I have seen, I was going to say, hundreds of tows, and I have seen lots of tows go to pieces.

Mr. FREAR. You have never seen one of theirs go to pieces, have you?

Mr. CARRIGAN. I would not know it if I saw it, because they are all alike.

Mr. FREAR. They would not come here and swear under oath that they never lost a raft if they did, would they?

Mr. CARRIGAN. No; I do not think they would.

Mr. FREAR. But it is a general impression that all of the rafts were carried intact in every single case from Clallam Bay?

Mr. CARRIGAN. The system of logging has changed. They used to carry those rafts in between swisters, and when they struck a rough sea, particularly towing cedar and spruce, they would ride high, and the waves in breaking over them would jump them out of the booms, and finally the thing would go to pieces. Now they take and tie the thing together in a cigar shape taking a little bit at a time, and move them instead of a large quantity, and I guess they do get by in pretty good shape, but it is a slow operation.

Mr. FREAR. They say they can carry them out as fast as any train of cars, because they keep them moving constantly all the time.

Mr. CARRIGAN. Sometimes that is true; but still it is a drop in the bucket and does not solve the problem.

Mr. FREAR. You had to combine all the units?

Mr. CARRIGAN. The Milwaukee is taking out spruce all the time, because they go through the spruce country. Deep Creek has plenty of spruce, and also on the Pysht. [Referring to map.] There is a range of mountains here. This is the Straits country with the Milwaukee trains. Over on the other side of the ridge is the Sol Duc country.

Mr. FREAR. We have been all through it.

Mr. CARRIGAN. The plan as finally worked out was to put a main line down to the Sol Duc country and then radiate from there like the ribs on your body, which would have drained the whole country except the north side.

Mr. FREAR. There is not anything on the north.

Mr. CARRIGAN. Oh, yes; there is.

Mr. FREAR. Between the mountains and the Sol Duc? There was nothing that was shown to us.

Mr. CARRIGAN. I can show it to you.

Mr. FREAR. The testimony is that there is nothing along the Sol Duc except until you get to Lake Pleasant, in any material amount. That takes it up to Lake Pleasant, where you strike this bunch of timber, which is, of course, a large quantity and of a very fine grade. There is where the Siems-Carey road comes one way, and here comes up from Clallam Bay to the other, and they reach that point there. [Indicating on map.] One is a 15-mile road, and the other is a 56-mile road. That is the situation as presented to the committee.

Mr. CARRIGAN. That is not fair. You would never, as a sensible man, put your reliance on bringing that timber from Clallam Bay and running the risk of the sea.

Mr. FREAR. There is no risk. It is only once in a while that occurs.

Mr. CARRIGAN. That is true. You can start in from Clallam Bay and reach that timber with a much shorter mileage than the way the road is going. But the way this road is planned it was a permanent proposition that when the Government got through somebody else would want the road, but meanwhile it would open up the country. The railroad scheme is planned for draining the country of its spruce by means of lateral roads, which is all right.

Mr. FREAR. And they are paying \$115,000 a mile?

Mr. CARRIGAN. Yes.

Mr. FREAR. That is interesting. May I ask a question? You spoke something about the Northern Pacific coming from Grays Harbor?

Mr. CARRIGAN. Yes.

Mr. FREAR. Have they had that plan constantly?

Mr. CARRIGAN. Yes.

Mr. FREAR. Then, later, the Milwaukee has planned to come down to Grays Harbor?

Mr. CARRIGAN. I made the surveys and sold them to the Northern Pacific for that very project.

Mr. FREAR. Then you are familiar with the facts?

Mr. CARRIGAN. That is the fact.

Mr. FREAR. So that both companies were scheming to get through and get their line through first, realizing that if the other one did that that they would probably preempt that whole territory. The Northern Pacific had gotten to Moclips, and the Milwaukee had gotten to Deep Creek?

Mr. CARRIGAN. Yes, sir.

Mr. FREAR. Now, the Milwaukee has this other branch?

Mr. CARRIGAN. If you understood the history of the situation a little more you know that the Northern Pacific has always traditionally considered the Olympic Peninsula its territory. When we were trying to get the road down there Mr. Elliott said to me, "Carrigan, you are 20 years ahead of your time." The Milwaukee came along and took it away from them, and they have always been sore as a boil ever since, always meaning to get into the country for which they have the survey. Every foot of that is surveyed. And when they get it they don't mean to let that territory finally pass to the ownership of the Milwaukee. These fellows know all of that, and they figured that if under this emergency of war they could raise sufficient funds to get that road through to Moclips they would not only make money in building the road, but that they would have a good selling proposition to the Northern Pacific.

Mr. FREAR. I think Mr. Lindsay testified that it was one of their purposes to turn it over to the Northern Pacific, and then get the two roads bidding against each other. Is there anything more that you have in mind, Mr. Carrigan?

Mr. CARRIGAN. That is all.

Mr. LEA. What do you think was the best route to build a railroad to meet the demands of the Spruce Corporation?

Mr. CARRIGAN. Of course, I would like to have seen it come to Port Angeles for the purpose of opening up the territory better and as a lasting benefit to the whole country, and that the Government could spend its money just as well to have enriched the entire peninsula and have given it two ways instead of one. But eliminating that and in answer to your question directly, I think the route adopted was the better plan. Now, you must always keep in mind that the armistice came out of a clear sky. I was at Lake Crescent on this railroad when the armistice was announced. Col. Disque and the Government and everybody else was figuring on at least two years. The Airplane Production Board—and I have this direct from Mr. Ryan—had a program for building 50,000 mammoth bombing planes, each plane to contain a 1,600-horsepower motor.

Mr. FREAR. Did they ever build one?

Mr. CARRIGAN. I am telling you the plan. Each plane to carry a 1,600-horsepower motor, each plane to carry eight machine guns, each plane to carry 16 men, each plane to carry sufficient gasoline to make the journey from the western front to Berlin and back again, or in round figures 1,700 miles, without stopping to take a drink, and to carry, in addition to all this other cargo, four tons of high explosive bombs. That was the program.

Mr. FREAR. Do you know how many men that would take?

Mr. CARRIGAN. I do not know.

Mr. FREAR. It would take 8,000 men at 16 men to the plane, and it takes 100 men to the plane to handle the plane on the ground. That is the testimony an officer put before us.

Mr. CARRIGAN. That is the program. John D. Ryan said it is a tremendous proposition. The plan was then to form those into battle squadrons and send them out simultaneously to blow up the aeroplane bases of the enemy and their transportation bases and ammunition dumps and Krupp Works and all the industrial tenants on the Rhine and Berlin, in other words, simply blow hell out of Germany in 48 hours. That was the big program, and John D. Ryan said, "Gentlemen, we can get the engines. We are short of linen, but we have thousands of acres planted in Ireland of hemp, raising flax for a living. We are shy of castor oil for lubricating purposes, but we have thousands of acres planted in Texas and elsewhere of the castor bean from which you extract the oil for lubrication. We are shy of mahogany for propellers, but we have men ransacking the forests of Mexico and Yucatan and Guatamaula and Hayti and the Philippines looking over the groves and assembling the mahogany, and we can get that. We will have the linen and we will have the oil.

Mr. FREAR. Where were they going to get the men?

Mr. CARRIGAN. He said, "Gentlemen, we can get everything else to carry out this program but spruce." Now, he said, "The burden is upon you men." This was at a banquet at the Washington Hotel. Maj. Sawyer and Gen. Disque and Gen. Kenley were there. He said, "We can get every single thing to carry out this gigantic program and end the war, because the war will be ended by the aeroplane, if you men will give us the spruce."

Mr. FREAR. Where had he been? Had he been over to the peninsula?

Mr. CARRIGAN. Yes. He had just come from there that day. Now, of course, we felt, and I still feel, if this program had been carried out, if we had had time, that although it would cost a pile of money, that that railroad is a fine railroad.

Mr. FREAR. We are not getting the question that we want, that was directly before the committee.

Mr. CARRIGAN. I am telling you John Ryan's plan.

Mr. FREAR. John Ryan's plan is not material to us in the committee for ascertaining what the facts are in regard to the road.

Mr. CARRIGAN. The point of all of this was that this big plan all hinged on our getting out the spruce, which meant the railroad.

Mr. FREAR. Let us get down to the railroad. This railroad was a 56-mile haul from Lake Pleasant down to Port Angeles. I want you to do some figuring now. Now, the two mills, admitting that both of them were built and both of them continued to manufacture, would mean about 500,000 feet of lumber a day?

Mr. CARRIGAN. The plan to build a mill at Lake Pleasant was crazy.

Mr. FREAR. I am going to admit that it was crazy for the sake of argument. Now, there is 500,000 feet that leaves the mill that they had to carry, because under their contract they had to carry one million and a half, consequently they had to dump a million feet of logs every day into the water at Port Angeles on a 56-mile haul?

Mr. CARRIGAN. Yes.

Mr. FREAR. You said that is right. I want to see if you are right. I know you reason from common-sense principles. Now, from Clallam Bay they had a 15-mile haul, or maybe a 20-mile haul; that has

been testified to. And, of course, if they could build as they build in ordinary times it would save a dollar a thousand even on freight charges, and they could build it expeditiously. They only had to haul it that short distance, put it in the water there, and start it over, just as they had to start it from the Port Angeles mill—the thousand feet every day. Now, why do you say that that long route, even though it might have been built at the same rate—which, of course, it could not; it was built at an enormous price—even though it could have been built at the same rate that that 56-mile haul was, why do you say that long route was preferable?

Mr. CARRIGAN. Because that road is splendidly built for the heaviest kind of traffic to run a continuous line of trains over, if you please. The amount of tonnage you could carry over that road depends upon the amount of equipment you put on the road. The road that Mr. Lightner proposed to build was an ordinary logging road that could never stand this amount of traffic.

Mr. FREAR. He said he could double-track it if he chose.

Mr. CARRIGAN. You could double-track this, too, if you chose. The point is that this was planned for a tremendous development.

Mr. FREAR. This was planned for more than a logging road.

Mr. CARRIGAN. Of course.

Mr. FREAR. That is the point.

Mr. CARRIGAN. It was planned for a link of the transcontinental road, which would serve a larger purpose, making a link of the transcontinental road. But Mr. Lightner's proposition was inadequate.

Mr. LEA. I do not want to detain you, Mr. Carrigan, but I am very much interested in your testimony. How long did you say you have lived in this county?

Mr. CARRIGAN. I have lived out here since the fall of 1889—30 years.

Mr. LEA. How long in Clallam County?

Mr. CARRIGAN. I lived there 12 years. The balance of the time I have lived here.

Mr. LEA. What was your occupation there?

Mr. CARRIGAN. I was the principal goat of the city. I was the principal property owner there, and am yet. I was collector of customs there for the United States Government for seven years. I was one of the three Government appraisers at Port Angeles. I was mayor of the city and chief property owner and all-around active citizen, if you choose to put it that way, interested in building up the community and doing whatever I could, incidentally learning that country up there.

Mr. LEA. You have been all over that country, have you?

Mr. CARRIGAN. All over everywhere. I built the first wagon road to Lake Crescent. That is the one that goes from Port Crescent. It was some job getting to that forest at that time. I put the first canoe that was ever put on Lake Crescent.

Mr. LEA. Do I understand that Mr. Ryan did not approve of this route by Lake Crescent?

Mr. CARRIGAN. He approved of the Milwaukee route. Mr. Ryan approved of the western extension of the Milwaukee, which was all right, which would get into this timber.

Mr. LEA. That would go through Deep Creek?

Mr. CARRIGAN. Deep Creek and Pysht, past Lake Crescent down to the Sol Duc River, finally on to the Hoh. It would go from Deep Creek southwesterly and southerly to the Hoh River, tapping the main spruce belt.

Mr. LEA. Would that come in contact with this railroad that is now built?

Mr. CARRIGAN. They would practically meet at common point at Lake Pleasant or near there.

Mr. LEA. Do you know about what the difference in the distance of the two roads would be from Port Angeles to the common meeting point?

Mr. CARRIGAN. If you have a map there, you can see it very easily. From Lake Pleasant you come down to the Sol Duc River practically on water grade until you get over the summit. [Referring to map.] Here is Lake Pleasant about 24 miles out from there. You are ascending over here to this point, and over here you are descending all the way.

Mr. LEA. That is at mile 23, approximately?

Mr. CARRIGAN. Yes; that is the summit of what we call Mullers Pass. Now, you see this road comes down here [indicating], to this point here.

Mr. LEA. In order to get it into the record, it comes down from Lake Crescent?

Mr. CARRIGAN. From Lake Crescent down the Sol Duc River, following practically water grade after you get over the summit to Lake Pleasant. That is 13 miles by rail.

From Deep Creek by way of Uysht Pass, or the Pysht River, to Lake Pleasant is a distance of approximately 28 miles, the distance the Milwaukee would have to build from their present terminal at Deep Creek to the southwest portion of Lake Pleasant. It is 13 miles from Mullers Pass to the same point, the southwestern portion of Lake Pleasant. That point would be Siems-Carey; that is the local name of it. But all the time we fellows that were interested in just seeing spruce gotten out figured on this and why this was better. The Milwaukee all the time was going through a spruce country and it has extended gradually, all the time. Merrill & Ring have a big camp at Pysht and they are in the spruce territory. We men who insisted on simply seeing spruce gotten out were aware of the fact that the Milwaukee, through the territory it then had developed and through which it was operating daily, was in spruce territory and getting out a considerable quantity of spruce every day; that Merrill & Ring, one of the big operators on this coast, were conducting a very large logging operation at Pysht adjacent to the Milwaukee's territory and were getting out a considerable percentage of spruce every day; that the Goodyear Co., logging at Clallam Bay, was in spruce territory getting out a large percentage of spruce every day, and was adjacent to still larger spruce areas within a limited mileage that could be made available if desirable; that all of these operations, the Milwaukee's, Merrill & Ring's, Goodyear's, and others in active course of log production were draining the territory on the north side of the mountain tributary to the Straits of Fuca; that all that was needed to amplify the spruce production from that particular region, and so help out the Government in its urgent need for airplane spruce, was that they should continue and enlarge their present

operations. They had a very large quantity of spruce immediately available, requiring no extraordinary development or expenditure to place it at the Government's disposal for airplane stock.

We figured an additional operation was necessary if the Government's spruce problem was to be quickly and adequately and permanently solved. This meant that it was absolutely necessary to put a line down the Sol Duc River through to Lake Pleasant and to the Hoh River, in order to tap the interior country in which practically not a single log had ever been cut. If you know the country you will realize that, and Maj. Sawyer will tell you that it is gospel truth. There was two separate countries; the country on the north the Milwaukee is draining, and Merrill & Ring and Goodyear is a totally different country from that on this side, and the only logging that has been done has been the logging that could be carried on by taking the spruce and dumping it into the water and drifting; and in this interior country there has never been a log, there has never been a stick, of timber cut for export. There is a local mill at Forks that cuts joists and flat boards for home consumption, but it is just a little dinky thing. But in this country on the south side of the mountain there have never been any logging operations.

There was no transportation; there was no means of getting out logs that were cut there. The transportation had to be supplied. There is a highway, the Olympic Highway, from Lake Pleasant to Mora; there is a gravel road. That was the only transportation in the country, and that was not suitable to haul a large tonnage of logs over until it was hard surfaced. That was my scheme, to hard surface that road, because that could be done quickly. Feeling all the time that this good work was going on the Merrill & Ring Co. and the Milwaukee Co., and all of them, were in a position where they could extend their operations, that was taking care of the spruce on the strait side of the mountain, if they could not come out by rail they could come out by water, as Mr. Lightner testified. There is a lot of spruce on the strait side, but the great area of the spruce, as Mr. Lightner testified, was up at the headwaters of the Hoh. In one township near Forks, according to the Government's own survey, there are 306,000,000 feet in one township.

Mr. LEA. What kind of wood?

Mr. CARRIGAN. The finest spruce that ever came up from the ground.

Mr. LEA. How far is that from Lake Pleasant?

Mr. CARRIGAN. In other townships adjacent there were 295,000,000, 200,000,000, 195,000,000, 150,000,000. While there are no stands of spruce, as stands, there are sections where there is a great deal more spruce than others, and here is where the big spruce territory is, south of the Sol Duc River [indicating on map]: a territory that is not tapped by the straits country. There is a splendid stand of spruce at the headwaters of the Hoko, where there are 300,000,000 feet. That would come out to Clallam Bay. The gentleman would build down the Hoko to Clallam Bay, a distance of 15 miles. There is a splendid stand of spruce, but it is only a drop in the bucket compared to this area southwest of Lake Pleasant.

Mr. LEA. You mean the Government railroad?

Mr. CARRIGAN. The Government Railroad No. 1. But I want to make this clear. I am not here for or against anybody; I am here

to tell you just what little I know about this, because I belong to that country and I know the country. I know that this road as worked out under Col. Disque's plan, or whoever was responsible for it, would have drained that entire country of spruce. The logging roads could have been built from that at any point, short, temporary roads existed to the timber along those lines; but that line is the axis of the country. Everything over there after you get to the divide drains to it. It is a water grade road and it is so strategic that you can drain the entire spruce territory from that road, and there is not any scheme that could be proposed to better it.

Mr. LEA. What do you think about the advisability of building this road as good as it was, as compared with building a cheap road to answer a temporary purpose?

Mr. CARRIGAN. I do not think there is any question about building it as good as it was built, because the war was an incident—although a bloody one—that would last only two, four, or five years, while that country is the biggest timber country in the world, and the finest. It would have been a crime to waste money on a temporary proposition when a permanent road could have been put in that would represent to the Government a valid asset when the war was over, instead of a pile of junk.

Mr. LEA. Do you believe there will be a practical sale for that?

Mr. CARRIGAN. I think the sale of that road is very seriously handicapped by its physical tying with the Milwaukee road. If that road had been started from Port Angeles and carried on to its present location, I think you would have—I will not say dollar for dollar, because there was excess costs unavoidably connected with rushing the work in war time. There was a constant cry that you must get any land, any spruce; the whole country was yelling for spruce, and the country did not care a damn about cost. Speed, speed, speed; that is what we were all hearing, what we were all demanding, and were cursing the men that did not say speed. So, while nobody will question that it cost 50 per cent more than peace-time construction, everybody was satisfied, and a wonderful record was made. Those men worked miracles; they made good. It is a splendid piece of construction, and if it was an independent line, not hooked in where it practically has got to fall into the hands of the Milwaukee road, I would say that under normal cost conditions you would have a 100 per cent investment.

Mr. LEA. How about the practicability of severing this connection with the Milwaukee and running it on?

Mr. CARRIGAN. That could be made at a point somewhere on the Lyre River. That physical connection could be severed at some point where you could make grade and come in about 3 miles southwest of Joyce, by breaking the physical connection of the Milwaukee road about 3 miles southwest of Joyce and proceeding thence by a practicable grade along the hillside directly north of the north end of Lake Crescent to and through the valley by way of Lake Sutherland, down the Indian Valley eastward to the Elwha River, and thence into Port Angeles on a grade heretofore established as entirely practicable, from the east end of Lake Crescent to Port Angeles. If you did that the Government would have a piece of railroad worth 100 per cent of ordinary peace-time construction, opening up in the right

way, on the right grade, and in the right place, the finest and biggest body of timber in America.

Mr. LEA. That would be practically the road that was selected by the Port Angeles—

Mr. CARRIGAN. No; it would not. Their road comes from Port Angeles by the way of the Elwha River, through Indian Valley, along the north shore of Lake Sutherland and then southwesterly through the divide between Lake Sutherland and Lake Crescent to the south shore of Lake Crescent, thence along the south shore the entire length of the lake to a point which would be common to the Government road at station 23, or $2\frac{1}{4}$ miles west of the west end of Lake Crescent. If that physical connection was broken there the Government would have a magnificent independent line. You can see the wisdom of building the way they built, instead of building a temporary logging road which would not have served permanent purposes. And this country is worthy of permanent construction. There is not any country richer on the face of the globe, fine farming land when the timber is removed, and it is an empire. Clallam County alone is bigger than the State of Rhode Island, and I think the wisdom of putting in permanent construction is beyond assail.

Mr. LEA. About Clallam Bay what shipping facilities are there now?

Mr. CARRIGAN. Not a damn thing.

Mr. LEA. There is no way of shipping in there for railroad construction?

Mr. CARRIGAN. The dock is here [indicating on map], and I have been there when we could not land at all; we had to throw the mail sack off and take a chance of its landing in the sea, which it frequently did, and time after time I have not been able to land from the steamer at Clallam Bay. There is a westerly swell that comes in from the Pacific, that bangs in there to beat the band. There is nothing there but a little jerkwater town. There is a chance for some protection over on the west side, but very small. It is not a fine commercial harbor like that at Port Angeles.

Mr. LEA. On the question of towing, you have seen a good deal of those conditions there?

Mr. CARRIGAN. I have seen them doing the skirt dance, when not a thing but a float would live, and they do not go out in that kind of weather. If they tell you they have gone out there, they have done it because they have picked their weather. There are weather stations all along the way, and they go over the chart when the weather is threatening and they can tell 48 hours ahead about the weather, and they do not start out with a tow; they stay ashore, and they pick the weather and get through. Michael Earles told me himself he had lost enough timber logs towing between Port Crescent, which is a very much shorter and simpler tow, only about 14 miles. He had a big logging camp at Port Crescent, the Puget Sound Mills Co. had a big lumber camp at Port Crescent; that was before the Milwaukee got through, and then they abandoned townig from Port Crescent, 14 miles away. They had their big mill at the head of the bay, but it was so risky and the loss so great that the Puget Sound Mills, which is the Charles Nelson Co. now, absolutely abandoned logging from all this country by tow, and are putting the logs on

the railroad to-day, and have been doing so ever since the road got through.

Why? If they could save a dollar a thousand by towing, why would they not do it? They had the logging railroad to the bay; they had docks there and bunkers, every possible facility there, and thousands of dollars invested to get logs to the bay. If they could save a dollar a thousand by towing from Clallam Bay, why was it not a much better proposition—there is a 75-mile tow—why was it not better, with 14 miles, with a chance to go into fresh water to break the tow, if they could save a dollar a thousand, why did they not do it, instead of throwing away their vast investment on a towing basis, instead of to get their logs on the road?

Mr. LEA. Going back to the interest of the Milwaukee in this road: Is what you have said in that respect intended to be a denunciation of the Milwaukee for wanting to build this road?

Mr. CARRIGAN. No, sir.

Mr. LEA. I want to know if the fact that the Milwaukee is going to be benefited is any reason why the Government should not have built this road?

Mr. CARRIGAN. No; not at all. They could have done just one thing better. The question was asked what was the sense in building the 20 miles of road from Port Angeles to Lake Crescent when those 20 miles were already in operation, when men were scarce, materials high and difficult to get. That was the reason for cutting out the continuous line from Lake Crescent to Port Angeles. One was very hard to overcome when speed was the governing factor, and time was the essence of the contract, and when lives were at stake. There was no way of getting around that argument. It was a straight argument, as far as the Milwaukee was concerned. It is not a denunciation of the Milwaukee; it is a corporation organized for the purpose of making money; it owns a great transcontinental system. It is the first and only railroad in the richest timber country in the world. It naturally does not want competition. You can not blame them for that. They may hurt some of us in the Southwest by having a strangle hold on the country, but, looking at it from a corporation point of view and a business point of view, the Milwaukee can not be criticised for wanting to hold what it has; and if anything is done, in any way to minimize that danger as much as they can, by forcing the physical connection with their road, it is a perfectly specious argument, hard to overcome, that, while there are going to be two rails in their part of the country tying at this point, they are not of any use to anybody in that condition but the Milwaukee. I would call that good business generalship.

Mr. LEA. Now, looking at it from the other standpoint, I ask you this question—

Mr. CARRIGAN. Their interests are there and they will fight hard and fight everything to get into that country. If it was the Northern Pacific or the Oregon & Washington they would be doing exactly the same thing. They are all alike, as far as that is concerned.

Mr. LEA. Now, looking at the other side of it, what would you say as to whether or not the Government interests were sacrificed by building this line as they did and connecting it with the Milwaukee, from the standpoint of spruce production?

Mr. CARRIGAN. Well, that is a big question. You could say that the Government interests were actually served by saying that 20 miles of construction, I would say that in the initial stages—we will divide this program into two parts—that in the first part of the program the Government interests were subserved beneficially by starting the Government railroad No. 1 from the Milwaukee main line at Joyee, because it absolved the Government from the need of building 20 miles of road and the furnishing of that equipment, and diverting that number of men to that at that moment useless construction. Up to that point I would say that the Government's interests were beneficially served. But looking to the final answer—to the end of the war and to the disposition to be made of that property after the war—if the Government is placing any value on that war-time production or construction, then the Government's interests have been injured, because that road, in its present state, is valueless for private individuals.

Mr. LEA. Its salvage value is decreased by making this connection with the Milwaukee?

Mr. CARRIGAN. Vastly, vastly.

Mr. LEA. In other words, in the hands of other parties.

Mr. CARRIGAN. If that other 20 miles had been built and the line carried into Port Angeles you would have had an independent line, useful to anybody competent to buy, own, and operate a railroad, without interference with another transcontinental railroad. No matter what the name of the railroad, I do not care whether it is the Milwaukee, or the Northern Pacific, they are all alike to me—they would all do the same thing, as far as that is concerned. The Milwaukee was only doing that to conserve its interests and protect its interests, no matter whom it hurt. The Milwaukee was not attempting to do an unselfish thing in its attitude. They were absolutely selfish. That might be called good business, but in the last analysis the Government has been vastly injured by that one fact, the physical tie-up with just one road. Now, that can be severed. That does not mean that you or I could not form a combination to buy that road and disconnect that connection and put in that 20 miles of separate road. That can be done.

Mr. LEA. I think there is one more question. This Port Angeles mill, as I understand it—do you know what its capacity is?

Mr. CARRIGAN. Four hundred thousand a day.

Mr. LEA. Is that on an eight-hour basis?

Mr. CARRIGAN. An eight-hour basis.

Mr. LEA. About what would be its capacity on a 24-hour basis?

Mr. CARRIGAN. Why, I suppose possibly a million.

Mr. LEA. It would not be three times that amount?

Mr. CARRIGAN. I doubt it very much. Maybe I am wrong. I say three shifts, a million would be a fair output to expect from three shifts. Now, that is another splendid piece of construction.

Mr. LEA. It is?

Mr. CARRIGAN. Yes, sir; absolutely.

Mr. LEA. Reverting again to this question of whether or not the Government's interests were sacrificed by this road that was built, what would you say as to whether or not the Government interests were sacrificed during the war, for war purposes?

Mr. CARRIGAN. In the matter of the construction of the road?

Mr. LEA. Yes. That is, the Government is endeavoring to accomplish its war purposes by constructing this road; do you think it was built at the most available route?

Mr. CARRIGAN. Yes, I do.

Mr. LEA. But from the standpoint of salvage it is not of as much value as it would be if it was an independent line all the way?

Mr. CARRIGAN. Yes; that is correct. The Government when it planned that road, I know, was figuring on the war lasting two years, or possibly three, and that they expected to really put the finishing touch to the war by means of airplanes. The Government had to have not only enough spruce for ourselves but for our allies. This was to be the chief source of supply, this was the big dramatic operation. This was the final solution of our spruce problems, and it wanted a line of railroad there that would stand the grief and deliver the goods. It was put in right and it was put in the right place and it was built in the right way, no matter what the cost. It is a magnificent piece of construction and, to that extent, the Government has got a bully piece of property if it was not for the fact that the Milwaukee has a strangle hold on it at Joyce.

Mr. LEA. Now, is there anything else of importance that you want to say? It is getting pretty late.

Mr. CARRIGAN. No, unless you want to ask me something.

(Witness excused.)

(Thereupon, at 6.50 o'clock p. m., the committee adjourned until Tuesday, September 2, 1919, at 10 o'clock a. m., at Portland, Oreg.)

SUBCOMMITTEE No. 1 (AVIATION)
OF THE SELECT COMMITTEE ON
EXPENDITURES IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES.

Portland, Oreg., August 29, 1919.

The subcommittee met at 10 o'clock a. m., Hon. James A. Frear (chairman) presiding. Also present Hon. Walter W. Magee and Clarence F. Lea.

Mr. FREAR. The committee will come to order. I will ask that the telegram sent to Secretary Newton D. Baker be inserted at the beginning of this hearing, purely as a matter of convenience for reference purposes.

(The paper above referred to is copied in the record, in full, as follows:)

HON. NEWTON D. BAKER,

Secretary of War, Washington, D. C.:

In accordance with our promise to you for a report from this committee in reference to the public sale of properties owned by the Government in the States of Washington and Oregon, acquired in the production of spruce during the war, we hereby respectfully report.

Practically all Government spruce production, airplane property, is advertised for sale September 2, 1919. The estimated salvage on railways and mills, given at the hearings, of the Spruce Production Corporation is less than 10 per cent of the actual cost. For illustration: The expenditures for railroad construction undertaken by the Spruce Production Corporation, according to its report, reach \$8,742,100. The salvage is estimated at \$750,000, or less than 9 per cent. The sawmill built by the Siems-Carey-H. S. Kerbaugh Corporation cost the Government \$2,395,345, and according to the same authority its salvage value is \$239,000 or only 10 per cent of its cost. On this estimate a settlement has been made with Great Britain. Those directly responsible for excessive expenditures used to advance large business interests should be held to a strict legal responsibility.

A sale of the different mills, railways, and other property, costing approximately \$20,000,000 is advertised in Portland, Oreg., for September 2, 1919. The recent sale by the War Department to the Curtiss Aeroplane Co. of \$20,000,000 of aircraft material for \$2,700,000, or 13 per cent of the cost, suggests the importance of preventing further unnecessary loss to the Government.

Evidence before this committee discloses that on the Olympic Peninsula, near the extreme northwest part of the State of Washington, a large tract of undeveloped timber is located, reaching several billion feet in amount, of which nearly 20 per cent is spruce, a considerable portion of which is suitable for airplanes. This timber is found in about a dozen townships located west of Lake Pleasant, and from 10 to 20 miles distant from the Pacific coast. This timber is also located a like distance from the Strait of Juan de Fuca. It is about 10 miles west of Port Angeles and 80 to 100 miles north of Grays Harbor on the Pacific, one of the largest milling centers in the country.

Prior to the beginning of the war the Chicago, Milwaukee & St. Paul Railroad had been extended from Port Angeles to Deep Creek on the straits, a distance of nearly 40 miles. The Milwaukee had also made surveys further west and south in an effort to reach the undeveloped timber section and in its attempt

to get to Grays Harbor. The Northern Pacific Railroad from Grays Harbor also had been reaching northward for this same undeveloped timber section and had reached Moclips, on the coast, about 30 miles north of Grays Harbor, near the south line of the Quinault Indian Reservation. This reservation was heavily timbered and on a direct line to Lake Pleasant timber.

During the war the Milwaukee Railroad asked the Railroad Administration for permission to extend its line west from Deep Creek toward this Lake Pleasant timber, but was refused as not a necessary war measure. When spruce activities developed for airplanes the extension of the Milwaukee road from Deep Creek, along the strait to Pysht and thence to the Lake Pleasant timber was urged.

The Spruce Production Division, a Government agency controlled by Col. Disque, in May, 1918, granted two contracts to the Siems-Carey-H. S. Kerbaugh Corporation, of New York. One, of \$25,000,000, was for spruce fitches at rates and time of delivery fixed in the contract. The second was a cost-plus contract to build a railroad connecting with the Milwaukee to reach Lake Pleasant for the purpose of hauling the spruce mentioned in the \$25,000,000 contract. When this extension of about 36 miles length was built, at a cost of over \$115,000 dollars per mile, or over \$4,000,000 in the aggregate, it connected with the Deep Creek line of the Milwaukee near Joyce, 20 miles west of Port Angeles. From thence the road struck south through Lyre Canyon to Lake Crescent and thence west to Lake Pleasant.

Practically no spruce is found on this route until Lake Pleasant is reached, near the coast, on the western outskirts of the large timber tract already described. The construction of this road presented most difficult engineering problems, and several slides have occurred, particularly along the base of the mountains surrounding Lake Crescent, one of which has just been removed.

A high bridge was also washed out since construction, one of several across the Sol Duc River, showing the general character of the route chosen ostensibly to reach the spruce.

The situation is further disclosed by a letter from Congressman Johnson, of Hoquiam, on Grays Harbor, which was placed in the record, wherein the Northern Pacific Railroad was stated to have apparently abandoned the race to the Lake Pleasant timber because it was understood the Government had advanced \$5,000,000 to the Milwaukee road to build a from its Port Angeles branch.

The Siems-Carey-H. S. Kerbaugh Corporation's railroad was almost wholly built by 4,000 soldiers furnished by the Spruce Division and Spruce Corporation, working in eight-hour shifts, day and night, and was nearly completed when the armistice was signed.

Committee hearings have already disclosed that among about a dozen railroads built by the Government spruce officials this road over the Olympic Mountains, known as road No. 1 or the Lake Crescent route, was built on a cost-plus contract at an exorbitant expense per mile. The cost of \$4,000,000 was exclusive of equipment, but included the construction of bridges, tunnels, and cuts, and is unprecedented in logging-road construction and built ostensibly to connect the Chicago, Milwaukee & St. Paul system with a tract of spruce nearly 40 miles distant.

Hearings show that this new line joins the Milwaukee Railway at a point about 18 miles west of Port Angeles on the Deep Creek line, making necessary a 54-mile haul to tidewater for the nearest timber on that line.

A 14 to 15 mile railway from the same timber to Clallam Bay where large logging operations and good logging railways exist could have been built for from \$300,000 to \$500,000 in 1918 and would have placed logs far more quickly at the mills, prevented a waste of \$3,500,000 for a useless railway, could have been built in less than one-half the time and would have saved a half million dollars in freight charges on the 500,000,000 feet of timber contained in the Siems-Carey-H. S. Kerbaugh Spruce contract.

These facts upon the evidence are beyond controversy and it appears that the line was primarily built not to carry spruce logs, but as an extension of the Milwaukee railway for commercial purposes and as a short cut to Gray's Harbor.

As stated above, the extension of the Milwaukee road runs near the north coast of the Olympic Peninsula to a point on Deep Creek and passes through a fair stand of spruce timber and would reach other holdings within 5 miles. An extension of this road could have been built at a small cost to the same

terminal reached at Pleasant Lake, in half the time and on a comparatively easy grade. This Deep Creek line was advocated April 10, 1918, by the Chief Signal Officer, supported by the Chief of the Spruce Production Division, Col. Disque, also by the Pacific coast committee of the Aircraft Board, also by the Aircraft Board in Washington, which facts have all been set forth in evidence before the committee.

You, as Secretary of War, also approved the Deep Creek route, April 24, 1918, a few days before the other route was adopted and work started thereon. In a report made by Gen. Frank McIntyre of the General Staff appears the following quotation from that letter:

"A virgin stand has been located in the northwestern part of the State of Washington, sufficient to meet the necessities of the next two or three years. The nearest railroad is the branch of the Chicago, Milwaukee & St. Paul, running west from Port Angeles. This branch now terminates at Deep Creek.

"The question of a railroad to reach this timber has been carefully considered and it is the unanimous opinion of the Pacific coast committee of the Aircraft Board that the best solution of the question is the extension of the Chicago, Milwaukee & St. Paul Railway from Deep Creek to Forks. This extension is included in the plans for the future development of the Milwaukee and the route has already been surveyed.

"It is the opinion of the War Department that this railroad should be built. * * *"

According to the testimony of Col. Disque, taken before Maj. Ray, in the hands of this committee, Disque consulted with the president, general manager, and chief engineer of the Milwaukee Railroad, together with other parties, and he states that all unanimously changed the route approved by the Chief Signal Officer and Secretary of War, which now makes a direct route through tunnels and over the Olympic Mountains that would materially shorten the Milwaukee line to Gray's Harbor. Col. Disque's superior officer was John D. Ryan, Director of Aircraft. Col. Disque apparently disregarded the decision of the Secretary of War. Col. Disque was advanced in rank from an ex-captain to a general in about one year.

The contract for \$25,000,000, already referred to and dated May 12, 1918, was entered into by the spruce officials through an agreement made in the East with Siems-Carey-H. S. Kerbaugh Corporation, of New York City. This corporation had no previous logging experience, but by a coincidence its reputed superintendent was Edward Donlin from Missoula, Mont., and liberal profits guaranteed in the contract were approved by John D. Ryan, Director of Aircraft, who held that position from May to December, 1918, inclusive.

A cost plus contract dated May 18, 1918, for a logging railroad to get out the \$25,000,000 worth of spruce was entered into by the same official also based on an agreement made in the east, whereby a standard gauge railroad was to be built over the Olympic Mountains.

This contract provided the road should be constructed in whatever form might prove necessary or desirable. An engineer to be employed in the work was empowered to both interpret and revise plans and specifications and all such conditions were subject to the engineer's approval, binding both the Government and the Siems-Carey-H. S. Kerbaugh Corporation without any right of appeal from his decision.

The railroad contract, dated May 18, was handed to John D. Ryan, Director of Aircraft, who approved the \$25,000,000 spruce contract, dated May 12, for which the railroad ostensibly was to be built. He refused to sign the railroad contract giving as a reason his connection with the Milwaukee road. Mr. Ryan was a member of the executive committee of the Milwaukee railroad; he was a director of the Milwaukee road, and the Secretary of War excused him from signing any approval, which formality was performed by Mr. Stettinius at the Secretary's request.

A Milwaukee road division engineer, Mott Sawyer by name, was commissioned a major and given extraordinary power of interpretation and revision of plans described in the contract. Nineteen thousand acres of timber lands belonging to the Milwaukee Railroad Co., an organization closely allied to the Milwaukee Railroad Co., are benefited by largely increased values through the extension of this same line. Mr. Sawyer was the engineer in charge of construction and is now an assistant to the president of the Milwaukee Railroad.

The following facts then appear from the testimony:

1. The Milwaukee Railroad officials and Milwaukee engineers apparently controlled the location and determination of the road that has been built.

2. The 36-mile route is not that approved by the Chief Signal Officer or the Secretary of War, and cost eight times as much as the maximum estimate for building a 15-mile road to tidewater at Clallam Bay.

3. This spruce could also have been reached by an extension of railroads from Grays Harbor on the coast or by any logging railroad built through the spruce country, or by other available routes including either the Deep Creek, the Pysht, or the Clallam routes.

4. The Lake Crescent line as constructed is of particular value to the Milwaukee Railroad as it shortens its proposed line to Grays Harbor from 30 to 50 miles, by a cut-off over the mountains. It is a \$4,000,000 road built at Government expense that will eventually form a link in the Milwaukee extension to the south along the coast. Reputable witnesses have testified before this committee that a good logging road, 15 miles long, to the same spruce could have been built in 1918 for \$500,000 from Clallam Bay and saved a 56-mile haul necessary under the Lake Crescent route.

John D. Ryan was the Government Director of Aircraft from May to December 1918, and in a position of supreme authority throughout that period, besides being a member of the board of directors and the executive committee of the Milwaukee Railroad. Mr. Ryan was president of the Montana Power Co., that holds valuable contracts for furnishing electric power with which to operate the western portion of the Milwaukee system.

Mr. Ryan approved the \$25,000,000 spruce contract dated May 12, 1918, and he knew that the construction of this railroad was for the purpose of carrying out the execution of such spruce contract.

Milwaukee Railroad officials apparently determined the route. A Milwaukee engineer built the road. Mr. Ryan personally examined the route in July, 1918. He was in a position of authority to determine all matters relating to the character or location of the road, and if necessary, was empowered to cancel any contract. His absolute power made him master of the situation from and after the signing of the spruce and railway contracts which were executed in the East.

It also appears from the evidence before this committee that two sawmills, one at Lake Pleasant and the other at Port Angeles, were being built at the time of the armistice by the Siems-Carey-H. S. Kerbaugh Corporation under their \$25,000,000 spruce contract at a cost of over \$2,000,000. The contract was automatically canceled by the signing of the armistice. These mills are now being junked by the Government with a 10 per cent estimated salvage value.

The total sawing capacity of the coast is given by the Spruce Production Corporation at 9,000,000,000 feet of timber annually upon an eight-hour day basis. This amount of production could easily have been doubled in case of necessity and was sufficient, under commandeering powers possessed by the Government, to have cut every spruce tree on the coast that could be logged and would have provided sufficient lumber for 1,000,000 airplanes if logs were to have been had, whereas, according to undisputed testimony, not one American-built fighting plane or bombing plane ever reached the battle front during our war with Germany.

John D. Ryan, in his letter to the Secretary of War submitted in the Ray investigation, conducted by the War Department, declared that the Siems-Carey-H. S. Kerbaugh Corporation's mill at Port Angeles was "absolutely necessary." This was in reply to the charge made in writing by Government Intelligence Officer Maj. Howes, that the Milwaukee Railroad was seeking to dominate the lumber industry of Washington.

Additional facts before the committee are of such importance that the proposed sale of railroads, mills, and timber tracts should be postponed until a further investigation can be had. To this end any bids received should be held subject to final decisions by the proper authorities.

It is believed from the foregoing facts that approximately \$5,000,000 of Government funds were squandered, misapplied, and converted to the prospective uses of the Milwaukee Railroad interests, and that such acts were permitted by men in positions of authority whose duty it was to prevent wasteful and unnecessary expenditures.

We would rather see this railroad and the mills scrapped than to have the Government sell them to the Chicago, Milwaukee & St. Paul Railroad for

an insignificant percentage of their cost. The facts here presented speak for themselves and further investigation may disclose conditions upon which a recovery can be had against John D. Ryan and others who are responsible for this wasteful expenditure of public funds.

JAMES A. FREAR.
WALTER W. MAGEE.

TESTIMONY OF FRANK R. PENDLETON.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Where do you live?

Mr. PENDLETON. Everett, Wash.

Mr. FREAR. You have lived there how many years?

Mr. PENDLETON. Twenty; most of the time. I have been in British Columbia off and on.

Mr. FREAR. What is your business?

Mr. PENDLETON. Lumberman.

Mr. FREAR. Logging?

Mr. PENDLETON. Logging and manufacturing.

Mr. FREAR. You have a place of business at Minneapolis?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. I happened to know that. At what point have you been logging in the State of Washington?

Mr. PENDLETON. Near Everett, Monroe, and Darrington; the camps are out in the woods, but adjacent to those points.

Mr. FREAR. You have also been lumbering in British Columbia?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. Will you please state to the committee the conditions under which you undertook the lumbering at British Columbia, and at what time?

Mr. PENDLETON. I went with the Imperial Munitions Board to help get out spruce the first part of January, 1918.

Mr. FREAR. How did you happen to take up that work?

Mr. PENDLETON. Maj. Austin C. Taylor was sent out to the coast by the imperial munition board.

Mr. FREAR. He was a member of the British Army?

Mr. PENDLETON. No. I do not know how he got his title. He never wore a uniform, and no one in our organization ever wore uniforms.

Mr. FREAR. No one in the British organization?

Mr. PENDLETON. In the spruce organization at Vancouver.

Mr. FREAR. You mean in British Columbia?

Mr. PENDLETON. Vancouver, B. C. He had the title of major, but I never knew how he got it.

Mr. FREAR. Please go on and tell us about your work.

Mr. PENDLETON. He was sent to British Columbia to see what could be done towards getting out spruce for airplane production, and I understood they needed help there from the lumbermen, and I offered my services to help get out airplane stock in any way that I could.

Mr. FREAR. By whom was he sent; what was his authority, or do you know who he was going for?

Mr. PENDLETON. He was sent by Sir Joseph Flavelle, chairman of the imperial munition board for Canada. This imperial munition board has a great headquarters in Great Britain; not a Cana-

dian concern, and they have different branches. Sir Joseph Flavelle was chairman for all Canada.

Mr. FREAR. And did they have charge of this airplane work and getting out the spruce?

Mr. PENDLETON. Yes, sir; they had charge of everything in the munition line. Then Maj. Taylor was sent out there to get this airplane stock.

Mr. FREAR. Where did Maj. Taylor come from?

Mr. PENDLETON. From Toronto.

Mr. FREAR. You were asked to take charge of that work, or did you volunteer?

Mr. PENDLETON. I volunteered.

Mr. FREAR. Where were you then?

Mr. PENDLETON. I was operating a mill and logging camp in British Columbia.

Mr. FREAR. Where?

Mr. PENDLETON. The mill is located at Red Gap, Vancouver Island.

Mr. FREAR. How far from Vancouver?

Mr. PENDLETON. About 60 miles. The railroad logging camp is at Lang Bay.

Mr. FREAR. What occurred; please explain your methods of operation in British Columbia, and how they handled the spruce question at that time?

Mr. PENDLETON. After I went over there I was appointed superintendent of production; that was the title they gave me.

Mr. FREAR. Where was your headquarters?

Mr. PENDLETON. Vancouver. We then discussed and went into details as to how to get out the spruce in the shortest order and how to get the greatest production.

Mr. FREAR. Can you tell the committee what the plan had been prior to that time, what the method of procedure was.

Mr. PENDLETON. There had not been any plans.

Mr. MAGEE. What was the date?

Mr. PENDLETON. The first part of January, 1918; I do not remember the exact date. Maj. Taylor had been there a few months, or a short time, trying to get at where the timber was located and who the men were that were capable of getting it out.

Mr. FREAR. What had been their method of securing airplane stock prior to that time?

Mr. PENDLETON. They had been buying a little from the mills, mostly in Washington.

Mr. FREAR. In the State of Washington?

Mr. PENDLETON. In the State of Washington.

Mr. FREAR. In the United States?

Mr. PENDLETON. In the United States. They were getting a little in Vancouver, but there was a very small amount being produced there.

Mr. FREAR. They were trying to get this spruce for their own use; their own needs?

Mr. PENDLETON. It was to go to Great Britain. I suppose it was for all of the Allies. I had no way of following it after it was shipped.

Mr. FREAR. Will you tell the committee what your methods of operation were after you went there, and what you did?

Mr. PENDLETON. It develops that the logging camps that were operating at that time had very little spruce. They were logging fir, cedar, hemlock, but there was no spruce to amount to anything in that district.

Mr. FREAR. Where was this district?

Mr. PENDLETON. All the way from Vancouver along the coast for 150 miles north, and what spruce was there was not of a character that would make airplane lumber. It would make pulp wood and box lumber, but it was not any good for airplanes. After having a crew of cruisers out for a long time, it developed that the only amount of spruce available in British Columbia was on the Queen Charlotte Islands, about 500 miles north of Vancouver, and about 100 miles out to sea from the mainland, across Heclett Straits. We found there was a reasonable amount of spruce there, although it was limited.

Mr. FREAR. Have you any idea as to what the stumpage was over there?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. About how much?

Mr. PENDLETON. The Government established a rate of \$6 per thousand for No. 1 logs, at \$2.50 for No. 2 logs, to be paid as the actual scale.

Mr. FREAR. At what point?

Mr. PENDLETON. That was the stumpage value; but the Government did all the scaling, so that whenever logs came out and they were scaled that was the basis of settlement, and the Government made this law and urged all the independent owners to pay the same price, so we paid \$6 per thousand for spruce stumpage, selected spruce No. 1, and \$2.50 for No. 2. That included all damage to the ground and timber, and also paid nothing for the No. 3 logs that we left in the woods.

Mr. FREAR. What grades did you use?

Mr. PENDLETON. No. 1 and No. 2.

Mr. FREAR. And \$6 was the general stumpage price?

Mr. PENDLETON. The stumpage price.

Mr. FREAR. About what quantity of timber was to be found up there?

Mr. PENDLETON. We kept cruisers out all the time, so we kept finding a few little bunches; but we figured we had enough spruce in sight to last another year on Queen Charlotte Islands, and some small bodies on the mainland, up in the same vicinity.

Mr. FREAR. Now, go on and tell the committee the procedure, please.

Mr. PENDLETON. We figured that the only possible way to get logging done was to have it done by loggers who knew their business.

Mr. MAGEE. Just what is the nature of these islands; were they occupied?

Mr. PENDLETON. Very sparsely; a few fishermen there, but it was almost unoccupied.

Mr. MAGEE. What is the extent of them?

Mr. PENDLETON. There are two large islands about a hundred miles long each. Now, that is not exact, but it is approximately correct. We figured that the lumberman was the only man that could get out the spruce. He had the equipment and the organization and he had the men, and we made arrangements then with the loggers to take their whole output, equipment, men, and everything else and move them out.

Mr. FREAR. Where?

Mr. PENDLETON. To Queen Charlotte Island.

Mr. FREAR. From the mainland?

Mr. PENDLETON. From the mainland in the Vancouver vicinity. We would go to a fir man and say, "You are logging fir, which is not a war essential at present. We want you to take your whole outfit and move to Queen Charlotte Island and get out spruce. We will transport it for you and give you the work and put your stuff back where you were when you started."

Mr. FREAR. How did you come to make your orders; what was the machinery?

Mr. PENDLETON. The basis?

Mr. FREAR. The regulations?

Mr. PENDLETON. In consultation as to what was the best method of getting at that.

Mr. FREAR. Who was consulted in regard to that?

Mr. PENDLETON. Maj. Taylor, as director of airplane production; H. R. McMillan, assistant director; and myself.

Mr. FREAR. Did you also discuss the matter with the loggers?

Mr. PENDLETON. Yes.

Mr. FREAR. You took them into consultation to find out what was the most effective means of getting out the spruce?

Mr. PENDLETON. Yes. They have a British Columbia loggers' association and a British Columbia lumbermen's association, and we consulted with both of those bodies.

Mr. FREAR. Before you give these regulations what occurred after the regulations were established?

Mr. PENDLETON. The men simply pulled up their mills and put them on barges.

Mr. FREAR. You mean the loggers?

Mr. PENDLETON. Yes; and we towed them north and put them to work on these islands, and they got out the spruce. Right along there, do you want the basis of our prices, etc., that were paid then?

Mr. FREAR. I would be glad to get everything.

Mr. PENDLETON. No one knew what it was going to cost to operate in that country, so in order to take what we thought was a fair basis we took the price that logs were then selling for in the market and agreed with these loggers that we would move them north at our expense, and back again, and pay them the market price for logs, less the price for stumpage. We would secure the stumpage for them. The price at that time was \$28 for No. 1 logs and \$16 for No. 2 logs, spruce logs.

Mr. FREAR. You furnished the stumpage?

Mr. PENDLETON. Furnished the stumpage, but charged it to them.

Mr. FREAR. And that came out of the price?

Mr. PENDLETON. Out of the price. We had to get part of that from the Government, and we had to take it up with owners all over

the country, so the Munition Board figured they could get that. In case a man owned timber, he could go and buy it if he had the price.

Mr. FREAR. You refer to the stumpage?

Mr. PENDLETON. To the stumpage.

Mr. FREAR. What amount of timber, spruce material, was being produced when you first went there in January?

Mr. PENDLETON. There was not any.

Mr. FREAR. None at all?

Mr. PENDLETON. A little bit of lumber was being bought by the mills, less than 100,000 feet per month, of spruce lumber for airplane purposes.

Mr. FREAR. Now, please tell the committee how your work advanced, if at all?

Mr. PENDLETON. It took us two or three months to get the camps moved north. Heckett Straits is considered by mariners about the worst piece of water on the British coast. It is nearly 100 miles wide, and the winds blow down through there, and it is shallow water, and the result is that a great many times we would be tied up in getting the scows across with the machinery. So it took three months before the loggers got in there and built their camps and roads and got to operating. So that through January, February, and March very little was coming in. In April they commenced to do a little better, and kept increasing until the last month we produced, delivered, almost 8,000,000 feet of finished airplane lumber.

Mr. FREAR. That is, in a month?

Mr. PENDLETON. In the month of November.

Mr. FREAR. The armistice occurred in November.

Mr. PENDLETON. In October, about 4,000,000. After the armistice was signed they told us to keep on and finish out that month, that they considered they could still use the airplane lumber.

Mr. FREAR. In the month of November you produced almost 8,000,000 feet of finished airplane stock?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. What was the number of logs, and the number of spruce logs, that you got out?

Mr. PENDLETON. All together a little over 200,000,000 feet, and for the last month about 24,000,000 feet.

Mr. FREAR. Twenty-four million feet of logs, by this procedure, working through the regular loggers' organization there?

Mr. PENDLETON. Yes.

Mr. FREAR. How were the logs brought down from the islands, or were they brought down, and where were they sawed up?

Mr. PENDLETON. A part of them was taken across to the mainland. They were taken to Vancouver and sawed up in mills that were established there. In two cases there were sawmills and in two other cases large pulp mills.

Mr. FREAR. They were in existence before?

Mr. PENDLETON. Yes. The plan was to use small mills established on the islands and take the lumber across in barges.

Mr. FREAR. What distance did you say you rafted these logs to get them to the mills?

Mr. PENDLETON. From 100 to 175 miles.

Mr. FREAR. They were rafted?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. How were they rafted?

Mr. PENDLETON. They were rafted in what is called the Davis raft. They would lay a bottom of logs and interweave them with cable, and then load in the top. That would bend the center down, and then they would pile them on top and put other cables over the top, so it made a kind of cigar-shaped raft, all bound with heavy iron cables.

Mr. FREAR. That is a well-recognized method of rafting, similar, I presume, to what the loggers use over at Clallam Bay, or do you know?

Mr. PENDLETON. It is the same thing. That is a patented method, and they use the same thing.

Mr. FREAR. How many of those rafts did you bring over?

Mr. PENDLETON. I am not sure about the number.

Mr. FREAR. Just in general, approximately?

Mr. PENDLETON. I would think in the neighborhood of 75 rafts.

Mr. FREAR. Seventy-five rafts?

Mr. PENDLETON. Between 75 and 100.

Mr. FREAR. And did you have any accidents to these rafts?

Mr. PENDLETON. Yes, sir; we lost the second raft we towed, on account of inferior cable being put on.

Mr. FREAR. That is, you were learning how to handle the matter, and the other rafts got over?

Mr. PENDLETON. One other raft of rejects was lost later on.

Mr. FREAR. And what became of the other rafts?

Mr. PENDLETON. They all went through.

Mr. FREAR. All went through properly?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. When did you cease operations there?

Mr. PENDLETON. The last of November.

Mr. FREAR. 1918?

Mr. PENDLETON. Yes; 1918.

Mr. FREAR. You said you occupied what position?

Mr. PENDLETON. Superintendent of production for the British Government in Canada.

Mr. FREAR. And you were an American citizen during this time?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. And you went there because of your own experience and your volunteering, as I understand?

Mr. PENDLETON. Yes, sir; I happened to be over there, so I thought I could do some good there.

Mr. FREAR. I wish to ask you, because I know your own frame of mind on this subject, and do not wish to state it, if you received any recognition for what you had done there, because I feel the committee is entitled to know that, irrespective of your own personal wishes.

Mr. PENDLETON. I received several very nice letters and an English sovereign in payment for my services.

Mr. FREAR. Will you show me the letter that was received by you which was shown to me yesterday, and which I know you showed me with some reluctance because of your own feeling of modesty.

Mr. PENDLETON. Is that necessary?

Mr. FREAR. I think it is advisable for the committee to have it, to show the position in which you were acting and how you were

regarded by the British Government. The committee desires that, and I recognize from what you have said in the past that you prefer not to use it.

Mr. PENDLETON. It is a personal letter [handing letter to the chairman].

Mr. FREAR. This reads:

IMPERIAL MUNITIONS BOARD, VANCOUVER, B. C.,
OFFICE OF DIRECTOR,
DEPARTMENT OF AERONAUTICAL SUPPLY,
August 18, 1919.

MY DEAR MR. PENDLETON: The conclusion of settlement of contracts as an aftermath of our production campaign brings to a final termination the activities of this department, and the consequent dissolution of our organization.

Will you, therefore, permit me to record the deep appreciation I share with the chairman and officers of the imperial munitions board in your excellent contribution of service, to which is largely due the gratifying results obtained by this department.

In the early stages of formulating the best mode of procedure to obtain a rapid aeroplane spruce production your intimate knowledge of coast lumbering conditions allowed me to lean heavily on your judgment, my admiration and respect for which has grown greater as succeeding production and settlement difficulties were supervised by you.

I am sure you will always be able to look back with gratification on your intimate association with the work of producing aeroplane lumber to meet a national crisis. My regret at this the termination of our daily personal association is tempered with the pleasurable memory I shall always hold of the privilege of having you associated with the board in the production of this essential war material, and I am also deeply sensible of the sacrifice of your own business interests and home comforts to gratuitously devote your time and energy to important national work in the production of this essential war material.

Assuring you of the board's, and my own personal sense of deep obligation for a signal service well and faithfully performed by you,

Most sincerely,

AUSTIN C. TAYLOR, *Director.*

Mr. F. R. PENDLETON,
Straits Lumber Co., Red Gap, B. C.

Did you receive material compensation for your services there; and if so, in what form?

Mr. PENDLETON. Nothing except an English sovereign; instead of a dollar a year they gave me a sovereign.

Mr. FREAR. We have dollar-a-year men here in our country. Have you the sovereign with you?

Mr. PENDLETON. Yes, sir [handing coin to the chairman].

Mr. FREAR. This is all that was given to you, an English sovereign, reading on the reverse side: "Department of Aerial Supplies to F. R. Pendleton in payment of services rendered. Austin C. Taylor, director."

That is worth more to you, I suppose, Mr. Pendleton, than whatever compensation could have been offered you by the Government?

Mr. PENDLETON. Yes; I was not interested to take a job for compensation.

Mr. FREAR. You were in active logging and lumber operations at the time you undertook this work, were you?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. At that time at Vancouver, I believe you said?

Mr. PENDLETON. My headquarters were at Vancouver, but the mills were on Vancouver Island.

Mr. FREAR. Do you know whether or not the plan pursued in British Columbia was adopted in any particular by this Government, or do you know the conditions here?

Mr. PENDLETON. Only by hearsay. I understand that it was not.

Mr. FREAR. Were you ever asked or invited to contribute in any way to the production of spruce by this organization that had its headquarters in Portland?

Mr. PENDLETON. No, sir. I attended several meetings down here to see if we could get some ideas that would benefit us over there.

Mr. FREAR. When was that?

Mr. PENDLETON. That was during the year 1918, all during the year.

Mr. FREAR. While you were carrying on your operations over there. What aid did you get?

Mr. PENDLETON. I did not find anything here that was of material benefit to us, as they seemed to be doing their business in a different way.

Mr. FREAR. Your people were working in cooperation with the real lumber interests and the loggers there?

Mr. PENDLETON. Yes.

Mr. FREAR. Did you find that situation here?

Mr. PENDLETON. No; I did not. I found that the loggers were very much dissatisfied here and humiliated because they had not been allowed to go in and do this work.

Mr. FREAR. Was their active cooperation here evident at the time when you were here?

Mr. PENDLETON. I would not be capable of judging as to that in the short time I was here.

Mr. FREAR. But in your operations up there did the Government itself undertake to erect sawmills and to build railroads and do things of that kind, or what was done?

Mr. PENDLETON. The only thing we did in the way of building was that we built one short piece of railroad, about 6 miles long.

Mr. FREAR. Where was that?

Mr. PENDLETON. On Nituat Lake, on the west coast of Vancouver Island. There was a body of spruce in there that had not been developed in any way, and we realized that if the war lasted another year we would have to get into every piece of spruce possible; so in order to be prepared we graded that piece of railroad ready to open up and put loggers in there if necessary.

Mr. FREAR. I do not know whether you know or not, but I am asking you what the average cost of a railroad like that would be per mile at that time?

Mr. PENDLETON. About \$6,000 per mile, without putting on the ties and rails.

Mr. FREAR. And what would that add to it about, with, say, 60-pound rails?

Mr. PENDLETON. It would probably be as much more; probably \$15,000 per mile.

Mr. FREAR. That would be the amount that was paid by the Government for those 6 miles of which you speak?

Mr. PENDLETON. Yes, sir; something in that neighborhood.

Mr. MAGEE. If completed?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. Was it completed?

Mr. PENDLETON. No; it was not. It was just graded.

Mr. FREAR. Would you have thought \$115,000 a mile to have been a little in excess of what was really necessary for getting out logs?

Mr. PENDLETON. Yes, I would.

Mr. FREAR. Would you have thought \$90,000 a mile was more than would ordinarily be charged for getting out logs?

Mr. PENDLETON. Yes.

Mr. FREAR. Or \$70,000 a mile?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. The testimony before the committee is that such contracts have been paid by the spruce production corporation in building railways in the States of Oregon and Washington, and that is the reason for my asking the question.

Mr. PENDLETON. Maybe I did not make myself exactly clear as to the railroad. That was let on a contract. The board went ahead and did that without knowing exactly what use they were going to make of it later, but they let that contract for the work.

Mr. FREAR. What labor was employed; what was the method of employing labor in British Columbia?

Mr. PENDLETON. Every logger employed his own labor.

Mr. FREAR. How many soldiers were employed in doing this logging?

Mr. PENDLETON. None at all.

Mr. FREAR. In British Columbia were any soldiers, so far as you know, let out, hired out to do commercial logging?

Mr. PENDLETON. None at all. There was not a man in uniform in the spruce production department there.

Mr. FREAR. Where were the men who were in uniform, who went from British Columbia, so far as you know?

Mr. PENDLETON. Overseas.

Mr. FREAR. If you were advised that approximately 30,000 soldiers were in Portland and in this lumber section engaged in logging, what would you think of that as a method that might have been pursued up in British Columbia; would it have been necessary there?

Mr. PENDLETON. No, sir.

Mr. FREAR. And you got out how many million feet of lumber the last month?

Mr. PENDLETON. About 8,000,000.

Mr. FREAR. How many feet of logs?

Mr. PENDLETON. Between 20,000,000 and 25,000,000; I can not state the exact amount now.

Mr. FREAR. You got out between 20,000,000 and 25,000,000 feet of logs last month with this simple method of procedure that you have spoken of?

Mr. PENDLETON. Yes, sir. I might say right there that our theory was that in order to get out this lumber, to get this thing done quickly, we should go to the men that were doing it in small units. We let, I think, one hundred and forty-odd contracts to loggers. Some of them had only two men at work, but every man that was on the ground, the beach combers, and the hand loggers, and fishermen, and everyone else was used. Everyone that had a few loggers was doing the work, on the theory that a great big unit would not be as econom-

ical and that you could not get as quick action. We did the same thing with our sawmills. The sawmills on these islands were all small. A few men went up there on their own responsibility and put in mills. Where they did not, we secured small mills and induced them to go north. We would move them the same as we did the loggers; we would transport them up to Queen Charlotte Island, and pay them the cost of installing their machinery. Then we would sell them the logs at actual cost—what they cost us. We would buy back the airplane lumber, which left them with the commercial lumber to dispose of in a commercial way, and when they were through we brought their mills back to where they were re-located, so when they were finished we had no equipment to speak of on hand and no lumber.

Mr. FREAR. These loggers, you say, were small operators as a rule?

Mr. PENDLETON. Most of them.

Mr. FREAR. What would you say about logging operations like those conducted at Clallam Bay—the Goodyear people and the Merrill & Ring operations conducted at Pysht Creek, the other at Clallam Bay, with whom I presume you are familiar—what would you say about their operations; are they small or large?

Mr. PENDLETON. I would call those good-sized operations.

Mr. FREAR. You are acquainted with Mr. Butler, of Everett?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. What is his standing in that community?

Mr. PENDLETON. Very good.

Mr. FREAR. Is he a logger?

Mr. PENDLETON. He does not do the logging himself, but he is interested in a number of logging concerns, and they are all practical operators.

Mr. FREAR. He stated that to the committee, substantially. If men of that kind had been brought into the production of spruce in this country, with your knowledge of conditions, you living in Everett, and knowing of the methods that have been pursued here, what would you say as to the increase in the production of airplane spruce lumber?

Mr. PENDLETON. I would think they could do it better than anyone else.

Mr. FREAR. You succeeded in British Columbia getting the results in the manner you have described?

Mr. PENDLETON. Yes. I might say right there that we had several parties who wanted large contracts up there on the coast, but we did not see any reason for giving such contracts.

Mr. FREAR. Did you let any contracts on a cost-plus basis?

Mr. PENDLETON. None.

Mr. FREAR. None whatsoever?

Mr. PENDLETON. None.

Mr. FREAR. I will say in justice to you that when I met you yesterday in this city you had no idea of testifying, but stated you were going to leave to-day, and, having known you for a number of years, I asked you if you would not briefly testify to the matters that you have stated here before leaving, and the committee has remained over for that purpose. I believe Mr. Magee has one or two questions to ask.

Mr. MAGEE. You spoke of 8,000,000 feet of finished product?

Mr. PENDLETON. Yes, sir.

Mr. MAGEE. In what form is that, in the form of flitches?

Mr. PENDLETON. No; not flitches. The definition of flitches as used here is where they take a wide slab off a log, leaving the bark on two sides, and then resawed in a cut-up plant. We have no resaw plant. The mills resawed those at their own plants, and it was made up in deals running from 2 by 4 up to 3 by 12 or 14.

Mr. MAGEE. You speak of lumber here as a thousand feet, say?

Mr. PENDLETON. Yes, sir.

Mr. MAGEE. I want to ask whether this 8,000,000 feet of that character, made up of a thousand feet of lumber, or whether it was a finished product ready for airplane construction?

Mr. PENDLETON. Ready to go to the factories.

Mr. MAGEE. Suppose that amount of finished product was in what you ordinarily call so many million feet of lumber, how many million feet of lumber to make that finished product comprise?

Mr. PENDLETON. That depends altogether on the class of logs you are cutting. With some logs you would get as much as 25 per cent airplane lumber out of the logs, and with some you would not get more than 2 per cent.

Mr. MAGEE. I do not know that you exactly understand what I mean. Suppose a man had a contract to provide 10,000,000 feet of spruce lumber in January, and 12,000,000 feet in February, and so on; that, I assume, would not be regarded as the finished product?

Mr. PENDLETON. No; it would depend on his specifications.

Mr. MAGEE. Suppose it was not the finished product. You spoke of getting out 8,000,000 feet; did you mean 8,000,000 feet of finished product?

Mr. PENDLETON. Yes, sir.

Mr. MAGEE. Can you give the committee an estimate of how many feet of lumber, in ordinary parlance, that would be?

Mr. PENDLETON. No; I cannot; because you might take one raft of logs and get 25 per cent that would make finished lumber, and the next raft would be full of knots and you would not get but 5 or 10 per cent. So it would depend altogether on the class of logs you were cutting.

Mr. MAGEE. It would be approximately three or four times that amount?

Mr. PENDLETON. Yes.

Mr. MAGEE. To get 8,000,000 feet of finished product it would take 25,000,000 or 30,000,000 feet of lumber?

Mr. PENDLETON. It would in our district. In poor districts in some cases it would be ten times.

Mr. MAGEE. It might take 80,000,000 feet of spruce lumber?

Mr. PENDLETON. Yes; it would be 80,000,000 feet of spruce lumber if we had taken the logs coming from regular operators around Vancouver. The airplane lumber saved out of that ordinary run of logs was less than 5 per cent.

Mr. FREAR. Naturally, you developed all the new territory?

Mr. PENDLETON. Yes.

Mr. MAGEE. You spoke of rafting logs 175 miles. I understood you to say at first that the Queen Charlotte Islands are 500 miles from the mainland?

Mr. PENDLETON. No; from Vancouver; about 100 miles from the mainland, but we could not take them all across direct.

Mr. MAGEE. So you rafted them 175 miles?

Mr. PENDLETON. Yes; that was those which came 'across. All did not come across the Heckett Straits.

Mr. MAGEE. About what proportion of the lumber did you raft, and what proportion was cut up on the islands?

Mr. PENDLETON. I could not tell you that now.

Mr. MAGEE. Can you give us any idea?

Mr. PENDLETON. I would say possibly half and half.

Mr. MAGEE. This was good spruce lumber, was it?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. Was it all used for airplane purposes?

Mr. PENDLETON. Yes.

Mr. MAGEE. Was any part of the Queen Charlotte Islands cultivated?

Mr. PENDLETON. Not to amount to anything; once in a while there would be a little ranch with a patch of potatoes.

Mr. MAGEE. The only inhabitants are practical fishermen?

Mr. PENDLETON. Practical fishermen.

Mr. LEA. Is this timber over there all spruce, or did you divide it?

Mr. PENDLETON. No, it is divided.

Mr. LEA. What is the other timber?

Mr. PENDLETON. Cedar and larch and hemlock.

Mr. LEA. Did you do selective logging?

Mr. PENDLETON. Yes, sir; selective logging.

Mr. LEA. You did not log it clean?

Mr. PENDLETON. No; took only No. 1 and No. 2 spruce logs.

Mr. LEA. Do you know about the proportion of No. 1 and No. 2 logs?

Mr. PENDLETON. No; I do not.

Mr. LEA. I suppose that has to be determined?

Mr. PENDLETON. By the Government scaler.

Mr. LEA. You spoke about the Government scale. Was that based on the actual aircraft produced or the estimate of it, before it was sawed into lumber?

Mr. PENDLETON. The Government scale was on the logs when they were put into the water. The Government in British Columbia scaled all the logs.

Mr. LEA. I do not suppose it was your purpose to pass on the merits of any controversy here that existed between the Government Spruce Production Corporation and the lumbermen.

Mr. PENDLETON. Not at all.

Mr. LEA. I suppose you are not familiar with the details of that.

Mr. PENDLETON. No; not the details.

Mr. LEA. Was this organization, the imperial munitions board, a Canadian or a British organization?

Mr. PENDLETON. A British organization.

Mr. LEA. That was an adjunct of the military system of Great Britain?

Mr. PENDLETON. Yes, sir; had charge of the production of all munitions, shells, ships, airplane lumber, etc.

Mr. LEA. Were those officers who were sent out military officers?

Mr. PENDLETON. No, sir.

Mr. LEA. Were they practical loggers?

Mr. PENDLETON. Maj. Taylor was not.

Mr. LEA. What was his position?

Mr. PENDLETON. He was director of airplane production.

Mr. LEA. Was he the man sent by England or by Canada?

Mr. PENDLETON. Not sent by Canada. Canada really had nothing to do with that. Sir Joseph Flavelle in eastern Canada, with headquarters at Toronto, was appointed chairman for Canada, for all munitions. He appointed Maj. Taylor to come to British Columbia as director of this branch. They would have another man in charge of shipbuilding, and another in charge of shell making, etc.; but Maj. Taylor was out there in charge of airplane production.

Mr. LEA. Do you know about what was your total production of aircraft lumber?

Mr. PENDLETON. Somewheres around 26,500,000 feet of finished airplane lumber.

Mr. LEA. Do you remember what month you began the falling operations?

Mr. PENDLETON. Not exactly, but it would be along in March, I think, that they commenced felling timber.

Mr. LEA. How many mills did you begin work with on the island?

Mr. PENDLETON. There were a couple of small mills on the island, and they commenced soon after that in a small way.

Mr. LEA. Part of this timber was transported as logs, and part was shipped as lumber?

Mr. PENDLETON. Yes, sir. Just a minute. In bringing out the amount of lumber there, if any comparisons are going to be made, we should also have a comparison as to the normal output of lumber between British Columbia and Oregon and Washington.

Mr. FREAR. Can you give that, substantially?

Mr. PENDLETON. Approximately British Columbia would get out about one-tenth as much lumber as Washington and Oregon. No one can get the exact figures, but from the statistics that these lumbermen get out, it would be approximately between one-eighth and one-tenth.

Mr. LEA. Where was your principal place of operation?

Mr. PENDLETON. My own?

Mr. LEA. Yes.

Mr. PENDLETON. We have a camp at Red Gap on Vancouver Island and a logging camp and railroad at Lang Bay.

Mr. LEA. When you made these contracts with the loggers what would they be for, a specific sum, or so much per log?

Mr. PENDLETON. So much per thousand.

Mr. LEA. Did you place a limit on the amount they would produce, or a maximum amount?

Mr. PENDLETON. No, sir; all they would produce for a year.

Mr. LEA. So that everybody who could produce logs could go ahead and get your spruce and you would take all that was produced that was suitable?

Mr. PENDLETON. For a year.

Mr. LEA. And the loggers did accept that proposition and did their best?

Mr. PENDLETON. Yes. I might say that some of the loggers made contracts and went up there without going to look the land over first, they did not know where they were going. They figured that it was in the hands of practical men and they would have a fair deal, and they would simply put their equipment on a barge and go up there with the idea of doing the very best they could.

Mr. LEA. Did they finance themselves, outside of the moving proposition?

Mr. PENDLETON. Yes.

Mr. LEA. And the loggers over here had that same opportunity, did they not?

Mr. PENDLETON. I do not know.

Mr. LEA. They could sell all the logs they could produce?

Mr. PENDLETON. I do not know anything about that. There was always a cancellation clause in every contract that if at any time the board wanted to cancel these contracts they had the authority to do it.

Mr. MAGEE. You mean the power was in the director?

Mr. PENDLETON. The power was in the director to cancel the contract at any time.

Mr. LEA. What was the object of having the cancellation clause in the contracts?

Mr. PENDLETON. In case the war ceased they could step out, which they did do. They, of course, had compensation arrangements in case of stopping them before their contracts were completed.

Mr. MAGEE. The compensation was adjusted according to the damages?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. I understood you to say the production of logs was about one-tenth in British Columbia, compared to the production in Oregon and Washington, prior to the war?

Mr. PENDLETON. Yes, sir; something along there; and this twenty-six and a half million feet mentioned is spruce; that was finished spruce lumber that was finished and shipped direct overseas.

Mr. FREAR. What is the comparative milling capacity, if you know?

Mr. PENDLETON. Practically the same proportion.

Mr. FREAR. About one-tenth. It is stated in the spruce production corporation book that it reaches 3,000,000 feet a day. That would make about 9,000,000,000 feet a year?

Mr. PENDLETON. Nine billion; while ours is between 700,000,000 and 800,000,000, a little less than 1,000,000,000 feet a year.

Mr. FREAR. So practically about one-tenth is the milling capacity. You spoke of the finished product. That would take, you said, considerably over 25 per cent, on the average?

Mr. PENDLETON. Twenty-five per cent of what?

Mr. FREAR. I mean that would take more than three times that amount or four times that amount, and that would be about 100,000,000 to 150,000,000 feet of spruce lumber?

Mr. PENDLETON. Yes; if you cut up the whole log.

Mr. FREAR. So that if in this country we produced 143,000,000 feet that would mean approximately the same amount of ordinary spruce lumber which you produced up there?

Mr. PENDLETON. You would have to produce 260,000,000 to be approximately the same.

Mr. FREAR. Two hundred and sixty million?

Mr. PENDLETON. Yes.

Mr. FREAR. I mean, of the finished product?

Mr. PENDLETON. Yes.

Mr. MAGEE. What the chairman was getting at was, assuming that we produced in the United States 143,000,000 feet of lumber, how many million feet of finished product would that be?

Mr. PENDLETON. I could not answer that, because in one district you would get 10 per cent and in another 40 per cent.

Mr. MAGEE. It might not be more than 15,000,000 feet of finished product?

Mr. PENDLETON. It might not. Mills up there put in logs a month ago that got less than 5 per cent.

Mr. MAGEE. From March to November, up in Vancouver, with one-tenth of the capacity that the people in the United States have, you produced nearly twice as much finished product as was produced here?

Mr. PENDLETON. Of course I do not know what they produced here.

Mr. MAGEE. They produced 143,000,000 feet of lumber.

Mr. PENDLETON. Was that spruce or spruce and fir?

Mr. MAGEE. No, spruce; which might not be more than 15,000,000 feet of finished product. You produced 26,500,000 of the finished product from March to November. So it is probable you produced a third more or perhaps double the amount of finished product from March to November as was produced in the United States in the year and seven months that we were at war?

Mr. PENDLETON. That would be possible. Of course I do not know anything about what they did here.

Mr. LEA. Of course this 143,000,000 shipped in the United States was the finished lumber, not the fitches.

Mr. FREAR. If you were told that 60 per cent of some shipments were refused by Great Britain and a percentage were refused at Grand Rapids by the Curtiss Airplane Co. and others, it would be very difficult to get an accurate basis of estimate?

Mr. PENDLETON. Yes.

Mr. FREAR. You said Col. Taylor, when he came there, associated himself with the loggers. He put you in charge as superintendent at the outset?

Mr. PENDLETON. He was there a short time getting what information he could before that.

Mr. FREAR. Just how did he call them together; what would be the method of calling together these lumbering operations? You say they called together the loggers and millers; what was the method?

Mr. PENDLETON. We had an advisory committee composed of the loggers and lumbermen, and we would hold meetings every time we needed to.

Mr. FREAR. Was it very difficult to get in communication with Col. Taylor or was everyone invited and given full consultation?

Mr. PENDLETON. Absolutely. We saw personally, I think, almost every man that had a contract and talked it over with him.

Mr. FREAR. And you say there were over a hundred contracts:

Mr. PENDLETON. Yes, sir.

Mr. FREAR. What was the method of logging? I omitted to speak of that. What was your method of logging there?

Mr. PENDLETON. Practically all with donkey engines.

Mr. FREAR. You had very little mill facilities?

Mr. PENDLETON. Yes.

Mr. FREAR. And it was all done by donkey engines. That is the method pursued in British Columbia at the present time?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. They went in there with donkey engines and pulled out the logs, with the results you have described?

Mr. PENDLETON. Yes.

Mr. LEA. What was the amount of production per side of logging?

Mr. PENDLETON. I could not tell you that.

Mr. LEA. That is the usual method of logging everywhere, is it not, the use of donkey engines?

Mr. PENDLETON. Oh, yes; nearly all; some places they use railroads and some hand logging, as they call it.

Mr. LEA. You have to fit the circumstances?

Mr. PENDLETON. Yes.

Mr. FREAR. At the places I have described, Goodyear, Merrill & Ring, and these very large operators here, getting out all kinds of material including spruce, have railways, as I suppose you know.

Mr. PENDLETON. Yes.

Mr. FREAR. They operate with railways, and in its efforts the Spruce Production Division, to get out spruce, built one railway at a cost of \$115,000 a mile to ship logs 56 miles before they were brought to tide water. That would be considered a very unusual operation up in British Columbia?

Mr. PENDLETON. Yes; it would.

Mr. FREAR. Did you ever hear of any operation of that kind?

Mr. PENDLETON. No, sir.

Mr. MAGEE. What length of log do you cut ordinarily?

Mr. PENDLETON. From 24 to 32 feet, as a rule.

Mr. MAGEE. Did you do any riving out there?

Mr. PENDLETON. Very little. We did start a few rivers to see how it would work. We heard they were riving down at Gray's Harbor, and figured that possibly they knew a little more than we did, but it was not satisfactory. We just put in a few men for a short time.

Mr. MAGEE. In getting these materials and these results there and getting them promptly, did you take advantage of the knowledge and experience of the men who had spent a large portion of their lives in the logging and sawmill business?

Mr. PENDLETON. Absolutely.

Mr. MAGEE. That is all.

Mr. FREAR. That is all.

(The witness was excused.)

Mr. FREAR. Telephone communications have come to members of the committee this morning from soldiers, or from those who claim to be soldiers, asking if they would be protected in case they gave testimony before the committee. The word has been sent to them that if they appear this afternoon the Secretary of War has promised them full protection, and I advised them that they could make their state-

ments to the committee. The committee will undertake to protect them in every way they possibly can in presenting their statements, and I do not believe that there will be any doubt but what they will be accorded full immunity by the Secretary of War.

Mr. PENDLETON. Mr. Chairman, there is one thing more, the question of making up these Davis rafts.

Mr. FREAR. Yes.

Mr. PENDLETON. In our contracts with the loggers they were allowed \$1 extra where they made up the Davis rafts. The price of them was so much, and if they were made up in Davis rafts to take them across the straits they were allowed \$1 extra.

Mr. FREAR. You found that was a satisfactory means of transportation?

Mr. PENDLETON. Yes, sir.

Mr. FREAR. Thank you very much, Mr. Pendleton. One question more: How long did you serve as superintendent?

Mr. PENDLETON. I served 15 months as superintendent.

(Thereupon, at 11.05 o'clock a. m., the committee took a recess until 2 o'clock p. m.)

AFTER RECESS.

The committee met, pursuant to the taking of recess, at 2 o'clock p. m.

TESTIMONY OF GEORGE W. FRENCH.

(The witness was sworn by Mr. Frear.)

Mr. FRENCH. Mr. Chairman, before giving any testimony, as a former operator in the intelligence department and master electrician, now in the service of the Government detachment of the Aircraft Service troops, may I ask that I have absolute protection for any testimony I might give as a witness and be amply protected in every respect?

Mr. FREAR. The jurisdiction of this committee extends only to the investigation. We have been assured by the Secretary of War in person that anyone testifying before the committee would be amply protected. We will go beyond that as a committee and wire the Secretary of War in the name of the committee, if necessary, asking that full immunity and protection be given to you from any testimony you may give here, and that no interference be permitted in regard to your discharge, which I understand has been ordered at Camp Dodge, and you have been ordered to start home.

Mr. FRENCH. I get my transfer papers to-morrow.

Mr. FREAR. I understand you are a private?

Mr. FRENCH. A master electrician.

Mr. FREAR. You have been subpoenaed and asked to come here and testify, and you are expected to give your testimony the same as you would if you were out of the service.

Mr. FRENCH. Very well, sir.

Mr. FREAR. What is your full name?

Mr. FRENCH. George W French.

Mr. FREAR. What is your age?

Mr. FRENCH. Thirty-three the 24th of October.

Mr. FREAR. How long have you been in the Army?

Mr. FRENCH. It will be about a year and 11 months, sir.

Mr. FREAR. Where were you living before you entered the Army?

Mr. FRENCH. Minneapolis, Minn.

Mr. FREAR. You had lived there how many years?

Mr. FRENCH. I have been on the road in and out of there seven or eight years.

Mr. FREAR. What was your business?

Mr. FRENCH. Lumbering and banking.

Mr. FREAR. When you came into the service in what capacity was it?

Mr. FRENCH. I came in as a private inducted into the Three hundred and thirty-seventh Field Artillery, Camp Dodge, Iowa.

Mr. FREAR. Were you assigned to any particular branch of the service?

Mr. FRENCH. Yes, sir, the Artillery.

Mr. FREAR. How long did you remain there?

Mr. FRENCH. Until about the 11th of January and was sent to the third training officers camp and transferred from there to Vancouver Barracks along about March of 1918.

Mr. FREAR. That is, before you had qualified for a commission?

Mr. FRENCH. I was sent out before I was qualified for a commission.

Mr. FREAR. Sent out to Vancouver Barracks?

Mr. FRENCH. Yes, sir.

Mr. FREAR. What was your position then?

Mr. FRENCH. I was a private with the Twenty-fourth Spruce Squadron.

Mr. FREAR. Then what position?

Mr. FRENCH. I was made a sergeant in the Twenty-fourth Spruce Squadron in connection with certain detail work at the cut-up plant.

Mr. FREAR. Were you given any particular assignment in any other branch of the service?

Mr. FRENCH. During from—I can not just state the date exactly, not having my papers with me—from about 1918, in conjunction with my work at the cut-up plant, not through an order but through certain arrangements, I was given the position of intelligence operator at the cut-up plant, with absolute jurisdiction of all reports; that is, to be reported to Capt. Gunn, and at that time Maj. Howes, rather, in which capacity I served from May, 1918, to January, 1919.

Mr. FREAR. May, 1918, to January, 1919?

Mr. FRENCH. Yes, sir. In November I was officially transferred by order to the One hundred and sixth Squadron.

Mr. FREAR. At Portland?

Mr. FRENCH. Yes, sir.

Mr. FREAR. Where are you stationed now?

Mr. FRENCH. At Vancouver Barracks, detachment air-service troops, record and storage office.

Mr. FREAR. What was this arrangement whereby you say you were given duties under the intelligence department?

Mr. FRENCH. The general plan and scope, after having been thoroughly investigated, on account of my sawmill and sales experience, was to report on the condition of operations and general conditions, most anything pertaining to labor that might come under my observation.

Mr. FREAR. From whom did you get your assignment?

Mr. FRENCH. Capt. George B. Gunn.

Mr. FREAR. You reported to him?

Mr. FRENCH. I did, sir.

Mr. FREAR. And through him to Maj. Howes?

Mr. FRENCH. After the captain turned the office over I reported to Maj. Howes.

Mr. FREAR. You had personal communications with both of these officers at different times?

Mr. FRENCH. Yes, sir. My files will show that.

Mr. FREAR. I did not bring out your experience in banking.

Mr. FRENCH. I had experience in banking and lumbering sales, and sawing experience.

Mr. FREAR. Where?

Mr. FRENCH. The Clark Nickerson people at Everett, the Willapa Lumber & Shingle Co. at Carlisle, and with the sales agency of D. H. McMillan and C. M. Stafford Lumber Co., Minneapolis.

Mr. FREAR. What education have you?

Mr. FRENCH. I have had a grammar and high school education.

Mr. FREAR. The reason I speak of that is because I desire to show your qualifications in the record. What is your rank now?

Mr. FRENCH. Master electrician.

Mr. FREAR. What rank does that correspond to in the Regular Service?

Mr. FRENCH. Just a rank—it is the rank of master electrician in the Air Service troops proper, and a grade that could only be given to carry our position and rank in this division.

Mr. FREAR. It is the equivalent of a noncommissioned officer?

Mr. FRENCH. A noncommissioned officer and pays \$81 per month.

Mr. FREAR. Will you now tell in your own way what you did after you went over in that service and what you observed in reference to the conditions you found there, under the instruction of Capt. Gunn, who was your superior officer and to whom you made your reports?

Mr. FRENCH. I wish to say that, not having the dates and having reported on a number of different subjects it would be almost impossible to give any specific time and to give the name of any specific officers connected with matters I may speak of, but if you will refer to my file, marked "P 110," the number which I reported under, they can be verified. Our files were boxed in the intelligence office at Portland and started away to San Francisco, and you will find those reports will cover generally those matters. There are some boxes from the Army that were taken and detached and made special. That is, Maj. Howes was requested to get in touch with them and report and work in conjunction with Capt. Farr.

Mr. FREAR. Where is Maj. Howes now?

Mr. FRENCH. San Diego, Calif. His correct address I have, but not with me.

Mr. FREAR. Do you know Lieut. Carrigan, who was under Maj. Howes at the time the Ray report was made?

Mr. FRENCH. The last time he reported back to the Western Department office at San Francisco.

Mr. FREAR. He was the lieutenant with whom Maj. Howes filed the charges that were investigated by Maj. Ray?

Mr. FRENCH. Yes, sir.

Mr. FREAR. As fully as you can will you state to the committee what particular things you found which were reported to Capt. Gund? I understand that you have not all the data, but all that data is on file, and can be used afterwards to corroborate your statements which you give us at this time in a general way, which the committee ought to know in carrying on this investigation.

Mr. FRENCH. You understand, sir, that the first part of my work pertained more or less to a general outline and a general report of conditions at the cut-up plant at an early time, such as fire protection, etc. Of course, that all would relate back to the early days of the outfit. I might say that I have made from memory a few notes of some of the reports that were touched upon.

Mr. FREAR. You can refer to that.

Mr. FRENCH. For example, there was one report made early on a burner for sawed cuts.

Mr. FREAR. About what time was that?

Mr. FRENCH. That was, I would think, along about May, 1918, possibly, covered by the general report.

Mr. FREAR. What was the character of that?

Mr. FRENCH. The reason being that at that time all waste and edgings were being handled in what I considered a very expensive manner, being trucked at a considerable cost for gasoline, and extra labor, to tally back on the railroads, where it was taken from the sheds and carried out by motor truck—the only means of transportation—and allowed to be accumulated and burned.

Mr. FREAR. What other means could have been taken in disposing of that refuse?

Mr. FRENCH. From my mill experience it had always been customary for mills to establish a burner and a conveyor of some sort.

Mr. FREAR. Did this plant lack that?

Mr. FRENCH. Absolutely.

Mr. FREAR. And it was using motor trucks?

Mr. FRENCH. Motor trucks and an ungodly amount of labor.

Mr. FREAR. How many men?

Mr. FRENCH. I could not say, because part of those men were furnished from fatigue details and part were not.

Mr. FREAR. Your report states fully in regard to that?

Mr. FRENCH. It simply touches on that matter and suggests something should be done so as to eliminate that expense.

Mr. FREAR. That report was made to Capt. Gunn?

Mr. FRENCH. Yes, sir.

Mr. FREAR. What else have you in mind?

Mr. FRENCH. I wish to say in connection with a burner, that if you will investigate you will find that the board had under construction at the time the armistice was signed a concrete burner. I personally know that the construction of the burner—that is, the operation of it, the cement and labor that went into it, were not ceased after the armistice was signed. I made a general report to Maj. Howes on that, but I do not believe that was incorporated, but I came this time to say that that was just one instance of where money and time and labor could have been saved.

Mr. FREAR. After the armistice was signed that continued how long?

Mr. FRENCH. I could not say as to that.

Mr. FREAR. Would it have been necessary or feasible to have gone on and completed it in order to make a necessary part of the equipment there?

Mr. FRENCH. I would not say so.

Mr. FREAR. Why?

Mr. FRENCH. Because it is used as a storage place at the present time, roofed over.

Mr. FREAR. Was it ever used for mill purposes?

Mr. FRENCH. No, sir; it was uncovered at the time the armistice was signed.

Mr. FREAR. What is the next matter you wish to bring before the committee?

Mr. LEA. What was uncovered?

Mr. FRENCH. The concrete burner. The next thing I reported was the speed in competition of the mill crews.

Mr. FREAR. The speed in competition of the mill crews?

Mr. FRENCH. Yes, sir.

Mr. FREAR. That is to say, the activity with which each crew was working?

Mr. FRENCH. Absolutely.

Mr. FREAR. And the results accomplished and so on?

Mr. FRENCH. Yes, sir.

Mr. FREAR. What did you report there?

Mr. FRENCH. I reported that from personal observation and talks I had with officers, whose names are included in those reports, that the policy or method would be much safer if more time was taken if quality was gone after instead of output, the reason being that at that time; as a matter of fact, a good part of the time, considerable of the stuff was going to the resaws, or as commercial lumber shipped out of the yard as commercial. To get to that point I would suggest that you check up the bill that the Willapa people made with the corporation.

Mr. FREAR. The Willapa people? Who do you mean by that?

Mr. FRENCH. The Willapa Lumber & Shingle Co.

Mr. FREAR. Where were they located?

Mr. FRENCH. I do not know whether their head office is at Carlisle, but they have a mill at Carlisle as I understand.

Mr. FREAR. Why do you suggest that we investigate as to their operations?

Mr. FRENCH. For the simple reason that I at one time suggested that a careful check be made on all incoming cants and an absolute tally made on all outgoing lumber, so that a tally estimate on wastage could be considered and the figures could be gotten at. Of course we had figures that supposedly would get that, but the thing at the time was that our resawing department, composed of resaws back of the units and one little resaw we had out on the platform, were not able half the time to take care of the lumber that was being sent back for remanufacture.

Mr. FREAR. What will be the effect of this rechecking on the Willapa Co., so far as you understand?

Mr. FRENCH. The Willapa Co., I have every reason to believe, has a legitimate deal, so far as they are concerned—the price I know nothing about—the matter of commercial lumber and footage, that is. The matter of the amount of footing that the Willapa people

took over would give you some idea as to the amount of stuff that went into commercial lumber.

Mr. FREAR. Does the committee understand you to say that the probability is that this Willapa Co. got more than the amount that was proper to deduct?

Mr. FRENCH. I do not say that; no. What I am trying to get at is this, that the Government was paying supposedly for airplane stock. There was airplane stock supposedly loaded. There was a difference represented in the commercial lumber, which the Willapa people later bought. That difference is the question; how was it accounted for?

Mr. FREAR. Do you know anything about how it was accounted for?

Mr. FRENCH. I can not say, because I had my hands too full of other stuff.

Mr. FREAR. You reported that to Capt. Gunn for the protection of the Government?

Mr. FRENCH. Absolutely.

Mr. FREAR. And that was according to instructions that you should report those matters to him?

Mr. FRENCH. Absolutely. I might say in connection with the speed system, that under the system that I believe was inaugurated by Maj. Breece there were certain tallies kept of wing-beam stuff. Those tallies were bulletined just as you would find a mill scale, so they were open to the inspection of the different units. Inspecting on the six unit, as I did over there, I found a good many of the foremen, while they had experience, they would be anxious to have their crew make a good showing. It was simply a matter of rivalry. That was reported to Maj. Breece, and I think it was later thrown in the intelligence files, and they said that speed could not be sacrificed, that the Government needed the stuff; the quality feature seemed to be disregarded.

Mr. FREAR. You reported that to Capt. Gund?

Mr. FRENCH. Yes, sir.

Mr. FREAR. Was anything ever done in regard to these recommendations?

Mr. FRENCH. As in a good many things, those reports went down to the abstract office. Some of them we got letters on; on some we got no replies. I was instructed to watch any checking and found in one connection that there had been a change, and that was in the manner of cluttering crews. The speed was such a foremost proposition with these men that they would say, "If I can cut a million feet of stuff, it don't make any difference how I get rid of it; let the next crew take care of it. That made considerable dissension among the superintendents, especially Supt. A. A. Green, who lives in Portland, and can give you testimony in that connection.

Mr. FREAR. What was the particular cause of the dissension?

Mr. FRENCH. It was simply a matter of speed and not cleaning up. You see what I am getting at? You would go into the mill and find stuff all over the floor. There was a shortage of trucks. That made the crew coming on necessarily clean up the work of the others before them, before they could commence operations.

Mr. FREAR. Who was responsible for that?

Mr. FRENCH. Higher up, sir; just who I could not say.

Mr. FREAR. Was any improvement made in those conditions?

Mr. FRENCH. There was, but it was just temporary and they went back to it again.

Mr. FREAR. Have you anything further in regard to that? If not, take up the next item.

Mr. FRENCH. The next thing was friction between mill inspection and shed inspection. At the time this report went in the shed inspector was supposed to pass finally on the sticks that went into the car. The result was, and I know this personally, that considerable lumber was rejected, sent back to the mill for resawing. The result was that on one or two large cuts especially there was an extremely large amount of it, and the mill inspector claimed that the shed inspector did not know his business. At that time I suggested, in view of the fact that we had one or two airplane inspectors from the East come out here, that they institute a course of instruction for inspectors. That is also covered by a report which gave the need for it, the idea being that if we were wrong show that we were wrong, and if we were right show that we were right. In other words, there was no set standard of inspection and it was very much needed. Now that thing finally resulted in the last days to a discontinuance of inspection on the platform, and the inspection in the mill holding fast. That was done on an order of H. S. Mitchell, so that the inspector was practically nothing more than a tally man. If anything looked too bad he was supposed to pass on it. The car was held out and the stuff was not inspected at the car.

Mr. FREAR. Do you mean to say that resulted in a poorer system?

Mr. FRENCH. There is no question about it.

Mr. FREAR. And that more worthless material was used as a result?

Mr. FRENCH. That is my idea, and I will tell you why. It was suggested that every crater in the mill be given a mark so that the wing beams could be marked and the source traced back. That system of marking was discontinued.

Mr. FREAR. Why?

Mr. FRENCH. I could not say but the result would be that you had a chance to pass the buck on. Unless you happened to know one unit was cutting spruce, possibly, it would have that effect.

Mr. FREAR. What the general effect of the change of which you speak in that system of inspection, and what proportion was rejected? I do not suppose what was rejected; it was all shipped out?

Mr. FRENCH. I have a note on that. There seemed to be so much agitation among the inspectors that it was found necessary or advisable to appoint three supervisors of inspection, by that meaning men who would have immediate jurisdiction of the mill and the shipping shed to say whether they were wrong or right, and keep a record of the rejects of each crew so that they could be recorded in the office.

Mr. FREAR. Was that done?

Mr. FRENCH. It was done; but, like everything else, there was contention about it.

Mr. FREAR. Why?

Mr. FRENCH. I would refer you to A. A. Green, superintendent of crews.

Mr. FREAR. Where will he be found?

Mr. FRENCH. In Portland, the last I know, sir.

Mr. FREAR. What did he say to you as to the contention; what was the reason?

Mr. FRENCH. I just don't like to get into personalities.

Mr. FREAR. You need not give the names.

Mr. FRENCH. I might just as well tell you, I guess. We had on one of the crews there one of the Mitchells, H. S. Mitchell's son.

Mr. FREAR. Who is Mitchell?

Mr. FRENCH. H. S. Mitchell is manager of the cut-up plant. There was also a C. E. Byrd, who was superintendent of one of the crews.

Mr. FREAR. Were they in the regular service?

Mr. FRENCH. No; Mitchell and Byrd and Green were civilians that can be found on the pay roll records of the cut-up plant.

Mr. FREAR. What was their position?

Mr. FRENCH. Mill supervisors, at a salary of \$300 a month.

Mr. FREAR. Were they inspectors?

Mr. FRENCH. As to that I could not say.

Mr. FREAR. They passed upon these inspections, you say?

Mr. FRENCH. No; I am saying that the contention among the crews was such that the inspectors were put on and that resulted in reports being handed in which the crew superintendents could not see. For example, take the case of Green. I do not know anything about Green's experience, but Green seemed to think he was having it thrown into him, by that meaning the reports going in on his crew were not just. His cut will be found to be the lowest in amount; I am talking about quantity, not quality. The others, Byrd and Mitchell, seemed to be after the speed proposition. Why I do not know. Green said he was endeavoring to cut the lumber right, and, of course, he was being hustled to get the stuff out. That is natural, but he was a man you could talk to. I know as assistant in the shipping shed, when you found the stuff was coming poor you could go in to him and say the stuff was coming rotten and he was a man who was willing to make amends. I understand that Mitchell and Byrd were different. That is testimony that would have to come in from men in their units.

Mr. FREAR. The substance of it is that the policy pursued in urging speed or haste was to the injury of the shop and the mill?

Mr. FRENCH. I would say so.

Mr. FREAR. That is, it was a poor class of stuff?

Mr. FRENCH. Yes; I would say so.

Mr. FREAR. That was your report to Capt. Gun?

Mr. FRENCH. Yes, sir.

Mr. FREAR. Was there any change made as to that?

Mr. FRENCH. It was stopped, and then it would pick up again.

Mr. FREAR. What is the next suggestion?

Mr. FRENCH. I have a report as inspector for the sixth unit.

Mr. FREAR. What is the character of that?

Mr. FRENCH. On a pretext and in order to get in to find out the truth I went in as an inspector on the sixth unit, which was considered the fastest.

Mr. FREAR. Did you do this after consultation with Capt. Gun?

Mr. FRENCH. Yes, sir. The unit was cutting a big percentage of fir and there would be a considerable amount of stock rejected.

Mr. FREAR. What was it for?

Mr. FRENCH. Wing beams. It was wing-beam stock, as we knew it. I had occasion to call attention to the fact that a lot of that was green; it was spoiled when it came into the camps. I can not tell you just what it was, but I made a report that was checked up and verified by an officer who was in charge of that unit at the time, substantially my report. The thing was, to be honest and frank, the stuff was dammed rotten that I requested that a check be made so as to find the source. The report was handed down through the lower office, and the last I knew we got nothing on it, the reason being, as I found out by going back to the head of the unit, was that the stuff came in, the cants had been dumped off on to a pile. I might say two or three different cars, but one pile, had been in there, they started to pile the stuff and the cars pulled out so that the car numbers could not be gotten and a check made.

Mr. FREAR. Those are largely technical terms that you are using, but in a general way we can follow you. What was the cause of that, and how could it have been improved so that the waste material would not have been sent out?

Mr. FRENCH. I do not understand you. What do you mean by waste material; do you mean poor cants?

Mr. FREAR. Yes.

Mr. FRENCH. Very well. I reported on that and made a suggestion that a record should be kept of the mills supplying these cants, that there should be a designation by a letter.

Mr. FREAR. That is, the mills that sent the cants in to the cut-up plant?

Mr. FRENCH. There should be a closer record made so that that stuff could be checked back to the source. It would be necessary, of course, to formulate some system of checking cants such as the Government uses on their logs.

Mr. FREAR. Was there a difference in the class of cants that came in from the various mills?

Mr. FRENCH. There is no question about that.

Mr. FREAR. Have you any idea as to any particular mills that furnished defective cants?

Mr. FRENCH. We could not check that up.

Mr. FREAR. It was impossible, because there was no system under which they could have determined that through an inspection of the cants as they came in?

Mr. FRENCH. We had inspection of the cants, sir; but the point I make is this, that those cants came in, and if you had the cants in surplus on the pile they might be used or might be taken off the car. The car comes in and cants are unloaded and go into the units. With a number of cars in and a plenty of stock ahead it was necessary to store those cants until they were ready to be handled. I might, as a millman, ship in a carload of cants and get by if that stuff was intermixed with a good bunch.

Mr. FREAR. Was that done purposely?

Mr. FRENCH. I can not say as to that.

Mr. FREAR. Was it done to any considerable extent?

Mr. FRENCH. We were supposed to have car numbers and checks.

Mr. FREAR. Did you?

Mr. FRENCH. We had; and those men were supposed to report conditions.

Mr. FREAR. What was the trouble with these cants as they came in; were they defective cants?

Mr. FRENCH. Of course, I am not an old millman, but from the stuff I have handled, and especially the stuff I have handled in the sixth unit, it was twisted; it was cross-grained.

Mr. FREAR. Unfit for airplane stock?

Mr. FRENCH. Part of it might be good, but a big percentage was second growth; it was too wide; the annual rings would not carry.

Mr. FREAR. You mean the number of rings permitted within a certain distance?

Mr. FRENCH. Yes, sir; and another thing was the method of checking.

Mr. FREAR. What did you do in an effort to try and get that condition improved?

Mr. FRENCH. I made a report on the sawing first.

Mr. FREAR. To Capt. Gunn?

Mr. FRENCH. Yes; and suggested that the sawyers take more time in laying out their cants. If a cant goes in and you have straight grain and turn it, you have got cross-grain. The sawyer was there for the cut. That is what he was after, if he could get by the inspector all right.

Mr. FREAR. Was there any improvement on the part of the sawyers so far as you could determine?

Mr. FRENCH. There was some improvement. I do not know how that came about, but there was.

Mr. FREAR. That came about through Capt. Gund?

Mr. FRENCH. I could not say. I know there were some changes made.

Mr. FREAR. You were making reports to him regularly under his orders, for the improvement of general conditions in the mill?

Mr. FRENCH. Yes, sir.

Mr. FREAR. What next have you that you wish to present to the committee?

Mr. FRENCH. The matter of wing-beam tallies.

Mr. FREAR. We know what wing beams are. What are wing-beam tallies?

Mr. FRENCH. It is the record that an inspector naturally was anxious to make; he was anxious to make as good a job for his unit as possible, because an inspection job was a desirable job; it paid well.

Mr. FREAR. What was the pay of an inspector?

Mr. FRENCH. It was along about \$5 or \$5.50 a day—\$4.50 or \$5 a day—and those men were anxious to get the wing-beam stock. There was one man we had over there that was found to be paid a bonus for the amount of wing beams he turned out a day.

Mr. FREAR. By whom?

Mr. FRENCH. By the higher ups; whether H. S. Mitchell I could not say.

Mr. FREAR. Was that general?

Mr. FRENCH. No, sir.

Mr. FREAR. Who were these inspectors; what kind of men were they?

Mr. FRENCH. They were supposedly men who had had mill experience.

Mr. FREAR. Had they, so far as you know?

Mr. FRENCH. That is getting into personalities. I might say that I believe the records will show that we had men over there that were inspectors that had had the experience and were good inspectors.

Mr. FREAR. How about those that were appointed; were they efficient to do the work?

Mr. FRENCH. I would not volunteer to cover all those men. I know some were not competent.

Mr. FREAR. Of course, that is true of any trade.

Mr. FRENCH. That is to be found, but that is going into personalities. I want to say in connection with these wing beams this fellow was getting. The beam would be tallied up as a beam, and would show a full net of tallies for that unit. The beam would be rejected in the shipping shed and go back for reworking.

Mr. FREAR. What do you mean by that?

Mr. FRENCH. I mean the beam would not pass inspection.

Mr. FREAR. What does the term "reworking" cover?

Mr. FRENCH. It might be cutting out from bad stock; it might be the stuff was fit for nothing but commercial; it would not be a beam.

Mr. FREAR. It might be used for struts, or something else?

Mr. FRENCH. Yes; but the beam tally showed the units and the thing I tried to show was that the inspection should be such that we should have known of that reject, and that the percentage of rejects should be so small as not to affect the proper mill tally of the beams. This was not the same through all the units. It all depended on the inspector.

Mr. FREAR. Was that very serious?

Mr. FRENCH. There were times when it was; yes, sir.

Mr. FREAR. What proportion?

Mr. FRENCH. I could not say, because the days varied, but there were tallies when the percentage of rejects was considerable.

Mr. FREAR. And you reported that to Capt. Gunn?

Mr. FRENCH. I did.

Mr. FREAR. And sought to have that improved?

Mr. FRENCH. Yes, sir; and I think there is a letter signed by Maj. Breece in which he charged us to prove to him that the wing beam tallies had been padded.

Mr. FREAR. Were they padded?

Mr. FRENCH. It was absolutely impossible to get that data; the stuff was in such a way that we could not get at it. The intelligence department and the corporation did not go hand in hand.

Mr. FREAR. What was the evidence of that?

Mr. FRENCH. There were a good many things we endeavored to get that we did not get. Maj. Howes will testify on that.

Mr. FREAR. Who was the major you spoke about before?

Mr. FRENCH. Maj. Breece.

Mr. FREAR. Did he act in conjunction with you?

Mr. FRENCH. In some things he did. In this one connection he remarked that he defied us to show him that the wing-beam tallies were padded. At that time we had a lieutenant who was making reports direct to H. S. Mitchell, and his reports were considered authentic. I can not tell his name.

Mr. FREAR. You were working under Capt. Gunn, seeking to improve conditions?

Mr. FRENCH. Yes, sir.

Mr. FREAR. Where is he?

Mr. FRENCH. I do not know. The last I knew he was in Washington, D. C.

Mr. FREAR. What were his initials?

Mr. FRENCH. Capt. George Gunn.

Mr. FREAR. Do you know what business he was in?

Mr. FRENCH. I believe he was in the real estate business. I am not just positive about that. My work was such that I did not see him much until the last. I knew more of Maj. Howes than I did of Capt. Gunn.

Mr. FREAR. Did you report to Maj. Howes direct?

Mr. FRENCH. Yes; until I was over in the cut-up plant. I was assigned to work which kept me over there.

Mr. FREAR. Where was Gunn; was he here in the city or over at Vancouver?

Mr. FRENCH. What do you mean—while out on duty?

Mr. FREAR. Yes.

Mr. FRENCH. He was on duty in the Yeon Building.

Mr. FREAR. Where was Howes; was he on duty in the Yeon Building, too?

Mr. FRENCH. Yes; we had our offices in the Yeon Building.

Mr. FREAR. During your work you were over at Vancouver?

Mr. FRENCH. Part of the time; and part of the time over here. You understand, the men radiated from this office.

Mr. FREAR. Were you in your hours of service told what to do by Capt. Gund?

Mr. FRENCH. Much of it was left to my discretion, much depending on the circumstances.

Mr. FREAR. What was your work over there when you were over at the plant, ordinarily, outside of this inspection work?

Mr. FRENCH. My activities would be different; it would all depend on what I did; what I did would depend on what I was after. My last work was as assistant foreman of the shipping shed.

Mr. FREAR. Those were your directions?

Mr. FRENCH. Yes. I wish to say that I have a report to show you just how much help we had from Maj. Breece. I had a report which I made on lumbering in my shop.

Mr. FREAR. What was that?

Mr. FRENCH. He simply advised at the time I was turning in reports on conditions over there, and, not making it hot for them, but asking and demanding better conditions, I was advised that he said he would like to get the S. P. who was making those reports. That was pretty strong.

Mr. FREAR. Who was with him at the time; who was he talking to?

Mr. FRENCH. H. S. Mitchell.

Mr. FREAR. Did Mr. Mitchell know?

Mr. FRENCH. I do not think so. The only way I might have been known, was because I was supposed to work on private cases regarding aliens.

Mr. FREAR. Those were your instructions?

Mr. FRENCH. Yes, sir.

Mr. FREAR. You were working on the question of aliens in the cut-up plant?

Mr. FRENCH. No, sir. My duty was that I was supposed to work on individual cases.

Mr. FREAR. You said aliens.

Mr. FRENCH. They might be aliens brought up. For example, sighting one man supposed to be destroying wing stock.

Mr. FREAR. An alien in the cut-up plant?

Mr. FRENCH. Yes. That was the case; nobody knew what I was doing.

Mr. FREAR. Excepting the people who employed you here at the office?

Mr. FRENCH. Absolutely.

Mr. FREAR. What next do you wish to tell the committee?

Mr. FRENCH. The next is a report on the Bridal Veil Lumber Co.

Mr. FREAR. Where are they located?

Mr. FRENCH. At Bridal Veil, Oreg. That covered a shipment of larch and hemlock.

Mr. FREAR. What was the cut-up plant doing with larch and hemlock?

Mr. FRENCH. That is what I wanted to know, sir.

Mr. FREAR. Was that to be used for airplane stock?

Mr. FRENCH. It was made up into beam stock and put through the mills.

Mr. FREAR. That is, for airplane stock?

Mr. FRENCH. Yes, sir. There was a rather amusing incident in connection with that.

Mr. FREAR. It was serious?

Mr. FRENCH. It was serious, when a man did not know the difference.

Mr. FREAR. It was intended for planes to be used by men who were risking their lives?

Mr. FRENCH. I could not say as to that.

Mr. FREAR. Men risk their lives when they go up in an airplane. Tell us what was the truth about that?

Mr. FRENCH. I reported on the larch and hemlock and immediately asked what the stuff was over there for.

Mr. FREAR. Who did you ask?

Mr. FRENCH. The first thing I took up as a feeler, to take this matter up with Capt. Broughton and the shipping shed. I next felt out Capt. Elliott, and finally Master Electrician McMillan, who was foreman of our crew, agreed with me that the stuff was either larch or hemlock. Understand, the Bridal Veil had an elegant stand of larch. It is an upland growth of larch, and so far as larch is concerned it is good stuff.

Mr. FREAR. For airplanes?

Mr. FRENCH. I am not speaking about airplanes.

Mr. FREAR. What do you mean by good stuff?

Mr. FRENCH. It is a good grade of larch.

Mr. FREAR. It might be a good grade of oak, or anything else?

Mr. FRENCH. Absolutely.

Mr. FREAR. What is larch used for?

Mr. FRENCH. The larch I have handled was used for sheeting and sheathing lap and common boards, and you might use it for finishing.

Mr. FREAR. Were there any instructions there, so far as you know, that permitted larch to be used as a substitute for spruce?

Mr. FRENCH. I brought over two samples. The matter was immediately taken up down below, when I found out that Capt. Elliott and Capt. Broughton did not know what the stuff was. We were asking for instructions as to how to handle it, because the stuff was coming out at the shed and was being intersorted with our fir, and when we found the larch we asked instructions as to what to do with it, and we were told that it was not larch. I brought two specimens over and they were sent to the Seattle laboratory for inspection. I contended that part of it was hemlock that had the birdseye.

Mr. FREAR. Was it?

Mr. FRENCH. So far as I know.

Mr. FREAR. What was the report?

Mr. FRENCH. We got a report back that the two specimens were larch. This report we got from above, but the average mill man said they were hemlock.

Mr. FREAR. Neither was spruce?

Mr. FRENCH. Neither spruce nor fir.

Mr. FREAR. What proportion of that was there contained in the material brought in there?

Mr. FRENCH. I can not tell you; it was in two or three cars; it was not mixed in.

Mr. FREAR. Straight cars of larch and hemlock?

Mr. FRENCH. Yes.

Mr. FREAR. What explanation was there for that?

Mr. FRENCH. It was sent over there for experimental purposes, they said. What the price was I tried to find out because of the amount of larch that came in.

Mr. FREAR. You were informed that it was for experimental purposes?

Mr. FRENCH. Yes.

Mr. FREAR. By whom?

Mr. FRENCH. That is the report I got from the office. You will find the correspondence with the Bridal Veil people on that and the different inquiries we made.

Mr. FREAR. You do not know anything about the prices?

Mr. FRENCH. That is one thing we tried to find out but we could not learn.

Mr. FREAR. Have you any information that they were going to use this for airplanes, this larch and hemlock, the same as fir, for elementary training?

Mr. FRENCH. Of course, you understand if a man wants to get by with that stuff he can have three or four different excuses; but what I can tell you is that the stuff was sawed into winged beam sizes and put into the mills and came out of the mills that way.

Mr. FREAR. Did you ever hear of the authority for such material being used?

Mr. FRENCH. I will say there was a considerable hubbub when it came in and it was reported.

Mr. FREAR. Was there any continuance of that?

Mr. FRENCH. No, sir; that stopped it.

Mr. FREAR. That came from the Bridal Veil Company?

Mr. FRENCH. Yes, sir.

Mr. FREAR. You reported that to Capt. Gunn and samples were sent to the laboratory for tests.

Mr. FRENCH. I brought over two specimens and the report came back that it was larch, and the bird's-eye showed it was hemlock. We had some good men over there. They were not given a chance, but they knew their business; not to make a slam on the officials, but we had a bunch of good men. I do not know why they never got up.

Mr. FREAR. You mean they did not get up into position of responsibility?

Mr. FRENCH. I say those men were not put where they should be.

Mr. FREAR. They could have done more effective work if given other positions?

Mr. FRENCH. In my own case—I can not give the date I was put on inspection. I reported that I had had inspection experience with the Clark Nickerson Mill under Herb Cluff and inspected planers. I inspected their common stuff and part of their cargo. Of course this was incident to getting experience for sales. I noted that fact in my papers, and it was something like two or three months that I was only piling lumber.

Mr. FREAR. In other words the questionnaire did not seem to be of much value?

Mr. FRENCH. That is what I would say.

Mr. FREAR. That is true of a good many branches of the service. What is next?

Mr. FRENCH. The report on the Oregon Planing Mill.

Mr. FREAR. Where is that?

Mr. FRENCH. Located here. The Oregon Planing Mill was being supplied per contracts with fir beams. The reason I reported on the Oregon Planing Mill was because of the tremendous cost entailed in the handling of the stuff and rehandling of the rejects they threw out. The reason I reported on that was because their men for some reason or other were entitled to take their pick of the cream.

Mr. FREAR. You say "their men"; who do you mean?

Mr. FRENCH. The inspectors from the Oregon Planing Mill.

Mr. FREAR. They were entitled "to take their pick of the cream"?

Mr. FRENCH. Because we loaded the rejects and they went out on our cars. Do you get me?

Mr. FREAR. No. Where did you get the rejects, from whom?

Mr. FRENCH. For example, a certain cut is ordered for the Oregon Planing Mill, for certain lengths of wing-beam stock. Their contracts specified certain lengths.

Mr. FREAR. Did their inspectors go over that stock?

Mr. FRENCH. Yes.

Mr. FREAR. Where did they go over it?

Mr. FRENCH. This stuff was piled out in the shipping shed, taking space that should be converted right to the corporation work only, unless they had some other arrangement, because, God knows, we needed the floor space. That stuff was gone over, and the stuff that was rejected was piled up. Our inspectors were given instructions

to reinspect and reload according to our specifications any stuff that would pass our specifications, and we did. Do you understand?

Mr. FREAR. I do not know whether I understand or not. The question is, what was the effect of that?

Mr. FRENCH. Just this, that the Government was loading Oregon planing rejects. The Oregon planing mill, according to their contract, was to be furnished so much footage.

Mr. FREAR. What is that?

Mr. FRENCH. I could not say, but they were supposed to be continuously supplied. They would make their selection out of that wing-beam stuff. The stuff would be stacked over, held for our inspectors, and our men would go over that stuff and load such beams as our specifications would cover. The balance of the stuff would go out into commercial. The point I make is the question of the contract. I tried to find out how it was that the Oregon people were given that privilege.

Mr. FREAR. Did you find out anything about it?

Mr. FRENCH. No, sir.

Mr. FREAR. Did you report it?

Mr. FRENCH. I did, sir.

Mr. FREAR. Were the conditions changed?

Mr. FRENCH. I can not say that they were.

Mr. FREAR. That continued right along?

Mr. FRENCH. Up until the Oregon planing contract was filled.

Mr. FREAR. What was the mill getting the lumber for?

Mr. FRENCH. I understand that went into the wing beams.

Mr. FREAR. What was the length of their stock?

Mr. FRENCH. Now, I could not say; but I think the lengths were from 18 feet 6 to 20 feet 6, and possibly 22-foot lengths. It was one of those three small lengths.

Mr. FREAR. You reported that, but there was no change?

Mr. FRENCH. The reason I did that was it did not seem right that the Government should be reloading Oregon rejects and that our floor space should be taken up, and especially for men to work on that unless there was some reason for it.

Mr. MAGEE. What did they do with the rejects?

Mr. FRENCH. They were reinspected by our inspectors and such portions as could be loaded by our specifications were put on the cars.

Mr. MAGEE. And sent away?

Mr. FRENCH. I do not know. You would have to get that on the bills of lading. They were sold as beams.

Mr. LEA. The point to that is that the lumber, according to your inspection, which was suitable for use they got the inspector to keep?

Mr. FRENCH. Yes, sir; you understand, they got the pick of the stuff and our inspectors were ordered to go through it and load such sticks as they could according to specifications, and the balance of it went out as commercial.

Mr. MAGEE. The point, I suppose, is that these rejects which upon further inspection you found suitable went to other mills?

Mr. FRENCH. I could not say as to that. They were shipped out. They went just the same as any other shipments.

Mr. MAGEE. The point is that discrimination was made in favor of the Oregon mill?

Mr. FRENCH. I would say so, and the result of it was that I took this matter up with Maj. Howes, and he said he could not understand it, and that we should have some idea as to what the contract was. But the question is, Why would the Government make that sort of a contract when we needed that stuff many a time, and car shipments were held up because we did not have those same lengths?

Mr. MAGEE. Where were you shipping them?

Mr. FRENCH. Of course, those bills of lading were secret. There were shipments going East. A lot went to Halifax, British Columbia; some went East to the airplane factories. It was supposed to be airplane stuff.

Mr. MAGEE. What did the Oregon company do, so far as you know, with the shipments it got?

Mr. FRENCH. I never worked on that end of the case.

Mr. MAGEE. Were they getting out airplane stuff?

Mr. FRENCH. They were getting out beams. We kilned it and loaded it for them and sent it over here.

Mr. FREAR. How far did that report get, do you know?

Mr. FRENCH. I could not tell you exactly. I know Maj. Howes made quite a stir about it and endeavored to get something definite on it, and finally told me the gig was up, to simply drop it and take up something else.

Mr. FREAR. That is, no action could be brought about?

Mr. FRENCH. The contract for the Oregon people was nearly finished. That was what was told us: "We will only have this to contend with a short time and then it will be over."

Mr. FREAR. Was there anyone there connected with the company that you thought was purposely engaged in helping the Oregon Company?

Mr. FRENCH. I could not say as to that.

Mr. FREAR. What next?

Mr. FRENCH. Extension of the shipping shed. Of course if you go over the place now, you could hardly believe it, but for a long time lumber was all along the track. Cars were being loaded hit or miss all along the right-of-way. That meant the accumulation of stocks and extra labor to load those cars. In other words, the output was too large for the shipping shed facilities. I reported on that several times; not once, but several times; and we finally got a letter advising that the Engineer department had in contemplation an extension of the shipping shed floor, but that they had not been able to get to it; that they did not seem to be able to get ahead with the operation.

Mr. FREAR. Did they ever get to it?

Mr. FRENCH. They did, sir, and made the improvement.

Mr. FREAR. Because of the complaint that was made?

Mr. FRENCH. Yes, sir.

Mr. FREAR. Did that come from Maj. Howes to whom you reported?

Mr. FRENCH. Yes. Another thing was, we had considerable trouble with car shortage in lengths.

Mr. FREAR. You mean you were not furnished cars for the shipments?

Mr. FRENCH. Yes. Of course there was a shortage of cars at the time, but the thing I want to make mention of is that considerable

time was lost that could have been used, not taking it from a matter of dollars and cents—if we could have had the cars and the right length of cars.

Mr. FREAR. For shipments from the cut-up plants?

Mr. FRENCH. No, sir; shipments going out, which we were getting out for wing beams, and they would send in 25 or 30, necessitating the loading of short stuff. What we were after was the 40-foot beam capacity so we could mix our load.

Mr. FREAR. The cars were not of the right type?

Mr. FRENCH. Yes. It was a Government proposition, and we should have had some special service.

Mr. FREAR. After complaint was made was any effort made to improve conditions?

Mr. FRENCH. There was very little. We were told it was due to the car shortage in this country.

Mr. FREAR. That may have been one of the reasons?

Mr. FRENCH. That may have been; I do not know. That was a condition I reported.

Mr. FREAR. What else?

Mr. FRENCH. There is just a small report on the planing mill. I never could just figure out what the idea of the planing mill was, the way it was lined up. The Willapa people had made a planing mill out of it, but the way those planers were put in. I have one report showing those planers coming from the old Leadbetter mill at Vancouver. I am not much of a planing-mill man, but I have seen stuff coming through and have inspected it, and they were not of the type that we wanted for production. That was getting into the commercial to a certain extent, but at the same time in order to handle some of our rework stuff we were getting out a little commercial.

Mr. FREAR. How do you mean for commercial stuff; what was the cut-up plant doing handling that?

Mr. FRENCH. I reported it and it was supposed to be followed up by one of the other operators.

Mr. FREAR. Did you ascertain at any time?

Mr. FRENCH. No; I could not find out much. I found out the stuff was commercial.

Mr. FREAR. You say these planers were not proper for that work?

Mr. FRENCH. I would not say so; I would say they were second-hand.

Mr. FREAR. They were secondhand if they were bought from the Leadbetter mill.

Mr. FRENCH. They were bought from the Leadbetter mill. Who bought them I do not know.

Mr. FREAR. What position did Leadbetter hold?

Mr. FRENCH. I do not know whether he was on the purchase board or the sales board.

Mr. FREAR. Where was he?

Mr. FRENCH. He was here, I believe. On Leadbetter I am not as conversant as I might be.

Mr. LEA. Could those planers do practical work?

Mr. FRENCH. They would be all right for rough work, but take anything like, say, ceiling or flooring stuff and you would get possibly a third grade.

Mr. FREAR. Did that continue after the report was made?

Mr. FRENCH. About the last time I checked that over I think the Willapa people were dickering for the planing mill, and I was not there at the time that the Willapa people took that over, and not being instructed to check that I did not follow it.

Mr. FREAR. Did they keep the planers there?

Mr. FRENCH. I do not know whether the Government paid for them or whether they were loaned; I do not know.

Mr. FREAR. Were you there when they were installed?

Mr. FRENCH. No, sir; that was preliminary to my report. I have the names of the men who moved that stuff.

Mr. FREAR. How many planers were there?

Mr. FRENCH. Two of them.

Mr. FREAR. How far is the Leadbetter mill from the cut-up plant?

Mr. FRENCH. I could not estimate, very close.

Mr. FREAR. What next have you in mind?

Mr. FRENCH. The next is the cant shortage.

Mr. FREAR. What was the effect of that and what were the conditions?

Mr. FRENCH. In the first place we had a large capacity mill and in conjunction with the reports I made on speed there were times when the mill yard was out of cants, absolutely nothing on hand, necessitating the laying off of from one to two crews. I made that report in conjunction with the speed report, suggesting that if there was any way to store the stuff, to anticipate shortages, it might be better to reduce the speed and get quality, and then at such time as the mill was crowded by cants, do the next best thing.

Mr. FREAR. What occurred—did they increase the supply of cants, or did they materially decrease the amount of work?

Mr. FRENCH. That situation was not only a one-day occurrence; it happened frequently. You might have a whole slather of cants coming in in a bunch, and everybody chasing his head off.

Mr. FREAR. That would be a matter of supply, as supplied from the outside mills?

Mr. FRENCH. Supply for one thing, and supervision of cants for another.

Mr. FREAR. Were not the cants properly prepared when brought in, or the material?

Mr. FRENCH. That is not the idea. I am talking about the supply.

Mr. MAGEE. Lack of system?

Mr. FRENCH. Lack of system in handling cants. If the mill was to be crowded at one time at the expense of airplane stock, why not have made some provision so that the stuff could be accumulated and handled in such a way that they did not have to speed up at one time and then be slack at the next time.

Mr. FREAR. Did they not have storage facilities so that they could hold these cants?

Mr. FRENCH. Very limited.

Mr. FREAR. Your theory is that they attempted to cut up the cants as soon as they were received, requiring a speeding up when there was an abundance of cants on hand?

Mr. FRENCH. Yes, sir.

Mr. FREAR. What was the force employed at the mill; did they have more than enough men, or enough, or what?

Mr. FRENCH. Of course, the cut-up plant in my experience is a different proposition from anything I ever seen before. I do not know, I am not an engineer, but I believe much labor could have been cut out if certain things had been installed, if it had been made a little bit bigger.

Mr. FREAR. They were new conditions?

Mr. FRENCH. I take that for granted. I do not know enough about that, but the only thing is, of course—

Mr. FREAR. Was there any improvement in the matter of presenting these cants?

Mr. FRENCH. How do you mean "presenting"?

Mr. FREAR. Bringing them in; was there any more regularity about the supply as they were furnished?

Mr. FRENCH. No, sir. The only thing I can say is that after the armistice was signed we seemed to get an ungodly accumulation of stuff. I know I was detailed on special duty to take car numbers, and my reports cover cars galore that came in.

Mr. FREAR. How long after the armistice was signed did the cut-up plant continue to operate?

Mr. FRENCH. That I would have to refer to my reports for.

Mr. FREAR. A week or a month, or how long?

Mr. FRENCH. They kept going until a big percentage of the stuff was cleaned up, or until the time they used to get possibly one or two or three cars.

Mr. FREAR. Six months after the signing of the armistice?

Mr. FRENCH. I would not want to state as to that offhand, because I am not positive. I know the accumulation was taken care of up to a considerable period. Cants continued to come in, and they started dismantling some units, and they reserved one or two units to handle the surplus. They dismantled part and would handle the rest with the other part. In the matter of cants there is one thing I want to make mention of, and that is the system of handling, and it is a thing that I think is very significant in the matter of crew competition. The men handling sawed cants naturally could get the big cut, sawing sawed cants as against rives. There seemed to be some sort of system whereby certain men—I might say Mitchell was favored with sawed cants.

Mr. FREAR. By whom would that favoritism be brought about?

Mr. FRENCH. I can not say. There was considerable opposition; I could not say whether it was H. S. Mitchell or not, but it was so arranged that if they were sawed cants Mitchell got the sawed cants, and Green and Byrd worked the rived cants.

Mr. FREAR. What was the significance of that; they were trying, each in this work, to get out the most material?

Mr. FRENCH. It would seem that favoritism was being shown, so as to show what the crew cut.

Mr. FREAR. Was there any significance to the fact that one man got out more material than the other, whether he was working on rived cants or sawed cants?

Mr. FRENCH. There is no question but what it was bound to make a feeling so far as the superintendents were concerned.

Mr. FREAR. I am wondering whether it is significant.

Mr. FRENCH. I would ask you to question A. A. Green on that.

Mr. FREAR. He is here in the city?

Mr. FRENCH. Yes, sir.

Mr. FREAR. And you thought that was favoritism, so far as Mitchell was concerned; he seemed to get the benefit of the cants that were sawed, while the rived stuff went to Green and others; is that the idea?

Mr. FRENCH. Yes, sir; that is the point.

Mr. FREAR. What else?

Mr. FRENCH. There was a report on the mess fund. There was a time when the mess in some squadrons was very poor. We were led to believe that our men over there would be sent to the front, and the natural tendency in that case was that the men would accumulate a mess fund. The thing got so bad that the men on the night shift—that is, the graveyard shift, from 11 to 7 in the morning—were being sent out with one sandwich made of bologna, and possibly an apple, and then a cup of coffee. If I remember rightly, that mess was at about 3 o'clock in the morning. There was a lot of that food that was absolutely thrown away; it was unpalatable. There was considerable agitation among the men, and it got so bad that I thought it advisable to make a report on it, and what I wanted to ask was, if we were to be a permanent organization why the accumulation of these mess funds? Why not put it into the stomachs of the men?

Mr. FREAR. What was the surplus from the mess fund?

Mr. FRENCH. In our squadron we had something like \$2,500 mess fund.

Mr. FREAR. For how many men?

Mr. FRENCH. For 250, I believe.

Mr. FREAR. Who had the custody of the mess fund?

Mr. FRENCH. William N. Edwards.

Mr. FREAR. Who was he?

Mr. FRENCH. Second lieutenant in charge of the Twenty-fourth Spruce Squadron.

Mr. FREAR. What became of him?

Mr. FRENCH. He was discharged and went back to Chicago.

Mr. FREAR. What became of the fund?

Mr. FRENCH. That is something which I imagine went through ordinary channels. There was a few men that was left, that had big dinners. We had one or two big dinners, and maybe 50 men may have participated. Some of the mess fund was used for big dinners, printing, and decorations, and possibly a little music.

Mr. FREAR. Did that help the man who had the bologna and the apple?

Mr. FRENCH. I would not think so. And the result was they asked for a report from all the squadron commanders showing the different mess funds, and of course we had reports pro and con. I also suggested that the officer of the day, who we could consider as being the most unbiased, should make a report on the night lunches and report those in, and some of the reports of those officers don't show good in print.

Mr. FREAR. What was the character of them?

Mr. FRENCH. Not satisfactory.

Mr. FREAR. In what respect?

Mr. FRENCH. They simply advised that men for that class of hard work which they were asked to do, under the pressure that they were working, should be given better food.

Mr. FREAR. Was there any improvement in the food?

Mr. FRENCH. Yes, sir. I think Maj. Palmer, I believe, came into command over there, and he had a special meeting of the officers and they were all advised that there should be no accumulation of mess funds. This man was a Regular Army officer. He said that money should go into the stomachs of the men.

Mr. FREAR. What was done with the fund accumulated?

Mr. FRENCH. Part of it went into either the regimental exchange or was turned back. One other thing: What did become of the balance of those mess funds? To come back, a lot of it was fed up in special dinners. Some of them did cost like blazes.

Mr. MAGEE. To whom were they given?

Mr. FRENCH. To the balance of the squadron that were left. There might be a detachment of 25 or 30 men, and possibly they would invite their friends in.

Mr. FREAR. The proceeds of the squadron were used for a few men?

Mr. FRENCH. Part of it was used in special dinners.

Mr. FREAR. Was there any accounting to the men themselves in regard to this mess fund?

Mr. FRENCH. No, sir; and that is what the men wanted; and they never got it.

Mr. FREAR. Did they apply for it?

Mr. FRENCH. They did; and I asked for it. It was agitated around the squadron; but the average man thought the thing would be over soon, and "I should worry; as soon as I am out I will be out." So we let it drift.

Mr. FREAR. What were these men getting who had the bologna and had the privilege of working from 11 to 7?

Mr. FRENCH. Some of those men ran from \$3 to \$3.50 up; some were laborers. Of course we were all the same, unless you happened to fit in with the mess sergeant, when you could grab off an extra sandwich or so.

Mr. FREAR. The point you make is that those men were working hard nights and that they were not given sufficient of the right kind of food?

Mr. FRENCH. That was it exactly.

Mr. FREAR. Was that improved?

Mr. FRENCH. It was.

Mr. FREAR. After you made the complaint?

Mr. FRENCH. Yes, sir. After the matter had been taken up by the squadron commanders, I want to say that I came near getting court-martialed for that report. In some way or other William N. Edwards surmised that I made that report.

Mr. FREAR. What was his position?

Mr. FRENCH. Second lieutenant, then.

Mr. FREAR. What did he do?

Mr. FRENCH. He called me in and told me I must not overlook the fact that I was still military and there was a way of handling men such as I was, and he did not propose to have any squadron secrets go out and he would handle such matters himself.

Mr. FREAR. Where did he come from?

Mr. FRENCH. He was a Chicago man.

Mr. FREAR. He is out of the service?

Mr. FRENCH. Yes, sir. I also want to say in conjunction with my work here, that before I could work to advantage it was necessary for me to fit myself with special passes.

Mr. FREAR. Passes from whom?

Mr. FRENCH. Passes through the squadrons. I was refused absolutely any pass until I was furnished the proper passes. These passes came from above, furnished, however, by Maj. Howes.

Mr. FREAR. What authority did this lieutenant have over you?

Mr. FRENCH. I was in his squadron; I was attached to his outfit at that time.

Mr. FREAR. But under the orders of Capt. Gunn?

Mr. FRENCH. Yes, sir.

Mr. FREAR. Did you report this to Capt. Gunn?

Mr. FRENCH. I had this covered in one report.

Mr. FREAR. What was done then?

Mr. FRENCH. I was furnished with passes, and Lieut. Edwards was given to understand that I was not to be pampered with, that my work was to go on.

Mr. FREAR. He may not have known that you were engaged in this intelligence work?

Mr. FRENCH. He did, sir.

Mr. FREAR. He was not a Regular Army officer?

Mr. FRENCH. I think he had been in the militia and had served on the border.

Mr. FREAR. You say conditions were improved, so far as the food was concerned, and that is one of the most sensitive points for a soldier, is it not?

Mr. FRENCH. We found it that way.

Mr. FREAR. What else have you?

Mr. FRENCH. The next thing is the matter of the 15 per cent reduction from all pay checks.

Mr. FREAR. Describe that.

Mr. FRENCH. I do not know the facts. There may be some men that do know what was the object of that 15 per cent and how it was arrived at. We were paid Army pay and we were paid the mill scale. Out of the mill scale was deducted the Army pay and insurance premiums returned, and deductions, as I understand, for board. If your check was \$75, it would be represented on the mill payroll given to you, and up in the left-hand corner of that check was a little figure showing the difference between the \$75 and the 15 per cent that had been deducted from it.

Mr. FREAR. What for?

Mr. FRENCH. That is what I would like to know.

Mr. FREAR. Was any statement made in connection with it?

Mr. FRENCH. There was a list passed around among the squadron when I first went in. We were all green. On that list you had to sign that you would stand for the 15 per cent deduction.

Mr. FREAR. What reason was given?

Mr. FRENCH. I can not say.

Mr. FREAR. Was no reason given in the statement you signed?

Mr. FRENCH. The majority of the men could not have got any intelligent understanding on it. To show how it was, we had men that never paid the 15 per cent.

Mr. FREAR. You mean, it was not deducted?

Mr. FRENCH. They took their check, and it was written with pencil, and they rubbed off the 15 per cent and got full money.

Mr. FREAR. Who made the deduction?

Mr. FRENCH. It was made in headquarters of the cut-up plant.

Mr. FREAR. What officer?

Mr. FRENCH. I was unable to get any further than that. I went over and in my own case asked for an explanation.

Mr. FREAR. What did they say?

Mr. FRENCH. They said it was supposed to be for maintenance of the squadron kitchen and k. p.'s and squadron administration, and, I believe, headquarters administration also; company administration and headquarters administration. There were lots of men up there.

Mr. FREAR. Why did they take the money away from the ordinary soldier to look after the headquarters?

Mr. FRENCH. We had soldiers employed at headquarters.

Mr. FREAR. To take care of soldiers at headquarters?

Mr. FRENCH. That is what I was told.

Mr. FREAR. Were they civilian employees who looked after this extra work, the kitchen police?

Mr. FRENCH. No; all Army men.

Mr. MAGEE. This 15 per cent was not for tips, was it?

Mr. FRENCH. No; my understanding was it went in for squadron and corporation administration there at the cut-up plant.

Mr. FREAR. How long did that policy continue?

Mr. FRENCH. For some length of time, and the big bone of contention of the men who left the plant was that they would like a statement as to that 15 per cent.

Mr. FREAR. Was it received?

Mr. FRENCH. We never got it.

Mr. FREAR. Do you know what fund it was credited to?

Mr. FRENCH. No.

Mr. FREAR. You say it was not taken away from some men?

Mr. FRENCH. They removed the pencil mark from the check.

Mr. FREAR. There was an attempt on the part of some squadron commanders to enforce that?

Mr. FRENCH. These deductions were supposed to be made at the canteen, and the checks at the cut-up plant office. Some men got wise and went to the Vancouver plant and got face for their checks. When they came back through channels it was not charged in on the pay roll, but they were told they must go up and pay that 15 per cent at the canteen.

Mr. FREAR. Did they?

Mr. FRENCH. A lot did not go.

Mr. FREAR. Then what?

Mr. FRENCH. In some cases we go on company punishment, and some squadrons—the names I do not have with me—

Mr. FREAR. What do you mean by that?

Mr. FRENCH. Extra fatigue and one thing or another.

Mr. MAGEE. Did you understand that it was customary to deduct 15 per cent?

Mr. FRENCH. I did after I got wise to the system; yes, sir.

Mr. MAGEE. Do you know whether it extended to other places or not?

Mr. FRENCH. I could not say as to that. I had absolutely no jurisdiction outside of the cut-up plant.

Mr. FREAR. Was there anything done by your superior officers, Capt. Gunn or Maj. Howes, in trying to get that system remedied?

Mr. FRENCH. At the time I made that report we were just cleaning up the bits of the former investigation.

Mr. FREAR. Which was that, the Ray investigation?

Mr. FRENCH. The Ray investigation. Now, Maj. Howes was anxious to get a commission strong enough to follow up certain lines we had lined up, and this happened to be one of them; but it was absolutely impossible to check those up without a certain amount of power back of us, and we were not in any position to demand this accounting at that time from the corporation.

Mr. FREAR. Was that taken up with any officers—Col. Disque?

Mr. FRENCH. I could not say. I know the major and I talked it over, and he said, "It looks to me as though the jig is up and we might just as well make the best of it and let it go."

Mr. FREAR. You do not know whether any complaint was made to headquarters?

Mr. FRENCH. I know any amount of men complained to their commanding officers.

Mr. FREAR. Did they take any action?

Mr. FRENCH. Evidently not, because the 15 per cent was being charged the last I knew.

Mr. FREAR. Is it being charged to-day?

Mr. FRENCH. It was charged on the pay-roll checks. Now, of course, the mill is out of business.

Mr. FREAR. What is the difference between police work and kitchen work?

Mr. FRENCH. I can not say.

Mr. FREAR. Is there any distinction as far as you can observe?

Mr. FRENCH. Of course, at that time they figured the kitchen and K. P.'s were entitled to civilian wages, according to the system, and they were put on a civilian wage. Now, the question the men asked was—

Mr. FREAR. They are back now on the regular Army basis?

Mr. FRENCH. No; we were on the regular Army basis.

Mr. FREAR. But you do not get the civilian pay now?

Mr. FRENCH. No. But the men asked, "Why is it we have to pay—we will pay the mess help—why do we have to pay the headquarters?"

Mr. FREAR. You say there were a good many men up at headquarters?

Mr. FRENCH. There were.

Mr. FREAR. Was that for the officers or for the men?

Mr. FRENCH. This 15 per cent was supposed to take care of squadron administration, supposed to take care of company administration at the cut-up plant.

Mr. FREAR. How much was deducted from the officers' pay?

Mr. FRENCH. I do not know of anything being deducted from the officers' pay.

Mr. FREAR. They were cared for at headquarters, were they; they had their dining room and kitchen supplies, etc.?

Mr. FRENCH. Yes; they had an officers' mess.

Mr. FREAR. You do not know whether any of this money taken from the soldiers, this 15 per cent, was used for the officers?

Mr. FRENCH. I could not say.

Mr. FREAR. Did you have any suspicions?

Mr. FRENCH. No; the only thing I questioned was the officers' extra pay.

Mr. FREAR. In what respect?

Mr. FRENCH. In endeavoring to get some pay-roll information I ran across the case of Broughton. His time card showed "loading expert," and if I recollect the report it was at a salary of \$125 a month.

Mr. FREAR. That is in addition to his pay as an officer?

Mr. FRENCH. He held a commission as captain in the Spruce Division.

Mr. FREAR. He had his captain's pay?

Mr. FRENCH. I would think so; yes, sir.

Mr. FREAR. Do you mean to say he had his captain's pay and was allowed \$125 extra pay?

Mr. FRENCH. That is, according to the time card. The pay rolls will show that.

Mr. FREAR. Capt. Broughton. What are his initials?

Mr. FRENCH. I have not the information right here. I can get that later on.

Mr. FREAR. You reported that?

Mr. FRENCH. I did not, because that came at a later time.

Mr. FREAR. When was that?

Mr. FRENCH. That was along about February.

Mr. FREAR. 1917?

Mr. FRENCH. Yes, sir. These were old pay cards I happened to run across, and I think it might be advisable to check that up.

Mr. FREAR. When the men got through with their civilian work, their civilian pay ceased; I mean when they got through with the work at the cut-up plant?

Mr. FRENCH. Yes; when they were discharged.

Mr. FREAR. When the work ceased they went back to the ordinary duties of soldiers?

Mr. FRENCH. The majority of those men were discharged and those that are there are on a civilian basis.

Mr. FREAR. Now they are all just receiving civilian wages?

Mr. FRENCH. There are not any enlisted men over there now.

Mr. FREAR. What are they receiving to-day?

Mr. FRENCH. I could not tell you.

Mr. FREAR. Why are they receiving civilian pay?

Mr. FRENCH. That I can not tell you.

Mr. FREAR. What is the difference between a soldier here and a soldier down at Camp Perry?

Mr. FRENCH. Of course there may be men over there that have not been ex-soldiers. None of those men may be ex-soldiers. At the time the armistice was signed the feeling was so intense that the average man said he wanted to get out. They realized that if the men were all discharged it would cripple the dismantling of the cut-up plant. So I, like a good many other men, signed a letter, a

form, on which we agreed to stay until March 1 if we were given our discharge here. That was the only basis those men would stay on.

Mr. FREAR. What is your work?

Mr. FRENCH. In the record and storage office.

Mr. FREAR. What is the work of the men there?

Mr. FRENCH. Disposing of stuff sold, and general clean-up.

Mr. FREAR. They are drawing civilian pay?

Mr. FRENCH. Yes, sir.

Mr. FREAR. But the soldiers at Fort Myer, Va., and other places are drawing only soldiers' pay?

Mr. FRENCH. Yes. There were a few soldiers, but the personnel of the corporation is civilian at the present time.

Mr. FREAR. Are these men in the service?

Mr. FRENCH. No, sir; they are civilians.

Mr. FREAR. What percentage are civilians and what percentage are in the service?

Mr. FRENCH. There are no enlisted men in the cut-up plant.

Mr. FREAR. What next?

Mr. FRENCH. The matter of fatigue. They worked three crews, and it was customary after a man put in eight hours to go on fatigue. That fatigue was without any recompense.

Mr. FREAR. What is "going on fatigue"?

Mr. FRENCH. It all depended; clean-up, general roustabout work. Those men might be on fatigue from two to three and four hours.

Mr. FREAR. In addition to the eight hours' service?

Mr. FRENCH. In addition to the eight hours without further compensation. I think there is a bulletin of the spruce division that says some men in the woods were paid time and a half for overtime. Our men were allowed nothing. The result was that the men in the graveyard shift, working from 11 to 7, when it came time to go back and do a man's work, were not there; they were not fit to handle their work.

Mr. FREAR. Because they had been engaged in this other work?

Mr. FRENCH. Because they were not given a chance to get sleep, and it was hard to get your sleep in the daytime, and a man needed all the rest he could get.

Mr. FREAR. Why did they call them the "graveyard shift"?

Mr. FRENCH. Because that just expresses the feeling of the men over there. I made a report on the fatigue. That report was not handed out until I personally was asked to check up the conditions and found on several different occasions car crews sound asleep in their cars, with trucks of stuff waiting on the platforms.

Mr. FREAR. During their eight-hour shift?

Mr. FRENCH. During their eight-hour shift. There might be a little let-up, but instead of being on the job they were half dead.

Mr. FREAR. Your theory was that it was because of this fatigue duty?

Mr. FRENCH. Absolutely. I turned in a report on that. Several officers, of course, deny it, but I noticed we got results.

Mr. FREAR. Did this fatigue work stop?

Mr. FRENCH. It did in part. Of course, there were one or two squadron commanders that insisted on dictating. Williams Edwards was one.

Mr. FREAR. Did you continue on fatigue duty?

Mr. FRENCH. I reported on some information I had that assistant foremen would send back in an evening 15 to 20 men to their bunks for sleep.

Mr. FREAR. What amount of time was taken up with this fatigue work?

Mr. FRENCH. It varied; it might be one, two, or three hours.

Mr. FREAR. What was the particular character of the fatigue duties?

Mr. FRENCH. Everything; it might be handling lumber; anything.

Mr. FREAR. There was no extra compensation for it?

Mr. FRENCH. Absolutely none.

Mr. FREAR. By what authority did they give you this work?

Mr. FRENCH. Those orders came in the form of fatigue roster, handed out by the office. There would be a roster saying that so many men from this squadron should report to so and so at such an hour for fatigue.

Mr. FREAR. You say that after a while it ceased largely?

Mr. FRENCH. Yes, sir.

Mr. FREAR. What have you next?

Mr. FRENCH. This report on the supervision of inspection in the Grays Harbor district. I would like to say that this is a very important report, but I am up against it because I do not have the names of the men and their addresses, but I can give you the basis of the report that came down from one of the supervisors, and can recall very closely the contracts made by Maj. Breece and some of the Grays Harbor mills.

Mr. FREAR. In what respect?

Mr. FRENCH. Meaning this, that while you could not blame the mill for taking the contract, there were a few things that I, of course, was unable to get relevant to the side cut that these mills got out of the stumpage. That referred in dollars and cents to that.

Mr. FREAR. Put in plain English, what was the substance of those contracts?

Mr. FRENCH. That I can not say, because Lieut. Carrigan is the man who examined that and took the data on that.

Mr. FREAR. Have you any record?

Mr. FRENCH. The only record I have of that, in general, is in my files.

Mr. FREAR. Can you not tell us in what respect, in what way this advantage on the side cut would go to the mill?

Mr. FRENCH. As near as I know, I understand it went in mill stumpage. I am not a logging man. I will be honest with you on that, but the only thing I can say is there were a few men who told me at the time they would be glad to go on record if they could be shown that the investigation was not a whitewash.

Mr. FREAR. This investigation?

Mr. FRENCH. No.

Mr. FREAR. The Ray investigation?

Mr. FRENCH. Yes. Shortly after that we were promised we would have another investigation. Those men said they would not go on unless they could be satisfied that it was no whitewash, the reason being they were closely affiliated with other mills.

Mr. FREAR. That does not help us to get a definite understanding of what the complaint was.

Mr. FRENCH. Lieut. Carrigan has the report.

Mr. FREAR. Where is he?

Mr. FRENCH. In San Francisco, and you will find in my files also a copy of the report, and the names of some of the men I spoke to about it.

Mr. FREAR. And your files, you believe, are in Washington?

Mr. FRENCH. The last I knew they were transferred to the Western Department, San Francisco.

Mr. FREAR. You mean by the side cut the part that is not used for airplane stuff?

Mr. FRENCH. Yes, sir.

Mr. FREAR. What were the things you had in mind? You say it is important, but there is nothing definite placed before us until we can get those reports.

Mr. FRENCH. I understand, but I can not intelligently testify on that.

Mr. FREAR. I am getting at what you want. You want us to get those report to corroborate your statement and ascertain what the facts are?

Mr. FRENCH. Yes, sir; and you can question the men that had something to do with that supervision. The point I bring up is trying to get those men to talk, showing the inspectors sent to those mills favored the mill men, and this can be corroborated by the supervisor's inspection.

Mr. FREAR. It would be an impossibility to bring back those reports now, and it is an impossibility unless we get those reports and bring them back here; I do not see any other way in which the committee could get any light. But it is all right for you to present it to the committee.

Mr. FRENCH. It is important because it relates to the style of contracts that Maj. Breece was making, which the supervisor told me at the time was not right.

Mr. FREAR. Maj. Breece was making contracts that were unjust to the Government?

Mr. FRENCH. Absolutely; giving the mill the big end of it.

Mr. FREAR. In what respect, can you tell us, did he give the mill the big end of it; that is, they were given the side cuts, you say?

Mr. FRENCH. It was a free proposition on the coast, as to the logs they were getting.

Mr. FREAR. You mean, after the Government took out the airplane stuff, then they made a present to the mills of the rest?

Mr. FRENCH. That is about the size of it. We never had opportunity to check it any further, and certain men, especially in this country, would not testify unless they could be satisfied it was not going to be a whitewash.

Mr. FREAR. Are there any other men that are ready to testify?

Mr. FRENCH. I have the name of one man, but I would much prefer you got it through my record, because I told him straight that I would never divulge his name.

Mr. MAGEE. Who were these supervisors?

Mr. FRENCH. They had charge of the mill inspectors.

Mr. MAGEE. Do you know where they are now?

Mr. FRENCH. We have one man in Portland.

Mr. MAGEE. What is his name and address?

Mr. FRENCH. He is the man I promised not to tell his name, because he is affiliated with a lumber company.

Mr. MAGEE. How do you expect we are going to examine him if we can not get his name?

Mr. FRENCH. I have got my records. I told him they could get it through the records.

Mr. MAGEE. Your record, you say, is in San Francisco?

Mr. FRENCH. That is my understanding.

Mr. MAGEE. You can hardly expect this committee to go down to San Francisco and examine it?

Mr. FRENCH. No; but I do not know of any other way.

Mr. MAGEE. Is there any supervisor around here who can give any light on this subject?

Mr. FRENCH. There is one man, W. J. Kuhl.

Mr. MAGEE. What is his address?

Mr. FRENCH. In Portland.

Mr. MAGEE. Will you furnish us with his address?

Mr. FRENCH. I will. I am supposed to leave here Sunday morning, but I will be glad to get it.

Mr. MAGEE. What is his name?

Mr. FRENCH. W. J. Kuhl. You can find out his address by calling the Saari-Lumber Co., in the Northwestern Building.

Mr. FREAR. Who was he?

Mr. FRENCH. He was one of the supervisors in the Gray's Harbor district.

Mr. FREAR. What would he know?

Mr. FRENCH. He would know about these contracts.

Mr. FREAR. He ought to have information as to them?

Mr. FRENCH. I would say he should.

Mr. LEA. Can you give us the name of any mills that you have reason to believe were taking unjust advantage of the Government in procuring this side cut?

Mr. FRENCH. Of course, in answering that question I would like to go to the record, because we had certain feelers that we were working on that were not fully established, which led into this.

Mr. LEA. If there is no specific information you could give us tending to show that any mill man was defrauding the Government in that way—

Mr. FRENCH. I will tell you offhand it was rumored—

Mr. LEA. Not from suspicion.

Mr. FRENCH. It was simply as it came to me. It is a matter of jeopardizing their interests; they may be absolutely right and above board, and, as a rule, my reports cover only definite facts.

Mr. LEA. I do not want the name of anybody, if it is a mere matter of suspicion. I believe that Mr. Kuhl, if you will ask him, may be able to give you valuable information.

Mr. FREAR. You mean, he can give direct information?

Mr. FRENCH. I believe so.

Mr. FREAR. Now go to your next proposition.

Mr. FRENCH. The next thing that caused considerable question was the matter of Sitka spruce shipped into Seattle.

Mr. FREAR. From where?

Mr. FRENCH. Supposed to have come from Alaska.

Mr. FREAR. It is grown down in Washington and in Oregon, but this supposed to come from Alaska?

Mr. FRENCH. That is what we were told.

Mr. FREAR. Well, what about it?

Mr. FRENCH. There was considerable question as to how we came by it and where it came from and what the reason was for putting it in at that late day.

Mr. FREAR. What time was it?

Mr. FRENCH. After the armistice was signed.

Mr. FREAR. What proportion; how much?

Mr. FRENCH. My reports will show the car numbers I checked.

Mr. FREAR. What was the character of it?

Mr. FRENCH. Some of it was all right and some of it was not. Now, we were told that was sent down for an experiment.

Mr. FREAR. For a while they were experimenting with Sitka spruce, were they not?

Mr. FRENCH. I understand so. The only question was why it was so late.

Mr. FREAR. What is next?

Mr. FRENCH. That, offhand, is the only thing I can think of in particular.

Mr. FREAR. Tell me what you know, if anything, about the records over there?

Mr. FRENCH. What do you mean by "records;" records the Government has?

Mr. FREAR. The Government records.

Mr. FRENCH. If you want my candid opinion, I think they have been handled very carefully. I do not know; it may be certain people have a right to go into those records. I know of one instance in connection with the Warren Construction Co. I will give you the information about that. It was about 11 o'clock on the morning of August 4.

Mr. FREAR. This month?

Mr. FRENCH. August 4, I think it was.

Mr. MAGEE. What year?

Mr. FRENCH. 1919. There were three men, as follows: Hutchinson, auditor for the Warren Spruce Co.—at least Capt. Sorensen identified him; Wallace, chief clerk for the Warren Spruce Co., at Newport, when they were active down there; and a man whose name I could not learn, but it was said he was connected with the Spruce Corporation. He was a short, stocky man, and wore a black suit and a dark fedora hat. These men called on Capt. Sorensen, who was in charge of the records at the record and storage office.

Mr. FREAR. Where?

Mr. FRENCH. At the upper cantonment, Vancouver Barracks; and Hutchinson told Sorensen that he had been sent for to get certain correspondence relative to a deal in which the Warren Spruce Co. was interested in connection with the Yaquina district.

Mr. FREAR. Sent over by whom?

Mr. FRENCH. That I could not say; he simply said he had been sent over.

Mr. FREAR. Where did you get this information?

Mr. FRENCH. I was right there and overheard the conversation. Capt. Sorensen advised Mr. Hutchinson that the records of the Warren Spruce Co., so far as he knew, were in storage at the steel warehouse at the cut-up plant.

Mr. FREAR. In the Government files?

Mr. FRENCH. In the warehouse, and that he did not have the authority to turn over any records that they might have, and that they would have to get the authority from the Portland office, and advised Hutchinson to do that and referred him to the Portland office—the town office. Hutchinson then told Capt. Sorensen that his company had already arranged for the delivery of such files in the possession of the spruce corporation as might be desired; that they had been furnished with a letter from Capt. Owen Massey, A. S. A. P., to Capt. C. W. Latimer, A. S. A. P., which he had handed to Capt. Latimer about two weeks before, for certain files desired at that time and had been delivered three files at that time. The unidentified man who said he represented the spruce corporation then advised Capt. Sorensen that it was all right to deliver any files that Mr. Hutchinson should want for the Warren Construction Co. In keeping with certain instructions I had, I was necessarily obliged to make report on another matter to Capt. Farr.

Mr. FREAR. Just what occurred?

Mr. FRENCH. I followed these men down to the cut-up plant. Then I went to the cut-up plant to inform Capt. Farr, he being the intelligence officer on duty over there, and I noticed those men were in the office of the headquarters and they were still after those files. I was on special work at the upper cantonment, so it was impossible for me to watch them any further, and I immediately reported to Capt. Farr and he said he would take it up. So I made no further reports on that.

Mr. FREAR. What was done, so far as you understand; did they get the letters?

Mr. FRENCH. I can not say as to that. I reported they got the three files and had this letter previous to this time.

Mr. FREAR. What was the size of the files?

Mr. FRENCH. That you will have to check up the inventories on.

Mr. FREAR. What was the number of letters in a file?

Mr. FRENCH. The files at the present time, especially files on record over there, are in boxes, possibly that wide and that long [indicating].

Mr. FRENCH. That is, 3 feet by 2 feet?

Mr. FRENCH. No; possibly 12 inches, or something like that; I have not got the exact size. They were ordinary packing boxes.

Mr. FREAR. Those boxes were turned over to the Warren Spruce Co.?

Mr. FRENCH. According to Hutchinson's talk with Capt. Sorensen, they were.

Mr. FREAR. Who had authority over there?

Mr. FRENCH. What do you mean by "over there"?

Mr. FREAR. Who had control?

Mr. FRENCH. As I say, Capt. Massey had furnished Hutchinson with a letter to Capt. Latimer authorizing the delivery of that stuff.

Mr. FREAR. From whom?

Mr. FRENCH. I can not say.

Mr. FREAR. He delivered it upon a letter he received?

Mr. FRENCH. Received from Capt. Owen Massey. Those are the words of Mr. Hutchinson.

Mr. FREAR. Are these in reference to some transactions at Yaquina Bay?

Mr. FRENCH. The records were in connection with a deal they were connected with in the Yaquina district.

Mr. FREAR. Did those files belong to the Government, or were they in the control of the Government?

Mr. FRENCH. Of course, that I would not know.

Mr. FREAR. The rest of the files are kept in custody there?

Mr. FRENCH. We have the cut-up plant, the Warren Spruce construction matters, miscellaneous other files, stored in the warehouse.

Mr. FREAR. Did those files belong to them?

Mr. FRENCH. They pertained to their operations. I do not know who has jurisdiction over those files, but I will say that Capt. Farr made mention of the fact at the time that "that was damned poor business." I took it up with him to be absolutely safe on the thing, because he was the man I was supposed to report to.

Mr. FREAR. And they took away three files?

Mr. FRENCH. Not at that time. They had taken three files out previous to that.

Mr. FREAR. Those were Warren Spruce Co. records, according to the talk that occurred there over at Vancouver Barracks, in the possession of Government officials?

Mr. FRENCH. I would suggest that you talk with Capt. E. P. Sorensen, who is over there.

Mr. FREAR. Those were taken out this month, August?

Mr. FRENCH. August 4 was the date they were over there, and they said two or three weeks before that, so that would be along in July.

Mr. FREAR. But it was since the time this investigating committee was appointed?

Mr. FRENCH. I would imagine so; yes, sir. I do not know the exact date.

Mr. FREAR. You do not know whether it had any relation?

Mr. FRENCH. I could not say. The only thing was that the records were asked for; why; I do not know, but I reported to my superior over there.

Mr. FREAR. What else if anything have you in mind in regard to the transactions there that ought to be brought to the attention of the committee?

Mr. FRENCH. On July 25, Mr. McGill, who was connected with the Spruce Corporation and who was at one time affiliated with Maj. Lanahan, called at the headquarters of the Air Service troops, and knowing McGill from previous experience I was interested when I found out he wanted to get a line on Capt. Manin's correspondence, correspondence which according to McGill he had with the Aberdeen Lumber & Machine Co.

Mr. FREAR. He was over at the cut-up plant?

Mr. FRENCH. No, he was at the Portland office.

Mr. FREAR. What were his initials?

Mr. FRENCH. I do not know them.

Mr. FREAR. What became of that?

Mr. FRENCH. That is a thing that I checked up, and I do not know.

Mr. FREAR. What was there in that which was significant to you?

Mr. FRENCH. That goes right back to the cost-plus contracts, Maj. Breece's contracts, because at that time we were working on the same work.

Mr. FREAR. Was that correspondence given to him?

Mr. FRENCH. That is what I could not find out, but it was intimated to me by Master Electrician Dunlap, who has charge of all the correspondence, that some of the correspondence out of headquarters files had been taken. He did not come out and say so himself, but he said as much as that.

Mr. FREAR. By whom did he say?

Mr. FRENCH. He would not give me that information.

Mr. FREAR. Dunlap is in the service?

Mr. FRENCH. He is a master electrician—has charge of all the correspondence at headquarters.

Mr. FREAR. To whom does he report?

Mr. FRENCH. Col. Van Way.

Mr. FREAR. Is he over there now?

Mr. FRENCH. Col. Van Way has charge of the Air Service troops. This is a matter of conversation between Sorensen and Hutchinson and a couple more men. The witnesses are myself and Master Electrician Ralph Staniford and an ex-soldier in the record and storage office by the name of Watts. This man Wallace and Hutchinson were unknown to me until I inquired. This man Wallace could be identified further by civilian Thompson.

Mr. FREAR. What about them?

Mr. FRENCH. They were the men who were up to get the records.

Mr. FREAR. Which records were they?

Mr. FRENCH. The Warren spruce records.

Mr. FREAR. What further?

Mr. FRENCH. I have nothing further in mind right now. I might say that my reports possibly would give some more, but I can not think of anything now. This was sprung on me in a hurry, and I had no time to prepare myself.

Mr. FREAR. I understand, and the committee has insisted that you shall present whatever facts you have gathered from the nature of your duties there. You had made application for discharge?

Mr. FRENCH. I made application for discharge here.

Mr. FREAR. Where? That is, Portland, Oreg.?

Mr. FRENCH. To get to that—I made my first application on the form that was sent out by the cut-up plant. That was away back in February. I was advised by my commanding officer that there would be many ahead, and to stay in the service at \$81 a month, which was all right. I later got a letter from Capt. —

Mr. FREAR. Eighty-one dollars, in addition to what?

Mr. FRENCH. Eighty-one dollars is my pay, and my clothing and everything found.

Mr. FREAR. Your commutation and rations?

Mr. FRENCH. Yes, sir; that is my regular pay, \$81.

Mr. FREAR. What is the total which you would get in money?

Mr. FRENCH. It would figure around \$150 altogether. I then got a letter at the time that I was relieved from special duty at the cut-up plant. If I had my correspondence, I could get that for you. I was given a letter to Capt. Pitney, who was in command of the service

troops at the upper cantonment, and it was suggested that I be given my immediate discharge so I could work as a civilian at the cut-up plant. Not more than possibly a week ago, on the strength of promises of men who were supposed to be here for discharge, I presented my letters and requested to my commanding officer through channels and was advised that Col. Van Way would not recognize the letters. They were too old, a certain circular, the date of which I can get if you need it, stating that they would discharge a man sending that man back to the assembling camps, back to their home point and travel pay from that point.

Mr. FREAR. Where is that, in your case?

Mr. FRENCH. Minneapolis. That is my home, but I have made arrangements, to be honest with you, to go to New York City. So I will have to be sent to Camp Dodge, to Minneapolis, and finally by the Government to New York. The affidavit says to collect additional mileage.

Mr. FREAR. That is granted to you under the rules or regulations?

Mr. FRENCH. Yes, sir; I signed an affidavit that that is my bona fide home.

Mr. FREAR. When did you get word that you were going to be discharged?

Mr. FRENCH. It was intimated about a week ago that the work would run along at the outside until the 15th of the month.

Mr. FREAR. Of September?

Mr. FRENCH. Yes; and then we were told we were to be discharged and transferred to-morrow.

Mr. FREAR. That is, Saturday?

Mr. FRENCH. Yes.

Mr. FREAR. When did you hear that?

Mr. FRENCH. That was the first part of this week.

Mr. FREAR. That was the first part of this week.

Mr. FREAR. So you are expecting this discharge tomorrow?

Mr. FRENCH. No. I expect to be transferred, and the thing I want to know, which is a trifle to a certain extent, but means considerable to the men who have stayed here and helped out on the promise that they would be taken care of—

Mr. FREAR. In what particular do you feel that there ought to be some other arrangement?

Mr. FRENCH. I feel that the men who have stuck to the job and put these records in shape should be given some different consideration.

Mr. FREAR. What consideration?

Mr. FRENCH. Should be given just a discharge here and additional pay if they want it.

Mr. FREAR. Have you asked for that?

Mr. FRENCH. Yes. I have also made request with the commanding officer to take up the matter to see if anything could be done. Nothing has been done.

Mr. FREAR. How many men are there in the same position?

Mr. FRENCH. Possibly eight men altogether.

Mr. FREAR. These men would have preferred to be discharged here?

Mr. FRENCH. We had one man that will be discharged here, who is accepting work at the officers' club, but the majority of those

men, having been promised discharge here, would rather be discharged here.

Mr. FREAR. Would you get mileage pay?

Mr. FRENCH. Yes, sir.

Mr. FREAR. To what point?

Mr. FRENCH. To our bona fide home.

Mr. FREAR. That would be Minneapolis, in your case?

Mr. FRENCH. Minneapolis, and later on to New York. But I want to say the files will show that at the cut-up plant men were released and being discharged and we were promised our travel pay back to New York City and other points. Of course, we are told that orders are orders. That is military, and that no special exception can be made in our cases. But every man over there is really entitled to it. The promise that was held out to them should be made good.

Mr. FREAR. Who held out the promise to you?

Mr. FRENCH. It was held out through the commanding officer and through the headquarters. I would not attribute it to Col. Van Way; it was the general atmosphere we were working under.

Mr. FREAR. Now, of course, this regulation is put forth?

Mr. FRENCH. Yes, sir.

Mr. FREAR. Is there anything else you can think of?

Mr. FRENCH. Nothing that I have in mind, sir.

Mr. LEA. What was the extent of those bad cants that were used at the Vancouver plant?

Mr. FRENCH. My report tells. I endeavored to report that.

Mr. LEA. Can you give any approximate idea?

Mr. FRENCH. No; I refer you to the lumber that the Willapa people bought. That will give you a fair idea, because it was suggested that they bought the commercial lumber.

Mr. LEA. Was it a material proportion?

Mr. FRENCH. Yes; it is very material.

Mr. LEA. Were those cants furnished by one of the Vancouver mills or shipped in from outside mills?

Mr. FRENCH. From outside mills. The logs were cut into 4½-inch cants. We had rives in there also. They were sawed and rived cants. (The witness was excused.)

Mr. MAGEE. Mr. Chairman, there is a clipping I have cut from this morning's Oregonian, with reference to a proposed resolution commending efforts to get out spruce at the cut-up plant at Vancouver, and this proposed resolution was of such a remarkable character that I would like to put it in the record.

Mr. FREAR. Do you desire to read it in?

Mr. MAGEE. I have no desire to read it in unless the committee wishes it, but I offer it as showing, apparently, the atmosphere that certain persons perhaps breathe here in the State of Oregon in reference to spruce production.

Mr. FREAR. You might read it for the benefit of the committee.

Mr. MAGEE. I will read it, and offer it in evidence as an exhibit.

(The clipping above referred to, marked "Exhibit No. 1, Aug. 29th, 1919," is copied in the record in full, as follows:)

"RAP IS TAKEN AT DISQUE—VANCOUVER COMMERCIAL CLUB REFUSES TO INDORSE WORK—RESOLUTION COMMENDING EFFORTS TO GET OUT SPRUCE AT CUT-UP PLANT OVERWHELMINGLY VOTED DOWN.

"VANCOUVER, WASH., August 28. (Special.)—A resolution indorsing Gen. Brice P. Disque in his management of the Spruce Production Division was

voted down at the meeting of the Commercial Club last night. The resolution which the club refused to underwrite is as follows:

- "Whereas under the good judgment and supervision of Gen. Brice P. Disque the spruce cut-up plant of the Federal military service was located in the most logical point for its successful operation at Vancouver, Wash.; and
 - "Whereas under the extremely adverse conditions and impediments of being obliged to construct said plant by and with the service and labor of inexperienced men and during weather in an inclement season of the year which made such construction almost impossible; and
 - "Whereas during said construction he was also hindered by and was obliged to overcome adverse and unpatriotic propaganda circulated among certain of his helpers; and
 - "Whereas in spite of the labor and weather conditions above set forth he was able in a term of about 45 working days during the winter season to construct and bring into operation the largest mill of its kind ever built, which was able to turn out 1,000,000 feet per day of airplane lumber, the largest output by one institution ever manufactured; and
 - "Whereas the said plant was the largest and most productive institution of its kind ever constructed by the hand of man in the given time; and
 - "Whereas by said most remarkable construction and efficiency the United States Government was able to make such production of airplanes that the control of the air was assumed and maintained by the Allies in the late war; and
 - "Whereas by said airplane production the turning point of the war was made and said war was won: Be it
- Resolved*, That we hereby indorse and commend the military administration of Gen. Brice P. Disque in his control and management of the Spruce Production Division of the United States military activities at Vancouver, Wash." [Laughter.]

Mr. FREAR. You say that was passed?

Mr. MAGEE. No; but the proposed resolution is of such a remarkable character that I think it ought to be put in the record, in order that our colleagues in the House may get some appreciation of the atmosphere here.

(Thereupon, at 5.30 o'clock p. m., an adjournment was taken until Tuesday, September 2, 1919, at 10 o'clock a. m.)

SUBCOMMITTEE No. 1 (AVIATION)
OF THE SELECT COMMITTEE ON
EXPENDITURES IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES,
Tuesday, September 2, 1919.

The subcommittee met at 10 o'clock a. m. in the post office building, Portland, Oreg., Hon. James A. Frear (chairman), present. Also present, Hon. Walter W. Magee and Hon. Clarence F. Lea.

TESTIMONY OF MR. J. B. MILLER.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Where do you live?

Mr. MILLER. City of Portland.

Mr. FREAR. For how many years have you lived here?

Mr. MILLER. I have lived here about 18 years in Portland. I have been in this country about 30 years.

Mr. FREAR. What is your business?

Mr. MILLER. I am a logger.

Mr. FREAR. And have been for how many years?

Mr. MILLER. For about 25 years.

Mr. FREAR. Whereabouts?

Mr. MILLER. Ostrander and Cathlamet, Wash., and Toledo, Oreg.

Mr. FREAR. In this section of the country?

Mr. MILLER. Yes, sir.

Mr. FREAR. Logging what?

Mr. MILLER. Spruce and fir; mostly fir, and cedar, and spruce.

Mr. FREAR. You were conducting logging operations at Toledo, were you?

Mr. MILLER. Yes, sir.

Mr. FREAR. For what period?

Mr. MILLER. Six years.

Mr. FREAR. That is, from what dates?

Mr. MILLER. From 1913. I have just practically left there, about six months ago. In fact, I have not left there yet.

Mr. FREAR. You have interests there still?

Mr. MILLER. To a certain extent.

Mr. FREAR. You were doing work there in 1918?

Mr. MILLER. Yes, sir; I was there during all of 1918.

Mr. FREAR. So you are familiar with the surrounding conditions that are found at Toledo?

Mr. MILLER. Yes.

Mr. FREAR. Did you have any interests in the mill at Toledo?

Mr. MILLER. Yes, sir.

Mr. FREAR. Who was interested with you?

Mr. MILLER. Mr. Bade and Mr. Putnam.

Mr. FREAR. What was the capacity of that mill?

Mr. MILLER. Fifty thousand—sixty thousand—it has cut 85,000 a day.

Mr. FREAR. Where did you cut your timber from?

Mr. MILLER. North of Toledo, toward Siletz. I built a logging railroad in there in 1913.

Mr. FREAR. And the road has been extended from time to time?

Mr. MILLER. Yes.

Mr. FREAR. The road extended how far before you completed operations in that section?

Mr. MILLER. Into section 19. I built two lines, what was known as the Wessel spur. That goes into section 24.

Mr. FREAR. That is, your road runs north to the north half of section 30. Is that right?

Mr. MILLER. Yes, sir.

Mr. FREAR. In township 10, range 10?

Mr. MILLER. Yes; 10, 10.

Mr. FREAR. Then it divides in two branches, one leading over into the south half of section 24?

Mr. MILLER. Yes, sir.

Mr. FREAR. And the other leading up into the south half of section 17.

Mr. MILLER. Section 17.

Mr. FREAR. About how far from the junction of the road down to Toledo or down to where you were logging?

Mr. MILLER. About 6 miles.

Mr. FREAR. And how far down to where you put your logs into the slough?

Mr. MILLER. I first drop in the slough about 7,600 feet from Toledo, north from Toledo.

Mr. FREAR. So that would be about—from where you put your logs into Depot Slough would be about 2 or 3 miles to this junction?

Mr. MILLER. Farther than that.

Mr. FREAR. How much?

Mr. MILLER. About 4 miles.

Mr. FREAR. Four miles from where you put the logs into the slough to the junction?

Mr. MILLER. It would be farther than that at this time, but that is where I started in.

Mr. FREAR. How far beyond, approximately—just your best judgment—did the north line which ran into 17 extend from the junction?

Mr. MILLER. About $2\frac{1}{2}$ miles.

Mr. FREAR. And the road that ran over into section 24 and section 23—did it go to 23?

Mr. MILLER. I built up within a thousand feet of 23 when I logged a quarter section in 24.

Mr. FREAR. About how far did that extend from the junction?

Mr. MILLER. About a mile and a half, I guess. It would run diagonally across 18, making it farther than it appears on the map.

Mr. FREAR. Diagonally across?

Mr. MILLER. From 30.

Mr. FREAR. Across 19?

Mr. MILLER. Yes.

Mr. FREAR. What kind of timber grew around that section?

Mr. MILLER. Fir and spruce.

Mr. FREAR. You are familiar with that Siletz region?

Mr. MILLER. Very well.

Mr. FREAR. What kind of timber grows there?

Mr. MILLER. Fir and spruce.

Mr. FREAR. And I suppose other timber?

Mr. MILLER. A fairly good growth of spruce; not so much until you go farther down the river. We have some places where there is solid spruce and other places where there is no spruce at all.

Mr. FREAR. Down the Siletz River?

Mr. MILLER. Where we have been logging.

Mr. FREAR. And that would be running north?

Mr. MILLER. That is rather northwest.

Mr. FREAR. Practically north of section 17?

Mr. MILLER. Yes, sir.

Mr. FREAR. The timber grows how far above—how far north; the number of miles?

Mr. MILLER. I do not know. I never have been down the line; I can not say.

Mr. FREAR. Would you say several miles or more?

Mr. MILLER. I have been through there 10 or 12 miles, and there was plenty of timber there yet.

Mr. FREAR. What I am trying to ascertain is with reference to building a road north joining onto the road you had there for the purpose of getting out timber for Government airplane use? I explain that briefly, so that you will know what my questions lead to. What was the grade upon this road you had running up into section 17 and south into 24?

Mr. MILLER. There was no grade beyond 3 per cent.

Mr. FREAR. That was 3 per cent?

Mr. MILLER. With the empties.

Mr. FREAR. What was the grade coming down?

Mr. MILLER. We had about 1,500 feet of 1 per cent adverse with the loads.

Mr. FREAR. You are up near the summit elevation in section 17?

Mr. MILLER. One thousand two hundred feet from the summit.

Mr. FREAR. What would be the percentage in rise from that to the summit, can you say—greater or less?

Mr. MILLER. No; the same per cent. I built a 3 per cent grade.

Mr. FREAR. That is for coming down with empties?

Mr. MILLER. Yes, sir; or coming down with a load.

Mr. FREAR. When coming down with the load?

Mr. MILLER. One per cent adverse.

Mr. FREAR. Going up with empties?

Mr. MILLER. No; going up with loads. You pull the hill with 1 per cent.

Mr. FREAR. Oh, yes. Have you examined with regard to the topography of the country, regarding building a road up north to get into this Siletz timber?

Mr. MILLER. I have been down the river, all over that whole country.

Mr. FREAR. What have you to say regarding the advisability of the possibility of getting a railroad in there, to get out this timber from that section?

Mr. MILLER. You would find no trouble at all. You could go in and build it west and get spruce, or build roads all over that country. That was my idea when I built the road in there.

Mr. FREAR. You built the road originally?

Mr. MILLER. I built the road; yes.

Mr. LEA. By referring to down the river you mean north or south?

Mr. MILLER. Down the river is northwest; no, practically north.

Mr. LEA. You had reference to the river flow?

Mr. MILLER. Yes.

Mr. FREAR. Have you any idea of the amount of spruce up in that Siletz country?

Mr. MILLER. No, sir; I do not know.

Mr. FREAR. You do not know the cruise?

Mr. MILLER. I am not familiar with the county cruise, but I know there was all the spruce in the Siletz country necessary to supply the European countries if they had cut it. The spruce would have supplied practically all of the European countries if they wanted it.

Mr. FREAR. From the Siletz country alone?

Mr. MILLER. From the Siletz section alone.

Mr. FREAR. You are familiar with all the conditions in this Siletz country?

Mr. MILLER. Yes, sir; I have been practically all over it.

Mr. FREAR. What is your best judgment as to the most feasible means of getting in there and getting out the timber?

Mr. MILLER. From down the river and across into section 6 would be my idea—what is called Dewey Creek; there is a low pass. Pull up through section 6 and drop into Dewey Creek, and then you can go anywhere down into the Bull's Bag.

Mr. FREAR. In a northerly direction?

Mr. MILLER. Yes.

Mr. FREAR. Where would it be brought out?

Mr. MILLER. At Toledo.

Mr. FREAR. That is the most available place, according to your judgment?

Mr. MILLER. It is the only place; it is not the available place. It is the only place. You can cross the summit in section 23 and get over into a lot of rocky country.

Mr. FREAR. Into section 23. That is over near the coast?

Mr. MILLER. Yes; over in the same direction they built this Government line.

Mr. FREAR. What about that course?

Mr. MILLER. You could get through there, but you would have quite an adverse grade getting back up.

Mr. FREAR. What about the economy of time as well as money in getting a road in there?

Mr. MILLER. Well, the Government built about within three miles of their coast line when they abandoned this line. That is what we call the Wessel spur—that is, going in west.

Mr. FREAR. You are speaking of one that joins your line?

Mr. MILLER. Yes, sir. The Government built that line in there. They join onto the end of the line I built.

Mr. FREAR. How far did they build in?

Mr. MILLER. I think about a mile and a half. They built all kinds of spurs in there.

Mr. FREAR. I thought you referred when speaking about the Spruce Production line, to one that runs up west?

Mr. MILLER. They built within 3 miles of that on the Wessel spur.

Mr. FREAR. What about the convenience and economy of getting in around the ocean side, compared with your course?

Mr. MILLER. There is no comparison at all. In the first place, they could not get anywhere.

Mr. FREAR. On around on the coast line?

Mr. MILLER. They could not get anywhere on the coast line. They would go up against Otter Rock and then they have got to go through Otter Rock Mountain. That is an iron mountain.

Mr. FREAR. You are familiar with all that territory?

Mr. MILLER. I have walked all over it.

Mr. FREAR. You have seen that mill at Toledo that has been built by the Spruce Production Corporation and which was never completed?

Mr. MILLER. Yes, sir.

Mr. FREAR. What have you to say about the value of that mill for practical purposes?

Mr. MILLER. The value of that mill is just what the machinery is worth.

Mr. FREAR. Is it practicable to use it for any logging purpose by anyone in this section of the country?

Mr. MILLER. I would not consider so. Our people figured on buying it, and I said, "If you do, we are broke right now."

Mr. FREAR. Why?

Mr. MILLER. Because you could never make anything out of it.

Mr. FREAR. You mean you could not make any profit on the investment?

Mr. MILLER. You would have to rebuild it.

Mr. FREAR. In what respect?

Mr. MILLER. It is too short on one end and too long on the other. You can not get but about a 24-foot log into the mill, and then you would have to tear down all the northerly end of it. You would have to tear that down before you could get the timber out. You could not get more than a 24-foot log out, and if they were to run that mill to full capacity they would go half an hour and the whole thing would be blocked. Of course, they never built it for practical logging purposes; they cut the stuff all up in short pieces. There is as fine machinery in that as money can buy, but that is as far as it goes.

Mr. FREAR. Do you remember when you were working, logging upon your northerly line, that there were Government employees logging over on the westerly line?

Mr. MILLER. Yes, sir.

Mr. FREAR. I have not asked you anything about this before.

Mr. MILLER. Ask me anything you want to.

Mr. FREAR. I have not asked you in advance to ascertain your judgment about it. What was the comparative output of those two forces of loggers or men who were engaged in logging at these two branches?

Mr. MILLER. I logged on the north branch and they logged on the west branch. They had five sides and I had one, and put out the same number of logs or possibly more logs than they did.

Mr. FREAR. With one side you put out as many or more logs as they did working on the west line with five sides?

Mr. MILLER. Yes, sir.

Mr. FREAR. About how many feet of logs would that be a day?

Mr. MILLER. I put out 70,000 to 80,000 feet.

Mr. FREAR. How many men did you have?

Mr. MILLER. About 55 men.

Mr. FREAR. And about how many men would you say were over on this westerly branch, called the Wessel branch?

Mr. MILLER. Something like 500.

Mr. FREAR. Soldiers, or what?

Mr. MILLER. Mostly soldiers.

Mr. FREAR. That is to say, in general, they had about ten times the force you were employing, with five sides, and with one side you put out approximately the same amount of logs?

Mr. MILLER. I do not know how many men they had, but I would judge 500 men.

Mr. FREAR. A large number of men?

Mr. MILLER. I know several times they had 75 or 80 men on a section.

Mr. FREAR. Did you have any soldiers working for you?

Mr. MILLER. Yes, sir.

Mr. FREAR. How many?

Mr. MILLER. I had 12 on the section, and we had 20 to 25 men in the railway.

Mr. FREAR. How many in the logging?

Mr. MILLER. None in logging.

Mr. FREAR. What kind of men were working over this Alsea line?

Mr. MILLER. Mostly soldiers, practically all soldiers. There was a few civilians, what they figured to go ahead with.

Mr. FREAR. Those were men who had charge of the work?

Mr. MILLER. Yes, sir; mostly.

Mr. FREAR. Is there anything further that you think would be of help to the committee?

Mr. MILLER. I do not know. Of course those soldiers——

Mr. FREAR. I mean, in a general way, about all the work there.

Mr. MILLER. The soldiers were as good a set of boys as ever lived, but they were inexperienced in that work. We had doctors and lawyers and dentists and everything else on the section in the woods.

Mr. FREAR. What was the reason for putting doctors and lawyers and dentists over there in the woods, do you suppose?

Mr. MILLER. I could not answer that.

Mr. FREAR. You had nothing to do with determining the policy?

Mr. MILLER. I would never put them there if it had been me.

Mr. FREAR. What was the approximate cost of building your railroad?

Mr. MILLER. I built some of my line for \$8,000 a mile.

Mr. FREAR. And what was the most expensive?

Mr. MILLER. \$15,000.

Mr. FREAR. What would have been the cost of building a railway north from this point, so far as you can judge, throughout this country, based upon your experience throughout this section?

Mr. MILLER. I do not think it would cost more than \$12,000 a mile. Steel is worth about \$5,000 a mile.

Mr. FREAR. What weight?

Mr. MILLER. Fifty-six pounds.

Mr. FREAR. That is the general weight?

Mr. MILLER. That is good enough for logging.

Mr. FREAR. You have built other railways, have you?

Mr. MILLER. Yes, sir.

Mr. FREAR. And logged elsewhere, as you said?

Mr. MILLER. Yes, sir.

Mr. FREAR. So you have had experience?

Mr. MILLER. I built the Cathlamet line 18 miles, in Cathlamet, Wash.

Mr. FREAR. What did that cost?

Mr. MILLER. It was quite an expensive road there. I would judge that road probably cost \$12,000 a mile. I had quite a lot of rock work and several trestles to build.

Mr. FREAR. And that was 18 miles long?

Mr. MILLER. I built 18 miles. I built 6 miles to start with, and kept adding to it.

Mr. FREAR. In 1918 did you build any of that road?

Mr. MILLER. Yes, sir.

Mr. FREAR. About how much?

Mr. MILLER. About a mile.

Mr. FREAR. About what was the expense of that?

Mr. MILLER. I could not tell you.

Mr. FREAR. Approximately?

Mr. MILLER. Not to exceed \$12,000. I had some pretty heavy cuts and fills to make.

Mr. FREAR. That is up at the cut on the north side, where we went with a locomotive? Let me just state for the record that the committee within the past three days has gone to Yaquina, Oreg.; has examined the road mentioned by the witness, including both branches running north and west; has gone down the south line across Alsea Bay to the Blodgett tract and the 24-mile road, and has gone over the north line around toward Otter Rock, and has that information with which to aid them in coming to their conclusions.

Mr. LEA. Where is the mill that you are interested in?

Mr. MILLER. At Toledo, Oreg.

Mr. LEA. Is that the one that Mr. Story is connected with?

Mr. MILLER. Yes, sir; I sold it to Mr. Story.

Mr. LEA. You no longer have any interest in it?

Mr. MILLER. I do in a certain way; yes.

Mr. LEA. But not as an operator?

Mr. MILLER. No.

Mr. LEA. This logging that you did, was that for yourself or for the Government?

Mr. MILLER. I didn't log for the Government at no time. We logged, cut, and sold to the Government all the timber that we could cut.

Mr. LEA. Did you sell the finished lumber or the cants to the Government?

Mr. MILLER. No; we cut cants for the Government.

Mr. LEA. You did not sell any logs to the Government?

Mr. MILLER. We might have sold half a dozen logs for some purpose to the Government.

Mr. LEA. But none shipped down?

Mr. MILLER. No; not that I know of.

Mr. LEA. What market did you supply with your mill?

Mr. MILLER. Any market we could sell to.

Mr. LEA. You shipped it over the bar more or less, did you?

Mr. MILLER. I shipped two years over the bar.

Mr. LEA. Who was doing this logging for the Government? You spoke of their having five sides while you were operating one?

Mr. MILLER. Mr. Hall was the manager.

Mr. LEA. Who is Mr. Hall?

Mr. MILLER. I do not know anything about Mr. Hall, only that Mr. Hall was the manager.

Mr. LEA. Do you know where he lives?

Mr. MILLER. He lived in Alaska somewhere, or British Columbia. He was a miner.

Mr. LEA. You do not know where he is now?

Mr. MILLER. No. All I know is that he is a very nice gentleman, as far as I know.

Mr. LEA. Do you know if he had ever logged before?

Mr. MILLER. He said not. His experience in the way he operated showed he never logged before.

Mr. LEA. Was his crew doing any construction work?

Mr. MILLER. Oh, yes; they logged and built roads and did general work of all kinds all the time they were in there.

Mr. LEA. Were they doing big construction work at the time you referred to when you were getting out 85,000 a day?

Mr. MILLER. Oh, yes; they were building a track with a track building crew, but they had five sides in there.

Mr. LEA. About how much lumber per day did you ordinarily get out with one side?

Mr. MILLER. Just according to the chance you have.

Mr. LEA. I mean, the average.

Mr. MILLER. Some loggers get out 40,000 and some 125,000. That is owing to the chance they have.

Mr. LEA. Of course, the timber has a lot to do with that?

Mr. MILLER. The timber and the ground.

Mr. LEA. Were you doing selective logging or general logging?

Mr. MILLER. General logging.

Mr. LEA. And what was this other crew doing?

Mr. MILLER. They went over the ground about three times. I do not know what they were doing.

Mr. LEA. Were they supposed to be doing selective logging, or picking it clean?

Mr. MILLER. They first went over the ground and taken out a few trees, and went over again, and I think logged over the third time. They logged as clean as I did, eventually. I do not know what kind of logging they would call it.

Mr. LEA. You did not discuss that with Mr. Hall?

Mr. MILLER. Did I?

Mr. LEA. Yes.

Mr. MILLER. I had no information about that.

Mr. LEA. So, if they went over it one time and then went over it a second time, getting part of it each time, that would have been selective logging?

Mr. MILLER. I imagine so. We logged a second time over the ground.

Mr. LEA. I just wanted to get at the fact. There is not any doubt that they were doing selective logging?

Mr. MILLER. I imagine so. I was up there probably half a dozen times during the time they were in there.

Mr. LEA. Now, as I understand your testimony, you believe that the most favorable way to get into the Selitz would be to go in from the south above Toledo and then east, your idea being that they should follow down to Selitz to tidewater; or, what is your idea about that?

Mr. MILLER. My idea would be to build from the end of my line, the northern line there, across the summit, on the same survey that I have, and then go down the river into section 6 and across the hill into Dewey Creek or Jay Bird Creek.

Mr. LEA. How far north would that take you, do you know?

Mr. MILLER. That would take you clear on down beyond—get over Jay Bird Creek—it would take you down to the—

Mr. LEA. I am not familiar with those locations. Could you tell me about how many miles it would be?

Mr. MILLER. About 6 miles.

Mr. LEA. About 6 miles from Toledo?

Mr. MILLER. No; not from Toledo.

Mr. LEA. Six miles from the present railroad?

Mr. MILLER. From the point of the present railroad.

Mr. LEA. How far would that be from Toledo?

Mr. MILLER. Well, that would be about 13 or 14 miles.

Mr. LEA. Now, if the railroad was constructed over to the Selitz shed from this spruce-production railroad No. 11, how high would the elevation be?

Mr. MILLER. I do not know anything about No. 11. I never was over there.

Mr. LEA. You own timber in there, do you not?

Mr. MILLER. No, sir.

Mr. LEA. You owned timber in there in the past?

Mr. MILLER. Yes, sir.

Mr. LEA. Where was your timber located?

Mr. MILLER. Sections 17 and 24.

Mr. LEA. That is where the branches run north from Toledo?

Mr. MILLER. Well, it is where the Wessel branch turns off. The Wessel spur turns off and goes into 24. I logged one quarter section in 24.

Mr. LEA. Then your route, you think, would be the most practical one, would be the one that would run through your property?

Mr. MILLER. Well, for the northern line there, starting at the end of my line, going over the hill into the Siletz Basin, and then down the river.

Mr. LEA. There are other ways that they could get in, are there?

Mr. MILLER. There is nothing impossible; no. You could build any way, as far as that is concerned, but it is not practical at all.

Mr. LEA. Do you know about the elevation of that watershed between the Siletz and the ocean?

Mr. MILLER. Why, some points there are 700 feet high. My aneroid showed 700 feet. Of course, there might have been some points I never was on, but I have been practically all over that country.

Mr. LEA. Is that 700 feet the lowest point?

Mr. MILLER. No, no. I crossed at 260 feet. Some call it 400 feet, but my aneroid showed me 260 feet.

Mr. FREAR. That is in 17?

Mr. MILLER. Yes, sir. Well, that is in 17 and 18. It practically comes together right there.

Mr. LEA. You never had any occasion to go north on that watershed beyond your property, did you?

Mr. MILLER. Yes, sir. I had two men working there for two months trying to find a pass through there.

Mr. LEA. For what purpose did you want to go up there?

Mr. MILLER. I wanted to build in the Wessel way, you see, on the Wessel spur. There was the main line first, and after my cruisers went in there and worked two months they could not get out of there with any practical line, and I came back and went the north way.

Mr. LEA. That was where your men were working, was out near the ocean, was it?

Mr. MILLER. No, sir. From where I cross the summit on through there for a distance of 5 or 6 or 7 miles.

Mr. LEA. And that is north, is it?

Mr. MILLER. North; yes. I never tried to cross the summit down where they tried to cross it, down at Otter Rock.

Mr. LEA. Your idea was to reach Toledo, reach the Siletz Basin from Toledo?

Mr. MILLER. Yes, sir. That is the only practical way to do it.

Mr. LEA. Have you ever made any cruise of the timber on down the Siletz to the ocean?

Mr. MILLER. Some I have, not all; no.

Mr. LEA. Where is the main body of the spruce, or is it distributed throughout that basin?

Mr. MILLER. Well, there is quite a lot of spruce all over, but around the Bull's Bag is the heaviest spruce.

Mr. LEA. Will you tell me where that place is? I am not familiar with these locations.

Mr. MILLER. That is about 6 miles down the river from the end of my line.

Mr. LEA. Now, in reference to the mill, Mr. Miller, you said the mill was too short on one end and too long on the other. Is the mill any shorter than the ordinary operating mill?

Mr. MILLER. Well, I would say so, yes; the end at which the logs come in the mill.

Mr. LEA. It should extend farther out, is that the idea?

Mr. MILLER. Yes.

Mr. LEA. What is the idea, to give room to handle the logs?

Mr. MILLER. You understand the elevation. The chute comes up into the mill, and then it is about 24 feet from the end where they break over to the level, you see, where they roll onto the carriage to the saw.

Mr. LEA. You would want more level room on top?

Mr. MILLER. More level room on top.

Mr. LEA. And to supply that would require an extension of this mill, wouldn't it?

Mr. MILLER. An extension of that end; yes, sir; on the long end.

Mr. LEA. But it would not require tearing down any portion of the mill that is built, that is constructed?

Mr. MILLER. Oh, no; but if you was to put on sufficient there to saw a 100-foot stick in there, which you should do in a mill of that capacity, why then you would have to clear all the south end down to get the timber out.

Mr. LEA. That would be for ordinary sawmill work?

Mr. MILLER. No; not ordinary. Ordinary mills do not use 100-foot sticks; but in that country they should do it.

Mr. LEA. If you wanted to do a big milling business?

Mr. MILLER. A mill as big as that should be able to saw a 100-foot stick—a big stick.

Mr. LEA. But the mill is wide enough—too wide, you say?

Mr. MILLER. It is wide enough; yes.

Mr. LEA. Oh, no; oh, no; they could run it if it was a mile wide. I think the mill is well built. From all that I can see about the mill it is well built. What I mean to say is the construction—what timbers are put up—the mill is well constructed. It is not in proportion to what they want to do with it. It is constructed for a different purpose than to accommodate the needs of a commercial sawmill?

Mr. MILLER. Yes.

Mr. LEA. Now, these soldiers were practically all inexperienced men in the lumber business, were they not?

Mr. MILLER. I will say that 90 per cent of them were; yes.

Mr. LEA. And it is a difficult thing for any man—it is impossible, is it not, for the inexperienced man to perform the same amount of labor that the experienced man does; it takes time to qualify him?

Mr. MILLER. Yes. Some of them were only in the way.

Mr. LEA. Yes. Now, on the whole, you found the soldiers willing to try to do, though, did you?

Mr. MILLER. Well, yes; largely they were willing to do. That is, they were not willing to do as long as they were getting soldiers' pay, but I paid them civilian wages when I hired them. I would not have them unless I could pay them civilian wages.

Mr. LEA. You got better results, did you?

Mr. MILLER. They worked to the best of their ability then.

Mr. LEA. You thought that was the right course to pursue?

Mr. MILLER. No; I do not.

Mr. LEA. To pay them civilian wages?

Mr. MILLER. No; I did not.

Mr. LEA. You think they should have been paid soldiers' pay?

Mr. MILLER. I do not think any man in that service should have been paid any more than the man at the front.

Mr. LEA. How about a man working on a ship as a civilian? Do you think he should be paid civilian wages?

Mr. MILLER. No; he should not have any more pay than the men who fought in the trenches.

Mr. LEA. You believe in the conscription of labor during the war for war purposes; is that the idea?

Mr. MILLER. I do not believe any man who has his pleasure here should have any more pleasure and get any more pay than the man at the front.

Mr. LEA. Would you be willing that the mill owners and loggers proceed on the same theory?

Mr. MILLER. Well, yes, yes. I was not very anxious to get rich at the expense of the Government.

Mr. LEA. At what price did you figure steel rails in the estimate given a while ago?

Mr. MILLER. Well, I figured them about \$5,000 to the mile.

Mr. LEA. How many tons to a mile?

Mr. MILLER. Eighty-eight tons to the mile, in 56-pound steel.

Mr. LEA. What price would that be per ton?

Mr. MILLER. Well, I have not figured it up, but along about \$5,000 a mile for the steel, splices, etc.

Mr. MAGEE. I would like to ask you a question. You spoke about 1 per cent adverse?

Mr. MILLER. Yes, sir.

Mr. LEA. I think you stated your road was built on a 3 per cent grade?

Mr. MILLER. Yes, sir.

Mr. LEA. I did not just get in my mind what you meant by saying that going up it would be only 1 per cent.

Mr. MILLER. Well, you go up on 3 per cent, and go up on the other side on 1 per cent. You do not savvy that?

Mr. MAGEE. No.

Mr. MILLER. Now, you remember that Siletz is 100 feet higher than the ocean side, or the Toledo side, the Siletz Valley, the Siletz River?

Mr. MAGEE. Oh, I see. You circle around, is that the idea?

Mr. MILLER. No; you do not circle around; you just go right over it. But the Siletz side is 100 feet higher than the Toledo side. In other words, you could turn the Siletz River right into the Yaquina River.

Mr. MAGEE. So that coming down you have the 3 per cent grade?

Mr. MILLER. You have the 3 per cent grade with the loads, or going up with the empties.

Mr. MAGEE. Going up with the empties you get what per cent?

Mr. MILLER. Three per cent going up with the empties, or coming down with the loads. If you go up the hill you are bound to come down the same hill on the same track.

Mr. MAGEE. I wanted to understand just what you meant.

Mr. MILLER. Do you understand now?

Mr. MAGEE. Well, I have had things clearer in my mind than I have this.

Mr. MILLER. Now, if you go up the hill—I probably can show you.

Mr. MAGEE. I probably can ascertain what you mean from reading what you have explained.

Mr. MILLER. If you go up the hill on a 3 per cent grade—

Mr. MAGEE. Now, you go up on a 3 per cent grade.

Mr. MILLER. You go up there on 3 per cent.

Mr. MAGEE. Then you turn?

Mr. MILLER. No; you do not turn. You are on the summit, right here. [Illustrating.] You start down that side on 1 per cent, going down.

Mr. MAGEE. You mean the other side?

Mr. MILLER. On the Siletz side, going down. That is 1 per cent going down. Then when you bring your load up, that is 1 per cent going up and 3 per cent going down.

Mr. MAGEE. I see what you mean; you branch off at the summit?

Mr. MILLER. You simply go over the hill. I am going to explain that to you. Now, here you go up this side here on 3 per cent. That is a flat place on the summit, right there on the summit. Now, you go down this side here, and there it is 1 per cent. Now you get the load and start back up the hill, and at that point it is 1 per cent, and when you go down on this side it is 3 per cent.

Mr. MAGEE. Now, you said that on this coast line, or in the extension of the coast line, that is, the road built by the Government, that you never get anywhere? What do you mean by that expression?

Mr. MILLER. Well, with any reasonable amount of money you would never get anywhere. A logger would never get anywhere with it, because he would not have money enough to drive through that tunnel; he never could go through that tunnel.

Mr. MAGEE. You mean up near Otter Rock?

Mr. MILLER. Right at Otter Rock. Otter Rock Mountain there.

Mr. MAGEE. Now, this coast line which the Government built runs up along the coast, does it not?

Mr. MILLER. I have been up the coast, but I never walked over this line.

Mr. MAGEE. Well, we went over the line yesterday and it runs up along the coast, as far as we went. Now, how far is the timber, or the spruce timber in any quantity, from the coast?

Mr. MILLER. Well, there is quite a lot of spruce timber right around Otter Rock.

Mr. MAGEE. How far is Otter Rock from the coast?

Mr. MILLER. Well, Otter Rock is right on the coast.

Mr. MAGEE. Is that a good clear cut in the log?

Mr. MILLER. No; it is what we call pin-knot spruce.

Mr. MAGEE. I mean timber suitable for airplane construction?

Mr. MILLER. Well, I would imagine it would be 5 or 6 miles.

Mr. MAGEE. In from the coast?

Mr. MILLER. Probably from the end of their line there, farther on, east.

Mr. MAGEE. What I am getting at is whether spruce timber for airplane purposes was found near the coast or in some material distance?

Mr. MILLER. Several miles in.

Mr. MAGEE. That is what I was getting at.

Mr. MILLER. It is several miles in.

Mr. MAGEE. So that to get spruce from that line they would have to turn at some point from the coast and go into the Siletz Reservation several miles.

Mr. MILLER. They would have to go inland farther than they are now.

Mr. MAGEE. To get the suitable timber?

Mr. MILLER. There is some spruce suitable anywhere, right up to the coast line.

Mr. MAGEE. If I understand you, your point is this, that you extended your road, the line of your road, it would extend several miles inland from the coast?

Mr. MILLER. Yes, sir.

Mr. MAGEE. And go in where the spruce is?

Mr. MILLER. Yes, sir. It would be several miles from the coast.

Mr. MAGEE. Well, with the coast line, no matter how far that extended on, at some point it would have to turn and go inland?

Mr. MILLER. Yes; to get away from the coast, the pin-knot spruce.

Mr. MAGEE. So it necessarily followed that it would be much cheaper, more economical, to extend your road in a straight line, which is already several miles from the coast, than to build a line over to the coast and go up along the coast and then go inland several miles.

Mr. MILLER. If they had put the same money in the extension of my line that they put on the north from the Yaquina to the Otter Rock, they would have taken out all the spruce that they would have needed at any time. They could have been logging spruce from 1 mile from the end of my line, more spruce than they got on the line that they logged on.

Mr. MAGEE. Well, in your opinion was there any necessity to build that coast-line road at all?

Mr. MILLER. Not from a spruce standpoint, there was not.

Mr. MAGEE. In order to get out spruce?

Mr. MILLER. No, sir; none whatever.

Mr. MAGEE. From that standpoint would you say that it was an absolute waste of public funds?

Mr. MILLER. Well, that is the way I would look at it; yes.

Mr. MAGEE. There isn't any doubt about it, is there?

Mr. MILLER. Not in my mind, there is not.

Mr. MAGEE. Do you think there could be in the mind of any reasonable man who had gone over the ground?

Mr. MILLER. I have heard nobody talking about it, but what said it was.

Mr. MAGEE. It is not such a road as any business man would be expected to build with his own money, is it?

Mr. MILLER. No, sir; I would not think so. I would not build it.

Mr. MAGEE. You could not conceive of anybody building such a road unless on a cost-plus contract, where somebody else paid the money, would you?

Mr. MILLER. I do not think so. I would not build it then.

Mr. MAGEE. Well, if you were building under a cost-plus contract and you got a certain percentage on the cost, a commission on it, as far as you would be individually concerned it would only affect the taxpayer and not yourself?

Mr. MILLER. That is different; yes.

Mr. MAGEE. So if you were willing to mulct the taxpayers, if your conscience would permit you to do that, it would not make much difference to you whether they built it or not, you would get your profit?

Mr. MILLER. Yes; I would be getting mine; but I would never build it.

Mr. MAGEE. Well, you are a conscientious man. Now, I think we went over the road which you have described on Saturday, from Toledo; that is, over what is called the Storey & Fischer Road. I think they sometimes call it that, do they not?

Mr. MILLER. Well, since I sold out there it has been called the Fischer-Storey Lumber Co.

Mr. MAGEE. Now, they had a mill located near the Toledo mill, didn't they?

Mr. MILLER. Fischer-Storey?

Mr. MAGEE. Or you had one there.

Mr. MILLER. No; the only mill there—the mill had been burned down.

Mr. MAGEE. I understand it has been burned up, but it was there?

Mr. MILLER. Yes.

Mr. MAGEE. How far from the location of the Toledo mill?

Mr. MILLER. What do you mean by that; do you mean the Government mill?

Mr. MAGEE. Yes; the Government mill, in distance.

Mr. MILLER. The Government mill, I would say, was 1,000 to 1,200 feet, something like that.

Mr. MAGEE. What direction from the Government mill was your mill?

Mr. MILLER. Well, our mill was east of the Government mill.

Mr. MAGEE. And the Storey people are constructing, as I understand it, a new mill there now?

Mr. MILLER. A little further up the stream; yes.

Mr. MAGEE. Now, you brought your logs from this reservation directly to the mill?

Mr. MILLER. Yes, sir.

Mr. MAGEE. Over a line of road extending from the forest right down over certain water there—what do you call it?

Mr. MILLER. One thousand five hundred feet. It is called Depot Slough, or Depot Creek.

Mr. MAGEE. Depot Creek is within a short distance of your mill?

Mr. MILLER. One thousand five hundred feet of the mill.

Mr. MAGEE. Now, would you tell the committee in what manner logs could be got to the Government mill over this coast road?

Mr. MILLER. Well, they would have to put it in the Yaquina, and then tow it from Yaquina.

Mr. MAGEE. They must cross the Storey-Fisher road somewhere. Doesn't this coast road cross that road somewhere?

Mr. MILLER. No, sir.

Mr. MAGEE. Well, you come down to what—what do you call it—Yaquina Bay?

Mr. MILLER. Down to Yaquina. The north line of the Government line starts out at Yaquina.

Mr. MAGEE. I know. As it comes down the coast, then you go up around some body of water there a mile and a half?

Mr. MILLER. You go around the bay.

Mr. MAGEE. Around the bay?

Mr. FREAR. Yaquina Bay.

Mr. MAGEE. Yaquina Bay?

Mr. MILLER. Around Yaquina Bay.

Mr. MAGEE. And then I observed that there was a long trestle extending out for some considerable distance into the bay.

Mr. MILLER. Well, there is one on both ends of the line, so far as that is concerned.

Mr. MAGEE. Well, you get down on that side. Now, the mill is across that body of water, the Government mill?

Mr. FREAR. No.

Mr. MILLER. No; the Government mill is built at Toledo, and you are talking about Yaquina. That is a distance of 12 miles apart.

Mr. MAGEE. What I am getting at is this, they have got to raft somewhere?

Mr. MILLER. They have to raft at Yaquina and tow to Toledo, a distance of 12 or 15 miles.

Mr. MAGEE. While on your road, you go from the reservation right down to your mill?

Mr. MILLER. Yes, sir.

Mr. MAGEE. What would be the difference in distance, both in rail-roading and in rafting?

Mr. MILLER. Some distance.

Mr. MAGEE. To where you find the spruce in any quantity?

Mr. MILLER. What do you mean, on my line?

Mr. MAGEE. You have got a line there, you say, now, that is 7 miles long?

Mr. MILLER. Yes; about 8 miles long.

Mr. MAGEE. About 8 miles long, and there is considerable spruce at the termination of that line?

Mr. MILLER. Well, all the spruce would be at the end of that line, between there and the coast.

Mr. MAGEE. What distance would you transport logs now over your line?

Mr. MILLER. From the end of my line to the mill now?

Mr. MAGEE. Yes.

Mr. MILLER. That is a distance of about 8 miles.

Mr. MAGEE. Now, what distance would you have to transport logs, say, from where they have cut some on the coast road? Have you been up where they are logging now?

Mr. MILLER. No; I have not, but it is 14 miles from Otter Rock.

Mr. MAGEE. They have run a spur—within 2 or 3 miles south of Otter Rock they have run a spur—I should think, a mile or a mile and a half or two miles into the woods, and they are logging there?

Mr. MILLER. That might be Spencer Creek.

Mr. MAGEE. Now, take those logs; how far would they have to transport those logs by railroad and rafting to get them to the Government mill?

Mr. MILLER. Well, about 25 miles.

Mr. MAGEE. Well, the comparison is very great, is it not, so far as economy is concerned, as well as time?

Mr. MILLER. What do you mean, over my line and over theirs?

Mr. MAGEE. Yes; and over their line.

Mr. MILLER. Well, I would never consider the coast side of it at all, at no price, no way of looking at it. I would never consider that at all.

Mr. MAGEE. Suppose we take the element of time. Take the element of time, in taking a carload of logs at the end of your line, how long would it take you to get them down to your mill?

Mr. MILLER. About 20 minutes.

Mr. MAGEE. How long, if you know, would it take to get them from this creek which you have described down to the coast-line railroad and then raft them 12 miles to the Government mill?

Mr. MILLER. I have no knowledge of how long it would take.

Mr. MAGEE. Can you give us any approximate idea?

Mr. MILLER. Well, I imagine that time could be made down over that line, fairly good time, say 20 or 30 minutes, 40 minutes, something like that. I do not know how fast they run on that line. I never was over it.

Mr. MAGEE. And you think they could run 12 miles in 40 minutes?

Mr. MILLER. Well, I do not know. They might not be able to run it in an hour. I never was over the line. They tell me they have some very sharp curves.

Mr. MAGEE. And then there would be the rafting in addition to that?

Mr. MILLER. Well, I do not imagine a man could get the same logs that he put in to-day in short of a week.

Mr. MAGEE. You think it would take about a week?

Mr. MILLER. I imagine it would. I haven't any knowledge of how long it would take.

Mr. MAGEE. It would take about a week as against 20 minutes.

Mr. MILLER. If you would throw that carload of logs right into the water and hitch a boat to it, you might tow it up there in a couple of hours.

Mr. MAGEE. Would that be feasible?

Mr. MILLER. I would not think so.

Mr. MAGEE. Now, in 1918, were there a number of mills functioning in that locality, run by men experienced in logging and sawing them?

Mr. MILLER. There was only one mill there. There was only one mill at Toledo. There was two small mills there, one has been built since, but there was a little old mill down on the bay there that was out of business. Since that time they have built it up for a tie purpose. Our mill was running there and had been running since 1913.

Mr. MAGEE. I think that is all.

Mr. LEA. One question: I want to ask a little further about the amount of logs gotten out in a day. In making an estimate of the amount of production for a year, how much per day would you figure per side?

Mr. MILLER. Well, I would not figure it.

Mr. LEA. Here is what I want to get at, Mr. Miller. The other day a logger was testifying before us, and he said that a side produced from 25,000 to 35,000 feet a day. As I understand you, you say you got out 85,000 feet a day.

Mr. MILLER. As I was telling you a minute ago, there are some places you can get out 25,000, and that is about all you can do, and other places you can get out 125,000 feet, owing to the location of the ground and the timber.

Mr. LEA. Isn't there some standard as an average with the lumbermen in this region that they accept as the average product of a side?

Mr. MILLER. No, sir; I never heard of it. We always log whatever we can get. Sometimes we run into a piece of timber and can log 100,000 feet a day, and we get into another piece on this side, maybe half a mile away, and the best we can get is 25,000 or 30,000.

Mr. LEA. With the same outfit and same crew?

Mr. MILLER. With the same outfit and crew.

Mr. LEA. So the fact that one produces a good deal less than the other would not necessarily be a condemnation of the other crew, would it?

Mr. MILLER. No; a difference of ground.

Mr. LEA. Depending on the circumstances?

Mr. MILLER. Yes, sir.

Mr. LEA. How did you learn the quantity that was produced by these other loggers?

Mr. MILLER. Well, they hauled my logs, and they made a daily report. They hauled my logs from the junction to town.

Mr. LEA. I meant how did you learn the quantity that they produced?

Mr. MILLER. From what they have got in the water now.

Mr. LEA. That was the cruise that you referred to in your testimony?

Mr. MILLER. I put out more logs than they put out, and I put out more carloads right along. I rode back and forth with the train crew every day; going up in the morning and coming back at night with the train crew.

Mr. LEA. I think that is all.

Mr. MILLER. They have been known to lay there for three, four, or five hours; at the switch.

Mr. FREAR. What about the comparative logging facilities between the Wessel branch and the north branch, that is, between where this other crew was working and where you were working?

Mr. MILLER. It was just as good ground.

Mr. FREAR. What about the stand of timber?

Mr. MILLER. Well, it was not quite as good a stand of timber.

Mr. FREAR. Which was not?

Mr. MILLER. The timber was not quite as thick on the Wessel side.

Mr. FREAR. There was a little less?

Mr. MILLER. A little less; yes.

Mr. FREAR. What difference would that make in the amount of production—what proportion?

Mr. MILLER. Twenty-five thousand feet a day.

Mr. FREAR. Twenty-five thousand feet a day on the whole cruise, or what?

Mr. MILLER. Well, say on what I was putting out—seventy-five or eighty thousand feet.

Mr. FREAR. That is, it would make 25,000 feet less?

Mr. MILLER. If they had been good loggers they would get out 50,000 feet.

Mr. FREAR. On each side?

Mr. MILLER. Yes.

Mr. FREAR. They had five sidings?

Mr. MILLER. Yes.

Mr. FREAR. And you had one?

Mr. MILLER. Yes.

Mr. FREAR. And you got out more than they did?

Mr. MILLER. Yes. Well, I want to say to you right now, without any questions—

Mr. FREAR. We will be glad to have you.

Mr. MILLER. With all due respect to everybody, the soldier boys done the best they could do, no question about that, but what they could do was limited. Mr. Hall was taking some lieutenant or major or somebody else—I do not know who he was, but I met the gentleman on his return trip—that was my return trip, too—he had been up there for three or four hours waiting to see them put out one log, and he left at 5 o'clock and they had not put out the log yet.

Mr. FREAR. Do you know whether that log is out of there now?

Mr. MILLER. I think not. I think they got the log behind a tree and could not get it out.

Mr. FREAR. Could not get it out?

Mr. MILLER. I see several of them that is still there yet.

Mr. FREAR. Now, you say that those soldiers were composed of lawyers and doctors, and dentists, etc.

Mr. MILLER. Yes. I had them working at all milling departments.

Mr. FREAR. How did they come to be selected—men of that type for that kind of work—do you know?

Mr. MILLER. I could not say.

Mr. FREAR. Did they say to you that they were anxious to get that kind of work, that they wanted to get in there?

Mr. MILLER. Well, some said they had joined the spruce production and didn't know, they thought they were going out West to fly, or do something they did not know what. Some of them were swamping, and they wanted to know if they had to stay in the swamp all night.

Mr. FREAR. They were flying fast around that one log, were they?

Mr. MILLER. There was a lot of men sent down there that did not know a spruce tree from a rosebush, honestly, they were lost in the woods when they were out of sight of the man that was with them.

Mr. FREAR. There was a man named Pendleton who testified before us. Do you know Mr. Pendleton?

Mr. MILLER. Yes, sir.

Mr. FREAR. Is he a highly reputable man?

Mr. MILLER. As far as I know, he is.

Mr. FREAR. Pendleton testified the other day before this committee that he had charge of logging operations in British Columbia, and with one-tenth part of the facilities, logging and milling, he was able to get out practically the same amount of finished airplane spruce in nine months that was gotten out here, and he didn't have a soldier in his crew.

Mr. LEA. No.

Mr. FREAR. Isn't that right?

Mr. LEA. No.

Mr. FREAR. Isn't that the testimony?

Mr. LEA. The United States produced 143,000,000 feet of airplane lumber while Mr. Pendleton testified that he produced

26,500,000 feet. The United States produced over 20,000,000 feet in the month of October alone, while he only produced 26,000,000 feet in eight months.

Mr. MAGEE. He is speaking of finished aircraft lumber.

Mr. LEA. That is the evidence. What is the use of disputing the evidence?

Mr. FREAR. What I am going to do is get an answer from this witness.

Mr. MAGEE. That is only throwing dust into the record.

Mr. FREAR. He testified finished airplane lumber, and we all know this was not, and it is a mistake to put it in the record in that form.

Mr. LEA. We will put it in the record.

Mr. FREAR. It is a mistake to get it in the record in that form. Mr. Pendleton testified that his 26,500,000 feet of production was finished airplane lumber. The crude lumber brought out in this country, airplane timber, was 143,000,000 feet, which, brought down to the proportion, as he said, of crude lumber, would have made about the same amount of lumber, or less, as it was estimated that he produced.

Mr. LEA. One hundred and forty-three million was the shipped airplane lumber, and his was the shipped airplane lumber. In other words, there was six or seven times as much produced in this country as in Canada, and they did make a marvelous production, no doubt about that, but there is no use in trying to confuse the record. I think the evidence is straight already.

Mr. FREAR. The testimony is that the airplane lumber that he produced was equal to the airplane lumber that was produced here, the finished airplane product, and he testified that his equipment, logging and milling, was not more than one-tenth of that possessed here, and that he reached results because he used loggers in cooperation and that enabled him to get the results. As far as our observation has gone here such was not the case.

Mr. MAGEE. The evidence here is that in some cases as high as 60 per cent of the lumber shipped from here to consignees in the East was rejected as absolutely unfit for use at all.

Mr. LEA. In an isolated instance that is true, but the fact is that this was shipped lumber.

Mr. MAGEE. I do not think, Mr. Lea, that you are fair about this proposition at all. Now, I do not care anything about the partisanship of this investigation, but I do think as a protection in the future, so far as this Nation is concerned, that we should put partisanship in the background and get the facts here and give them to the House and to the public. The public wants the facts, whatever they may be. If there is any question about this proposition recall these witnesses and have it determined.

Mr. LEA. Of course, we ought to put that in the record, and the fact is that the records of the lumber produced during the month of October, 1918, shows that it practically equals the total Canadian production.

Mr. FREAR. That fact is not shown before this committee, and never has been.

Mr. LEA. It ought to be shown.

Mr. MAGEE. What Mr. Pendleton was talking about was finished aircraft product. What we have been talking about and taking

evidence about prior to that time was so many million feet of lumber, and I questioned Mr. Pendleton specifically as to what percentage of so many million feet of lumber the finished product would be, and the highest estimate was 33½ per cent, the minimum given being 10 per cent. You can take your choice anywhere between 10 and 33½ per cent. There is no question in my mind at all that Mr. Pendleton was a competent witness and that he gave the facts as they exist.

Mr. LEA. But he did not testify to the quantity produced in America. I have no doubt that Mr. Magee was trying to develop the facts as he understood them, but I am satisfied that you are under a misapprehension as to what the American production was, and that is a matter of evidence.

Mr. MAGEE. I was under no misapprehension.

Mr. FREAR. My understanding is precisely that of Mr. Magee, and I studied this question, I think, possibly as much as the other members of the committee. Mr. Pendleton was very fair.

Mr. MAGEE. I want to say here and now, not in a spirit of criticism, that I do not think the members of this committee should be counsel for anybody. I think we ought to be here as investigators, and put partisanship aside, and get the facts. If you know any man who is at hand that can show that we shipped out of here 143,000,000 feet of finished aircraft product, get the witnesses on here to clear that up. Let us not misstate these facts to the public. Let us put partisanship in the background and get the facts, and give them to the House and to the people. I want to say in addition to that that my position all the way through has been—and when I was drafted for work on this committee I made that clear—I shall do everything I can to get the facts to the country, not because of the tremendous waste that has occurred in this war—that is gone, and there is no use in crying over spilled milk, but we have the future to look to. While, perhaps, we may not participate in any future war, we may have future wars, and it is of very great importance to the country that we know exactly what was accomplished in aircraft production in this war, so that we may profit by the errors of the past and put ourselves in a position where we will not be a tailender in aviation but in the very first rank in aviation in the future, as we ought to be, in my judgment.

Mr. LEA. I want to call the committee's attention to this fact—

Mr. MILLER. Are you through with me?

Mr. FREAR. No, sir; I want to ask you some questions and let you go in a minute.

Mr. LEA. The testimony of American production is not in the record, but the other day, at Seattle, I requested that the figures be furnished. I haven't seen those figures that are to be furnished, but that was a part of the evidence that I requested to be put in here at Portland, and I hope we will get it accurately, whatever it is.

Mr. MAGEE. I understand it was put in, and I don't know whether Col. Stearns testified to it, or who did testify, but it is in evidence here.

Mr. FREAR. This testimony is in evidence, that 28,000 soldiers were in, with 1,000 officers, and they were largely engaged in spruce production, and that with all that number, and ten times the facilities in logging and lumbering here, that they produced practically the

same amount, in fact, of finished lumber as the standard up there, and I was going to ask—Pendleton stated he needed no soldiers, that they didn't have British soldiers up there, that no British soldiers were farmed out there for cost-plus contracts—would you employ soldiers or would you employ civilians in carrying on your operations?

Mr. MILLER. Civilians. I will say this: I put one soldier in the woods one day to help rustle rigging, and the evidence of one of my men is that he got hurt. That man never touched a choker in the whole day long. By the time he got there, the boys had the work done and were gone, and he went back with them, and many times he never got there. We worked him one day in the scraping job, and he never touched anything. He was coming and going all the time, and most of the time was running. Of course, I was sorry for the man, because he was in fear of being killed.

Mr. FREAR. He never had anything of that kind to do before?

Mr. MILLER. He would not come up in 20 feet of the line for fear it would jump onto him. He wasn't to blame for that, either.

Mr. FREAR. On this Wessel tract, what is the character of the timber, largely spruce?

Mr. MILLER. Largely spruce in that quarter section; yes.

Mr. FREAR. So that when they were logging the selective logging—and I speak of that because I have had such information—where they were logging it was practically taking the entire cut.

Mr. MILLER. They did take the entire cut, but not at the one time.

Mr. FREAR. They went over it just like you did up in that section?

Mr. MILLER. No; a little different. I logged mine straight, and they went over and cut a few trees and then came back and cut a few more.

Mr. FREAR. I thought you said you went over yours twice?

Mr. MILLER. I do, in some cases, where it is very thick. They cut Mr. Wessel's timber as close as I would cut it; in fact, have got logs in the bay down there now that won't even make box lumber.

Mr. FREAR. Do you know why they were cut?

Mr. MILLER. I don't.

Mr. FREAR. Does anyone know?

Mr. MILLER. I don't know, no, whether anyone knows.

Mr. FREAR. Was your mill employed in cutting timbers for this other mill?

Mr. MILLER. Yes.

Mr. FREAR. Instead of cutting spruce for airplanes you were engaged in cutting timber for this great mill?

Mr. MILLER. We had nothing to say about it at all.

Mr. FREAR. I am trying to get the situation. What amount of timber would you say went into that big mill?

Mr. MILLER. Oh, I couldn't say just how much went in it, because we cut all the time and it went over there into both the mill and railroad construction.

Mr. FREAR. And where did that lumber go, into the mill?

Mr. MILLER. It went into the mill, into the railroad construction at Waldport, everywhere they were a mind to send it; in fact, they just practically took charge of everything we had.

Mr. FREAR. Took charge of your output?

Mr. MILLER. Took charge of the output.

Mr. FREAR. This Waldport that you speak of, that is what is called the south line?

Mr. MILLER. The south line.

Mr. FREAR. Running to the Blodgett tract, this 25 miles run?

Mr. MILLER. Yes.

Mr. FREAR. Do you know anything about that line?

Mr. MILLER. I have been to Waldport, but I could not say as to just on what ground the road is constructed.

Mr. FREAR. You spoke about the mills around there. Is there a mill at Yaquina?

Mr. MILLER. No.

Mr. FREAR. On the opposite side of the bay?

Mr. MILLER. There is a mill on the opposite side of the bay over there, that was known as the Brewer mill.

Mr. FREAR. A small mill?

Mr. MILLER. A small mill that cut some timbers for the Warren Spruce, I believe.

Mr. FREAR. They were all employed around there, those mills employed cutting timbers for the mills and for the railroads, instead of cutting them for the spruce airplane stuff?

Mr. MILLER. Well, we cut airplane cants for a while, at night, with soldier help in the mill; but that was not profitable to us, so, for some reason, we quit.

Mr. FREAR. It was not profitable because of difficulty of working nights, or what?

Mr. MILLER. Well, I can't say. I think our manager said they were not making anything, or was going behind, or something.

Mr. FREAR. What do you say—was soldiers' help as good as ordinary help?

Mr. FREAR. Some of them were as good as gold, and some of them didn't know how.

Mr. FREAR. You could do selective logging, but you could not log without selective help; is that the size of it—with these men that were given to you?

Mr. MILLER. The men didn't know how, and they were afraid, you see. I put in half the night there; after I would work in the woods all day, I would come down at night and put in half of the night.

Mr. FREAR. You took the men that were given to you? Did you have the choice of selecting among the soldiers?

Mr. MILLER. Well, I can't say that I did. Lieut. Leman was very good. "Now," he says, "there is a good bunch of men there. I would like to have them come up and work in the camp." But I think, as far as the mill was concerned, we took them as they came.

Mr. FREAR. Those are the lawyers and dentists and doctors, of whom you spoke; they were not the loggers or men who had had experience in the woods?

Mr. MILLER. No.

Mr. FREAR. And those are the men that you took to run your mill to cut timbers to build this Government mill?

Mr. MILLER. Well, we had some at daytimes, too; we had some at daytimes, cutting timbers for this mill.

Mr. FREAR. In the daytime—

Mr. MILLER. Some we had in the daytime; yes.

Mr. FREAR. You had nothing to do with the policy of how your mill should be run or what you would cut?

Mr. MILLER. They would come over in the morning with their orders and "cut this" and "cut that," and that is all there was to it.

Mr. FREAR. You followed orders?

Mr. MILLER. Well, I guess we had to. I wasn't hardly allowed to ride on my own train.

Mr. FREAR. Who did ride on the train?

Mr. MILLER. Anybody that wanted to, I guess, but at times they selected their crews.

Mr. FREAR. That is, they practically commandeered the mill and the woods and the train and everything?

Mr. MILLER. Well, they gave us cutting orders, you see, in the morning, and they taken the road that—practically without any leave or license, and done as they pleased.

Mr. FREAR. The suggestion was made here, if I remember correctly, that this road ran over your property. Does that affect your judgment at all in this matter? That the easiest way to get out the logs was over your road, rather than around this 13 or 14 mile road from Yaquina Bay, with a 12-mile logging—

Mr. MILLER. There is no comparison. There is no other way to do it. That is the only way to do it.

Mr. FREAR. That is all.

Mr. MAGEE. Now, I would like to ask a question. I would like to ask you to state to the committee what would have been the practicable and feasible thing to do to get out a largely increased supply of spruce from this Siletz reservation, suitable for aircraft production? I understood you to say that in your opinion there was sufficient spruce in this district to supply the needs of all the Allies. By that I mean you had a small mill there, and, as I understood you to say, there were not a lot of other mills functioning in that locality?

Mr. MILLER. Well, my way of figuring, that it would have been to have turned it over to a bunch of loggers, taken the loggers from the service, put them back in the logging camps, and sent these soldier merchants, and the dentists, doctors, and lawyers, up to the front, to be trained to be sent over to France, because they can fight as good as anybody; but we could not train them in the time we had and make loggers out of them, and we could not get the production. Now, if they would have given us a bunch of loggers that we had, and had given us sufficient money to have gone ahead and have built these lines in at the proper places to have produced this spruce, we could have had a lot of spruce in France that never was there.

Mr. MAGEE. Were there plenty of loggers here on the coast to take care of this work, men of experience?

Mr. MILLER. We never had any shortage before the war.

Mr. MAGEE. As I understood, in the hearings up in Seattle it was testified to there that there are some 500 mills functioning on the coast. I don't know just exactly where those mills are located.

Mr. MILLER. I had a good crew of loggers. They took one of my loggers—one of my high-climbers, on a day that I was rigging a tree to produce timber to build the Government mill, to build the railroads—they took that high-climber out and demanded that he

be at a certain place at a certain time, and left me there half rigged, and I had to search around for a few days to find somebody else that could take that place to finish rigging that tree. That tree was probably 180 feet from the ground, where they were putting on this rigging. I did everything I could do to prevent that man from going, but it made no difference. I prevailed with Maj. Ebey to let me keep my loggers. Nothing doing. I had to get along with the very best I could—get along with anything and everything; but I had no soldiers to speak of.

Mr. MAGEE. Assuming that the loggers had been organized—and lumbermen—and they had been put in charge here, can you give the committee any idea how long it would have taken before they would have had an efficient organization and could have gotten out spruce lumber ready for shipment?

Mr. MILLER. I wrote Col. Disque a letter, asking him to advance me \$50,000; I would log the same spruce that he logged. I got no reply.

Mr. MAGEE. You mean the same amount?

Mr. MILLER. Yes; the same amount, and in one-fourth the time and at a tenth of the expense.

Mr. MAGEE. As I understand, no spruce lumber, at the time of the armistice, had been furnished from the Blodgett tract; while some trees had been cut there, no lumber had been gotten up to the mill, no logs hauled; in fact, this Toledo mill was not completed at the time of the armistice, never has been in operation.

Mr. MILLER. Never has been; no.

Mr. MAGEE. So that not a foot of lumber was actually sawed up?

Mr. MILLER. In that whole operation at Toledo and Waldport, Yequina; from the entire operation there has never been a board delivered to the Warren—

Mr. MAGEE. Not a foot of spruce?

Mr. MILLER. Not a foot of spruce delivered from the—

Mr. MAGEE. From the airplane production?

Mr. MILLER. Never has been a board, except a few big, overgrown logs that they shipped out on the train and a million feet that we cut nights.

Mr. MAGEE. Now, there is only one other question. That is, How did you get the lumber to market? How did you ship it out? What was the means of transportation?

Mr. MILLER. To the East?

Mr. MAGEE. Yes.

Mr. MILLER. We had cars.

Mr. MAGEE. I mean over what route? How did you ship it, what places, and over what line?

Mr. MILLER. Well, I don't know on what lines it went from our place. We shipped over the C. & E. Railroad to main line at Albany, and from there—

Mr. MAGEE. C. & D.?

Mr. MILLER. C. & E.

Mr. MAGEE. It is a branch of the Southern Pacific?

Mr. MILLER. It is called the C. & E.

Mr. MAGEE. That is, from your mill?

Mr. MILLER. That is, from the mill to the main line at Albany.

Mr. MAGEE. You had railroad transportation right in your mill?

Mr. MILLER. Yes.

Mr. MAGEE. Do you think there would have been any trouble if the loggers had been organized in getting the spruce lumber out of the Selitz Reservation in any reasonable quantities that the Government might require?

Mr. MILLER. I told Col. Disque if he would give me—that is, would loan me—\$50,000, I would be logging in 30 days on the same spruce that they logged on.

Mr. MAGEE. And getting spruce?

Mr. MILLER. And would cut every foot of that spruce and put it into airplane——

Mr. MAGEE. Get the spruce started toward the market?

Mr. MILLER. Yes; in 30 days.

Mr. MAGEE. Now, I don't know as it has been testified to here, but, if you know, when did the Government begin operations—that is, when was the beginning of the construction of these two railroads and of the Toledo mill?

Mr. MILLER. Well, I could not say as to that. It was along in the winter.

Mr. MAGEE. Winter of 1917 and 1918?

Mr. MILLER. I think it was. Wasn't it 1918, Frank, or 1917, when they commenced it? When Jim Monorey was there. Mr. Jim Monorey was there in charge first.

Mr. MAGEE. Who?

Mr. MILLER. Jim Monorey. He was a good logger.

Mr. MAGEE. It was in the early winter, wasn't it, of——

Mr. MILLER. Yes, it was in the early winter, because I know it was pretty bad weather when he was down there; considerable rain.

Mr. MAGEE. That is all.

Mr. LEA. Mr. Miller, you don't intend that we should infer that there was no difficulty in getting experienced men to do work here during the war, do you?

Mr. MILLER. Experienced men?

Mr. LEA. Yes.

Mr. MILLER. We had all kinds of trouble—we did.

Mr. LEA. What?

Mr. MILLER. We had all kinds of trouble, and you did, too; the Warren Spruce had all kinds of trouble. You had a lot of men down there that was—well, wasn't what you would call loggers.

Mr. LEA. I misunderstood what you said before. That is all right. That is all.

Mr. FREAR. What have you to say as to the operations of the Warren Spruce Co., that is, the method, so far as efficiency goes?

Mr. MILLER. I think they done the best they could.

Mr. FREAR. How did that efficiency compare with what others would do?

Mr. MILLER. I don't think they had done as well as loggers would have. They probably done as well as any other man of the same standing would do.

Mr. FREAR. They were not loggers?

Mr. MILLER. I don't think they claimed to be loggers.

Mr. FREAR. Not railroad men?

Mr. MILLER. Well, I understood they were pavers of streets and highways and so forth, and not railroad men.

Mr. FREAR. They were the ones who received the cost-plus contracts to build the railroads and log the spruce, were they, or do you know?

Mr. MILLER. I presume they were,

Mr. MAGEE. As I understand, the results of your observation and knowledge, so far as it goes, is that men who had no previous experience in the lumber business and no knowledge of the business, were attempting to get out spruce timber there, rather than placing it in the hands of loggers and lumbermen who had made the logging and lumbering business the work of their whole lives?

Mr. MILLER. Certainly. They sent men down there to saw those trees down, that never seen a crosscut saw, nor never seen a tree or a spring-board. They didn't know whether they stood in their heads or on their feet. I have seen saws snapped off right at the handle, where the men fell off the spring-boards. My filer went from my camp to file for them, to see if he couldn't help them out. I had two good filers, and one of them went over there to the spruce camp. He couldn't file for them. They drove wedges on top of the saws, and they couldn't pull them, and they would saw them in rainbow and they would saw them every way. There was nobody at fault, but they just didn't know. The boys were as good as gold.

Mr. MAGEE. They did all they could?

Mr. MILLER. Done the best they could, absolutely, and I am surprised at some of them ever getting out of there alive. They would go in and fell a tree whichever way some lieutenant told them to fell it, whether it was against the natural way to go, or not. The tree has three natural ways to go, and sometimes they won't go the other way at all, and they have been made to wedge up against those things. Bad management on somebody's part to send the soldiers in there.

Mr. FREAR. Let me just ask a question.

Mr. MAGEE. Well, now, if I may: It has been suggested here that there was not any other help available and it was necessary to get the soldiers in there or not work at all.

Mr. MILLER. It was at that time, possibly. They sent the loggers all away.

Mr. MAGEE. That is what I am getting at. Will you give us the facts; that is, I would like to know whether or not it was practicable and feasible to get this lumber out by men who knew their business?

Mr. MILLER. There would have been if they hadn't sent them to war. I had good crews—I could produce anything.

Mr. MAGEE. That is what I mean. In other words, the men who knew the logging business, because it was their business, were sent out of this locality to the front, while lawyers and doctors and dentists and clerks and so forth were sent on in here to do the logging and lumbering business; is that what you mean?

Mr. MILLER. That is it, exactly.

Mr. MAGEE. If they hadn't been sent out, do you say that there would have been sufficient material here, consisting of experienced men, to have met the needs and requirements of the Government?

Mr. MILLER. I had all the crew I needed until they started here taking them out.

Mr. MAGEE. What do you say as to that general proposition?

Mr. MILLER. As a general proposition, there was plenty, no complaints. Now, of course, there was a general shortage many times in some people's camps, but in the general camps they were pretty well filled up. In other words, we were getting along.

Mr. FREAR. Do you know of any reason, then, why 30,000 soldiers should have been brought here to do logging?

Mr. MILLER. I do not.

Mr. FREAR. You don't understand, do you, that it takes about 30,000 soldiers to make a division, to qualify a commanding officer for a particular rank?

Mr. MILLER. No; I don't know that. But then I know that there was a lot of men sent here that had no business being here.

Mr. FREAR. In order to get this plan and plat before the committee clearly and so as to make it a matter of record, how far is Toledo from Yaquina Bay, on the river?

Mr. MILLER. I think it is 12 or 14 miles. I am not sure as to that.

Mr. FREAR. And Yaquina Bay is about how far from the entrance to the jetties going out into the ocean?

Mr. MILLER. I think about 5 miles; maybe 4 miles.

Mr. FREAR. The Yaquina River runs up past Toledo and is a logging stream, or capable of logging, for how many miles with tidewater?

Mr. MILLER. Oh, there is tidewater above Elk City, which would be 27 or 28 miles from—

Mr. FREAR. Toledo?

Mr. MILLER (continuing) From Yaquina.

Mr. FREAR. So that the Yaquina River is a rather large stream, large boats can be brought up to Toledo?

Mr. MILLER. Well, the *Bandon* and *Fifield* were brought in there. They run to San Pedro and San Francisco.

Mr. FREAR. That is not in recent years?

Mr. MILLER. No; it was in 1914 and 1915.

Mr. FREAR. It was before the bar formed at the mouth of the harbor?

Mr. MILLER. Yes.

Mr. FREAR. Which is now being dredged. The Corvallis & Eastern branch of which you speak, which is a branch of the Southern Pacific, runs from Toledo out to Corvallis or Albany, and then down the main line?

Mr. MILLER. Yes; runs by Corvallis and Albany, both.

Mr. FREAR. It also runs down so far as Yaquina. That is about how many miles?

Mr. MILLER. Well, somewhere 12 or 14 miles. I am not sure as to the distance.

Mr. FREAR. From Yaquina this Government road of which you have spoken, running north, extends near the coast and up to the neighborhood of Otter Rock?

Mr. MILLER. Yes.

Mr. FREAR. Along a distance of about 13 miles?

Mr. MILLER. Well, somewhere 13 or 14, 15; I could not say the mileage.

Mr. FREAR. Twelve or thirteen miles. That was a route that was selected by the Spruce Production for getting into the Siletz?

Mr. MILLER. Well, I imagine the Spruce Production—now, I don't know who selected that road, but it was selected by the Government.

Mr. FREAR. That is the road that was built by the Warren Construction Co. or Warren Spruce Co.?

Mr. MILLER. Yes.

Mr. FREAR. That would make a distance down to Toledo—you testified, but I thought I could get it clear in the record—of 12 or 13 miles to Yaquina, and then 12 miles or more to Toledo, or 25 miles, as you have testified?

Mr. MILLER. Yes, sir.

Mr. FREAR. That would be the ordinary course under this road built by the Warren Spruce Co. Your road ran directly north of Toledo into the Siletz?

Mr. MILLER. Yes.

Mr. FREAR. And out a distance of six miles, or thereabouts, you would strike the spruce?

Mr. MILLER. Yes.

Mr. FREAR. And from that distance, you say, from six miles, you would be into the spruce?

Mr. MILLER. Solid body of spruce.

Mr. FREAR. That could be brought down to Toledo, to that mill. The big Government mill was placed at Toledo?

Mr. MILLER. Yes, sir.

Mr. FREAR. The road south, of 24 miles, or thereabouts, had its terminal on Yaquina Bay, opposite Yaquina?

Mr. MILLER. Yes.

Mr. FREAR. And then ran south about 24 miles to the Blodgett tract.

Mr. MILLER. That is my understanding. I never had been over the line. I have been to Waldport.

Mr. FREAR. That would make a distance of 12 miles from your terminal up to Toledo—

Mr. MILLER. Yes, sir.

Mr. FREAR. Or thereabouts.

Mr. MILLER. About 36 miles.

Mr. FREAR. Where the logs would have to be rafted, and 24 miles, or, as you say, a distance of 36 miles. So, in one way, in order to get to the Siletz under this Warren Spruce Co. railroad, they would go 25 miles to Toledo by railroad and rafting, and on the south line, to get down to the Blodgett tract they would go 36 miles, 12 miles of which were rafting, to get to the Toledo mill?

Mr. MILLER. Yes, sir.

Mr. FREAR. Whereas, with your line directly north, you could have reached it inside of 6 or 8 miles; is that right?

Mr. MILLER. Correct. Absolutely correct.

Mr. MAGEE. You would have to raft from the Blodgett tract?

Mr. MILLER. Yes, sir; they come in right together, one across the bay from the other.

Mr. MAGEE. About 12 miles.

Mr. FREAR. You don't know about the amount of spruce in this Siletz region?

Mr. MILLER. No; I don't.

Mr. FREAR. That is all. Thank you very much, Mr. Miller.

(Whereupon, at 11.45 o'clock a. m., the committee took a recess until 2 o'clock p. m.)

AFTER RECESS.

The subcommittee met, pursuant to the taking of recess, at 2.20 o'clock p. m.

TESTIMONY OF MR. A. W. MORGAN.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. You live in Portland, Mr. Morgan?

Mr. MORGAN. Yes, sir.

Mr. FREAR. And have lived here how many years?

Mr. MORGAN. Five years.

Mr. FREAR. And you lived down at Toledo prior to that time?

Mr. MORGAN. Yes.

Mr. FREAR. And how many years down there in the Siletz country?

Mr. MORGAN. I moved in the Siletz country in 1905; I was in that territory until I moved here five years ago.

Mr. FREAR. Let me see. You have done cruising, have you?

Mr. MORGAN. Yes, sir.

Mr. FREAR. For how many years?

Mr. MORGAN. Oh, about 20 years.

Mr. FREAR. How long?

Mr. MORGAN. Twenty years, more or less.

Mr. FREAR. About 20 years; and cruising in other places besides the Siletz?

Mr. MORGAN. Yes, sir.

Mr. FREAR. And you were a homesteader down in the Siletz at one time?

Mr. MORGAN. Yes, sir.

Mr. FREAR. So that you had some little experience in cruising and are familiar with the lumber situation and the timber situation, I assume?

Mr. MORGAN. Yes, sir.

Mr. FREAR. You were with the committee who went down through there, went down to Toledo last Saturday, and were with the committee throughout our visit so as to help us in advice in regard to timber, were you?

Mr. MORGAN. Yes, sir.

Mr. FREAR. And you have gone over all the railroads with us?

Mr. MORGAN. Yes, sir.

Mr. FREAR. So that you have knowledge of the conditions?

Mr. MORGAN. Yes, sir.

Mr. FREAR. I will give you the map and wish you would please testify first, so as to get the matter in form on the record; do you know the railroad that is built from Toledo north, known, formerly known, as the Miller Railroad, known as the Storey & Fischer Railroad before?

Mr. MORGAN. Yes, sir.

Mr. FREAR. You have been over that road?

Mr. MORGAN. Yes; a good many times.

Mr. FREAR. A good many times. Do you know where the terminus of that road comes in section 17 on the north end, and then the other branch that goes over into section 24?

Mr. MORGAN. Yes, sir.

Mr. FREAR. On the west?

Mr. MORGAN. Yes.

Mr. FREAR. You are familiar with the timber in that section?

Mr. MORGAN. Yes, sir.

Mr. FREAR. Have you ever cruised it?

Mr. MORGAN. I cruised part of it. I cruised some of it; yes.

Mr. FREAR. You cruised different tracts, I understand, in the Siletz country?

Mr. MORGAN. Yes, sir.

Mr. FREAR. You have a general knowledge of the amount of spruce timber in the Siletz country?

Mr. MORGAN. I think so. I think I have a fairly accurate knowledge of it.

Mr. FREAR. About what amount of total spruce do you understand has been cruised there?

Mr. MORGAN. I estimate there has been about 700,000,000 in this Siletz country.

Mr. FREAR. Seven hundred million feet?

Mr. MORGAN. Yes, sir.

Mr. FREAR. Now, will you explain just where that timber is to be found with reference particularly to the ridge which separates the coast, or the tidewater, or whatever you may call it, timber from the timber that is over on the Siletz side?

Mr. MORGAN. Beginning in section 24, in 10-11, we run into a spruce belt there. It extends clear on down toward the mouth of the Siletz River north on both sides.

Mr. FREAR. By extending down you mean extending north?

Mr. MORGAN. Extending north; yes.

Mr. FREAR. North up the river?

Mr. MORGAN. Yes; on both sides; and there is some on the west slope.

Mr. FREAR. That is the west slope of that?

Mr. MORGAN. Of that divide, between the river and the ocean.

Mr. FREAR. Yes; of that divide. About what proportion of the timber is on the east slope of the divide in the Siletz Valley; that is, of this spruce timber?

Mr. MORGAN. As near as I could figure it out, it would be about 550,000,000 that would slope to the Siletz.

Mr. FREAR. On the east side?

Mr. MORGAN. On the east side; yes.

Mr. FREAR. Now, how much on the west side?

Mr. MORGAN. About one hundred and fifty or sixty million, approximately.

Mr. FREAR. That is, that could be reached from over on the——

Mr. MORGAN (interrupting). Ocean side.

Mr. FREAR. On the ocean side?

Mr. MORGAN. Yes.

Mr. FREAR. How does the spruce grow in the Siletz country?

Mr. MORGAN. Well, it grows in——

Mr. FREAR (interrupting). That is, I mean with reference to its growth in bunches; is it found in that condition in the Siletz?

Mr. MORGAN. Yes, yes; in places; and in places it is mixed with the fir, and in other places it is practically all spruce.

Mr. FREAR. Beginning at the north end of the road that has been described by Mr. Miller this morning—his road at that time—that reaches, does it, into the beginning of the timber, or reaches into this Siletz timber?

Mr. MORGAN. It is in to the Siletz timber now. They have been operating on the south side of the Siletz timber belt.

Mr. FREAR. They are in on the reservation, aren't they?

Mr. MORGAN. Yes.

Mr. FREAR. So called?

Mr. MORGAN. Yes.

Mr. FREAR. What is the condition of the timber that you approach as you move north along the prospective line that he proposed building there?

Mr. MORGAN. Well, after you get over the ridge you run into the main timber belt. It is very compact from there on.

Mr. FREAR. Yes; all kinds of timber?

Mr. MORGAN. Yes; fir and spruce and hemlock.

Mr. FREAR. That is, you mean to say that the timber is heavier in there?

Mr. MORGAN. Yes; the timber gets heavier as you get into the main body.

Mr. FREAR. Then describe what the general condition of the timber is as you go up from there to the Siletz.

Mr. MORGAN. Well, you run into some spruce on Mill and Dewey Creeks as you get over into Jaybird Creek.

Mr. FREAR. Jaybird Creek is about how far above the end of his line? Just point it out there on the map, if you will. I have looked at it, but point it out for the information of Mr. Lea or Mr. Magee.

Mr. MORGAN. His line is in this section here [indicating on map].

Mr. FREAR. Yes; that is the north end?

Mr. MORGAN. Yes.

Mr. MAGEE. Is this map in evidence?

Mr. FREAR. No; it has not been offered. You had better identify it. (The map above referred to was marked "Exhibit 2 for identification, September 2, 1919.")

Mr. MORGAN. This is Jaybird Creek here [indicating on Exhibit 2 for identification], and if you go on a straight line it would be 1, 2, 3—about 4 miles on a straight line across here.

Mr. FREAR. That is 4 miles from where?

Mr. MORGAN. It may be a little more.

Mr. FREAR. Four miles from where?

Mr. MORGAN. From the end of the road.

Mr. FREAR. From the end of the road as now built?

Mr. MORGAN. Yes; here in section 30.

Mr. FREAR. Now, what have you to say about the timber up there?

Mr. MORGAN. This is very heavily timbered in there.

Mr. FREAR. How far is that timber from the coast?

Mr. MORGAN. That would be about 4 miles from the coast, I think.

Mr. FREAR. About 4 miles from the coast?

Mr. MORGAN. Well, Jaybird would head up possibly a little closer than that; maybe within 3 miles of the coast.

Mr. FREAR. You mean the headwaters?

Mr. MORGAN. Yes, sir.

Mr. FREAR. That creek flows to the east?

Mr. MORGAN. Yes.

Mr. FREAR. And joins into the Siletz.

Mr. LEA. Get the record to show where it enters the Siletz River.

Mr. FREAR. Yes. Where does it enter the Siletz River?

Mr. MORGAN. In section—

Mr. FREAR. Tell us what town and range.

Mr. MORGAN. Nine south and 10 west.

Mr. FREAR. Have you examined the railroad beyond, where it has been built up to the top of the ridge, just a short distance beyond that?

Mr. MORGAN. Been over the survey?

Mr. FREAR. Yes, sir.

Mr. MORGAN. I haven't been over it all the way. I know where it crosses the county road.

Mr. FREAR. Where it crosses the ridge, I mean?

Mr. MORGAN. Yes; I know where it crosses the ridge.

Mr. FREAR. Whereabouts does it cross the Porter line?

Mr. MORGAN. They cross at the Summit, according to the map. I don't know. I guess it must cross there.

Mr. FREAR. Will you explain to the committee what is meant by that Porter survey?

Mr. MORGAN. That was made by Andrew Porter, I think it was last October—October and November. The port commissioners of Toledo hired Mr. Porter to make that survey to ascertain just what grade would be on that road coming out this way. It had been contended by some people that that was an impossible route to get out from the main body of the Siletz timber; that it would be too heavy a grade coming out there.

Mr. FREAR. What was the result of that?

Mr. MORGAN. I saw the survey and it was a little less than 2 per cent, as I remember it.

Mr. FREAR. A little less than 2 per cent coming south?

Mr. MORGAN. Yes.

Mr. FREAR. That would be the direction in which you would be bringing the loaded cars?

Mr. MORGAN. Yes, sir.

Mr. FREAR. Now, where did Porter's survey run after it crossed the railroad belonging to Miller, at the top of the ridge?

Mr. MORGAN. It swung off to the west from Miller's survey up into 18, 7 in 10-10, and back down on the other side of the creek, I think, the other side of Mill Creek from Miller's survey, and it hung around the base of the hill; it didn't go down into the bottom, where Miller's road went; it kept up on the side in order to get the grade.

Mr. FREAR. What I wanted to do for the benefit of the committee, so the committee will understand it, there is a Porter survey that runs from Toledo, or thereabouts up into the Siletz country; that is the fact, is it not?

Mr. MORGAN. Yes.

Mr. FREAR. Now that Porter survey crosses the road that has been described by Mr. Miller this morning, which runs north from Toledo at a distance of about 4 or 5, or something like $4\frac{1}{2}$ miles, on the top of this ridge?

Mr. MORGAN. Yes, sir.

Mr. FREAR. Then that continues up on the Siletz country?

Mr. MORGAN. Yes, sir.

Mr. FREAR. That is right, is it?

Mr. MORGAN. Yes, sir.

Mr. FREAR. You state that the Porter survey reaches a maximum of about 2 per cent grade coming up, coming with loaded cars south; does that go up into all this spruce country of the Siletz?

Mr. MORGAN. Yes; that taps practically all the spruce and all the timber that is on the Siletz divide. It can be worked in and be picked up down at an assembling point at the end of the line on the Siletz River, at tidewater; it can be picked up and brought out on that road.

Mr. FREAR. Now, what have you to say about that method of assembling logs—that is, from a logger's standpoint—in a stream like the Siletz, in preference to assembling them upon land?

Mr. MORGAN. Well, it is a great deal cheaper. It is the cheapest logging proposition there is, where you have a good stream to log into and have an assembling point to float to and take them out on cars to ship them or take them to a mill.

Mr. FREAR. That is, you mean it is assembled there before it is shipped out eventually?

Mr. MORGAN. Yes.

Mr. FREAR. Would that make a point for assembling a convenient point or not for assembling, for the logs there in that particular tract of the Siletz Valley?

Mr. MORGAN. Yes. They could be anywhere down there on tide-water at the end of the survey, or perhaps above or below; they could be assembled from above and below, both, for the tides would bring them up and the current and tides would take those that were above down.

Mr. FREAR. How far does the tide run up the Siletz?

Mr. MORGAN. It runs up into section 7, in 9-10.

Mr. FREAR. How far would that be, for instance, from the mouth of the Siletz River, generally speaking?

Mr. MORGAN. Well, I don't know as I could tell you, exactly.

Mr. FREAR. That is just to help the committee.

Mr. MORGAN. It is a very crooked river. It would be over 20 miles, I guess.

Mr. FREAR. This is the mouth of it over here. [Indicating on Exhibit 2 for identification.]

Mr. MORGAN. Yes, sir.

Mr. FREAR. Over 20 miles?

Mr. MORGAN. I think so.

Mr. FREAR. So that runs down right into the heart of the timber?

Mr. MORGAN. Yes. It comes winding around through the timber. There is a great deal of timber would work in from both above and below with one or two donkey engines into the river.

Mr. FREAR. Generally speaking, how many million feet of spruce timber have you estimated could have been reached by this road that was suggested by Mr. Miller this morning, running north to the Siletz, or over either the Porter survey or over any other survey they chose to put in there?

Mr. MORGAN. Well, I would think there would be eight or ten billion feet would come out over that road eventually, worked down to it. There would possibly have to be spurs built up from each side.

Mr. FREAR. Eight or ten million feet?

Mr. MORGAN. Billion.

Mr. FREAR. Oh, how many?

Mr. MORGAN. From eight to ten billion feet.

Mr. FREAR. Oh; billion feet?

Mr. MORGAN. Yes.

Mr. FREAR. Now, how many million feet of spruce would you say out of this 550,000,000 feet of spruce in there—

Mr. MORGAN (interrupting). Well, that would practically all come out.

Mr. FREAR. All could come out?

Mr. MORGAN. It could be assembled there eventually.

Mr. FREAR. Yes; and could be brought out from there?

Mr. MORGAN. Yes.

Mr. FREAR. In other words, assuming that 20 per cent of the spruce timber would make airplanes, finished airplane timber, and that is practically the estimates that we have, from these logs, that would make all the way—well, that, of course, you can not testify to; but 1,000 feet of airplane stock taken for each airplane, it would make from fifty to one hundred million airplanes—to a hundred thousand airplanes from that one tract of the Siletz Reservation, per 1,000 feet; and that is dividing it up by 20 per cent as the average.

Mr. MORGAN. Well, I don't know anything about that, though.

Mr. FREAR. You don't know that. But it would make an enormous amount of airplane timber, if you could log that 500,000,000 feet, or one-half of 500,000,000 feet?

Mr. MORGAN. Yes.

Mr. FREAR. And that comes down the main part. Now, could you reach any of the spruce that was over the ridge; and if so, how would you get to it?

Mr. MORGAN. On this road?

Mr. FREAR. Yes.

Mr. MORGAN. Why, I always figured that it was very easy to reach part of that over the ridge, say, half or two-thirds of it.

Mr. FREAR. You mean the ridge that runs north and south, parallel to the coast?

Mr. MORGAN. Yes. Of course, I am not an engineer, but I see a good many logging roads, and I see them built over worse country than that. In fact, there is only a 500-foot elevation there in section 28.

Mr. FREAR. Going over the ridge?

Mr. MORGAN. Yes. And by climbing over that and following the base of the mountain around in sections 22, 23, and 14—

Mr. FREAR (interrupting). That would be on the west side of the mountain?

Mr. MORGAN. That is on the west side of the mountain; yes.

Mr. FREAR. On the west side of the ridge?

Mr. MORGAN. Yes; part of it, part of those sections are. Fourteen—the west end of 14—there is a little over a 40 on the west side, and that runs heavy to spruce; and 15 and 16 and 10 run heavy to spruce. A little on the west end of 11 runs heavy to spruce. That is very fine.

Mr. FREAR. In what town and range?

Mr. MORGAN. In 10 south, 11 west.

Mr. FREAR. That would take what proportion of this 150,000,000 feet that you say would be on the west side of the ridge?

Mr. MORGAN. Well, I have always thought that they could get half or two-thirds of it very easily on that road.

Mr. FREAR. So that if that were the case, they would be able to get out 600,000,000 feet entire from the Siletz region through this road, with the extensions that could be put out, that now would be an extension of the Miller road?

Mr. MORGAN. I believe they could.

Mr. FREAR. Yes. You are familiar with the general conformation of the land, are you, in the Siletz country?

Mr. MORGAN. Fairly; yes.

Mr. FREAR. Is there more than one place that you can go over the Siletz; that is, that you can go over the ridge to get into the Siletz from the Miller road or from the Toledo side?

Mr. MORGAN. Going into the Siletz?

Mr. FREAR. Yes.

Mr. MORGAN. Well, yes; there is another divide on the Olalla Slough, just over, about practically the same elevation.

Mr. FREAR. About what is that elevation?

Mr. MORGAN. Mr. Miller testified that it was 242 feet. I don't know for sure, but, then, I think he is right. He has had it surveyed and taken the elevation of it.

Mr. FREAR. What is the elevation approximately over on the divide between the Siletz and the coast?

Mr. MORGAN. Well, I don't know. It runs from 700—well, I guess there is some pretty near a thousand feet—some of that ridge almost a thousand feet high—but Mr. DeCamp tells me that he found a pass in section 26, 9-11, that was 500 feet, according to his measurement.

Mr. FREAR. That is, that would be a place for the railroad to go across the divide that separates the timber and the coast from the Siletz?

Mr. MORGAN. Yes.

Mr. FREAR. Who is DeCamp?

Mr. MORGAN. He is with the Spruce Production.

Mr. FREAR. The Spruce Production people?

Mr. MORGAN. Yes.

Mr. FREAR. That is the man who was with us yesterday on the trip north?

Mr. MORGAN. Yes; he is assistant engineer, I believe. He claims that he found a pass in 26, 9-11, that is only a 500-foot elevation.

Mr. FREAR. Now, it was testified this morning by Mr. Miller that the Siletz country is higher than the coast?

Mr. MORGAN. Yes.

Mr. FREAR. That is true?

Mr. MORGAN. Yes.

Mr. FREAR. So that the elevation, in getting into the Siletz from the south is about one-half of that coming from the coast, is it?

Mr. MORGAN. Yes.

Mr. FREAR. According to the statement?

Mr. MORGAN. Well, after you get farther down there, coming up the Jaybird—you see the Jaybird empties in just above Tidewater—you see, you would have a further climb there by the Siletz agency,

where Mr. Miller's road hits the river. I think that is over a 50-foot elevation. It may be around a hundred feet there at the agency.

Mr. FREAR. That is, you mean higher than where it goes over the divide?

Mr. MORGAN. Yes—no; I mean higher than at Tidewater.

Mr. FREAR. Yes; but what is the great elevation that you go over in going from the Miller road north into the Siletz country?

Mr. MORGAN. Well, all I know is what Mr. Miller tells me. I have heard a good many times, too, and Mr. Storey said on their survey it showed 242 feet of elevation there. I had understood it was more, but that is what they say, and I think they must know.

Mr. FREAR. That is, just generally?

Mr. MORGAN. Yes.

Mr. FREAR. What you have talked with them?

Mr. MORGAN. Yes.

Mr. FREAR. You have been over this road leading up the coast?

Mr. MORGAN. Yes.

Mr. FREAR. The testimony is that that road is 12 or 13 miles in length from Yaquina Bay, and that then the logs are brought down on that road to the Yaquina Bay and rafted in to Toledo, which is, as testified, in the neighborhood of 12 miles; are those the facts as you know them?

Mr. MORGAN. That is practically correct; yes, sir.

Mr. FREAR. Yes. That would make it about 24 or 25 miles?

Mr. MORGAN. Yes.

Mr. FREAR. What would you say from you experience—have you had any experience in logging?

Mr. MORGAN. Yes.

Mr. FREAR. During these years?

Mr. MORGAN. In my early days here I logged for a number of years?

Mr. FREAR. Yes. What would you say, as a practical logger, of the advisability of running a road north from Toledo to get into this spruce part, with the idea of running it this 25-mile circuit around the coast?

Mr. MORGAN. You mean the spruce on the coast side?

Mr. FREAR. Well, to get into the Siletz?

Mr. MORGAN. All the spruce?

Mr. FREAR. Yes.

Mr. MORGAN. Oh, well, there is no question about which is the practical way. That is, from Toledo you want to go over the lowest pass, you know, to get the least resistance to your haul; and, according to all the evidence I can get in the matter, the one pass pretty near doubles the other.

Mr. FREAR. Yes. Well now, I am speaking about the distance. If you can get from 3 to 4 miles beyond the Miller road into the spruce, you have to go—that is about 6 or 8 miles from Toledo, isn't it?

Mr. MORGAN. Yes.

Mr. FREAR. Now the other road is 25 miles?

Mr. MORGAN. Yes.

Mr. FREAR. Now, I am speaking about the practicability of putting in a road. Where would you put it in, or where would any man

who has had lumbering experience down there and who is familiar with the Siletz River?

Mr. MORGAN. Well, I would think any practical man would put it in from Toledo.

Mr. FREAR. You would say any practical man would?

Mr. MORGAN. Yes. I don't think there is any question about that.

Mr. FREAR. Yes.

Mr. MORGAN. That is my opinion.

Mr. FREAR. The Government mill that was constructed was built where?

Mr. MORGAN. On the flat across the slough from Toledo.

Mr. FREAR. Right near Toledo?

Mr. MORGAN. Yes.

Mr. FREAR. And so that that would be near where these logs would be dumped into what you call—

Mr. MORGAN (interrupting). Depot Slough.

Mr. FREAR. Depot Slough; yes. What would be the character of the construction, so far as you can judge, of the railroad, compared to constructing the line that would go directly north over this 240 or 250 feet elevation, compared with that line that runs away around toward the coast in expense?

Mr. MORGAN. You mean this road from the coast which was built on over into the Siletz?

Mr. FREAR. Yes; which would be the cheaper and more speedily constructed for logging purposes?

Mr. MORGAN. I don't think there is any question but what the Toledo Road would be cheaper.

Mr. FREAR. Do you know anything about the cost of railroad construction?

Mr. MORGAN. Well, not a great deal, except in a general way in handling timber and logging propositions we have all those figures, you know, on the cost of logging roads.

Mr. FREAR. What do you estimate roads similar to the Miller Road?

Mr. MORGAN. Well, in normal times we would figure around from ten to fifteen thousand dollars a mile; perhaps an average of \$12,000 a mile.

Mr. FREAR. What would you say about the—well, I don't know that you would know the difference; he said that he built a mile there for something like \$12,000 or \$15,000 this morning, didn't he?

Mr. MORGAN. I think so.

Mr. FREAR. I understood that was his testimony. If that was the general cost of construction, would you say that was the average cost of construction up through that section or a section similar to that?

Mr. MORGAN. I would think so; yes, sir.

Mr. FREAR. This road that was built up there—do you know that it was built at the cost of \$90,000 a mile?

Mr. MORGAN. I have heard that.

Mr. FREAR. For the Government?

Mr. MORGAN. I have heard that; yes.

Mr. FREAR. Do you know the Blodgett tract?

Mr. MORGAN. Yes, sir.

Mr. FREAR. Have you had any business dealings in regard to the Blodgett tract?

Mr. MORGAN. Well, I have never had any business dealings. I have had correspondence at one time with the owners.

Mr. FREAR. In what connection?

Mr. MORGAN. In regard to—I had a prospective buyer at one time.

Mr. FREAR. That is, you were an agent for the sale of the Blodgett tract. How long ago was that?

Mr. MORGAN. Well, I don't know that I was an agent. They submitted it to me. That was about three years ago, I think.

Mr. FREAR. Yes.

Mr. MORGAN. They submitted me a price on it.

Mr. MAGEE. Gave you an option on it?

Mr. MORGAN. No; they didn't give me an option on it. They made me a price and submitted a cruise and told me what they wanted for it.

Mr. FREAR. Have you examined any of the Blodgett tract in the past?

Mr. MORGAN. Yes; I have been in the Blodgett tract. I have examined a few forties on the south side of it and was back into it fairly well from that side.

Mr. FREAR. What would you say as to the comparative difference, if any, between the Blodgett tract and the Siletz as to the growth of spruce; that is, spruce as you have understood here suitable for airplane stock, which is straight spruce?

Mr. MORGAN. In my opinion it is about the same.

Mr. FREAR. They run about the same, in your judgment?

Mr. MORGAN. Yes. They are a good bunch of timber, each one of them.

Mr. FREAR. You went down the railroad a day or so ago?

Mr. MORGAN. Yes, sir; Sunday.

Mr. FREAR. That is this 24-mile railroad?

Mr. MORGAN. Yes, sir.

Mr. FREAR. Did you notice slides on that road?

Mr. MORGAN. Yes, sir.

Mr. FREAR. What was—I am just trying to get this in the record; we all know, but I desire to have it placed there.

Mr. MORGAN. Yes; there was, and I noticed the slides; I noticed a great many slides, and some pretty bad ones.

Mr. FREAR. How deep were some of them where the rails were washed down?

Mr. MORGAN. Why, it seemed to me there was one place there where they had built the tramway over that the rails were down about 20 feet, covered up about 20 feet, and shoved possibly out of line that much.

Mr. FREAR. Covered with dirt.

Mr. MORGAN. Dirt and débris; yes, sir.

Mr. FREAR. The rails were down there, and we had a wooden tramway built over to carry us?

Mr. MORGAN. Yes.

Mr. FREAR. I made a misstatement—that the north road cost \$70,000 a mile; the south road cost \$90,000 a mile.

Mr. MORGAN. Yes, sir.

Mr. FREAR. That road would require some little attention, wouldn't it, to keep it up?

Mr. MORGAN. Yes.

Mr. FREAR. For logging purposes, or anything else?

Mr. MORGAN. Yes.

Mr. FREAR. That would make a haul of how far to get to Toledo from the Blodgett tract—that is, from the nearest timber in the Blodgett tract—as far as you could judge?

Mr. MORGAN. Well, they claim 24 miles of road to the tract, and then it is about 3 or 4 miles across the tract, east and west; and, of course, as there is no stream to log in, to assemble the logs at some given point, you know, at the end of the road, why, there would have to be two or three main lines through it and a lot of laterals each way. It would be rather an expensive tract to log.

Mr. FREAR. Then, after you get it up to the Yaquina Bay, the end of the road, then how far are you from Toledo?

Mr. MORGAN. About 12 miles, I should judge.

Mr. FREAR. Then, you have got to raft it 12 miles farther, to Toledo?

Mr. MORGAN. Yes.

Mr. FREAR. So, at the minimum figure, it makes it 36 miles?

Mr. MORGAN. Yes, sir.

Mr. FREAR. Would you, as a logging proposition, consider it advisable to go down there for 36 miles to get these logs when you could get them right at the side of the Miller road, from the north?

Mr. MORGAN. No, sir. I thought it was a very foolish move all the time.

Mr. FREAR. But you didn't have any cost-plus contract?

Mr. MORGAN. No.

Mr. FREAR. Have you had any discussion with any of the officers of the spruce division or corporation in the past?

Mr. MORGAN. Yes, sir; I have talked to some of them.

Mr. FREAR. Mr. Hitchcock and others?

Mr. MORGAN. Yes, sir.

Mr. FREAR. Will you briefly explain to the committee your experience in regard to that?

Mr. MORGAN. It was in the month of July; I don't remember just what time in the month; last year; possibly along about the middle of the month.

Mr. FREAR. July, 1918?

Mr. MORGAN. 1918; yes.

Mr. FREAR. Yes.

Mr. MORGAN. There was a delegation, three or four men, sent down here from Toledo. It seems that the people up there learned that they were going to build the road from Yaquina up the coast and from the South Beach down into the Blodgett tract instead of building into the timber the shortest way and getting results; so they held a mass meeting at Toledo and selected a committee to come down here and try—

Mr. MAGEE (interrupting). To come to Portland?

Mr. MORGAN. Yes; to Portland; to go before Col. Disque or his associates and try and present the facts to him and explain the situation. So they came to my office and asked me to go with them; thought I was a little more familiar.

Mr. FREAR. That is, you were living in Portland, were you?

Mr. MORGAN. Yes; I was living here in Portland. I went with them, and we met—we didn't see Col. Disque, but we met Hitchcock, Maj. Hitchcock, and we stated the facts to him. We had maps there,

showing practically where the main stand of the spruce was and the feasible routes to bring it out, and he claimed that they had had surveyors in there and found it impossible to come out that way, to get over this 240-foot divide, and that they were going to build around the other way. But we insisted and told them that they were making a mistake in going the other way, and he finally said that if there was a way through there, if we would go down and point it out, he would send Amos Benson along to examine it, and if it proved that that was the logical way, why, they would go that way. So the committee asked me to go along and go with Amos Benson and show him what I thought was the most feasible way out of there. I went down to Newport and waited there a few days, finally got Benson to go over with me, over into the Siletz, and we started in down on Jaybird. I showed him three passes coming out of Jaybird; I think they run around 324 to 345 feet elevation, and looked over the country and some of the timber, and he admitted that that would be very easy to get out of there. And of course he wanted as short a line as possible, and I told him I thought that from there on—

Mr. FREAR (interrupting). You say, of course he wanted as short a line as possible?

Mr. MORGAN. Yes; that is what he said.

Mr. FREAR. Yes; that is what he said.

Mr. MORGAN. Yes; that is what he said. Yes. I told him I thought by going straight south from the southeast corner of section 30 in 9-10, that was where the lowest pass was we showed him coming out of Jaybird. I told him if we could go straight south through 31 I remembered a low pass through there when I was cruising in 31 years ago, which I thought it was pretty easy to get over. I didn't believe it was much higher than this one. It was getting late. He said he didn't have time to go farther that day, but for me to go on the next day and find it; if I did find the low pass he would come and go over it with me and examine it and go clear through there. But, however, he knew at this time that there was a way to go up the river on a water grade, but he wanted a shorter cut; that is, by going through 31, down Dewey Creek, through 36 and 37, which would cut off a mile or two, maybe 2 miles.

Mr. FREAR. Going in which way?

Mr. MORGAN. Going around the river the way the Porter survey goes.

Mr. FREAR. That is, going up from Toledo north?

Mr. MORGAN. Yes; going from Toledo north. So the next day they found a surveyor, Jim Derrick, and Walter Hall, and myself went through there. Mr. Derrick ran a level, and I went through on the section line and we found the pass. According to Mr. Derrick's level it was 200—345 feet, only about just a little higher than the pass out of Jaybird, and a very narrow backbone. It could have been cut down to the Jaybird pass very easily with not more than a cut a hundred feet or so long. So we came on through down Dewey Creek, and Mr. Hall got his car and we went to Toledo and picked up that committee that had been down there and went down after Mr. Benson. He was supposed to be at the Abbey House at Newport, but he wasn't there and we could not find out where he was. So I had been up there several days already and neglecting my business,

and I told the boys there was no necessity of me staying any longer, so to get Mr. Derrick, the county surveyor, to go over it with him when he found him. So I came on home. But I understood they never did get him to go over it. In fact, he admitted here later that he didn't go.

Mr. FREAR. To you or in what way?

Mr. MORGAN. Yes; he admitted to me and in the presence of several timber owners here, in the presence of Mr. Hitchcock, that he had not been over it yet; said he never had had time to get over it.

Mr. FREAR. What did Hitchcock say? Did he say anything?

Mr. MORGAN. Well, Hitchcock had just before that—just prior to that he stated that Mr. Benson had been over it and reported that it was impossible. I told him that he hadn't been over it. I know positively that he never did go over it.

Mr. FREAR. Well, now, Hitchcock was a logger of some years experience, was he?

Mr. MORGAN. Well, I don't know about that.

Mr. FREAR. Did he ever speak of it in any way?

Mr. MORGAN. No, sir.

Mr. FREAR. Well, was he a railroad man with any great amount of experience?

Mr. MORGAN. I don't think so. I understood he was an attorney, although I don't know.

Mr. FREAR. Oh, he was a lawyer?

Mr. MORGAN. I understood that he was.

Mr. FREAR. And he was sent out here to take charge of these things. Was he put up as a buffer that you people had to see each time?

Mr. MORGAN. He was; yes. He was a good one, too. [Laughter.]

Mr. FREAR. What is your politics?

Mr. MORGAN. Democrat.

Mr. FREAR. There is no politics in this, so far as you are concerned?

Mr. MORGAN. So far as I am concerned there is not.

Mr. FREAR. Hitchcock was a Democrat, wasn't he?

Mr. MORGAN. I don't know.

Mr. FREAR. I understood so. Is there anything else you think of, Mr. Morgan, in regard to this general situation over there?

Mr. MORGAN. No.

Mr. FREAR. They went on and they built the road, didn't they, around the coast side?

Mr. MORGAN. Yes.

Mr. FREAR. Your people never heard anything more about it?

Mr. MORGAN. No.

Mr. FREAR. That is, they didn't consult with the people locally?

Mr. MORGAN. No.

Mr. FREAR. Have we got that explained fairly clearly?

Mr. MAGEE. I think you had better ask—

Mr. FREAR (interrupting). You go on.

Mr. MAGEE. Well, I don't want to suggest, but you said that Maj. Hitchcock stated that Mr. Benson did go over it. Did you ever have any later conversation with Maj. Hitchcock and Mr. Benson when that question came up?

Mr. MORGAN. I will explain to you how that was. I went in to Maj. Hitchcock's office with some of the timber owners—this was

later; I don't know just what time, but it was after this thing had all blown over, and went in to consult regarding the price of the spruce down there, and Mr. Hitchcock started in to tell us, you know, about the expensive roads that had been built to get it out, and according to that, why we were not entitled to a very big stumpage, but his road expense would be charged up against the stumpage. So, some of the owners told him it wasn't necessary to go to all that expense, and if he had opened it up the right way that it would not have been a very expensive logging proposition. And he says, "How would you open it up?" And they told him that they would have gone in from Toledo over this Miller road, over this pass that Porter later surveyed; that is, they would have gone that way; that would have been the general direction, and worked it up from there; that that was a logical way. In fact, I think all of the owners were agreed on that. And he bluffed up and said it was impossible; that he had a report from Amos Benson there; Amos examined it and he turned it down, said it was an impossibility to get a road in that way. And I told him that that was a mistake; that Mr. Benson didn't go over all of it; he went over part of it. And, of course, he started bluffing me. He said, "You was with him and you admitted it was impossible." I told him it wasn't true. And, of course, it stopped at that.

We did not come to blows over it, and in a few minutes Amos Benson came in and I introduced him to some of the owners there, and one of them spoke up and said, "We were just talking about you; Mr. Hitchcock says you went over this land and Mr. Morgan says you did not," I says; "Which one told the truth?" He stammered and said, "I have not had time to go over it yet; I have been too busy on this land."

Mr. MAGEE. That settled it?

Mr. MORGAN. That settled it; that was the last of it.

Mr. MAGEE. What is Mr. Derrick's given name?

Mr. MORGAN. They call him Jim; I do not know what his name is. His initial is Z.

Mr. MAGEE. Where does he reside?

Mr. MORGAN. At Toledo.

Mr. MAGEE. Is he there now?

Mr. MORGAN. Yes.

Mr. MAGEE. I think that is all.

Mr. LEA. Mr. Derrick is the county surveyor?

Mr. MORGAN. I think he is. He was at that time. I do not know whether he is now or not. He was county surveyor all the time I was down in that country.

Mr. LEA. Did he have practical experience in such matters as these?

Mr. MORGAN. Yes, sir.

Mr. LEA. Who is Amos Benson?

Mr. MORGAN. He is the son of Simon Benson.

Mr. LEA. Is he connected with the lumber business in any way; the logging business?

Mr. MORGAN. I think he has been; I do not know whether he is now or not.

Mr. LEA. Is his father in the logging business?

Mr. MORGAN. He was at one time, I think. I do not think he is now.

Mr. LEA. Where does he live?

Mr. MORGAN. He lives in Portland.

Mr. LEA. This survey that was made from Toledo—the Porter survey—was by what organization?

Mr. MORGAN. The board of Toledo paid for that.

Mr. LEA. That is an organization to develop the port there, is it not?

Mr. MORGAN. Yes.

Mr. LEA. And they made this survey in order to show the resources of that port?

Mr. MORGAN. I think so.

Mr. LEA. With the idea that this railroad should connect this Siletz country and be contributory to the port?

Mr. MORGAN. Yes; I think that was the idea.

Mr. LEA. I suppose logging was practically in every direction on this Siletz River after it reached tidewater, was it not, so far as tide-water was concerned?

Mr. MORGAN. You could log either above or below.

Mr. LEA. Either up or down?

Mr. MORGAN. Yes.

Mr. LEA. Do you know on whose advice, if anybody's, the spruce production corporation finally acted in selecting these routes?

Mr. MORGAN. I do not.

Mr. LEA. To a considerable extent, the selection of such routes is a matter of judgment, is it not, among practical men?

Mr. MORGAN. They should be; yes.

Mr. LEA. Sometimes practical men disagree?

Mr. MORGAN. I do not know. They may; yes.

Mr. LEA. You spoke of something being said about you should be paid—the amount you should be paid as stumpage. Did you have any stumpage in there?

Mr. MORGAN. I had some stumpage; yes.

Mr. LEA. Where was it?

Mr. MORGAN. I had some in sections 20 and 17, 9 and 10.

Mr. LEA. Just generally, where is that with reference to Siletz?

Mr. MORGAN. That is on the Siletz River; it borders on the Siletz River.

Mr. LEA. How far is that from Toledo?

Mr. MORGAN. That would be, I suppose, by the wagon road, within about 12 miles, 12 or 13 miles.

Mr. LEA. Have you been interested with anybody else who has timber holdings in the Siletz, in relation to this matter?

Mr. MORGAN. In what way?

Mr. LEA. As an agent, or negotiating for them.

Mr. MORGAN. No; I think not; not on the stumpage.

Mr. LEA. Did you have anything to do with the Weatherford tract, or the Pendleton property?

Mr. MORGAN. No, sir.

Mr. LEA. Did you ever act as agent for Mr. Pendleton?

Mr. MORGAN. No, sir.

Mr. LEA. Did you consult with Mr. Pendleton or Mr. Weatherford with reference to considering the buying of any Government property down there?

Mr. MORGAN. No, sir.

Mr. LEA. Did you go down there with them to see it?

Mr. MORGAN. Yes; I was down there with them to see it.

Mr. LEA. You went down from Portland, did you?

Mr. MORGAN. Yes, sir.

Mr. LEA. What was your interest in going down with Mr. Pendleton and Mr. Weatherford?

Mr. MORGAN. We wanted to see what was done. I wanted to look over the roads and mill.

Mr. LEA. You went down for the purpose of showing them around?

Mr. MORGAN. Not exactly. Mr. Pendleton is as familiar with that country as I am.

Mr. LEA. You all three went down together?

Mr. MORGAN. Yes; and there was another party or two with us.

Mr. LEA. You said that an offer was made you on the Blodgett tract. What was the offer that was made you?

Mr. MORGAN. I do not remember exactly what it was. As near as I can remember, it was a dollar a thousand for the spruce and 75 cents for the fir and 30 cents for the hemlock.

Mr. LEA. How long ago was that?

Mr. MORGAN. That has been three or four years ago.

Mr. LEA. And who made you that offer?

Mr. MORGAN. I do not remember who that was.

Mr. LEA. Whoever owned it?

Mr. MORGAN. The owner at that time or his agent.

Mr. LEA. Do you remember about what the total price would have amounted to at the figures they quoted you?

Mr. MORGAN. No; I do not.

Mr. LEA. Do you know what the estimate is of the amount of timber on the Blodgett tract, approximately?

Mr. MORGAN. I do not believe I could recall it offhand now.

Mr. LEA. You do not know exactly?

Mr. MORGAN. No.

Mr. LEA. All right. I think that is all.

Mr. FREAR. To show your qualifications as a cruiser, have you cruised for any officials down there through the different tracts—the Blodgett tract, for instance?

Mr. MORGAN. I have; yes. I checked up some forties for the county assessor, and also made a preliminary for the Seattle outfit, and I think I cruised a few forties for them prior to that.

Mr. FREAR. Your business now is the timber business?

Mr. MORGAN. The timber business; yes.

Mr. FREAR. So you have had considerable experience?

Mr. MORGAN. Oh, yes.

Mr. FREAR. The fact that you had a piece of land in there, or timber in there, if you did have it—I was occupied with something else at the time and did not hear you say—would that affect your judgment as to the location of this railroad and things of that kind in the slightest degree?

Mr. MORGAN. Not in the least.

Mr. MAGEE. What do you mean by checking?

Mr. MORGAN. In checking you get the cruise that is submitted by the owner and go in and cruise a forty here and there and compare it to the owner's cruise, or whoever submitted the cruise to you; that is, checking up the cruise that is submitted to you.

Mr. MAGEE. What do you mean by "forties"?

Mr. MORGAN. Forty acres. That is a subdivision.

Mr. LEA. How many years has it been since you were engaged in logging?

Mr. MORGAN. It has been 16 or 17 years.

Mr. LEA. That is, you have been engaged in it 16 or 17 years, or it has been 16 or 17 years since you were engaged in logging?

Mr. MORGAN. Since I logged any.

Mr. LEA. You have lived in this State for many years?

Mr. MORGAN. Yes, sir.

Mr. LEA. That is all.

Mr. FREAR. You have been living in this section where they are logging?

Mr. MORGAN. Oh, yes; I am in touch with logging all the time.

Mr. FREAR. That is part of your business, because you are dealing in timberlands?

Mr. MORGAN. And cruising. I cruised a great deal right ahead of the saws in the logging camps during the last 10 years, and have to watch it very carefully.

Mr. FREAR. So that you are familiar with all the different phases of logging?

Mr. MORGAN. Yes; in my business you have got to keep in touch with things.

Mr. FREAR. So you have kept up to date in logging operations?

Mr. MORGAN. I do not claim to be an up-to-date logger, but I have kept up with logging.

Mr. MAGEE. Do you think you know as much about it as a lawyer or a doctor or a dentist?

Mr. MORGAN. Yes.

Mr. LEA. Or a Congressman?

Mr. MORGAN. Yes.

Mr. LEA. There is one great thing about a Congressman; he knows everything about it without investigating. [Laughter.]

Mr. FREAR. There is another thing; they are willing to investigate and ascertain the facts generally.

(Thereupon, at 3.15 o'clock p. m., the committee adjourned until to-morrow, September 3, 1919, at 10 o'clock a. m.)

SUBCOMMITTEE No. 1 (AVIATION)
OF THE SELECT COMMITTEE ON EXPENDITURES
IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES,
Wednesday, September 3, 1919.

The subcommittee met at 10 o'clock a. m., in the courthouse, Portland, Oreg., Hon. James A. Frear (chairman) presiding. Also present, Hon. Walter W. Magee and Hon. Clarence F. Lea.

TESTIMONY OF CAPT. THOMAS A. SWEENEY.

(The witness was sworn by Mr. Frear.)

Mr. MAGEE. Where do you reside, Captain?

Capt. SWEENEY. 731 Brooklyn Street, Portland, Oreg.

Mr. MAGEE. How long have you resided here?

Capt. SWEENEY. In Portland, Oreg., 15 years.

Mr. MAGEE. What is your business?

Capt. SWEENEY. General construction.

Mr. MAGEE. Of what character?

Capt. SWEENEY. Railroads and highways.

Mr. MAGEE. Were you here in 1907, or the early part of 1918?

Capt. SWEENEY. Yes, sir; I was here until February 8, 1918.

Mr. MAGEE. Are you familiar with the general situation in this locality as to spruce timber?

Capt. SWEENEY. Yes; I think I know as much about the spruce, the location of spruce in the Northwest, as any man.

Mr. MAGEE. Will you go on and state to the committee what information you have relative to spruce timber or the getting out of spruce timber for airplane production that you know about?

Capt. SWEENEY. In November, 1917, there was an arrangement made by the Government to pay from \$120 to \$160 a thousand for rived spruce. The No. 1 spruce at \$160 was supposed to be straight grained without spirals and without pitch knots and other specifications to make it first-class timber for wing-beam stock. The No. 2 was priced at \$120. They were asking for farmers and small loggers to get this out, and the publicity department of the spruce corporation was very anxious to get the farmers to get the spruce out; but when the farmers applied for an interview with the powers that were then, they were unable to see them, and were unable to get into touch with the financial arrangements that the Government would be willing to make. Therefore, the getting out of spruce under contract by the thousand was a practical failure.

I organized the Western Spruce Association, my plan being to furnish the tools, the groceries, and the tents for loggers—that is, I mean men who were able to do the work and were not able to get the equipment to do it with—and I was to furnish them horses, and they were to get out this spruce in small lots. Of course, spruce grows in little clusters and growths. It is not in a large body of timber. Fir, possibly, in the Siletz, and spruce in there amounted to maybe 15 per cent of the timber, and it grows in small clusters on little rises or hills. I went ahead and made arrangements to get options on certain properties, to get out spruce. I think they were paying \$7.50 a thousand, the Government price, and agreed to pay the Government price. You understand, I was not wealthy, but I thought I might be able to help the Government out by forming this association of small loggers to get this out. I had taken quite an active part in Red Cross work previous to this time, and I thought possibly I might donate my services to the Government in this particular work.

The point naturally arises, where I got off. My getting off was that I would agree to pay the men \$4 a day apiece who would work on this, and agreed to get the money from the Government for the carload shipments, and anything that was left over the \$4 a day that was paid to these men I would split up with the men. I understand Col. Disque had a difficult time finding out just exactly where I got off and could not understand my motives in organizing this association.

Mr. MAGEE. You say you understand. What I am trying to get is just what you know of your own knowledge and experience. Did you have any conversations with the colonel?

Capt. SWEENEY. Yes; I had several conversations. I am coming to that now. I went to Col. Disque on two or three different occasions, and he had agreed that this would be all right, but he asked me at that time where I would be getting off, and I told him I thought I would be able to take care of myself; if I did not make anything it would be all right and I would not be losing anything, and it would be doing something for the Government. I was at this about six weeks.

Mr. MAGEE. What time of the year was that?

Capt. SWEENEY. This was along in the first part of the year, the first week or so in January, 1918, and I was told that there was an organization being formed by large timber owners and large contractors to turn this over to one contractor, the getting out of all the spruce on a cost-plus contract. I went immediately to Col. Disque. You understand that although there are many times that you will hear a report you may not be able to definitely trace it.

Mr. MAGEE. Yes; and that is the reason I suggested that we do not care anything about rumors or hearsay.

Capt. SWEENEY. Well, this is absolutely true.

Mr. MAGEE. All the committee wants is the facts within the knowledge of the witness.

Capt. SWEENEY. I went to Mr. Disque and explained to him what was going on and he said—

Mr. MAGEE. What did you say to him?

Capt. SWEENEY. I told him that there was an organization being formed to trim the Government; they wanted the Government to

build railroads into their timber where their timber is on both sides of the railroad, and when the spruce is exhausted—there may be, possibly, 10 per cent of all the timber which is spruce—and when the spruce is exhausted they will, under the rule of the Government of selling to the highest bidder, of necessity have to sell to the people who own the timber on both sides of the railroad. He immediately became very excited and told me he would not have his character assassinated. I told him I was not trying to assassinate his character; that I was simply trying to give him a tip; that I was not personally interested in his welfare. I gave him the name of a man who would be able to give some more information to him, and this man went and saw him. I do not know what the outcome was, excepting what this man told me afterward, but it was about like my own experience. I told Mr. Disque at that time that he was either in on the frame-up or else he was being made a sucker of by the financial and timber interests of this country.

Mr. MAGEE. Where was this conversation?

Capt. SWEENEY. In the Yeon Building, in Mr. Disque's office, on Sunday afternoon.

Mr. MAGEE. This city?

Capt. SWEENEY. Yes, sir; the second Sunday in January, 1918. I stayed on until about two weeks longer, and in trying to close these options in going to the spruce department to get their assistance, I was referred to the Porter Bros.

Mr. MAGEE. You tried to make some arrangements with Col. Disque in reference to getting out spruce timber for airplane production?

Capt. SWEENEY. Yes, sir.

Mr. MAGEE. Did you receive any encouragement?

Capt. SWEENEY. I received no encouragement, and I sent several other small loggers to the colonel and they received the same treatment that I received. It seemed that a man must have his bond and Bradstreet's report in his hand with his card when he went into the office, showing at least he was worth from two million to ten million dollars, in order to do any business or talk to those people.

Mr. MAGEE. What leads you to that conclusion?

Capt. SWEENEY. Because the small loggers who went in there who were not able to do this were not given any consideration, and the big men could walk by them. After a small man had been waiting an hour to go in, these large contractors could walk in without any hesitation and go into the office.

Mr. MAGEE. Were there a good many loggers along the coast who were in a position, with equipment, etc., to get out spruce logs?

Capt. SWEENEY. You understand, many of the loggers had the equipment, but they were financially embarrassed; they could not move their equipment in for possibly an indefinite time. The war might be over in two months or a year and the men would not take a chance.

Mr. MAGEE. Assume that the Government had financed them and given them sufficient money to utilize their equipment, were there sufficient men here of experience in the logging business to get out the spruce required for the needs of the Government?

Capt. SWEENEY. That is just exactly the point. They were all prepared and equipped to do it if they could get a little assistance from the Government.

Mr. MAGEE. Go on and state what you know as to the number of loggers, their ability to get out spruce in quantities if encouraged and aided by the Government.

Capt. SWEENEY. Well, at that time there was considerable talk of the I. W. W., but in reality that talk was promoted more by people who were interested in getting soldiers in here and organizing a division, I think. The I. W. W., in my experience—and I went all over this section—was possibly 10 per cent of the men at work. I had considerable experience with the I. W. W's. and I never had any damage done by them. The small loggers who had small crews—from 20 to 50 men—working were getting out a great deal of timber, and down in Cusic County there were several small loggers that I was in touch with and they came up to Portland and tried to see Mr. Disque, and I tried to see Mr. Disque for them, and a Lieut. White, who was in the office, told me that it would be almost impossible to see Mr. Disque for the small loggers; that they were coming in at all times of the day and Mr. Disque did not have time to talk to them, there had been so many of them; and as to saying exactly how much the loggers on the coast could do I would not say that, but I know they have been doing this work for years, and there is no reason to believe they could not have done this work much cheaper.

Mr. MAGEE. Do you know of your own observation whether they were willing to do it?

Capt. SWEENEY. Absolutely, they were.

Mr. MAGEE. And whether they were reasonably able to do it?

Capt. SWEENEY. They would have done it if they had had a certain amount of assistance from the Government to move their equipment in and take it out again; but no one was going to move their equipment without having some assistance. Mr. Disque wanted them to give bonds, but he would not give bonds to pay them if they lost money.

Mr. MAGEE. What do you mean by that—that they could not get any cost-plus contracts?

Capt. SWEENEY. Oh, no; it was an impossibility to get cost-plus contracts.

Mr. MAGEE. What do you know of your own knowledge about the inability of the loggers to obtain any cost-plus contracts?

Capt. SWEENEY. There was a man by the name of—I forget his name—but there was a man down in Toledo that was up here for a week trying to get a contract out of the Siletz. Right above that hog back, out of Toledo, in the Siletz, there is a large body of spruce near that little divide just west of the extension of the Miller railroad.

Mr. MAGEE. That is a few miles north of the end of the railroad?

Capt. SWEENEY. I think Miller's railroad ran about 5 miles up from the end of his track. The end of the track was about a mile or a mile and a half from Toledo, and it ran 5 miles, and about 3 miles above that was a rise of possibly 500 feet, maybe a 2½ or a 3 per cent grade, and just over that was where this large body of spruce is—just over that to the west of that along the ridge; and this man came in here and was here a week trying to see Mr. Disque, and he saw everybody but Mr. Disque and received no encouragement. He offered to get this out on a per 1,000 basis of \$160 a 1,000 if the Government would advance him the money, or he offered

to get it out on a cost-plus contract, but he could not show the financial responsibility.

Mr. MAGEE. How did he need any financial responsibility if he got a cost-plus contract?

Capt. SWEENEY. Well, I do not see that you have any financial responsibility if you had all the backing of the Government behind you.

Mr. MAGEE. If a man had a cost-plus contract with the Government the Government would pay all the expenditures under the contract and a commission on those expenditures.

Capt. SWEENEY. But a small man could not do that; a small practical man could not do that. It takes a banker to get a cost-plus contract.

Mr. MAGEE. What I am getting at is why should a man's financial responsibility enter into the proposition?

Capt. SWEENEY. That is the question that has never been solved here.

Mr. MAGEE. You can not solve that?

Capt. SWEENEY. No; that is too deep for me and for everybody.

Mr. MAGEE. You said this man said he could not see the colonel. Was the colonel out of town?

Capt. SWEENEY. No; he could not get through the battery.

Mr. MAGEE. Of what?

Capt. SWEENEY. Of bank clerks and slackers from the East that were out here as sprucers in the office.

Mr. MAGEE. You mean he could not get an interview?

Capt. SWEENEY. That is what I mean.

Mr. MAGEE. Do you know anything further about this spruce situation that you have not stated?

Capt. SWEENEY. I know I saw that he was not going to do anything with the small fellow, was not going to permit them to do anything, and that he was letting contracts to the bankers and timber owners, and so I left here and went to Victoria.

Mr. MAGEE. British Columbia?

Capt. SWEENEY. Yes, sir. I heard in town that Mr. Pendleton was doing some work up there, and I was going up on that Charlotte group of islands. I foolishly had thought that I could be of some assistance, but they did not want assistance.

Mr. MAGEE. Who did not want assistance?

Capt. SWEENEY. These people here in this country.

Mr. MAGEE. You had gotten up to British Columbia, and are you now back in Portland?

Capt. SWEENEY. No; I am just going up now, crossing the line.

Mr. MAGEE. Whom do you mean by "they"?

Capt. SWEENEY. I mean the spruce outfit here.

Mr. MAGEE. In Portland?

Capt. SWEENEY. Yes, sir. I went up there to investigate, to see if I could do anything in Canada, and I was up there about a week at Victoria when I received a wire from Washington, D. C., that I was given a commission as lieutenant in the Army and asked to accept that immediately by wire acceptance, and I saw that I was not getting very far in helping the Government here, so I accepted the commission and went to Washington, D. C.

Mr. MAGEE. You did not join the soldiery here with civilian pay?

Capt. SWEENEY. No; I did not. Sometimes I am kind of sorry I did not, but in after years I guess I will feel better about it.

Mr. MAGEE. Then what?

Capt. SWEENEY. Then I went to France and was given a company and given a commission as captain, and we did a lot of work over there; we did what we were ordered to do, and we did not have any civilians in the work.

Mr. MAGEE. When did you reach France?

Capt. SWEENEY. On the 22d of May, 1918. We did railroad work, road work, railroad construction, and on the 19th of July I was sent to the Avergne Mountains and sent in there to put a siding in, to timber into the forest, a railroad siding. I built that, and when I had finished it I reported the work was completed, and they said to stay, that there was a sawmill on the way, and I was ordered to construct this mill and get out railroad ties and bridge timbers for construction at the front line, props, etc., and about a month afterwards I constructed another mill about 50 miles from there. This was about August 22, and I was in Claremont. Capt. Williams, who was a captain of infantry, was in charge of the aviation camp. This was about 100 miles southwest of the line. On the 22d of August there were 16 men lined up—

Mr. FREAR. What year?

Mr. MAGEE. 1918?

Capt. SWEENEY. 1918. On the 22d of August about 16 men were lined up that had been ordered to the front. I think there were about four or six De H. 4 machines in there, De Haviland machines, and the rest of them were French machines. They were grouped and I do not remember what kind they were. They may have been Spads, or something of that sort. But at least, they were second-grade machines. The French did not give the first-class machines to the Americans. Those young fellows who were going out were a sort of devil-may-care outfit, they did not seem to care, and they were laughing and kidding there and shaking hands with everybody.

Mr. FREAR. Americans?

Capt. SWEENEY. Americans. They shook hands with everybody, and said, "Well, this is not au revoir, this is good-bye." Capt. Williams and I were standing opposite and I asked him why all this gloom. The fellows who remained behind were very gloomy. He said, "Well, those boys will never come back, and they know it." I said, "Why," he said, "Well, those American machines have no protection. As soon as a bullet hits that gasoline tank it is curtains, it will take fire immediately and the men, the pilot and observer, have no chance to get away." He said the boys called those the flaming coffins.

Mr. MAGEE. Sure death?

Capt. SWEENEY. I presume so. I did not ride in any of them.

Mr. MAGEE. What did he say about that, the captain in charge?

Capt. SWEENEY. He said they would not come back, that when one of those machines was struck it was the finish. The other machines, the French machines, were old and were not up to date. They were not as fast as the German machines, and they were not as efficient as the German machines, and, therefore, they did not figure they had much of a chance in those machines either. I saw Capt. Wil-

liams about a month afterwards and asked him particularly if those fellows came back who went over. He said he had never heard of any of them, he said they had fallen inside the German lines and had been captured or killed.

At that time also he told me that he was going to Congress and have an investigation, and if an investigation was not started he would try to start one.

Mr. FREAR. For what?

Capt. SWEENEY. To learn why those machines were built without protection for the Americans.

Mr. MAGEE. Now, do you know where Capt. Williams is?

Capt. SWEENEY. Capt. Williams was at Claremont on the 15th of April. I went through there. I was sent back to the Bordeaux district on the 6th of January in charge of road work south of Bordeaux.

Mr. MAGEE. Do you know what his given name is?

Capt. SWEENEY. They call him Jack.

Mr. MAGEE. Capt. Jack Williams?

Capt. SWEENEY. He was a captain of Infantry.

Mr. MAGEE. Do you know his regiment, or company, or division?

Capt. SWEENEY. No; the only thing I remember is that he was a captain of Infantry, but he was in charge of the aviation camp, and was an aviator.

Mr. MAGEE. Do you know what division of Infantry?

Capt. SWEENEY. No. He was in charge of this aviation camp at Claremont. He is well known there, and practically ranked—

Mr. MAGEE. He had charge of the camp at this time?

Capt. SWEENEY. He was as important as a colonel there, because he was the ranking officer.

Mr. MAGEE. Can you give us any further fact to identify him?

Capt. SWEENEY. I think that would be sufficient, Capt. Williams, in charge of the aviation camp at Claremont.

Mr. MAGEE. Have you ever heard anything from him since you left; do you know whether he has returned?

Capt. SWEENEY. No. I saw him on the 15th of April.

Mr. MAGEE. 1919?

Capt. SWEENEY. 1919.

Mr. MAGEE. At this same place?

Capt. SWEENEY. He only had 28 ground men there and had nothing to do.

Mr. MAGEE. He was at this same place?

Capt. SWEENEY. He was waiting for orders to go home.

Mr. MAGEE. What time did you leave France, Captain?

Capt. SWEENEY. I left France on the 7th day of June, 1919.

Mr. MAGEE. Have you been discharged from the service?

Capt. SWEENEY. Yes, sir.

Mr. MAGEE. When were you released from the service?

Capt. SWEENEY. I was discharged from the service on the 5th of July, 1919.

Mr. MAGEE. Where?

Capt. SWEENEY. Camp Lewis.

Mr. MAGEE. And then you came to Portland?

Capt. SWEENEY. Yes.

Mr. MAGEE. I think that is all.

Mr. LEA. Was this a corporation that you organized for the purpose of getting out spruce?

Capt. SWEENEY. An association.

Mr. LEA. It was not incorporated?

Capt. SWEENEY. No; it was not incorporated; it was an association.

Mr. LEA. Did you have any capital stock?

Capt. SWEENEY. No; it was just an association formed under the laws of Oregon.

Mr. LEA. What equipment did you have?

Capt. SWEENEY. I had splitting wedges, saws, axes, and chains, teams, and double trees and wagons.

Mr. LEA. Did you have any donkey engines?

Capt. SWEENEY. I presumed I did not need any donkey engines under the system they were getting out the spruce at that time.

Mr. LEA. You did not have any equipment of that kind?

Capt. SWEENEY. I did not have any donkey engines.

Mr. LEA. Did you own any timber?

Capt. SWEENEY. I did not own any timber.

Mr. LEA. Did you have contracts for any timber?

Capt. SWEENEY. I had options on some spruce timber.

Mr. LEA. What had you been doing prior to that time—when the war began?

Capt. SWEENEY. Highway construction.

Mr. LEA. That was State highway construction?

Capt. SWEENEY. State and county highway construction.

Mr. LEA. Did you have any contracts?

Capt. SWEENEY. At that time?

Mr. LEA. Yes.

Capt. SWEENEY. If I had any contracts I would not have monkeyed with this spruce.

Mr. LEA. How long since you had had any contracts before that time?

Capt. SWEENEY. The 1st of September.

Mr. LEA. You were doing what then?

Capt. SWEENEY. Building a highway down toward Astoria.

Mr. LEA. What distance, what kind of highway was it?

Capt. SWEENEY. About seven miles of construction work, excavation, and grading.

Mr. LEA. Was that a concrete road?

Capt. SWEENEY. No; it was just the grading of it. It was a big fill put in there and they do not lay the pavement until after it has settled, out there.

Mr. LEA. You were never able to make a contract for getting out spruce for the Government?

Capt. SWEENEY. The ability of a man—

Mr. LEA. No, I do not refer to your ability. What I meant is that you did not get any contract; you were not able to get any arrangement that was satisfactory for you to get logs.

Capt. SWEENEY. I never asked for a private contract, because it was a proposition that they would pay \$120 to \$160 a thousand for spruce.

Mr. LEA. If you had produced the logs you could have got that price?

Capt. SWEENEY. Yes, sir; rived stock.

Mr. LEA. Did you deliver any spruce to the Government during the war?

Capt. SWEENEY. No, sir.

Mr. LEA. Now, about these gasoline tanks connected with the airplanes in England—what service were you in over there—what branch of the service?

Capt. SWEENEY. Engineers.

Mr. LEA. Now, the fact was that all the Allies were without protected tanks to begin with, were they not?

Capt. SWEENEY. Not that I know of. In England they might have been, but in France the Germans had their tanks protected with cork and steel, and the French had half-inch steel protection.

Mr. LEA. Now, did these machines that the French turned over to the Americans have protection on the tanks?

Capt. SWEENEY. Yes; I presume they had.

Mr. LEA. But originally they did not, did they?

Capt. SWEENEY. I do not know; I do not know as to that. I did not say anything about the French protection. I said the French machines were out of date.

Mr. LEA. And the Allies, both England and France, helped protect the front, as far as aviation was concerned, didn't they, or do you know about that?

Capt. SWEENEY. Yes; it was a charitable proposition on their part. They had to protect us.

Mr. LEA. It was a joint effort; the Americans furnished them materials, and they constructed a great many planes, and furnished some planes to the Americans, and their aviators sometimes protected the American lines.

Capt. SWEENEY. Yes; they did; I am sorry that they had to.

Mr. LEA. Now, do you know about the death rate of the American aviators as compared with the others?

Capt. SWEENEY. I do not know.

Mr. LEA. You know that the record is established, don't you?

Capt. SWEENEY. I do not know. I do not know what the record is.

Mr. LEA. I believe that is all.

Mr. FREAR. What date did you say those boys were lined up?

Capt. SWEENEY. About the 22d of August, 1918; somewhere in the latter part.

Mr. FREAR. By a singular coincidence on August 22 the Thomas committee filed its report, in which it announced that not a single fighting plane or bombing plane of American manufacture had reached the fighting front. That committee was composed of Senator Thomas, Senator Reed, and Senator Hoke Smith, all Democrats, who were in the majority. It happened to be the same day. You say you do not know about the various machines—how they were constructed. The complaint made by Rickenbacher and the others, as I understand it—and I am asking you if you know—is that the battery was placed at one end and the oil tank at the other, and the aviator sat between, and that made it practically impossible, to use their language, as has been testified before us, to get out in case of an accident.

Capt. SWEENEY. Well, Mr. Frear, as far as the technical construction of an airplane is concerned, I was in the Engineers, and I was

simply giving my conversation with Capt. Williams, who was in charge of the aviation camp.

Mr. FREAR. That is one reason; that is what was alleged to make it so extremely dangerous, because they were between those two places; the pilot was between the battery and the oil tank?

Capt. SWEENEY. Yes.

Mr. FREAR. And, of course, if there was a bullet came, it was liable to perforate the oil tank, and that was the end?

Capt. SWEENEY. Yes.

Mr. FREAR. An aviator named Archibald testified before our committee in Seattle several days ago to the effect that only one American airplane was seen at the Argonne; was that it?

Mr. MAGEE. Connected with his division.

Mr. FREAR. Yes; connected with his division, and that no English or French machines, if I quote correctly, were around there at that time. He testified that the Germans came down within a few hundred feet and raked the American who were there at that time. I speak of that because you say that the other countries were able to help. It seems that in all cases they could not.

Capt. SWEENEY. That was Mr. Lea's statement.

Mr. FREAR. I understand, but I am giving you this illustration from testimony placed before the committee. A letter to the Secretary of War was read by the chairman of this committee in which it was urged to send airplanes. It was repeated three times, about the absolute necessity of having airplanes, which were lacking at the front, American airplanes. The Secretary of War said it was a beautiful letter. That letter came very close to my home. That is all.

(Witness excused.)

TESTIMONY OF MR. BRICE P. DISQUE.

The witness was sworn by Mr. Frear.

Mr. FREAR. What is your full name?

Mr. DISQUE. Brice P. Disque.

Mr. FREAR. How old are you, Mr. Disque?

Mr. DISQUE. Forty years.

Mr. FREAR. Where is your home?

Mr. DISQUE. New York City.

Mr. FREAR. You were in the Regular Army?

Mr. DISQUE. For about 18 years.

Mr. FREAR. You served in the Philippines?

Mr. DISQUE. On three different tours; yes, sir.

Mr. FREAR. And until what time?

Mr. DISQUE. Up to the time of my discharge,

Mr. FREAR. And what rank did you hold at that time?

Mr. DISQUE. I resigned from the Regular Army in January, 1917, as a captain of cavalry.

Mr. FREAR. 1917, in January. You were then a captain of infantry? What did you do then?

Mr. DISQUE. I became warden of the Michigan State Prison, at Jackson.

Mr. FREAR. At what time?

Mr. DISQUE. I had entered upon the duties about a month prior to my resignation. I was on leave of absence until the resignation took effect.

Mr. FREAR. Then you were on duty there in Jackson in December?

Mr. DISQUE. December 23, I think.

Mr. FREAR. 1917?

Mr. DISQUE. 1916.

Mr. FREAR. And up to what time did you remain in the prison as the warden?

Mr. DISQUE. About the middle of September I left Jackson.

Mr. FREAR. September, 1917?

Mr. DISQUE. 1917.

Mr. FREAR. That was about six months after war had been declared?

Mr. DISQUE. Approximately.

Mr. FREAR. How did you become appointed warden of the penitentiary, by what influence, I mean, or how did it come about? The reason I am asking this, let me state briefly, is this: That statements have come to the committee, and you are entitled to go into all these matters and give your own explanation, your own answers, and I think the committee wants you to do that.

Mr. DISQUE. I do not know what influences came to bear to arrange for my appointment. I received a cablegram from the members of the board while I was in Manila offering the position, and I had a short cable correspondence with them to determine that the position was in no wise a political one. They gave me their word that it was not, and all of them seeming to be business men of good reputation. I went to the States on leave, and found, as I thought, that the situation was what they had represented it to be, nonpolitical, and I accepted it.

Mr. FREAR. What are your politics?

Mr. DISQUE. I never voted in my life, never had any interest in politics, and never had a political friend as such, and do not know any now.

Mr. FREAR. The reason I have asked that question is that the suggestion has gone forth that this committee is actuated, either directly or indirectly, by political prejudices, and I desire to say this and have it entered in the record at this time, that this committee—the members, I believe, generally, received their appointments without solicitation, and in one case, I know distinctly, against the vigorous protest of one who is serving. I am now referring to the chairman of the committee. There was a distinct understanding that this committee could not be used, directly or indirectly, as a political adjunct at that time, and that is the disposition at this time. This committee was elected by the unanimous vote of the House of Representatives, Republicans and Democrats alike, and I am now referring to the joint committee. This committee of three was asked to make an investigation of spruce activities on the western coast and sent here by the unanimous vote of the 15 members, including the three Democratic leaders of the House. This committee comes here asked to make the investigation at the request of Gov. Hughes, personally, and at his recommendation as contained in his report. That is the attitude of this committee, without political preference or partiality in any way

it desires to get at the facts so far as able to, and it proposes to do so. I say that in justification because of some statements that have been given to the press. The only effort to link politics with this committee has come from the chairman of the Democratic national committee, who acknowledged the authorship, or stood for the authorship of an article charging this committee with having other motives than an honest purpose to carry on an investigation. He continues in that view, as chairman of that committee, and stated that he proposed to continue in that view. That is all I have to say on that subject, and the question with regard to your political affiliations was simply brought forth because of the peculiar situation which has been brought about in an effort to discredit the work of this committee.

Mr. DISQUE. May I say, Mr. Chairman, in view of the fact that you have so completely assured us that you are going to get the facts of this operation, I am prepared to give them to you, backed up by documentary evidence in every instance. Your record, as I have read it to date, is largely opinion evidence, from people who have never known the conditions surrounding the spruce-production operations. That part of it which is facts and of a severely critical nature of our operations is, in mild language, falsehoods which I can disprove. I have named to you a list of witnesses and asked you to call them here, because the records of this operation are in this city. They are complete. It was a large operation, too big for any one brain to carry and be able to give a detailed explanation of every phase, and it is necessary, to get the truth of this thing, that every man that I named, and some more whom I will name, should be called before your committee and be given an opportunity to refute what I know positively to be one of the grossest misrepresentations that has ever appeared in a public record.

Mr. FREAR. In reply to that let me say that this committee, in its direction for an investigation, is required to pass upon expenditures reaching \$1,055,000,000, extending from the Atlantic to the Pacific coast, in Dayton, Ohio, in Buffalo, N. Y., in Detroit, Mich., and that only an incident of that is the money which has been spent out here in this spruce production. The committee has been furnished with a list of approximately 150 witnesses, many of whom I do not believe can throw any light, excepting personal desires and enmities. You have furnished the committee a list of possibly 20 people. Unless the committee neglects all of its other duties and remains here on the coast for a month or so in order to carry on these investigations, it will be unable to call all the witnesses you have mentioned.

In order to be perfectly fair and clear as to the facts, the committee, at the request of Secretary Baker, called as one of its first witnesses, in the city of Chicago, Col. Morley, to get his understanding. The first witness the committee called upon the coast was Col. Stearns, who was then and is now president of the corporation, to get his understanding of the situation, and for a day and a half he was before the committee. Another witness who was called was Mr. Donovan, a member of your board, a man who certainly had full knowledge of all the conditions during his connection with it. Another man whom we called was Maj. Grammer. So that we have been endeavoring to get a fair understanding of this matter from both sides of the controversy, if it may be denominated as such. We desire

the facts. There is no matter of trail here. All that we are doing is investigating.

And let me suggest this: I was asked to do this yesterday and I omitted it—you asked, as I understand, that every witness before this committee be sworn. That is right, is it?

Mr. DISQUE. Yes, sir.

Mr. FREAR. We have invariably, from the Secretary of War down to the present time, sworn every witness, and we have always done that in every investigation that has been held. A suggestion was made by one of the witnesses in the city of Seattle that he had grievances which he thought warranted a criminal procedure. It was called to my attention yesterday by a newspaper correspondent, and he asked if there was any question about the testimony of any witness before this committee which would entitle the witness to immunity. I know nothing about it, but I understand the Shipping Board has taken the position that any witness testifying before that board is entitled to immunity under the Federal statute. I have talked to Mr. Magee—I have not talked with Mr. Lea—as to his knowledge of the law, but I simply wish to ask you if, under the circumstances, you waive any immunity, which I assume you do.

Mr. DISQUE. Absolutely.

Mr. FREAR. As to your testimony?

Mr. DISQUE. Yes. But no other witness does waive immunity in his testimony before a congressional committee unless he agrees to it. I do not know if previous witnesses had this matter put to them in this way or not, but every lawyer I have talked to has assured me that testimony given to a congressional committee is privileged. If it had not been, there is more than one man who would be facing a suit to-day.

Mr. FREAR. That is the privilege that you have. This was the first case that was called to my attention—yesterday—about the matter of immunity.

Mr. DISQUE. I might say, Mr. Chairman, assuming that we are after the facts—

Mr. FREAR. That is what we desire.

Mr. DISQUE. As I understand it. The committee has not called Col. Stearns, Mr. Donovan, or Maj. Grammer, but those gentlemen asked to come before the committee, as I understand it, and the only people that the committee has called are men who have a personal grouch or a grudge. Therefore you have not, up to date, invited the facts from those who know them. That is why I mentioned the list of witnesses, to help you get at the real truth of this thing from those who are best equipped to give it to you.

Mr. FREAR. Let me state that you are entirely mistaken in your position as to the attitude of this committee on witnesses. At least 50 witnesses out of the 100 have asked to be called.

Mr. DISQUE. That is natural.

Mr. FREAR. And those are people who desire to testify as to conditions in regard to the Spruce Corporation. I understood that Col. Stearns desired to be called, and that is the reason he was called as our first witness.

Mr. DISQUE. Didn't he request it?

Mr. FREAR. What is that?

Mr. DISQUE. Didn't he request to be called?

Mr. FREAR. No; I sent for him.

Mr. DISQUE. He told me that he requested it.

Mr. FREAR. Well, we will find out about that.

Col. STEARNS. The wires crossed.

Mr. FREAR. The wires crossed, all right. I knew nothing about his request, because I sent for him at once as the one who could throw the most light upon the matter. There will be probably more crossing of wires and correspondence before we get through, but we will try to straighten that out.

Mr. Donovan wrote me in the State of Washington, saying that our committee would not be welcomed in the West unless we came in a particular frame of mind, and I wrote back to him that it was immaterial to the committee whether we were welcomed or not; that we desired to get the facts, and that we proposed to do it, so far as possible. Mr. Grammer—I do not know that he asked to be sworn, but we were very glad to have the benefit of his testimony. Secretary Baker himself desired that Morley should be sworn in Chicago, and I sent for him for that purpose. So let me say that the request did not come from the individuals, so far as we know. We have had requests from the other side, but that is immaterial. What we desire are the facts, and so far as we can get them in the brief time we can afford to spend in this investigation on the coast. We will employ that time to get those facts. Now, it is an absurdity to think that all these officers, all these majors, can be called by this committee to the exclusion of all the other witnesses. In every case that is tried—and this is not a case, but it is an investigation to get the facts—you do not inquire whether people are ready to bolster up a case until you know what case is made against them.

Mr. DISQUE. Certainly.

Mr. FREAR. That is the situation in which this committee is placed. I think we come to it with open minds, so far as possible.

Mr. DISQUE. May I ask you—you said Mr. Donovan wanted you to come in a particular frame of mind; do you mean to say that he tried to prejudice the committee, and wanted it to come here favorable to our operations?

Mr. FREAR. I say this, that Mr. Donovan wrote me and gave his letter to the press at the same time, quoting what purported to be an interview from me, which was not true, and stating to Congressman Hadley—and it has been read into the record—that he did not expect—that we would not be welcomed as a committee unless we came in a fair frame of mind, prepared to get at the facts, or words to that effect.

Mr. DISQUE. He was not trying to influence you adversely?

Mr. FREAR. Not in the slightest degree; no.

Mr. FREAR. How did they come to send for you away out in Manila, to take charge of the Michigan Penitentiary?

Mr. DISQUE. Well, I will have a witness here to-morrow, who can best explain that.

Mr. FREAR. All right; then we will pass over that.

Mr. DISQUE. Mr. Frank Eaman, who is a member of the board, a man whom I had never met in my life until I went to Jackson, can best tell the committee. He will be here to-morrow night. I do not know, as a matter of personal knowledge, at all.

Mr. FREAR. You were down in Manila, 6,000 miles—yes, 9,000 miles away from Michigan, and Mr. Eaman sent for you to come there to handle the affairs in the penitentiary: is that it?

Mr. DISQUE. The board, as a whole, did.

Mr. FREAR. Who were the other members of the board?

Mr. DISQUE. There were three members of that board.

Mr. FREAR. Who were the members?

Mr. DISQUE. Mr. Wernicke, of Grank Rapids; and Eaman, and a man by the name of Edward Frensdorf, who lives at Hudson, Mich.

Mr. FREAR. Was there anything in your past experience that had led them to feel that you were especially fitted for running the Jackson prison, so far as you know?

Mr. DISQUE. Well, I had had charge of one of the military prisons in the Philippines, and my record in the War Department was at their service, and I think, from the whole thing, they made their selection, in an endeavor to get away from local men who took politics into the institution.

Mr. FREAR. But we will have to concede that it was a very remarkable situation that caused the authorities of the State of Michigan to send to the Philippines, to Manila, 9,000 miles away, to get some one whose experience rested with having been in charge of a military prison; that is true, isn't it? Mr. Eaman can possibly explain it.

Mr. DISQUE. He can tell you all about it.

Mr. FREAR. The war was declared April 6, and September, what date was it, that you resigned your position?

Mr. DISQUE. I don't remember the exact date. It was about the middle of the month.

Mr. FREAR. And then what?

Mr. DISQUE. Well, before we leave that, since you have brought out that it took six months for me to get into the Army.

Mr. FREAR. I simply let the dates speak for themselves.

Mr. DISQUE. Let me say, Mr. Chairman, that in February, about the middle of February, 1917, my resignation had hardly been dry, it looked to me, then as though the war was coming in the near future: I immediately wrote Gen. Scott, Chief of Staff, and asked him to withdraw my resignation, and also endeavored to have myself reinstated in the exact rank that I had resigned from. In fact, I wrote him two letters. I wrote two or three others to friends in the War Department. I then asked to have a bill introduced in the Senate, and it was introduced, to reinstate me as captain of Cavalry. And during that period nothing was done that resulted in my reinstatement, until the War Department wired me and offered me a lieutenant colonelcy in the Signal Corps.

Mr. FREAR. In September?

Mr. DISQUE. The wire came in September.

Mr. FREAR. What is the explanation of over six months that the department took no action, or have you any understanding of it?

Mr. DISQUE. Nothing, except the tremendous volume of business falling upon a very small War Department at the opening of the war.

Mr. FREAR. Then you were appointed as lieutenant colonel, were you?

Mr. DISQUE. Lieutenant colonel.

Mr. FREAR. And I am speaking of this because criticism has come and you are entitled to make your own statement, and we are very glad to have it, as a committee. What did you do then?

Mr. DISQUE. My order reached me at Jackson to report to Washington prepared for duty overseas. I arranged my family affairs, completely closed everything of a personal nature, and bid my family farewell—my children, at least—went to Washington with my field kit, and reported for duty; was assigned to the staff of Gen. Foulois, who was then under orders to go to France. I was to have gone with him, had my duties outlined, and spent the next week or so arranging my affairs so that I would be ready to start activities over there as soon as we arrived. The boat on which we were to sail had been designated for October 24.

Within a week or 10 days after I arrived in Washington, not one but several officers, friends and superiors, came to me and urged me to take this position in the spruce development, and for a week, as all of them will testify, I would not even talk to them about it. Eventually it was brought to me by people whom I respected, who made it a matter of cold-blooded duty for me to accept it, and finally I agreed to come to the Northwest, and instead of going with Gen. Foulois I was ordered here.

Mr. FREAR. Let me say, incidentally, Gen. Foulois has been before this committee. He is now a major, if I remember correctly.

Mr. DISQUE. Yes, sir.

Mr. FREAR. And the reason I speak of that is because titles are—

Mr. DISQUE. Changing all the time.

Mr. FREAR (continuing). Are very numerous; in fact, I have held some of them myself, and we use the address with no sense of disrespect for titles when we speak of people without the use of them in this committee. You had had no previous experience in logging, in timber work—

Mr. DISQUE. No; not—

Mr. FREAR. I am asking just—

Mr. DISQUE. Not the slightest.

Mr. FREAR. Was any explanation given you why you had been selected for this position, to take charge of all these activities out here?

Mr. DISQUE. Well, I imagine that was probably due to the feeling that the officers who were endeavoring to have me come out here had about my military record, and what they knew of me. I had had similar industrial—not similar, but various industrial jobs in the Army, involving construction, development, handling of considerable numbers of men, putting jobs over on time so that they would be ready and done when the time came. I think it was a general—

Mr. FREAR. That was in Manila, or where?

Mr. DISQUE. All over the United States and the Philippines, at different times from 1899 to 1916.

Mr. FREAR. That is, as a captain—you were a captain in the service?

Mr. DISQUE. A captain, lieutenant, private, sergeant.

Mr. FREAR. You then came out here about what time?

Mr. DISQUE. My first trip here was in October. I think I arrived here about the 15th.

Mr. FREAR. That is, 1917?

Mr. DISQUE. 1917. I looked over this ground and met a committee of some 12 or 15 prominent lumbermen who had been brought together. We spent the entire day one day talking over the situation. Then I spent about a week moving about to get a picture of it. Then I returned to Washington and made a recommendation, which was accepted by the Aircraft Board, and immediately returned here and took charge of these operations.

Mr. FREAR. Who was at the head of the Aircraft Board at the time?

Mr. DISQUE. Mr. Howard Coffin.

Mr. FREAR. You talked with him before you came out?

Mr. DISQUE. Several times.

Mr. FREAR. And also after you returned?

Mr. DISQUE. Yes, sir.

Mr. FREAR. Who was in charge here at that time, or was anyone in direct charge?

Mr. DISQUE. The spruce office here at that time consisted of two or three inspectors and clerks, who were merely verifying bills of lading and receiving inspection certificates to forward to Washington for payment, and between October and the date I finally returned a disbursing officer had been sent out here so that they might make the payments to the mills more readily, and Mr. Russell Hawkins had been selected while I was in Washington, during the early part of October, to come here as a lumberman or a logger, to assist in driving the thing forward.

Mr. FREAR. Was he the first man who took charge here?

Mr. DISQUE. I understand not. I don't know the previous history of it very much. I understand there was another, a Mr. Allen, in charge here. Well, I think the spruce producers had a girl that was quite active.

Mr. FREAR. Working in conjunction with that organization?

Mr. DISQUE. Working—

Mr. FREAR. What was the organization at Washington prior to your undertaking this? They had some kind of a spruce production organization there, didn't they, or what was it, so far as you know?

Mr. DISQUE. There was nothing in Washington, that I know of, prior to the time I was selected to come out here, except one officer, who was what you might call the lumber agent or section of the Equipment Division of the Signal Corps. I recall he had a desk there, and it rested upon him to excite the interest of the lumbermen to produce this material and also a greater production following specifications, and cooperate with the lumbermen with a view to getting the kind of material that the Government required.

Mr. FREAR. Who was that?

Mr. DISQUE. The man who had charge of that, when I was in Washington, was Sligh.

Mr. FREAR. Maj. Sligh?

Mr. DISQUE. Yes; a Grand Rapids man.

Mr. FREAR. Was Maj. Leadbetter connected with the service at that time?

Mr. DISQUE. I don't know when Leadbetter became connected with the service. He was in it when I went to Washington.

Mr. FREAR. That is, I understood—

Mr. DISQUE. And came to me and introduced himself—I had never met him—and I think was in the Finance Department at the time. I think he got to me because it was known that he came from the Northwest and knew something about this lumber situation.

Mr. FREAR. Was the Finance Department separate from the Production Department, or was it a branch of it?

Mr. DISQUE. I don't know. I never was very familiar with the Washington office.

Mr. FREAR. Do you know what the nature of his duties were in the Finance Department?

Mr. DISQUE. I don't know.

Mr. FREAR. He was there when you went there?

Mr. DISQUE. He was there when I arrived.

Mr. FREAR. Then, that was November, 1917, when you returned?

Mr. DISQUE. That was in October when I went to Washington, September.

Mr. FREAR. That is when you went down there; I see. Then when you returned, what was done, and whom did you meet?

Mr. DISQUE. Do you mean from the first trip here?

Mr. FREAR. After the first trip that you speak of?

Mr. DISQUE. I went right to the Aircraft Board then.

Mr. FREAR. That is, to Coffin?

Mr. DISQUE. Coffin, and Admiral Taylor. I don't recall all the members. The general board met and I explained the situation.

Mr. FREAR. That board consisted of Coffin and Taylor, Taylor representing the Navy?

Mr. DISQUE. The Navy.

Mr. FREAR. There was a board there at that time?

Mr. DISQUE. Oh, yes.

Mr. FREAR. That were engaged in looking after aircraft; and it was a mutual duty of the Army and Navy together.

Mr. DISQUE. This was a board created by act of Congress.

Mr. FREAR. Yes; I remember now.

Mr. DISQUE. To advise the Secretaries of War and Navy.

Mr. FREAR. What occurred then?

Mr. DISQUE. You see, at that time I had agreed to undertake the work. My duty then remained to make my recommendation—

Mr. FREAR. Yes.

Mr. DISQUE (continuing). To the Aircraft Board, and they accepted that recommendation, and I proceeded to move out here and take charge.

Mr. FREAR. What was the nature of your recommendation there in general?

Mr. DISQUE. I wish I had it.

Mr. FREAR. Just generally.

Mr. DISQUE. It is easily obtained. It is printed and available.

In general, it was that the lumbermen here felt that one of the most urgent necessities was supplementing the existing labor supply, which had been interfered with by the draft originally—or not originally but by strikes and other troubles, labor troubles; and also by the draft, and also by volunteer enlistment. The best fellows for either the Army or logging were the chaps who volunteered first. That cleaned out quite a bit of this industry of the skilled-labor men

that were worth their salt, and the impression I had was that they needed additional labor, and needed it right away.

My recommendation, therefore, provided that we go to Camp Lewis, up here in Washington, where lumbermen would naturally have been concentrated, mobilized, and at Camp Custer, in Michigan, and at Camp Kearney, in California, and endeavor to get the lumbermen who had gone into the Army to see their duty to volunteer to go back into the logging business. Unfortunately, at that time a couple of engineer regiments had been made up to go to France. They had appealed to the lumbermen, and again some of the best of them jumped into those regiments and were gone. They were men from this area, where you cut 6 and 8 foot trees, and it is a special job, sent over to France to cut small trees, and unfortunately Michigan lumbermen, instead of going to France, had come out here, in some instances. That is one of the things that followed lack of preparation. The War Department didn't have the eyes of the Almighty, but I happened to see this thing, and we tried to stop it immediately, and I think a sincere effort was made to do so. I recommended that we organize a force, first of a regiment of soldiers, with rifles, prepared for any emergency, to protect these properties, to stay in Vancouver Barracks, and be at our call.

Mr. FREAR. That is, you mean by these properties the properties out here on the coast?

Mr. DISQUE. Private mills and logging camps.

Mr. FREAR. When was that report made?

Mr. DISQUE. That was made, I think, about November 7.

Mr. FREAR. 1917?

Mr. DISQUE. It is printed and is of record.

Mr. FREAR. I just want the general data, to know about the time this action was taken.

Mr. DISQUE. At that same time I made a report—or in that same report I recommended that we build here, somewhere in the northwest, we hadn't determined just where, a cut-up plant to refine the product. I didn't know anything about logging or lumbering, but I had been through two or three mills, and I had seen great big wonderful spruce logs butchered, so far as aircraft material was concerned; a thing so apparent to me, I certainly felt that it was apparent to lumbermen; and I therefore invited a conference with several lumbermen, and they agreed with me that we would never get our fair percentage of aircraft material out of these spruce logs until we prepared machinery specially designed to do it.

Mr. FREAR. Those spruce logs of which you speak, were they being cut up for airplane stuff, at that time?

Mr. DISQUE. Ostensibly. But the fact was that brokers and foreign governments, in their ambition and competition to get this stuff, were offering fancy prices for what was known as the "G" list, and our price for the higher specification material apparently was not enough to make the sawmill man interested in producing it.

Mr. FREAR. What was it at that time?

Mr. DISQUE. At that time it was \$105.

Mr. FREAR. That is, \$105 a thousand?

Mr. DISQUE. A thousand board feet.

Mr. FREAR. That is the sawn lumber?

Mr. DISQUE. And the sawmill men, in some cases, were getting as high as \$90 for what was known as the "G" list material, and I think I can give you a relative idea of "G" list and No. 1 specification by saying that it is our general opinion, after a year and a half operation, that of No. 1 specification not more than 25 per cent was fit for airplane construction, and of "G" list not 5 per cent of it.

Mr. FREAR. "G" list then was a good deal poorer than No. 1?

Mr. DISQUE. Very much poorer; it was not a half or a third as good.

Mr. FREAR. Did you have No. 2 list?

Mr. DISQUE. Later, we had a great many specifications.

Mr. FREAR. I was wondering what the comparison was between "G" and No. 2.

Mr. DISQUE. There was no No. 2 at that time. We had specification No. 1, that included three grades, long lengths, medium lengths and short lengths, but they were all supposed to be straight grained.

Mr. FREAR. And all the rest of "G"—

Mr. DISQUE. "G" list is anything that is clear. The grain can run across the board, and, of course, if it does, you can't use it for an airplane.

Mr. FREAR. No. 1 list, what was the price for that, was that included in the "G" list?

Mr. DISQUE. No; that was \$105.

Mr. FREAR. For No. 1?

Mr. DISQUE. And they had to take their fair proportion of the long, medium, and short lengths. That is the way that was regulated.

Mr. FREAR. That is, those who bought it?

Mr. DISQUE. Well, everybody bought it through the Government.

Mr. FREAR. That was the price, when you say they had to take it with those.

Mr. DISQUE. Had to pay \$105.

Mr. FREAR. The "G" list, what was the price for that?

Mr. DISQUE. They got as high as \$90 for it—\$85, \$80; but it just depended upon who the broker was and how bad he wanted it and—

Mr. FREAR. That is the condition that you found when you came out here?

Mr. DISQUE. I was telling you why I recommended that cut-up plant. And that recommendation, I might say to the committee, was not my own recommendation, except as it was the recommendation of what I thought to be the best lumbermen in the Northwest; and that that recommendation and that that decision and every other decision of importance, that was made by me or my officers during this operation, was based upon conferences, discussions, and final recommendations from groups and committees of the best lumbermen in this country.

Mr. FREAR. That is your judgement of those with whom you conferred?

Mr. DISQUE. They advised me and I acted on their advice. I could not have done this thing without it; it was a tremendous problem; it called for sincere men, capable men, and I was able. in each instance—and you will realize the importance of this—

to pick those men to advise me on a project, who were not personally interested, and I don't think in a single instance that I had advisors on any project who were interested in that project. It is perfectly natural——

Mr. FREAR. You are referring to milling and logging?

Mr. DISQUE. I am referring to every decision we made that affected the industry and our production.

Mr. FREAR. That is, everything relating to spruce production you felt that you were conferring with the very best people to advise?

Mr. DISQUE. Yes, sir.

Mr. FREAR. Now, what was done next?

Mr. DISQUE. Well, then, as I say, I recommended that mill at Vancouver Barracks.

Mr. FREAR. That was the first recommendation made?

Mr. DISQUE. That was the first one that was made.

Mr. FREAR. Did you begin assembling troops here at that time, according to the original agreement, or what?

Mr. DISQUE. The War Department authorized these troops. I recommended 10,000 troops. A survey of the entire industry indicated that there was a shortage of 7,000 men in the industry to meet normal requirements. I was coming here with an additional requirement over their normal, but I did not provide any extra men for that except in the way of this military regiment, which would be available for most anything.

Mr. FREAR. Now, what was done there first?

Mr. DISQUE. In Washington?

Mr. FREAR. No, here; that is, I mean about the assembling of troops and how that matter progressed?

Mr. DISQUE. It took us some time to get those troops in. I think it was pretty well along in December before the first of them arrived. The War Department canvassed the camps and selected a number of officers and sent them here. Those troops were brought into units as rapidly as possible, individual record cards made, so as to get the best evidence we could as to their training and skill, the jobs they were best fitted for, and requests began to come in from the different operations for men.

In the meantime I met the Lumbermen's Association in Seattle and took a canvass of each operation and its requirements. We came down here and did our best to meet them, and I think we did meet them. I haven't heard anybody complain.

From that time on, the operation developed——

Mr. FREAR. You proceeded to build the cut-up plant at the outset, did you?

Mr. DISQUE. We immediately started on the cup-up plant as soon as we could get the money it was built——

Mr. FREAR. What was the situation regarding finance at that time?

Mr. DISQUE. Well, all preparation of that nature had to be made by the War Department through the Chief Signal Officer.

Mr. FREAR. At the outset?

Mr. DISQUE. That is, entirely through our operations, until we became a corporation and——

Mr. FREAR. You didn't become a corporation until what time?

Mr. DISQUE. It was really—I guess the armistice was over before we really began to operate as a corporation.

Mr. FREAR. So that practically during all that time your finances had to come from the finance division of the production?

Mr. DISQUE. Yes; at no time during our operation did I control the finance department of this office. It was a distinct and separate office—

Mr. FREAR. Who was in charge?

Mr. DISQUE. Well, there was a Capt. Crist in charge at first; later on a Mr. Moore; later on Maj. Campbell, who later became the treasurer of the corporation; and then they relieved the finance department from the War Department end of it and left it entirely with the corporation.

Mr. FREAR. Wasn't Leadbetter connected with this finance—

Mr. DISQUE. Not in any way whatever.

Mr. FREAR. What was his position?

Mr. DISQUE. Well, Leadbetter became what we call liaison officer, in Washington, for this organization.

Mr. FREAR. He was there before your organization was perfected, then?

Mr. DISQUE. He was relieved from the finance department at my request and put in what we call the liaison office of the Spruce Division, in Washington.

Mr. FREAR. He remained there?

Mr. DISQUE. He remained there throughout the war, except he came to the Northwest once or twice, and he was selected for that because he was the only man that I had seen in Washington that knew anything about this Northwest.

Mr. FREAR. What was the nature of his duties?

Mr. DISQUE. He was to receive my messages and attend to their execution in Washington. The mass of communications going into Washington at that time was such that unless some one took a telegram personally to Gen. Squier, to Howard Coffin, or to somebody else the chances were that you didn't get action on it for some weeks; and that was Leadbetter's particular job, to see that we got action on our recommendations; also to follow the shipments as they came through and in conference with the allied representatives allocate these shipments to them in accordance with the supreme war council's regulations. That was his entire job.

Mr. FREAR. Well, he remained there up to what time?

Mr. DISQUE. I think he left in a week or two after the armistice was over.

Mr. FREAR. Up to the close of the war? What followed after you got 10,000 men here, and about what time were they all assembled?

Mr. DISQUE. Well, I will have to give you that very roughly, but it was—

Mr. FREAR. Just generally.

Mr. DISQUE. It was probably the end of January or into February before we got all those men; maybe later.

Mr. FREAR. That is, 1918?

Mr. DISQUE. 1918; and as rapidly as we received them, put them through their medical tests and typhoid prophylactic treatment to prepare them, we sent them into the woods.

Mr. FREAR. They were brought in, concentrated here at Vancouver, and then they were sent out?

Mr. DISQUE. At Vancouver.

Mr. FREAR. And what next operations did you undertake in this work of producing spruce?

Mr. DISQUE. I will have to go back now——

Mr. FREAR. That is all right.

Mr. DISQUE (continuing). To December. It was the 15th of November when I arrived here. Within a few days after that it seemed apparent to us, and it was apparent to everybody, that the production of logs was going to fall off in December and January, probably in February. The high price that had been set on spruce had milked the country of all logs that were in the water; the strikes and other things had prevented the extension of logging routes, had slowed down operations; and the miserable amount we did get in September, October, and November, which ran around from two to four million feet, was low-grade stuff, but it had been rushed out of those logs because the logs were available and there were not any more logs laying around to cut up.

The Council of National Defense and the Aircraft Board had presented the thing to me in such a manner that it looked like a national necessity to have spruce during this winter period, so that the material could go into airplanes and be on the west front by the time of the spring drive.

Mr. FREAR. That is, the spring drive of 1918?

Mr. DISQUE. 1918. It looked to me like one of the critical times of a man's life and of an operation when anything was justified that would produce it. A great many people—that is, I say a great many—a number of people suggested this splitting of these trees.

Mr. FREAR. That is the riving operation?

Mr. DISQUE. An ordinary spruce log, wing-beam length, probably will weigh around 6 tons. All of them that had been within reach had been dragged out at the prices that the Government had been paying.

Mr. FREAR. What do you mean by "that had been within reach"?

Mr. DISQUE. All that were within reach of existing operations.

Mr. FREAR. All the logs that had been cut, you mean?

Mr. DISQUE. Well, all that they could reach within their——

Mr. FREAR. Do you mean the timber?

Mr. DISQUE. In the timber.

Mr. FREAR. You mean all the timber that could be reached had been dragged out?

Mr. DISQUE. All of it.

Mr. FREAR. Spruce timber?

Mr. DISQUE. All the spruce trees that were within operating range of spurs of loggers' logging railways that were possible to be brought out were brought out, because the price was higher than they had ever known for spruce logs. And it required additional railways in every logging camp to get more of them. It meant for one fellow to take up his spur, that was over in fir here or hemlock or cedar—take it up bodily and put it over here, maybe, where there was a clump of spruce standing somewhere. Spruce don't grow like hay. If you get a 15 or 20 percentage of the timber in spruce, you are lucky.

Mr. FREAR. Were you familiar with the woods—with the growth of spruce?

Mr. DISQUE. I am now very familiar with it.

Mr. FREAR. I see.

Mr. DISQUE. I was not at that time. Well, the fact, as I was saying, is this, that there were no logs available; there wasn't any possibility of any more coming in except just dribblings. The lumbermen, the loggers, said: "No; there is no use your talking about building railroads in winter; it can not be done; we can not afford to do it; we would not try to do it; if we had all the money in the world, we could not do it." It was statements like that, coming to me, that convinced me that you could not build logging roads in this country in the winter, and I agree with them now; I have seen it tried.

Mr. FREAR. Well, you mean because of moisture, or what?

Mr. DISQUE. The rainfall is heavy, and the surface soil is very deep in places, and you simply can't move anything. It becomes moist and slides occur; they don't attempt to do it in most places.

So this riving suggestion meant to split these trees into any size pieces that was easily transported. It eliminated the heart of the tree and left it in the woods and left us the clear part that we wanted for airplane and could be dragged out by horses and carried on auto truck. Well, we were getting at that time, according to our records, something like 1,400 letters a day—something like 250 telegrams a day. Everybody in the Northwest was telling us how to do it. Now—

Mr. FREAR. That is, how to do what?

Mr. DISQUE. How to get spruce.

Mr. FREAR. Riving?

Mr. DISQUE. No; how to increase the program. Everybody had his idea. A great many of them were good, but it must be apparent that it was impossible for me to read all those letters. But they continued—

Mr. FREAR. One thousand four hundred letters a day would pretty nearly take all the people around here that knew anything about spruce, and several times, wouldn't it?

Mr. DISQUE. Yes. They had plenty of paper and lots of pencils.

Mr. FREAR. And they kept writing you every day?

Mr. DISQUE. That many letters came into our files. I don't say that they were all recommendations about spruce, but a great volume of them were—so many that no 10 men could have digested all of it and acted. But a great many of them believed in riving. Some of them wanted us to start campaigns in the two States, and they all had three or four jobs lined up for somebody.

We decided that riving would be a good thing and published broadcast our offer to get the farmers throughout the two States to rive this odd tree here and there and get other small contractors to go in, feeling that the aggregate production would materially assist. Also—

Mr. FREAR (interrupting). Well now, let me ask right there, they do logging here in the winter?

Mr. DISQUE. Oh, yes; they log here in the winter in some places sometimes. But logging in the winter here, I would say, if you could get an accurate estimate on it, you would find it was somewhere around 40 per cent in volume as compared with that done in the summer.

Mr. FREAR. Only 40 per cent?

Mr. DISQUE. I imagine that would be about what a truthful and experienced logger would say. I have had a great many of them tell me that. And our production from the normal industry would indicate that was about right. Well, we got this rived program under way after that, and immediately we started to rive ourselves through an operator. We asked him to make a test. This operator gave us a report that indicated that it would cost about \$63 a thousand to produce this rived material.

Mr. FREAR. That is just in the pièces, the logs?

Mr. DISQUE. That is in the rough piece; and that includes stumpage, labor, and hauling it to the railway. Well, I felt that the—

Mr. FREAR (interrupting). Well, what would the stumpage be down there?

Mr. DISQUE. I think he figured his stumpage at \$5 a thousand.

Mr. FREAR. So that would leave \$58, or thereabouts?

Mr. DISQUE. For the labor of producing.

Mr. FREAR. For the labor of producing?

Mr. DISQUE. That report we had in our hands when we made an offer to the industry, or to the people as a whole, advertised it everywhere that we would give \$90 a thousand if they would produce rived material. Well, they didn't take that; hardly anybody got under way, because they had been selling rived spruce in some sections here, shipping it to the East on cars, and charging \$250 a thousand for it.

Mr. FREAR. Who was doing that, to be specific?

Mr. DISQUE. Well, there is one name I can give you offhand; a man in Aberdeen by the name of Nels Est. He was one. There were others.

Mr. FREAR. Whom were they selling to?

Mr. DISQUE. To the British representatives; to American airplane factories.

Mr. FREAR. Would they forward these rived pieces, or were they manufactured here into lumber?

Mr. DISQUE. No; they just sent the split tree right on the train.

Mr. FREAR. Where? To London?

Mr. DISQUE. To the East; to London.

Mr. FREAR. They were shipped by vessel?

Mr. DISQUE. Oh, yes; I suppose so.

Mr. FREAR. In the rived pieces?

Mr. DISQUE. Now, there wasn't a great deal of that. I want to be clear about that. But there was enough of it—it had happened; I suppose, in the case of not more than five or six cars, because they had just got started. When I announced this price of \$90 it didn't appeal, but I felt it was a fair profit.

Mr. FREAR. When was that announcement made, about?

Mr. DISQUE. That was announced in December, I think.

Mr. FREAR. 1917?

Mr. DISQUE. The middle of the month, 1917.

Mr. FREAR. Yes.

Mr. DISQUE. We got no response that was satisfactory, and we issued a new memorandum announcing a bonus until the end of February, 1918, I think, for all who would produce. That would put a \$40 bonus on the previous price.

Mr. FREAR. That is, that would be in addition to the 65?

Mr. DISQUE. In addition to the 90.

Mr. FREAR. In addition to the 90. That would be 130.

Mr. DISQUE. Each one of these steps, I would like to say, were taken after very long conferences with men who knew their business. They recommended them. Some of them wanted me to put a price of \$250 on it; said we could not get it without that. I remember Senator Poulsen over here one evening in a talk he announced—and he was considered to be one of the most experienced men in that part of the country.

Mr. FREAR. One of the large operators?

Mr. DISQUE. He said. "You can't get it under 250."

Mr. FREAR. Was he furnishing any material to the allied governments at that time, or the United States?

Mr. DISQUE. Why, he was logging. He does not run a mill.

Mr. FREAR. But he was not riving?

Mr. DISQUE. He does not rive, and he does not run a mill. So that his logs merely went to the—

Mr. FREAR (interrupting). To the rivers?

Mr. DISQUE. To the mills. His logs went to the sawmills.

Mr. FREAR. Oh, yes. You say they did not rive from his logs?

Mr. DISQUE. Not up to that time.

Mr. FREAR. How did he know anything about what they would be worth, if that is the case?

Mr. DISQUE. Well, nobody knew; nobody knew.

Mr. FREAR. He was just stabbing at it when he said \$250.

Mr. DISQUE. That is what they were doing; and it was the stab of the men who ought to know the most about it that we took. And this bonus brought an increased production, but it wasn't enough. It wasn't going to do anything like what we wanted. It was then—and I have my diary here; I will give you the exact date. It was some time, though, in the middle of December that we were getting activity from this end; were not getting production. I called a meeting in my office one night of what I had learned at that time to be a number of the most representative men in Portland—lumbermen, business men, and others.

Mr. FREAR. Now, let me ask at that point when you were riving were the 10,000 men that you had brought here—were they out in the woods riving, or what was done with that force of men?

Mr. DISQUE. At that time there were not any men here yet.

Mr. FREAR. Oh, that is before the men came?

Mr. DISQUE. We had not received any men, hardly.

Mr. FREAR. Yes. You were just working with the loggers in the woods and the men you could get?

Mr. DISQUE. Entirely. Our men did not become effective for us under Government operations until, I would say, in the latter part of February, March, or April, maybe.

Mr. FREAR. Yes.

Mr. DISQUE. At any rate, this meeting that I called was for the purpose of asking those folks to see if we could not find some additional method by which we could arouse interest to get this production. It lasted a long time one night. Then we met again the next day, several of us. It resulted in this condition: That we had to form a company; that some of them had to put their equipments,

their horses, their wagons in—this was a riving operation, understand. At that time there was no other thought than to take care of this emergency and get the rived trees out. So that any contractor who had horses in large number, with an organization, that had been in the habit of driving around in the hills and doing construction work, would lay out a little hill or road so the trucks could run in and get it, we naturally drifted toward organizations of that type.

Mr. FREAR. Was there any logging done at that time of spruce for airplane purposes?

Mr. DISQUE. Was it being done?

Mr. FREAR. Yes. Was Poulsen and these others doing any?

Mr. DISQUE. It was being done as it is done ordinarily in the winter, and enough logs were coming out at that time possibly to take care of one-fifth of our requirements. Railroads could not be built then, according to their own recommendations. And under the laws of Congress at that time we could not buy logs.

Mr. FREAR. Why was that?

Mr. DISQUE. We could not spend money for railroads. We could not say to a logger, "Extend your railroad and we will pay you for it." It was simply the law; that is all; and we could not do it.

Mr. FREAR. That is, Congress wasn't turning it over broadcast into the hands of the people to invest in that way?

Mr. DISQUE. No. It was the old standing regulations of the War Department, which are proper, and which I thoroughly approve of; and the auditor has interpreted them, and the Army is kept right between a little narrow lane in spending money.

Mr. FREAR. The same as every other department of the Government?

Mr. DISQUE. Exactly the same. And I don't disapprove of it at all. But we were unable to do it.

Mr. FREAR. All you could do was to fix the price and make it attractive to the people that you wanted to have do the work?

Mr. DISQUE. Yes.

Mr. FREAR. Well, now, what occurred there?

Mr. DISQUE. Well, the meeting concluded that there was nothing left to do but to call on some big contractors and get them to undertake to go into where there were some heavy stands of this spruce. None of the heavy stands ever had been attacked, you understand, because spruce wasn't a desirable commercial lumber. The loggers had never driven toward it; they had gone after fir. They had not sought out the four big stands of spruce that were known at that time. They were not even very well known. We learned about them after getting recommendations from the Forestry Departments and getting county cruises and owners' cruises. We spotted four or five big areas where the spruce ran a much heavier percentage to the total stand of timber than ordinarily. It was those operations we were going to direct these big contracting operators into.

Mr. FREAR. That is for riving?

Mr. DISQUE. For riving. That is the only thought we had in mind at that time. The contract firms—well, there were not any at that time, but these business men who were in my office then tried to get together. It was a cold-blooded patriotic duty I was

putting up to them. The loggers were doing all they could. We were tiding over an emergency, in my mind, at that time, and I wanted something to supplement the logging operations. So we got what was reported to be one of the best capable contracting firms in the United States to put their equipment, their brains, and their services in organization at our disposal to go and get this stuff.

Mr. FREAR. What company was that?

Mr. DISQUE. That was the Grant Smith-Porter Bros. Then the price came up. What were we going to pay them for it? As I say, we had recommendations all the way from \$63 up to \$250. I could have made a fixed price contract with Grant Smith-Porter Bros. at \$250 and probably never would have heard of it again.

Mr. FREAR. That was left entirely in your discretion?

Mr. DISQUE. Not entirely at all. Every contract I made went to Washington for approval.

Mr. FREAR. Well, that is what I was inquiring.

Mr. DISQUE. But that was my recommendation.

Mr. FREAR. Well, you said that you could have made the price at \$250 and there probably never would have any question come up.

Mr. DISQUE. There would have been no criticism.

Mr. FREAR. That is, you mean the officers at Washington would have agreed to it?

Mr. DISQUE. Why, they would have accepted it. But I refer now to all this talk now about cost-plus contracts. No one regrets the necessity of them more than I have. I think they are an abomination.

Mr. FREAR. Of course, we haven't come to that yet. We are now talking about the riving.

Mr. DISQUE. Yes; but I was telling you about why we put this price up.

Mr. FREAR. I was trying to get to the range of jurisdiction of your activities at that time, how far you could fix prices, and so on. Now, your prices had to go back to Washington for approval. Who approved them there?

Mr. DISQUE. The Chief Signal Officer.

Mr. FREAR. That is Squires?

Mr. DISQUE. Yes.

Mr. FREAR. I see.

Mr. DISQUE. Well, that is why I had to make a cost-plus contract. It was anywhere from \$63 to \$250. Now, if we had said \$250, they would have had a handsome profit, because our actual costs, including amortization, liquidation charges, and every nickel that ever went into it from any sources was \$144. They would have been in pocket \$110. I think the cost-plus contract was the economic thing for the Government. I know it was.

Mr. FREAR. You entered into a cost-plus contract with this—

Mr. DISQUE (interrupting). Grant Smith-Porter Bros.

Mr. FREAR (continuing). Firm of Grant Smith-Porter Bros. for the riving?

Mr. DISQUE. For the riving. We picked out an area, got them to bring their organization together hurriedly and said, "Get in there now and split that stuff and get it out for us."

Mr. FREAR. Where did they start, and what was the result of the operation?

Mr. DISQUE. Well, they started in two or three places. They started, I think, in Willapa Harbor or Bay; down here at the end of the river here; I think down in the Tillamook district; I am not sure about that. This operation was—

Mr. FREAR (interrupting). Well, just generally.

Mr. DISQUE (continuing). Divided out under other officers. And a little later—

Mr. FREAR (interrupting). Now just to inquire there, did they have any options on this timber? Were they using their own timber?

Mr. DISQUE. They were not.

Mr. FREAR. Or did they buy timber as they went along?

Mr. DISQUE. They went out and bought timber. I don't think they owned any timber. And the price fixed on that was fixed after a long consultation with the biggest timber owners and, again, conversation with fellows who were going to buy it independently, not through cost-plus, and it was agreed by everybody nearly that it was a fair price all around.

Mr. FREAR. Now, the price then fixed was what?

Mr. DISQUE. For selective logging, I mean for rived stock?

Mr. FREAR. Yes; for the riving.

Mr. DISQUE. My recollection is that that was \$5 a thousand. I think later on we had some at \$7.50.

Mr. FREAR. \$5 a thousand?

Mr. DISQUE. For the stumpage.

Mr. FREAR. Yes; and what was the riving figure; that is, what was granted to them under this cost-plus contract? What was the figure fixed for rived stock?

Mr. DISQUE. You mean the ultimate cost?

Mr. FREAR. Yes.

Mr. DISQUE. \$144.

Mr. FREAR. \$144?

Mr. DISQUE. That included stumpage.

Mr. FREAR. Included stumpage and all?

Mr. DISQUE. Hauling it out of the woods, their overhead, our overhead, the roads we had to build, the trucks we had to put in there.

Mr. FREAR. Did you agree to put in the roads and make a contract to—

Mr. DISQUE (interrupting). We had to get the spruce.

Mr. FREAR. I am just inquiring as to the fact.

Mr. DISQUE. They did that; the Grant Smith-Porter Bros. That is part of their cost.

Mr. FREAR. Well, that covered all of this. What did you do—furnish the money? Or what was the method of procedure there? Did they do all this themselves, and then—

Mr. DISQUE (interrupting). Well, we supervised the operation with the best experts we could find, who were assisted by accountants who checked all their bills and approved of expenditures before they were made as necessary in the operations. That is the way they operated. And the entire cost went through their hands. That included the pay of any men whom they employed, and the percentage of overhead of their office in town which was properly chargeable to it, and even the liquidation charges to date that have been charged to it.

Mr. FREAR. Just explain to the committee. You fixed a certain price for this rived stock, which was to cover the stumpage and other things, and you allowed them \$144 per thousand?

Mr. DISQUE. No, indeed. The \$144 is the ultimate cost to the Government that resulted from this thing.

Mr. FREAR. Oh, I see. Yes, yes.

Mr. DISQUE. As it shows to-day on the final statement.

Mr. FREAR. Then the price was purely a cost-plus contract?

Mr. DISQUE. Yes, a straight cost-plus contract.

Mr. FREAR. I see; yes, yes. I understand. And the total reached \$144 a thousand?

Mr. DISQUE. One hundred forty-four dollars; and they were selling that same lumber at \$250 when we began the operation.

Mr. FREAR. Now, how long did that contract last, and what was the amount of production?

Mr. DISQUE. We obtained a total of about 18,000,000 feet of rived stock, which became undoubtedly 10,000,000 to 11,000,000 feet of the highest grade airplane lumber that has ever been produced.

Mr. FREAR. Now, how do you make that estimate?

Mr. DISQUE. From—do you care to get the exact figures?

Mr. FREAR. No. Well, yes; if you have got the exact figures.

Mr. DISQUE. I have them right here.

Mr. FREAR. It would be well to put them right in the record.

Mr. DISQUE (producing a blue-print tabulation). This is a production sheet, showing the production report on the Vancouver cut-up plant from the beginning of operations to the armistice.

Mr. FREAR. Oh; was this cut up at the cut-up plant here?

Mr. DISQUE. Brought into the cut-up plant, and there it became aircraft lumber.

Mr. FREAR. At what time was there that this cost-plus contract was on with the Grant Smith-Porter Bros? What time was this—what time of the year?

Mr. DISQUE. This report here starts in March.

Mr. FREAR. March, 1918?

Mr. DISQUE. Yes. Now we started the cut-up plant in the early part of February, but I suppose the accountant didn't feel that the production that month was fair to be put in here.

Mr. FREAR. Now, what were they cutting at the Vancouver plant at this time—just the rived stock?

Mr. DISQUE. Just the rived stock that was brought in.

Mr. FREAR. That was brought in. Other people were furnishing it in addition to the Grant Smith-Porter Bros.?

Mr. DISQUE. Oh, yes.

Mr. FREAR. And they all brought it in and you were cutting it up as it came in?

Mr. DISQUE. A great many operators were producing it; I suppose over a hundred of them.

Mr. FREAR. What have you there—what statement?

Mr. DISQUE. This is the report of operations compiled monthly from daily statistical reports. It shows the material received, sawn, and lumber shipped, lumber produced, and the resulting figures show that the airplane lumber obtained from the material entering the plant averaged for the entire period 55 per cent of the total lumber that came in.

Mr. FREAR. Now, what kind of lumber was that; airplane lumber?

Mr. DISQUE. That came in?

Mr. FREAR. No; what came in was the rived stock.

Mr. DISQUE. With the cants, and later on sawn cants.

Mr. FREAR. Well, were there sawn cants that were used at this time?

Mr. DISQUE. They are all included in this statement, this final balance.

Mr. FREAR. So that this don't determine the amount of rived stock that was brought in to finished lumber, finished airplane lumber, if all these matters were included?

Mr. DISQUE. No; that does not. But the test made in the mill on Willapa Bay owned by—well, Mr. Burnside and Mr. Howard Jayne are the principals in that mill. They tested out some of these cants and their reports were approximately the same as these figures. About 55 per cent of the cants became airplane lumber, which we shipped East, and which was reported by American and British and other factories as being the finest they had ever seen, and which according to our statistical data was acceptable from 85 to 99 per cent.

Mr. FREAR. Where was it sent? Can you give me any specific places and at what time? It was along that time—

Mr. DISQUE. You mean the finished product?

Mr. FREAR. Yes; the finished product. That is, the reason I ask that is this: That there were rejections which occurred both by Great Britain and by many of our or by several of our different concerns, like Curtiss and many others.

Mr. DISQUE. Yes.

Mr. FREAR. And what I am endeavoring to arrive at is whether these shipments were included in those rejections?

Mr. DISQUE. We were shipping, of course, to every American factory. We were shipping to Great Britain, Italy, and France. Under the Supreme War Council's regulations they restricted us and would not allow us to ship hardly any high-grade spruce to American factories.

Mr. FREAR. Why was that? Giving the benefit, you mean, to the Allies?

Mr. DISQUE. The Allies had their machinery, their men, all trained; they knew what kinds of machines they wanted, and it was felt, I suppose, that they wanted to keep their fleets right up to the minute and increased; and the only material we were sending to American factories at this time and for a long while afterward was the fir airplane lumber, which was a little heavier; otherwise just about as good, but used largely in the training planes.

Mr. FREAR. That was entirely used in the training planes, wasn't it?

Mr. DISQUE. No. Later on they used it in all kinds of planes.

Mr. FREAR. Is that so? What kind of planes was fir used in?

Mr. DISQUE. Everything.

Mr. FREAR. Was it used in the Haviland fours?

Mr. DISQUE. It was used in British machines, in the French machines and American machines.

Mr. FREAR. Oh, you mean foreign countries?

Mr. DISQUE. In all of them.

Mr. FREAR. Was it used in Spads?

Mr. DISQUE. So I understand. I have this only from their own officers. I have never seen it. But I have seen the American factories using this material that was shipped east. I was in the Curtiss factory and the superintendent pointed a room out that he said, "Before you began shipping that stuff from Vancouver that room would not hold the rejects. Look in there now." And there was one wing beam piece in it. That was typical of the reports we got from all sources, of the lumber that left the Vancouver plant.

Mr. FREAR. Now what was this board that was picking out the selects and sending them abroad, and whom did it consist of?

Mr. DISQUE. Well, that was general—in the American Army, Gen. Bliss was on it. Well, I guess Gen. Foch was on it, I suppose, over there. I don't know who all was on it.

Mr. FREAR. Gen. Foch, of France. Did they decide over there that the poor material was to be sent to our factories?

Mr. DISQUE. No. They decided that the British and the French and the Italians should get the spruce to their requirements before we did; in other words, until our production was sufficient—

Mr. FREAR (interrupting). Well, was there any difference in the character of the material that was sent to the different ones? I understood you at first to say that the better class of material went to the foreign Governments, and that that was accounted for, or that that accounted for the large proportion of rejects that came to our own plants, the Curtiss plant and elsewhere?

Mr. DISQUE. Well, our own people didn't have so many rejects, except from the G list stock that had been shipped before we came here, and some of it was shipped after we came here because they would rather have that than nothing.

Mr. FREAR. Well, about what time, what year, would that be?

Mr. DISQUE. Well, some cars were six months getting across the continent, but the average car, after we got our railway scheme working, the average car went across in about 12 to 14 days.

Mr. FREAR. You had all the priorities given for this shipment?

Mr. DISQUE. Yes, sir. Before that the average car was about 60 days getting across. And we didn't ship rejects; we shipped just exactly what those factories thought they were getting. But when they called for G lists to some factory around here, the mill had a lot of it and it was shipped; of course a lot of that was rejected; it wasn't fit to send. I always opposed shipping any of it, because it used up car space and simply became kindling wood.

Mr. FREAR. Now, I think the testimony is before the committee that in one shipment that went to Great Britain there was 60 per cent—are those figures right?—that is my recollection; 60 per cent rejects that were rejected of that shipment. I was wondering why.

Mr. DISQUE. I would not be a bit surprised.

Mr. FREAR. I was wondering if that accounts for it.

Mr. DISQUE. I will tell you how that happens.

Mr. FREAR. Yes.

Mr. DISQUE. We shipped to British orders at St. Johns, New York, Philadelphia, and Galveston. I found one case where the British had promised a boat, said they had her ready, and the stuff laid out on the sun dock there, with it raining and everything, for three months before they put it on the ship. It would be a surprise to me if any of that would be accepted. That is how it happened.

Mr. FREAR. So that wasn't the fault of the selection here, or the inspection here, according to your statement?

Mr. DISQUE. I don't know about this case. I don't know what the car is. If I had the car number, if I had the order number, I could tell you where it came from and how it arrived.

Mr. FREAR. All you could tell was it passed inspection here, and you could not tell what the character of the lumber in the car was, except it met the inspection test as imposed here?

Mr. DISQUE. Exactly.

Mr. FREAR. You used inspectors, did you?

Mr. DISQUE. We used the Pacific Coast Lumbermen's Inspection Bureau in all of our outside inspection.

Mr. FREAR. Whom were they employees of?

Mr. DISQUE. They were their employees that they had in their bureau. They are supposed to have quite an esprit in that organization. It is the bureau that inspects the lumber to-day and did before the war.

Mr. FREAR. Now, that was the case in inspecting the Grant Smith-Porter Bros. output?

Mr. DISQUE. No.

Mr. FREAR. Well, I am just inquiring.

Mr. DISQUE. No, sir; the Grant Smith-Porter Bros. output came to the cut-up plant at Vancouver in the form of cants.

Mr. FREAR. Oh, yes; that is right. You are right.

Mr. DISQUE. It was there inspected, after being remanufactured, by our own inspection crew, which was trained there under lumbermen.

Mr. FREAR. Yes. So inspection had nothing to do with their cost-plus contracts, with the cants?

Mr. DISQUE. Except that the cants were inspected, and the inspection did not affect them very much, except that we constantly followed it to see that they were not cutting trees that had no aircraft material in them. Some mistakes were made.

Mr. FREAR. Now, what was your procedure in that respect? There are certain limitations as to the kind of lumber and kind of cants that can be used in spruce trees; that is, it would depend upon whether it was selected material or not—material that was suitable for aircraft lumber?

Mr. DISQUE. Yes, sir. We had what we call tree spotters, not in the employ of the Grant Smith-Porter Bros., but in the employ of our division.

Mr. FREAR. Who were they?

Mr. DISQUE. They were men who knew trees, knew spruce, had seen the tree felled, had seen it bucked, had seen it split, had seen it go through the factory, and by that experience learned, as much as humans can, to look at the outside of a tree and form a fair estimate of what was in it.

Mr. FREAR. What was their experience prior to that?

Mr. DISQUE. They had been engaged in one way or another in the lumber business.

Mr. FREAR. That is, they were not soldiers here; they were men engaged in this division?

Mr. DISQUE. They were soldiers in this division, but had come from lumber operations.

Mr. FREAR. Where from?

Mr. DISQUE. Well, all over. They were, I think several of them were from right here on the coast, had been drafted, or in one way or another got into our organization.

Mr. FREAR. How many did you have?

Mr. DISQUE. I don't know.

Mr. FREAR. Hundreds?

Mr. DISQUE. Oh, I suppose—well, the best witness on that would be our inspection officer. I don't know how many were out. I would say about 30 or 40.

Mr. FREAR. Oh, I see. I was just trying to get at the general number.

Mr. DISQUE. I don't know. But those men would go around and pick the tree, mark it, and that was the only tree that the contractor was allowed to fall. And I saw a statement sometime last spring showing the percentage of trees marked which developed that they were not good airplane trees, and it was remarkably low. I have forgotten the details of that statement, but it was prepared and passed over my desk. It is available somewhere in the organization's records.

Mr. FREAR. Now that operation of riving extended to about what time; the spring of the year?

Mr. DISQUE. It went on—you see, we made contracts with several small riving companies.

Mr. FREAR. Outside of the Grant Smith-Porter Bros.?

Mr. DISQUE. Yes. We agreed to buy their stuff at \$180, and there would be three or four men get together and devote their entire labor to it, and all their profit was their own labor to pay and they were able to make money I think at that price.

Mr. FREAR. That is, they undertook all those operations themselves without assistance from the Government?

Mr. DISQUE. Yes.

Mr. FREAR. And brought in the prepared cants, and selected, as you have said, by your officers, who spotted the trees?

Mr. DISQUE. Well, they selected their own trees, these independent contractors. We were not interested in the kind of trees they picked, because—

Mr. FREAR (interrupting). You determined it upon the receipt of the cants?

Mr. DISQUE. Receipt of the cants at the car shipping point.

Mr. FREAR. I see. Well now, that is up to what time was this riving operation?

Mr. DISQUE. Well, I was going to say these contractors had contracts for a certain amount of cants. In order to justify their operation we had to let it be a considerable number. The result was that some of them were still splitting I think up to the end of the war. It was a case in a good many instances of them promising lots of things and then not making good. They would say, "We will get them out in the next four months." Well, they would have a contract for a certain amount, and we felt that it was, and it was always useful. We were always glad to get them, and we just allowed those fellows to go ahead and deliver until their contracts were finished. I think—I don't remember when it was; sometime in the

spring, though, when I directed that no more riving contracts be let, because our other operations had developed at that time so that we knew what was in front of us.

Mr. FREAR. What occurred after your riving operations, after you ceased making contracts on that, what was the next step in preparing the spruce?

Mr. DISQUE. In between the time we began riving and the time we took any other radical measures to increase or expand production, a good many things happened. May I refer to this paper here?

Mr. FREAR. Surely.

Mr. DISQUE. I will give you a little picture.

Mr. FREAR. I would rather you would testify from what you have got there than read it.

Mr. DISQUE. I won't read it.

Mr. FREAR. All right. Just give your own statement from any memoranda you care to.

Mr. DISQUE. This will give you a general picture of that that occurred in between. First, we were called on for 10,000,000 feet.

Mr. FREAR. That was when?

Mr. DISQUE. That was when I came out here. That was to have been 10,000,000 feet of what everybody felt was the finest straight grain material that could be produced.

Mr. FREAR. Who was calling on you for that? That is, the board in Washington?

Mr. DISQUE. The Aircraft Board.

Mr. FREAR. Yes.

Mr. DISQUE. Next, we got a call for 30,000,000 feet. That came in the spring.

Mr. FREAR. Thirty million feet in how long; a month?

Mr. DISQUE. A month. And that was supposed to be perfect stock. When we got this call for 30,000,000 feet, we had then been producing for a month or two from the cut-up plant what we thought was the finest stuff that could be made and what lumbermen conceded was.

Mr. FREAR. That is, you say, not over 50 per cent aircraft timber?

Mr. DISQUE. No, sir. The material we sent East from the cut-up plant went between 85 and 100 per cent aircraft material.

Mr. FREAR. That is right. I am referring to the cants. It went in between 85 and 100 per cent aircraft material.

Mr. DISQUE. That is according to the statements which I have here from the factories who used it.

Mr. FREAR. Yes.

Mr. DISQUE. And also from my own observation in having visited those factories while they were using the old stock that had been shipped when we came, and also later on in the year when they were using stuff that came from the cut-up plant.

Mr. FREAR. You said that they reached 85 per cent on those that came in from the cut-up plant?

Mr. DISQUE. As soon as the cars on hand left the cut-up plant reached any given factory—

Mr. FREAR. When did you begin shipping from the cut-up plant?

Mr. DISQUE. In February.

Mr. FREAR. And continued shipping from the cut-up plant; did all the products that went from here go from the cut-up plant after that?

Mr. DISQUE. No, sir.

Mr. FREAR. By what means was it sent out?

Mr. DISQUE. Every lumber mill continued sending.

Mr. FREAR. Here?

Mr. DISQUE. No; to the factories.

Mr. FREAR. Direct?

Mr. DISQUE. Yes, sir. They charged it to us, but it was shipped by them on bills of lading forwarded over to our office.

Mr. FREAR. So there would be no method of determining the comparative character of the material that went from the cut-up plant?

Mr. DISQUE. Exactly. We have that very definitely in detail.

Mr. FREAR. Where did you ship this material from the cut-up plant?

Mr. DISQUE. The cut-up plant material went to the same destinations that the material from the mills went to, but our records contain utilization sheets made out by the factories using this material, which show the car number and its source and the percentage that was accepted and the percentage that was rejected.

Mr. FREAR. The reason I ask that is because the statement has come to us—and you are entitled to the same information that comes to us—that many cars were rejected and were of no value. Now, what method have we of determining whether they came from the cut-up plant or from the mills?

Mr. DISQUE. The very papers that we can furnish to the committee will show over the signatures of outside officers where the car came from; it will show if it came from a private mill from Mr. So-and-so, and the date, and car number so-and-so, Vancouver cut-up plant.

Mr. FREAR. That went to the purchaser at the point of delivery and there kept a record of it?

Mr. DISQUE. Yes, indeed; that car was inspected upon arrival by their own inspector and by a representative of the utilization department of the Bureau of Aircraft, who, by the way, was not my man, but was always a little bit hostile to us; but he acknowledged himself, after this cut-up plant began, that he had never seen lumber like that. Mr. Patrick said that. I think you will find him in this city.

Mr. FREAR. That went to the various factories, and they had a check there from the car number to determine where the lumber came from? You say that the average there was 85 per cent. Did you send to the Curtiss Airplane Co.?

Mr. DISQUE. Yes, sir.

Mr. FREAR. They had a good many rejects. Do you know whether or not they came from your plant, or whether they came from the mill owners generally?

Mr. DISQUE. Would you like for me to go over a few statements?

Mr. FREAR. No. I do not know where they came from, but our information will show definitely where it did come from. It is right here in my case. If we had the car numbers from the Curtiss people, from those who received it, that would be the method of checking.

Mr. DISQUE. If you can give the car number of the stuff received.

Mr. FREAR. I do not believe the car numbers were furnished the committee, so I was trying to ascertain the comparative character

of the lumber furnished by the cut-up plant, compared with that of the private mills.

Mr. DISQUE. I would say, Mr. Chairman, that our records indicated practically—well, I will not attempt to give the percentage, but an overwhelming percentage of the cars from outside mills found difficulty in getting past the inspectors. The rejections were considerable; they ran sometimes to 80 per cent.

Mr. FREAR. Eighty per cent of rejections?

Mr. DISQUE. That just stands out as one case or so.

Mr. FREAR. What would that be due to?

Mr. DISQUE. It is due to the fact that the man that owns a saw-mill can get \$105 for his stuff, and his employees are always inclined to keep slapping a little bit more on. It is simply human nature to load that car as low grade as you can.

Mr. FREAR. That would be rejected when it got to the Curtiss Co., or any other company of that kind?

Mr. DISQUE. Yes.

Mr. FREAR. But it passed inspection when it was put on the cars at the mills, and those inspectors were the men selected by you.

Mr. DISQUE. I did not select them. I selected the Pacific Lumber Inspection Bureau.

Mr. FREAR. I thought you said they were soldiers.

Mr. DISQUE. They were not soldiers; I do not think I said they were soldiers; they were civilians. They were employed by the Pacific Lumber Inspection employees, their own employees. We did later on get in there and endeavor to check that thing closely ourselves, because of the quality of the stuff going out from the mills resulted in so many rejections; and I am sure that the record will show that after we took more interest in that inspection there were less rejections. There are lots of figures that can be extracted and presented.

Mr. FREAR. Of course, the matter of cold figures would hardly affect an 80 per cent rejection that was passed upon by the Government inspectors. I was trying to find out where the responsibility rested for that system of inspection that permitted such rejections, unless it was an unusual case.

Mr. DISQUE. It was an unusual case. I said at the time it was unusual. I cited it as one of the unusual cases, and as to those rejections you must get this point—it is hard for a great many people to understand it—when you are presenting the material to one of these aircraft factories who make it into airplanes, the men down there who inspect it have an entirely different thought in mind from the men who are loading it. The man who loads it has a written specification which he has been studying, and he may be most conscientiously trying to comply with it. The man who inspects it at the airplane factory has in mind not only that written specification but the daily observation showing the stuff that is going through the factory, knowing what is going to be rejected when it gets into a certain part. He is an expert, 100 per cent better than the man who loads it.

Mr. FREAR. Than the inspector down here?

Mr. DISQUE. We endeavored to get some of those fellows over here, and we did get some of them, and improved our inspection constantly.

Mr. FREAR. The question would suggest itself if there was collusion between inspectors.

Mr. DISQUE. I do not think there was the slightest collusion.

Mr. FREAR. You did not discover any?

Mr. DISQUE. I did not see any.

(Thereupon, at 12.25 o'clock p. m., the committee took a recess until 2 o'clock p. m.)

AFTER RECESS.

The committee met, pursuant to the taking of recess, at 2 o'clock p. m.

TESTIMONY OF MR. BRICE P. DISQUE—Continued.

Mr. FREAR. I believe you were referring to a memorandum at the time we adjourned. You can go ahead, please, and give any statement in addition with regard to the method of organization.

Mr. DISQUE. I was referring to the reason and necessity for expansion of our operations, which, summarized, were that we started to rive to tide over an emergency period, and later on the requirements being raised to 30,000,000 feet it rendered necessary some very radical and large expansion of the production of logs. At that time we had learned to get the most out of the log, and the problem was to get more logs into the water. Prior to that time we had sent circulars and inclosed forms to all the loggers of the Northwest, asking them to give us their estimates for production for the next 12 months.

Mr. FREAR. That is, of their mills, or their logging camps?

Mr. DISQUE. Their logging camps. Those circulars were replied to by 99 logging companies, and their total estimated production led us to believe that we might expect 675,000,000 feet of logs in the next 12 months from them.

Mr. FREAR. What kind of logs?

Mr. DISQUE. Spruce logs. These were the general run of logs, including all grades. Subsequently we found that 23 companies produced logs in addition to the 99 who had reported, and the total resulting production was only 74.9 per cent of what the loggers had anticipated.

Mr. FREAR. Let us see. When was this statement made; at what time did the 99 loggers make their report; when was that?

Mr. DISQUE. This report was made some time prior to June.

Mr. FREAR. 1918?

Mr. DISQUE. This report covered the period from June 1, 1918, to May 31, 1919.

Mr. FREAR. What was their report as to what they could produce?

Mr. DISQUE. The 99 reported that they could produce 675,540,000 feet.

Mr. FREAR. Yes. That was 99 loggers, and that was up to May 31, 1918?

Mr. DISQUE. 1919.

Mr. FREAR. Oh, for the following year?

Mr. DISQUE. Yes. On the basis of records that we had made on production, that meant that the resulting aircraft lumber would

amount to approximately 101,000,000 feet. That is 8,500,000 feet per month. Fifteen per cent of the logs is all we could expect from the general run of logs.

Mr. FREAR. Yes.

Mr. DISQUE. But, I say, subsequently 23 camps produced logs who had not reported, and they produced what amounted to an average of 3,317,000 feet per month, up until the armistice.

Mr. FREAR. Those 23 additional camps?

Mr. DISQUE. Twenty-three additional camps. That would have meant if they had continued throughout the year on that average that those 23 camps would have produced 39,804,000 feet.

Mr. FREAR. Of aircraft material?

Mr. DISQUE. Of logs. This, added to the amount that the 99 reported, would have given us probably an actual production of 540,000,000 feet for the year.

Mr. FREAR. I do not quite understand you. You said they could produce 675,000,000.

Mr. DISQUE. That is what they promised, but they actually produced 74 per cent.

Mr. FREAR. You could not tell that beforehand?

Mr. DISQUE. But that was afterwards

Mr. FREAR. Their promise was in addition to that from these 23 additional loggers who expected to produce 39,090,000?

Mr. DISQUE. No; they did not promise that; what they actually produced. So that the total we had in sight for that 12 months was 540,000,000 feet of logs.

Mr. FREAR. You are speaking about May 30, 1919. Of course you could not estimate way back in 1918 what you were going to get out of that?

Mr. DISQUE. No. But assuming they would produce 675,000,000 plus what was actually produced, which we neither knew about at that time, we would eliminate that properly from our estimate, because it was not reported to us; but adding it in we had 675 plus 39.

Mr. FREAR. About 700,000,00?

Mr. DISQUE. About 700,000,000 feet, 15 per cent of which would be 105,000,000 feet of aircraft lumber for the 12 months, or around eight and a half to nine million feet per month, which was one-third of what the Government was requiring.

Mr. FREAR. You say 85 per cent of the log could not be used for aircraft?

Mr. DISQUE. That was our experience and is covered by most accurate and detailed records.

Mr. FREAR. That estimate differs.

Mr. DISQUE. That is, a large per cent did, and it only resulted after a great many mills in the Northwest changed their methods of manufacture and after we built the cut-up plant. This committee can call before it a number of spruce manufacturers whom I could name who have stated that they did not know how to saw aircraft lumber until certain things had happened.

Mr. FREAR. That was true of yourself; you had to learn like all the others; we assume that is true. What about fir?

Mr. DISQUE. May I continue that thought?

Mr. FREAR. Yes.

Mr. DISQUE. The thought that I wanted to present is that when we were expanding we had before us the promises of all the known loggers, which only netted us one-third of what the Government and our allies were demanding. Prior to that time we had met associations of loggers, committees from districts, individuals, in our office and in theirs; we had written letters; we had issued circulars offering to contract with loggers over an 18-month period to buy their logs; we had made it known in the press; we had done everything that humans could to encourage them and assure them that we would take their product and we would prevent their loss. Our prices were such that they could have made money, and yet in the face of that their combined offer was one-third of what was demanded.

Mr. FREAR. Did you at that time in your offers tell them they could have cost plus contracts, or that you would advance them Government money so they would be protected?

Mr. DISQUE. Yes, sir; not that they could have cost plus contracts, because I do not like them; I did not want to make any. When we did make them it was a last resort and a necessity, and we tried to keep them to the minimum, because of the tremendous supervision required.

Mr. FREAR. What about the question of advanced moneys?

Mr. DISQUE. We agreed to advance moneys.

Mr. FREAR. Where are your statements to that effect; you have the correspondence to that effect, have you?

Mr. DISQUE. I have it here. We offered to these loggers to take up a spur here and put it down over there and we said, "We will contract with you to cover the cost of that." Each case is a different problem; we could not make any broad contract for the entire industry, because each logger had a different problem. In the case of Merrill & Ring, they had a spur over in some fir. We urged them to put it into spruce. We agreed to furnish the labor, and they agreed to do that.

Mr. FREAR. That was a 2-mile railroad?

Mr. DISQUE. Seven miles.

Mr. FREAR. In which direction did that road run?

Mr. DISQUE. That road, I think, ran west.

Mr. FREAR. West from Pysht Creek?

Mr. DISQUE. From their operation at Pysht west, out into a stand of spruce which was waiting there, and they agreed to do it.

Mr. FREAR. You say it was 7 miles?

Mr. DISQUE. I think it was 7 miles; I am not positive, around 5 to 7 miles. That is one of a great many instances where we endeavored along in January and February to show the loggers that we would take care of any additional costs that they underwent to to expand their operations.

Mr. FREAR. I am getting down to the time that you made the suggestion and 675,000,000 logs could be furnished.

Mr. DISQUE. That came in May.

Mr. FREAR. After you had got the statement from the loggers this Merrill & Ring contract was made in February.

Mr. DISQUE. I am reciting what efforts we had made prior to this to get production.

Mr. FREAR. When you were making efforts to get loggers to undertake this work, you say advancements of money or reimbursements

or other means were offered to get them to enlarge their output. Did you offer them labor?

Mr. DISQUE. We did.

Mr. FREAR. What was the result of that?

Mr. DISQUE. The result of that was just what I am leading to here.

Mr. FREAR. All right; go on.

Mr. DISQUE. That we had an offer accumulated from the entire industry that only amounted to one-third of what we had to produce. In 1917 there were 319,000,000 feet of spruce produced and 6,700,000,000 of all kinds of lumber. That is from the Forestry Department report. In 1918 there were 492,000,000 feet of spruce produced and only 7,313,000,000 feet of all species. In other words, the industry had increased its spruce production approximately 54 per cent.

Mr. FREAR. That is in 1918; at the last of the year you were striking the gait.

Mr. DISQUE. The entire industry produced 54 per cent more spruce in 1918 than in 1917, and they only increased their general production 7.7 per cent.

Mr. FREAR. You had the control of that, so that unless they agreed to produce spruce you could shut down their mills?

Mr. DISQUE. Well, that might have been done.

Mr. FREAR. I think it was done, was it not?

Mr. DISQUE. I do not know of any case.

Mr. FREAR. It might be cited later.

Mr. DISQUE. Where a spruce mill was shut down except through shortage of cars and the accumulation of the side cut on their dock. So that we had reason to feel that the industry, having increased 54 per cent and having only promised a third of what we required, that it was necessary for somebody to become active and increase in some other direction. That led to the distinct feeling, and I would say it is backed up by 90 per cent of the lumbermen out here, because I know them and have been in conferences with them hundreds of times; they felt we had to do something to supplement it again. That something had to be in a line which would not interfere with what was going on already. Everybody was doing their best, and they were only getting one-third of what we required. That is why these riving contracts which we had made in December and had gone over this period, for the purpose of helping us tide over and had produced 11,000,000 feet by the cost-plus operation and 7,000,000 feet by the individual, showing that we were not getting from those individuals as much as we had hoped were then converted—

Mr. FREAR. What percentage of the riving material went into airplane lumber, the higher per cent?

Mr. DISQUE. About 52 to 55 per cent. That was in the spring, and that is the time when we felt we had not anything in sight, that we converted our riving contracts into selective logging contracts. At the time we made contracts with Grant Smith, Porter Bros., the Airplane Spruce in Grays Harbor, and the Warren Spruce there was no thought of doing anything other than tide over an emergency period.

Mr. FREAR. Did you have contracts with the Warren Spruce Co. for riving?

Mr. DISQUE. Yes, sir.

Mr. FREAR. What did they produce?

Mr. DISQUE. Well, I probably can give you that.

No; I have not got that. Our accountant can give that exact figure.

Mr. FREAR. You can put it in later if necessary. What did the aircraft—this was the air—

Mr. DISQUE. The Airplane Lumber Co.

Mr. FREAR. Yes; the Airplane Lumber Co.

Mr. DISQUE. I think that is what they called it. I do not remember what any of them produced. The total was 11,000,000 feet of rived stock.

Mr. FREAR. You had not testified regarding those contracts before, so I did not know.

Mr. DISQUE. That was in Grays Harbor—the airplane company.

Mr. FREAR. That is the Polson Co.?

Mr. DISQUE. Polson's organization. We took on those contractors at a time when they were only to rive, because they only had teams and road organizations. They had reputations that came to us at least as capable and competent contractors, and as the spring developed we converted those contracts—something that had not been anticipated—into selective logging contracts for them.

Mr. FREAR. What did you do with those who were not in a position to carry on selective logging but who could do riving?

Mr. DISQUE. All those who had had contracts continued to rive until they supplied the total amount of their contracts or until the armistice was signed.

Mr. FREAR. You said the contracts were canceled afterwards. Why didn't you continue the riving, if it was a practical proposition, with those others who could not do logging?

Mr. DISQUE. Well, riving is practicable all right, but, as I said, it was an emergency measure and we did not want to continue it a day longer than was necessary. They were put in there to tide us over until we could get logs. There is no question that you get more lumber out of a log than you do out of a split tree.

Mr. FREAR. That is certain.

Mr. DISQUE. And there is no question but that riving is more expensive, more extravagant, more wasteful than logging.

Mr. FREAR. That would be true; but if riving brings 55 per cent, or from 52 to 55 per cent, and regular logging only brings 15 per cent and we were in great need of this airplane lumber, as we were, why did you cease the riving?

Mr. DISQUE. Because with a given number of men we could largely increase the amount of the final product by selective logging. Not by general logging, but by selective logging.

Mr. FREAR. I understand.

Mr. DISQUE. We got more out of the trees that we felled by the selective-logging process.

Mr. FREAR. But this cancellation of contracts, didn't that affect a good many small operators who were not able to take up logging?

Mr. DISQUE. They were not canceled until the armistice was signed.

Mr. FREAR. I understood you to say—

Mr. DISQUE. They were allowed to continue production until they supplied the amount of their contract.

Mr. FREAR. And those contracts, providing the contracts had ended, were they continued, or what was done?

Mr. DISQUE. No.

Mr. FREAR. I understood you to say you canceled them.

Mr. DISQUE. We quit when they had supplied their contract. We did not do riving any more.

Mr. FREAR. Why not?

Mr. DISQUE. Because we would do better with the selective-logging process.

Mr. FREAR. You were getting it from certain loggers, you were getting the supply from them, so you did not feel that you needed any more riving?

Mr. DISQUE. We were getting it from our own operations and from the logging industry, and in the meantime—

Mr. FREAR. What were you getting from your own operations?

Mr. DISQUE. Well, we got a total—our own operations produced a total—

Mr. FREAR. I know; I am not referring to after the armistice. I am referring to the period as this matter goes along. I am trying to get what your estimates were, and what was the basis of your judgment. It may be all right; I am trying to find out.

Mr. DISQUE. I can give you that very readily. Here is what we got from our own operations, and it is set up in comparison to the total industry. The record started August 3, when the industry produced 13,000,000 feet and our own operations 2,000,000 feet. That was for the week ending August 3. The next week the industry was 13,000,000 and our own was 2,800,000.

Mr. FREAR. That is, logging?

Mr. DISQUE. Logging. The next week the industry was 12,000,000 and ours was 2,200,000.

Mr. MAGEE. Was this 1918?

Mr. FREAR. What year was this?

Mr. DISQUE. 1918.

Mr. FREAR. This was in August.

Mr. DISQUE. August 3. The private loggers produced 86 per cent of the total and we produced 13.94 per cent. Ours continued to increase and the other to decrease up to October 26, when the logging industry produced 66.98 per cent of the total spruce logs and our operations produced 33.02 per cent.

Mr. FREAR. What proportion at that time of the troops—how many troops did you have here at that time?

Mr. DISQUE. In October?

Mr. FREAR. In October.

Mr. DISQUE. There was approximately 28,000.

Mr. FREAR. What proportion of those were engaged under your contract, what you call "we" produced?

Mr. DISQUE. I would have to ask the adjutant about that. I do not recall.

Col. STEARNS. You can get an exact statement of it right away.

Mr. FREAR. Who do you mean by "we"?

Mr. DISQUE. I mean the Spruce Production Division.

Mr. FREAR. I know, but the Spruce Production Division was not doing it, they were doing it under contract.

Mr. DISQUE. With the contractors whom we were supervising, as cost-plus operations.

Mr. FREAR. What contractors were those?

Mr. DISQUE. They were the Warren Spruce Co., the Grant Smith-Porter Bros., and the Airplane Spruce, over in Grays Harbor.

Mr. FREAR. Those three contractors were producing, then, thirty-odd per cent.

Mr. DISQUE. Thirty-three per cent of the total spruce-log production.

Mr. FREAR. Thirty-three per cent in October?

Mr. DISQUE. Yes, sir.

Mr. FREAR. They were producing it with what help?

Mr. DISQUE. With all the help that we could give them.

Mr. FREAR. Now, as I understood it, there were 99 loggers, and then you had 23 extra logging companies. How many logging companies or logging organizations were there here in the Northwest—now, Merrill & Ring were not included in these people?

Mr. DISQUE. They were not included in the 33 per cent production.

Mr. FREAR. No?

Mr. DISQUE. They were included in the 66 per cent.

Mr. FREAR. Now, Merrill & Ring are among the largest loggers in the Northwest, are they not?

Mr. DISQUE. I expect they are. Their production would be pretty well up in the list.

Mr. FREAR. And the Goodyear Co.?

Mr. DISQUE. I do not know how about their production.

Mr. FREAR. What I mean to say is, that there were many loggers in the business, doing a large business. You spoke of 122.

Mr. DISQUE. There were 122 companies that we had records of, that reported.

Mr. FREAR. They reported?

Mr. DISQUE. Yes.

Mr. FREAR. Now, three companies, or three firms, one of which, the Warren Spruce Co.—was that a logging concern?

Mr. DISQUE. It became one.

Mr. FREAR. Was it before?

Mr. DISQUE. Never.

Mr. FREAR. It never had done any logging before?

Mr. DISQUE. Oh, I expect they had done some in their road work.

Mr. FREAR. Whereabouts?

Mr. DISQUE. In their road work.

Mr. FREAR. Explain to the committee where they had done this road work?

Mr. DISQUE. I do not know where.

Mr. FREAR. Do you know that they did?

Mr. DISQUE. No.

Mr. FREAR. You do not know anything about it. Now, they came here just like the Siems-Carey-Kerbaugh Co., didn't they, without any previous logging experience? Isn't that true?

Mr. DISQUE. I expect it is.

Mr. FREAR. Now, you took three companies, and the only company which had ever done logging before was the Airplane Co., which was the Polson Co., that is right, isn't it?

Mr. DISQUE. Yes.

Mr. FREAR. Now, you took two other companies, cost-plus contracts, the Siems-Carey-Kerbaugh Co. and the Warren Spruce Co.,

and you threw your force of men, the soldiers that you had, which were able to produce, and you enabled those two companies that had never done any work before to bring the total up to 33 per cent, that is right; do we understand it right?

Mr. DISQUE. Well, it is understood right, except that we did not favor them with men any more than we favored all the private operations.

Mr. FREAR. Oh, yes; I am just trying to get a basis.

Mr. DISQUE. And with materials, I might add, with cars, with priorities, with everything on earth. There was absolutely no preference given to any of them.

Mr. FREAR. No; but I was trying to see if I understood you correctly, your statement.

Mr. DISQUE. I would like to refer back to that matter of utilization that we were touching on before dinner.

Mr. FREAR. I have here a statement that was just handed to you in regard to the production of one of the companies.

Mr. DISQUE. Oh, the riving production?

Mr. FREAR. Yes. I thought maybe you could put that in the record here.

Mr. DISQUE. Here it is. The best witness on this, of course, would be our comptroller. He hands me this statement, however.

Mr. FREAR. The committee will accept your statement.

Mr. DISQUE. Production, Grant Smith-Porter Bros., 6,391,323 feet of split cants. The Warren Spruce Co., 3,839,606.

Mr. FREAR. Where and when was that, were those supplies furnished, those split cants?

Mr. DISQUE. Well, that covered a period from, I would say—I do not know, January on until we stopped riving. The Airplane Spruce & Lumber Co. produced 1,272,342 feet.

Mr. FREAR. That is, in cants?

Mr. DISQUE. Those are cants.

Mr. FREAR. That is the riving?

Mr. DISQUE. That is the riving.

Mr. FREAR. Yes, I see. All right.

Mr. DISQUE. Now, they did not all get started at the same time, and it is not fair to compare them as to quantity; and, another thing, some of them had better shows than others.

Mr. FREAR. Where was the Warren Spruce Co. doing their riving?

Mr. DISQUE. They were riving, I think, in the Willapa Harbor district some and also in the mouth of the Columbia here, in the Clatsop district—no, they were not in Clatsop; they were in the Siletz district.

On that matter of utilization I think the committee would like to get this clear. We have records here covering 117 cars of fir airplane lumber that went to the factories in the East. They show that the rejections were less than seven-tenths of 1 per cent.

Mr. FREAR. The rejections of lumber?

Mr. DISQUE. Yes, sir.

Mr. FREAR. That is of fir.

Mr. DISQUE. Fir airplane. We have lumber utilization reports—

Mr. FREAR. How many cars was that?

Mr. DISQUE. Eighty one cars.

Mr. FREAR. Eighty-one cars of fir?

Mr. DISQUE. Yes; we have here attached to this, on the Vancouver shipments from the cut-up plant, spruce to American factories, 21 cars, showing the low grade three-tenths of 1 per cent; on grade, 99.7 per cent. We have here three cars on specification 15038, which is laminated stock, 100 per cent acceptance.

Mr. FREAR. How long were you engaged in laminating?

Mr. DISQUE. While we only sent that one especial order that came for it, we were sending it quite a bit from time to time throughout our operations. We never sought laminated stock. It was a fall-down stock, really, from the other.

Mr. FREAR. Did it increase at all while you were engaged over there?

Mr. DISQUE. My recollection is that the factory in Grand Rapids, I think, agreed to use laminated stock very largely, and they were shipped a considerable quantity of it. Of course I did not place these orders, they came to me to ship out.

Mr. FREAR. I understand.

Mr. DISQUE. I think the greater part of the laminated stock that went out from here went to that factory, and I have been told that at was inspected on the specification of straight airplane stock, and if that was so, of course, there was a tremendous rejection, because it never was intended for that. It was not charged as that, and if it had been inspected on the quality that had been ordered, why, I do not have any doubt that the result would have been just like I have read.

Mr. FREAR. You do not know anything about that, excepting—

Mr. DISQUE. Only reports from officers who had been there.

Mr. FREAR. You do know that there were quite a large number of cars that were rejected at Grand Rapids?

Mr. DISQUE. Yes.

Mr. FREAR. Have you any correspondence to show why, whether it was laminated material or whether it was simply rejections because of failure to meet the inspection?

Mr. DISQUE. I would rather you would call our inspection officers on that.

Mr. FREAR. You can inquire of them, because we can not call the various officers. You can inquire and see, and if you can testify we will be glad to have you do so.

Mr. DISQUE. Yes, sir. I want to say further about this utilization that we heard that the British had a shipment at Galveston that was below grade. We immediately wired and asked them to send a representative there of their own to check up. We had a letter from them in a few days stating that they had found it perfectly satisfactory. We have that letter in our files. Later on, after the armistice, Gen. Carmack, who was in charge of the British purchases in Washington, made a statement that it was due to the improved quality of lumber that we had shipped from our cut-up plant that permitted England to reduce her requirements, and England did reduce her requirements about 33 per cent in October.

Mr. FREAR. But she was getting a large additional supply, and new supplies from British Columbia at that time, which she was not receiving before; isn't that true?

Mr. DISQUE. They did not say so.

Mr. FREAR. That may be true, but wasn't that a fact?

Mr. DISQUE. I do not think so. I talked——

Mr. FREAR. That is the testimony before the committee.

Mr. DISQUE. I understood it was, Mr. Chairman, I talked with the British officers at frequent intervals during the war. They would come out here and look over our operations and consult with us, and assist us in drawing the specifications to suit because there is a considerable loss between New York and London on any ocean transportation. You lose in quality. We were endeavoring to get the sizes of these pieces to send up, and get those sizes which would ship to the best advantage. In Washington I met their representatives on a number of occasions, and every time we asked them about their Canadian spruce—they had been in the war then four years—they would tell me that they were getting practically nothing out of Canada. They would tell me that they had to depend upon us. I had frequent conferences with Canadian officers who came down here from Vancouver. They were endeavoring to get spruce out of those islands up there, and my impression was that they got under way in the spring of 1918 for the first time, and they had been in the war four years.

Mr. FREAR. That was the same situation with the United States, wasn't it?

Mr. DISQUE. We had been in the war about six months when I came out here.

Mr. FREAR. But we knew that the war was on in other countries, and appreciated the possibility of our getting in; that was apparent to us at that time, wasn't it?

Mr. DISQUE. I do not know about that. But I wanted to say this, that the production from Canada, we felt, was going to be improved, but up to the end of the war the British Government gave us no indication that they were getting what they wanted from Canada.

Mr. FREAR. You said you reduced the supply to them.

Mr. DISQUE. That was right at the end of the war. A telegram came, and it was perfectly natural, because it takes time for this stuff to get into the factories in Europe. They had learned that this quality was improved and they began to lower their requirements. There is a telegram in our files stating that owing to the improved quality of the material being shipped the Allies have reduced their requirements for the next 12 months, as follows: And I want to correct the record, if I may, in that from what I have understood it has been reported that Canada sent 26,500,000 feet of high-grade airplane stock. I do not know, I assume that they did—it has been stated—but I will say that we sent 23,500,000 feet of similar material in October, 1918, of absolutely the same quality of material in one month that they sent in the entire five years of the war.

Mr. FREAR. Where was that sent from?

Mr. DISQUE. Ours?

Mr. FREAR. Yes.

Mr. DISQUE. Right from this Vancouver cut-up plant and the mills in the Northwest.

Mr. FREAR. Did those mills pass this inspection—were they passing the inspection the same as the Vancouver plant at that time, or what kind of lumber was it?

Mr. DISQUE. At that time we were inspecting in the mills, I think, about as carefully as we were at the cut-up plant. We had by that time built up a pretty good inspection crew.

Mr. FREAR. What was the total production of lumber, airplane lumber, up to the end of the war?

Mr. DISQUE. From here?

Mr. FREAR. From where? This Government?

Mr. DISQUE. This report only covers the period after the Bureau of Aircraft Production became interested.

Mr. FREAR. When was that?

Mr. DISQUE. Starts with September, 1917. The footage, September, 1917—

Mr. FREAR. Just give us the totals, unless it is something important.

Mr. DISQUE. I think it is important to show what our country did here in increasing this, and it will show it clearly if I read the first four or five months.

Mr. FREAR. My understanding was that they practically began at that time, but go on.

Mr. DISQUE. The Allies were buying throughout the war from brokers who bought in turn from these mill merchants out here.

Mr. FREAR. Is that shown in the production here?

Mr. DISQUE. No, sir.

Mr. FREAR. That is not shown, that they were selling direct, so that would not appear here at all?

Mr. DISQUE. That does not appear here.

Mr. FREAR. So you could not tell what the production was here, except in so far as it went into our Government accounts.

Mr. DISQUE. Except that this, all of it, had happened after September.

Mr. FREAR. It includes all at that time, at the beginning of your allotting—

Mr. DISQUE. In September there was 952,663.

Mr. FREAR. This is 1917?

Mr. DISQUE. September, 1917. October, 726,000.

Mr. FREAR. Would you mind giving two or three months, showing the increase, without going through it?

Mr. DISQUE. I will say that that is not correct—

Mr. FREAR. Change it.

Mr. DISQUE. That is what we actually paid for. It was in that period when it dovetailed.

Mr. FREAR. Just change the record, if you choose.

Mr. DISQUE. There was other G-list stuff sent down during those months. Practically 2,000,000 feet a month, it says, additional to that, but that is a guess. November, 2,887,000; December, 3,206,000; January, 4,595,000 feet.

Mr. FREAR. Are these the correct figures, or was there additional?

Mr. DISQUE. There was nothing additional to this.

Mr. FREAR. Nothing additional sent in?

Mr. DISQUE. February, 7,320,000 feet; March, 9,977,000 feet; April, 13,583,000 feet; May, 11,864,000 feet.

Mr. FREAR. Why did that fall down in May?

Mr. DISQUE. The logs did not come in, just simply that we did not have the logs.

Mr. FREAR. In the winter the logs increased rapidly, and now in the spring there was a falling off. What is the explanation?

Mr. DISQUE. We simply did not have the logs, and we were not under way producing yet. July, 13,776,000 feet; August, 18,861,000 feet; September, 16,682,000 feet; and October, 22,145,000 feet. That was the way the production progressed.

Mr. FREAR. What was the total there, have you got it?

Mr. DISQUE. One hundred and forty-three million, eight thousand nine hundred and sixty-one feet.

Mr. FREAR. That is, of lumber?

Mr. DISQUE. That is of the highest grade aircraft lumber that was ever produced.

Mr. FREAR. A lot of that lumber was rejected, wasn't it, by Great Britain?

Mr. DISQUE. I do not agree with that; no, sir.

Mr. FREAR. I am just inquiring.

Mr. DISQUE. There was an occasional—

Mr. FREAR. Doesn't that include the cars that were rejected at Grand Rapids and various other places, Curtiss and others?

Mr. DISQUE. That includes the cars that were rejected.

Mr. FREAR. How many cars were rejected, all told, do you know?

Col. STEARNS. There is no complete record.

Mr. DISQUE. We have no complete record of that.

Mr. FREAR. All right.

Mr. DISQUE. But our records have never indicated that there was any considerable quantity rejected.

Mr. FREAR. I understood you in one case—maybe I have made a mistake—that in one case there was 80 per cent.

Mr. DISQUE. I said I had a recollection that that stood out. That was early in this program. After spring got under way the rejections were almost negligible.

Mr. FREAR. Now, that ends up your statement as to the production. Let me see your report, please.

Mr. DISQUE. I want to add to that statement of production that the day the armistice was signed we had laying in the water—

Col. STEARNS. And in the woods.

Mr. DISQUE. Waiting to go to the mills about 40,000,000 feet of high-grade spruce logs.

Mr. FREAR. Are those like the logs that are down there in the bay, at Siletz Harbor now?

Mr. DISQUE. They included those.

Mr. FREAR. Do you call those—

Mr. DISQUE. It was a better grade, by far.

Mr. FREAR. Do you call those high-grade logs?

Mr. DISQUE. I do not.

Mr. FREAR. Those are not for airplane purposes.

Mr. DISQUE. Well, they were fir logs. They were much better than the average run of logs that you will see in a raft.

Mr. FREAR. Would any considerable percentage of those logs be suitable for airplane purposes, in your judgment?

Mr. DISQUE. I think we would have obtained from those logs at Toledo, had we manufactured them, probably 20 per cent aircraft.

Mr. FREAR. Twenty per cent aircraft from those logs, when you only got 15 per cent on the average?

Mr. DISQUE. All right.

Mr. FREAR. All right.

Mr. DISQUE. We would get nearer 30 per cent on our selected logs after the operations got under way.

Mr. FREAR. If you were engaged in sending this fir—81 cars of fir were sent to Great Britain, was it?—less than 1 per cent was rejected.

Mr. DISQUE. Those did not go to Great Britain.

Mr. FREAR. Where?

Mr. DISQUE. They went everywhere.

Mr. FREAR. It is immaterial, I suppose, that they were sent there. Eighty-one cars of fir, then, were sent out, less than 1 per cent of which was rejected.

Mr. DISQUE. Seven-tenths of 1 per cent rejected.

Mr. FREAR. Seven-tenths of 1 per cent rejected?

Mr. DISQUE. Yes.

Mr. FREAR. Up to what date was that?

Mr. DISQUE. I take it this report covered up to the end of our operations. I might explain here, Mr. Chairman, that it was a difficult thing for us to get accurate information from the manufacturers regarding the quality and utilization qualities of that lumber. We continuously endeavored to have reports sent the moment a car was inspected, and it was almost impossible to get them.

Mr. FREAR. Well, I find an interesting statement here in this report that you have handed me, that while the spruce reached 79,000,000 feet for the year, the fir reached 59,906,000, practically 60,000,000, or almost as much as the spruce. That is to say, the cedar was nominal, 3,000,000 feet. That is to say, that the fir was at least 40 or 45 per cent, between 40 and 45 per cent of the total output, which makes up 143,000,000 feet.

Mr. DISQUE. Exactly.

Mr. FREAR. We supposed it was spruce heretofore. Was that true of the Canadian cut?

Mr. DISQUE. I do not know about the Canadian cut.

Mr. FREAR. The reason I ask that question is because in October your cut here was 9,000,000 feet, and the Canadian cut was 8,000,000 feet of finished spruce lumber, as this was, and you gradually reach about the same, with facilities that were ten times as great, according to the statement there, as could be found up in their country. Would you say that that was a fair percentage, that you had ten times the milling and logging capacity here? I want to arrive at some basis of comparison.

Mr. DISQUE. I want to say that I haven't any confidence in the statement made about the British production.

Mr. FREAR. As to the amount, you mean?

Mr. DISQUE. As to anything about it. We had the impression here, and we are well grounded in it, that there wasn't anything of importance going on out of there.

Mr. FREAR. They had the same impression, according to the statements, as to conditions here, but that does not bring us any results, what we are trying to ascertain. We have the specific statement that

26,500,000 feet of finished airplane lumber was sent out, and, as we understood, all spruce. Now, you had 79,000,000—and that was in nine months—you had 79,000,000 feet here. The other is 60,000,000 feet, approximately, so far.

Mr. DISQUE. I have wired to those in authority to get a definite statement of the Canadian production.

Mr. FREAR. We will be very glad to have it, if you receive it, to see if it materially varies. If you find it does, will you notify us?

Mr. DISQUE. I will be glad to give it to you.

Mr. FREAR. Now, the question comes up at this point, if fir was used to that extent, why couldn't it have been used throughout?

The spruce production reached 317,000,000 feet in 1916, and you say 319,000,000 feet—approximately the same amount—in 1917. Now, why couldn't they have increased the fir, if they were using it in the airplanes in Europe that were in the real fighting; why were they holding you down, apparently, to the spruce production here?

Mr. DISQUE. They were not. In January or December the lumber experts around the Bureau of Aircraft Production decided that fir was a good substitute for spruce.

Mr. FREAR. That was in the early part of 1918?

Mr. DISQUE. The early part of 1918, and possibly a little before that. And they started in to use it only for wing beams on the training planes. Later the Italians said they were willing to take it. They simply could not get the spruce; that was all; and they took the next best thing.

Mr. FREAR. Now, we had 317,000,000 feet of spruce sawn in the two years of 1916 and 1917?

Mr. DISQUE. That is, logs.

Mr. FREAR. What?

Mr. DISQUE. That is, logs.

Mr. FREAR. That is, logs; yes. Now, what amount of fir did they have in those years? What I am trying to ascertain is this—

Mr. DISQUE. Oh, it was several billion feet.

Mr. FREAR. Several billion feet cut?

Mr. DISQUE. Yes, sir.

Mr. FREAR. So that if they had begun using fir instead of finding out the spruce, you would have had no difficulty in completing it with the force that was operating at that time?

Mr. DISQUE. The Allies would not have fir; they would not take it at all for a long while. No one wanted fir if they could get spruce.

Mr. FREAR. You were beginning operating here way back in November, 1917, and you were getting out fir at that time for the Allies and all others, were you not?

Mr. DISQUE. No; that fir in those days I am positive only went to American factories making training planes.

Mr. FREAR. What time did the Allies agree that they wanted to use it for Spads and for other kinds of planes?

Mr. DISQUE. Well, it came in the spring. I think the Italians agreed to take it for wing-beam stock.

Mr. FREAR. The spring of 1918?

Mr. DISQUE. The spring of 1918.

Mr. FREAR. If they would take it for wing beams, they would take it for struts, wouldn't they?

Mr. DISQUE. No.

Mr. FREAR. Why?

Mr. DISQUE. Because it is heavy; and you get plenty of short lengths of spruce to make up all the shorter parts.

Mr. FREAR. So there was no difficulty on that part?

Mr. DISQUE. There never was a time when they were keen about it. They took it as the next best thing that they could get.

Mr. FREAR. You are testifying as an expert. Upon what do you base your judgment as to what these combined countries were keen about; what is your evidence of it? They were anxious to get aircraft, apparently more anxious than we were, so far as results show now. You say they were not keen about it; they would take anything they could get.

Mr. DISQUE. About the fir.

Mr. FREAR. About the fir.

Mr. DISQUE. My opinion on that is based on numerous conferences with the very men who represented those Allies in the use of this lumber.

Mr. FREAR. Is that put in the form of correspondence?

Mr. DISQUE. I do not know directly, but it is in the form of interviews, and appears in my diary.

Mr. FREAR. What does your diary show?

Mr. DISQUE. It shows numerous conferences with different allied representatives.

Mr. FREAR. I mean, as to this question of the fir?

Mr. DISQUE. I think the best evidence of that would probably be found in correspondence, where they agreed to take fir, and it took a long while to get them to do it.

Mr. FREAR. Will you get the letters, or have some one get the letters?

Mr. DISQUE. You will have to get those in Washington. Mine was just a telegram—they will take so much fir. These orders were placed in Washington.

Mr. FREAR. Where will we find them in Washington? We were directed in Washington to come out here to get all the records.

Mr. DISQUE. Well, we will try to find them in our own. We have telegrams from Washington ordering the fir.

Mr. FREAR. What we were interested in, as a committee, was the gradual growth of the demand for fir, and the reason for that is not alone what has occurred in the past but what may occur in the future; that is, we want to see how it developed and what the possibilities were, and why.

Mr. DISQUE. I think, if I tell you that fir is heavier, it hasn't the resiliency of spruce, it fractures much more readily than spruce, but when a nation is trying to increase its air fleet they will use anything that will do.

Mr. FREAR. That is—

Mr. DISQUE. They prefer the spruce and always tried to get it; and, I might add—

Mr. FREAR. Our airplane stuff practically all went into training places, didn't it; that is, our fir—

Mr. DISQUE. I don't know anything about what was done in the construction. I was told something, but I don't know; but this is

true, that as a result of the interallied council in Paris, or in Versailles, wherever it was—the supreme war council—most of the spruce we produced, in fact practically all of it, was directed to France and England and Italy.

Mr. FREAR. What percentage did Italy get?

Mr. DISQUE. Offhand, I would say about one-seventh of it; may be an eighth?

Mr. FREAR. That is, one-eighth of all, including the United States?

Mr. DISQUE. All, including the United States.

Mr. Chairman, may I refer to—

Mr. FREAR. Yes.

Mr. DISQUE. This morning you spoke about making—our arrangement in Washington. I think it would be well to pillar up in the minds of the committee the reference that has been made to my supposed agreement with Mr. Gompers in connection with bringing labor out here. That sort of thing occurred in the beginning of this thing, and it would probably be well to get it cleared up now.

Mr. FREAR. You don't mean the hearing now?

Mr. DISQUE. No; in the beginning of my operations.

Mr. FREAR. Oh.

Mr. DISQUE. That was one of the early—

Mr. FREAR. Something you want to discuss or disclose to the committee?

Mr. DISQUE. I want to make the record in that respect.

Mr. FREAR. What is the record? You mean our record?

Mr. DISQUE. Yes. The record says, as I have read it, that I had a secret agreement or a conference or an understanding with Mr. Gompers to put in an eight-hour day out here. I think that direct statement was made, and I want to deny it, absolutely.

Mr. FREAR. That is, there was nothing at all to that?

Mr. DISQUE. Absolutely nothing.

Mr. FREAR. You had nothing to do with any eight-hour proposition?

Mr. DISQUE. I did, after I came out here. The one reference that Mr. Gompers made to me, in my conversation with him about an eight-hour day, was something to this effect. He mentioned it once, I think, only. He says: "I believe if those folks would go on an eight-hour day out there that their troubles would be over." I didn't agree with Mr. Gompers to do anything.

Mr. FREAR. When was this?

Mr. DISQUE. That was before I came out. And it came up—I want to say why I saw Mr. Gompers.

Mr. FREAR. That was before you came out; what month—October, November, 1917?

Mr. DISQUE. That was the latter part of October, 1917, after I had been here the first time, believed that we needed men in this operation. I went back to Washington and recommended it.

Mr. FREAR. Recommended what?

Mr. DISQUE. That they provide men.

Mr. FREAR. Yes.

Mr. DISQUE. We had never had soldiers supplied to private operations to work. There didn't seem to be any other way of doing it, and in order to do this without bringing down the antagonism of a

great element in this country, I presented the thing to Mr. Gompers, who, as you know, is the head of a big organization in the country. interested in labor, got him to see the necessity for it——

Mr. FREAR. How did you get him to see the necessity?

Mr. DISQUE. Explained to him just what I had learned of the conditions.

Mr. FREAR. Where and when and how was that done?

Mr. DISQUE. That was explained to him in his office at Washington.

Mr. FREAR. That is, you did that?

Mr. DISQUE. I did that, and he told the Secretary of War, so far as he was concerned they would not disapprove of it. He realized the necessity of it.

Mr. FREAR. Not disapprove of what?

Mr. DISQUE. Putting soldiers into private operations out here to work in the production of this lumber and that was——

Mr. FREAR. You mean he would permit the Government to employ those soldiers in that work?

Mr. DISQUE. No; I don't mean that at all.

Mr. FREAR. What is the meaning that he would approve of it?

Mr. DISQUE. If I said that he would approve of it, it is not the correct expression. I mean to say that he told the Secretary of War that they would not oppose it or cause any trouble about it, that he believed that it was the necessary thing to do, and, as an American, was willing to see any precedent broke to supply what seemed to be a necessary vacuum in the labor situation. That was all there was to that conference.

Mr. FREAR. That is, if he was not opposing it, he was putting himself on a higher plane than the opposition which came out here in the laboring conditions——

Mr. DISQUE. I think so.

Mr. FREAR. Well, how many interviews did you have with him, and what was the nature of them?

Mr. DISQUE. I just had those two, and that is all there was to it.

Mr. FREAR. Did you have any interviews with him later?

Mr. DISQUE. No. I have never seen him since, and——

Mr. FREAR. Did you discuss, with anyone else, this question?

Mr. DISQUE. About this question? Discussed it with the Assistant Secretary of Labor.

Mr. FREAR. That is, Post?

Mr. DISQUE. Mr. Post.

Mr. FREAR. What was the character of that discussion?

Mr. DISQUE. Simply the same discussion, and I think he wrote a letter or a memorandum to the Secretary of War, stating the result of that discussion, and stating that there would be no objection from the standpoint of the Labor Department of the Government.

Now, later on—I have been accused in here of playing some kind of a game with Mr. Gompers. That is absolutely untrue.

Mr. FREAR. You didn't mean this committee has made such a charge?

Mr. DISQUE. No, sir; I mean the evidence that I have read. Later on, some of the labor folks out here tried to take advantage of a Loyal Legion organization that we built up to stabilize this condition, and I wrote to Mr. Gompers, in no uncertain terms, explaining to him what was trying to be done and that it had to

stop. Those letters would satisfy anybody that there was nothing between Mr. Gompers and myself. I want this set right here in this testimony to-day.

Mr. FREAR. Did Gompers have the determination of the 8-hour day, or how did that grow out?

Mr. DISQUE. He never knew anything about it, so far as I know.

Mr. FREAR. Did you determine it?

Mr. DISQUE. I was forced to determine it, not of my own will. Do you want that story?

Mr. FREAR. Yes; glad to have it.

Mr. DISQUE. I would be glad to give it to you.

Mr. FREAR. I think the committee would appreciate it.

Mr. DISQUE. It seems as though there had been quite a discussion among lumbermen here for about a year, about the 8-hour day. Some of them were willing to adopt it, others didn't. They had formed an organization to prevent the adoption of it. Practically all the members of that organization I think I can count as my friends now, and I could then. They had strikes and troubles, and the impression they gave me was that the industry was practically paralyzed during the summer of 1917, because of the labor conditions, and it seems as though the 8-hour day was the big problem. Several of them came to me at different times, talked with me privately about it. Some of them wanted me to declare for it, some of them wanted me to oppose it. Personally, I did not believe that any man ought to want to work only 8 hours during war. I have worked 24 hours during war, for two years, day and night, hiked over hills and mountains, and been in engagements. I can't understand any man who would want to cut his work off on 8 hours during the war period, but we had a practical problem here; it was no theory.

Mr. FREAR. That same problem was all over the world, wasn't it?

Mr. DISQUE. The Inland Empire adopted an eight-hour day along about the winter of 1917.

Mr. FREAR. The Inland Empire is what?

Mr. DISQUE. That is the eastern part of Oregon and Washington, and Idaho; and then they repudiated it, as I understand it; at any rate, they got the thing worked up again. There was a mediation commission out here that probably got the laboring men to think about it again, and those operators who favored it; and I was in Washington in February, during which time the lumbermen were holding meetings, trying to make up their minds what they wanted to do, and if there is one of them who will say that I influenced them in any way during those meetings, I haven't heard of him; I don't believe there is. They met, and they didn't come to an agreement. They were in closed session, finally, here in Portland, the day I returned from Washington, and I might say that while I was in Washington on that trip, or any other trip, I never discussed the eight-hour day with Mr. Gompers, Mr. Baker, Mr. Post, or any other man in an official position, or unofficial, in Washington—the subject never came up. Letters were sent out here to Dr. Suzzallo, and telegrams, but never one to me.

Mr. FREAR. Those were introduced in the record.

Mr. DISQUE. I think all I have ever seen are in the record.

Mr. FREAR. Those came from Secretary Baker and from the Assistant Secretary, Wilson?

Mr. DISQUE. Yes, sir.

Mr. FREAR. In which they were urging the adoption of that; but that the people here were to try and arrange that themselves?

Mr. DISQUE. Among themselves.

Mr. FREAR. Without the insistence of the department?

Mr. DISQUE. Well, now, I got back here and was met at the train, on my return from the trip to Washington, and asked to come to the Portland Hotel.

Mr. FREAR. When was this?

Mr. DISQUE. About the end of February, 1918. I found probably 150 to 200 lumbermen there. I understood they had been in conference off and on for some time, maybe a week or so, I don't know exactly. They had a committee of about 25 appointed that wanted me to sit in with them, and, I think, all day we sat in a discussion of this problem. We found that a number of operators had posted notices that they were going on the eight-hour day on March 1. We found that a number of others were very hostile to the idea. They were not able to get together on it. It was apparent, and apparently accepted by all of them, that we had to do one thing or the other uniformly throughout the industry. Well, that went on, as I say, all day, and along toward evening that meeting of some 150 or 200 lumbermen unanimously stood up and voted to turn the thing over to me to decide. I had heard the thing, and my opinion was that the industry would probably be wrecked for months to come if we didn't announce for the eight-hour day. That is why, having passed it on to me, I said "That is my recommendation."

Mr. FREAR. Do you know of any other case in the Northwest, or in the country, where one man was empowered to decide for the whole western part of the United States an eight-hour day should go into effect?

Mr. DISQUE. That was unusual; but it was passed to me by the lumbermen.

Mr. FREAR. And you determined that the eight-hour day should go into force for soldiers and for all others? Did you determine the question of the pay that was to go to soldiers?

Mr. DISQUE. Only as providing that it would be the same that civilians got. The pay schedule was the result of averaging, I suppose, 100 or so operations, all done by the lumbermen themselves. That was written into our record—

Mr. FREAR. You determined that the soldiers should get the same pay as the civilians, that was your action?

Mr. DISQUE. Well, that was approved properly by the Secretary of War.

Mr. FREAR. Yes, I know; but do you know of any other branch of the service where that was the case?

Mr. DISQUE. Well, all during my Army career I have seen soldiers receive extra-duty pay.

Mr. FREAR. But that is a different proposition. I have received it as a soldier myself.

Mr. DISQUE. All through the Army I have seen soldiers work for the post exchange and other extra work, the salary of which is not provided by law, and paid extra.

Mr. FREAR. Yes, that is true; officers, soldiers.

Mr. DISQUE. I have never seen officers get anything extra.

Mr. FREAR. Well, they get it, and you will find it in the law; that is, they get it at this time for extra quarters; that was added by Congress, and we gave them additional, but I am asking you if you know of any other case in your career, or in the history of this Government, where soldiers were placed upon the same basis—that is, these soldiers here, I mean—were placed upon the same basis as civilians and given from \$3 to \$4 and \$5 a day working in the woods and on the railroads, and if so, why? You determined it, you say?

Mr. DISQUE. What is the question, now?

Mr. FREAR. Do you know of any other case?

Mr. DISQUE. I do not.

Mr. FREAR. Your boys are coming back to Oregon, some of them, now; they will not all come back.

Mr. DISQUE. What boys?

Mr. FREAR. The boys, the soldiers that went out from this town; they are not all coming back, by far. The company I organized, only about half of them. They had casualties of nearly 50 per cent in the Battle of Chateau Thierry, and they were getting \$30 a month. My own son was over there; and you say that you gave these boys—you determined the amount.

Mr. DISQUE. Now, listen——

Mr. FREAR. Just a moment, I want to get the question.

Mr. DISQUE. If you will talk calmly to me——

Mr. FREAR. Yes.

Mr. DISQUE. Don't waive your fingers at me.

Mr. FREAR. I will discuss this question with you.

Mr. DISQUE. I want the record to clearly indicate the attitude of the chairman.

Mr. FREAR. Have it indicate the attitude of the chairman?

Mr. DISQUE. He is pointing his finger at the witness.

Mr. FREAR. And the witness is telling him how he has got to interrogate himself. Go on, put that down.

Mr. DISQUE. The chairman apparently is making this a personal matter.

Mr. FREAR. Not at all.

Mr. DISQUE. You referred to your son.

Mr. FREAR. That was just one incident.

Mr. DISQUE. I have been through a war.

Mr. FREAR. Yes. And you determined, for the people of this country, that the boys who are home here, the boys who are out in the woods, should receive several times the amount of the pay that the boys who were over there giving their lives in France; is that right?

Mr. DISQUE. That was done as a measure considered by those responsible as the only possible way of accomplishing what had been set before them as an absolutely necessary war measure, and, if you will permit, I would like to outline a few of the reasons why it was found necessary.

Mr. FREAR. Let's fix it whether or not your answer stands as before. Before, your answer was that you decided it. Now you say it was decided by others; is that right?

Mr. DISQUE. I did it.

Mr. FREAR. Then you say you decided it. All right. Now, give the reasons.

Mr. DISQUE. It was decided by me after consultation with a number of people—

Mr. FREAR. Oh, yes

Mr. DISQUE. That in the situation, and approved by the Secretary of War and the Aircraft Production, all of whom were then facing a national crisis—

Mr. FREAR. Yes.

Mr. DISQUE. All of whom were interested—conscientiously interested, patriotically interested—in accomplishing this thing.

Mr. FREAR. Give us the reasons. Don't make any attempt to philosophize over the frame of mind of the Secretary of War and others, because the people who were over in France were engaged just in the same way, patriotically, and giving up their lives. Tell us why you decided to give those men the extra pay over and above what the women, the mothers and fathers, were giving their boys over there?

Mr. DISQUE. The first reason was that when these men were brought, they were intended, primarily, to work for private operators, and no—

Mr. FREAR. You mean when they were enlisted?

Mr. DISQUE. When they were brought here to supplement this labor. And if we had put soldiers in their camps to work on soldiers' pay, which the Government was giving soldiers, you would be giving the operator the advantage of free labor. If you had had him pay the soldier what the Government was paying him he would have had labor for a third or a fourth of what his competitors were paying. Another reason—

Mr. FREAR. Just a moment on the question of free labor. Let's see if we understand that. It would give him the advantage of free labor, you say. He was working for the Government.

Mr. DISQUE. He was producing everything from ship timbers to aircraft and commercial lumber, necessarily. There is no operator here who had perfect aircraft trees, and, then, working for—

Mr. FREAR. Your rule was that unless he was producing over 50 per cent aircraft lumber that you would have the right to close his mill; wasn't that it?

Mr. DISQUE. I had no such rule that I know of.

Mr. FREAR. Wasn't that a rule that was applied?

Mr. DISQUE. That was not.

Mr. FREAR. All right. The labor, however, was labor for the Government, they were getting out supplies for the Government, getting out airplane stuff for the Government, weren't they—these soldiers who were put in there at the work; otherwise, there could be no contention that you had a right to employ them. You were not putting them at any commercial operations, were you?

Mr. DISQUE. We certainly did not intend to.

Mr. FREAR. Of course, there has been testimony that they were put at it, but I mean you didn't intend to do it?

Mr. DISQUE. I understood that there was a case reported.

Mr. FREAR. You didn't intend to do that?

Mr. DISQUE. No; we had no such intention.

Mr. FREAR. So that, as a matter of fact, they were working for the Government, or you believed they were and intended that they should?

Mr. DISQUE. Well, they were working indirectly for the Government, because there was hardly an operation here that was provided—roughly, I would say—I don't suppose any of them put 50 per cent of their product into the Government's hands. They necessarily produced several kinds of material that the Government didn't want, and they sold it commercially, they got a profit on it, and the men who assisted in aircraft production were necessarily handling commercial operations also.

Mr. FREAR. Are you aware of the fact, as stated in Seattle by Capt. Turner, that he had a force of men—one hundred and thirty-odd men—who were engaged in employment there—commercial employment—and never got out anything for the Government? Is that so?

Mr. DISQUE. I read that.

Mr. FREAR. Well, is that true?

Mr. DISQUE. I have here several requests from Capt. Turner, written in the form of letters and telegrams, asking us to send men to that camp. He was advised repeatedly that unless the production from a given camp amounted to 100 feet of aircraft lumber per man per day that the men should be withdrawn.

Mr. FREAR. When was that letter sent?

Mr. DISQUE. That was our general regulation. Capt. Turner knew about that. I noted Capt. Turner said they produced no aircraft lumber.

Mr. FREAR. I think that ought to go right in the record here.

Mr. DISQUE. Yes.

Col. STEARNS. We have all the correspondence here.

Mr. FREAR. Take your time.

Mr. DISQUE. Let us cite these requests from Capt. Turner for additional men.

Mr. FREAR. Of course, that may lead to the assumption that he had that they were going on to manufacture for the Government. Of course, he may not have known just what was to be done there—that is, what the purpose was—until, as he said, he later discovered it.

Col. STEARNS. He was up there in charge of that thing; he was responsible.

Mr. DISQUE. He knew, absolutely, that we didn't propose to leave men out where they were not producing aircraft lumber.

Mr. FREAR. All right. Anything along that line.

Mr. DISQUE. On July 17, as late as that, Capt. Turner wired us:

Cherry Valley Co. needs 10 boom men, Everett. Necessary distribute log production.

On June 8 Col. Stearns, returning an application for more men, said:

It is the policy of this office from now on to send troops to those camps and mills that are producing only the highest grade of airplane spruce.

Mr. FREAR. That is from him?

Mr. DISQUE. This is from Col. Stearns, refusing to send more men.

Mr. FREAR. When was that?

Mr. DISQUE. June 8. (Reading:)

It is probable that in the not far future the troops who are now in fir camps, and especially fir camps that are not getting out an excellent quality of airplane fir, will be withdrawn.

Mr. FREAR. What was the occasion for the writing of that letter?

Mr. DISQUE. They were asking for more men.

Mr. FREAR. Were you getting reports as to what was being produced in that camp at that time?

Col. STEARNS. Yes, sir; we got a report, and here are our efforts. This letter should be read.

Mr. DISQUE. Well, that only confirms what I have stated before, that they required a hundred feet per man per day in order to retain men. That had to be aircraft material.

Mr. FREAR. Well, now, would that mean 50 per cent? I have used the term 50 per cent——

Mr. DISQUE. No; it had to be logs that would eventually produce a hundred feet of the best material that we shipped.

Mr. FREAR. That would be over 50 per cent, wouldn't it, because the average man, his capacity is what, 700 feet a day, that is the estimate, and, according to your estimate of 15 per cent, that would be that he would have to produce considerably over 50 per cent.

Mr. DISQUE. There were civilians in those camps, in addition to the soldiers, so that the production was not reflected by the number of soldiers in the camp, entirely.

Mr. FREAR. No; but the individual, I take it, it would have to average up to that.

Mr. DISQUE. I don't believe I quite get that.

Mr. FREAR. All right.

Mr. DISQUE. I will just state that in connection with the Cherry Valley Timber Co., on July 18, we addressed a letter to them, containing this paragraph:

This means 100 feet of aircraft lumber or flitches that will produce 100 feet of aircraft lumber. One hundred feet of flitches is not sufficient.

That means, then, that it must be the finished article. A copy of that, of course, was given to Capt. Turner.

Then he recommended that if we could not supply men to another camp from Vancouver, that we move them from the Cherry Valley Co. over there.

We wrote him August 28 that we were going to take those men from fir camps that seemed to be producing less than others——

Mr. FREAR. That is, you mean less Government material?

Mr. DISQUE. Less Government material—and put them into more productive camps. The selective logging operations were expanding and we adopted the plan of moving those trained men then into them.

Mr. FREAR. Was he making complaint at that time?

Mr. DISQUE. No; he never made any complaint that I know of.

Col. STEARNS. He made one report, and that resulted in this——

Mr. DISQUE. September 13 he wired us in reply to a telegram in which we asked him the production up there and said that for August they had produced 254,000 feet total log scale; same period, 10,500,000 feet all species. That, reduced down, meant that they were producing their hundred feet per man per day.

Mr. FREAR. But it does not indicate whether it is for Government purposes.

Mr. DISQUE. Oh, yes. Well, his reply was a message to a message we had sent him.

Col. STEARNS. That came up in telling exactly how—

Mr. LEA. Could I look at that a minute [examining paper]?

Mr. DISQUE. It is proper to say here that in these fir operations when a log is thrown into the water, goes into a raft, it is sold then and goes to a variety of mills. The only way we could judge of that was by Capt. Turner himself watching that production up there and knowing whether it was the type of fir tree that would produce aircraft lumber, then giving us the total production from the camp, and from that taking our average that we had learned to believe in—the average that would become aircraft material from certain types of logs.

Mr. FREAR. What kind of a contract did you have with this—what is the name of the company?

Mr. DISQUE. The Cherry Valley Lumber Co.

Mr. LEA. In that connection may we have your telegram to Capt. Turner?

Mr. FREAR. I think he read that.

Mr. LEA. I think we want that in the record.

Mr. DISQUE. Well, I don't believe I heard of it. I haven't seen that.

Col. STEARNS. I don't think that is there; I think just the answer.

Mr. DISQUE. We ought to have had it. I don't think we had a contract with those folks, for we had no contracts with a great many loggers who were using soldiers in their camps. They were producing the logs. We followed it through to know that they were doing that.

Mr. FREAR. What evidence have you that they were providing airplane lumber?

Mr. DISQUE. Only Capt. Turner's statements.

Mr. FREAR. Capt. Turner's statement is to the effect that they were not.

Mr. DISQUE. Well, here is a letter. Of course, we—

Mr. FREAR (interrupting). That is, that is his sworn statement before the committee, that they were doing commercial logging.

Mr. DISQUE. Well, here is a letter from that company.

Col. STEARNS. We wrote to know whether logs were going into airplane lumber or not.

Mr. DISQUE. Yes. That is a reply to ours of September 11 at hand, in which he requests certain information in regard to airplane cants which could be secured from the rafts of the Cherry Valley Timber Co.

Col. STEARNS. Read the whole thing.

Mr. DISQUE. All right. We regret we are unable to give you the exact information you require, for the reason—

Mr. LEA (interrupting). If you will just permit the suggestion, suppose we put in the whole letter, the date, and to whom addressed.

Mr. FREAR. Well, you can do that, but just read it now so the committee will have it.

Mr. DISQUE. All right.

The reason that our mills saw various brands of logs which will be going through at the same time and no scale by brands is kept in the mill, although all rafts are carefully checked and inspected before being sawn.

Futhermore, we have sawn very few of the Cherry Valley logs in the last few months, say, since the month of July, as they have been going to other mills. However, we would say, from considerable experience with them in the past, that they would yield a very fair proportion of airplane stock if purchased in camp run—that is, without any logs sorted out, except hemlock and cedar—and the camp run of fir would yield us in the past about 65 per cent of all the airplane stock that we produced.

We are now about to start their raft No. 160 at mill A, and, judging from its appearances, it will yield us a very satisfactory volume of airplane stock. We still have two rafts of theirs in storage, which will yield a smaller amount of airplane stock than No. 160, and since these rafts were purchased early in August we have been able to secure no more of their logs.

This was the mill that was getting the production from that camp. We had to go to that source to get a real unbiased opinion of the quality.

Mr. FREAR. Well, that bears out your contention, does it, that they were cutting some airplane stock?

Mr. DISQUE. There is no doubt that they were cutting airplane stock.

Mr. FREAR. You simply don't know the amount, which, of course, is—

Mr. DISQUE (interrupting). It could be obtained, I am sure, from the mills who bought their rafts.

Mr. FREAR. Well, the purpose here, as I understand, is that you were attempting anyhow to keep a hand on the airplane stock?

Mr. DISQUE. Absolutely. We required reports, Mr. Chairman, from every officer in those camps to keep us advised.

Mr. FREAR. In other words, you were not intentionally or not purposely letting those soldiers out for commercial purposes?

Mr. DISQUE. Certainly not.

Mr. FREAR. Yes. Well we want it put in the record, then.

Mr. DISQUE. A point brought up is, we have several orders here issued by the adjutant gradually withdrawing men from time to time from different places that we found were not producing the fair percentage that we had a right to expect. There is a number of them here, and I suppose we could bring a hundred or more.

Mr. FREAR. I have here a letter, a copy of letter, signed by Mr. Leadbetter to Mr. Howe. You have seen that, have you, of June 4, 1918, in reference to this conference incident which you brought up.

Mr. DISQUE. I don't believe I ever saw it.

Mr. FREAR. Here is a memorandum from Mr. Howe, and you can state whether it covers the facts, and I will only read that part which relates to labor trouble.

Mr. DISQUE. What Howe is this?

Mr. FREAR. Maj. Howe, of the Munsey Building, Washington, D. C.

Mr. DISQUE. June 4?

Mr. FREAR. June 4, 1918. It is headed "Equipment Spruce Production Section," and it is signed by F. W. Leadbetter, major, Signal Corps, purports to be a copy of his letter. He says:

First, the activities of Col. Disque, of the Spruce Production Department, began through a recommendation by the Secretary of War that if such an arrangement as Col. Disque suggested could be made satisfactory to labor it looked as though the matter could be handled from a military standpoint.

Leadbetter at this time was in Washington, as I take it, as you said, acting in conjunction with your work here?

Mr. DISQUE. Yes.

Mr. FREAR (reading) :

Second. Col. Disque was instructed to take the matter up from a labor standpoint with Mr. Gompers. This was done, and in a final interview the matter was settled in a way satisfactory to Mr. Gompers and his assistants. Mr. Gompers then requested that Col. Disque and the writer—

That would be Leadbetter—

accompany him to the Secretary of War's office, where the Secretary of War approved of the general understanding and told Col. Disque to report to Gen. Bliss, Chief of Staff, in order to get the matter put in military shape. Gen. Bliss gave the attached instructions to the writer. They appear very simple and apparently were to be carried out immediately. Col. Disque went west with this view of the situation. Gen. Bliss went abroad, and evidently these instructions have been variously interpreted by the different people who had in their hands the matter of carrying them out.

You need not take this down. The next refers to some matters here; unless some one wants to put them in the record. Referring to paragraph 8:

As regards the labor situation, I feel that it must be handled with the utmost caution. You know that Mr. Gompers's people were thoroughly in touch with Col. Disque, and at a subsequent conference with Assistant Secretary of Labor Post, the matter of the help of the Secretary of Labor was assured, which situation the attached papers will place clearly before you.

Col. Disque's broad experience in handling labor, his breadth of view of the labor situation, and the fact that he was in close touch with Mr. Gompers, Mr. Morrison, Mr. Hamilton, and Mr. Gompers's other assistants, and Secretary of Labor Post; that he has met on the coast and been in close personal touch with Secretary of Labor Wilson and Mr. Felix Frankfurter and other members of the President's Mediation Committee, goes to prove that no other man could have the confidence of these people and the knowledge of the situation that he has, and his views on that particular subject are, therefore, in my judgment, better than that of any other person.

Major Leadbetter, as I said, was at this time serving with you, but he was appointed before you were?

Mr. DISQUE. He was appointed before I was.

Mr. FREAR (reading) :

9. The method by which these soldiers who are going into the woods should be paid must, of course, be carried out in accordance with the original understanding.

What did he mean by "must be carried out"?

Mr. DISQUE. I am sure I don't know.

Mr. FREAR (reading) :

The lumbermen agreed, through their representatives here, that they would pay the prevailing loggers' wages to the soldiers, from which would be deducted the \$30 a month allowed by the Government. This arrangement should, if possible, be extended to the soldiers working in the cut-up plant established at Vancouver, if such a scheme is considered feasible by the proper military officers. By direction of the chief signal officer.

(Signed)

F. W. LEADBETTER.

I don't know that you care about the rest of the letter, but you may look it over. [Mr. Frear passing letter to Mr. Lea.] In other words, the danger existing over in the cut-up plant; which was practically handled entirely by soldiers, was it not—the labor?

Mr. DISQUE. Practically; yes.

Mr. FREAR. Yes. That serious danger that occurred over there brought to the mind of Col. Leadbetter the necessity, or Maj. Leadbetter, the necessity of having those soldiers paid the same as civilians. Was that done?

Mr. DISQUE. I am sure I don't know why, or what Maj. Leadbetter had in mind in writing that letter. I don't know why he wrote it. He was thoroughly familiar with all of our operations. But he is mistaken in saying that I was in close touch with Mr. Gompers or Mr. Secretary Wilson. I met Mr. Wilson once on the west coast.

Mr. FREAR. He mentions Morrison and several others there that you were in close touch with.

Mr. DISQUE. I never heard of them after I left Washington. I met them once, or it may be twice, in Washington; had no communication with them, except Mr. Gompers on two occasions, when I protested against the activities that were leading up to what I felt would be a disruption of the Loyal Legion here. And that first reference in there to—may I see that just a minute? [Mr. Lea here passed said letter to Mr. Disque.]

Mr. FREAR. That contains other matter I didn't care to have go in, unless you want it in. It relates to you personally. [Mr. Disque here peruses said letter.]

Mr. DISQUE. No; I don't think that is important. You asked me if the men at the cut-up plant—

Mr. FREAR (interrupting). At Vancouver.

Mr. DISQUE (continuing). Received a civilian's wages. The mill was built by soldiers entirely, practically entirely, without any extra pay whatever; completed by them. After it got under operation we were confronted with the question of discrimination in the organization here, and they were allowed extra wages. It was exactly similar in its net result to the extra-duty pay that was paid to hundreds of soldiers in the Army working as tradesmen. I had charge of the Government factory at Manila, which is the largest manufacturing plant that the Army controlled up to the time of the war, some 1,200 men employed there, and every soldier was paid extra pay.

Mr. FREAR. Was there a provision of law, or of any act passed by Congress that authorized it?

Mr. DISQUE. Yes, sir.

Mr. FREAR. Was there any provision of law that authorized this?

Mr. DISQUE. There was not.

Mr. FREAR. That is, you were a law unto yourself in that respect?

Mr. DISQUE. No, sir. I didn't do this of my own—I had the approval of all the superiors in the War Department.

Mr. FREAR. Well, were the officers of the War Department, after you had decided it and they approved it, did they have any authority to do this?

Mr. DISQUE. Well, sir—

Mr. FREAR. That is, any authority of law, so far as you know?

Mr. DISQUE. If we had all limited ourselves to the strict niceties of the law, we would have been whipped in this war long ago.

Mr. FREAR. Well, your department here—this corporation and the division—was the only one, so far as can be found, was it not, that failed to observe the law in these respects: They passed an eight-hour day for the soldiers and paid them the same wages as civilians. Was there any other branch of the Government where that was done?

Mr. DISQUE. I am not familiar with the other activities. We were working out here 12 and 15 hours a day. We didn't know what was going on anywhere else.

Mr. FREAR. Well, you had 30,000 men here.

Mr. DISQUE. I said 28,000 men.

Mr. FREAR. Well, you had some officers, too. Does that include officers?

Mr. DISQUE. No.

Mr. FREAR. How many officers did you have?

Mr. DISQUE. I think there were approximately a thousand officers.

Mr. FREAR. That is—that is, 29,000. I am trying to get the authority, because it is an important question—to determine just on what authority you were determining an eight-hour law, which is done by an act of Congress, and by what authority you were determining what amount of money should be paid to these soldiers over in the Vancouver plant and out through the woods, which is only ordinarily done by an act of Congress.

Mr. DISQUE. Well, the determination of that eight-hour law, Mr. Chairman, was pretty much the same as if a man had come along in an automobile and had said, "Here, you can take this car and drive it around the square." I did it because the lumbermen asked me to. I had no authority other than the authority of the unanimous request of this industry to do it. It was not a law. It was a decision rendered by a man that they had asked to arbitrate or mediate that question.

Mr. FREAR. Now, did they pay extra pay for time over the eight hours?

Mr. DISQUE. Yes, sir.

Mr. FREAR. Did you do that for the soldiers?

Mr. DISQUE. I don't know.

Mr. FREAR. Did the soldiers stand on the same basis as the civilians?

Mr. DISQUE. He was supposed to.

Mr. FREAR. Then he would be supposed to receive the extra pay for the extra time, would he not?

Mr. DISQUE. I would have to check up to see what they did on that. This point, however, should be considered, even in the lumber industry men receive a variety of wages. The schedule runs from low up to high, due to the skill of the individual and the work that he performs. And we endeavored in the operations where the cost-plus contractors were involved to pay the soldiers working there in accordance with their skill and services rendered, and as they became more efficient they were advanced. The point was to—the purpose was to give them a minimum that would permit them to live. A man can't live in these camps on soldier pay. It cost a dollar and five cents to feed the men out here, and the Government paid them a dollar total. These men had to have clothing, that cost a great deal more than soldier clothing, and they wore it out much more rapidly. All those things were taken into consideration.

Mr. FREAR. In view of the fact that you took this into consideration it is an interesting disclosure that the principal of a high school over at some little city testified the other day in Seattle that his pay after deducting his board, I think, was 7 cents for 20 days, and he was engaged in shoveling, and he said that he did not know of any

cases where the men had been taken from the shovelers' ranks and raised in their wages or in their position. Now, he was a principal of a high school, he is to-day, and he was a graduate of a high school.

Mr. DISQUE. Well, I imagine the soldiers in France netted even more than that from their dollar a day.

Mr. FREAR. Well, I know; but I am giving you the situation to make it clear for the committee.

Mr. DISQUE. That explains for the necessity, Mr. Chairman, why we had to pay these men, very clearly. It is probably true, what he said; but a school-teacher is not a very good shoveler, and the probabilities are that he didn't earn any more. [Laughter.]

Mr. FREAR. Well, the school-teachers and the lawyers and the doctors and the dentists were brought in here to do lumbering, weren't they? That was the testimony of a gentleman who testified before the committee yesterday.

Mr. DISQUE. Well, we had to do a good many things. We had a military regiment here which was soldiering. We had to have clerks look after our operations. The accounting was a tremendous problem. We had to have men who were capable of operating telephones, telegraphs, trucks; men who—in fact, all the men in the cut-up plant were trained to do a special kind of manufacturing, and I have had a number of lumbermen tell me that any man would have had to have been trained to do that work, and the longer a man had been in the lumber business the more difficult it would have been to have trained him in that mill. The superintendent of that plant made that remark to me yesterday, and he has been a lumberman for 25 years.

Mr. FREAR. Mr. Miller's testimony yesterday in this same building was to the effect that these lawyers and doctors and dentists were engaged in the woods at lumbering and cutting down trees, or trying to, and of course his testimony is to the effect that it took about three or four of those men to do as much as an ordinary lumberman, due to their inexperience, not to their lack of knowledge.

Mr. DISQUE. Well, of course, that testimony—we heard volumes of that same kind of talk when we were out here, but we were doing the best we could. We could not get lumbermen. There were just so many of them left out here. And as long as we could not get a hook tender that had been in the business all of his life the next best thing was to get what we could. And incidentally I think it is interesting to state here that after we got hold of this first draft of men to supplement in the industry, from that time on, at our request, we got only men who were not subject to the draft, men who maybe had poor eyesight, men who might be flat footed, men who were of an age eligible to go to war, except for some physical defect that still permitted them to work, and our whole effort was to make this organization up out of men who were keen to do something, but who were not permitted, through their physical disqualifications, to go to France. We had—I suppose 60 per cent of our men were of that type: and gradually it was the purpose, and it was being carried out, to replace the fellows who were men of the type that would pass the draft and allow them to go on into competent units and go across, replacing them with the limited-service men.

Mr. FREAR. How many men did you transfer from your camp here to other camps for the purpose stated?

Mr. DISQUE. Not a single one.

Mr. FREAR. Consequently you were gathering them in here as fast as you could, were you not?

Mr. DISQUE. The limited-service men for the purpose of replacing the others.

Mr. FREAR. But there were none that were replaced?

Mr. DISQUE. And if this war had continued two months more the first 3,000 would have gone. The plans were laid; the order had been issued.

Mr. FREAR. Were you given power to exempt men yourself?

Mr. DISQUE. Not at all.

Mr. FREAR. Or did you exempt them?

Mr. DISQUE. I didn't.

Mr. FREAR. That was urged, as I now recollect, by a very prominent citizen of the Pacific coast, that you be given the power to exempt men. I don't know whether you were ever made aware of that or not.

Mr. DISQUE. I had no power like that.

Mr. FREAR. You never attempted to exercise it anyhow?

Mr. DISQUE. No. I had no power to exercise it. I recommended—

Mr. FREAR (interrupting). Well, you had no power to grant the eight hours and to grant the extra-duty pay, as has been suggested, or grant the pay to soldiers the same as civilians, as far as that is concerned, unless there is some law that we are not acquainted with; and that is the reason I was asking this other question. The Vancouver plant—you had these soldiers over there on what? They were doing practically all the work, weren't they—just soldiers?

Mr. DISQUE. Practically all of them.

Mr. FREAR. What was the reason that they got extra pay? The high cost of living? Or what was the justification of paying them this amount? They were not competing with civilian labor. They were there at the cut-up plant.

Mr. DISQUE. Well, as I stated before, it was done very much in the nature that it is done everywhere in the Army where men are engaged in the performing of work of tradesmen, and also that it would have given a distinction here within this organization that would have injured its morale to have selected certain men and forced them to live on the Government ration.

Mr. FREAR. That was the basis of it, then—that it would interfere with the morale of these men that were patriotically trying to serve their country, in wages, out of the range of actual danger; is that it?

Mr. DISQUE. That was one of the reasons.

Mr. FREAR. Yes. Well, it is an unusual reason to give for a man who is subject to service at the front, and where other men were being killed who were sent there; it is an unusual condition, isn't it? You will have to concede that. That a man here who is out of the danger zone should be willing or should be permitted to have civilian pay up to what price? What did you pay? What were the wages paid these men?

Mr. DISQUE. Well, I can get our bulletin that covered that.

Mr. FREAR. Oh, just generally. I don't care about it exactly.

Mr. DISQUE. Just the average wage. I suppose they would average three and a half, three seventy-five, maybe less.

Mr. FREAR. Up to what?

Mr. DISQUE. Well, that is the average. I don't know what the highest was. I doubt—I think the highest paid man in the logging industry, if I recall the schedule, was a hook tender or high climber, who got a dollar an hour. I don't know whether we had any soldier high climber or not.

Mr. FREAR. They were paid throughout; no matter what position they occupied, they received the same pay?

Mr. DISQUE. Supposed to be the same. Mr. Chairman, I want to say to you this, that you don't regret the necessity of paying soldiers any more than I do. I have been a soldier all my life, and in 1915 I recommended to Gen. Wood, and he considered it favorably, that when this country ever got into war every mother's son in it go on a cost basis. I thoroughly believe in that. I wish it could be done. I think everybody—

Mr. FREAR (interrupting). On a cost basis; what do you mean by that.

Mr. DISQUE. To live without any profit at all; to live without making anything in addition to what it is necessary to live on. I am in thorough accord with that. But I was facing a practical problem here. I advised with honest men, and we did what we thought was right.

Mr. FREAR. Well, your problem was to simply pay these men civilian wages. What was the problem over there in Vancouver, where they were working without competition with the civilians, and yet they were being paid far more than the boys over in the trenches who were standing up against the enemy, who were fighting our battles?

Mr. DISQUE. I doubt if the men at Vancouver had any more left at the end of the month than any other soldier.

Mr. FREAR. Oh, well, that does not explain it.

Mr. DISQUE. After paying for the necessities.

Mr. FREAR. The man with the hundred dollars a week may spend all of his money.

Mr. DISQUE. No; I mean from taking care of their necessities.

Mr. FREAR. But were the men here at Vancouver in any different position than the men at San Antonio, or the men at Camp Lewis, or the men in any other place, excepting that they happened to be adjacent to a city where they could spend their money?

Mr. DISQUE. The men at San Antonio were adjacent to a city.

Mr. FREAR. It all depends on how close?

Mr. DISQUE. Well, as I say, that was a case where we used our best judgment in our sincere desire to serve to the best of our ability.

Mr. FREAR. I am not questioning the judgment, but the judgment is based upon an act without authority of law, unless there be some law, and that was the reason I was asking. There is no law that you know of as to that, I believe you said?

Mr. DISQUE. The approval of the Secretary of War is the law that I am interested in, of course, as a subordinate. Any order of a superior becomes law to any junior.

Mr. FREAR. Did the Secretary of War tell you to do this?

Mr. DISQUE. He approved of this plan.

Mr. FREAR. After you had done it, he approved?

Mr. DISQUE. No; he approved of it before we did it.

Mr. FREAR. Did the Secretary of War advise that this be done in a case of this kind? Did he issue any order? Was there anything official?

Mr. DISQUE. The only official thing I recall is an opinion by Gen. Ansell, the Judge Advocate General.

Mr. FREAR. To what effect?

Mr. DISQUE. Approving of this method. That is on file in the War Department.

Mr. FREAR. That is, after this order had been put into force?

Mr. DISQUE. I would say it was after he rendered an opinion.

Mr. FREAR. You have not the opinion there, have you?

Mr. DISQUE. No; I have not. But it approved of this policy and definitely approved of this program of paying the soldiers the civilian wages, and he was the Judge Advocate General of the Army.

Mr. FREAR. No; the Assistant Judge Advocate General.

Mr. DISQUE. He was Acting Judge Advocate General of the Army at that time.

Mr. FREAR. Have you that order?

Mr. DISQUE. I think it is in our file. I know the Secretary of War has got it; I think we have a copy of it.

Mr. FREAR. What does he base it upon; he is a legal officer; on what does he base the right to say what the wages should be of any soldiers, when the Congress is the only body, so far as we know, that has that authority?

Mr. DISQUE. Well, of course, the Judge Advocate General interprets laws for the Army, and just what his decision contained I am sure I do not recall. I was only interested in results, and that result was satisfactory to us, and we got the decision and found out what his reasons were.

Mr. FREAR. Found out what his decision might be, not his reasons?

Mr. DISQUE. It may not give his reasons; I do not know.

Mr. FREAR. Were these men in Vancouver Barracks anxious to go over to the front, or what was their attitude?

Mr. DISQUE. I suppose if any man had said to any of them that they wanted to stay here there would have been an ambulance necessary in a hurry, and I think I know that is the case with every man I knew in this organization.

Mr. FREAR. The reason I asked that is that the statement comes to us largely to the contrary; but I realize that that is not anything to base judgment on, and so I am asking you for your opinion on it.

Mr. DISQUE. The most outrageous libel that has ever been uttered against this division was to the effect that some of these men wanted to stay here. I can give you a number of instances where men wanted to get their boys out here, and where we told them we were not looking for men who wanted to come here. Mr. Pendleton could tell a very interesting story about a son of his that was due to be drafted, and it is reported to me we told him we did not want him when he came.

Mr. FREAR. Have you the letter?

Mr. DISQUE. I think our adjutant has it.

Mr. FREAR. Was that any different from many other letters that you received and where you granted the authority?

Mr. DISQUE. We never granted authority for any man to come here unless we wanted him for some specific job.

Mr. FREAR. Here is the case of a son of a logger, who would have been of some use, and you would not take him; but you brought men from New York and elsewhere.

Mr. DISQUE. We did not ask for those men.

Mr. FREAR. They were sent to you?

Mr. DISQUE. That was because the draft boards all over the country furnished their quota.

Mr. FREAR. They were furnishing men that were of no use, who had no training, and it takes a long time to train men to be of service in logging, does it not?

Mr. DISQUE. In some jobs.

Mr. FREAR. I have the letter here that you wrote to Mr. Gompers, and I will insert it in the record because I think it is along the line you stated there. It is dated June 10, 1918, addressed to Hon. Samuel Gompers, president American Federation of Labor, Washington, D. C. This was in the Ray report. It reads:

MY DEAR MR. GOMPERS: Photographic copies of your letter of May 21 to Mr. W. D. Clark, secretary local union, International Union of Timberworkers, at Coeur d'Alene, Idaho, seem to be spreading broadcast in this section of the country, and the activities of Mr. Call and other organizers of the timberworkers' union are such that I can only view with alarm the future relations of labor and capital in this section.

This was date June 10. [Reading.]

I endeavored to set forth, in my letter to you of April 20, the conditions as I saw them and it was my hope that the excessive activities of the International Union of Timberworkers would be discontinued. I felt also that you thoroughly appreciated my position and sympathies in the matter and that that, if nothing else, would satisfy you that the view I had taken was the patriotic and correct one for this period. Conditions are rapidly reaching the point where I shall find it necessary to disband the Loyal Legion of Loggers and Lumbermen and in doing so to state frankly that they have been exploited by the timberworkers' union in what I feel to be a most unpatriotic manner.

Did you have authority to disband them?

Mr. DISQUE. I organized them and I certainly would have disbanded them.

Mr. FREAR. How would you have disbanded them?

Mr. DISQUE. I would have ceased to have anything to do with them.

Mr. FREAR. You would have passed out an order that they should cease to exist?

Mr. DISQUE. No; I would have withdrawn my support. I have no doubt that would have resulted in their disbanding.

Mr. FREAR (reading):

It is not possible that two organizations can exist in this industry during the war period, both of them ostensibly for the purpose of insuring continued production and fair treatment of labor and capital.

We have gone through a very critical period in the lumber industry and for the past few months conditions have been better than anyone had a right to expect and I feel that if the International Union of Timberworkers will permit their organization to ride along as it was before the war and particularly as it was when I came to this section of the country, we can depend upon a stable condition among the laboring men during the balance of the war in the lumber industry, but I am confident that if they continue to exploit the Loyal Legion of Loggers and Lumbermen, as they are doing, to increase and expand their organization, we can look forward to a period of chaos which is rapidly approaching.

In the photographic copy of your letter to Mr. Clark there is the statement, "Quite recently the basic eight-hour day has been established in the lumber

and timber industry of the great Northwest. That was the achievement of the American Federation of Labor, and no little credit is due to the International Union of Timberworkers." I certainly am very much surprised to find such a statement over your signature and, feeling as I do that I have a complete knowledge of this situation. I wish to state unqualifiedly that the International Union of Timberworkers or the American Federation of Labor could never have brought about the basic eight-hour day in this industry during the period of the war.

I came here with the feeling of great confidence in the patriotic support I would receive from your office in undertaking a most difficult problem and up until recently I have had that support, but I feel that there must be some misunderstanding of the situation in your office to render it possible that such a communication could be sent broadcast or that such an impression and view of conditions could be possible in the headquarters of the American Federation of Labor.

I sincerely hope that you will consider this letter in the spirit in which it is written and realize that it is not possible for the Loyal Legion of Loggers and Lumberman to continue in existence and serve its purpose if the activities of the Timberworkers' Union are to continue.

That is a letter that you wrote Mr. Gompers. In that letter you threatened to disband this organization which you say you organized.

Mr. DISQUE. Yes.

Mr. FREAR. Had they been doing good service?

Mr. DISQUE. Very good.

Mr. FREAR. Paid for by the Government?

Mr. DISQUE. The Government—well, the Government covered the expenses of it, yes.

Mr. FREAR. How much?

Mr. DISQUE. I do not know what it amounted to.

Mr. FREAR. It ran into a good many thousand dollars, did it not?

Mr. DISQUE. Yes.

Mr. FREAR. And you complained because the American Federation of Labor or the International Union of Timberworkers claimed that they were to be credited with the eight-hour day, and you apparently did not approve of that statement. That was not the reason that you were going to disband the Loyal Legion, was it?

Mr. DISQUE. Not at all.

Mr. FREAR. Just what was the reason, so far as it appears?

Mr. DISQUE. I think it will be necessary to read the letter again to get the reason.

Mr. FREAR. I attempted to get it, and that was the nub of the situation that I got over on the other side.

Mr. DISQUE. If the letter does not explain it I do not think I can.

Mr. FREAR. What was the reason that you were going to disband this Loyal Legion?

Mr. DISQUE. Well, as I say, the purpose is clear from the letter. It would take just as many words for me to explain why as there are in that letter.

Mr. FREAR. Here is an organization of supposedly loyal men, employees and employers, who had agreed, as I understand, to act in this organization, and the Government had spent considerable money in this organization, and it existed until June 4, 1918, when you write a letter to Mr. Gompers and say to him that statements made by his organization regarding the eight-hour proposition are not true, and then state that you will disband this organization of yours unless certain conditions are complied with. I was wondering what those conditions were.

Mr. DISQUE. Well, now, let's see. Does not that say that the unions were trying to disrupt the organization?

Mr. FREAR. I did not get that they were trying to disrupt the organization from the letter.

Mr. DISQUE. That is what I endeavored to convey in that letter.

Mr. FREAR. You said:

If they continue to exploit the Loyal Legion of Loggers and Lumbermen, as they are doing, to increase and expand their organization, we can look forward to a period of chaos, which is rapidly approaching.

Then you speak of the photographic copy of the letter to Mr. Clark.

Mr. DISQUE. There was just a lot of activity started around here, particularly in Washington, trying to take advantage of this organization and turn it into a labor union. In organizing the Loyal Legion I felt that we had an obligation to both the men and the employers not to permit it to be used to become an advantage to any other organization that might come along. As I say, I would have withdrawn any interest in it if I had felt at any time that it was going to become any kind of a labor union, I. W. W., American Federation of Labor, or anything else, because this was a war organization built for one purpose, and if the other element was going to be strong enough to outdo that and take advantage of a war situation to bolster up its own organization I would not be a party to it. That is the idea I tried to convey in that letter.

Mr. FREAR. What was the purpose of referring to the eight-hour proposition; that is, that Gompers claimed the credit, and you objected to that?

Mr. DISQUE. I objected to that because the unions were telling the laboring men that they got them the eight-hour day, and they were trying to get the men of the Loyal Legion to form unions with the American Federation of Labor. I felt it was improper.

Mr. FREAR. You felt that the credit did not belong to them?

Mr. DISQUE. It belonged to the men and the employers in this industry.

Mr. FREAR. That is, on June 4, that it threatened a disruption of the whole organization; it threatened chaos, as you say. This matter had been running along for about six months at that time. You had given the eight hours; you were giving 30,000 soldiers the same pay as was given to civilians, and had conceded practically everything that could be asked for, and yet here was threatened chaos out here in this organization. Apparently all these concessions that were given had not brought about the result you hoped for, had they?

Mr. DISQUE. Yes, sir; they had. This was an attempt to interfere, which we nipped in the bud and prevented. There was constantly something coming up attempting to interfere, and it was simply ordinary vigilance being exercised when that letter was written.

Mr. FREAR. Did Gompers reply to it?

Mr. DISQUE. I do not recall.

Mr. FREAR. Was it necessary to keep 30,000 soldiers out here to regulate the business, and, if so, for what purpose—or the 29,000 soldiers, including officers and men?

Mr. DISQUE. We certainly felt that it was, or we would not have had them for the purpose of working wherever our operations called

for labor and wherever the independent operators required labor, and they were assisting the Government program.

Mr. FREAR. The suggestion comes, why was 30,000 fixed upon as the required number, or 29,000?

Mr. DISQUE. The strength of that organization grew up gradually from 10,000, 12,000, 16,000, 22,000, 28,000. I really think the last authorized was something like 27,000. They may have oversupplied. It was changed from time to time by the Chief of Staff to meet the increasing demand for this material. There is no doubt that 10,000 to 12,000 men would have been released and formed into an organization in December to go overseas. They would have negotiated by that time the fundamental work, which required an extra number of men.

Mr. FREAR. Is there anything to the suggestion that it takes a certain number of men to bring an organization up to a position where it must have a commanding officer with a certain rank? That has been presented.

Mr. DISQUE. That is just a pipe dream. I will tell you, Mr. Chairman, about that.

Mr. FREAR. I think it ought to be told.

Mr. DISQUE. I commanded here for a year. I know what you refer to; you allude to the fact that I became a general because there were 30,000 men.

Mr. FREAR. I am inquiring if that is true.

Mr. DISQUE. Friends of mine went to Europe, much more favored than I, and they became generals, men who were classmates of mine. I commanded here a general's command for a year as a colonel. Had they given me the rank commensurate with my job I would have been a major general. No one that I know of ever mentioned rank in connection with me until I was recommended here by Mr. Ryan.

Mr. FREAR. Were there not a number of letters sent from your subordinates here urging your promotion?

Mr. DISQUE. I never saw one or heard of one.

Mr. FREAR. Will you say there were not?

Mr. DISQUE. I will say I never saw or heard of one.

Mr. FREAR. Are there not letters on file in Washington to that effect?

Mr. DISQUE. If there are, that is absolutely news to me.

Mr. FREAR. You were speaking about the fact that you were entitled to the position of a major general, measuring up with others. Let me state a case. I know of a young man who was a graduate of St. Johns Military Academy and spent three years more in military training, having had five years training. He was put out immediately in charge of troops by Gen. Charles Magee, whom you know and who is certainly an authority on drilling soldiers. This young man entered the Army as a first lieutenant; he went through all the fighting at Chateau-Thierry, and he came back as a first lieutenant. To-day, on his own resources entirely he has got a position of control, a very large position, in the State of Wisconsin, for himself. He came back as a first lieutenant and he went through all the fighting and was perfectly satisfied and never raised any objection to staying a lieutenant.

Mr. DISQUE. I would like to say that lots of men go through without promotion. I went through the Philippine insurrection as a

second lieutenant and came out as one. So, too, I can understand it is sometimes hard for a fellow to go through those things and never get promoted.

Mr. FREAR. Here you came in practically as a captain. Here you had been a captain in 1917, and in 1918 you were a general?

Mr. DISQUE. That is right.

Mr. FREAR. That is a pretty lively promotion?

Mr. DISQUE. There were several of us that went up that way. A good many of my friends are generals on the same basis.

Mr. FREAR. They are not now, unfortunately; and I say that sincerely, because some of them are very able men.

Mr. DISQUE. I did not know they were reduced.

Mr. FREAR. Fulois is one, a very able man, and there are others that I know of. You have brought up this matter of Gompers. Is there anything else that you care to suggest? I was going to take up a few suggestions myself, but I thought that if you had anything in mind you could state it. I suggested that matter in regard to some one else who had gone through the service and came out with the same position and on his own efforts received a high position and occupies a position of large responsibility now.

Mr. FREAR. What is your position now?

Mr. DISQUE. I am president of T. Amsinck & Co. (Inc.), an importing and exporting concern, in New York City.

Mr. FREAR. That is whereabouts, on Broadway?

Mr. DISQUE. No. 96 Wall Street.

Mr. FREAR. Who introduced you to the parties that gave you the appointment? Let me make it definite; did John D. Ryan introduce you?

Mr. DISQUE. He introduced me; he was one of the persons who introduced me.

Mr. FREAR. And recommended you for the position?

Mr. DISQUE. And recommended me for it, and in all probability, his recommendation had very much to do with my getting the position. Since that subject has come up in the record, if you will permit me, I will give you all the facts.

Mr. FREAR. All right.

Mr. DISQUE. When I resigned from the Army in 1917, of course I cut loose from all sure things in the way of a job. When I resigned in Michigan to come back into the Army I lowered my income very materially, and also abandoned the only chance in civil life that I knew about. To an Army officer resigning, it is quite a change in his life; he is rather uncertain as to what is going to happen, and when this war came to an end and I was in Washington, for the first time I told Mr. Ryan my situation and asked him to look around and if he could find some place for me I would be glad of it; and the result was that Mr. Ryan heard of this vacancy in New York, and he had been out here and been over our operations and he was familiar with everything we had been doing, as far as he could be in that position, and he recommended me, and his recommendation apparently had enough weight to get me assigned where I am to-day.

Mr. FREAR. Would you say what your income was there at the prison, as warden, in Michigan, which you spoke of?

Mr. DISQUE. Is it important for me to answer these personal questions?

Mr. FREAR. I do not know that it is; you spoke of it.

Mr. DISQUE. I rather think, Mr. Chairman, that that is a personal matter, unless the committee insists.

Mr. FREAR. I will ask you this, as to your present income in this position that you now hold as president?

Mr. DISQUE. Is it necessary for me to answer that question?

Mr. FREAR. I am asking you.

Mr. DISQUE. I certainly think that is a personal matter. I will say my present income is approximately twice what was offered me to return to the Michigan State Prison. No; it is not quite twice what they offered me to return to the Michigan State Prison, including the allowances that a man receives as warden of the institution; and I would say further that any man in New York needs twice as much as he can get anywhere else on earth to live in pretty nearly the same way.

Mr. FREAR. I am not criticizing that phase of it, but what I will ask is this: The statement has been made, and I think you ought to know that it has been made, that you are receiving \$30,000 in your present position; and if that is not so the committee ought to be informed.

Mr. DISQUE. I will say that I was offered a better salary than I am getting to-day, in another place; and I was offered salaries practically as good in two other places out in this country that Mr. Ryan and none of his friends had anything to do with. Usually business concerns do not pay men unless they are worth it; the statements at the end of the month and at the end of the year have everything to do with my income.

Mr. FREAR. You were appointed originally on the organization of this company?

Mr. DISQUE. What company?

Mr. FREAR. The Amsinck Co.

Mr. DISQUE. That company is 60 years old.

Mr. FREAR. You were given the presidency of it, and you do not care to answer as to whether your salary is \$30,000 a year or not?

Mr. DISQUE. I consider that a private matter. I will say definitely that it has not to my knowledge the slightest connection with spruce production, any more than the salary that the Kaiser is getting to-day.

Mr. FREAR. We will see if we can get a closer connection, then. The Siems-Carey-Kerbaugh Co. had a large cost plus contract, and I will refer to that later, in the peninsula, did they not?

Mr. DISQUE. They had a railroad contract.

Mr. FREAR. A railroad contract.

Mr. DISQUE. And a spruce contract.

Mr. FREAR. They had a \$20,000,000 spruce contract.

Mr. DISQUE. No; I do not know about that.

Mr. FREAR. Twenty-five million dollars for 250,000,000 feet of fitches?

Mr. DISQUE. They were to get 60 and 100. That would average about 70, the way the things came out of the average about 70, the way the things came out of the logs. That is about seventeen and a half million that that contract would have totaled had they completed it.

Mr. FREAR. Seventeen and a half millions. That is the Siems-Carey Co.

Does the Siems-Carey Co. own any stock in the Amsinck Co.?

Mr. DISQUE. Not one dollar.

Mr. FREAR. You are sure of that?

Mr. DISQUE. Absolutely.

Mr. FREAR. You are sure of that in making that statement?

Mr. DISQUE. They have absolutely nothing to do with it.

Mr. FREAR. They have no control over it whatsoever?

Mr. DISQUE. Absolutely none; and never did have.

Mr. FREAR. I am glad you have made that statement, because unless there is something to counteract it I will believe you.

Mr. DISQUE. Absolutely. I know who owns the stock, and I know that Siems-Carey haven't a nickel's worth of it, and have never been interested in any way in that corporation.

Mr. FREAR. Who were the officers of this company that you are connected with? This is a subsidiary company of the international company; who would know in the international company as to this fact, as to this question?

Mr. DISQUE. As to whether they own stock?

Mr. FREAR. As to whether they own stock.

Mr. DISQUE. The treasurer of it can tell you.

Mr. FREAR. What is his name?

Mr. DISQUE. Well, I can tell you—Mr. George W. Baldwin, the vice president, can give you the information.

Mr. FREAR. I was trying to think of the name of the treasurer. I can not think of the name myself.

Mr. DISQUE. I have only seen him once or twice. We are not in that building, and I do not see those folks very much. I am down at the end of Wall Street, and the American International is on Broadway.

Mr. FREAR. Do you know anything about who the stockholders are in this corporation?

Mr. DISQUE. The Amsinck Co.?

Mr. FREAR. Yes.

Mr. DISQUE. The American International owns every dollar's worth of its stock. Now, I will say that the corporation——

Mr. FREAR. Doesn't the American International—don't they own the stock, or a majority of the stock, in the Siems-Carey Co.?

Mr. DISQUE. This Siems-Carey-Kerbaugh Co. that was up here?

Mr. FREAR. No; the Siems-Carey Co.—that was the Siems-Carey-Kerbaugh Co., but the Siems-Carey Co. was the one that joined with Kerbaugh in taking the contract.

Mr. DISQUE. The Siems-Carey Co. are large contractors.

Mr. FREAR. Yes.

Mr. DISQUE. Who—I have learned this since I was in New York, for the first time—who entered into a contract with the American International Corporation in 1915 to build some railways in China. They are merely contractors, or cocontractors, for this railway project in China, which has been dormant, so far as I understand, since the war started. That does not mean that they have a nickel's worth of property or stock in the American International Corporation.

Mr. FREAR. The stock in their corporation—is any part of it owned by this American International Co., or do you know?

Mr. DISQUE. In the Siems-Carey railway concern the American International has an interest, I have been told—not by anybody in the American International. It is simply common gossip.

Mr. FREAR. I have understood so.

Mr. DISQUE. I do not know what it is or what the connection is. I only heard of that the last month or so. I would like to clear up a point here, Mr. Chairman.

Mr. FREAR. Certainly.

Mr. DISQUE. This Amsinck Co., and the reason I happened to drop in there, it was a German house for the past 60 years. During the war the Alien Property Custodian found that they were misusing their organization, at least he thought so, to assist the Germans—that was in 1917—and the president of the corporation was sentenced to one of the Federal prisons, down at Atlanta, Ga., as I understand. In order to save it to American commerce, the American International bought it in. It was rather dormant during the war, and at its close it happened that there was no president there, and that is how I happened to be selected for that job. It being an old organization like that, it would seem that there ought to have been plenty of men available to step on up, but it just so happened that practically all of the principals in the company were either German citizens or naturalized Americans, born in Germany, and the stockholders did not want any more of them in control of it.

Mr. FREAR. Do you know whether Mr. Ryan is one of the directors of that company or not?

Mr. DISQUE. He is a director of the American International.

Mr. FREAR. That is what I meant, the American International that owns the stock of the Siems-Carey Co. and of this company that you are connected with?

Mr. DISQUE. Yes; he is a director in that corporation.

Mr. FREAR. Of course, he is a stockholder, in order to be a director.

Mr. DISQUE. I do not know about that. I doubt if Mr. Ryan is much of a stockholder. I think he is a director by courtesy, as is done in New York. Men of business ability are invited around on directorships. I do not know, but I do not think Mr. Ryan has much stock in it.

Mr. FREAR. You do not know anything about that, I suppose, except gossip.

Mr. DISQUE. That is all.

Mr. FREAR. If it is agreeable, we will adjourn until 10 o'clock to-morrow morning.

(Thereupon, at 4.30 o'clock p. m., an adjournment was taken until to-morrow, Thursday, September 4, 1919, at the hour of 10 o'clock a. m.)

SUBCOMMITTEE No. 1 (AVIATION) OF THE
SELECT COMMITTEE ON EXPENDITURES
IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES,
Thursday, September 4, 1919.

The subcommittee, met at 10 o'clock a. m., pursuant to adjournment, at the courthouse, Portland, Oreg., Hon James A. Frear (chairman) presiding.

Also present: Hon. Walter W. Magee and Hon. Clarence F. Lea.

TESTIMONY OF GUY GEORGE GABRIELSON.

(The witness was sworn by Mr. Frear.)

Mr. FREAR. Where do you live?

Mr. GABRIELSON. New York City.

Mr. FREAR. What is your business?

Mr. GABRIELSON. Law and accounting.

Mr. FREAR. With what firm?

Mr. GABRIELSON. M. & L. W. Scudder, 177 Broadway.

Mr. FREAR. That is the firm that was with Judge Hughes in his investigation of aircraft?

Mr. GABRIELSON. It was.

Mr. FREAR. And you are an employee of that firm?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Under the direction of this committee, did you make any investigation of certain matters in the city of New York at the request of the chairman?

Mr. GABRIELSON. I did.

Mr. FREAR. In that investigation did you ascertain the character of the American International Corporation?

Mr. GABRIELSON. I did.

Mr. FREAR. Just tell briefly whom you saw and what the facts are.

Mr. GABRIELSON. July 29, 1919, I called at the office of the American International Corporation and interviewed Mr. Mayer, the assistant treasurer of the American International Corporation, who informed me that the American International Corporation owned 100 per cent of the stock of G. Amsinck & Co. (Inc.), 96 Wall Street; that the American International Corporation owned 50 per cent of the stock of the Siems-Carey Railway & Canal Co., which, by the way, is the Siems-Carey in the Siems-Carey, H. S. Kerbaugh Corporation. He also informed me that Mr. John D. Ryan was a director of the American International Corporation and this was verified through Moody's Manual.

Mr. FREAR. And he stated that the American International Corporation owns all the stock of the Amsinck Co.?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. Of which Mr. Disque is president?

Mr. GABRIELSON. Yes, sir.

Mr. FREAR. What was stated to you about Mr. Disque's salary?

Mr. GABRIELSON. Mr. Mayer stated that Mr. Disque's salary was \$30,000 a year.

Mr. FREAR. That is all.

Mr. LEA. That is all.

(Witness excused.)

TESTIMONY OF MR. BRICE P. DISQUE—Continued.

Mr. FREAR. I find here in this morning's paper a brief statement which I wish to read with an explanation. It reads:

DISQUE CONDUCT DEFENDED.—WEYERHAEUSER MAN COMES TO SUPPORT OF ACCUSED OFFICIAL.

TACOMA, WASH., September 3.

George S. Long, secretary of the Weyerhaeuser Lumber Co., of Tacoma, to-day came to the support of Brice P. Disque, whose actions as chief of the spruce division are being investigated by a congressional committee.

In a telegram to Mr. Disque Mr. Long declared that Mr. Disque had handled the labor problem in the Northwest in a most able manner; that without his efforts the entire problem of getting out lumber would not have been solved, and declares his belief in the former chief's ability and integrity.

Let me say the committee has not thus far challenged that matter. We are simply investigating the facts, but I will say that Gov. West has been subpoenaed to testify in regard to Mr. Long, who is secretary of the Weyerhaeuser Corporation, and he will be asked to repeat part of the testimony he submitted in Washington before the Military Committee in regard to Mr. Long.

Mr. LEA. What is Mr. Long's connection with this investigation?

Mr. FREAR. Very intimate, according to Mr. West. While we are indulging in newspaper clippings which are brief, I have one here which was read into the record several days ago, and I simply wish to refer to it to ask a question of Mr. Disque. It is headed, "Vancouver chamber will not indorse régime of general."

Mr. LEA. Why not cut out this political flapdoodle and get at the facts in the case?

Mr. FREAR. We will get all the political flapdoodle you wish; we are going to call Gov. West, a Democratic leader, to testify and show whether it is political flapdoodle or not.

Mr. LEA. That is all right; but making campaign literature at the expense of the Government ought to be cut out, and we ought to get at the facts.

Mr. FREAR. We are going to show more political flapdoodle before we get through, and we are going to get at the facts, regardless of politics.

Mr. LEA. That stuff has no place in the record.

Mr. FREAR. This stuff has a place in the record, and I will say that the only effort to cover up has come from the Democratic member of the committee, who is acting, apparently, under the direction of Mr. Homer Cummings.

Mr. LEA. I have not intended to cover up a single fact, and have no relations with Mr. Cummings at all. I think our committee ought to be above the reproach that attaches to it.

Mr. FREAR. The only reproach that attaches comes from the attempt of the Democratic member to cover up the facts.

Mr. LEA. If you will read *The Voter*, a Republican paper, you will see.

Mr. FREAR. We know the character of *The Voter* and what is said as to its control by the Spruce Corporation. Look at the nods going around the room now.

Mr. LEA. That is all right, and we want to get at the facts, and we will get near them if we cut out of these political matters and judge things on their own merits.

Mr. FREAR. We are going to judge of things on their merits, and I will say that the Democratic member has been permitted to cross-examine witnesses from the beginning until now, a thing which was never permitted before in any investigating committee; and he is going to be permitted to do so without hindrance, to see whether we get the facts or not.

Now, after this slight interruption which is indulged in with good nature, I will continue. The resolution reads:

Whereas, under the good judgment and supervision of Gen. Brice P. Disque the spruce cut-up-plant of the Federal Military Service was located in the most logical point for its successful operation, at Vancouver, Wash.;

And further down:

Whereas by the most remarkable construction and efficiency the United States Government was able to make such production of airplanes that the control of the air was assumed and maintained by the Allies in the late war; and,

Whereas, by said airplane production the turning point of the war was made and said war was won: Be it

Resolved, That we hereby indorse and commend the military administration of Gen. Brice P. Disque in his control and management of the spruce production division for the United States military activities at Vancouver, Wash.

That failed of passage; there was only one vote for it. What I want to ask in that connection is this, about the time of your letter written to this committee upon your arrival here and, by the way, you saw the Democratic member of the committee before you saw any other member, at time the communication came out. It was published and your statement to the committee was published in the papers before it was opened by members of the committee. I wish to ask if there is any publicity organization seeking to influence public sentiment at this time in regard to the activities of the Spruce Production Corporation, so far as you know?

Mr. DISQUE. Absolutely none. I do not know the man who introduced that resolution and never heard of him, and do not know why they are taking up my end of the situation.

Mr. FREAR. I accept your word as being an accurate and full statement on that matter, but it is a suggestion to those who are engaged in this work that they ought not to do anything more than when a court is in session they should seek to influence public opinion. Of course it failed; but according to your statement you had nothing to do with it, and we will assume that is absolutely true.

What purports to be a telegram from you, Mr. Disque, dated November 23, 1918, I wish to read into the record at this time. It says:

Telegram. Extract from letter to the aircraft executive, Ryan, Washington.

Local papers are continuing to refer to the threatened investigation of spruce activities. The subject is already nauseating to the officers of this division, and we urge that any contemplated investigation be started at once. Myself and officers feel that we have sacrificed enough and we do not propose to remain here indefinitely merely for the purpose of submitting ourselves to the mud-slinging tactics of petty politicians. We will welcome early, honest, and thorough investigation, but since reading the Hughes investigation we don't believe it possible.

DISQUE.

Judge Hughes, who was a Republican candidate for President of the United States last time, who has been a judge of the Supreme Court of the United States and who is generally considered a very high-class man, was called by the President of the United States to conduct an investigation into the subject of aircraft activities because of the miserable failure of the aircraft production program, and he, with the Attorney General, sat throughout hearings covering a period of about five months. He never charged one cent for his services but donated everything to the Government, as did Meyer Steinbrink, who was the counsel, who sat with him throughout all those hearings. With the Attorney General present, and he practically indorses very part of Judge Hughes' investigation and report, I call attention to the telegram which you sent to Director Ryan, in which the criticism is made of Mr. Hughes and the investigation. Naturally no investigation, however thorough, if Mr. Hughes is thus criticized, would meet with approval, if we can judge aright, and of course we are here to make an investigation in all fairness to everyone who is concerned; but that is a statement that the chairman wishes to make at this time in regard to a telegram taken from the official records of your department. Did you send the telegram?

Mr. DISQUE. I sent the telegram, and would it be proper to state why?

Mr. FREAR. Certainly.

Mr. DISQUE. I did not know it was coming up this morning. I have in our office a copy of the Hughes report. Before that report was made I happened to be in Washington, and volunteered to give a sworn statement to one of Mr. Hughes' associates. The statement was full and complete, accurate, truthful, and correct. The first two paragraphs of that report—I should have the report here, but I can give the general sense of it—either in the second or third paragraph, a definite statement is made regarding the Spruce Production Division that is absolutely false.

Mr. FREAR. That is regarding the Vancouver plant?

Mr. DISQUE. Regarding the cost of the Vancouver plant. That is one. The second is made that it cost at that time, which was June, 1918, that this report was made, that it cost \$1,400,000, whereas in November, 1918, when the report came to our attention, and more than half of the expenditures had been made between June and November, the total cost as reported to me by our comptroller was \$700,000, half the amount that Mr. Hughes had stated definitely had been expended in June. Another reason why I sent that telegram was that in the second or third paragraph of his report Mr. Hughes,

who had not come to this coast and had not sent a man here, had only taken my statement and had not taken the statement of any other member of this organization that I know of, and I do not believe now that he did, stated a fact which insinuated that we had spent in the neighborhood of \$15,000,000 or \$16,000,000 for spruce and had only received \$3,000,000, or something like that, in return, and the intimation was clear that we had wasted the balance. Then, in the last paragraph, or next to the last, there was an insinuation that there was something wrong about the Spruce Division, and that hurt; it cut pretty deep the men who had worked as we had. He had not been out here, nor had he sent a man. We had been investigated several times by the War Department and, so far as we knew, we were as clean as any organization or agency of the Government, and yet here was that nasty insinuation in a finding in that report of Mr. Hughes, and my confidence was blasted.

Mr. FREAR. You say his statement was that the Vancouver plant had cost \$1,400,000 up to that time?

Mr. DISQUE. In June; yes.

Mr. FREAR. According to the statement made June 30, 1919, which I have before me, the Vancouver cut-up plant cost \$1,975,534.04. Is that right?

Mr. DISQUE. May I see that? That was several months after I left the division. [Examining papers.]

Mr. MAGEE. Was the plant completed when you left?

Mr. DISQUE. Yes. I do not know whether this is a statement of the cost of the cut-up plant, or a statement of all the money spent there for operation. The comptroller tells me that includes the labor cost of operation at the cut-up plant.

Mr. FREAR. That includes, does it, the pay of soldiers?

Mr. DISQUE. The pay of everything.

Mr. FREAR. At civilian wages?

Mr. DISQUE. That includes oils, electricity, machinery—

Mr. FREAR. Does it include the pay of soldiers at civilian wages?

Mr. DISQUE. Yes, sir; the entire operation of the plant over a period of practically a year and its liquidation expenses, as I understand it. The machinery was taken out and stored and catalogued and advertised.

Mr. FREAR. You are sure of that; you make that statement positively?

Mr. DISQUE. The comptroller tells me that contains all the operating expenses up to that date.

Mr. MAGEE. Is it not possible to get the exact cost of this plant?

Mr. DISQUE. Exactly. I have that attached to the Hughes report, which I will have here later.

Mr. FREAR. You do not imagine Judge Hughes ever purposely made a statement that was false?

Mr. DISQUE. I do not know Judge Hughes, but I know this, that the effect of his report was a most serious thing to me and my associates, and whether it was intentional or not the resulting damage was the same.

Mr. FREAR. The request of Judge Hughes was that this committee come out here and make this investigation, and the personal request which he made of the chairman of this committee that he come out

here and make the investigation, indicates that Judge Hughes wished to have the matter cleared up so far as it could be cleared up, and that is what the committee is here for at this time. It was impossible for Judge Hughes, after five months of hearing, to cover every phase of the question, just as it is impossible for this committee at at least a dozen different places where they must stop before they get back to Washington on October 1, having hearings at the various places—because this is only an incident of the expenses of aircraft production which have reached over a billion dollars, the expenditures and the commitments. The complaint is made that the report which you desired to submit to Judge Hughes was not accepted? That is the understanding?

Mr. DISQUE. Who made that statement?

Mr. FREAR. I understood you to say that.

Mr. DISQUE. Not at all. I made this statement to one of his associates, and that is the only evidence, so far as I know, that he had about our operations.

Mr. FREAR. Was it a written statement?

Mr. DISQUE. It was a statement given to them which was written by a stenographer and signed by me afterwards.

Mr. FREAR. The difficulty, let me say, with an investigating committee or any judge on the bench, where such statements are made, is that there is no opportunity to cross-examine and inquire as to the facts. For instance, one of the most important matters in this investigation in Portland, so far as we can judge, is the very fact that was brought out that you received \$30,000 a year, and yet yesterday you refused to testify as to that. So, the purpose of this investigation is to bring out the facts.

Mr. DISQUE. Mr. Chairman, I am trying to give you all the facts I know of, and I am going to give them as long as you will listen to them, and they will be backed up by real evidence; but the point that has appealed to me is this: That without ground for it, without any evidence that I have heard of that has any weight in a court, this committee has left Washington with the assumption that I am crooked; that I have been influenced by Mr. Ryan; that there has been some shenanigan going on up here; and with that back in their minds I am afraid that the words read into the record by yourselves and the questions asked witnesses who do not know anything about it, and the headlines in the papers, and all those things that tend to mold public opinion, have gradually built up a fictitious rainbow and pipe dream about my connection that is absolutely without foundation.

Mr. FREAR. That is what we are here to ascertain.

Mr. MAGEE. So far as I am concerned, I wish to take exception to the remarks of the witness. As a member of this committee I left Washington with no assumption that anybody was crooked, or with any assumption in my mind whatever.

Mr. DISQUE. I only have the hearings of the committee in Washington; I only saw them the day before I left New York.

Mr. MAGEE. I think your remarks, at least so far as I am concerned, are entirely unjustified, and I wish to take particular exception to them upon the record. I am here to get the facts, and I want you to understand that I do not ask any favor from any Republican

or Democrat or from any other man, and that I am not afraid of any living man that I know, and that, as far as I am concerned, regardless of whom it may hit, I am going to do what I can to get all the facts without fear or favor, without regard to being criticized for it, and simply in the performance of my public duty. I have no personal feeling in the matter, and I am here to do my duty as directed by the House, to get the facts and report the facts to the House, and I am going to find the facts and make every effort to get all the facts. That is my position as a member of this committee, and has been my position since I left Washington, and will be my position all through this investigation.

Mr. FREAR. Now, if we have gotten over that part of it, we will go on with our testimony. In our Chicago hearings, and I suppose that may have had some influence upon what you have just said, Mr. Disque, Maj. Sligh appeared before the committee and he made some statements that I think ought to be brought to your attention, and that you may have the privilege of disputing or correcting or explaining if there is anything in them, I desire to read them. On page 597, reading the printed report, and let me say that I do not believe the committee's judgment is affected or determined by anything that appears from the testimony of any one witness individually, although it may have a bearing upon the case for final determination in presenting the report. This is the first place in the record where he refers to you, and he says:

As far as Col. Disque is concerned, his story of what he had done at Jackson prison was a pure fabrication, and I don't like to use that short and ugly word, but it is the only word that is fit to characterize his character; he not only lied repeatedly, but is a fakir of the first water.

I realize that that is a very hard statement, and I do not think it ought to stand if you have any explanation to make, or any statement to make in reply to it.

Mr. DISQUE. Mr. Chairman, of course, my verbal reply to this would not be any better than Maj. Sligh's statement, so far as the evidence is concerned. I did not know this was coming up. Could you defer this until a little later in the afternoon?

Mr. FREAR. Willingly so.

Mr. DISQUE. If you will, I will be prepared to discuss it.

Mr. FREAR. If you prefer not to have me do so——

Mr. DISQUE. I want it discussed; I think it would be unfair to me not to go into it.

Mr. FREAR. That is the point that occurs to the committee. If a statement has been made that is unfair about you, you should have an opportunity to give your testimony on that, and you are entitled to correct such statements in order that the record may be correct.

Mr. DISQUE. I have in my trunk every newspaper clipping that has been printed about the Jackson prison from the time I went there until I left. That is all the evidence I have with me, except a few statements of the accounts of the institution, and I would like to refer to those, if the committee will take it, as a reply to this, and also, I think, it would be better to wait until to-morrow.

Mr. FREAR. Willingly.

Mr. DISQUE. Mr. Eaman will be here to-morrow, and he knows more about that than I do.

Mr. MAGEE. The committee is here to get any statements it can and all the facts. I want every witness to understand that. Any particular witness you desire to call will be called.

Mr. DISQUE. I have named a lot of witnesses and you can not get them.

Mr. MAGEE. We can not call everybody and can not get them all over the country, you appreciate that. If there are three or four witnesses you desire to have called the committee will be very glad to hear them. We can not stay here forever, but we will be glad to stay here a reasonable length of time.

Mr. DISQUE. Well, have you called any of the witnesses I have requested?

Mr. FREAR. You are the first one that has been called.

Mr. MAGEE. Yes; we have called several of those you have named.

Mr. FREAR. Oh, yes; we called some of them in Chicago and elsewhere. We called Morley in Chicago, as I have stated, and we called Col. Stearns in Seattle.

Mr. DISQUE. You called Morley when he didn't know what you wanted, as he stated in his testimony. He did not know what was going to be testified to.

Mr. FREAR. We did not know what you were going to testify to. The Secretary of War, who is the man most interested in this investigation, was the man who asked us to call Morley.

Mr. DISQUE. But, Mr. Frear, since you got out here you have accumulated a lot of damaging testimony.

Mr. FREAR. Of which Morley has no knowledge, because he stated he came in in August.

Mr. DISQUE. I do not remember when he came in, but if you will call him back now, in the light of what you have received, you will get a different story.

Mr. MAGEE. There is nothing in this question of Col. Morley, because the Secretary of War directed us to call him. He said Col. Morley lived in Cleveland and arranged to have him in Chicago to testify, and stated that he could tell us the whole story. We did just exactly as the Secretary of War requested and called Col. Morley, and told him the request of the Secretary of War and asked him to make a complete statement of everything he knew, which I assume he did. If he did not state everything he knew it was not the fault of the committee.

Mr. DISQUE. That is like asking a man to come out and prove himself innocent before he knows what he is charged with.

Mr. MAGEE. We did not know what Col. Morley knew. We simply did as the Secretary of War requested.

Mr. DISQUE. Now, Mr. Magee, you know that is not anything at all that would appeal to anyone, to call a man in and say "Now, prove yourself innocent." That is what you did with Morley.

Mr. FREAR. Morley was not charged with anything.

Mr. MAGEE. He was just part of this organization.

Mr. FREAR. You have the wrong idea, entirely. As a witness, you can not determine the attitude or the scope of the investigation of this committee. We have, as I said to you yesterday, one hundred and more witnesses who asked to testify. We can not bring one-quarter of those and hold hearings. All we are endeavoring to do is

get a general understanding of this situation. We are not trying to convict anyone, that is not our business. We would not have any jurisdiction if we did. We want to get the facts here. You, as ex-president of this organization, are an incident, just the same as Col. Stearns, and just the same as Morley. Every man is simply a man. If he can throw any light upon it and help the committee in coming to its decision in making their report, that is what we want. We are not going to try the character of anyone, but you are entitled to know anyone who has specifically attacked you, and that is the reason of presenting this Sligh report, because I understood that you want to reply to it, and I am very glad to have you make any statement you desire, to-morrow, if you prefer.

The cost-plus contract—

Mr. DISQUE. Mr. Chairman, before you go on I would like to introduce this authority of the Judge Advocate General that we ended up with last night.

Mr. FREAR. Yes; I would be glad to have that.

Mr. DISQUE. That ought to go into the record as approving the paying of the soldiers. That is the legal authority of the War Department.

Mr. MAGEE. Why wouldn't it be a good plan, Mr. Chairman, to have this read into the record?

Mr. FREAR. I am going to do it now. I am trying to get the point.

Mr. LEA. I think you will get the gist if you read the last of it.

Mr. FREAR. Well, I will read the whole thing. It is not very long and it will give us some light, because the committee has no information with regard to it:

WAR DEPARTMENT,
OFFICE OF THE ASSISTANT SECRETARY,
Washington, D. C., September 11, 1918.

Memorandum for the Director of Aircraft Production.

1. You have requested me to secure the opinion of the legal adviser of the department as to the propriety of continuing payments to contractors for spruce production where certain elements of cost are based on payments made by contractors to soldiers for their labor in spruce production pursuant to an arrangement heretofore approved by the Secretary of War.

2. I am advised by the legal adviser of the department that such disbursements can be continued with propriety. You are directed to issue the necessary instructions to disbursing officers so that there may be no interruption in the vitally important production of spruce.

3. A copy of the opinion of the Judge Advocate General is attached hereto.

B. CROWELL,
Acting Secretary of War.

[First Indorsement.]

Contracts. Lemmond Bg.

War Department, J. A. G. O., September 11, 1918.

To: First Assistant Secretary of War.

1. You request the opinion of this office concerning the application of section 1765 Revised Statutes to the employment of troops by contractors in getting out spruce and fir for airplane construction. It is stated that in November, 1917, the Secretary of War approved a plan whereby troops were asked to volunteer for work as lumbermen for the purpose stated, owing to the fact that there was a great shortage of labor, and that under such plan "these troops were put in the forests and became employees of the various contractors who paid them the prevailing wages less the \$30 a month they received as soldiers from the United States Government." Three specific questions are presented, as follows:

"a. Does the statute prohibit such enlisted men employed by persons having contracts with the Government from receiving pay from such contractors?"

"b. Would payment by the contractor employing such enlisted men be in violation of the statute where the contract with the Government is a cost-plus contract, but where such contractor in employing the enlisted men is acting as an independent contractor and not as an agent of the Government?"

"c. Where the price to be paid to the contractor is measured by his cost and the appropriation is available for the purchase of the article proposed, is not the appropriation available for the payment of the price stipulated in the contract as cost to the extent that it includes all actual cost to the contractor?"

2. In the opinion of this office, section 1765 Revised Statutes has no application to the situation described. The employment of the soldiers was not by an agent of the Government using Government funds but by an independent contractor who paid them from his own funds, according to agreement and authority of the Secretary of War, and as they were paid no more than the prevailing rates of wages less the amount of their pay as soldiers, the execution of the contract was no more expensive to the Government than it would have been had soldiers not been so employed. Furthermore, if there be any doubt on the question because the contractor operated under a so-called cost-plus contract—and I do not think this is at all material—the legality of allowing the soldiers pay by the contractor in addition to their pay as enlisted men can not be questioned in view of the settled construction of paragraph 1765 Revised Statutes, which is that it does not prohibit a person from receiving compensation for services of two distinct employments. (*United States v. Saunders*, 120 U. S. 126.)

3. In the light of the facts stated in this case, questions (a) and (b) are answered in the negative and question (c) in the affirmative.

S. T. ANSELL,

Acting Judge Advocate General.

Mr. FREAR. I will not make any statement in the record at this time, but it does not give, so far as I can understand, any authority for this organization, of which you were the head, to give soldiers over in this cut-up plant at Vancouver the same pay that civilians were receiving outside.

Mr. DISQUE. Why not, Mr. Chairman?

Mr. FREAR. As a lawyer, that would be my judgment; but I will make a further investigation and see whether I am right or not. It speaks of contractors to whom these soldiers were let out; but those—

Mr. DISQUE. The cut-up plant was operated under a contract.

Mr. FREAR. With whom?

Mr. DISQUE. Mr. Mitchell, covering this entire—

Mr. FREAR. Have you got his contract?

Mr. DISQUE. It is in our files.

Mr. FREAR. Will you produce the contract? What was Mr. Mitchell's salary?

Mr. DISQUE. I do not recall what it was. I think he was limited—well, I will not say, the contract is available.

Mr. FREAR. I would just ask you if it was \$25,000 a year, or do you know?

Mr. DISQUE. I do not think it was that much.

Mr. FREAR. Will you produce the contract, please, this afternoon so that we can examine it?

Mr. DISQUE. Yes.

Mr. MAGEE. I want to state here in the record my legal opinion. The case cited by the learned Acting Judge Advocate General, in my opinion, has no application to the case in question, and that, in my opinion, no authority exists for any payment to soldiers in the service of the United States except such payment as may be clearly fixed by an act of Congress; that the case cited by the Judge Advocate General would appear to be a case where a person in the service

of the Government of the United States was acting in two different capacities, and his salary is divided between the two classes of work, as may be instanced by the payment, as I recall, to the superintendent of the Federal Board of Vocational Training, where, I think, the salary was appropriately divided. But an instance of that kind, in my opinion, can not be applied to the pay of soldiers, whose payment is fixed by act of Congress. In my opinion, the sole authority rests in Congress to fix compensation.

Mr. DISQUE. Mr. Magee, may I say there that this opinion was rendered by the Judge Advocate General?

Mr. MAGEE. I am not criticizing you, General.

Mr. DISQUE. He based it on this very operation. That is why he rendered the opinion. You said you did not think that opinion referred to our operation, or applied to it. That is what he was doing; he was rendering an opinion on our work.

Mr. MAGEE. I am not criticizing you, General, but I am putting on the record that I do not agree with the opinion of the Acting Judge Advocate General. I do not think that his opinion is the law. That is my judgment. In other words, I am clearly of the opinion myself that the authority to fix the compensation of officers and soldiers and sailors and marines of the United States is in Congress itself, and has always been fixed by congressional enactment.

Mr. FREAR. This letter will be inserted in the record in entire. You have testified, I believe, what cost-plus contracts were made. Will you just repeat, so that I can make an examination?

Mr. DISQUE. There was Grant-Smith-Porter Bros., the Warren Spruce Co., the Airplane Lumber Co., I think was the name of it, and Siems-Carey, and, possibly, some more that I do not have in mind.

Mr. FREAR. Those four were the large contracts?

Mr. DISQUE. Those were the four large ones.

Mr. FREAR. Referring to the Siems-Carey-Kerbaugh contract, which is the one we have been considering prior to our taking up hearings in Portland, that appears to have been a contract, one contract for the construction of a railroad from a point on the Milwaukee Road near Joyce, as I recollect, to Lake Pleasant, of about 36 miles—well, the length was not stated in the contract; in fact, the location of the road was not stated in the contract.

Mr. DISQUE. It was not stated in the contract.

Mr. FREAR. This railroad was under the cost-plus contract given to Siems-Carey-Kerbaugh Co., and was to aid in the logging provided in another contract given to the Siems-Carey-Kerbaugh Co. under date of May 12, 1918. The railroad contract is dated May 18, 1918. Under date of May 12, 1918, in article 1 it says that the seller, which was the Siems-Carey-Kerbaugh Corporation, agreed to sell to the Government, and the Government agreed to purchase from the seller, 250,000,000 feet of spruce lumber flitches within the period of 18 months, as is provided; and in article 5 it appears that the price to be paid for such flitches to the seller by the Government shall be \$100 per thousand for No. 1 grade and \$60 per thousand for No. 2 grade, based on the measurements, etc. That is, if all of this lumber was \$100 per thousand that would mean a \$25,000,000 contract.

Mr. DISQUE. That was not possible, of course.

Mr. FREAR. If all of it was No. 2 grade it would be on the basis of \$60 per thousand, which would make it a \$15,000,000 contract; that is right?

Mr. DISQUE. Yes.

Mr. FREAR. So that it ranges between \$25,000,000 and \$15,000,000 as to the amount of the contract, depending upon the respective grades of lumber or flitches that were gotten out by this company. That is right, is it not?

Mr. DISQUE. According to our production records it probably would have run in the neighborhood of \$18,000,000 had they completed the entire contract.

Mr. FREAR. You can not tell anything about it, they just started, they had not even organized their mills.

Mr. DISQUE. I am basing this estimate on what we obtained in the way of one and two logs at other places.

Mr. FREAR. That has no reference at all in determining a difference of \$10,000,000. You stated yesterday that it would be \$17,500,000. You haven't anything at all to base that upon, so far as the committee can understand, speaking for one member of the committee.

Mr. DISQUE. That is right, but there is nothing to show that it is \$25,000,000.

Mr. FREAR. It will rest between \$25,000,000 and \$15,000,000.

Mr. DISQUE. Somewhere.

Mr. FREAR. Now, these two contracts were entered into between the Aircraft Production Board and the Siems-Carey-Kerbaugh Corporation. The contract of May 12, 1918, for the \$15,000,000 to \$25,000,000 was signed Siems and Kerbaugh on behalf of their corporation, and by J. Van de Crisp as captain, Signal Corps, United States Army, and approved May 28, 1918, by the Director of Aircraft Production, John D. Ryan, director. Who was Capt. Crisp?

Mr. DISQUE. He was our disbursing and contract officer.

Mr. FREAR. With directions to sign contracts that were approved or agreed upon, I take it?

Mr. DISQUE. Yes; he was.

Mr. FREAR. That was a necessary function, I understand?

Mr. DISQUE. He was disbursing officer, and simply checked up the legal phases and requirements to see that they were carried out in the contracts.

Mr. FREAR. That was done by all the various branches of the War Department; it was necessary.

Mr. DISQUE. It was a routine duty.

Mr. FREAR. This contract, as I stated, was on May 12, 1918. The contract of May 18, 1918, which was to build a railroad to get out these logs, was signed by Siems and Carey on behalf of the Siems-Carey-Kerbaugh Corporation, and also by Capt. Crisp, and "approved May 18, 1918," is left blank by the Secretary of War. A statement has been made, and there is no question as to that, I take it, that Mr. Ryan stated to the Secretary of War that he would not sign this, he did not care to sign it for reasons given, and Mr. Stettinius was called in to sign that railroad contract, which is dated, as I said, 12 days after the other.

Mr. DISQUE. Not to sign it, Mr. Chairman?

Mr. FREAR. Not to approve it.

Mr. DISQUE. He was called in to make the contract, to do all the negotiating in connection with it, and did so. Mr. Ryan, to my own knowledge, had absolutely nothing to do with, no participation in, the making of that contract.

Mr. FREAR. Where were you at that time?

Mr. DISQUE. In Washington.

Mr. FREAR. You were there at that time, in Washington?

Mr. DISQUE. Yes, sir.

Mr. FREAR. That was in May, 1918?

Mr. DISQUE. Yes, sir.

Mr. FREAR. When did you go to Washington?

Mr. DISQUE. I arrived there. I would say, about the 15th or 20th of May, somewhere the first half of the month. The exact date I do not recall.

Mr. FREAR. And you left when?

Mr. DISQUE. I left about the 20th or 21st. I was there about a week.

Mr. FREAR. You were there, then, during these negotiations?

Mr. DISQUE. Entirely.

Mr. FREAR. Some question has arisen regarding the location of the road, and may have an important relation. It becomes rather important in one connection in this investigation, and I wish to ask did you go up into the Olympia Peninsula and go over the various routes that have been proposed?

Mr. DISQUE. I did not prior to the building of the railway. I have been over them two or three times since.

Mr. FREAR. But not prior. I was just wondering.

Mr. DISQUE. Now, just a minute. I do not think I did.

Mr. FREAR. There is nothing in the record, and that is the reason. It was purely an inquiry.

Mr. DISQUE. I do not think I did.

Mr. FREAR. There were two or three routes that have been suggested to the committee, one to Clallam Bay of 15 miles to touch the same spruce that was testified by Mr. Lightner could have been built at this time for \$500,000, ordinarily from \$300,000 to \$500,000. Another, as you are familiar, of course—the Pysht River route—which presumably would have been a continuation of the Milwaukee line from Deep Creek up either by way of Clallam Bay or cutting out Clallam Bay to Pleasant Lake, a distance—

Mr. DISQUE. I do not think they ever contemplated going to Clallam Bay. Their surveys were all up the Pysht River.

Mr. FREAR. Well, it occurred to the committee that might have been an important place, and where their surveys had been eventually determined upon, of course, was a matter of conjecture beyond that. They were after business, of course, and if they could have gotten a large amount of business there they might have gone, but the Pysht Creek route was—I have forgotten—something like 17 miles up to the road and then 2 or 3 miles into Pleasant Lake.

Mr. DISQUE. I think it was 25 miles to reach the same point that the other route that we built reached. We had to add 25 miles on top of the Milwaukee to get to the same point.

Mr. FREAR. That was not the testimony of Mr. Frost, who made the surveys, and others who were there, but let it stand at that.

Mr. DISQUE. Mr. Who?

Mr. FREAR. Mr. Frost.

Mr. DISQUE. Well, that is the evidence of the Milwaukee officials, of their own line, 25 miles.

Mr. FREAR. Frost made the investigation independently to build a road, not for Milwaukee, but he was to build a road up through there. Possibly there is some question as to whether that connected up with the Milwaukee. I am not sure as to that. I mean that is to be referred to. There was the third proposition of building a road either from Port Angeles around Lake Crescent, out to Lake Pleasant, which would be a distance of something like 56 or 60 miles.

Mr. DISQUE. Thirty-six miles, to be accurate.

Mr. FREAR. No; not at all. It would have been about 56 to 60 miles, and that was proposed—

Mr. DISQUE. Where from, Mr. Chairman?

Mr. FREAR. I said from Port Angeles.

Mr. DISQUE. There was no proposition that I heard of.

Mr. FREAR. I am explaining to you what is in the record before the committee.

Mr. DISQUE. Oh, I see.

Mr. FREAR. From 56 to 60 miles, or thereabouts, on the south side of Lake Crescent to Lake Pleasant, by John Cain and an organization that claimed to have a survey which extended along that line, and from the west end of Lake Crescent along the Sol Duc River down to Lake Pleasant. The road as built joined at what is called Disque Junction, a mile or so from Joyce on the Milwaukee road, and then went south through Lyre Canyon, until it reached the easterly end of Lake Crescent, and then took the northerly side of Lake Crescent, through two tunnels and along the side of the mountain to the westerly end of Lake Crescent, and then down the Sol Duc River over the same line that had been surveyed by this independent corporation. I am trying to get the situation, as this committee has been over all these lands; I am trying to place it in the record so as to have the arrangement understood at this time.

Mr. DISQUE. Well, may I ask, are you stating that it went along the same line as that other survey, as a matter of fact, or just what has been said?

Mr. FREAR. No; we do not know just the identical lines of survey.

Mr. DISQUE. It is not like a table; you can not run a railroad anywhere in there.

Mr. FREAR. We will assume so, but it crossed the other survey a number of times and ran along, but I was trying to indicate, or desired to indicate the line, that was all.

Mr. DISQUE. Yes.

Mr. FREAR. On March 20, 1918, did you send this telegram to the Secretary of War?

Distance necessary to open this line, Lake Crescent route, to reach large spruce tracts double that necessary by the Milwaukee Deep Creek route. Will not go through railway facilities beyond Port Angeles. This line seems an unnecessary expenditure, and everybody interested in it wishes Government to bear proportion of expense considerably greater than Government would have to bear in extending Milwaukee. Milwaukee has been driving their road west slowly to meet development of country and are now within 30 miles west of Port Angeles. Milwaukee being common carrier equipped

to advance their own line over their surveyed road unquestionably best means of entering Clallam spruce. In this opinion I have support of most experienced operators in this section.

Did you send that telegram?

Mr. DISQUE. What is that?

Mr. FREAR. That is under date of March 20, 1918.

Mr. DISQUE. Who to?

Mr. FREAR. To the Secretary of War, I assume.

Mr. DISQUE. Yes, sir; I do not deny that. This is the first time I have had it called to my attention, but I did send such a message.

Mr. FREAR. On the 8th day of April, 1918, did you send this further letter to the Secretary of War, containing this statement:

It will be noted that the Milwaukee extension Deep Creek route will immediately tap large stands of spruce timber between Deep Creek and Pysht River, whereas the proposed Crescent Lake Railroad must be extended its full length before any spruce will be available. Furthermore, it is regarded by many excellent engineers as a very difficult problem to lay rail along either the north or south bank of Crescent Lake, and those best equipped to discuss the problem state that the only practicable means of using this line would be to ferry cars or product across Lake Crescent and connect with the Milwaukee near Port Angeles.

Did you send that letter to the Secretary of War?

Mr. DISQUE. What was the date of that?

Mr. FREAR. That was under date of April 8, 1918.

Mr. DISQUE. Yes.

Mr. FREAR. I desire to place all these matters before us so that we can then have any explanation that may be offered.

Mr. FREAR. It then appears that the Secretary of War on April 24, 1918, wrote a letter to the Director General of Railways, Mr. McAdoo, which stated in part as follows:

A virgin stand has been located in the northwestern part of the State of Washington, sufficient to meet the necessities of the next two or three years. The nearest railroad is the branch of the Chicago, Milwaukee & St. Paul running west from Port Angeles. This branch now terminates at Deep Creek. The question of a railroad to reach this timber has been carefully considered, and it is the unanimous opinion of the Pacific coast committee of the Aircraft Board that the best solution of the question is the extension of the Chicago, Milwaukee & St. Paul Railway from Deep Creek to Forks. This extension is included in the plans for the future development of the Milwaukee, and the route has all been surveyed. It is the opinion of the War Department that this railroad should be built.

Now, this was sent by the Secretary of War, under date of April 24, as appears from a report by Frank McIntyre, major general, General Staff, executive assistant to the Chief of Staff, which has been filed with the Ray investigation.

The Siems-Carey Railroad as built, according to the statement of June 3, 1919, has cost the Government, or cost this corporation, or whatever you choose to call it, \$3,988,511.93, and I understand that there are other items to be added to that, some small items. That is exclusive of equipment.

Mr. DISQUE. Of course, that includes ballast and some ordinary expenses that go into maintenance frequently in railway construction, but not much.

Mr. FREAR. What would it include?

Mr. DISQUE. Additional ballast and other operating expenses that sometimes are included. It is a mooted question; some railroads include it and some do not. But we will accept that as the cost.

Mr. FREAR. That is the statement given out by your—

Mr. DISQUE. I do not think it is an important point.

Mr. FREAR. But, of course, we do. That is the difference. It says, as we understand it, that this railroad cost about \$115,000 a mile, exclusive of equipment, for the 36 miles, or thereabouts. I do not know that you are familiar with this testimony, but it was taken by the committee, and it has such an important bearing at this moment, before any explanation is made, that I think it ought to be read into the record so that we will know the situation.

Let me say that the road, as constructed, was constructed by an engineer of the Milwaukee road, under his management, I understand—Mr. Sawyer.

Mr. DISQUE. Maj. Sawyer.

Mr. FREAR. He was named a major—taken out of the Milwaukee organization, made a major, and now he is back with the Milwaukee organization, as I understand.

Mr. DISQUE. That is right.

Mr. FREAR. Assistant to the president or something of the kind.

Mr. DISQUE. He is assistant to some superintendent up there.

Mr. FREAR. Make the correction. The committee is glad—

Mr. DISQUE. And he was not managing the building of this road. He was representing me up there, to see that the contractor complied with regulations.

Mr. FREAR. He was the man who had the handling of it, there was no man over Sawyer—between Sawyer and you?

Mr. DISQUE. That is right.

Mr. FREAR. And there was no man over you excepting John D. Ryan, director of aircraft.

Mr. DISQUE. He was the next.

Mr. FREAR. Yes; he was the next. I am reading now from the reporter's record, page 2494, from the testimony of a Mr. Carrigan, who testified at Seattle, and, let me say, whom I had never seen 10 minutes before he was placed on the stand, but was a man who was a reputable citizen, had been a tax officer of the county, and made his statement briefly as to his qualifications; and here is a part of his testimony. He said: "I have seen all these telegrams you refer to." The committee introduced a number of telegrams from John Cain and others, in reference to this road that ran around the south side of Lake Crescent, you remember, and those were referred to in a general way. He says, "I have seen all these telegrams you refer to. I think I have seen every telegram Mr. Cain received from his eastern associates. The Milwaukee"—that means the Milwaukee Railroad—"at the same time, while I was trying to get Col. Disque to adopt this hard surface road"—he had some proposition up there, I think, that he was trying to get through—

Mr. DISQUE. He wanted a concrete road built across the county.

Mr. FREAR. Yes; he had something else. I am merely speaking just of the railroad as built.

Mr. DISQUE. Yes.

Mr. FREAR. He says, "I was trying to get Col. Disque to adopt this hard-surface road. Mr. Cain and his associates were trying to get

them to adopt their railroad and logging proposal; the Milwaukee was also trying to get the Government to advance them \$2,500,000 for 10 years without interest, or to take their bonds at 85 cents on the dollar, to extend their line from a point between Twin and Deep Creek by way of Pysht Pass to Lake Pleasant and the Hoh." That is referring to the Hoh River, and the timber was north and west of Lake Pleasant—this big timber tract they were trying to enter.

Mr. DISQUE. Most of it west and south.

Mr. FREAR. Most of it west and north is the testimony before the committee.

Mr. DISQUE. Well, that is all right.

Mr. FREAR. I am giving the testimony before the committee. Unless you have a better knowledge from your own experience, of course—

Mr. DISQUE. I will give you the district forester's report in a moment.

Mr. FREAR. We had the cruises that were given there; that is, the men who were familiar with it, and they made that statement. [Reading:]

The Milwaukee was pretty certain that they were going to get that contract, because they kept announcements going through the newspapers, every week or two, that they expected to start construction immediately, on the strength of a railroad contract being awarded to them by the Government. They were absolutely cocksure of that. Col. Disque had recommended that the Milwaukee be loaned this money, without interest, and the skids seemed all greased for a Milwaukee killing. Mr. Cain was very much discouraged, feeling that the Milwaukee had finally botten the upper hand, but his associate, Franklin Helm, who was the chief promoter of the Port Angeles & Grays Harbor Railroad—

that is the road that they had named—

was in New York and hooked up with Pliny Fisk, of the banking house of Harvey, Fisk & Sons, of New York, and were working very hard to secure the contract, but things were not going well. And, finally, out of a clear sky, came the announcement that the award had been made—in the first place they were working with Rogers, Brown & Bro., railroad contractors. The Milwaukee had sufficient strength to see to it that Rogers & Brown were not accessible to the Government as railroad contractors, which was one of the biggest firms in the country and very successful.

Telegrams were introduced as affecting that, up in Seattle. [Continuing reading:]

So, in all the negotiations with Helm and the Cain and Lindsay and Aston crowd, Rogers & Brown, up to a certain point, had been their railroad contractors; they were going to be put in charge of this work. I saw the original telegram that came to Mr. Cain, ordering him to substitute the Siems-Carey first, and, later, to add H. S. Kerbaugh to the contract, just then being formed at Portland, in connection with an attorney named Edwards, who was, he said to Col. Disque, in a logging contract which Col. Disque made Mr. Cain believe he was on the point of signing. So Siems-Carey-Kerbaugh were substituted for Brown. Neither Cain nor I understood why that was done at that time, but later, after the contract had been awarded and Siems-Carey had \$6,000,000 placed to their credit by the Government on a blanket mortgage that covered nothing, because they didn't have anything, the whole story came out to me, through Mr. Cain, which he obtained through his associate, Franklin Helm, as to how the miracle had been worked.

Now, the Milwaukee had absolutely the call on this contract up to a given point. It seemed that in earlier days the banking house of Harvey, Fisk & Sons, of New York, had financed Secretary William McAdoo, of the Treasury, in building the tunnels under the Hudson River—a very disastrous venture for Mr. McAdoo; it broke him, and almost broke the house of Harvey, Fisk

& Sons; they got through by the skin of their teeth—but that established a friendship between Fisks, and particularly Pliny Fisk, who was an active member at that time, and McAdoo, that was never ended and is not ended to this day.

When the life of the Port Angeles & Grays Harbor Railroad proposition, both railroad and logging, was in the balance, and Fisk had made up his mind they were licked, he went to Secretary of the Treasury McAdoo, who was Director General of the Railroad Administration, and said to him, "Bill, I am vitally interested in securing a railroad contract in the Northwest for getting out airplane spruce for the Government. We have got the spruce, we have got the surveys, we are ready to build this road if we can get the Government's approval and get this logging contract. Now, I have simply got to have it. The skids were greased for the Milwaukee to get this contract, and I can't get a look-in without your intervention. You and I have fought and played and died together, been resurrected together, gone through hell's fire together, and you have got to come to the front and help me get this contract for my company."

Mr. FREAR. That is, Fisk said this to—

Mr. CARRIGAN. Pliny Fisk said this to Secretary of the Treasury McAdoo, who was also Director General of the Railroad Administration. And he made this last appeal, which is the only prop he had to lean upon, because up to that moment the Milwaukee had triumphed in all their negotiations, and they were relying upon John D. Ryan to turn the tide in their favor; Ryan, I think, being a director of the road and the man who electrified the Milwaukee road through the State of Montana for the Milwaukee, and that was the big influence which they were counting upon, which I gathered from various intimate and Milwaukee sources, to secure them this contract. Then Fisk played his trump card, went to McAdoo and got McAdoo's active intervention, and it was on McAdoo's orders, or suggestion, however you choose to put it, that the contract was given to Siems-Carey-Kerbaugh for this logging operation on the Olympic Peninsula.

Mr. FREAR. Now, McAdoo had determined that the Milwaukee should not extend their line; he had done that by an order. I don't know whether you know that or not.

Mr. CARRIGAN. Yes. That was all a part of this negotiation; it didn't happen in a minute.

Mr. FREAR. No.

Mr. CARRIGAN. But, Mr. Chairman, the Milwaukee had a great deal of influence in this deal.

Mr. FREAR. Yes.

Mr. CARRIGAN. They felt that that was their territory, and they have resented, at all times, anybody else going in and opening up that splendid territory of the finest timber standing in America to-day. They have fought every effort to get in there, and so have the loggers of this State, generally speaking. The Northwestern Lumbermen's Association, they have all been opposed to opening up that territory; they have kept it on the reserve list; they have opposed anybody getting in there to make that timber available to the market; they have opposed the building of mills. That is why they were all unanimous in condemning the building of the mill at Port Angeles.

Now, it comes back to this: The Milwaukee was working hand in hand with the Northwest lumbermen, as far as killing the mill at Angeles was concerned. But they had a strong drag with the administration; they had a strong drag with Col. Disque; they had his approval of their scheme, but when the final solution came—the proposition of Mr. Aston, Mr. Helm, and Mr. Cain was to build from Port Angeles by way of the Elwah River, Lake Sutherland, and the south shore of Lake Crescent to Fairholm and thence down the Sol Duc River to Lake Pleasant and thence on to the Hoh River, with spurs up to the headwaters of the Hoh, and dragging in through all the valleys the stuff to the main line.

Mr. FREAR. And, as he says, that was for the continuation of the line down to Gray's Harbor?

Mr. CARRIGAN. Yes. They later expected to sell this road to the Northern Pacific, which ran to Moelips, so that it would give two lines, competing lines, through the Olympic Peninsula, and open up that vast territory. That was our plan.

Now, the Milwaukee having the strength it had, when McAdoo got into the game he thought it advisable to make a compromise, not permitting the Mil-

waukee to build westward, not permitting the new line to go into Port Angeles and compete with the Milwaukee, but to make a compromise by swinging the road around the north shore of Lake Crescent to Joyce, which is about 3 miles from the lake, and tie in the Government railroad No. 1—

That is No. 1, I think, in your list here?

Mr. DISQUE. Yes.

Mr. FREAR (continuing reading):

to the Milwaukee system at Joyce, the idea being that when the war was over and this emergency had ended, the Milwaukee would have not only a line with a physical connection with the Government railroad, and presumably the only line, too, but that road would be valuable. That was done on this theory: It is 20 miles from Port Angeles to Joyce, so, in round numbers, it will be 20 miles from Port Angeles to a common point on the lake equivalent to the point at Joyce. With railroad building material being scarce, labor being scarce, what was the sense in building an independent 20 miles of road when there is 20 miles of existing road to which this Government road could be tied in at Joyce? And on that theory the independent line to Port Angeles was eliminated and the physical tie made with the Milwaukee at Joyce.

On the further theory that half a loaf was better than no bread: If the Milwaukee could not get the Government money and could not get its line extended with Government aid, and the other fellows having to take the contract, needing the money possibly, the Milwaukee would be the final winner in having the Sol Duc territory opened up at Government expense, tied into their line to the westward at Joyce. So that the line was useless to anybody else, and that is the compromise that was made, and that is exactly how it was made, Mr. Chairman, from the intimate narration of all the inside facts obtained direct from Mr. Cain, and I have seen the correspondence; I have read the original telegrams; I have read their contracts, and I know the facts around about all these different negotiations that you haven't time to listen to now.

This statement was accompanied by the situation presented to the committee, that a logging road was built from Joyce to Lake Pleasant, around the north side of Lake Crescent, 36 miles in length, as you have stated, making approximately a 56-mile haul for logs from the Lake Crescent district to Port Angeles, the only means of reaching the water—

Mr. DISQUE. From Lake Pleasant, you mean.

Mr. FREAR. From Lake Pleasant to Port Angeles; yes. Whereas testimony has occurred that it could have been dumped into the water by a 14 or 15 mile railroad, built at one-eighth the cost, from Clallam Bay; and had they followed the Milwaukee extension that was proposed here, from Pysht Creek, or through Pysht Creek, there would have been all the road that had been constructed from Joyce up to Twin that could have been utilized at that time.

Here is a haul of about 3 or 4 times the length that would have been required—over 3 times that would have been required from Clallam Bay, without any logs, practically, being reached, and timber being reached, from Port Angeles to Lake Pleasant, because the large body of timber, you say, was a little south of Lake Pleasant; the people that we have had before us say a little north of Lake Pleasant, but all agree that it was west.

Mr. DISQUE. No; I said west and south.

Mr. FREAR. Yes; west and south.

Mr. DISQUE. There is some north.

Mr. FREAR. You all agree it was west.

Mr. DISQUE. I don't deny that there is timber north of Lake Pleasant at all.

Mr. FREAR. And there was timber on the road along the Deep Creek line, as you have stated in your telegram, as you have stated

in your letter to the Secretary of War, and as he states in his letter to the superintendent of Aircraft Production, as late as April 24.

Mr. DISQUE. Yes.

Mr. FREAR. That was the situation, and the road was built around the other way, at a cost of approximately \$115,000 a mile. Let me say that there was a slide taken out near Lake Crescent, just ahead of us, I think about a week or so, and there are two tunnels on that road, and I believe large cuts—must have been to have had that enormous cost for construction.

Now, what is your explanation of that?

Mr. DISQUE. Well, may I ask you, Mr. Chairman, is that all the evidence there is in the record of an intimated collusion with undue influence?

Mr. FREAR. That has nothing to do with the situation of this investigating committee. You are said to have decided where the road should go.

Mr. DISQUE. Yes, sir.

Mr. FREAR. We ask you, as a committee, what was your reason, what did you do?

Mr. DISQUE. I made that decision, and I am going to, I think, satisfy you that I had good reasons to do it.

Mr. FREAR. That is what we want.

Mr. DISQUE. But the great big thing back of all this is that that fellow talked for 15 minutes there, in a way that we would not have been allowed to say one word in court, and he created an impression that there was undue influence exerted to favor the Milwaukee Railroad. That is what his whole testimony leads up to.

Mr. FREAR. We are asking you what your explanation is, not what your judgment of this investigation is.

Mr. DISQUE. I want to make it clear to the committee—

Mr. FREAR. We can form our own judgment of the value of his testimony.

Mr. DISQUE. I want to know how to go at it.

Mr. FREAR. Explain why you determined upon this after you had wired and written the Secretary of War, inside of 30 days before this contract was let; advise the committee why, notwithstanding the Secretary of War had approved this route along the Strait—why you overruled that, why you changed the route?

Mr. DISQUE. Of course, the Secretary of War approved that route because I had recommended it, but when this contract was made—

Mr. MAGEE. The Secretary of War approved which route?

Mr. DISQUE. From Deep Creek up the Pysht River; he merely approved that as a matter of routine, because that is the route we suggested; but in the contract that was made to build the railroad, which he approved, it is definitely provided, I think, that the route shall be designated after we came back here. I know that is in a memorandum drawn at the time that that contract was made.

Mr. MAGEE. It did not define any particular route.

Mr. DISQUE. I don't think so.

Mr. MAGEE. Not as I understand it.

Mr. DISQUE. I have a memorandum drawn when that contract was made, which says—

Mr. FREAR. Here it is. I can read from article 1. It says:

The contractor, if requested in writing within 20 days from the date hereof by the officer in charge of the Spruce Production Division of the Signal Corps of the Army, hereinafter referred to as the officer in charge, shall survey and construct or cause to be surveyed and constructed for the Government, within six months after receipt of such request, a standard gauge railroad from a point on the line of the Chicago, Milwaukee & St. Paul Railroad Co.'s railroad in the State of Washington, to be determined by agreement between the parties, to the contractor's mill site to be constructed at or near Lake Pleasant in said State, together with all telegraph lines, sidetracks, terminals, and other facilities, exclusive of rolling stock, of whatever nature shall prove to be necessary or desirable. Said railroad shall be constructed according to a survey and according to plans and specifications submitted to and approved by the officer in charge.

Who was the officer in charge?

Mr. DISQUE. Well, that would be me, I expect, in this case. Probably intended that way.

Now, in order to give you this clearly I want to go back a little ways and bring this Clallam situation right through the various stages that we passed through, because we did change our mind, and were rather proud that we did; and we feel that any man, in war times or in business or in any other place, has got to change his mind to meet changing conditions.

It was almost immediately upon the opening of our office that we began to get recommendations about this Clallam spruce. We didn't know where spruce was at that time. We immediately began to get in touch and make our surveys, and we had a large number of recommendations, telling us how to develop that timber in Clallam County. There were any number of people who wanted contracts to go in there. Most of them wanted the Government to do everything connected with it, just guarantee them a profit. We had though presented among all these routes three possible ways that you have described, and we were not interested vitally at that time, because as time went on we thought that there was no doubt that we could get our 1918 requirements without tapping that timber, but it was felt that we needed the timber for 1919. It was these three routes that were—or three means of opening that timber suggested, were, as you say, up the Hoko and into Clallam Bay, through the Goodyear Logging Co.'s properties; the other one extending the Milwaukee to Lake Pleasant; and the other suggested around the south shore of Lake Crescent.

Now, I went through a process of elimination there that any business man would go through, I think, and I, by consulting with honest and able men here, formed my conclusions as our minds met, on these different points, and it appeared to us that the Clallam Bay and Hoko River proposition was not the one to take. Now, this method involved towing rafts from Clallam Bay through the Straits to the Sound, to the various mills, also called for a railway operation that did not seem to be a practical one, in light of the volume that we contemplated bringing over it. We interviewed steamboat captains, tug captains, sawmill men, of years experience on the Sound, made a thorough investigation regarding the towing possibilities and the booming grounds at Clallam Bay, which are very very small. We came to the conclusion that that would not

be a regular operation, it would be interrupted at times for two and three weeks possibly, and we based that on good information. And I would like to—I have read this report, and this witness that you had on the stand, he seems to have created an impression regarding the reasons for changing routes—I want to read what he had to say to the committee regarding towing from Clallam Bay.

Mr. FREAR. That is, you mean Carrigan?

Mr. DISQUE. Yes, sir. (Reading:)

Mr. FREAR. And they never lost a raft in the history of their business; that is Mr. Lightner's sworn statement.

Mr. CARRIGAN. I have seen the beach from Clallam Bay to Port Angeles absolutely strewn with logs.

Mr. FREAR. Whose logs were they?

Mr. CARRIGAN. I would not say from what company.

Mr. FREAR. That is his company, and only three rafts were ever broken in the Merrill & Ring Co., that is from Pysht; that is all the testimony before us.

Mr. CARRIGAN. Then I will say that God was good to Merrill & Ring and Mr. Lightner. I have known those Straits for 30 years, and I have seen, I was going to say, hundreds of tows, and I have seen lots of tows go to pieces.

* * * * *

Mr. CARRIGAN. That is not fair. You would never, as a sensible man, put your reliance on bringing that timber from Clallam Bay and running the risk of the sea.

Later on Mr. Lee asked:

Mr. LEA. About Clallam Bay, what shipping facilities are there now?

Mr. CARRIGAN. Not a damn thing.

Mr. LEA. There is no way of shipping in there for railroad construction?

Mr. CARRIGAN. The dock is here [indicating on map], and I have been there when we could not land at all; we had to throw the mail sack off and take a chance of its landing in the sea, which it frequently did, and time after time I have not been able to land from the steamer at Clallam Bay. There is a westerly swell that comes in from the Pacific that bangs in there to beat the band. There is nothing there but a little jerk-water town. There is a chance for some protection over on the west side, but very small. It is not a fine commercial harbor like that at Port Angeles.

Mr. LEA. On the question of towing, you have seen a good deal of those conditions there?

Mr. CARRIGAN. I have seen them doing the skirt dance when ot a thing but a float would live, and they do not go out in that kind of weather. If they tell you they have gone out there they have done it because they have picked their weather. There are weather stations all along the way, and they go over the chart when the weather is threatening, and they can tell 48 hours ahead about the weather, and they do not start out with a tow; they stay ashore, and they pick the weather and get through. Michael Earles told me himself he had lost enough timber logs towing between Port Crescent, which is a very much shorter and simpler tow, only about 14 miles. He had a big logging camp at Port Crescent; the Puget Sound Mills Co. had a big lumber camp at Port Crescent; that was before the Milwaukee got through, and then they abandoned towing from Port Crescent, 14 miles away. They had their big mill at the head of the bay, but it was so risky and the loss so great that the Puget Sound Mills, which is the Charles Nelson Co. now., absolutely abandoned logging from all this country by tow and are putting the logs on the railroad to-day and have been doing so ever since the road got through.

Later another witness of the committee's, Mr. Chisholm, whose testimony summarizes as follows:

We do not operate steadily. We have to wait a good deal. You might lay up two weeks. It takes a raft from three to four days to two weeks to reach the mills.

Furthermore, on December 29—

Mr. FREAR (interrupting). Now, he is testifying? Is he testifying?

Mr. DISQUE. No, sir; I am.

Mr. FREAR. Now, let me just suggest something right here: Is it agreed that the Goodyear Lumber Co. has been rafting there, has been rafting at Clallam Bay for several years, I don't know how long, carrying in the neighborhood of—I have forgotten—a large number, a great many millions of logs, several years, and that they never lost a raft? Is there any question about that, so far as you know?

Mr. DISQUE. I don't know a thing about that.

Mr. FREAR. No. Is there any question about the fact that Ring, Merrill & Ring, some of the largest operators on the Pacific coast, were engaged in working at—let's see—Pysht Creek; the mouth of Pysht Creek?

Mr. DISQUE. Yes.

Mr. FREAR. They rafted there for all of their cut for a number of years, reaching 100,000,000 feet, I think, a year, and that in all that time they have only had three tows broken and one of those was a large loss; the other two—that is, they were largely scattered, and the other two only slightly? Is there any question about that? That is the testimony of Mr. Lightner.

Mr. DISQUE. I don't know the facts about that at all.

Mr. FREAR. Now those are the cases that were presented to the committee, and of course the tide, low and high tide, would have some effect, unless there was dredging, at any harbor of that kind, like Yaquina Bay, or any other place you choose to find, would it not? I just ask if that would not be necessary? You would have to dredge at Yaquina Bay, wouldn't you, if you were going to tow there?

Mr. DISQUE. I don't think we contemplated any dredging there.

Mr. FREAR. You don't. Well, would you contemplate towing there from 10 to 14 miles?

Mr. DISQUE. In a land-locked harbor.

Mr. FREAR. Oh, yes; a land-locked harbor, but the question of towing as a method of bringing the logs up was one of the considerations.

Mr. DISQUE. The point I am making is this: They may have taken rafts from Merrill & Ring's and Goodyear's for a century.

Mr. FREAR. Yes.

Mr. DISQUE. If they quit working whenever the sea got rough, which it does, according to our information, at very frequent periods and for long periods of time.

Mr. FREAR. Mr. Lightner's testimony was contrary to that.

Mr. DISQUE. Yes. I have been reading here—

Mr. FREAR (interrupting). Yes; you just read one case in which Chisholm said it was rough at times. We remember the testimony as it came before us. Now, if you were going to ship in a large consignment of logs, as you proposed over this railroad as built to Port Angeles, there would have been a necessity of other mills being called upon to cut some of those logs, wouldn't there?

Mr. DISQUE. There was no necessity, but it was agreed—

Mr. FREAR (interrupting). If you were going to get a quick cut, it was?

Mr. DISQUE. It was agreed we were going to do that.

Mr. FREAR. Then you would have had to have rafted from Port Angeles?

Mr. DISQUE. That is an entirely different problem. You can get from Port Angeles around the dangerous point at one tide, and on one tide there is very little probability of a sea coming up sufficiently dangerous to break up a raft, which is a different proposition.

Mr. FREAR. The statement as an expert made by you does not agree with that of a number of these people who towed, who said the great trouble of all the towage and the only point which was serious was near Port Townsend. That was way beyond Port Angeles.

Mr. DISQUE. Did they say they could not go around there?

Mr. FREAR. Oh no. They always did go around without losing a raft.

Mr. DISQUE. Well, I would——

Mr. FREAR (interrupting). That is all. I just wanted to find out about that.

Mr. DISQUE. I would like to have the committee call the following men, who knew about this thing; that is, E. S. Geirin——

Mr. FREAR (interrupting). Well, these men were shipping. They owned all the timber, they owned the logs; they were shipping over there constantly. They know as much about it as anyone else there was.

Mr. DISQUE. Mr. Chairman, you are talking about men who had an ax to grind, and I am going to show the ax before I get through.

Mr. FREAR. Is there any questioning that they towed without losing a raft? Do you agree to that?

Mr. DISQUE. I will accept that; but I say if they did, they didn't tow when the weather was rough.

Mr. FREAR. They said it was with practically very little interruption. That was Lightner's testimony.

Mr. DISQUE. Then, let's take the Federal Weather Bureau's reports. that is available.

Mr. FREAR. Yes; let's take it at the same time we take the slides on the railroad you built that interrupted all traffic.

Mr. DISQUE. That slide, according to engineers who have seen it, would have interrupted traffic probably 24 hours, and it is the only slide that occurred on the railroad; that is, of any importance.

Mr. FREAR. Then, let's take the bridges that washed out on your construction.

Mr. DISQUE. There were no bridges washed out. There was a false structure washed out. There wasn't a bridge washed out. It is perfectly reasonable to expect a freshet would come along and take out a false bridge, but after the bridge was constructed it was never interrupted.

Mr. FREAR. It may not have been, but we saw the slides down below Yaquina, where the road slid down 20 feet. There were very serious chances on the railroad as well as any other system. What I mean to say is, and I am not questioning but what possibilities may occur of weather, and all other interruptions, but all those means

of communication, of logging, are subject to conditions that may occur.

Mr. MAGEE. Why, the evidence shows it has been a feasible means of transportation from time immemorial.

Mr. DISQUE. Been a what?

Mr. MAGEE. A feasible means of transportation from time immemorial.

Mr. DISQUE. Well, time immemorial. We need something more than that. We need an absolute regular means that can not be interfered with; and that Sound up there and straits is interfered with frequently, and nobody has said that it was not; and every man who has told you about the logs he has towed has dodged the question of how many days and weeks he has failed to send a tow out.

Mr. FREAR. Oh, no; not dodged them. They answered squarely.

Mr. DISQUE. No.

Mr. FREAR. They were very honest witnesses; men like Lightner, never questioned, and he is a highly reputable man.

Mr. DISQUE. Well, it won't expedite it to bring that out, but I have read the testimony.

Mr. FREAR. But when you say witnesses were dodging questions, you see, that is rather serious.

Mr. DISQUE. Well, the point came up once or twice, and they said, "Well, we"—

Mr. FREAR (interrupting). Oh, you mean in your conferences?

Mr. DISQUE. No; I mean in your evidence.

Mr. FREAR. Oh, in our evidence.

Mr. DISQUE. And he said, "Well, we didn't operate occasionally," or something like that. They know darned well they didn't send tows out whenever that weather was rough. Let's bring them back and ask them the question. He said—

Mr. FREAR (interrupting). That would be true, if the weather was rough.

Mr. DISQUE. Let's ask them how many days it was rough.

Mr. FREAR. If that is material I am willing to send for them.

Mr. LEA. Why not let us go ahead with the facts.

Mr. FREAR. I think it is rather serious, questioning the accuracy of witnesses.

Mr. DISQUE. I didn't have any idea of building the road at that time. This was back in a period in December the 29th. Mr. Earles, who is a man I think recognized up there as a wide experienced man in logging and mill. He was in my office—

Mr. FREAR (interrupting). Who is Earles?

Mr. DISQUE. Michael Earles. He was the man who ran that Puget Sound Mills and Logging Co. He was in my office and my diary shows—

Mr. FREAR (interrupting). That is, he is from Port Angeles?

Mr. DISQUE (continuing). On December 29, that he said, "You could not count on a continuous operation at all there, and you could not consider moving rafts from that Clallam Bay in any big or continuous operation." Now in addition to that I had filed with me the report of the District Forester—

Mr. FREAR (interrupting). Just let me ask you as you pass by, Mr. Earles was from Port Angeles, and they wanted to get the haul;

they wanted to get the cut there; they wanted to get the mill established; everything led them to desire to have it placed there.

Mr. DISQUE. Exactly.

Mr. FREAR. When you speak of influences on men.

Mr. DISQUE. There are influences all around. You can hardly get anybody who is not.

Mr. FREAR. Of course your recognized that and accepted that as one of the conditions.

Mr. DISQUE. Then the officials of the Federal Forestry Service had advised me that we would have to develop the timber by a railway, if we established a large production. Even though we should decide to develop the Hoko as a temporary measure to provide an immediate increase in production. And I have here the report of Mr. George H. Cecil, district forester.

Mr. FREAR. The Committee has read it, yes.

Mr. DISQUE. And Mr. Nelson's report on the Clallam Bay, in which it says, page 4, "Rough weather at times makes it impossible to make up rafts or tow them to the mills." Now another thing that was in my mind then, I think a reasonable question, that by developing up the Hoko you are concentrating our development largely on the property of the Goodyear Logging Co. A lot of other people owned timber there.

Mr. FREAR. Well, through the Milwaukee lands as well—through the Weyerhaeuser's land as well?

Mr. DISQUE. Well, the outlet was Goodyear, and these other fellows would be at the mercy of the Goodyear Logging Co.

Mr. FREAR. Oh, no; you could commandeer.

Mr. DISQUE. Well, we didn't commandeer.

Mr. FREAR. You could have done so just as well as you did the Blodgett tract.

Mr. DISQUE. Well, after the war was over, I am thinking now, it would have been a very unfortunate, unfair advantage for anybody.

Mr. MAGEE. Now there is the point. Were you building for the future, General, or were you constructing for the emergency of war?

Mr. DISQUE. We were building for that emergency, but always trying, and sensibly so, to do it in the best way, considering everything.

Mr. MAGEE. Well, you were meeting the emergency of war?

Mr. DISQUE. Yes.

Mr. MAGEE. Now, in my own mind, I would like to know whether you were acting to meet that emergency of war?

Mr. DISQUE. Why, exactly.

Mr. MAGEE. Whether that was the sole consideration, as the basis of your action?

Mr. DISQUE. That is the thing that inspired every move we made.

Mr. MAGEE. Well, do you say that is the sole consideration of the basis of your action?

Mr. DISQUE. That is not a fair question.

Mr. MAGEE. Well, do you refuse to answer it?

Mr. DISQUE. Any man at any time never has only one sole consideration for any act.

Mr. MAGEE. No; I have asked a proper question. You can answer that question yes or no, General.

Mr. DISQUE. Why, I considered everything. I properly did.

Mr. MAGEE. No; just answer the question yes or no. I don't care how you may answer it.

Mr. DISQUE. I won't answer it yes or no.

Mr. MAGEE. Well, then, you refuse, as we understand it?

Mr. DISQUE. Yes, sir; it is not a fair question. It does not bring out the fact.

Mr. MAGEE. Well, now, I accept to the general's statement that that is not a fair question, and we are here as an investigating committee, and I think that when I ask you, as an emergency of war, whether or not your decision was based upon the sole consideration of the best interests of your country in the emergency of war, that is a fair question, and I am entitled to a fair answer.

Mr. DISQUE. I will say that the requirements of the country at that time—

Mr. MAGEE (interrupting). No; if you can't answer it yes or no—

Mr. DISQUE (continuing). Were the only thing that moved me.

Mr. MAGEE. I ask that this be stricken out. If you don't want to answer that question, you don't have to.

Mr. DISQUE. Well.

Mr. MAGEE. That ends it, if you don't want to answer it.

Mr. DISQUE. Well, the answer is that nothing but the war emergency did stand as my motive.

Mr. MAGEE. Well, then, you answer the question, but you answer it differently from what you answered it before.

Mr. DISQUE. But I still say that I considered many things in doing that.

Mr. MAGEE. Well, I say you have answered the question; that ends that.

Mr. DISQUE. Now, you folks want to know why I didn't build up the Hoko.

Mr. FREAR. We want to know why you selected, rather, the route you did.

Mr. DISQUE. The route we did select?

Mr. FREAR. Yes.

Mr. DISQUE. But I have got to eliminate in order to cover that.

Mr. FREAR. That is all right.

Mr. DISQUE. Here was a logging company with a large capital, as I understood, logging in their own territory, had an operation under way.

Mr. FREAR. That is, you are referring to Goodyears?

Mr. DISQUE. Goodyear Co. The indications were that they would have liked to have had control of that situation over there by the Government building a railroad through their property; but they were operating—they were in spruce. The Government had contracts at that time with practically 100 mills to take all the spruce aircraft lumber that they would produce. These contracts were made separately, so that the mills could in turn contract and guarantee loggers the best price that had ever been paid for spruce logs. There is no reason on earth why the Goodyear people could not have developed all their own property to its fullest limit. There was a good financial proposition for them. There was a good

patriotic thing for them to do, and, as an officer of the Government, I had a right to expect they would do the best they could to develop their own property. And in view of the entirely adverse recommendation from everybody that talked to me about it, against the possibility of moving towns out of Clallam Bay, I gave that route up in my mind as one that we would be interested in for developing the great, big stand west and south and north of Lake Pleasant.

Mr. FREAR. Well, let's see if we understand each other. The Pleasant Lake stand of timber, which was the great timber that you were trying to reach, was within about 15 miles of Clallam Bay—14 to 15 is the testimony?

Mr. DISQUE. That was the edge of it.

Mr. FREAR. Yes.

Mr. DISQUE. You could go on 25 miles to get through it.

Mr. FREAR. Oh, that is true of Pleasant Lake. You were not at the edge of it when you reached Pleasant Lake?

Mr. DISQUE. No.

Mr. FREAR. You had to go on to get to the timber; that was the edge, but you were reaching timber all the way along.

Mr. DISQUE. No; not the kind that we wanted exactly.

Mr. FREAR. Well, you had never seen the timber, had you?

Mr. DISQUE. Well, I have very complete reports from my—

Mr. FREAR (interrupting). Oh, yes. They were getting spruce there, as you say, that they could have cut on their lands then for the benefit of the Government.

Mr. DISQUE. Exactly.

Mr. FREAR. Then it was spruce you could reach?

Mr. DISQUE. Exactly.

Mr. FREAR. Now, they only had a limited capital. They had gone about 5 or 6 miles. This was a proposition that would cost from \$300,000 to \$500,000 to build in time of war, as they have stated, or about one-eighth of the cost of the road as built. Now, you didn't offer them any cost-plus contract, did you? You didn't give them any conditions like were given Siems-Carey Kerbaugh Co.? I ask that. They were reputable loggers; they were people that were able to handle the matter. Now you are questioning their patriotism, as I understand.

Mr. MAGEE. Let him answer.

Mr. FREAR. I ask whether you offered them a cost-plus contract.

Mr. DISQUE. I did not. Neither did I offer Siems-Carey a cost-plus contract to produce fitches or spruce lumber.

Mr. FREAR. Or railway?

Mr. DISQUE. The railway was a cost-plus contract.

Mr. FREAR. Of course it was. Well, that is the point. They could have gotten in there just as well as Siems-Carey-Kerbaugh, if you had given them a cost-plus contract. All they needed was \$300,000 to \$500,000, where you gave Siems-Carey-Kerbaugh about \$4,000,000.

Mr. DISQUE. But, Mr. Chairman, I say I eliminated that as a proper way to develop that spruce.

Mr. FREAR. Yes; but the reason you gave was questioning the patriotism, and so on, as I understand.

Mr. DISQUE. No. One of the reasons for eliminating it was I had a right to think and believe that they would do all that could be done in their own timber.

Mr. FREAR. But they could not reach on to the Pleasant Lake. They didn't have the funds.

Mr. DISQUE. They were not interested in that. There was no reason why I should give them a contract to log something they didn't own.

Mr. FREAR. That is what you did with Siems-Carey-Kerbaugh.

Mr. DISQUE. Siems-Carey-Kerbaugh came to me. I didn't come to them.

Mr. FREAR. Well, that is all right. Go on.

Mr. DISQUE. I didn't offer Siems-Carey anything. I want that clearly stated in the record.

Mr. FREAR. All right.

Mr. DISQUE. I never made an offer to Siems-Carey.

Mr. FREAR. I don't know that you ever did. Let me say we are just trying to find out what the facts are.

Mr. DISQUE. Well, that is the truth, and that is the fact.

Mr. FREAR. Now, we will go on. We have passed over the Clallam Bay proposition.

Mr. DISQUE. Now, I just have some notes here to refresh my mind. It has been six months since I left this operation.

Mr. FREAR. That is all right. You may refer to them. That is, don't read the notes.

Mr. DISQUE. No.

Mr. FREAR. But use them for reference purposes, if you desire.

Mr. DISQUE. No; I won't read them. Now, of course, as you said, the citizens up there wanted a concrete road built across the country, which was a very laudable proposition from the standpoint of the local community, but we didn't consider it the way to get spruce out. Then, there was this company wanted us to go around the south side of the lake. At that time—

Mr. FREAR (interrupting). That is, that Port Angeles company?

Mr. DISQUE. The Port Angeles and Grays Harbor, I think is the name of it. The point I would like for you to see right there is this: I looked over this map and talked with lots of people. Then I went and saw Mr. Earling, the vice president of the Milwaukee, in charge of this end of their road, and discussed with him the—

Mr. FREAR (interrupting). When was this?

Mr. DISQUE. Oh, it started in December.

Mr. FREAR. Oh, December, 1917?

Mr. DISQUE. Yes, sir.

Mr. FREAR. Yes.

Mr. DISQUE. And it culminated with his letter to me of February 26.

Mr. FREAR. 1918?

Mr. DISQUE. 1918. At least this was one of the critical points in our negotiations. He says, "Since receiving your"—this is a letter from Mr. H. B. Earling, vice president of the Chicago, Milwaukee & St. Paul Railway, dated en route, Seattle, February 26, 1918, addressed to Col. Brice P. Disque, Portland:

Since receiving your letter of January 28 I have conferred with our people in Chicago regarding the question of extension of the line on the Olympic Peninsula. Now, that the Government has taken charge of the operation of railroads, which includes also the financing, we are of the opinion that the matter should

be brought to the attention of Director General McAdoo by your department, and particularly as we understand the Director General has in mind a plan contemplating just such situation as the one which exists on the peninsula.

The rest refers to a map that he sent me, which is not important. Now, I might say there that this was the last communication that I had from Mr. Earling, when it seemed possible for the Milwaukee to extend their line from Deep Creek on up the Pysht.

Mr. FREAR. Of course, you know they were refused permission by the railroad administrator?

Mr. DISQUE. Yes, sir.

Mr. FREAR. I guess that was subsequent, wasn't it? Or do you know?

Mr. DISQUE. That was subsequent to this.

Mr. FREAR. Yes.

Mr. DISQUE. I will come to that and show you why.

Mr. FREAR. All right.

Mr. DISQUE. I had been trying to get the Milwaukee to extend their own line from Pysht up to Lake Pleasant. It never occurred to me that we would be responsible or would have to take the responsibility of getting the rail facilities in there. Here was a trans-continental line bang up against the thing almost, only 25 miles, and they were going up there anyway some day, and I tried for two, about three months, it appears here, to get them to do it.

Mr. FREAR. Have you got your correspondence there that shows where you were trying to do it?

Mr. DISQUE. It is not all here. It is in my file, available.

Mr. FREAR. That is, you mean the files here?

Mr. DISQUE. Right here in Portland.

Mr. FREAR. Yes.

Mr. DISQUE. And I went to Seattle, had conferences there with Mr. Earling. He came down here. We were trying to get together on some kind of a basis that the Milwaukee would be justified in doing in a year what had been planned out for the next ten years.

Mr. FREAR. That is, you mean to say ten years in advance of when they went down?

Mr. DISQUE. They were going ahead about three miles a year. They expected to get to Lake Pleasant, I don't know when, but maybe eight or ten years from that date.

Mr. FREAR. They had a line surveyed way down to Forks, or way down—

Mr. DISQUE (interrupting). Why, they had it surveyed clear down in Grays Harbor.

Mr. FREAR. Yes; they had it surveyed down to Grays Harbor; then they desired to get down to Grays Harbor?

Mr. DISQUE. Yes; I suppose they did.

Mr. FREAR. Just as the Northern Pacific were trying to get out.

Mr. DISQUE. Just as they were trying to get out.

Mr. FREAR. Yes.

Mr. DISQUE. Now, this talk with Mr. Earling finally resulted in him going East, and this letter was written on his return. He went back to see if his director could not agree with him, or his president, or the executive committee, or whoever he may be, I don't know who he met in Chicago, but his letter says he consulted with his officers, and the proposition that I had finally made to him, which was not

accepted by him but which I thought was a fair one to the railroad and the Government, and which I felt would be acceptable finally to the railroad, was put up to him just before he went East, and that proposition was this, in a few words.

Mr. FREAR. That is in correspondence, is it?

Mr. DISQUE. Oh, yes.

Mr. FREAR. I just asked to have the letters brought, but you go right ahead and testify.

Mr. DISQUE. I will read a telegram here containing it, in a moment.

Mr. FREAR. Oh, yes; go ahead.

Mr. DISQUE. It was to the effect, and this was in January or February, 1918, that I felt that it would be fair, since the railroad could not finance this thing and I had learned that they would not do it, that the War Department should finance it and build it with a contract with the railway that it would be taken over by them at the conclusion of the war and they were to pay back to the Government its cost price less 10 per cent at the end of 10 years' time.

Mr. FREAR. That is, the Milwaukee would take it over at the close of the war?

Mr. DISQUE. They would take it over and pay the cost of it less 10 per cent at the end of 10 years' time; and that was done to amortize what we thought was the excessive cost. I don't know whether they would have accepted that finally or not, but before they got a chance the director general took more active control and the negotiations drifted from Earling and our office to Washington. The Milwaukee refused to go to the director general or participate. They were not keen about it, but they were willing to have it done if the director general should so instruct. Then our telegrams were taken up with Washington, and that is best evidenced by one sent to Mr. Howard Coffin, Director of Aircraft Production, on March 6. The first part of this telegram refers to this Walston H. Brown Co. that has been mentioned in the record. I don't know who they are. I don't know who Pliny Fisk is, or any of those folks. I have never seen them in my life. And this fellow here—here is the date, sent from my office March 6, 1918 [reading]:

HOWARD COFFIN,

Munsey Building, Washington, D. C.:

Walston H. Brown & Bros., of New York City, proposed to this office in January a contract to secure Clallam County spruce, offering to furnish not less than 50,000,000 feet airplane spruce within 18 months. Offered to furnish bond and start operations within 30 days. Wished advance 30 per cent contract provided that Government commandeer all docks, wharves, rail and water transportation and facilities as well as sawmills necessary to operation and turn same over to contractor. Also that the Government commandeer stumpage and rights of way as well as steel rails and logging equipment. Contractors also provided that Government guarantee full supply labor and no strikes, and agree to guard operations and prevent unreasonable demands for wages.

I told representatives of Brown Bros. that we could not consider such a contract. They retired with understanding that they would try to arrange conditions with which I told them Government could agree. Approximately 2,000,000,000 feet good spruce in Clallam and Jefferson Counties owned by several different companies. Have always considered this great virgin stand unnecessary for 1918 production, but vital for 1919. Have felt it indispensable that common carrier tap this territory with railroad in order that a large number of operators may get to work next year and have uniform opportunities to

place their production on a through-line railroad. Milwaukee Railroad officials agree to extension their line into this territory some 50 miles, cost approximately \$2,225,000. Will have road operating by January 1, already surveyed and contemplated, but except for spruce situation would not construct inside next 10 years. Government should authorize through director general this extension Milwaukee road with understanding that cost less 10 per cent should be returned to Government by railroad at end of 10 years without interest. Reduction 10 per cent for purpose of equalizing present excessive cost construction materials. Brown Bros. but one of many who wished to open this tract and have monopoly where it is absolutely essential that a large number of operators be admitted. Practically every proposal has been one in which the Government should do everything except take the profit. Brown Bros. met me in Washington and said they were ready to start operations in accordance with my conditions, except that they wanted a bonus on the current price of spruce lumber. This was but a few minutes before my train left and they agreed to take the matter up here in Portland. To date they have offered no reasonable proposition. I do not feel that the Government is justified in paying a bonus and would never consent to it. We can get that spruce when we need it without increasing cost to the Government.

That telegram——

Mr. MAGEE (interrupting). What is the date of that, General?

Mr. DISQUE. March 6. I sent down there about the time we began to try to get action from the director general. We wanted to get construction started before or as soon as the dry weather came on.

Mr. FREAR. That was two days before the telegram you sent to the Secretary of War, March 8, which I have read into the record.

Mr. DISQUE. March 8. Well, then, if that is March 8. We continued to touch this subject over the wires from time to time and got no headway. We were using the cream of the year, time when we had to start construction; it begins in the middle of May, I suppose, up there. We took time to get an organization out on the road; so that it was in May that I decided to go to Washington for the—well, really, the only purpose that I had in mind was to bring this thing to a head. In the meantime Mr. Ryan had become Director of Aircraft Production. I think the minutes say he assumed his duties on the 20th, but he was there when I left here to go East, and one of the reasons I went was that I wanted to find out whether he was a man that proposed to put this thing over and hit the ball, and if he wasn't I was ready to ask to be relieved.

Mr. FREAR. When did you go East, did you say?

Mr. DISQUE. About the 10th of May, I think.

Mr. FREAR. Yes.

Mr. DISQUE. It was some time along the first half of May.

Mr. FREAR. He was there then, you say?

Mr. DISQUE. He was there when I arrived. That is the first time in my life I ever saw him.

Mr. MAGEE. Well, he wasn't director then, was he?

Mr. DISQUE. I think so. He was when I arrived.

Mr. MAGEE. Well, I understood he didn't become director until May 4.

Mr. FREAR. Well, Potter was his predecessor, and he came in some time in May.

Mr. DISQUE. He was certainly acting as director when I got there, and I arrived there, as I say, about the 10th or 12th of May. All of these negotiations up to that time had been carried on first with the Milwaukee officials, then with the Director of Aircraft, Mr. Howard Coffin, and with his retirement, being unable to get action, I went to Washington to bring a settlement about if possible.

Mr. FREAR. A settlement in what way?

Mr. DISQUE. Of this question as to who was going to build that railway.

Mr. FREAR. Oh, yes.

Mr. DISQUE. And to have it done and started. We were losing time that could not possibly be added to the end of the construction period. About this time, when I arrived in Washington, one of the first things I had in mind was the railway, and I went to Mr. Ryan direct and said, "Here is this situation. There has got to be a railroad constructed there right away if we are going to get anything next year," and I started to tell him our plan. That is when he told me that he was a director and a member of the executive committee of the Milwaukee Railroad and that he preferred not to discuss any problem that involved that railroad in any way.

Mr. FREAR. What was the status of the Siems-Carey-Kerbaugh contract for the production of flitches before you left Portland?

Mr. DISQUE. Yes; that is important to bring in right here.

Mr. FREAR. Yes; it follows up.

Mr. DISQUE. Before I left Portland, some time in April—I think April 12, if my memory is correct—I had drawn a contract. Do you want to go into that now?

Mr. FREAR. Yes; as to the negotiations that led up to the Siems-Carey-Kerbaugh contract.

Mr. DISQUE. You mean, their spruce contract?

Mr. FREAR. Their spruce contract; yes. If you want to take time to look that up we will adjourn now until 2 o'clock.

(Thereupon, at 12.03 o'clock p. m., the committee took a recess until 2 o'clock p. m.)

AFTER RECESS.

The committee met, pursuant to the taking of recess, at 2 o'clock p. m.

TESTIMONY OF MR. BRICE P. DISQUE—Continued.

Mr. FREAR. Before the adjournment we were talking over the question of continuing this statement as to the Siems-Carey-Kerbaugh contract; that is, the spruce contract. You can go on with that now, if you will.

Mr. DISQUE. I think I could make it clearer to carry through the railroad idea, and then follow it up. At this time in Washington we had signed a contract, on April 12, as I recall, with the Siems-Carey-H. S. Kerbaugh Corporation for 250,000,000 feet of flitches; I had declined to sign that contract in Portland, where it was made, because at that time we had not made provision for transporting the spruce flitches from Lake Pleasant to a transcontinental line, and I did not want to obligate the Government to buy flitches from them until we had a definite means of getting them away from Lake Pleasant. They came to Washington while I was there for the purpose of having that contract negotiated—completed.

Mr. FREAR. Was it signed on May 12?

Mr. DISQUE. It was signed by them in Portland, before they left.

Mr. FREAR. By "them" you mean whom?

Mr. DISQUE. Siems-Carey, in my office in Portland.

Mr. FREAR. Was it closed by the Portland office for the Government?

Mr. DISQUE. I did not sign it.

Mr. FREAR. Did anyone sign it, Crisp or anyone else? I was trying to get in my mind what was the fact. As I remember, it was signed by Crisp.

Mr. DISQUE. I think you are correct in that.

Mr. LEA. That is my recollection of it.

Mr. MAGEE. What you had in mind was that the railroad contract and the spruce contract were interdependent, or twin contracts; one could not be carried on without the other?

Mr. DISQUE. What I had in mind was that I would not execute a contract for delivery of spruce at Lake Pleasant until there was a means of getting it away from there. At that time I had not discussed any phase of the railroad question with Siems-Carey.

Mr. MAGEE. One contract could not be carried out without the other?

Mr. DISQUE. There was no other contract in our mind at that time.

Mr. MAGEE. But you had a railroad contract and you had a spruce contract. Your spruce contract could not have been made available without a railroad being constructed; in other words, one contract was dependent upon the other. It would not be any use to build a railroad unless you had an opportunity to get spruce out over it. Is not that right? They were really twin contracts, you might call them.

Mr. DISQUE. They became that, but at the time I am talking about there had never been any discussion of a railroad contract.

Mr. MAGEE. That was merely suggested when you said you would not sign the spruce contract until some means had been provided to get the spruce out?

Mr. DISQUE. That is it; and when Siems-Carey first proposed to us to get fitches, their original proposition included providing transportation to the point called Port Crescent, just west of Port Angeles.

Mr. FREAR. By what road?

Mr. DISQUE. They were going to put in their own. I never discussed it with them. I told them we were not interested in that, that we were going to have a road put in by the Milwaukee or some other way under the Railroad Administration, and I did not discuss it with them. Yet their original proposition did provide for them delivering fitches to Port Crescent.

Mr. FREAR. That was also a proposition that you folks had been discussing, even up to the time of the signing of the armistice, was it not Port Crescent; and the reason for that was so that the Milwaukee could not hold you up on freight rates?

Mr. DISQUE. We did discuss that quite at length until the armistice came. We were prepared to extend our line down there.

Mr. FREAR. From the Joyce Junction, or Disque Junction?

Mr. DISQUE. If the Railway Administration had not come to reasonable terms. And since you mention Disque Junction, I understand that has been mentioned before and I want to say that name was given to a switch up there without my knowledge or permission, and it was some two or three months afterwards that I heard

about it and I ordered it changed, and I found that they had included it in certain legal papers and it could not well be changed. I had no ambitions in that line.

Mr. FREAR. That did no harm.

Mr. MAGEE. They have got your name up there, have they?

Mr. LEA. When he saw the building up there we concluded it was not any particular honor.

Mr. DISQUE. Now, we were in Washington, as I say. We had found that the railroad would not be built by the Railway Administration, nor would they assist in any manner. I then went over to the Aircraft Board. They were having their regular meeting, and I told them that I wanted to discuss the means of getting this spruce out from Lake Pleasant and that involved a railway line. Mr. Ryan called Admiral Taylor to the chair, turning the meeting over to him, and left the room.

Mr. FREAR. What date was that?

Mr. DISQUE. About the middle of May, approximately the 15th. The exact date will be shown in the Aircraft Board's records. I then outlined the situation to the Aircraft Board. Most of them, I think, were familiar with it at that time, and they decided unanimously that the Government or the War Department would have to build that road with their own funds and to proceed to do it immediately.

Mr. FREAR. That is because the Railroad Administration had refused to permit it?

Mr. DISQUE. Had refused to participate, or to permit the Milwaukee to. Then was when Siems-Carey came into the railway project for the first time. They had been recommended as high-grade contractors.

Mr. FREAR. That is, so far as you knew?

Mr. DISQUE. Yes, sir.

Mr. FREAR. Because the record shows they were in long before that.

Mr. DISQUE. In what?

Mr. FREAR. In this deal.

Mr. DISQUE. The railway?

Mr. FREAR. No; that the Siems-Carey-Kerbaugh Co. were in this deal long before.

Mr. DISQUE. Well, they were not in it so far as the railroad was concerned, at least; not to my knowledge.

Mr. FREAR. All right.

Mr. DISQUE. They were recommended by the chairman of the Great Northern, by the chief engineer of the Great Northern, by the president of the Northern Pacific, the vice president and chief engineer of the Minneapolis, St. Paul, Sault Ste. Marie, and several other prominent railway men in the country who ought to be judges of the ability of contractors. I told them that the Aircraft Board had authorized the road. They were railroad contractors and told me then that they had their organization ready. Its activities had been largely suspended because the war was on, and they were more interested in getting that road completed and built than anybody else, because they had nothing in the way of deliveries coming until after the road was up to Lake Pleasant. We had lost up to that time, I felt, a month and a half of construction weather, and of all the people

whom I had met in the way of contractors I was impressed with them as the people who would probably put a thing over; put punch into a job better than any others. They were new to me, but I did have the feeling that they were people who would go through with a job that they started. So I proposed to them a contract to build this line, not any particular place, but to connect up the Milwaukee with Lake Pleasant, and it was then that Mr. Carey, who had been out here looking over the spruce and looking over the routes, said to me that he was sure he could not build that extension from Deep Creek up to Lake Pleasant before the winter rains started, and he was confident as a contractor—

Mr. FREAR. Before the winter rains set in?

Mr. DISQUE. That was only six months away then, and he was confident as a contractor that if it could be finished, the supporting grades that would have to be prepared going around the Pysht River were in such soil that they would not stand up during the coming winter season and the railroad would be out of commission most of the time. Well, as you have gathered from my telegrams and from letters and other things at that time, there was not any doubt in my mind but that Deep Creek was the place to start to carry on this line. Mr. Earling had never felt that the Lake Crescent route was a feasible one. They seemed to have the impression that grade was almost impossible from Joyce up to Lake Crescent, and I had never seriously thought of the Lake Crescent route. I told Carey that I could not understand his saying that the Lake Crescent route, which was some 11 miles longer than the extension from Deep Creek, could be done in less time; but he was insistent upon it and told me he would not guarantee to finish the line if we went by way of Deep Creek. That led to my talking with Mr. Byram that day before he left Washington. Mr. Byram is the president of the Milwaukee, and he had come to Washington to talk with Judge Lovett and myself to find out if the Milwaukee was to participate, or the Railway Administration, and having found they were not he left town; but before leaving I asked him what he thought about the two routes and he told me their local engineers out here had always favored the route near the Pysht River, but he personally did not think there was a great deal of difference. That is the first time that any Milwaukee official had led me to think that it was even possible to go up. I may have misunderstood them, but that was the impression I had all along.

Mr. FREAR. That is, go up which way?

Mr. DISQUE. The Lake Crescent way. Mr. Byram, being president of that line, and feeling that it was possible to go by the Lake Crescent route, and Carey, the man who was going to build it, stating definitely and positively that he was sure it could be built in the time required up to Pysht River. I told Carey that I would arrange that the contract would not describe the route until I had another opportunity to check up the information that he had given me. The contract therefore left the route open until I could have further opportunity to look into it. I came west, immediately got in touch with Mr. Roberts, locating engineer of the Union Pacific, being a man whom I had every reason to believe was disinterested from every standpoint, and he went into the country and spent three days mak-

ing a reconnoissance of both routes. I don't think that anyone knew he was making this reconnoissance. He was supposed to go in there without advertising himself, and I wanted his honest opinion and he gave it to me about the 5th or 6th of June, as I recall, and he concurred in Carey's recommendation. He showed me the difference in cubic yards that had to be removed, the difference in the character of the soil through which the cuts were to be made, the compensating grades that would exist, the total rise that would occur in the road in both ways, and ended up by recommending without qualification that if the road had to be built in record time and finished before the winter rains, the only possible way would be by Lake Crescent.

Mr. FREAR. Did he give you any figures, any estimates?

Mr. DISQUE. Not any exact figures. There was not time to make those. We were losing good weather every day. And then at that time I had also in my possession a report from the district forester here in Portland who had sent his lumber engineer up there, a man supposed to be an expert in those questions.

Mr. LEA. While we are on that Roberts report, had we not better put than in now?

Mr. FREAR. We might just as well. Was it in writing?

Mr. DISQUE. In writing. I have it here.

Mr. FREAR. You can read it if you choose.

Mr. DISQUE. I would like to read a portion of it and then I can insert the entire report. I think it would be well first to put in the reasons Carey gave why he felt it ought to be built by Lake Crescent. The first reason was that going up the Pysht River the grade would be largely along the slope of steep hills in soil which was subject to frequent slides, and therefore probably would not stand up during the first year of operation after the rain started. The second reason was that the Pysht River route involved a very heavy grading operation involving the removal of large quantities of earth at several points, to which it would not be possible to move steam shovels until after the route was completed; therefore all excavation would have to be done by hand, and that would be slower and more expensive work.

Then the third reason was that the route via Lake Crescent could be built with a maximum grade of 2½ per cent, would be practically level most of the way, and where cuts were necessary they would be largely in rocky formations which would eliminate the possibility of serious interference to the operation of the road.

The fourth reason was that the entire route via Lake Crescent was parallel by a good metalled county road, and this would render possible the moving of crews, tools, and equipment to any number of points along the line, thus permitting operations to start everywhere simultaneously and to keep them supplied.

Another reason was that after the job was done the haul to make connection at Port Angeles was some 6 miles shorter. Of course that was not an important reason at that time.

Mr. FREAR. Let us see if we understand. The route to Port Angeles would be 6 miles shorter in what way?

Mr. DISQUE. Via Lake Crescent than if we had extended from Deep Creek.

Mr. FREAR. That is, he claimed it would be shorter from Joyce?

Mr. DISQUE. From Lake Pleasant to Port Angeles, it would be 6 miles shorter via Lake Crescent than by way of the Pysht River.

Mr. FREAR. Oh, yes; that is right. But did he take into consideration the fact that the Pysht River line was run out as far as Deep Creek? Did he mean to say that from the end of Deep Creek—

Mr. DISQUE. No. If both roads were completed you could get to Port Angeles from Lake Pleasant 6 miles shorter by way of Lake Crescent.

Mr. FREAR. But there were about 30 or 40 miles of the road that had been completed from Port Angeles on the Milwaukee; that is, the road through Twin.

Mr. DISQUE. I do not know the distance, but the Lake Crescent route was approximately 11 miles longer than to have extended from Deep Creek up to Lake Pleasant. That was all taken into consideration. We knew of no way we could have gotten there in a shorter time.

Mr. LEA. You mean, for construction?

Mr. DISQUE. The number of miles was greater, but the construction time would have been shorter.

Mr. MAGEE. How many miles did the St. Paul need to reach this timber tract?

Mr. DISQUE. Twenty-five, I understand from them. I may be a mile or two off on that; but that is my recollection. Then I had in my possession at that time, and it had come to me in April, the report of the district forester here and his letter of April 4, where he says on page 2:

Referring to the route via Pysht River—that it was a more difficult route in many respects, and further it has not the advantage of the latter in opening up considerable areas of timber prior to reaching the region around Lake Pleasant.

Mr. FREAR. "By the latter"; what did he mean?

Mr. DISQUE. The Lake Crescent route. [Reading:]

It will undoubtedly be necessary to build the latter route some time in order to develop the timber along the line, and I do not believe that the two roads so close together in the same territory will be justified. Such a line would pass through the heart of the finest spruce region of Washington, and with the necessary spurs would make this material accessible.

Mr. FREAR. That is quoted from Cecil?

Mr. DISQUE. Cecil's letter of April 4. And on page 6 of Mr. Nelson's report accompanying Mr. Cecil's letter he says:

I am advised the construction of the mountain portion of the route is very heavy and is bad soil for slides. The road crosses several divides, and consequently has a considerable amount of grade against the traffic coming in and loads going out. The traffic going out will all be loads and lifting it over these divides makes a high cost of operation.

Further, on page 8 of his report, he says:

The construction from Joyce to Lake Crescent is light, with the exception of about 1½ miles. The construction along the lake is in rock for about one-half its length, with one short tunnel, the remaining distance is not difficult.
* * * The maximum gradient against the loads coming out is 1.2 per cent.

That is what was in my mind in Seattle when I asked Mr. Carey, Mr. Roberts, Mr. Carey's engineer, Mr. Kelleher, a man who had engineered the extension of the Canadian Pacific; Mr. Earling, and an engineer of the Milwaukee; my own division engineer and myself

met to discuss what we should do. We met at the Washington Hotel immediately after Mr. Roberts gave me his report, and everybody discussed the two routes.

Mr. FREAR. Who were present?

Mr. DISQUE. There were Mr. Carey and an engineer of his company. I have forgotten his name. There was Mr. Kelleher.

Mr. FREAR. Who is he?

Mr. DISQUE. He is the engineer who extended the Canadian Pacific, so I have been told. Then there was Mr. Earling, vice president of the Milwaukee, and an engineer from the Milwaukee line.

Mr. FREAR. What was his name?

Mr. DISQUE. I do not recall. I do not know who else was there. We discussed this matter for some three or four hours. Nobody in the room, I do not think even myself, when we went into that meeting knew which route we would decide on. I wanted to hear every side of it, because we were interested in only one thing, and that was to get a road up before the rain came and rendered construction impossible. When the meeting ended we had decided to build by way of Lake Crescent, based on this information that I have already given.

Mr. FREAR. What date was that?

Mr. DISQUE. On June 3, from Mr. Roberts's letter.

Mr. FREAR. That is 1918. Maybe at this point it would be just as well to discuss some of these objections that were raised to see whether they were seriously raised or to see what the purpose was of the suggestions, and if you will let me take Mr. Roberts's report I would like to ask about that.

Mr. LEA. I would suggest that we put this Roberts report in.

Mr. MAGEE. I would like to ask the general who was there outside of the Milwaukee railroad officials and those affiliated with them.

Mr. FREAR. He gave the name of Mr. Earling, and he said the engineer of the Milwaukee line.

Mr. DISQUE. Mr. Roberts was there.

Mr. FREAR. Mr. Roberts was there at that time?

Mr. DISQUE. Oh, yes. The only Milwaukee officials or people in any way associated with them were Mr. Earling and his engineer. Nobody else from the Milwaukee was there so far as I know.

Mr. FREAR. Mr. Carey and his engineer.

Mr. DISQUE. So far as I know of, they had no relations with the Milwaukee.

Mr. LEA. Did you give the name of your engineer?

Mr. DISQUE. I do not know which one it was, now, whether it was Mr. Welch or—I may be able to find it in my diary [referring to book]. This diary was not kept while I was away from Portland. Ordinarily it was kept by an aide in the office, and when I was away he usually showed my absence.

Mr. MAGEE. There was nobody there representing the Northern Pacific, was there?

Mr. DISQUE. No, there was nobody there that I know of that had anything to do with the Northern Pacific. Have you got the report of Mr. Cecil and his forester in the record?

Mr. FREAR. No, not in the record. It is quite a long report, so we did not put it in the record.

Mr. DISQUE. Do you want to attach it?

Mr. FREAR. We might as an exhibit. It would not be advisable to put it in the record, because it is so long, and only some parts of it relate to this.

Mr. DISQUE. That entire report relates to Clallam County spruce and the railway.

Mr. FREAR. I understand it does. He got this from loggers and different people, he did not get it individually. He never was over the land himself, Mr. Cecil. That is his testimony.

Mr. DISQUE. His man Nelson was over it.

Mr. FREAR. No, Nelson did not go over it. Have you any evidence that Nelson went over it? Nelson gets his information from Cecil.

Mr. DISQUE. My understanding is that Mr. Nelson spent about two weeks up there.

Mr. FREAR. Have you anything to show along that line?

Mr. DISQUE. And that he went over that proposition.

Mr. FREAR. Do you know Roberts's initials?

Mr. DISQUE. It is in that letter. There it is, right—right [indicating].

Mr. FREAR. Yes; H. J. Roberts.

Mr. DISQUE. "This report is based upon a rather hasty examination of the timber on the Hoko River. The purpose of the examination was to determine the quality of spruce and the best route or routes for developing transportation to log the timber." My definite understanding is that Mr. Nelson spent two or three weeks up there before he made that report.

Mr. FREAR. That is entirely apart from anything that appears in the report, then.

Mr. DISQUE. I just read where he said that.

Mr. FREAR. But you do not know how much time he was engaged in looking after the spruce. He attempts to give some report that he has heard about the slides, as I understand it, but he knew nothing about that, unless he has given some—

Mr. DISQUE. He went over the route, according to his report.

Mr. FREAR. Where is that?

Mr. DISQUE. It says it is based upon an examination of it.

Mr. FREAR. Of the route?

Mr. DISQUE. Yes, sir. I will read it again. I am only taking this on what is said here. My impression has always been that he did spend a couple of weeks up there. He says: "This report is based upon a rather hasty examination of the timber on the Hoko River. The purpose of the examination was to determine the quality of the spruce and the best route or routes for developing transportation to log the timber." That is his first paragraph.

Mr. FREAR. That is the purpose, but he does not say he was up there over the route.

Mr. DISQUE. He says it was based upon an examination.

Mr. FREAR. Of what?

Mr. DISQUE. Of the timber.

Mr. FREAR. Of the timber, but he did not say he examined the railroad or spruce.

Mr. DISQUE. You can call him in and I am sure he will say that.

Mr. FREAR. Surely, if he is to be had here we will do that, if there is any question about it. That is the way I understood it as it was read.

Mr. DISQUE. There was one other person there, apparently, named MacAndrew, Alexander MacAndrew. He went up there.

Mr. FREAR. From your office here or what?

Mr. DISQUE. He was from my office.

Mr. FREAR. He was not an engineer or anything like that?

Mr. DISQUE. He is not an engineer. That was the only other person present than those I named.

Mr. MAGEE. That is a total of how many, General?

Mr. DISQUE. I should say 8.

Mr. FREAR. Let me enter in the record here a part of the statement which he makes. This is a report taken from his report on the Pysht River route. He says: "The total cost of 25 miles would probably be \$1,690,000." He says there would be one tunnel about 210 feet in length, and two of the largest trestles have a maximum height of 145 feet and 160 feet, respectively.

In the testimony that was presented before the committee there was no suggestion that any tunnels would be required. Of course, these were not, we will agree, transcontinental engineers, but they were men who were familiar with building big logging railways—had built them—had been over this route, and this route had been examined by the engineers, Thomson, Frost, and others, and as I recollect the testimony, it would cost all the way from fifteen to twenty thousand dollars a mile. That was Frost's testimony, as I now remember it, for this Pysht Creek route. Of course, if you were going to build a transcontinental railway along the line that we have there, on the road that has been put in, six or seven hundred-foot tunnels, as I recollect, is it not, on that Lake Crescent line?

Mr. DISQUE. There is one tunnel—the longest tunnel there is 500 feet, a few feet less.

Mr. FREAR. A few feet less; that is the way I have it in mind. Here is a two hundred and some odd feet tunnel, about half the length, and the total is about one-third—no; a little over one-half.

Mr. DISQUE. The total what?

Mr. FREAR. The total approximate, here, cost on the Pysht Creek.

Mr. DISQUE. Oh, well, if you will read the last paragraph of Mr. Roberts's letter there, in connection with that, you will get his comparative view on that question, and I think it is really proper to read that. I think you would agree with me right now. It is his last paragraph, where he refers to the estimate of the cost in his survey.

Mr. FREAR. Where it says "Inasmuch as"?

Mr. DISQUE. Yes.

Mr. FREAR. "Inasmuch as surveys have not been completed by both routes and the cost of labor and material is very uncertain, the estimates given herein should be considered as approximate figures and are given principally to show there is no great difference in cost between the two routes under consideration." Now, all the testimony that we have had before us is to the effect—unless you are going to build a transcontinental railway—that none of the grades were over 2 per cent, as I remember, that is, on either route; that is, that the grades were approximately the same. I mean with

loads, and that is what you were figuring on with logging. He was up in that district three days, he says. This committee spent three days there, and we were on the go all the time. It was all we could do to make it with the aid of speeders.

Mr. LEA. Mr. Chairman, I believe it would be a good idea to have that whole report in the record.

Mr. FREAR. Yes, put that in the record. That is the agreement? (Whereupon the report above referred to is copied into the record as follows:)

CLALLAM COUNTY,
UNION PACIFIC SYSTEM,
Portland, Oreg., June 8, 1918.

Personal.

Col. BRICE P. DISQUE,
*Spruce Production Division, United States Signal Corps,
Yeon Building, Portland, Oreg.*

DEAR SIR: I hand you herewith two copies of my report on investigation for proposed railroad to reach Lake Pleasant, Clallam County, Wash., which confirms statements made to you last Monday, June 3, in Seattle.

I regret that the report has been delayed, but other urgent duties prevented it reaching you sooner.

If I can assist you in the future, I will be pleased to have you call on me.

Yours, truly,

H. J. ROBERTS.

CLALLAM COUNTY,
Portland, Oreg., June 8, 1918.

Col. BRICE P. DISQUE,
*Spruce Production Division, United States Signal Corps,
Yeon Building, Portland, Oreg.*

DEAR SIR: Pursuant with your instructions, the writer made an investigation with view of selecting the most feasible route for construction of a railroad from a connection with the Milwaukee Railroad at some point west of Port Angeles, Clallam County, Wash., to Lake Pleasant, same county.

The investigation was made on the ground June 1, 2, and 3, 1918. Data secured by previous Milwaukee, Oregon-Washington, and other railroad surveys in this territory was available and carefully considered. Additional information of much value was secured from Milwaukee engineers, who have spent several years in the territory under consideration.

It was the writer's understanding, in making the investigation, that the Milwaukee standards for their railroad in the vicinity would be generally followed in construction of the proposed line (especially as regards maximum grades), inasmuch as the proposed line would probably at some time become a part of the Milwaukee system.

From the sources of information previously mentioned and an examination of the territory, there appears to be only two routes worthy of consideration, viz:

The Pysht River route and Crescent Lake route, as illustrated on map attached. The Milwaukee and other companies have made surveys over the greater portion of both routes; neither of the routes, however, is entirely connected to the common point by survey and the information on the intervening distances was secured principally by reconnaissance investigation.

PYSHT RIVER ROUTE.

The line would be carried by this route from a connection with the end of the Milwaukee line at Deep Creek, westerly, about 4 miles to the Pysht River; thence southwesterly, following the Pysht River drainage on ascending grade to the divide between the drainages of Pysht River and Sol Duc River, elevation about 757 feet; thence following Beaver Creek drainage on descending grade to Lake Pleasant, a total distance of about 25 miles.

The grading is comparatively heavy and would consist, principally, of red and blue clay, soapstone and undurated clay rock. Most of the grading is steam-shovel work. The material north of the divide, on the heaviest portion, would

be subject to slides and difficult to remove during the rainy season. The transverse slopes on supported grade portion, north of divide, range from 5° to 30°. The slopes south of divide are lighter. The greater portion of the route is covered with dense underbrush and timber.

The maximum grade westerly is 2 per cent compensated and easterly 1.5 per cent compensated. There would be about 8.5 miles of supported 2 per cent grade and 5.3 miles of supported 1.5 per cent grade. Total ascents both directions about 1,400 feet.

Two of the largest trestles have a maximum height of 145 feet and 160 feet respectively.

There would be one tunnel about 210 feet in length.

The total cost of the 25 miles would probably be \$1,690,000.

CRESCENT LAKE ROUTE.

Line would be carried by this route from a connection with the Milwaukee Railroad at a point about 1.5 miles west of the station of Joyce, southerly along the Lyre River drainage, an ascending grade about 5.5 miles to easterly end of Lake Crescent; thence following along the north shore of the lake with several miles of level grade and thence ascending to the divide between the drainage of the Lyre and Sol Duc Rivers to about elevation 1,158 feet; thence descending and following the Sol Duc River Valley to Lake Pleasant, a total distance of about 34 miles.

There would be about 3 miles of very heavy grading work along the shores of Crescent Lake and the Lyre River, with probably several short tunnels. Grading on the balance of the line is not heavy and for 18 miles along the Sol Duc River Valley is very light. The material encountered would consist, principally, of loose gravel, cemented gravel, and a rock apparently of igneous nature. This latter classification is very much in evidence along the shore of Lake Crescent. With exception of possibly a mile on the Lyre River, the material will not be subject to slides and can readily be removed during the rainy season.

The maximum grade westerly is 2 per cent compensated and easterly 1.5 per cent compensated. Total ascents both directions about 1,540 feet. There will be about 8 miles of supported 2 per cent grade and probably 1 to 2 miles of 1.5 per cent supported grade.

Trestles would not be comparatively numerous on this route. The highest would have a maximum height of about 90 feet.

The Sol Duc River would be crossed twice and would require span structures of about 130 to 170 feet in length.

The total cost of the 34 miles would probably be in the neighborhood of \$1,650,000.

The following features are in favor of the Lake Crescent route *vs.* Pysht River route:

(a) It will, in my opinion, require less time to construct inasmuch as (1) more men can be employed and distributed to better advantage and (2) owing to the classification of material, nearly as good progress can be made during the rainy season as during the dry months; (3) approximate estimate shows less cubic yards to move.

(b) The trestles are not as high and, consequently, less fire hazard and danger of interrupting traffic.

(c) The cost will probably be slightly less.

(d) Shorter haul by several miles from Lake Pleasant to Port Angeles.

(e) Will, in my opinion, serve the State and county better as a commercial enterprise, after the Government is through using the line.

(f) The cost of maintenance will probably be less and there will be considerable less danger of slides.

After taking all features into consideration and bearing in mind that time is the principal factor to be considered, there remains little doubt but that the Lake Crescent route is preferable to the Pysht River route and I recommend that it be adopted.

I would also recommend the free use of 15° curves along the shore of Lake Crescent on the level grade portion. Wherever it is manifest, a considerable saving in time and expense can be effected by doing so. Inasmuch as the curves would be on level grade they can easily be modified at a later date, if necessary to meet the approval of the Milwaukee Co.

Inasmuch as surveys have not been completed by both routes and the cost of labor and material is very uncertain, the estimates given herein should be considered as approximate figures and are given principally to show there is no great difference in cost between the two routes under consideration.

H. J. ROBERTS.

Mr. FREAR. Now, he apparently must have secured his information from some other people, because he could not have taken all that route and gone over it.

Mr. DISQUE. I doubt it; he inquired from everybody he saw, I suppose.

Mr. FREAR. He inquired possibly from their own engineers, or some one else—I mean the Milwaukee engineers.

Mr. DISQUE. I do not know who he inquired from.

Mr. FREAR. But, as I stated, those who had put up this plan of building a railroad up there found that it could be put up without any more objection, to use their expression, than would ordinarily be encountered in building logging roads. They did not find any danger from slides, that is, no more than—you have slides on your Lake Crescent road, and you have tunnels twice as long—what I desire to get at is, why this sudden determination, why this change occurred when you had wired the Secretary of War, you had written the Secretary of War, the whole thing was placed before the Secretary of War, and finally you changed this decision because of Mr. Carey's suggestion to you, the president of the Milwaukee road, in Washington, and these Milwaukee officials, including Mr. Roberts, of the Union Pacific, I take it, and maybe others. Here is the situation that presents itself. He says the Pysht Creek route meant the removal of much earth. The testimony is that it would not mean the removal of nearly as much.

Mr. DISQUE. Who said that?

Mr. FREAR. This is Roberts.

Mr. DISQUE. Did he say there was not as many cubic yards to be removed?

Mr. FREAR. That is what I understood you to read.

Mr. DISQUE. No, sir; he said more, I think.

Mr. FREAR. In Pysht Creek?

Mr. DISQUE. I think so.

Mr. FREAR. Where was it that you read; I took that down.

Mr. DISQUE. Nobody told me that that I know of.

Mr. FREAR. Pysht Creek meant the removal of much earth?

Mr. DISQUE. I think all the information I had was that there were more cubic yards to be removed over the Pysht Creek.

Mr. FREAR. That is what I say, the Pysht Creek meant the removal of much earth. Now, why would it mean the removal of more earth than cuts that were 200 feet in height, very nearly that, in Lyre Canyon, made out of rock. That cut there in Lyre Canyon must be 150 feet, anyhow, it would seem, out of solid rock.

Mr. DISQUE. That is a canyon in there that you are running around. I do not believe there is any cut made that deep.

Mr. FREAR. It is a canyon, it is on one side, of course.

Mr. DISQUE. I do not know about that, Mr. Frear. I was acting on the advice of the best engineers I could get at the time.

Mr. FREAR. I understand, but you were acting very suddenly; you were shifting ground very suddenly after April 24. The Secretary

of War, for the reasons that you gave, the reasons that are suggested, which are pertinent reasons—you say to the Secretary of War: "It will be noted that the Milwaukee extension (Deep Creek route) will immediately tap large stands of spruce timber between Deep Creek and Pysht River." Now, there is not any question about that, I take it—"Whereas the proposed Crescent Lake Railroad must be extended its full length"—36 miles, it means—"before any spruce will be available. Furthermore, it is regarded by many excellent engineers as a very difficult problem to lay rails along either the north or south bank of Crescent Lake"—not by the people, in general, but it is regarded by many excellent engineers as a very difficult problem to lay rails along either the north or south bank of Crescent Lake—"and those best equipped to discuss the problem state that the only practicable means of using this line would be to ferry cars or product across Lake Crescent and connect with the Milwaukee near Port Angeles." I do not see how anyone could make a stronger statement regarding the preference for Deep Creek than is contained there. If so, it must come in this telegram which was sent by you to the Secretary of War on March 20, in which you state: "Distance necessary to open this line, Lake Crescent route, to reach large spruce tracts double that necessary by the Milwaukee Deep Creek route."

Here it is put at double the distance. "Will not go through railway facilities beyond Port Angeles. This line seems an unnecessary expenditure and everybody interested in it wishes Government to bear proportion of expense considerably greater than Government would have to bear in extending Milwaukee. Milwaukee has been driving their road west slowly to meet development of country and are now within 30 miles west of Port Angeles. Milwaukee being common carrier equipped to advance their own line over their surveyed road unquestionably best means of entering Clallam spruce. In this opinion I have support of most experienced operators in this section." The most experienced engineers and the most experienced operators all had agreed at that time, according to your own statement to the Secretary of War, and on that he bases this letter: "A virgin stand has been located in the northwestern part of the State of Washington sufficient to meet the necessities," etc. "The nearest railroad is the branch of the Chicago, Milwaukee & St. Paul running west from Port Angeles. This branch now terminates at Deep Creek. The question of a railroad to reach this timber has been carefully considered and it is the unanimous opinion of the Pacific coast committee of the Aircraft Board that the best solution of the question is the extension of the Chicago, Milwaukee & St. Paul Railway from Deep Creek to Forks. This extension is included in the plans for the future development of the mill, and the route has already been surveyed." It is the opinion of the War Department that this railway should be built, and in coming to that conclusion the Secretary of War no doubt had your telegram and letter stating that the best engineers had come to this conclusion. Now, as I said, at one meeting after you came back from Washington the whole thing was wiped out. Now, let us see, did Carey—Carey was the first man—no, the first man that suggested it to you was the president of the Milwaukee road, down at Washington.

Mr. DISQUE. No; Carey was the first man.

Mr. FREAR. I thought he did it before you left Washington. I thought you said before you left Washington he did, he put a doubt in your mind.

Mr. DISQUE. He was the first man that ever suggested a change in this route.

Mr. FREAR. That was the president of the Milwaukee?

Mr. DISQUE. No; Carey.

Mr. FREAR. Let us get to Carey——

Mr. DISQUE. As soon as we told him we were going to give him the contract to build the road, then is when he said he could not get it done in time.

Mr. FREAR. Carey was up here at the time?

Mr. DISQUE. He was in Washington.

Mr. FREAR. Oh, you met him in Washington. Was he there at the time the contracts were signed?

Mr. DISQUE. He came there to get his contracts signed.

Mr. FREAR. Now, Carey was there and he made that statement to you?

Mr. DISQUE. Yes.

Mr. FREAR. At that time you did not know, did you, that the American International Co. owned one-half the stock of the Siems-Carey Co.?

Mr. DISQUE. I never knew they had any relations.

Mr. FREAR. Of course you did not, I assumed that. And you did not know at that time that John Ryan at that time was a director of the American International Co.?

Mr. DISQUE. Absolutely, no.

Mr. FREAR. Now, Carey's interests might have been—of course the committee does not know, we are just weighing this thing—they might have been to establish something that would in the future be a shorter line, if that was the desire of Earling and the other officials——

Mr. DISQUE. I hardly think, Mr. Chairman, that at that time anybody was thinking along those lines. Of course anything is possible, but here was the situation, as I saw it; the Milwaukee folks that I had talked to had all made up their mind to go up Pysht River. I felt that I was going to run into a lot of real opposition, but I met Mr. Earling in Seattle, and Mr. Carey—well, you never know anything, of course, until you know it—but I was never more convinced of a man's sincerity in my life than I was in that man's desire to get that road built in as short a time as possible.

Mr. FREAR. Who was this?

Mr. DISQUE. Carey. I do not believe he had any other thought in his mind.

Mr. FREAR. I have read into the record the things that occurred in Washington and in New York with Helm and with Pliny Fisk and all those people, and with Kerbaugh, those people were—no; we have not read the Kerbaugh statement, but it is in the Ray report—those people were all anxious, and they were all working, and they give reasons which are independent of the reasons you give—the Milwaukee road had sought to get around by way of Deep Creek in their line toward Grays Harbor, and they were building along there slowly.

The next proposition that we get is that when they applied to the railroad administrator he refused to permit them to go there. Now, they had been hoping to get along that line.

Mr. DISQUE. Did they apply to him?

Mr. FREAR. Oh, yes; that was the statement that was made somewhere in the record. They applied and he refused.

Mr. LEA. I got that impression.

Mr. DISQUE. I supposed down there that the Milwaukee had not made any request. They refused to do it. I asked them to two or three times and they refused to do it.

Mr. FREAR. I am quite sure that is in Mr. Ryan's letter to the Secretary of War.

Mr. DISQUE. I do not know about that.

Mr. LEA. I have got that impression. I might be wrong about it, because I can not put my finger on it.

Mr. MAGEE. Somebody made a request and it was denied by the director.

Mr. FREAR. It was denied by Mr. McAdoo, Director of Railways. Now, here was the situation: Here was a road, a short cut; as they admit, a very expensive road—that is, it would be expensive under ordinary conditions—as it turned out it was built at \$115,000, exclusive of equipment; and in all it must be two or three times the ordinary cost of transcontinental railways. I see a doubt in your face. Let me express it. The Milwaukee Railroad, the valuation was \$60,000 a mile, as I have put it in, in 1918, if I remember correctly. That is the valuation of their entire system through the most expensive State, and that includes their terminals, includes all their equipment. Here was a road which was put in without equipment, without terminals—unless you call that station at Disque Junction a terminal, and the one down at Lake Pleasant, and of course they do not have value.

Mr. DISQUE. Mr. Chairman, that includes all their thousands of miles across the prairie, does it not?

Mr. FREAR. Yes.

Mr. DISQUE. Well, now, do you know that the Alaska railways have cost \$141,000 a mile?

Mr. FREAR. Oh, that is thousands of miles away, and here is a different situation. The Milwaukee is equipped with electricity, a very expensive electrical system—and, by the way, John D. Ryan is president of the Montana Power Co., that has all those contracts.

Mr. DISQUE. Yes; but their road, I think it is fair to say, travels over a long distance of prairies, where construction is very light. Our road compares quite favorably with the Alaskan railways, which did cost \$141,000 a mile.

Mr. FREAR. True; but where you have to ship thousands of miles away—

Mr. DISQUE. That does not include the cost of building the railroad.

Mr. FREAR. It may be that they have a very expensive system of construction, but you can not estimate a road built here, where in one case you are building down at Toledo a road for \$12,000 or \$13,000 a mile for logging purposes, and they were building up there at that time for, they said, \$15,000, could build at \$20,000—

Mr. DISQUE. Who?

Mr. FREAR. That was along Pysht Creek. That was Lightner and those who were testifying—Frost and Chisholm. We had two or three others that testified to the cost of other roads up there at that time.

Mr. DISQUE. I have been over those roads, some of them.

Mr. FREAR. So have we; we have been right alongside of them, over the Merrill & Ring and Goodyear roads—driven along the main roads.

Mr. DISQUE. Did you ride over it?

Mr. FREAR. No.

Mr. DISQUE. You risk your life to do it.

Mr. FREAR. The only risk we had was in driving over the Milwaukee road when we were thrown off the speeder. [Laughter.]

Mr. MAGEE. The two front wheels jumped the track at the same time.

Mr. DISQUE. While you are talking about the cost, here is a suggestion that I have. I am not a railroad constructor or an engineer—

Mr. FREAR. Oh, we understand that.

Mr. DISQUE. And you are not.

Mr. FREAR. Do not understand that I am holding you responsible. I think it is way beyond.

Mr. DISQUE. I am responsible.

Mr. FREAR. You think you are?

Mr. DISQUE. Yes, sir; I am; and I want to say this—

Mr. FREAR. Then, if you are responsible, there is a good deal of responsibility upon your shoulders. I did not believe that.

Mr. DISQUE. I certainly feel that is where it belongs, if there is anything wrong about that operation. Now, if the cost was excessive, and none of us know—no one ever will know just whether it was or not—

Mr. FREAR. Why; why not?

Mr. DISQUE. A board of competent engineers can be selected to go up there and make a report. I think that is the way to settle it.

Mr. FREAR. That is for a transcontinental line, but we are talking about getting those logs out.

Mr. DISQUE. I would say to tell that board that they had to move 400 cars a day over the line; then let them determine if that road, built in five months, is excessive.

Mr. FREAR. You do not know whether you would move 400 cars or 200 cars.

Mr. DISQUE. That was the production that had to be met.

Mr. FREAR. That was the production that was to be entered in the contract, but the testimony of practically everyone who has been before this committee is that it was not possible to put out this 250,000,000 flitches with any number of men you could put in. You had 4,000 men, I think, up there working—

Mr. DISQUE. Some man testified who said this road could not be built in a year and a half.

Mr. FREAR. I know; and these people had never logged a day in their lives—Siems-Carey. We have not got to that point yet why the contract was given to them.

Mr. DISQUE. I wanted to say about the cost, when it came to arranging to handle our traffic over the main line of the Milwaukee they came to us and said that their main line would not handle the traffic; that they would have to spend somewhere in the neighborhood of \$300,000 east of Port Angeles on that line of theirs.

Mr. FREAR. East of Port Angeles?

Mr. DISQUE. To take care of our traffic if we sent logs on down east of there to dump them into one of those bays. That is why we had difficulty about the freight rates east of Port Angeles.

Mr. FREAR. As far as dollars and cents are concerned, it would cost a dollar more freight rate per thousand to take the logs down to Port Angeles than it would to dump them in Clallam Bay; that is the testimony. I do not think there is much question about that.

Mr. DISQUE. That I do not know about.

Mr. MAGEE. Let me see if I get your position. As I understand from your statement, you were influenced to locate this Lake Crescent Railway where it was located through the influence of these Milwaukee officials and others whom you have described, and if they were not sincere in the statements they made to you then you were duped.

Mr. DISQUE. No; I did not make any such statement as that. I was not influenced by any Milwaukee official. Every Milwaukee official that ever talked to me about it indicated that they desired to build up Pysht River. They simply agreed that night in Seattle that if we built the other way it would be a practical route.

Mr. MAGEE. I understood you to say that the president of the Milwaukee Railroad was the first one that put a doubt in your mind.

Mr. DISQUE. He simply put that doubt in my mind by saying, for the first time that I had heard from any Milwaukee officials, that he did not think—

Mr. MAGEE. That was prior to the night meeting at the Washington Hotel?

Mr. DISQUE. Yes—that he did not think it made much difference which way we went so far as getting the railroad was concerned. We were not talking about his line at all. We had abandoned all talk of the Milwaukee.

Mr. MAGEE. Your position was, as you have already placed it in writing, that he created a doubt in your mind.

Mr. DISQUE. That is it, exactly; the doubt that he created.

Mr. MAGEE. And that caused you to change your decision?

Mr. DISQUE. Exactly.

Mr. MAGEE. That is what I am getting at. I understand you were influenced in that way, so if they were not sincere, why then you were duped in the premises?

Mr. DISQUE. You understand, Mr. Magee, that I got this from Mr. Byram. He did not come to me with it. I hunted him up and asked him.

Mr. MAGEE. I am trying to get at the reason for your conclusion, without wasting too much time.

Mr. FREAR. I was going to make a statement; the Milwaukee failed to get the money for the Pysht Creek route. That is agreed upon. They wanted to get into that country, we will say, before the Northern Pacific could come up. The Northern Pacific was up as far as Mo-

clips. They were trying to reach north at the same time. If the Milwaukee Road, after their failure to get the money for the Pysht Creek route, could get the Government to put up \$4,000,000 to build through on this other line and they could take it over at what you have got here, practically 10 per cent, the salvage, why should they oppose this change of route? Wouldn't that look as though it was an eminently good contract, or a good agreement for them to make, and don't you suppose that Carey and Earling and all these people who look away ahead in these propositions, that they could see the ultimate result; because Ray, in his report, says the Milwaukee is going to take it over? He said it would be 50 per cent, but no one could imagine that they were really going to pay 50 per cent on this if it is for carrying logs, because you can carry the logs to Clallam Bay and over your road for a dollar a thousand on the logs. You can not pay anything like the cost of reproduction, as has been suggested here. Now, does it not seem a practical proposition that the Milwaukee Road did have a deep interest in having the Government build that at its own expense, when they could buy it back for a song. What is your judgment?

Mr. DISQUE. Why, what you have said there, Mr. Chairman, of course, is not evidence, it is an opinion you have formed.

Mr. FREAR. I am asking you.

Mr. DISQUE. I do not know anything about that. I know that the Milwaukee did not have anything to do with my decision.

Mr. FREAR. Well, let us see if they did not. First, Carey, we have shown his position in regard to this large corporation; of course, it is agreed that Mr. Ryan is a member of the executive committee, Mr. Ryan was a member of the board of directors, Mr. Ryan is the president of the Montana Power Co., and he has great interests; he even had such great interests that he stepped out at this meeting, he had such great interests that when the Secretary of War presented the contract to him he asked Mr. Stettinius to sign the contract, but a two hundred and fifty million spruce contract had been put over. Prior to that time it had to be brought out by a railroad, everyone knew that, and it was going to be brought out by a railroad connecting with the Milwaukee, and everyone knew that. Now, there is the situation. That is not a supposition, isn't that evidence? and they were trying to get down to Grays Harbor, and here was a short route. They could not get the money themselves, and here was the Government going to build this road.

Mr. DISQUE. Well, it is not my job to defend the Milwaukee. I have nothing to do with that.

Mr. FREAR. I agree with you on that.

Mr. DISQUE. I had no negotiations except what I have described to you, and I do not think there is anything in that theory.

Mr. FREAR. Well, possibly not, but in a brief hour all your telegrams and letters, based upon the experience of engineers and people who were operators in that neighborhood, was all wiped out and Mr. Byram, the man who created a doubt in your mind, Mr. Earling and his engineer, came there, and the man who was put in charge of the job was Mr. Sawyer.

Mr. DISQUE. It was not done in an hour. Of course Mr. Carey brought this matter up in Washington, and it took me about five or six days to get out here, and it took me another week—

Mr. FREAR. When I said an hour—

Mr. DISQUE. I would like to say that before I could get the reports—this thing has been put in so many suppositious forms, let me ask this, Mr. Chairman?

Mr. FREAR. Yes.

Mr. DISQUE. Assuming that we are not involved in all these questionable proceedings.

Mr. FREAR. Yes.

Mr. DISQUE. Wasn't it a pretty reasonable way for a man to determine this thing, in view of the fact?

Mr. FREAR. Do you want my judgment?

Mr. DISQUE. What else could a reasonable man have done?

Mr. FREAR. If you ask my judgment, as a member of this committee, I would have said, to confer with all the people there who were not interested in putting a road through, who had not failed to get the money from the Railroad Administration and were using this as a means of getting a railroad branch down there, confer with the men who were building railroads every day up there for logging purposes, taking the shortest route possible, get to Clallam Bay, if needs be—and that is a harbor of refuge, as I think we will show in a few moments, although you thought it was a dangerous point, I think we will have evidence to show that—you reached there what day?

Mr. DISQUE. May 12, approximately.

Mr. FREAR. How long were you there?

Mr. DISQUE. I was there about a week.

Mr. FREAR. You were there about a week. When you came back here on June 3 you had your meeting and decided it within two weeks, and you had been months accumulating this testimony that caused your report to the Secretary of War.

Mr. DISQUE. Of course we were doing lots of other things between times.

Mr. FREAR. I realize that. I meant after you got back here.

Mr. MAGEE. The points as I look at it, General, is what caused you to reverse the decision of the Secretary of War on your own authority?

Mr. DISQUE. Well, I do not think you have stated that right.

Mr. MAGEE. I will read to you what Gen. McIntyre says.

Mr. DISQUE. Read the contract, Mr. Magee. That is the thing I was acting under when I came out here.

Mr. MAGEE. This was sent to the Secretary of War.

Mr. DISQUE. Certainly, I acknowledge that.

Mr. MAGEE. This is April 24, 1918. You say that my question is not a reasonable question. Now, I am taking the position of Gen. McIntyre, Chief of Staff. I assume Gen. McIntyre, who is one of the most efficient officers in the Army, and was the Chief of Staff at the time, that he was reasonable. Now, in his letter to the Secretary of War, he states, on page 5:

The point in question is, what caused a reversal of the decision to build the Deep Creek route, and by whose authority was the action of the Secretary of War of April 24, 1918, reversed. The only evidence on this subject is that contained in the testimony of the commanding general of the Spruce Production Division (Gen. Disque). He states: "We had Mr. Roberts of the Union Pacific go over that; Mr. Caliber, who laid out the Canadian Pacific, go over

it, Maj. Welch, and I personally have gone over all the route up there in Clallam County, and the Siems-Cary contract to build the railroad was closed in Washington, with the provision that the exact route would be determined by me before they began operations, because in Washington, Mr. Byron, president of the Milwaukee, put a doubt in my mind as to the advisability of going ahead the way we had planned before we went to Washington, so we left it open and came out here again and went over the lines and then had a meeting in Seattle, attended by Mr. Erling, of the Milwaukee, and his chief engineer; Mr. Roberts, chief engineer of the Union Pacific; Mr. Caliber, who had logged the Canadian Pacific; Mr. ———, who had been a superintendent of the Milwaukee; Mr. Carey, and myself. We spent the evening listening to the different arguments and then I decided to build it by way of Lake Pleasant (Crescent Lake route), and that decision was concurred in by everyone present."

Mr. DISQUE. That explains it about as clearly and concisely as I can put it.

Mr. MAGEE. Is that the only explanation you have as to why you reversed the decision of the Secretary of War?

Mr. DISQUE. I have given, I think, right here, a great deal more than that as the reason why I decided on the Lake Crescent route. I have never acknowledged that I reversed the decision of the Secretary of war. I don't think I did.

Mr. MAGEE. Do you doubt the accuracy of the statement of Gen. McIntyre?

Mr. DISQUE. I don't think I did reverse it. The contract left it open to be decided here.

Mr. MAGEE. Do you question the statement of Gen. McIntyre?

Mr. DISQUE. Gen. McIntyre was not talking to this point when he wrote that.

Mr. MAGEE. Gen. McIntyre is a person who calls a spade a spade, isn't he—black black—sets out exactly what the fact is?

Mr. DISQUE. That is what I have been doing and propose to continue to do.

Mr. FREAR. Now, here is the situation, General. I have been trying to revolve in my own mind what impelled you to make this change. You state in your letter to the Secretary of War, which is a real statement of the case, that you could strike spruce immediately after you left Deep Creek.

Mr. DISQUE. Yes.

Mr. FREAR. The crying need of this war was to get that spruce as quickly as possible, and yet you could not get spruce from the other line without going 36 miles; that is conceded by your own statement. And with those facts before you—

Mr. DISQUE. I have got to keep notes on this. That is not correct.

Mr. FREAR. Let me read it, then.

Mr. DISQUE. No; I have stated, repeatedly, that we didn't need that spruce, we had made preparations in other territories for 1918, and our 1919 production is the thing we were interested in from this area. That is what I said.

Mr. MAGEE. Well, you were going to be sure that you would have spruce enough long after the war ended.

Mr. FREAR. If your statement now was the truth, why did you write on March 20, or wire on March 20, or we will take it as late as April 8—as late as April 8, why did you then write the Secretary of War, "It will be noted that the Milwaukee extension will immediately tap large stands of spruce timber between Deep Creek and

the Pysht River." Why did you write that, if you had taken care of all this proposition?

Mr. DISQUE. I was trying to put in that letter every argument I could to prevent these other folks, who were trying to build a road around the south side of Lake Crescent, delaying our game by working their influence.

Mr. FREAR. I don't care whether your motive was a right motive or not.

Mr. DISQUE. It was spruce.

Mr. FREAR. The spruce you could reach immediately. When I asked you "if you were going to reach spruce immediately, why did you select the other route?" you now explain because you had made other arrangements for the spruce; is that it?

Mr. DISQUE. Well—

Mr. FREAR. If it is, then I want to ask you, then why did you write the Secretary of War, as late as April 8, and make that statement, that that was one of the inducements?

Mr. DISQUE. That statement is perfectly correct, a proper statement to put in there, in any argument for extending that line. That is one point in favor of it.

Mr. FREAR. That is a very important one, wasn't it, that you were going to strike spruce immediately, and would not strike it on the other side?

Mr. DISQUE. It is a very important point, but, as I said repeatedly, we were figuring on this operation as a next-year development, we had made preparations that would take care of 1918. That striking spruce immediately developed afterwards, I think, that the spruce along there is not good quality.

Mr. FREAR. But you state to the Secretary of War that it is.

Mr. DISQUE. Well—

Mr. FREAR. And, as a matter of fact, you say Goodyear and these people were cutting spruce for the Government.

Mr. DISQUE. Oh, yes.

Mr. FREAR. Right along there?

Mr. DISQUE. Exactly.

Mr. FREAR. If it was not good quality—

Mr. DISQUE. Not right along there; several miles west and several miles off that line.

Mr. FREAR. Was the Puget Sound Co. there at Port Angeles cutting any lumber for the Government—airplane stuff?

Mr. DISQUE. They cut spruce now and then. Several times we had to go up there and pull out some rafts they had hid away and make them saw them up. They had good commercial orders and foreign shipments, and it was quite a little—

Mr. FREAR. They were cutting for the Government?

Mr. DISQUE (continuing). Trouble to make them cut for the Government.

Mr. FREAR. They were cutting airplane stuff for the Government?

Mr. DISQUE. Yes.

Mr. FREAR. They were cutting timber from the Milwaukee lands, according to Mr. Scott; that is, just west of Joyce they were cutting timber from Milwaukee lands, and it was the spruce that you had in there and it was the spruce that you were using.

Mr. DISQUE. I don't know what percentage of it became aircraft.

Mr. FREAR. If you don't, none of us do.

Mr. DISQUE. We can find out, but we don't know now.

Mr. FREAR. We are assuming that it was good spruce; when you wrote here in this letter to the Secretary of War that you would immediately strike spruce, that is beyond comprehension unless some other purpose, not in your mind, but in the mind of some people, caused this sudden turn, but there is an explanation and it is as plain, it would seem, as can be made, that if the Milwaukee could not get the Pysht Creek route and could get the Government to build the other line, no matter how much it cost, that it was to their interest to do it, and then tie it up, just as the Southern Pacific would tie up this lower line, if they can, at what can be allowed, because they have been calculating on building a coast road.

Mr. DISQUE. If there is anything in that theory, why wouldn't they influence me to extend their line where it was up Deep Creek?

Mr. FREAR. The advantage of the other route was apparent immediately, because it was shorter; no matter what it cost, they were going to get it for a song, and the Government was going to build it.

Mr. DISQUE. You know they are complaining now because their other road is a stub end. It is quite a disadvantage to them.

Mr. FREAR. But they can get in there and get the spruce; they are logging it out to-day, and they are keeping their road busy.

Mr. DISQUE. Yes, sir.

Mr. FREAR. Whereas the road that runs to Pleasant Lake will not be kept busy for a long time, I fear, because it is not a profitable road for logging; it is when the Milwaukee takes it over that it would seem to be a possibility.

Mr. DISQUE. I would think the committee ought to call some loggers who have had roads somewhat the size and length of the one we built.

Mr. FREAR. There is none. There are none to be found.

Mr. DISQUE. None?

Mr. FREAR. We have inquired everywhere to find where logging roads were built at \$115,000 a mile, and we haven't struck any.

Mr. DISQUE. Have you called Mr. Mark Reed, or Mr. Alex Polson?

Mr. FREAR. I say, none that we have found.

Mr. DISQUE. I think both those gentlemen have logging roads approximately as long as the one we built, and I think they have roads built just as well, if not better.

Mr. FREAR. And at the same expense? It is the expense I am referring to.

Mr. DISQUE. But the cost—

Mr. FREAR. Mr. Polson, in his testimony before the Ray committee—and he is one of the largest loggers in the country, I understand—he complains bitterly because a man you sent up there held up the extension of his road, as he claims, so that he could not get into the spruce of the Quinault Reservation. That is the testimony in the Ray committee, and, if you question it, I will bring the testimony—Polson's testimony.

Mr. DISQUE. What was the finding about that?

Mr. FREAR. The finding was that this man was removed by you and another man put in his place to work there with Nelson. That was the evidence. I don't know what the finding was.

Mr. DISQUE. What is the finding as to the delay?

Mr. FREAR. The finding of Ray, who was a major, who was examining you—who was examining majors and all—he was a major in the Army. I should not expect that he was going to find anything against John D. Ryan or against you or against the other majors, and that is what McIntyre says here, that he acted correctly; that is, that these men who made the complaint, Howes and Kerrigan, acted correctly in filing their claims, and he criticizes Ray, inferentially, because Ray knew why these men made the claims against—

Mr. DISQUE. I have never seen Ray's report.

Mr. FREAR. Haven't you? It is very interesting.

Mr. DISQUE. I felt that the Secretary should have published that, in light of the hostile criticism that brought it on, and I have never had an opportunity of seeing it. I don't think Ray—it would have made any difference whether he was reporting on a major or a general or the President; if he had found anything, he would have put it in there. That is the way Regular Army officers act.

Mr. FREAR. Is that the way Regular Army officers act?

Mr. DISQUE. Absolutely.

Mr. FREAR. Oh, well, now—

Mr. LEA. Just a moment. Might I make a suggestion?

Mr. FREAR. I don't think a Regular Army officer—

Mr. LEA. I think we ought to get along here and get at the facts, what we have to rely upon, not wasting time with argument. So I would suggest that we ask the questions and let the argument go for the future.

Mr. FREAR. I agree with you that Mr. Disque and I probably will not get together, although I think we are both rather familiar with Army methods. I have been for many years.

Mr. LEA. I think in this connection, though, it might be well to read the reasons, as given in this letter, by Mr. Roberts. So I would like to take just a minute to do that.

Mr. FREAR. All right. Of course, that will involve at this time a questioning on each individual reason, because I think that it is subject to that.

Mr. LEA. I simply wanted that as showing the information given to Mr. Disque which he says led to a change of his opinion.

Mr. FREAR. Here is the situation: Mr. Roberts in three days goes over a route that we went over in three days, and you recollect how rapidly we had to move. Unquestionably, he could not make an investigation there except in a general way.

Mr. LEA. He states this in his report: That he took the surveys made by the Milwaukee and by this other company—I have forgotten the name of it—that goes on the Crescent route—

Mr. FREAR. That is the Port Angeles.

Mr. LEA. And he went over that in connection with his view of the territory, and then he summarizes his reasons in this language:

The following features are in favor of the Lake Crescent route v. Pysht River route:

(a) It will, in my opinion, require less time to construct, inasmuch as, first, more men can be employed and distributed to better advantage, and, second, owing to the classification of material, nearly as good progress can be made during the rainy season as during the dry months; third, approximate estimate shows less cubic yards to move.

(b) The trestles are not as high, and, consequently, less fire hazard and danger of interrupting traffic.

(c) The cost will probably be slightly less.

(d) Shorter haul by several miles from Lake Pleasant to Port Angeles.

(e) Will, in my opinion, serve the State and county better as a commercial enterprise after the Government is through using the line.

(f) The cost of maintenance will probably be less, and there will be considerably less danger of slides.

After taking all features into consideration, and bearing in mind that time is the principal factor to be considered, there remains little doubt but that the Lake Crescent route is preferable to the Pysht River route, and I recommend that it be adopted.

Mr. FREAR. There is no doubt but what there was a desire on the part of some people to make the shift as long as the Government was going to build it. But let me take up the things that he speaks of.

"The following features are in favor of the Lake Crescent route," keeping in mind that you had been consulting with engineers and operators constantly in coming to your previous conclusion that the Pysht River route was the best, he says, "It will, in my opinion, require less time to construct, inasmuch (1) more men can be employed and distributed to better advantage, and (2) owing to the classification of material, nearly as good progress can be made during the rainy season as during the dry months." This was in May. Six months of construction would have had the road finished by the rainy season. "Approximate estimate shows less cubic yards to move."

Mr. DISQUE. Did he say it would be finished in six months?

Mr. FREAR. No; I said Carey said it would. Carey told you it would.

Mr. DISQUE. I thought you were reading from Mr. Roberts's report.

Mr. FREAR. No. Well, I may explain right here that Carey said to you and it was plain to him—this road didn't take six months to build, as I understand it?

Mr. DISQUE. The Lake Crescent route?

Mr. FREAR. No; no other road would have put in 4,000 men, no one imagines that if you put three or four thousand men on—

Mr. DISQUE. Did they have 4,000 men on that line?

Mr. FREAR. That is the testimony; 4,000 men were employed. I don't know what particular operation, but Siems-Carey—

Mr. DISQUE. Who testified that, Mr. Chairman?

Mr. FREAR. I think you did.

Col. STEARNS. Approximately that many.

Mr. FREAR. That is the officers who were actively engaged here.

Mr. DISQUE. I didn't know. I saw someone said they had worked three shifts up there.

Mr. FREAR. Yes; they were on the railroad, not on the spruce.

Mr. DISQUE. I don't think they did on the railroad.

Mr. FREAR. But that is the testimony.

Col. STEARNS. A part of the time.

Mr. DISQUE. I saw a letter from Maj. Sawyer the other day, saying that there was not any such thing happened.

Col. STEARNS. I think you will find it in the record that it was a part of the time.

Mr. FREAR. Just a part of the time.

Mr. LEA. As I get the facts—perhaps we are under a little misapprehension—but I understand there were three shifts on a part of that road, but not on all of it, by any means.

Mr. FREAR. I understand.

Mr. DISQUE. If there were, it probably was an infinitesimal part of the construction.

Mr. FREAR. If you don't know how many men were employed—you say it is an infinitesimal part; what is your knowledge, what is your personal knowledge of it?

Mr. DISQUE. I will read the letter that came from Maj. Sawyer.

Mr. FREAR. The man who is president to-day of the company gave us this information of your company.

Col. STEARNS. No, sir; I did not.

Mr. FREAR. I supposed you were the one who testified.

Col. STEARNS. I didn't say they were working three shifts all the time.

Mr. FREAR. Three.

Col. STEARNS. Or three.

Mr. FREAR. No one says they were working three shifts all the time.

Col. STEARNS. There were three shifts on a part of the road that was difficult of construction.

Mr. FREAR. Sure; that is the understanding. [Reading:]

(b) The trestles are not as high, and consequently less fire hazard and danger of interrupting traffic.

What he was proposing, as he said—a route of 140 feet high—where the testimony of all these others in regard to that route was that it was an ordinary logging road that could be built without any difficult features of operation, and they all agreed that it would not cost over \$20,000 a mile.

Mr. DISQUE. Who is it that agreed to that?

Mr. FREAR. Frost.

Mr. DISQUE. Who is—

Mr. FREAR. Frost.

Mr. DISQUE. Do you mean by Frost—

Mr. FREAR. Thomas, who was an engineer. These are logging roads. They are not speaking of a transcontinental road, with tunnels and all that.

Mr. DISQUE. We could not build an ordinary logging road, as those gentlemen are in the habit of building them. None of those men that you have named have any road that long, or that comes anywhere near handling anything like the traffic that we had to bring over it.

Mr. FREAR. The testimony of Mr. Lightner was—he said [reading]:

I can handle as much traffic over a road from Clallam Bay up there, every log that can be cut, just as much as they can on the long road, for the reason that they could keep it going with sidings, they could keep it going constantly both ways.

That is his testimony; and I am speaking of the question from the practical logger's standpoint, as compared with other, because we have to learn this subject just like you. [Continuing reading:]

(c) The cost will probably be slightly less.

That is, the cost of the Crescent Lake route, Roberts says, would be slightly less; in other words, the Crescent Lake route, for 36 miles, cost about \$115,000 a mile, or about practically \$4,000,000. He says that that is less than for building 25 miles on the Pysht Creek route.

Mr. MAGEE. He estimates at \$1,600,000.

Mr. FREAR. Estimates \$1,600,000. And then he makes this statement:

(d) Shorter hauls, by several miles, from Lake Pleasant to Port Angeles.

That feature would be so because—

Mr. DISQUE. About 6 miles, I think.

Mr. FREAR. About 6 miles more to the road as planned. [Reading:]

Will, in my opinion, serve the State and county better as a commercial enterprise after the Government is through using the line.

There is no doubt but what that is that. That is the basis, apparently, of the charge. [Continuing reading:]

The cost of maintenance will probably be less, and there will be considerably less danger of slides.

They had slides in both cases. You have got slides down here.

Let's go now to the cost-plus contract made with the Siems-Carey-Kerbaugh Co. We have had the railroad. What were the circumstances leading up to the making of that contract?

Mr. DISQUE. For construction of the railroad?

Mr. FREAR. No; we have got past the construction of the railroad. The circumstances leading up to the granting of the contract, for which the railroad was made—built?

Mr. DISQUE. The flitch contract?

Mr. FREAR. Yes; the flitch contract.

Mr. DISQUE. As I said this morning, we had a number of propositions that came to us proposing development of the Clallam County spruce. Some of them were fantastic and others were requiring so much from the Government in the way of assistance that we could not see our way to accept them. None of them seemed to have the standing that would justify a large contract nor the actual collateral to put up to guarantee the Government's getting what they had promised until this Siems-Carey Co. came to us.

Mr. FREAR. How did they come to you and where?

Mr. DISQUE. The first communication that we had, the first time that I ever heard of the Siems-Carey-Kerbaugh Corporation, is this telegram of March 16 signed by Pliny Fisk, of Harvey, Fisk & Sons, a firm that I don't know, have never seen, and did not know—don't know them to-day. A telegram comes addressed to me in Portland. [Reading:]

H. S. Kerbaugh (Inc.) has telegraphed authority to William C. Bristol to negotiate a contract with you for the delivery of 100,000,000 feet spruce and the building of a railroad. Among Kerbaugh's references are Samuel Rea, president of the Pennsylvania Railroad, and A. C. Shand, chief engineer same road, and our firm recommend him unqualifiedly.

That is the first that I have of Siems-Carey.

Mr. FREAR. This was for building a railway as well as for getting out the flitches.

Mr. DISQUE. That was their proposition.

Mr. FREAR. The first word you got was from Pliny Fisk?

Mr. DISQUE. Well, I had another telegram on the 19th of March.

Mr. FREAR. This first was when?

Mr. DISQUE. The 16th of March. [Reading:]

We have authorized by wire Theodore Rickson to represent us in negotiating and closing contract with you.

That is signed "Siems & Carey, H. S. Kerbaugh."

Mr. FREAR. That was moving fast, wasn't it? Three days after you had heard from those people here were people going to build a railway and put in 100,000,000 feet of fitches—

Mr. DISQUE. Well, all the telegrams indicate that they designated somebody to come down and talk to us. Of course, we hadn't seen anybody then.

Mr. FREAR. No; I understand from this end of it.

Mr. DISQUE. Then, again, on the 16th—I have these a little out of order—let's see if I can get them in now—

Mr. FREAR. Did you wire back in response to this one of the 16th?

Mr. DISQUE. I am sure I did not. There is no record of one, and my recollection is very clear that I did not.

Mr. FREAR. I would assume that you hadn't.

Mr. DISQUE. I didn't know who they were. I was getting telegrams from everybody who wanted to build railroads and open spruce.

Mr. FREAR. Here was a man in Wall Street, who was ready to open spruce—Pliny Fisk.

Mr. DISQUE. Then a telegram on the 16th of March, which should have been read second, probably [reading]:

We have authorized William C. Bristol to represent us in negotiating a contract with you for the delivery of 100,000,000 feet spruce and the construction of about 50 miles of railroad, and we ask that you give Bristol an interview as early as possible. H. S. Kerbaugh, (Inc.).

Mr. FREAR. Now, that was how many feet did you say there, 100,000,000.

Mr. DISQUE. One hundred million.

Mr. FREAR. One hundred million. This was 50 miles of railway they expected?

Mr. DISQUE. Fifty miles.

Mr. MAGEE. Had you advertised for any bids for such purpose?

Mr. DISQUE. No.

Mr. FREAR. You didn't know anything about why you were getting those letters for 50 miles of railway?

Mr. DISQUE. There were a lot of people talking about it.

Mr. FREAR. Talking about what?

Mr. DISQUE. Getting into Clallam spruce. There were companies out or talking about forming; there was really two or three corporations formed, and everybody in the country, I suppose, knew about it.

Mr. FREAR. Did they mention Clallam to you in these?

Mr. DISQUE. Not in these telegrams.

Mr. FREAR. You didn't respond to either one of those?

Mr. DISQUE. I think not. That is my recollection. The fact that he said Bristol would be coming in, I think probably is the reason I didn't reply, more than any other.

Then on the 19th of March a telegram came from Harvey Fisk [reading]:

With reference to any contract which might be entered into through Theodore Rickson's negotiations as representing Siems and Carey, also H. S. Kerbaugh, we are prepared to give such guarantees for any advances made and to satisfy you in every way through the department here and War Credits Board. Will this be satisfactory? Answer. Address Willard Hotel. Pliny Fisk.

There is no record of any answer to that, and I am sure I did not send any, to the best of my recollection.

Mr. FREAR. Apparently, he had been taking up the matter with the department down at Washington, from the character of that telegram.

Mr. DISQUE. Gone to the War Credits Board, apparently.

Mr. FREAR. Yes.

Mr. DISQUE. Then, on the 20th of March, I received one [reading]:

We have telegraphed authority to John Cain to represent us if Theodore Rickson is absent or for any other reason can not act. Therefore, all of yesterday's telegrams mentioning Rickson kindly apply to John Cain.

That is signed, "Siems-Carey-H. S. Kerbaugh, Pliny Fisk."

Mr. FREAR. Did you know at that time that John Cain, of Port Angeles, was with this road or with this company that was trying to put through the road—Crescent road?

Mr. DISQUE. I never had it in mind; I didn't know it until—at least, I may have been told of it, but this is the first time I understood it. I might add in here that Carey and Kerbaugh claim that some of these messages were forged. There is some trouble down there. I don't know what it is, but there is some kind of a mixup between Cain and Kerbaugh and Carey.

Mr. FREAR. There was a mixup, surely, before they got through.

Mr. MAGEE. And Fisk, was Fisk in the mixup?

Mr. DISQUE. I don't know whether he is in it or not. Some claim is made—

Mr. MAGEE. I heard that a former good friend had told so. I didn't know whether you knew about it.

Mr. DISQUE. No; I never saw Fisk in my life; I don't know him. I never have seen those other folks, except once since I left here, and that was in connection with this; they wanted me to testify in court in a suit that was brought regarding the conditions surrounding the opening of these negotiations.

Then I have a letter here that is not dated, but it apparently came right after this, because it is signed by Cain, and it is apparently his follow-up to these telegrams.

Mr. FREAR. That is John Cain?

Mr. DISQUE. John Cain. He happened to be in Portland and wrote this letter.

Mr. FREAR. He lives in Port Angeles.

Mr. DISQUE. He lives at Port Angeles, and apparently came down here as a result of all this correspondence. He says:

I have the honor to submit next subjoined, in three sheets, the proposal and application of Messrs Siems and Carey and H. S. Kerbaugh, contractors, of New York City, N. Y., for logging and delivery 300,000,000 feet spruce logs from Clallam County for the Government, as well as railroad facilities—

Mr. FREAR. Let me ask right there: Had you had any negotiations with Brown Bros. there in New York?

Mr. DISQUE. Cain I think had been in talking to me about them. I had not seen Brown Bros., but he——

Mr. FREAR. Had you had any letters or telegrams from them, or anything of that kind?

Mr. DISQUE. There were several telegrams passed back and forth, in an endeavor to get a contract for Walston H. Brown & Sons.

Mr. FREAR. That is right.

Mr. DISQUE. Cain, I think, was their local representative and Bristol also, I think, was their attorney here.

Mr. FREAR. And that refers back to this Carrigan's statement which I read this morning. Walston Brown was put out, and his theory or explanation was that he was put out because they would not accept his bonds and the Milwaukee was standing in the way, blocking it. Of course, I am not stating that that is a fact, but that is his statement to the committee.

Mr. DISQUE. I stated in my telegram to Mr. Coffin, of March 6, why Brown did not get a contract. He wanted impossible conditions and we would not give them to him.

Mr. FREAR. What?

Mr. DISQUE. He wanted us to do everything, to promise to guarantee everything except profits, and he wanted those, and he never did give us a proposition that seemed reasonable. That is the only reason I know of why Brown didn't get it.

Mr. FREAR. Well, Sims-Kerbaugh fell into the shoes—as a matter of fact I don't think there is any question—of the Brown people, and they were undertaking it with Cain, who was the man who had appeared. Now, just go on.

Mr. DISQUE. Continuing Cain's letter [reading]:

You gave me an interview before when this matter was in somewhat different shape.

Mr. FREAR. That was with reference to Brown, I suppose?

Mr. DISQUE. I suppose that he means that. [Continuing reading]:

And I now request that you accord me a personal interview upon this proposal in order that an understanding may be immediately reached.

That is signed "John Cain." Then he attached this proposal made by the Siems-Carey-Kerbaugh Corporation.

Mr. FREAR. Just what is the nature of it? Unless it is important, why, we will pass it.

Mr. DISQUE. Well, it is important in this way: That it being so much more of a businesslike proposal, wherein the contractor was going to take some chance himself, that it appealed to us, on first blush, as a little bit worthy of our consideration as compared to the proposals that had come to our office up to that time.

Mr. FREAR. Just suggest where these appear.

Mr. DISQUE. First in here is the railroad at cost and expense of the contractor.

Mr. FREAR. At cost and expense of the contractor. That is Siems-Carey-Kerbaugh Co.—that was their first proposition?

Mr. DISQUE. That was their first proposal. Second, contractor proposes to cut and deliver 300,000,000 feet of Nos. 1 and 2 logs,

deliveries to commence on or before November 1, 1918, and the whole amount to be delivered 18 months from the date of the signing of the contract. The prevailing price to be paid for logs, the contractors to receive 30 per cent advance of the amount of the contract—the custom that was followed in all similar operations. After the signing of the contract and during the continuance of its performance, if a higher price shall prevail the loggers to get the advantage of it. That is, if we made a general increase in the price.

Mr. FREAR. That went into most all the contracts, did it?

Mr. DISQUE. All of them. Deliveries to be made at any point on Puget Sound that the Government may select. The Government will use its powers of commandeering and requisition in aid of the contractor for the purpose of obtaining the projection of said railroad, the operation of the logging industry, and the delivery of said logs in aid of the spruce production required by the Government. The contractor has the right to sell his commercial surplus cut. If there are any embargoes, the Government must assist in having them removed to facilitate the operation. Contractor stands ready to furnish satisfactory bond and guaranty in the usual form required by the Government. Then is a list of recommendations which includes, to my mind, the most competent people to recommend contractors in the country.

Mr. FREAR. Well, what loggers?

Mr. DISQUE. There were no loggers, Mr. Chairman.

Mr. FREAR. No loggers; no people outside of log rolling?

Mr. DISQUE. Well, there was a clean-cut proposition.

Mr. FREAR. Yes. Well, I am not criticizing your end of it.

Mr. DISQUE. It was the best thing that ever came to our office in the way of a clean-cut offer.

Mr. FREAR. They agreed to build the railroad there?

Mr. DISQUE. They agreed to do the whole thing. Now you mention that about loggers. I think you would be interested to know why I was willing to make a contract with a man who never logged.

Mr. FREAR. Well, let's go along with the contract, and then we will get to that. What is the next that occurred—that is, in their selection?

Mr. DISQUE. Well, the next thing, I told this fellow Rickson, or Cain, in case—

Mr. FREAR (interrupting). They were both representing Fisk.

Mr. DISQUE. Well, I think Cain was the fellow that came down, and I think he had someone with him. I don't remember. I told him that any contract made with anybody, I certainly wanted the principals here to discuss it, talk it over and find out who and what they were. And my next record of anything is that Siems-Carey-Kerbaugh, members of the firm, came to Portland, all three of them, and we had two or three interviews, the last of which resulted in drawing the contract that was made on April 12, and was finished with the members of my committee present in the room during the entire afternoon while it was being framed.

Mr. FREAR. Well, that was entirely different from this proposal of theirs, was it not?

Mr. DISQUE. Well, the contract that I drew at that time I don't think is much different from this proposal.

Mr. FREAR. No?

Mr. DISQUE. Except that I did not provide for the railway.

Mr. FREAR. That is what I mean. That is the important part.

Mr. DISQUE. I left that out. I didn't want them interested or mixed up in any railway. As I said before, it had been my idea that anyone should be able to go in there and log and move out over a common carrier his material. And another thing that comes in right there, these folks got out here and found out that we wanted a material entirely different from what they had in mind when they made that proposition.

Mr. FREAR. In what respect?

Mr. DISQUE. Well, they were talking about logs. We didn't want logs.

Mr. FREAR. Logs in general. Oh, their contract was for logs instead of flitches?

Mr. DISQUE. For logs.

Mr. FREAR. Yes.

Mr. DISQUE. We didn't want logs; we wanted flitches; and that caused some changes in the thing. Then, when it came down to the flitches, in order to produce the quantity we wanted it made it necessary that they do selective logging instead of general logging. That also called for a few modifications in framing the contract.

Mr. FREAR. That is, as to rates of payment, and so on?

Mr. DISQUE. No; the rates of payment and things were about—the price was different, but it involved us marking trees to prevent them cutting in and slicing trees that were not suitable—questions of technique more than anything else, I would say.

Mr. FREAR. That is, it was agreed from the start that \$100 for first-grade flitches and \$60 for the second was a fair price?

Mr. DISQUE. Yes, sir.

Mr. FREAR. So that was adopted?

Mr. DISQUE. That was adopted. That rate we based upon not too much information, but it was pretty close after all, I think. It was the best we could think of at that time. At any rate, we closed that contract. I don't know whether you have a copy in your file or not.

Mr. FREAR. Yes.

Mr. DISQUE. The one I made in April, the 12th of April?

Mr. FREAR. No. I have the May contract.

Mr. DISQUE. Well, let's see—

Mr. LEA. It is in the Ray report.

Mr. FREAR. Yes; I think it is in the Ray report. I have seen it.

Mr. DISQUE. Well, all there was to it, I told him I would not sign it; I was satisfied with the contract, but until we had a railway there I wasn't going to buy any logs f. o. b. Lake Pleasant. Then they went away. Then we met them in Washington.

Mr. FREAR. Now, what was the proposal in regard to a railway? They offered to build a railway themselves, put it in, to get these logs out?

Mr. DISQUE. Yes.

Mr. FREAR. They would do that at their own expense?

Mr. DISQUE. That is their proposal right here.

Mr. FREAR. That is their proposal; and you finally determined that the Government should build it?

Mr. DISQUE. Well, there was a lot of things happened in there. I didn't determine the Government should build it.

Mr. FREAR. Why was it that you were not willing that they should build it when they proposed and you prepared the original draft of this contract in April?

Mr. DISQUE. Well, when they proposed this thing I had no idea in mind that the Government was going to build any railway. I thought the Milwaukee were going to extend their railway and told these folks that we were negotiating with them, and that subject was dropped. Well, we didn't discuss it five minutes here, I don't think. The question of their building the railway was dropped, because it was being considered and had been, and no one thought of anyone but the Milwaukee extending their line.

Mr. FREAR. Oh! Now, as we get it, their proposal to you was that they would build a railway of 56 miles, or whatever it is here, a 50-mile railway; they would build that at their own expense, if this contract was given them, but you didn't give that to them because you were expecting the Milwaukee would continue their Deep Creek operations?

Mr. DISQUE. That is it.

Mr. FREAR. Now it comes up to us that the railroad was finally built by the Government on a cost-plus contract, which was different from either one, from either matter, and a rather expensive proposition to the Government if it don't get more than the salvage value estimated here. Now, how did that come about?

Mr. DISQUE. Well, I will say there was quite a period lapsed in between there.

Mr. FREAR. After it was found that the Milwaukee road were not going to build, then why wasn't their proposal taken to let them build the road in to get out these flitches?

Mr. DISQUE. Well, I really think that the real truth is that Siems-Carey learned a good deal about the situation after they came out here that they didn't know before they came, and they would never have entered into a contract on that basis with fuller knowledge of the condition.

Mr. FREAR. What evidence have we got—here is a very important proposition. Here is a \$4,000,000 railway that is built by the Government on a cost-plus basis; they had proposed to build it themselves; you objected to their building it because of this possible Deep Creek extension of the Milwaukee road. It comes up to us that that railroad was built at \$115,000 a mile by the Government. Why?

Mr. DISQUE. Well, I believe the best witnesses you can call on that, and a great deal better than I am, would be the members of that firm. As I say, they changed their minds about what they could do after they saw it.

Mr. FREAR. But they got the contract. They got the contract.

Mr. DISQUE. Well, I have explained that, of course.

Mr. FREAR. Both contracts. Is that the only explanation you can give to this committee? Is there anyone else that can be referred to? Have you no correspondence, telegrams, or anything to explain this remarkable change?

Mr. DISQUE. Well, I would say that you might, undoubtedly could, get something from Mr. Cain, and from the attorney who was with him; I don't recall who it was.

Mr. FREAR. Well, but you were the one who was authorizing the railroad?

Mr. DISQUE. As I say, Mr. Chairman, when these gentlemen came to my office we had been thinking of nothing but the extension of the Milwaukee. That was the fact.

Mr. FREAR. Let me look, will you, please, at that proposal that they made.

(Mr. Disque here passed paper to Mr. Frear.)

Mr. FREAR. This was proposed about the time that the original contract was drawn, was it? I didn't notice the date of it.

Mr. DISQUE. That is not dated. It came shortly after these telegrams, and was brought to me by Cain, apparently about the latter part of March; after the 20th.

Mr. FREAR. Yes; on March 20 Pliny Fisk or Siems—was it Pliny Fisk sent you the telegram, "We have telegraphed to John Cain?"

Mr. DISQUE. This came in after those messages apparently. It is not dated.

Mr. FREAR. Was that message from Fisk or from Siems-Carey-Kerbaugh, March 20, "We have telegraphed to John Cain?"

Mr. DISQUE. That was Siems-Carey-Kerbaugh and Pliny Fisk, all of them.

Mr. FREAR. They all joined in that telegram of March 20. Sometime after that this proposition was made by John Cain, whom they had authorized to act for them; there is no date; presumably what, in April?

Mr. DISQUE. I think that was probably the latter part of March. That would be my guess at it.

Mr. FREAR. The latter part of March. Just enter that in the record, please, in full. You have read part of it. I will read that first paragraph, which seems to be a very important paragraph: "Proposal of Siems and Carey and H. S. Kerbaugh, of 50 Church Street, New York City, to cut and deliver 300,000,000 feet spruce logs for United States Government.

"Railroad: At the cost and expense of the contractor, a railroad shall be built and completed on or before November 1, 1918, via Joyce, Lake Crescent, and Soleduc Valley, from Port Crescent, by a suitable route to and in the vicinity of Lake Pleasant," at the cost and expense of the contractor.

Mr. MAGEE. Is that the Lake Crescent route?

Mr. FREAR. "By a suitable route to and in the vicinity of Lake Crescent," from Port Crescent.

(Pursuant to the foregoing instructions the document was marked "Exhibit 2, Witness Disque, September 4, 1919," and is set out in full as follows:)

GILLIAM COUNTY.

Col. BRICE P. DISQUE,
Aviation Corps, Spruce Division,
United States War Department,
Yeon Building, Portland, Oreg.

SIR: I have the honor to submit next subjoined in three sheets the proposal and application of Messrs. Siems & Carey and H. S. Kerbaugh, contractors, of New York City, N. Y., for logging and delivery 300,000,000 feet spruce logs

from Clallam County for the Government as well as railroad facilities. You gave me an interview before when this matter was in somewhat different shape, and I now request that you accord me a personal interview upon this proposal in order that an understanding may be immediately reached.

Very respectfully,

JOHN CAIN.

Address: Oregon Hotel,
City.

(First attached sheet:)

CLALLAM COUNTY.

PROPOSAL OF SIEMS & CAREY AND H. S. KERBAUGH, OF 50 CHURCH STREET, NEW YORK CITY, TO CUT AND DELIVER 300,000,000 FEET SPRUCE LOGS FOR UNITED STATES GOVERNMENT.

Railroad.—At the cost and expense of the contractor, a railroad shall be built and completed on or before November 1, 1918, via Joyce, Lake Crescent, and Soleduc Valley, from Port Crescent, by a suitable route to and in the vicinity of Lake Pleasant.

Logging operations.—Contractor proposes to cut and deliver 300,000,000 feet of No. 1 and 2 logs, deliveries thereof to commence on or before November 1, 1918, and the whole amount to be delivered 18 months from the date of the signing of the contract therefor.

Price.—The prevailing Government price to be paid of \$35 per thousand for logs of No. 1 grade, and \$20 per thousand for logs of No. 2 grade.

Advances.—Contractors to receive upon signing of contract and giving satisfactory bond a 30 per cent cash advance of the amount thereof.

(Second attached sheet:)

Increase of price or modification.—If, after the signing of the contract and during the continuance of its performance, a higher price shall be established for logs by the Government, or a more favorable contract entered into for like operations, then the contractor hereunder to receive the benefit of such price. And if, during the period of this contract, the Government shall make or establish more favorable terms of operation for logging and for logging operations for spruce than now obtained, contractor hereunder to have the benefit of such modifications.

Deliveries.—Deliveries to be made at any point on Puget Sound that the Government may select.

Government assistance.—The Government will use its powers of commandeer and requisition in aid of the contractor for the purpose of obtaining the projection of said railroad, the operation of the logging industry, and the delivery of said logs in aid of the spruce production required by the Government.

Contractor to have the right to dispose of surplus.—All logs not taken under this contract by the Government may be sold by the contractor to other parties, and the Government will aid the delivery of the same.

Embargoes.—Contractor to be rendered free of embargoes on transportation, material, and labor necessary and required for the performance of this contract during the continuance thereof.

(Third attached sheet:)

Bond and guaranty.—Contractor stands ready to furnish satisfactory bond and guaranty in the usual form required by the Government.

References for Siems & Carey.—L. W. Hill, chairman, Great Northern; W. P. Kenney, president; also Chief Engineer A. H. Hogeland; J. M. Hannaford, president Northern Pacific; George T. Slade, vice-president; also W. L. Darling, formerly chief engineer; O. N. Kalk, chief engineer, Minneapolis, St. Paul & Sault St. Marie Railway; W. P. Hinton, vice president Grand Trunk Pacific Railway; Howard Elliott, chairman New York, New Haven and Hartford Railway; Charles A. Stone, president American International Corporation; Samuel McRoberts, of National City Bank also War Credit Board; First National Bank, St. Paul; National City Bank, New York.

References for H. S. Kerbaugh.—Samuel Rea, president Pennsylvania Railroad, and Shanne, chief engineer, Pennsylvania Railroad.

I certify that the foregoing is a true and correct copy of a record to be found in the files of the United States Spruce Production Corporation.

O. M. MASSEY.

Assistant Secretary United States Spruce Production Corporation.

SEPTEMBER 1, 1919.

Mr. FREAR. Did the Government lose out by this failure of yours to accept the proposition of Siems-Carey-Kerbaugh Co. at that time that they would build the road, as it subsequently cost about \$4,000,000?

Mr. DISQUE. I don't think so. If we had gone on with that contract, assuming we could buy logs, which we could not buy at that time under the War Department regulations—

Mr. FREAR (interrupting). Didn't you have power to commandeer?

Mr. DISQUE. No, sir.

Mr. FREAR. Not at that time? You did later?

Mr. DISQUE. We had no power to commandeer at any time, except as it was given in specific instances, when applied for to the War Department.

Mr. MAGEE. Well, you don't mean to say the War Department didn't have power to commandeer?

Mr. DISQUE. They did.

Mr. MAGEE. They did have the power to commandeer.

Mr. DISQUE. The chairman is talking to me. I said I hadn't.

Mr. MAGEE. Well, he meant through the War Department.

Mr. FREAR. Of course you would exercise it through the War Department. I understand that.

Mr. DISQUE. It could have been done at any time, I expect.

Mr. FREAR. Yes. Why, you threatened right here to commandeer the Blodgett tract.

Mr. DISQUE. That was some time later.

Mr. FREAR. Yes. But I mean the power existed in the War Department.

Mr. DISQUE. But we were not authorized then to buy logs. You could buy lumber under the War Department regulations, and the law as it was written, but you could not buy logs, and I could not make this contract for logs. Therefore it involved a different kind of a contract. It involved a mill somewhere to reduce logs to lumber. It involved the expenses of—

Mr. MAGEE (interrupting). Why did you relieve them from the cost of building this railroad and build it at the cost of the Government, at \$4,000,000? That is the question I understand the chairman asks.

Mr. FREAR. There is a perfectly patent explanation for it on one theory, but why, from the theory of protection for the Government, instead of the Milwaukee road? What is the explanation?

Mr. DISQUE. Why, if they had brought a contract here like that, signed, of course I would have taken it.

Mr. FREAR. Well, here was a proposition, a proposal; why didn't you say, "Sign it?"

Mr. DISQUE. Why, they were not here. They came down here to discuss it and never would have made that proposition.

Mr. FREAR. Just give me the statement you have there, please [referring to Exhibit 2].

Mr. MAGEE. Both contracts went right along together. One was dependent upon the other. As I understand, you state you were willing to enter into the spruce contract but would not enter into the railroad contract.

Mr. FREAR. It says, "References for Siems & Carey: L. W. Hill, chairman Great Northern," and you read two or three names here

and said, as I understood you, they showed the references and you knew they were reputable people and were ready to contract with them.

Mr. DISQUE. Exactly.

Mr. FREAR. Then why didn't you close the contract right there?

Mr. DISQUE. The principals of this firm were not here. I had never seen them.

Mr. FREAR. Why didn't you wire them?

Mr. DISQUE. I did.

Mr. FREAR. Asking them to come on immediately and sign the contract?

Mr. DISQUE. They came here. They went up and looked over that country. They had been misinformed.

Mr. FREAR. When was that?

Mr. DISQUE. That was in April, I assume.

Mr. FREAR. Subsequent to this?

Mr. DISQUE. Subsequent to that; came down to our office and had some different ideas from that proposal. They also learned they could not sell us logs; that they had to convert them into lumber; and the resulting contract was not that, because they would not, no other man on earth would have, signed that contract after they found out the situation and after they learned—

Mr. FREAR (interrupting). Did they say they would not? Is there any correspondence in your files to that effect?

Mr. DISQUE. Well, there wasn't anybody around our place that even discussed it that I recall.

Mr. FREAR. I assume that is correct.

Mr. DISQUE. I think that the only fair way to answer that is to get the men who were there, who understand what Siems-Carey did.

Mr. FREAR. Well, but you were here?

Mr. DISQUE. But I wasn't running around with them and talking to them.

Mr. FREAR. Well, but you were here in Portland, and they went up there to look at it?

Mr. DISQUE. Yes.

Mr. FREAR. And came back. Now, did you ask them, "Are you ready to carry out your proposal?" Did you write them, did you wire them, or did you say anything, asking them, "Are you ready to do anything to carry out your proposal to build the railroad and make the contract"?

Mr. DISQUE. I told you I told them to come to our office for that discussion. In that discussion there was present Mr. W. M. Ladd, president of the Ladd and Tilton Bank in this city, and Mr. Mark Reed, of the Simpson Logging Co., of Shelton, Wash. They at that time were members of what was known as the Pacific coast branch of the Aircraft Board. Also were present—

Mr. FREAR (interrupting). They were the ones that had approved this Deep Creek proposition that was referred to?

Mr. DISQUE. Yes. There was also there Mr. Rickson, Mr. Cain, Mr. Carey, Mr. Kerbaugh, and a man Donlan, and a Mr. Thomas, an attorney of Portland.

Mr. FREAR. All of these latter-named people that you have mentioned were representing the Siems-Carey-Kerbaugh Co.?

Mr. DISQUE. Yes.

Mr. FREAR. Donlan was the manager, was he?

Mr. DISQUE. He had something to do with them.

Mr. FREAR. Yes. I understood he was the manager. He was from Missoula, Mont.? Or did you know that?

Mr. DISQUE. I don't know where he was from.

Mr. FREAR. Well, that is the statement before the committee.

Mr. DISQUE. I might say in connection—

Mr. FREAR (interrupting). What about Thomas? Where did he come from, or who was he interested in?

Mr. DISQUE. He was an attorney here in town.

Mr. FREAR. I know, but who was he representing?

Mr. DISQUE. He was representing Siems-Carey-Kerbaugh Co.

Mr. FREAR. So all the last people you mention were representing the Siems-Carey-Kerbaugh. If the Siems-Carey Kerbaugh Co. had been guaranteed that contract for building the railroad and had built it in there for the purpose of getting out these logs, they would have owned the railroad?

Mr. DISQUE. Yes.

Mr. FREAR. If they built it on a cost-plus contract for the Government and it was put in there, then anyone who came up afterwards to build a railroad that would be useless for logging purposes could buy it and it would have to be sold; that is true?

Mr. DISQUE. I don't quite get your question.

Mr. FREAR. If the Siems-Carey-Kerbaugh Co. built this road at their own expense and they started into logging they would have the control and the ownership of that road and no one else could get in; they could sell it to the Northern Pacific?

Mr. DISQUE. Yes.

Mr. FREAR. They could sell it to anyone that they wanted to, but if the Government built it, as they did, on a cost-plus contract, it threw it into the open market then, unless the Siems-Carey-Kerbaugh Co., with their 30 days' option, had closed up there, but they could not do that because they had not secured any timber at that time; so that threw it into the open market and leaves it to-day compelled to sell and with only one possible purchaser in sight; isn't that right?

Mr. DISQUE. Well, as to the purchaser I think there could be several.

Mr. FREAR. Now, whom; what interests?

Mr. DISQUE. Well, I should think the men who own the larger areas of timber up there would be interested.

Mr. FREAR. Well, now, that comes from your standpoint, and would be my own; that is, I would have no knowledge were it not for the fact that the testimony before this committee is that they can build a railroad down to Clallam Bay for \$300,000 a mile under ordinary conditions, with a short haul, and put the logs in there instead of carrying them on a 56-mile haul over this road to Port Angeles, and they can do it at \$1 a thousand cheaper. So the man who is a practical logger and is going to figure on this is going to take the shortest possible route, and he could not afford, as far as that is concerned, to pay 10 per cent, which is the salvage value; isn't that true?

Mr. DISQUE. I understood that more than one company with funds enough to buy that road had discussed it in a way with Col. Stearns that led him to believe that there was a possibility of them becoming interested. I know that one concern in New York with enough funds to buy the road—

Mr. FREAR (interrupting). For what purpose?

Mr. DISQUE. Logging.

Mr. FREAR. For logging?

Mr. DISQUE. Lumbering—discussed it with me, wanted to know what the amount of timber was, what kind of a mill it was, what kind of a railroad, and were seriously considering buying it if it was going to be sold as the average war product is usually sold, and they discussed it, I think, with Col. Stearns—finally asked me one day what I thought they would have to pay for it, and I told them I didn't know, but I had recommended to Col. Stearns never to sell it until he could get its reconstruction value at the time of sale. They then withdrew, I think.

Mr. FREAR. Of course, that is an impossibility under any conditions, unless the Milwaukee takes it. Now, let us say that you get your 10 per cent, and let us figure on that basis as a business man who is a logger or who is engaged in these matters, and let's see if we won't arrive at the same conclusion—

Mr. DISQUE. Ten per cent of what?

Mr. FREAR. Ten per cent of the value, \$400,000.

Mr. DISQUE. You mean we start off with the assumption that is all we can get for it?

Mr. FREAR. Yes.

Mr. DISQUE. I don't agree with that.

Mr. FREAR. No. I mean you, as a business man, come up here and say, "I want to buy this road, or I am going to indulge in lumbering operations; I own the Clallam lumber, or I own the Weyerhaeuser lumber there, or I own the Milwaukee Land Co. lumber, 19,000 acres that the Milwaukee owns up there;" now let's say I am in that position. Either one of those owners must come in, because you can't commandeer private property in times of peace now. It is going to be a person of that kind to buy that railroad. The first thing that comes to the individual is, isn't it, What will it cost me to get out that timber? Now if he is confronted with the fact that for less than \$400,000 to-day he can build a road up from Clallam Bay and can then log that timber for a saving of a dollar a thousand around Port Angeles, what is going to induce him to pay for this 56-mile haul and the \$400,000 with all the additional upkeep and all the expense that will naturally follow the long route? Now, I am putting it as a business proposition that necessarily confronts us to-day representing the government.

Mr. DISQUE. Well, I think if you will call the witnesses I have given you, I can demonstrate to you that your information is wrong.

Mr. FREAR. In what respect?

Mr. DISQUE. You can not put logs at Port Angeles at that price, and in the second place—

Mr. FREAR (interrupting). Well, that is the testimony, and there has no one disputed it yet.

Mr. DISQUE. I say, Mr. Chairman, you have witnesses, I think possibly one, two, or three; if you will call the gentlemen I have named, I will produce men whose testimony—

Mr. FREAR (interrupting). We can't call all of them. What man will testify to that? We will call him on that specific fact.

Mr. DISQUE. Well, will one man's testimony overrule everything you have got?

Mr. FREAR. It is immaterial whether it will or not. The committee has got to determine that policy for itself. Tell me the man you want called.

Mr. DISQUE. I will later on. I would like to think over it.

Mr. FREAR. Now, the testimony is when you get up to the Milwaukee line for the 36-mile haul that then it costs a dollar on the Milwaukee line to get into Port Angeles. That is the testimony of Mr. Lightner. That is a haul from Lake Pleasant up to the Disque Junction. Say that it does not cost any more to haul there than it would down to Clallam Bay; you have got an additional 20 miles. That is as I understood his testimony. If I am mistaken I will be glad to be corrected. That was the point. And I asked if your people would not state that the Milwaukee road insisted upon a dollar or thereabouts for these freight charges on its share of the bringing out of the logs, a dollar a thousand. Now, if they did, there is the business proposition that is going to confront any man buying logs; he is not going to buy a pig in a poke, to use the expression; he is going to know what he does. It is a business proposition. We want to know why we are left in this position if these people were ready to come up here and build the road themselves.

Mr. DISQUE. I have told you that after they came they were not ready to build the road.

Mr. FREAR. You told us that there was no proposition made, that neither in writing or telegraph, or no discussion made about that proposal, but that suddenly, without any explanation in any way, a cost-plus contract was entered into with the Siems-Carey-Kerbaugh Co.

Mr. MAGEE. When they voluntarily offered to build the road at their own expense.

Mr. DISQUE. Well, now, I will tell you there is no use camouflaging the record—

Mr. FREAR (interrupting). That is right.

Mr. DISQUE. With statements like that.

Mr. FREAR. That is right. There is no use of camouflaging here.

Mr. DISQUE. They came out here after mailing this proposition, and looked over the ground and were not ready to build a railroad.

Mr. FREAR. Did they say so? Who said so and where?

Mr. DISQUE. Why, if they had been willing to do it, Mr. Chairman, don't you suppose I would have taken them up on it?

Mr. FREAR. Why, no. In the first place, in the proposition there, you didn't take them up.

Mr. DISQUE. Well, that was a preliminary proposal sent here.

Mr. FREAR. You stated those people whose names are there stated were sufficient evidence that they were reputable and that they were worth dealing with.

Mr. DISQUE. Well, if the committee is not satisfied they are the men who were in that conference, the men who were parties to this contract and who can give all the reasons they had in their minds as to why they didn't want to—

Mr. FREAR (interrupting). No reason was advanced by anyone why this proposal wasn't taken up.

Mr. DISQUE (continuing). Carry out the proposal. It is unreasonable to assume that I would not have done that if they had appeared there and had been prepared for that contract to be drawn.

Mr. FREAR. It is unreasonable to presume, I would take it, that any business man engaged in anything would not have said, "What is your best proposition now? Where is your proposal; what is your best proposition?"

Mr. DISQUE. Exactly.

Mr. FREAR. Yes; and there has nothing been shown here—

Mr. DISQUE (interrupting). And that contract as eventually drawn and put in the record is the best thing that the Government could get, after that discussion that followed their arrival on the coast.

Mr. FREAR. Who determined it?

Mr. DISQUE. Myself and the associates on that board.

Mr. FREAR. You determined the cost-plus contract?

Mr. DISQUE. That wasn't a cost-plus contract.

Mr. FREAR. For the railroad?

Mr. DISQUE. Oh, the railroad?

Mr. FREAR. We are discussing the railroad now.

Mr. DISQUE. No. I didn't draw that contract.

Mr. FREAR. Who did?

Mr. DISQUE. That was drawn by Mr. Stettinius in Washington.

Mr. FREAR. He determined the cost-plus proposition?

Mr. DISQUE. As far as I know. That was two months—no; a month after this thing happened.

Mr. FREAR. In May?

Mr. DISQUE. Yes.

Mr. FREAR. When you were back there?

Mr. DISQUE. That was a month after we drew this preliminary contract for spruce.

Mr. FREAR. Well, if the Milwaukee buys that, they will buy it a good deal cheaper than they would to have built around by Pysht Creek, wouldn't they? That is conceded.

Mr. DISQUE. Well, but I don't think they ought to.

Mr. FREAR. What are you going to do? Are you going to hold this railroad everlastingly here?

Mr. DISQUE. Why, I think it can be leased and operated.

Mr. FREAR. The president of the company shakes his head, that it won't be sold, but it has got to be sold sometime for some purpose. Now for what? If it is not good for a logging road, what is it going to be sold for?

Mr. DISQUE. Mr. Chairman, maybe that is true; I don't know that it is. I don't know that is the way it is going to turn out, but certainly during the war we were not thinking of things like that.

Mr. FREAR. Someone thought of it when Stettinius drew this contract then, in view of the proposal that is here.

Mr. DISQUE. I never met Mr. Stettinius except at that time.

Mr. FREAR. You didn't know anything about what that contract was?

Mr. DISQUE. And it will be conceded he is an honorable man.

Mr. FREAR. Oh, unquestionably honorable.

Mr. DISQUE. I don't think he would do anything that he didn't think was in the interests of the Government.

Mr. FREAR. No. It is a remarkable situation, though, isn't it?

Mr. DISQUE. I don't see it.

Mr. FREAR. No; I don't suppose you do.

Mr. DISQUE. I think it is only fair to call Mr. Carey, though, and Mr. Kerbaugh, and let them explain some of the things that you have in mind.

Mr. FREAR. Well, possibly we will do that.

Mr. DISQUE. Because—

Mr. FREAR (interrupting). You don't know, do you, of course, what Pliny Fisk had in this contract? You don't know that it was over 50 per cent, do you?

Mr. DISQUE. Are you sure that it was?

Mr. FREAR. Well, I have got his statement to a man who is in the room now.

Mr. DISQUE. Well, I am sure I don't know anything about that.

Mr. FREAR. Of course, you don't understand that. That is the reason I am inquiring about a situation which you don't know about, and which has an important relation to this contract that was made, and I am speaking now of the logging contract.

Mr. DISQUE. Well, if there were any ramifications all underneath this that I don't know about—

Mr. FREAR (interrupting). Well, there are many. I assume there are many.

Mr. DISQUE. You assume there are?

Mr. FREAR. Yes; I assume there are many.

Mr. DISQUE. Well, I wish I knew of them, because I might be able to clear this thing up more rapidly to your mind.

Mr. FREAR. Well, of course, we are trying to get the different angles of it at this time to see what there is to be had on it.

Now, referring to the Warren Spruce Co. contract, that was a cost-plus contract, that is all you know about the granting of the contract for the Siems-Carey Co., or is there anything else you want to offer about that?

Mr. DISQUE. I would like to look a moment through these papers.

Mr. MAGEE. Where is that railroad construction contract; can we not get that and put it in evidence? We have not had the railroad contract which was signed and became a valid obligation.

Mr. FREAR. Is that in your files?

Mr. DISQUE. The original contract?

Mr. FREAR. Yes.

Mr. MAGEE. That is the one I want to be put in evidence.

Mr. FREAR. That can be put in when you find it.

Mr. DISQUE. All right. There are two or three features of the Siems-Carey contract I would like to refer to.

Mr. FREAR. What are they?

Mr. DISQUE. In connection with that, the Siems-Carey contract as eventually drawn—

Mr. FREAR. That is the flitch contract?

Mr. DISQUE (continuing). Guaranteed production by negotiable collateral to the extent of \$750,000, and a million-dollar note properly indorsed as security. In reading that contract our understanding has been that upon failure to perform they would forfeit to any extent necessary their own bond or collateral put up in connection with the contract and the advances thereunder.

Mr. FREAR. But, as you remember, there was no cancellation clause?

Mr. DISQUE. As we drew it up here there was none. The cancellation clause that was put in made it become a cost-plus 7 per cent contract on cancellation, and that is why I have said that I later approved of that idea, because I have learned that War Department contracts which had no cancellation clause have been adjusted on a cost-plus 10 per cent basis and we really are 3 per cent to the good, based on the general regulation as it has been reported to me.

Mr. FREAR. Referring back of that, this is the situation that the Government was left in, is it not, that at any time that contract could be canceled?

Mr. DISQUE. The one they had.

Mr. FREAR. The Siems-Carey-Kerbaugh people were absolutely in the hands of those who had the right of canceling the contract?

Mr. DISQUE. Well, they were if they violated any of the conditions; but nothing could be done to them if they carried out the contract obligations.

Mr. FREAR. What is the question of cancellation there; does it not give the right of cancellation at any time on the part of the Government? Does it require a violation even of conditions which, of course, can very readily be found.

Mr. DISQUE. Now, I would like to look at that. We had about 400 of these things around this place [examining papers.] No, I have not got their contract here.

Mr. FREAR. This is the condition I have in mind. Article 16 reads:

If the seller fails to comply substantially with the terms of this contract, it may be canceled by notice in writing by the contracting officer to the seller, and the contract shall be deemed canceled upon the giving of said notice without prejudice to any claim the Government may have against the seller. If the seller is in default at the end of any month as scheduled in Article II, the Government may cancel from the total of the contract that portion of the whole represented by such default or any part of the same.

If, in the opinion of the Secretary of War, the public interests so require, this contract may be canceled by 30 days' notice in writing from the contracting officer to the seller, and in case such notice be given this contract shall be deemed to have been canceled 30 days after the giving of such notice.

The thought I had in mind was this, that I wished to ask you if this is not a contract that practically can be canceled at any time unless there is an understanding between the parties, and it gives those who have the power of cancellation of this railroad contract, and in this subcontract the right immediately to have the Siems-Carey-Kerbaugh Co. taken out of the field and anyone can step in.

Mr. DISQUE. Well, I always understood they had to fall down in their contract before we could do anything of that sort. I think they would have a legal course or cause of action if we should abandon them.

Mr. FREAR. They would have the right to put in a claim against the Government, probably.

Mr. DISQUE. I do not think we would be sustained in breaking that contract just at will.

Mr. FREAR. There is no contract that can be entered into between individuals and the Government in regard to which questions can not be raised; but the thought I had was that it gives a tremendous power to those who wish to exercise it.

Mr. DISQUE. Over the contractor?

Mr. FREAR. Yes.

Mr. DISQUE. That is true of practically all contracts in time of peace or war. The government always has the final decision, the contract says the final decision shall rest with the contracting officer.

Mr. FREAR. Of course, in this case, you were not the contracting officer, only incidentally?

Mr. DISQUE. That is all.

Mr. FREAR. Your superior was the director of aircraft.

Mr. DISQUE. The execution of the contract, of course, was entirely up to me.

Mr. FREAR. But the preparation of the contract and all the matters that went into it were determined in Washington?

Mr. DISQUE. By Mr.—now you are talking about the spruce contract?

Mr. FREAR. Well, all the contracts. You simply signed this as a matter of form; you had no voice in the determination, did you?

Mr. DISQUE. I certainly did. In this spruce contract I was probably consulted and acted more than any other person in the Army, because the contract as eventually let was based on one which I had had drawn out here, and additional clauses were added which I think were honestly intended to protect the Government.

Mr. FREAR. But you objected to some of those, did you not? Is that not the testimony?

Mr. DISQUE. I felt that it was a mistake to put that cost-plus cancellation in there. As the armistice came before they got through the job, I think it was a good thing for the Government that it was done. That is the only objection I recall having had. It was not enough of an objection for me to have withheld my approval of it or my signature from it. I did not think it was a vital point at all.

Mr. FREAR. I understood there was some controversy before the Ray committee.

Mr. DISQUE. I think somebody made a remark one day that I didn't like that contract, and it is possible I said I did not like it.

Mr. MAGEE. That was a liberal, advantageous contract to the contractors?

Mr. DISQUE. I doubt if it was any more liberal than the average contract.

Mr. MAGEE. Was there any limit to the profits under the contract?

Mr. DISQUE. Fifteen per cent.

Mr. MAGEE. As I understand, in most of the cost-plus contracts the contractor was given a certain percentage of the amounts given up to a certain amount, and then if the contract called for larger expenditure another percentage, and then there was a provision providing that in no event the profit of the contractor should exceed

\$250,000. As I understand, in this contract there was not any such limit of \$250,000.

Mr. DISQUE. This was not a cost-plus contract until it became canceled? Then there was no use talking about the profits, because it was all over then. He had gotten a certain per cent on the money that he had.

Mr. MAGEE. It might become a cost-plus contract?

Mr. DISQUE. Not during the time that profits were possible.

Mr. MAGEE. I think Gen. McIntyre's report discussed that.

Mr. DISQUE. There was no time during the period that profits were possible that that could become a cost-plus contract.

Mr. MAGEE. As I understand, this was the only large cost-plus contract entered into where, in case the percentage reached an amount in excess of \$250,000, that limit of profits of \$250,000 was not provided in the contract.

Mr. DISQUE. Well, I do not know anything about that; that is something beyond me, what happened in other contracts.

Mr. MAGEE. You claim to have had more to do with it than anybody else.

Mr. DISQUE. I say I do not know what was in the other contracts.

Mr. MAGEE. I assumed you were familiar with the ordinary provisions of contracts awarded by the Government.

Mr. DISQUE. I think you will find that each department has a different form and type of contract.

Mr. FREAR. Have you ever had any legal training; have you ever studied law?

Mr. DISQUE. About two years.

Mr. MAGEE. You are not a lawyer?

Mr. DISQUE. I am not a lawyer.

Mr. FREAR. When was that, and where?

Mr. DISQUE. I started in at the University of Cincinnati. I had about—well, I have been used by the Judge Advocate's Department of the Army for about 350 cases.

Mr. FREAR. That is, in court-martial cases?

Mr. DISQUE. Yes. I have been through the law department of the staff college.

Mr. FREAR. What line of training did they give you there—criminal law?

Mr. DISQUE. They give general law, criminal evidence, and contracts.

Mr. FREAR. So you have studied the law of contracts?

Mr. DISQUE. All those things an Army officer runs into in the service.

Mr. FREAR. Have you had any experience in importing, or matters of that kind, before you were given your present position?

Mr. DISQUE. Not a bit.

Mr. FREAR. You were appointed to a \$30,000 position at the request of Mr. Ryan without any previous experience?

Mr. DISQUE. I was not appointed at the request of Mr. Ryan.

Mr. FREAR. On his recommendation?

Mr. DISQUE. I know, but I would like to have that clearly stated here. Mr. Ryan merely said to somebody, and I think it was probably Mr. Baldwin, of the American International, "I would like for

you to talk with this man Disque," or something of that sort. He did not even go over with me.

I went over and had a talk with the vice president and the president of the American International, and then wrote them a letter from out here, outlining my career; and since then I have heard from three different people in New York, people whom I had known before, that the American International officers had inquired of them regarding me before they notified me that I would be appointed. I feel quite confident that Mr. Ryan's introduction led them to go ahead, but I do know that they did not appoint me because Mr. Ryan introduced me there, entirely, and they did look up three people that I know, and I do not know how many people that had known me before, and got a record that apparently satisfied me. Mr. Ryan did not know, I think, that they expected me to go to the importing and exporting house, and the reason I did go there is that it had been a German house, completely managed by Germans, and they wanted some Americans to take charge of it. I would like that to be on the record clean, because I do not think that Mr. Ryan went over there and urged my appointment at all.

This morning's papers very unfairly, in the headlines, say I admitted my obligation to Mr. Ryan. I did not admit anything, and I do not. I admit Mr. Ryan introduced me.

Mr. FREAR. You asked him for some position?

Mr. DISQUE. I do not call that an obligation at all.

Mr. FREAR. Possibly it was not an obligation.

Mr. DISQUE. It says interrelation is shown. That is not true.

Mr. FREAR. Is it not a very unusual situation for a man without any previous experience whatsoever in the line of the business for which he is appointed receiving suddenly a \$30,000 position, which is \$100 a day for working-days, unless he had some very strong recommendation to get it? Now, I am just asking that as an ordinary business proposition.

Mr. DISQUE. As I told you before, that was not the only position that was offered to me. The salary that I am getting there is not widely different from others that I could have gotten and can get now.

Mr. FREAR. Would you object to giving those places?

Mr. DISQUE. I do.

Mr. FREAR. Of course, that leads us into speculation.

Mr. DISQUE. It leaves you with my word.

Mr. FREAR. But your word was not given when we asked your salary; you refused to state it, and I had to call another witness to establish that.

Mr. DISQUE. I consider that private business. I feel that it is unfair to bring up a matter of that sort until there is some live evidence that it is justified, Mr. Chairman. That is an insinuation and innuendo against me, and I will tell you frankly it is the first one in 20 years' service for this Government.

Mr. FREAR. That is a very remarkable situation, we will have to confess. I think any jury would say that it was very unusual; and it is simply because of that that we are asking the facts and asking the amount of salary paid, asking who it was that gave the appointment, in view of the fact that 50 per cent of the Siems-Carey Co. stock was owned by this American International Corporation, and

in view of the fact that all of the stock of the Amsinck Co., of which you are president, is owned by this American International Corporation, and in view of the fact that John D. Ryan is a director, and that he recommended you for the position, and a large salary is being paid. I think it is very natural that we should want to inquire. Whether that is an insinuation or not, I do not know. If Mr. Ryan decided to do that, that is for him to say.

Mr. DISQUE. May I interpolate?

Mr. FREAR. Go ahead.

Mr. DISQUE. Do you think it reasonable that they would put a man in a position such as I am occupying, where millions of dollars pass every month, who could be influenced in an undue manner, in an improper manner, who was not capable of handling that business? That is not the way the business men of this country manage their affairs.

Mr. FREAR. We are not suggesting there is anything improper.

Mr. DISQUE. That is all there is to it.

Mr. FREAR. There is no suggestion that you have any authority to handle the business of this company. It may be they have placed all the restrictions imaginable, and your position is simply that of any other officer. Presidents do not determine those things. Board of Directors determine them, and oftentimes it is purely an honorary position.

Mr. DISQUE. I will say to you, to make the record clear, that I am not a dummy in any sense of the word in that job, that I manage that business at Amsinck as independently as any president in this country manages any corporation, and the finances of it are in my control.

Mr. FREAR. What is the character of the work, in a general way?

Mr. DISQUE. Largely commercial banking and importing and exporting.

Mr. FREAR. And you never had a particle of experience in that work before you received a \$30,000 position?

Mr. DISQUE. I had had experience for years over the entire world.

Mr. FREAR. Whereabouts; in any particular along that line?

Mr. DISQUE. Not along that particular line, no.

Mr. FREAR. You were a captain in the service, you testified, less than two years before, drawing how much, \$3,000 a year?

Mr. DISQUE. I do not remember what I was drawing.

Mr. FREAR. That is practically a captain's salary?

Mr. DISQUE. Yes, and that is why 1,200 officers have left the Army in the last 10 months. They have been starved out. To pay \$3,000 for the men who had the job I had in Manila, if I could step out and get \$30,000 that is going some.

Mr. FREAR. We will agree it is going some.

Mr. DISQUE. And I would not get it if I was not earning it. Business affairs in New York are not run on that plan.

Mr. FREAR. We happen to be familiar with business affairs in New York. I know some awfully good men who are not getting that.

Mr. MAGEE. What I wanted to ask was with reference to this statement of Gen. McIntyre:

The Stems-Carey-Kerbaugh contract was a most profitable one for this corporation and guaranteed a minimum profit of 7 per cent to the contractor

on all expenditures except the overhead cost of the New York office. This clause is unusually liberal inasmuch as the corporation was being financed by the Government and, had the contract been carried to a completion, it would have meant a profit of about \$1,400,000 on a project which involved no financial risk on the part of the Siems-Carey Kerbaugh Co. and covered a period of 18 months.

It was in connection with that that I made the statement.

Mr. MAGEE. As I understand it, no other governmental contract, large contract, that contains a provision, a cost-plus contract, where the commission to the contractor on the contract exceeds the amount of \$250,000, that the contractor shall be limited to that amount. It can not be in excess of that maximum of \$250,000. That is as I understand it. That is the reason I mentioned that in connection with Gen. McIntyre's statement the liberality of this contract.

Mr. DISQUE. I do not know what this all is here, but if it would be interesting to the committee I would be glad to read it. [Referring to paper.]

Mr. FREAR. Is this in response to something that Mr. Magee asked you?

Mr. DISQUE. No.

Mr. FREAR. I supposed you had some answer there.

Mr. DISQUE. I have not read it over, but here is a lot of remarks that occurred when Siems-Carey first came in our office.

Mr. FREAR. If there is anything you want to read put it in the record, if it is not too long.

Mr. DISQUE. I do not know what it is, whether it will clear up this thing or not.

Mr. LEA. Suppose he looks it over and presents it in the morning?

Mr. FREAR. That might do. You can insert it then, unless you want to look it over now. I wanted to ask another question. Maybe it would be a better plan for you to read it over to-night, and if there is anything you want to put in there is no objection to it being entered, if it is not too long.

There were advances made to the Siems-Carey-Kerbaugh Co. on the railway. Do you remember how much without examining the books?

Mr. DISQUE. I do not; no. I haven't got any of those figures. That was handled entirely by the finance department of the Government.

Mr. FREAR. The advance made to the railroad corporation of the Siems-Carey-Kerbaugh Co. was \$500,000, and the advance made to the spruce division of the Siems-Carey-Kerbaugh Co. on their spruce contract was \$750,000. That is \$1,250,000. Did they pay any interest to the Government on those advances?

Mr. DISQUE. I would say they did. I do not know of any contracts made for advances that did not provide an interest rate, and it was changed from time to time by the War Credits Board.

Mr. FREAR. What was the rate?

Mr. DISQUE. Well, it ran from 5 to 7 per cent, to by best recollection.

Mr. FREAR. Was there any repayment made back by your corporation to the Siems-Carey-Kerbaugh Co. of the interest that had been charged them?

Mr. DISQUE. You mean did we give them 7 per cent?

Mr. FREAR. Did you refund back the interest that they had paid on these advances?

Mr. DISQUE. I would say we did, unless the War Credits Board changed their plan. I know that I wired several times to call attention to the fact that interest that they were charging only became a boomerang on the Government costs, but whether that was modified or changed I do not know.

Mr. FREAR. As a matter of fact you did pay back the interest after it was charged, did you not; that is, you repaid back interest to Seims-Carey-Kerbaugh and to other contractors where money was advanced?

Mr. DISQUE. I think so; but our treasurer would be able to state that definitely.

Mr. FREAR. I thought that instead of calling various officers we would accept your statement, subject to correction at any time on that subject.

Mr. DISQUE. Yes.

Mr. FREAR. I think it is advisable so as to save calling a number of witnesses. That was the purpose. Is the treasurer here?

Col. STEARNS. He is not here.

Mr. MAGEE. If I may say in connection with that, I would like to have a statement prepared so that a few questions can be asked in reference to the amount of funds which the United States Spruce Production Corporation has on hand now, and where those funds are deposited, as of September 4 or September 1. That will save some time.

Mr. FREAR. Let me suggest here, that in the morning you bring if possible a brief statement of the interest charges paid by these various contractors, these four large contractors, and a statement of whether or not the interest was repaid to them, paid back to them. That will shorten that.

Mr. DISQUE. In that connection, I do not know whether you understand or not, but I think it would be well to have the point clear; in the three larger cost plus contracts, other than the Siems-Carey railroad—

Mr. FREAR. That would be the Warren Spruce, Grant-Smith Porter Bros., and the Airplane Lumber Co.?

Mr. DISQUE. Yes. The contractors got no 7 per cent on the soldiers' Government wage, on the amount of pay that the Government gave the soldiers.

Mr. FREAR. Did Siems-Carey-Kerbaugh get that? •

Mr. DISQUE. They did not, because they let their work out to subcontractors at fixed prices, and it was not possible to take care of it. Had Siems-Carey employed these fellows direct we could have done it, but they let their work out to subcontractors and we could not find a way to do it. And also, on all of their contracts, where the supply of soldiers with food or clothing was concerned, we allowed no 7 per cent. And also, wherever possible, our purchasing department bought the larger equipment themselves, and there was no 7 per cent on that. Furthermore, I think it would be interesting to say that the subcontractors on the Siems-Carey work, on the railroad as I understand, practically all of them were experienced men at that kind of work, and Mr. Carey told me that practically all of them either did not make any money or lost money on their

jobs. He is the best witness on that and can tell to what extent it was. He told me that before I went East.

Mr. FREAR. What was the reason for that, poor judgment in bidding?

Mr. DISQUE. Because they found the brush and the grubbing more expensive to perform than they had thought.

Mr. FREAR. Then this road, under ordinary circumstances, would have cost a good deal more than \$115,000 a mile during those times if they had received any particular profit, is that the idea?

Mr. DISQUE. I guess it would, according to that.

Mr. FREAR. The suggestion has been made by an accountant whether or not 7 per cent was paid on the subcontractor's contract.

Mr. DISQUE. I imagine it was. I would want to get that verified, though. I think it was.

Mr. FREAR. On the Warren Spruce—we have not reached that, but I wish to bring that up now, as soon as we finish with the Siems-Carey Co.—there were a number of conditions under which the cost plus attached, and that, I presume, was true in the Siems-Carey Co. to an extent. For instance, a man was paid who was out getting rights of way, was he not? He was paid on the cost plus; that is, his contract—for instance, he was getting \$10 a day or whatever amount it would be, then he was entitled to a 7 per cent cost plus as one of the items?

Mr. DISQUE. I am sure I could not answer that.

Mr. FREAR. What I wish light on is this: If that was so in getting rights of way, was the 7 per cent allowed upon the amount that was paid for the rights of way as well?

Mr. DISQUE. You did not take that up with Maj. Morley. My impression was that mater was discussed. I do not know just what the—

Mr. FREAR. That question has been asked before, I believe, of one of the witnesses—Col. Stearns, I think—something similar to that.

Mr. DISQUE. I could not answer it.

Mr. FREAR. I was wondering. It is something we would like light on.

Mr. DISQUE. I would have quite a doubt in my mind which way was right to answer that, because we had our own men out working on the right-of-way question.

Mr. FREAR. But they were paid—

Mr. DISQUE. They were officers paid by the Government, without any extra money at all.

Mr. FREAR. Of course, of the officers that would be true, but I mean if they were private parties. I got the impression that they were private parties that were out purchasing rights of way, who received the 7 per cent cost plus, and then the Government paid in addition that, some rate upon the amount that was paid for the right of way, just as an illustration.

Mr. DISQUE. I do not believe it would be fair to say that that was done, because there is a doubt in my mind.

Mr. FREAR. Your folks could give us the information?

Mr. DISQUE. I am not qualified to answer that.

Mr. FREAR. As I remember, in the Warren Spruce Co.—and I can not find the contract that has that provision—their cost-plus contracts reached to even the provision of accident insurance in

Washington and Oregon, and after that was paid they had a cost-plus contract on that; they received 7 per cent profits. Is that right, or do you know why?

Mr. DISQUE. I do not know. We would have to call in our legal talent on that.

Mr. FREAR. Will you ascertain if that is true?

Mr. DISQUE. Well, that was Maj. Morley, and he is away from here.

Mr. FREAR. But you have your contracts right here; you have the payments that were made; someone surely is in position to tell that.

Mr. DISQUE. We will try to get that to-morrow.

Mr. FREAR. Now, the situation that presents itself is this: Apart from the fact that you were here engaged in paying soldiers the same as civilians, whereas, of course, in service in France and elsewhere the soldiers were only getting their \$30 a month, and there was no insurance against accidents over there; but here, as I understand, in the Warren Spruce Co., there was an insurance against accidents. These men who were out in the woods had insurance against accidents, and then a cost-plus contract. Now, let us get the facts in regard to that.

Mr. DISQUE. I think I can clear that up. My recollection of that is only this far, and this far I am very clear; that there are laws around here that require companies to take out liability insurance for their employees. I am sure that we had correspondence with the War Department to determine how far these contractors could be compelled to comply with that law. It went on for a period of months, and how it turned out I do not know. But the subject was live, and if it came up it was because the contractors had counsel who advised them that they had to protect themselves. And then the question came up, is that a legitimate cost under a cost-plus contract?

Mr. FREAR. Is it a legitimate cost-plus proposition that the Government should pay for the prevention of an accident over in the woods of Washington and Oregon, when it was submitting the boys over in France to all kinds of hazards without any insurance unless they paid for it themselves? That was the thought. You might find out from the records what they show. Now, the Warren spruce contracts were entered into——

Mr. LEA. I am pretty sure, from the record, that that was an element of the cost-plus contract. The contract was rather sweeping in its terms, and every element of cost ordinarily computed by a contractor in estimating jobs was involved in the costs on which a cost-plus contract was allowed.

Mr. FREAR. It is my recollection that it was specifically named as one.

Mr. LEA. I think it is.

Mr. FREAR. Yes. Will you please bring that Warren spruce contract, something that we can use for examination?

Mr. DISQUE. Certainly; you have no copy of that in the record?

Mr. FREAR. Not of that provision that was attached. I have a Warren spruce contract here somewhere. Have you copies of the other two—Grant-Smith, Porter Bros. and the Airplane Co. contracts? I do not believe anyone has seen those. If so, will you please bring them, that is, for inspection, anyhow? You entered into the contract with the Warren Spruce Co.?

Mr. DISQUE. Yes, sir.

Mr. FREAR. According to this contract, that was called S. P. D.-17, on the 11th day of January, 1918?

Mr. DISQUE. If you are looking at the contract, I assume that it is correct. It was about that time.

Mr. FREAR. I assume this was one of the contracts.

Mr. DISQUE. That was about the first time we had any relations with them, I believe.

Mr. FREAR. This runs to 26 articles or provisions, signed by you, apparently, and also by the Warren Spruce Co., by J. O. Hoyt, president, and M. B. Lynch, secretary, and for the Government by J. Van de Crisp, I assume the same officer who was engaged in signing before. You are familiar with the terms of that contract, are you?

Mr. DISQUE. In a general way, yes, sir.

Mr. LEA. What date is it?

Mr. DISQUE. January 11, 1918. How was that contract entered into, that is, I mean what led up to the preparation of that contract and giving it to those people.

Mr. DISQUE. That contract followed shortly after making one with the Grant-Smith Porter Bros., and at a time when we had determined to do some riving on our own, through these contractors, to tide us over, and it was entered into as a result of Mr. Hoyt, as I recall it, coming to our office and proposing his organization, which consisted of teams and road crews, machinery, those things which we had all felt were necessary to carry on the riving operations. He came to the office and proposed that they undertake a contract similar to the Warren Spruce Co.—I meant to the Grant-Smith Porter Bros.

Mr. FREAR. Theirs was a riving contract?

Mr. DISQUE. The same.

Mr. FREAR. And when was theirs made?

Mr. DISQUE. Grant-Smith?

Mr. FREAR. Yes.

Mr. DISQUE. Prior to that, some week or so, possibly two or three weeks.

Mr. FREAR. What was the general purpose, was it confined to riving?

Mr. DISQUE. I am pretty sure those contracts were entirely riving and the necessary things to remove rived cants.

Mr. FREAR. Were there any logging contracts entered into with them afterwards?

Mr. DISQUE. Several months afterwards we found, as I said yesterday, the production was going to fall, or was not going to come up to our requirements, and it was then that these cost plus contractors were converted into selective loggers by new contracts, some time in the spring of the year.

Mr. FREAR. That is, subsequent to this January 11 contract?

Mr. DISQUE. Several months, I understand.

Mr. FREAR. I asked for the contracts because I do not find that we have them here. This subsequent contract, did it give any authority to the Warren Spruce Co., or did this contract give them any authority to build railroads for the purpose of getting out the riving or the logs?

Mr. DISQUE. I think it provided that they would build anything that we required to move the timber. I think all their operations of that nature were subject to direction of our office. That is the way it worked, and I think that is the way it was provided.

Mr. FREAR. I have a statement furnished from the Washington office of aircraft which says—signed by J. P. Murphy, general counsel—is he here?

Mr. DISQUE. Yes, sir.

Mr. FREAR. It says:

Under the terms of contract No. S. P. D.-17—

The one which I am reading.

Provision is made for the riving and delivery of spruce splits by the Warren Spruce Co., and under the terms of contract No. S. P. D.-155 the terms of contract No. S. P. D.-17 are supplemented to include logging and milling operations, and in Article I thereof it is provided as follows:

"ARTICLE I. In addition to engaging in riving operations as in said contract provided (contract No. S. P. D.-17)"—

The one before us of January 11. [Continuing reading:]

"The contractor shall also engage in logging and milling operations and other activities incidental thereto, designated by the contracting officer."

J. P. Murphy, general counsel, states that it was under this provision of contract S. P. D.-155 and the general terms of both contracts that said railroads were constructed. There is nothing in this contract that speaks of railways, there is nothing that gives authority, unless the part underscored, "other activities incidental thereto." Was it under that provision that you went to work and paid out for the construction of railways at various places by the Warren Spruce Co., or was there some specific authority that you know of? I am asking for information.

Mr. DISQUE. Well, this was the logging.

Mr. FREAR. Logging and milling.

Mr. DISQUE. I think those terms contemplate the necessary railway extensions to take care of them.

Mr. FREAR. That was the construction made by your office?

Mr. DISQUE. That was our point of view.

Mr. FREAR. What was the difference between that and the position relating to the Siems-Carey-Kerbaugh Co.? They had to have a special contract to build their railroad. The Warren Spruce Co. built a road down here of 24 miles under this contract.

Mr. DISQUE. Well, the Siems-Carey Co. had they carried on their contract I think would have 75 miles of railway never mentioned in their contract for flitches. These were loggers. The other fellows were loggers and sawmill operators. That is what they became under these new contracts.

Mr. FREAR. Were not special contracts made with anyone in regard to railroads? How was it with Grant-Smith Porter Bros.? Did they have any provision authorizing the construction of railroads?

Mr. DISQUE. It was, I recall, just about the same as this.

Mr. FREAR. Then they could construct almost anything that they desired, and the cost-plus contract would have attached to buildings, hotels, or anything else, wouldn't it, if they felt it was necessary for carrying on the business?

Mr. DISQUE. You will find further along in those contracts that the cost-plus contractor didn't do anything that was not approved.

Mr. FREAR. No; it is not a question of approval, it is the question of authority under which they are acting. Of course any individual, you could send out Hitchcock or anyone else and he might approve it, but the point is, was it entered into under any specific authority? That is the point we are asking. Is there any contract for the construction of a railroad?

Mr. DISQUE. I do not think there is any specific actual contract with either of them.

Mr. FREAR. So that if they built 24 miles of railroad down there, as they did, from Yaquina or thereabouts, and built other railways, they were all under this same provision which I have read and to which Mr. Murphy attaches his name, just "other activities."

Mr. DISQUE. But each activity and each extension, and everything else was done by specific instructions prior to it being undertaken and determined by the proper officers.

Mr. FREAR. Who were the officers that determined it?

Mr. DISQUE. Well, we had a chain of officers, from approval clerks of invoices, and approval officers of materials bought—

Mr. FREAR. Here is a cost-plus contract, we will say, with the Warren Spruce Co. Who determined the building of the road, let us say, down to the Blodgett tract?

Mr. DISQUE. That was determined by everybody, I would say, clear through to the director of aircraft production.

Mr. FREAR. Was there any act of your corporation—it was not a corporation then, it was just a division—was there any act on the minutes or anything else that indicates—

Mr. DISQUE. I am sure there is.

Mr. FREAR. Will that be produced so that it will supplement the contract here, showing the action taken and by what officials directing the railroad to be built from Yaquina Bay down to the Blodgett tract?

Mr. DISQUE. We can produce that in quite detail.

Mr. FREAR. That is, the minutes? That would be true also of the railway built from Yaquina Bay up to the Otter Rock, and thereabouts?

Mr. DISQUE. All construction operations.

Mr. FREAR. Just have those brought, so we will have some intelligible understanding of what the procedure was at that time. The Warren Spruce Co., was that a logging company, or what kind of a company was that?

Mr. DISQUE. When we employed them, or entered into a contract with them, they were known as general contractors, as I understand it.

Mr. FREAR. What kind of contractors?

Mr. DISQUE. Well, my understanding is that they contracted for most anything.

Mr. FREAR. Building ships, railroads?

Mr. DISQUE. No, I mean—

Mr. FREAR. It was just confined to paving construction, wasn't it?

Mr. DISQUE. Well, I understood they did other things.

Mr. FREAR. What, among other things? It was known as the Warren Paving Construction Co., wasn't it, or some similar name?

Mr. DISQUE. I do not know what their style is. They formed a new corporation.

Mr. FREAR. That is, they entered into a new corporation, and that is the Warren Spruce Co.?

Mr. DISQUE. The Warren Spruce Co.

Mr. FREAR. Well, it has the same officials, or substantially the same, has it not?

Mr. DISQUE. I think so.

Mr. FREAR. Now, what had been their experience in logging, or in work of this kind?

Mr. DISQUE. They were not going to log; they were going to rive.

Mr. FREAR. But they did eventually log, didn't they?

Mr. DISQUE. That was some months later. They had learned a good deal about the woods in the meantime. Their job under the first contract was to rive, and they knew as much about that as anybody else around here, and they knew more about building roads to get it out than any other people we could get hold of. That is why we made a contract with those folks. That is why we considered Grant-Smith Porter Bros., in addition to the fact that they are the only two concerns that said, "We are getting to go in and do this thing." It was not easy in those days to get people to come away from their war work, to get someone to go onto a job of that sort, and you had to find somebody whose normal activities were more or less suspended because of the war.

Mr. FREAR. Did the riving operation—that was not a cost-plus contract?

Mr. DISQUE. Yes.

Mr. FREAR. Was it?

Mr. DISQUE. Yes.

Mr. FREAR. That was a cost-plus contract, too?

Mr. DISQUE. Yes, sir. I said yesterday the recommendations from lumbermen were to charge anywhere from \$60 to \$250. No one knew what it would cost to get it out. You could not get anybody unless you paid such a high price on it that it would break the Government almost. You could not get anyone to go out there and do it, so the cost-plus contract was adopted with close supervision, and the result was, as I said yesterday, an average cost of producing that stuff of \$144, when they had been asking \$250.

Mr. FREAR. What was the cost of the Warren Spruce Co. riving operations?

Mr. DISQUE. I gave that yesterday, and I have forgotten it now. I have not got the papers here.

Mr. FREAR. You gave that separately?

Mr. DISQUE. This is the average for the three cost-plus contractors.

Mr. FREAR. I am trying to get what was the cost of the Warren Spruce Co.? Here is a company that had no previous experience, as I understand it, in riving, logging, or anything else connected with it, although the Airplane Co. and the Grant-Smith Porter Co., they had, had they not?

Mr. DISQUE. I do not know about the Grant-Smith Porter Bros.; I do not think they had had any. None of them had any experience in riving. These were all riving contracts at this time. No one had any idea that anyone would be logging. In my mind I thought,

of course, that the industry here would be under way strong in the spring and we would soon be able to pass these fellows out, but instead of that, as I said yesterday, the industry was not producing anywhere near what we required.

Mr. FREAR. I recollect that. The point is—

Mr. DISQUE. Then is when they became loggers.

Mr. FREAR. The people here who, I understand, were loggers were not getting these contracts. Why didn't you give cost-plus contracts to loggers, generally, and why confine it simply to the Warren Spruce Co.?

Mr. DISQUE. The perfectly good reason for that, in our mind, was that people ought to know that it cost to log, who had been in the business all their life; and no one ever rived, no one could tell what it cost, and we felt that the cost-plus contract, closely supervised, was the most economical thing for the Government, and you could not get anybody to do it on any other basis.

Mr. FREAR. Explain to the committee how this contract was entered into, by whom, and anything that relates to this Warren Spruce Co.

Mr. DISQUE. All I know is that we have the contract here. This Mr. Hoyt, mentioned a moment ago, came into my office one day and outlined his organization, said what he had available to put at our service, and our conference, followed by my investigation or inquiries, led me to believe that he was in a position to do those things that he had promised, and the contract went along in the normal way and was made up by—

Mr. FREAR. Tell the committee what occurred to bring you confidence that they could do the work any better than loggers or people who were in business throughout these two States.

Mr. DISQUE. Well, I think—

Mr. FREAR. Who brought him up—who introduced him?

Mr. DISQUE. Nobody did, as far as I know.

Mr. FREAR. Nobody had any influence in determining these contracts and getting them from your company?

Mr. DISQUE. Absolutely no.

Mr. FREAR. Just simply you were the one who decided it. I am inquiring.

Mr. DISQUE. I stated yesterday that I called together several men in this city, in December, and we talked this matter over. I didn't know whether any men in that meeting would ever become interested in this or not—in forming a company to rive. I merely wanted to find out what we could do to supplement what was going on. From that meeting, it developed that the Grant-Smith Porter Bros. contract was made. This Mr. Hoyt was not at the meeting, but he heard of it; he came in and said "I have got teams and equipment, things that you apparently need for riving operations, and we would like to make a contract to go and rive."

Now, I can say positively and absolutely, without question, nobody ever recommended Mr. Hoyt to me, or the Warren Spruce; nobody ever tried to do anything for them with me, and my information about them was gathered in an ordinary way. I have merely the satisfaction in my mind that I had determined that they could deliver the goods, and the contract went through the ordinary channels.

Mr. FREAR. This further statement: Of course, they had had no experience in the work. The thing that occurs to us, or occurs to me, and I am inquiring, is not that they should go out and attempt the ordinary method of riving and that you would tell them how much they could have, and all that, because you had fixed the price on riving, hadn't you?

Mr. DISQUE. That was a cost-plus contract for riving.

Mr. FREAR. I mean with others, tell generally—didn't you fix a price for riving?

Mr. DISQUE. We fixed a price of \$90 and then raised it to \$130 and still didn't get it. We had something like a hundred small contractors producing it. It would be impossible to give them cost-plus contracts and follow their operations. We had to concentrate wherever we had a cost-plus contract and to take care of the accounting.

Mr. FREAR. Had these people done any riving prior to that time?

Mr. DISQUE. I don't know. I don't think they had. Nobody had done any riving.

Mr. FREAR. I thought you said there were a number of small contractors doing riving at this time.

Mr. DISQUE. During the entire period of riving. I don't know that there were more than one or two riving at that time. I haven't any knowledge—

Mr. FREAR. Now, this company went on and later on went into the logging business. How did that second contract happen to be given to them, who were the ones that had the placing of that? Did you have the final determination or the sole determination?

Mr. DISQUE. Oh, no. That was determined after several months' very gradual development of the situation, which indicated the necessity of supplementing the logging industry with any means that we could get. Here was an organization working down in the woods, by that time quite a bit, had developed crews that knew how to fall trees, how to yard them in, because you have that in riving on a large scale, and it looked reasonable, logical, and businesslike for us to convert these riving contracts into logging contracts.

Mr. FREAR. Here were a hundred loggers, or maybe more than that, who were engaged in logging operations through the woods. The question that I am asking is how was it brought about that this company was given the cost-plus contract while a company right at the side, working for the Government, was working upon a fixed price?

Mr. DISQUE. All the loggers were cutting the timber as they go, taking all the trees in reach, those who were in spruce at all, and a great many were not, didn't have any spruce trees in their entire operations, and those who were in it probably didn't have more than an average of 20 per cent of the trees standing on their ground, spruce; the other 80 per cent averaged in fir, hemlock, and cedar.

Mr. FREAR. That is the only explanation—

Mr. DISQUE. I am not through. If you are ready I will go ahead.

Mr. FREAR. Go on. I was trying to find a paper. I am listening.

Mr. DISQUE. The loggers were doing this normal logging, and I had every right to believe doing everything that they possibly could. We had offered them every kind of help that the Government au-

thorized us to offer. Every request for help was given. We had loggers to take us their spurs out of the fir and put it into spruce, and had offered to adjust the costs with them, and still we were getting one-third of what the Government required, and we fell, and very gladly fell, to those other contractors who had organizations ready to supplement everything that they were able to produce.

Mr. FREAR. Did you draw no more than the four contractors that you speak about?

Mr. DISQUE. No, no, no, with those—well, we only had three. Siems-Carey was not a cost-plus contract. We would have given a contract to anyone else who came along and made a reasonable offer.

Mr. FREAR. The reason that that suggestion is made is that a good many loggers said all their offers—that is the testimony thus far—that all of their offers to aid in producing logs were apparently rejected or not given any consideration.

Mr. DISQUE. May I cover that subject just a minute, Mr. Chairman?

Mr. FREAR. Yes; it is an important one.

Mr. DISQUE. I think it is important that the committee get, at this time, a clear understanding of why we did not do the thing that you would normally think was the natural thing to do, and, as I have said, we had offered to all the loggers both to take up their spurs and put them into the spruce and pay the expenses. We had made contracts with the mills, which in turn could have made eighteen months' contracts with loggers, at prices unknown before, they were so high—good prices, prices on which good profits were made. Then we drifted along and found, with the promises—even had they so fulfilled them to the limit, we only had approximately a third. At that time, or shortly after that, there was a rumor that wooden shipbuilding was going to be discontinued. Then there was a decrease in the amount of cantonment lumber required, and other conditions came up, another draft was coming, and a number of men logging in fir—fir of the kind that nobody was interested in, became active right then and there was a regular wave of patriotism—

Mr. FREAR. Why was no one interested in the fir?

Mr. DISQUE. Because it was red fir, probably, or low-grade fir of another kind. Maybe it was all right for shipbuilding and it might have been of the type for that.

Mr. FREAR. The testimony is here, as I understand it, that practically one-half of all the work at the cut-up plant was from fir.

Mr. DISQUE. Well, there are different kinds of fir.

Mr. FREAR. Well, were you giving instructions as to what kind of fir would be acceptable?

Mr. DISQUE. Yes.

Mr. FREAR. Couldn't they reach into that?

Mr. DISQUE. Some of them didn't have any of that on their property. Some of them didn't have any.

Mr. FREAR. The figures, as I remember, were 59,000,000, practically 60,000,000 feet of fir and 79,000,000 feet of spruce—

Mr. DISQUE. Something like that. Well—

Mr. FREAR. Of the 143,000,000.

Mr. DISQUE. Now, Warren spruce people were building this railway line down here in the Alsea and in the Siletz. We needed down there approximately 75 logging sides to make the production that we

wanted from those two operations, the production that we figured on as a part of our necessary production to meet the requirements; as our plan was entirely established we figured on so much on a certain date from this area, and so on, and I thought I saw then an opportunity to place several of these loggers, who just then became quite active in offering their services.

Mr. FREAR. Who just then?

Mr. DISQUE. Yes, sir; just then, in July.

Mr. FREAR. Hadn't they been trying to get before you and get your attention long before that?

Mr. DISQUE. I had met a couple of dozen men, I suppose, of the loggers.

Mr. FREAR. Hadn't they tried to reach you by letters and otherwise, and coming in here on visits, trying to reach your attention, and Maj. Hitchcock, who seemed to be a buffer—I don't know whether it was with your knowledge or not—I am asking if you had any knowledge of this—I speak more specifically, for instance, of Lightner and Butler and men of that type, and the other loggers.

Mr. DISQUE. Did Butler ever try to see us?

Mr. FREAR. I understood so.

Mr. DISQUE. Well, I ordinarily got the letters from men of that type, and I don't remember of him ever making any attempt.

Mr. FREAR. You remember Lightner?

Mr. DISQUE. I do. I saw Lightner a couple of times.

Mr. FREAR. Lightner was ready and endeavored to do what he could, according to the statement, but he was given no opportunity—that is, he represented the Goodyear Co., didn't he, the Goodyear people?

Mr. DISQUE. He had all the opportunity he wanted, if he had really wanted to take advantage of it.

Mr. FREAR. You don't think he really was in earnest; you think you were the only one who was in earnest about the thing?

Mr. DISQUE. No.

Mr. FREAR. Go on.

Mr. DISQUE. No; I don't say that.

Mr. FREAR. Well, it seemed to be the general impression with a number of loggers that they could not get in close touch with the man who was at the head of the work here, and they tried very anxiously and they insistently tried, according to their statements, and could not reach the head of the organization. Now, I am trying to find out if there was any reason for it, or if their statement is not true.

Mr. DISQUE. I would like to read to the committee a resolution adopted by 200 of these loggers, after the armistice was signed, that will state what they voted unanimously, and, I think, answers that question.

Mr. FREAR. Well, all right, if it is not very long, I am perfectly willing.

Mr. DISQUE. Well—

Mr. FREAR. Did these loggers have contracts or what—contracts with you?

Mr. DISQUE. I didn't attend the meeting.

Mr. FREAR. When was it and where? What brought it about? What kind of a meeting was it?

Mr. DISQUE. It was a meeting of the West Coast Lumbermen's Association.

Mr. FREAR. Lumbermen's?

Mr. DISQUE. At the Portland Hotel.

Mr. FREAR. Was this lumbermen or loggers? I was talking about loggers.

Mr. DISQUE. Men who attended this meeting are sawmill men and loggers.

Mr. FREAR. What proportion were sawmill men? Of course, the sawmill men, I haven't heard any complaint but what they were given the opportunity to work, but the loggers were not——

Mr. DISQUE. I don't know what proportion were loggers and what were not. I understood it there were about 300 men there, and it included practically all the men with whom we were doing business, but I am not particularly anxious about that.

I have said repeatedly that we did make offers; we published them in the papers; we gave them to them by addresses at every meeting that they called; we wrote to them; we sent them circulars; we talked to them personally and went to their officers; and I think——

Mr. FREAR. Who did, did you?

Mr. DISQUE. I did; my assistants did.

Mr. FREAR. Did you go to any of these offices of these men that I have mentioned up there who tried to reach you but Lightner and others and the head of the concern?

Mr. DISQUE. The head of what concern?

Mr. FREAR. The head of the Goodyear concern. Mr. Goodyear, I think, was one of the men with Lightner.

Mr. DISQUE. Did he say he tried to reach me?

Mr. FREAR. Yes; unquestionably so. That was the statement before the committee.

Mr. DISQUE. Was Mr. Goodyear before the committee?

Mr. FREAR. No; Goodyear wasn't. Lightner was; but they were together when they came here.

Mr. DISQUE. Lightner is not at the head of the Goodyear logging business.

Mr. FREAR. Well, he tried to, and Mr. Goodyear left word that you could see Mr. Lightner, who had charge of the thing.

Mr. DISQUE. Didn't I see him?

Mr. FREAR. No. That is Lightner's story.

Mr. DISQUE. Didn't he see anybody?

Mr. FREAR. No; couldn't see him; that is, when they were here you could not see them.

Mr. DISQUE. Didn't they see anybody?

Mr. FREAR. Oh, he saw Hitchcock; yes.

Mr. DISQUE. Let me put this to you as a reasonable proposition. I can bring you all the evidence that will satisfy you that I was in that office from 12 to 15 hours a day. If there was just more people than I could see in that time the probabilities are that I did not see them; but there was always somebody competent to act.

Mr. FREAR. Hitchcock, I believe, did act in that. Did you appoint Hitchcock?

Mr. DISQUE. Hitchcock? I don't see why he should meet those—
Col. STEARNS. Hutchinson, you mean.

Mr. FREAR. Hutchinson; I took the suggestion from a member of the committee.

Mr. LEA. Yes; I was wrong about that. That is correct.

Mr. FREAR. I know Hitchcock did meet a whole lot of people.

Mr. DISQUE. Yes.

Mr. FREAR. Mr. Hutchinson.

Mr. DISQUE. Well, now, what I wanted to do, if you are ready, I will show you why the loggers have been active in giving you this adverse impression, which I am sure you have got, and that is that we didn't seek their help. I believe if you would call the spruce loggers of the Northwest—I don't believe 1 per cent of them would give you such an impression.

Mr. FREAR. Now, who would you say? Call the spruce loggers, what class of men?

Mr. DISQUE. I will give you a list of all in the morning. I haven't got it here.

Mr. FREAR. Of course, we can't call them; that is a physical impossibility, and the only suggestion is, what would be the reason that those people should have any different opinions than the others.

Mr. DISQUE. We were interested in spruce and we naturally didn't go to hunt for fir—red-fir loggers, men to do small fir—

Mr. FREAR. But Goodyear's people were working right in spruce.

Mr. DISQUE. Goodyear's people had all the justification for extending their operations any human ought to want. They could sell all the logs they produced; they knew it; they were getting prices for their logs that were never known, and they could have made an 18 months' contract which would have justified railroad building anywhere through their properties.

Mr. FREAR. The suggestion was made very strongly to the committee that they could not get in touch with you or with anyone that could put them in the way of a contract, in the making of an agreement. That is our impression.

Mr. DISQUE. I don't believe it, Mr. Chairman. I don't believe it.

Mr. FREAR. Of course, you never saw them.

Mr. DISQUE. I have seen Mr. Lightner.

Mr. FREAR. What was the trouble when you saw Lightner?

Mr. DISQUE. I don't remember what the trouble was.

Mr. FREAR. He is a very able man, isn't he? A very honorable and honest man?

Mr. DISQUE. I don't know him well enough to pass on that, but Mr. Lightner was either asleep or else he was trying to dodge the issue if he didn't take advantage of our circulars that said, "We will contract with loggers to take all they will produce for 18 months."

Mr. FREAR. Why, a peculiar situation; he had the same impression about you; that is, according to his testimony.

Mr. DISQUE. The difference is that I produced it and he didn't.

Mr. FREAR. But he didn't think the opportunity was his, possibly.

Mr. DISQUE. Well, he had an organization and a logging show and a railroad and money, and a contract from us offered to him to pro-

duce for 18 months. What more would you have me do as a representative of the Government?

Mr. MAGEE. They produced a very material amount of spruce, didn't they?

Mr. DISQUE. I don't know. No, I would not say that at all. They produced some spruce.

Mr. MAGEE. Yes; a very material amount, as I understand.

Mr. DISQUE. Well, I don't know. I don't know about that.

Mr. LEA. How many of these contracts did you enter into with loggers to produce upon that basis?

Mr. DISQUE. I can't tell you. There were circulars sent broadcast, notifying them to come on.

Mr. FREAR. Does anyone know how many?

Mr. DISQUE. Oh, yes.

Mr. FREAR. That is a very important question that Mr. Lea suggests.

Mr. DISQUE. Well, we can tell you how many, if that is interesting; but, as Col. Stearns just says, most of them had already made contracts with mills, which was our first thought. It was natural for me or anyone to assume out here, when we would go to a mill and say, "Here, we will take your production for 18 months. Now, go out and get a logger to contract to bring it in." The regular price was fixed, so that the mill man paid the logger. I didn't fix it. That was fixed before I came here.

Mr. MAGEE. Col. Stearns testified that of the 143,000,000 of lumber produced, that only $7\frac{1}{10}$ per cent of that amount was produced under your three cost-plus contracts.

Mr. FREAR. Four; the same thing.

Mr. MAGEE. Well, he said none was produced under the Siems-Carey-Kerbaugh contract.

Mr. DISQUE. What I went over shows you how much. We were producing 33 per cent of the entire production when the armistice was signed.

Mr. FREAR. From these Government operations, from the cut-up plant here?

Mr. DISQUE. From the logs. I am talking about log production.

Mr. MAGEE. I am telling what Col. Stearns testified to.

Col. STEARNS. Mine was for the whole. I included all those months that we were getting under way and in which we stopped riving, practically, and were building railroads.

Mr. MAGEE. Seven and four-tenths per cent of the—

Col. STEARNS. The general gave it month by month.

Mr. MAGEE. Seven and four-tenths per cent of one hundred and forty-three millions was your testimony.

Col. STEARNS. The general's is month by month.

Mr. DISQUE. That really is the riving material. Then we stopped riving, as I say—

Mr. MAGEE. No; I am telling what the testimony was.

Mr. DISQUE. That is correct.

Mr. FREAR. Of the one hundred and forty-three million total.

Mr. DISQUE. I presume that is correct.

Mr. MAGEE. And that the loggers produced the balance.

Mr. DISQUE. Yes.

Mr. MAGEE. So that they seem to have produced the effective results, from the testimony.

Mr. DISQUE. Mr. Magee, if this is a matter of arguing something, I am not keen to prove that we did this thing.

Mr. MAGEE. I am talking about the testimony.

Mr. DISQUE. I am glad that the loggers did all they could. I have always felt that they got into the game—some of them.

Mr. MAGEE. But you seem to misunderstand the situation. You were trying to give the impression to the committee that the loggers didn't do much.

Mr. DISQUE. No.

Mr. MAGEE. And that you did it all under these cost-plus contracts.

Mr. DISQUE. No; I didn't.

Mr. MAGEE. And I was simply referring to the testimony of the president of the corporation, which is in the record here, and I will produce it in the morning and submit it to you?

Mr. DISQUE. It is difficult, of course, to meet that attitude of a committeeman.

Mr. MAGEE. I take an exception to that remark.

Mr. DISQUE. I don't accuse the committee of anything.

Mr. MAGEE. In taking the testimony of the president of this corporation, if we can't rely on that, that is one thing, but I am merely calling attention to what he testified to. I took the testimony of the president; I accepted that, and I assumed that it was reliable, and that the committee could; that is the position I took, and I am merely calling attention, and I will produce that testimony and submit it to you to-morrow. It is confusing, to my mind, to have statements made which are directly contrary to what the president has testified to, and I would like to submit that evidence.

Mr. DISQUE. I have not made any statement about the production of the cost-plus operations as compared to the total, except in the matter of logs. Col. Stearns's reference was to the finished airplane lumber that eventually went East.

Mr. MAGEE. I am stating what his testimony was as to the 143,000,000 feet of lumber.

Mr. DISQUE. That is finished airplane lumber that left the cut-up plant or other mills and went East on freight cars. He probably is correct in that. I don't question it at all.

Mr. MAGEE. That, I understand, is the total amount produced, as given in the evidence.

Mr. DISQUE. And in explanation of that, I say that practically all of that 7 per cent, or whatever it was, came from the rived materials that were produced, which was suspended when the spring opened, and our cost-plus operators, instead of going ahead with riving, were converted into selective loggers—

Mr. MAGEE. Well, now, but if I understand—

Mr. DISQUE. Let me finish my sentence. It is not full until I do.

Mr. MAGEE. But you don't answer my questions; you run off on a dissertation. Now, is it true that the total amount produced and shipped out was 143,000,000 feet?

Mr. DISQUE. Yes, sir.

Mr. MAGEE. I am stating that Col. Stearns testified that of that total amount 7.4 per cent was produced under the three cost-plus contracts, the Warren Spruce contract, the Airplane Spruce Co. contract, and the Grant-Smith Porter Bros. contract, the colonel stating that none was produced under the Siems-Carey contract, and that the remainder, or 92.6, I think, was produced by loggers. That is his testimony, and I will get the testimony and bring it down in the morning, when my turn comes, so that I can take it up with you.

Mr. DISQUE. I don't question that.

Mr. MAGEE. If you don't question it, there is nothing to it.

Mr. DISQUE. I don't know why that point is under discussion at all.

Mr. MAGEE. I was getting at your production of lumber that was shipped out. If it is understood that the loggers produced 92.6 per cent and you produced, under your governmental agency, 7.4 per cent, we agree.

Mr. DISQUE. The point is that you say the loggers produced it, but they did not. The loggers did not produce any of that; the sawmills did. We were talking about loggers.

Mr. MAGEE. Where did the logs come from?

Mr. DISQUE. And the point came up, how many logs did the Government produce? That is an entirely different question from how much lumber did we ship East, and shows our operations in a more favorable light and a fairer light—

Mr. MAGEE. I don't know as your mind runs in the same line as mine, but what I had in mind, and what I was questioning Col. Stearns about, and what I have in mind now, is the amount of spruce lumber or fir lumber contained in that total of 143,000,000, which was produced by your governmental agencies, as I term them, or your three cost-plus contracts. As I understand, you were stating that you could not get sufficient lumber to meet the requirements of the Government without awarding these cost-plus contracts to supplement other work, and that was the point in my mind.

Mr. DISQUE. That is correct. That is perfectly right.

Mr. MAGEE. That if you didn't get, within a year and seven months, but 7.4 per cent of the total, under your cost-plus contracts, it seems to me that some credit ought to be given to the loggers who got out the balance of it.

Mr. DISQUE. Well, that is perfectly right.

Mr. MAGEE. Well, then we agree.

Mr. DISQUE. But the big point is we were not then working with our cost-plus contracts.

Mr. MAGEE. I mean during the war.

Mr. DISQUE. The second big point is that if the loggers produced all the 143,000,000, it was only half of what we were required to get, and I say and I have always said that supplemented the industry—

Mr. MAGEE. You are wandering away, because I am talking about results and not about what the possibilities of the future were. I am talking about results reached.

Mr. DISQUE. I am inclined to think, Mr. Magee, that you are just confusing the situation; that is the way I feel about it.

Mr. MAGEE. I am trying to get my mind clear. You confused me, and I was trying to see whether or not I had formed a correct idea, and you say now that I have, and that ends it.

Mr. DISQUE. Is it your desire to prove that we did not do anything out here?

Mr. MAGEE. I have no desire to prove what you did or what you didn't do, but I am trying to find out what you did do and what results you obtained.

Mr. DISQUE. I have been trying awfully hard to tell you, for the last hour.

Mr. MAGEE. I didn't appear to get much information.

(Whereupon, at 5.30 o'clock p. m., the committee adjourned until 10 o'clock to-morrow morning, Sept. 5, 1919.)

**SUBCOMMITTEE No. 1 (AVIATION)
OF THE SELECT COMMITTEE ON
EXPENDITURES IN THE WAR DEPARTMENT,
HOUSE OF REPRESENTATIVES,
*Portland, Oreg., September 5, 1919,***

The subcommittee met, pursuant to adjournment, at 10 o'clock a. m. in the Federal court, Portland, Oreg., Hon. James A. Frear (chairman) presiding. Also present Hon. Walter W. Magee and Hon. Clarence F. Lea.

TESTIMONY OF BRICE P. DISQUE—Continued.

Mr. FREAR. I desire at the outset to read into the record a letter from Mr. Pendleton, which he asks to have inserted because of statements contained in the papers which he says may confuse matters. It is dated August 30, 1919, addressed to the chairman of this committee, and says:

DEAR SIR: In reading the Portland papers published last night and this morning, I notice that the report of testimony given before your committee by myself. in regard to spruce production, was badly mixed up by some of the papers, who got the figures confused.

Most of these were unimportant, as the correct figures appeared in some other part of the article. There is one statement, however, that is of importance, if your record is the same as some of the papers. I believe your record is right and that your reporter correctly caught what I tried to convey in my testimony.

The statement was made there that Gen. Disque, and the organization under him, produced about 143,000,000 feet of spruce lumber, and I was asked what part of this would be suitable for aircraft construction. Some of the papers report me as answering not over 15 per cent.

What I did answer was that I could not answer that, as I did not know whether the 143,000,000 feet mentioned was the full cut of the log, or flitches, or finished aeroplane lumber, but if it was either of the first two mentioned specifications, that the acceptable aeroplane lumber would be very much less and might go as low as 15 per cent, but that I could not tell without inspecting the lumber.

As stated above, I believe your record will be found correct, but if it differs materially from this, I would like to have this letter filed as part of that report.

Yours, very truly,

F. R. PENDLETON.

(The letter above copied in the record was marked: "Exhibit 3. For identification, September 5, 1919.")

Mr. FREAR. That letter was dated at Everett, Wash.

I have a letter received this morning, from 308 Pacific Building, Vancouver, British Columbia, September 3, 1919, addressed to the chairman, which is as follows:

MY DEAR MR. FREAR: I happened to be in the office of the Forestry Department yesterday when they received a telegram from Gen. Disque asking for the amount of spruce logs and lumber produced in British Columbia. They referred him to the Imperial Munitions Board, and this morning Maj. Taylor received the same wire. He answered as follows:

"Produced something over 200,000,000 feet of logs, of which a considerable amount was on hand at the signing of the armistice. Produced and shipped about 26,500,000 feet of aeroplane lumber."

I am just giving you this information, as they are evidently checking up to see whether my evidence was correct or not. I happened to meet a newspaper man from Portland, and he states that the 143,000,000 feet of lumber produced down there included fir as well as spruce. It might be well for you to have that point brought out.

Yours, truly,

F. R. PENDLETON.

(The letter above copied in the record was marked: "Exhibit 4. For identification, Sept. 5, 1919.")

MR. FREAR. We have brought the point out, that about 60,000,000 feet of the timber produced in this country was fir instead of spruce and that the telegram apparently refers to spruce alone. In carrying on the investigation this morning, I wish to make a brief statement, and it is personal entirely in character.

This investigation committee was appointed, as I have stated before and shall state until it is thoroughly impressed upon those within hearing and for the record, because this is a House record that is going back to the House which has sent us to investigate. We were called upon to find out about the expenditure of over \$1,000,000,000, or \$1,055,000,000, to be accurate, which had been made for the production of airplanes from money appropriated by Congress. The statement has been made by Secretary Baker before our committee that not one fighting plane or one bombing plane ever reached the front of American manufacture. The statement has appeared in the record and appeared repeatedly that outside of observation planes there were no planes in use by Americans, excepting as they were bought or taken over from foreign Governments. Two hundred and thirteen observation planes, known as the "flaming coffins," De Haviland 4's, which were testified to here by Sweeney, were on the front at the time of the signing of the armistice.

That is a state of facts which is so appalling in character that the House requested this committee to make an investigation. The war had continued for over four years—and this is for the record—and our Government had been in the war for 19 months when that state of facts existed. This committee is called upon to find out the cause, if possible, and make its recommendation and its report to Congress. As I said before, this committee was selected by the unanimous vote of Congress, and we are sent out here to examine this one phase of the subject, the spruce situation, which has involved an expenditure of something over \$40,000,000, and the unanimous report of the committee of 15 was that we should come here and make this investigation.

I make this statement because of what I believe is an important situation that has developed. Before a witness was heard by our committee, the chairman of the National Democratic Committee

acknowledged sponsorship for an article which assailed the committee, stating that it was a junketing committee and throwing aspersions upon the general character of what was to be its course and what our disposition was in this investigation. From that day to this the committee has been hampered in the investigation and its efforts to get the facts by a method of covering up which does not come entirely from outside of the committee, and the effect has gone out that this committee is prejudiced for political purposes, and it has gone out for the purpose of prejudicing public opinion.

The only political words used at any time, and the only thing that could bring that about, have been the suggestions of Mr. Cummings and those who have sought to discredit the work of this committee.

When the committee came to Portland the first proposition that met us immediately after our arrival, was an open letter given by Mr. Disque, former head of spruce production, to the newspapers, demanding that this committee hear some 15 or 20 people whom he named. That appeared in the papers before even the committee had notice of it, excepting as it may have gone to one of the members of this committee, Mr. Lea. That statement was published and given as much circulation as possible to create the impression that unless the committee did call all these people it would not give a fair deal, or fair play, to Mr. Disque, who feels that he is on trial and that this is a trial to determine his guilt or innocence—which it is not, and I have so repeatedly stated; it is an investigation to ascertain facts.

No committee that I have ever heard of, and I have sat on committees before, for long periods, has ever had a counsel for the defense, who cross-examines every witness for the purpose of trying to discredit or disqualify the work of the committee, and as I have said, I have sat on many committees. Yesterday I introduced in the record—and the purpose was just exactly what is to follow to-day—an interview from John Long defending Mr. Disque. Long was one of the original members of the spruce division here and had much to do with it, and was assailed by Gov. West in the city of Washington before the Senate committee for his connection with it. Long, in his published statement, defends Disque. Of course this may have been purely accidental. I introduced in the record yesterday a resolution that was sought to be passed by the Board of Trade of Vancouver, complimenting very highly Mr. Disque for the wonderful work he has done. Only one vote favored that resolution. I am speaking of things that I want the record to show, and so that the propaganda will be known to the people and the House, and they will understand the difficulties under which this committee is working.

I read now a telegram from Bellingham, Wash., the home of Donovan, who testified before this committee and said our committee would not be welcomed out in the West unless we came with fair minds. I have forgotten the way he framed it. The answer of the chairman was that it was immaterial whether we were welcomed, as is the case here, so far as the surroundings are concerned.

We are trying to get the facts, and we are going to get them if it is possible to do so. The telegram is as follows:

BELLINGHAM, WASH.

JAMES A. FREAR,

*Chairman Spruce Investigation Committee,
Benson Hotel, Portland, Oreg.:*

The Chamber of Commerce of Bellingham respectfully requests, in the interests of fair play, that you hear both sides and call the witnesses named by Gen. Disque.

A. W. DEMING, *President.*

J. A. MILLER, *Secretary.*

(The telegram above copied in the record was marked "Exhibit 5. For identification. September 5, 1919.")

Mr. FREAR. That is from the home of Donovan, a member of the Spruce Board, the man who gave publicity to the statement that was received in Washington, that we would not be welcomed in the West.

Here is a second telegram, received late last night, from Seattle, Wash.:

Charges being made here that parties interested in bringing out only one side of spruce production situation are endeavoring to prevent calling of all witnesses able to throw light on situation. We are directing your attention to this because we believe that you feel as positively as our people do that all the material facts should be brought out, and that your committee forestall any just criticism by calling before you every man who is suggested as likely to be able to offer you relevant information about the spruce production campaign and its expenditures.

SEATTLE CHAMBER OF COMMERCE.

(The telegram above copied in the record was marked "Exhibit 6. For identification. Sept. 5, 1919.")

Mr. FREAR. Out of pure curiosity I telephoned this morning to Mr. Parsons, the president of the Chamber of Commerce of Seattle, whom I know, and he says he had never heard of any telegram before or any action by the chamber on the subject.

I desired, if we extended our hearing this morning along that line, to follow up some of the matters that were brought out yesterday and to go into the Siletz Railway, which it seems to me is certainly deserving of careful explanation. We have many complaints before this committee; we have been asked to subpoena 100 witnesses, 43 in one list of witnesses, who it is said can testify regarding what they believe is waste or extravagance, some on small matters and some on important matters. The committee endeavors to sift out a few names, and that has been the only way in which we could conduct an investigation, because our time is limited. Mr. Disque comes before us and demands that a certain number of witnesses shall be heard, and, by a peculiar coincidence in this propaganda, the telegrams come in from various places signed "Chamber of Commerce," when the presidents of the chambers of commerce do not even know about it, all asking that Disque's witnesses be heard.

There are many other things that I would have liked to go into, including the Blodgett purchase, things with which this witness is supposed to be familiar, I assume. Surely he was more familiar with all the matters concerning the Siems-Carey-Kerbaugh contracts than anyone else, because he assumes complete responsibility for everything that occurred. No one else connected with the spruce organi-

zation knows anything about it unless he sat in at the hearings, because the decision was made by the witness, according to his own testimony. It is very difficult to believe—not impossible, but difficult—that the railroad built in the peninsula under all the circumstances brought forth by this committee was built for logging purposes and for war purposes; but it appears at this stage of the proceedings that it was a commercial railway. At this stage of the proceedings it appears to be unquestioned, not entirely by the witness but by others whose testimony has gone in, and we expect to follow the testimony further. The witness has also testified that within two years his salary was jumped from \$3,000, or approximately that, to \$30,000.

Mr. DISQUE. You say the witness testified to that?

Mr. FREAR. No; I am going to amend that; the witness did not testify to the \$30,000. The committee could not get that information from the witness and had to put its own witness upon the stand, who received that information direct from the organization in New York. And with no previous experience, the committee is informed that that presumably was given because of the qualifications of the witness, a salary nearly one-half the salary of the President of the United States and over twice the salary of any cabinet officer or member of the Supreme Court of the United States, and the appointment came from John D. Ryan or on his recommendation.

The complaint has gone out, and I desire to correct it as we go along, that we are not giving a fair hearing to the members of this corporation. Of the 10 or 11 days of hearings so far held, practically five days have been consumed by the officers of, or witnesses for, the corporation; and, although the witness who sits before us, I understand, stated since the last hearing that only 18 minutes of time had been consumed by himself and the rest by the chairman, the record will show whether that is true or not. He was given free license to talk part of the time, and we are glad to have him state any facts because we desire the facts and the truth and, so far as we are concerned, we are going to get it here or we will go out of business.

When we first met at Seattle a witness stated that this committee was expected, or he desired to have us swear witnesses. This was made by Mr. Disque through the president of the corporation, Col. Stearns, who admits that. Of course that is ordinarily done, but the assumption which comes from a man who is no different from any other citizen to-day, however high his position might once have been, that this committee is to determine its course by his orders is beyond all comprehension to those who have conducted similar examinations in the past.

I have a clipping in connection with this propaganda that I desire to read into the record because I think it ought to be perpetuated. It is as follows:

CHARACTER ASSASSINS DEPLORED BY DISQUE, CONGRESSMAN LEA.

Congressman Clarence F. Lea, member of the Spruce Investigating Committee—

This is taken from one of the local papers:

and Gen. Brice P. Disque, chief witness in the inquiry, were speakers before the Portland Ad Club Wednesday afternoon at the Benson Hotel. Col. C. P.

Stearns, Gen. Disque's successor as president of the Spruce Production Corporation and commander of the spruce production division, was a guest.

"The wholesale assassination of character of men who served their country during the war is outrageous," declared Congressman Lea.

"It will be shown," said Gen. Disque, "that the work of the spruce production division was honestly handled and that we produced more than enough airplane material to supply the needs of America and our allies."

(The articles above copied in the record was marked "Exhibit 7 for identification, Sept. 5, 1919.")

Spruce production is the subject that we are investigating, as I said, with a proposition before us that not a single American fighting machine of any character was produced at the front in 19 months. This publicity procedure, of course, is rather new to the committee. I have understood that it is not new to the people of this community in the past, but we are not at war now. We are after the facts, and when a member of this committee declares the proceedings of his colleagues, means character assassination, it is time to have that read into the record. If I felt that that was my attitude here I would immediately resign my position in Congress, and before I would charge my colleagues who have sat with me faithfully working for the same purpose, that such was the case, I would resign and go to my constituents and ask them whether or not I ought to be retained in public service. I do not believe anything could be said that is more unfair, unjust or untrue, and it is only part, apparently, of a program that has been inaugurated way back before this committee ever swore a witness. The purpose apparently is to suggest that the investigation is discrediting someone, the President or someone else. You can not have an investigation unless you are going to ascertain the facts, and that is what we are trying to do. As I stated before, never before in my experience has a counsel for the defense sat at the table in a legislative committee cross-examining witnesses, as has been done in this committee, sometimes for a day at a time.

That is all I care to say.

There are many questions I would have gone into with this witness, but I have concluded with him. I have no further questions to ask now. This I will say, beyond that, that it is impossible to call all the witnesses he asks. I have stated so to him repeatedly, and whatever may be his wishes or those of the chambers of commerce, engaged in this propaganda, if it be of all Washington and Oregon combined, it can not affect the action of this committee. We are going to try and get a fair statement of the position of the Spruce Production Corporation, but any man that is intelligent knows that facts must be first produced where the charges are made. We know nothing about those facts. We have come here without information, and we desire to get information here. That is what we are going to get if we can, and we are not going to put on one witness and let him talk all the time. Five days, approximately, of the 10 days have been occupied so far by the members of the Spruce Production Corporation. Now, I do not know that there is anything further to say. I desire to interview some witnesses who are ready to testify on other phases, in order to keep the hearings going without delay, and my colleague Mr. Magee and my colleague Mr. Lea, I assume, will carry on the interrogatories with this witness.

Mr. LEA. Mr. Chairman, I regret the necessity that makes it necessary for me, as I view it, to reply to what you have stated this morning. I believe that the trouble that this committee has experienced is largely of its own making, and I want to make a candid statement at this time and then suggest a method by which, if possible, we can give the witnesses an opportunity to be called, the facts can be developed, and we can dispose of this testimony in a seemly way and one that will be creditable to the Congress of the United States that we represent.

In my judgment, the trouble that has come to this committee is due to its unfair handling of the facts. The facts stated by the chairman illustrate, in my mind, exactly what I want to emphasize and illustrate. The statement has been repeatedly made during the hearings of this committee that the United States had not one bombing or fighting plane upon the front, and from that it is attempted to make the public draw the inference that nothing was accomplished in the Aviation Service of the United States during the war. Nothing could be further from the facts. If it is necessary to make arguments and speeches during the hearings of this committee, as a matter of fairness the facts should be presented to show the whole truth instead of a half or quarter truth. The fact was that during the war the United States made, as I recall now, over 16,000 airplanes. A large proportion of those planes were training planes. The United States purchased of the Allies 5,071 planes, which were used in Europe. There were about 1,300 planes that went over from America that were used in Europe. But America, it is true, did not have what is technically known as bombing and fighting planes of its own manufacture on the western front, but it did use many others, the De Havilland planes and many planes of foreign make, which took part in the war.

Then, a frequent reference is made to the American planes described as "flaming coffins," wanting to make the mothers of America believe that their country was untrue to the boys that went to war, and that our boys were needlessly and unnecessarily slaughtered. Nothing is further from the fact. The record is that the American boys did not have the death rate that our allies had, and where one American went down in battle two Germans went down from the fight of American boys, and it is a shame to try to disgrace the American boys, who made that brilliant sacrifice and brilliant success for America.

Now, if we want to tell the people of this country the truth and have them understand the facts, why not tell the truth, and the whole truth, instead of one-fourth of it, and try to make them believe that is all of it.

Now, here is another reason that was explained in the testimony of Gen. Disque why there were no more American planes on the battle front. Europe had her factories. It was cheaper and safer to send materials across the Atlantic to build these planes in the factories near the battle line. It saved shipping space to do it. So the best airplane material that went from the Pacific slope went to the factories in Europe, and thousands of American mechanics in the factories of England helped build airplanes and helped carry on the war, and American workers aided the Allies in Europe.

Now, you have disclaimed any political purpose. That is right; but I want to say this, that the American people will never judge this committee by what it declaims from its lips, but will judge it by its work and by the record we leave here for posterity. It is said that on yesterday—so the chairman states—that this witness occupied 18 minutes in testifying, while members of this committee took all the rest of the time. Now, I do not know whether those figures are right or not, but I believe they are approximately right, and I wish the lawyers of America would know that fact, and then they would understand why criticism is coming to this committee for its unfair methods. There is not a fair-minded lawyer in the whole United States than can go over this record and approve of the way this investigation has been conducted. It is true that witnesses in favor of the Spruce Corporation have occupied possibly five days in giving the facts, but it is also true and written into this record, where it will stand as long as the record stands in the United States, that they were not given a fair opportunity to state the truth, and an effort was largely made to prevent them from stating the truth.

Now, I am referred to as a counsel for the defense. I may permit my judgment to be warped. I am subject to the same weakness that every other man is. It may be that I take a biased attitude when I do not intend to do it; but God knows I do not want anything but to get at the truth. If there is any man here who has committed a crime I am willing to put the brand on him and put him in the penitentiary if he deserves it; but as I am an American and believe in American fair play, I am willing to fight to the last ditch to get it in this investigation into this matter and let it go before Congress.

I have cross-examined. As stated by a prominent citizen the other day, this investigation would have been absolutely a farce and ridiculous if it had not been for the examination that I have from time to time, in a humble way, tried to make to develop the truth. Now, we are closing, near the close, here in Portland, and what is the situation? Charges of a more or less serious nature are up with this committee. Important witnesses, important questions, are yet pending before us. It is a question whether or not we are going to have time to hear them. Mr. Frear is right in his suggestion that we have got a great matter here to investigate. Financially considered, this is only a small matter in proportion. Now, that is true. Nevertheless, charges have been made against men here that reflect upon their integrity and the Government operations during the war, and if we are going to base judgment upon those operations it is necessary that we should hear, not half the truth, but the whole truth in reference to them.

So my suggestion now is this: I believe that we have made a great mistake; too much time has been wasted on argument and contention. Every lawyer knows that the proper function of an attorney, or of an investigating committee, is to come here and ask these witnesses what was done and why it was done, and not argue and contend with them; but leave the argument and controversy until we get back to Congress. So my suggestion is this: Let us try to get together here and stop these unseemly controversies. They are a

reflection upon the Congress of the United States, and they discredit the work of our committee. This committee has a great work to perform. There ought to be an investigation of this war. Twenty-two billion dollars, possibly, have been spent. I find no fault or criticism with the investigation. Undoubtedly there ought to be an investigation. But the value of that investigation to us and to the country depends upon the things intelligent men do and the impartiality with which they do it. Rob it of either of those qualities, and this investigation will simply be nothing but a joke, a stench in the nostrils of the American people.

Now, let us get together here; let us examine these witnesses in the order that would be followed by attorneys in high-class, respectable courts, allowing the liberty, of course, a greater liberty than would be allowed in court. I will try to avoid controversy. I will try to devote my examination totally to essential facts, and let us try to work together. We have got a duty to perform, and let us forget bygones and try to do the right thing here now. The chairman and my other colleagues here have been very kind to me in many respects. We have not gotten along in our official duties, but we have personally, and they have been kind to us. Now, I may have some bias and prejudice that I do not intend to have, and you must confess that you may have the same feeling. Now, let us forget this and start in anew and try to get at the facts, and we will do lots better, I am sure.

Mr. FREAR. But the gentleman, whom I regard very highly personally, and always have—I have served with him on committees of the House heretofore—he has utterly failed to get the point of my statement this morning. At a public meeting here in this city he, in effect, charges my associate, Mr. Magee, and myself, unless he includes himself, as assassins of character. I have shown the propaganda that has gone out. I have introduced telegrams here, and I have shown the statements that have been made, the resolutions they have sought to have passed, all those things I have presented in the record, and now it is what occurs here in the committee. That is not the trouble; the trouble is what occurred outside of the committee. That seems to be the great fault that is not appreciated here. I would not have charged anyone with being an assassin of character unless I had known that that was their purpose.

Mr. LEA. Mr. Frear, if you will excuse me a minute, I will explain that.

Mr. FREAR. Just a minute—my own son fought all through this war. I gave him, and he is entitled to his wound stripes, and he did not stay down in Vancouver Barracks, either.

Mr. DISQUE. Mr. Frear, if you will—

Mr. FREAR. Let me get through, and then you can talk.

Mr. DISQUE. You were looking at me.

Mr. FREAR. You have had 28,000 men here, and my boy was fighting there at the front, at Chateau-Thierry, with thousands of his comrades. Talk about the mothers of this country. They indeed have cause to complain. The Secretary of War testified before this committee that not a single fighting or bombing plane was furnished. We can not get over that statement by saying 16,000 planes, pen-guins, known as grasshoppers, and other things were built that can

not fight. They were not there for fighting. They never reached the front and could not have been used if so, any more than you would use broomsticks for fighting against modern machine guns. For the training of men—yes; we had thousands of men trained, of course, waiting and wanting to fight, and we had 540 machines at the signing of the armistice that came from foreign Governments, and 213 of our own at the front. I think those are the exact figures. Those are the facts. When we are giving facts let us have them just as they appear before the committee. I do not think the mothers of America would be satisfied to have this report a whitewash, to have these facts covered up.

I would not have taken this position for a moment unless I had thought it was going to be an honest investigation, and I have never been connected with an investigation but what I felt that it was an honest investigation. I understand the mental operations of one who has been in charge here, and he feels that he has done everything right. We are endeavoring to find out, not from his method of judgment, but from the ordinary method of understanding what was done, that is all that we care to know. There is no one accused of a crime. In fact, I am very free to say that nothing of that kind has been presented to the committee, and so that insinuation, that accusation, is entirely false. The committee is not in that attitude or frame of mind. But we do know this, that there is a condition here that has not been yet explained, a condition that existed nowhere else in the United States. A man sat here with 28,000 men and 1,200 officers, and was absolute dictator, apparently, according to the statement that comes before us, and he of his own knowledge and of his own judgment gives these soldiers, way back here, civilian pay, in Vancouver Barracks and elsewhere. He decides upon promotions and all those things. Now, that is not a crime, it is just a question of judgment. Those are the things that we have been called upon to investigate and report to the House of Representatives, of which we are members, and we are the committee duly appointed. It has not been denied that Homer Cummings, before the committee ever started, made the charge that it was going to be purely a junketing trip, and that has been charged with all the various five House committees that are out on their work, trying to get the facts. Why? Because it is stated something would reflect upon the administration.

I will say this, that the first suit I ever brought was against a Republican chairman of my county, and I secured—and I am speaking of this in a personal way—I secured a personal judgment for the county I represented. The only proceeding I ever brought in a State legislature was against a Republican senator, and I am a Republican, and I drove him out of the senate because he was found to be engaged in improper practices. The records will show. There is not a particle of politics, so far as my Brother Magee and I are concerned, I know, in this investigation. The only politics that have been injected in these proceedings have come entirely from the end of the table.

Now, my good Brother Lea—personally I think a good deal of him and of his family, and always have—I fear that he misunderstands or misinterprets our purposes, and surely when he makes the statement that is quoted in the newspapers read here, that is false. Everyone knows it is false, as far as our attitude is concerned, in regard to being assassins of character.

The boys were killed over in Europe, and of one company in my district over half of them were lost. The captain of the company that I organized—and I have had 16 years' military experience; the witness is not the only man who has had military training; mine included 5 years in the Regular Army—that company lost its captain; and a number of men from my little home town were killed. I am interested in this investigation, and honestly interested in it, with the purpose of bringing out the facts, and, as Brother Magee well says, for the purpose in the future of avoiding a condition of affairs such as has occurred in this country, that permitted an expenditure of over a billion dollars and never a fighting American plane at the front.

As I said, I think that is the attitude of the committee, and, in regard to the witness, I do not care to examine any further. I leave my Brothers Lea and Magee to carry on the investigation. The only time we have to interview witnesses is in the short days we have outside of the hearings, and I desire to go to meet several at this time, and so I trust I will be excused from the committee without anything further than that explanation.

Mr. LEA. Shall I go ahead with the witness?

Mr. FREAR. Yes.

Mr. MAGEE. Both of you have taken up considerable time. I did not intend to say anything, because I think that I have made my position clear on several occasions.

Ever since I have been a member of the House of Representatives I have never indulged in personalities, and I am not going to begin now. You never can get anywhere, in my judgment, in personalities, because they are largely based upon assertions, and one person will assert one thing and another person can assert another, and you can not very well enjoin a person from talking. Now, if either or both of my distinguished colleagues desire reformation, so far as they are concerned I haven't any objections to that; and I wish them Godspeed. As for myself, I have no reforming to do. I was drafted by the Speaker of the House of Representatives for work upon this committee, and, as everybody knows, it is not a pleasant task, but I have endeavored, so far as I have been able, to elicit the facts. I have no feeling against anybody. I have no prejudice in the premises, and so far as I am concerned I shall continue along the even tenor of my way in the future as in the past and endeavor, so far as I am able, to perform my full duty to the public and elicit all the facts, without fear or favor from any person. That is all I care to say.

Now, if you desire to go ahead now, Mr. Lea, you can go ahead, and when you finish if there are any further facts which have not been touched upon, or upon which I desire further information, I will ask some questions.

Mr. LEA. All right, thank you. I want to say, to begin with, that I did not anticipate taking up this examination this morning, and I may not be able to do it in as orderly a way as I would like.

Mr. MAGEE. You can have your own time.

Mr. DISQUE. May I make a brief statement in regard to yesterday's testimony? There are a few corrections I think should be made.

Mr. LEA. Yes; if you have any corrections to make I would be glad to have you do it.

Mr. DISQUE. There was a matter came up yesterday as to why Siems-Carey's original project was not accepted, and I did not get an opportunity to read my diary into the record. I think it is proper that it should appear here.

Mr. MAGEE. You mean as to the railroad job?

Mr. DISQUE. Yes. You know they had a proposition sent to us and brought to us by one of their agents, which apparently would indicate that they wanted to build a railroad in addition to producing spruce. It has been six months since I was at work on this, and a year and a half since this interview occurred, and I have done a great many other things since. My mind was not fresh, but I think my diary here will show why that railroad was not built by them and why they never even went into a serious discussion of it. The diary reads—

Mr. LEA. What date is this?

Mr. DISQUE. This is my diary of April 11, 1918, made in my office by Capt. McAndrew, an aide on duty in the office, whose duty it was to keep this diary.

They wanted a contract for 300,000,000 feet of cants from the country around Lake Pleasant, and their idea of a cant was a log cut in six sections only. Said they had practically assured the right of way and options on the stumpage sufficient to fill a contract for that amount. Col. Disque explained that the cants would have to be cut in accordance with our cant specification, and that we would buy them at Lake Pleasant. This, they thought, would add greatly to the mill expense over what they had expected in making their estimates.

Mr. MAGEE. Is this a diary or memorandum made by you personally?

Mr. DISQUE. It is made by another officer who kept this, who attended to this in the office.

Mr. MAGEE. It would be better to call that officer.

Mr. DISQUE. I am willing to state this under oath. This is what happened, because I verified this every morning. He is not around here.

Mr. LEA. I think I can explain this in a minute, to get at what Mr. Magee wants to know. This diary, Mr. Disque, was kept under your direction, wasn't it?

Mr. DISQUE. Yes, sir.

Mr. LEA. Who was the man that kept it?

Mr. DISQUE. Capt. Alexander McAndrew, who was an aide of mine, whose duty it was to keep this diary. This was presented to me every morning.

Mr. MAGEE. Where is Col. McAndrew now?

Mr. DISQUE. He is in Buenos Aires now. If this committee had come out here while the organization was on, or within a few months, we could have had everybody present.

Mr. MAGEE. We could not come before we were appointed.

Mr. DISQUE. This is the best I can produce.

Mr. MAGEE. Can't you give a general statement of whatever you want to state?

Mr. LEA. Here is the thing, I do not suppose it is very long—I do not know what is in it; I have not seen it, but I believe it should be in the record.

Mr. DISQUE. It is long enough to show why they did not build that railroad, and it was considered, and I am making this statement

under oath. I am willing to stand by every word that is in this diary. Now, we will go back and get it again, so that we will get the story complete:

They wanted a contract for 300,000,000 feet of cants from the country around Lake Pleasant, and their idea of a cant was a log cut in 6 sections only. Said they had practically assured the right of way and options on the stumpage sufficient to fill a contract for that amount. Col. Disque explained that the cants would have to be cut in accordance with our cant specification, and that we would buy them at Lake Pleasant. This, they thought, would add greatly to the mill expense over what they had expected in making their estimates, and might cause them to change their plans. They suggested building down the Hoko to get that timber, and said that it was 14 miles up from the sound to the first heavy stand of spruce, and that this would more than offset the advantage of being able to get the logs rafted out before the railroad could be finished. Col. Disque said that the whole development was in the hands of the Director General, and his decision on the Milwaukee extension must be waited for.

Mr. Carey wanted to emphasize the point that they had satisfactory options to go ahead, and asked whether in case the Milwaukee did not get permission to build their road, would they be allowed to build, and could they go ahead with the understanding that no matter who built the road they could have the contract to open up the Bogachiel and the Hoko. Col. Disque said they could make definite arrangements any time, but that there would be no advance until the right of way and all options were obtained. They suggested a cost-plus contract for logging the Hoko into the sound. Told them this was out of the question and they said the line was so difficult that they did not think a logging operation there would pay. It would be all right if the fir was being taken out too, but this would make the operation too slow for the spruce. Rixon said they had bought the millsite on Lake Pleasant and that a road down the Hoko would take away a lot of business from the mill. Also said that he thought they could build down the Hoko and get the stuff faster than could be done by having to put in that bad 15 miles from the lower end. They were very anxious to be considered as one of the bidders for building the railroad if the Milwaukee did not do so. Said they would take the route to the north of Lake Crescent, but that they would use a ferry for the present, at least. In this way it would require only 28 miles to get in. Col. Disque said that he could not sign any contract until there was a railroad at Lake Pleasant, but that he could assure them that if there was any contract let they would get it. They also said that they would need more help than the usual advance on the contract. Col. Disque explained that there were apt to be changes in the specifications, but that any contract could be made subject to such changes being mutually satisfactory. They said the small size of the cants would run up the mill work so much that they would not be able to get the stuff out as soon as they had counted on doing. They expect to log the spruce only at first and come for the rest later. When the entire business was logged the railroad cost would not exceed \$1.50 per 1,000. They said that on account of the hemlock as dead expense, the stumpage would cost them about an average of \$5.

Col. Disque said they should be able to log for 16 collars. Mr. Carey suggested that the small loss due to impossibility of accurate inspection in large cants would be more than offset by the increased speed, but Col. Disque said that we had already tried that and it didn't work. Mr. Carey again brought up the question of the Lake Crescent road, and Col. Disque told him we were committed to the Milwaukee, and also that he doubted if Mr. McAdoo could authorize an entirely new road rather than extend one already there. He suggested, however, that if they wanted to run a road from Lake Pleasant to the Hoh and Bogachiel we could stop the Milwaukee at Lake Pleasant. Mr. Carey asked if they could have the contract read for 18 months after the railroad reached Lake Pleasant, but Col. Disque explained this to be impossible under the ruling of the War Credits Board. Rixon said that parts of that section will cut 16,000,000 to the section, and Col. Disque thought they could get 66 per cent of their logs into cants. In their estimates they figured twice as many No. 2's as No. 1's, and they say they allowed \$5 per thousand as the railroad cost on branch lines. They have no options for stumpage at higher price than \$4.

Mr. Rixon mentioned the fact that Moore is not keeping his riving camp cleaned up and the fire risk is very great.

The rest of that is not material. In that connection it was figured at that time what the amortization of a load in there would amount to. We were told there was 30,000,000,000 feet of timber that could be drained by a railroad in there, and at the cost of this road as finally completed that would mean 18 cents a 1,000 feet were it all brought out over the line. Now, there is one other thing that came up yesterday, in reference to Mr. Hughes's report. I promised the committee a definite statement this morning, and I have it here.

Mr. MAGEE. Do I understand that the first spruce contract was entered into about April 16?

Mr. DISQUE. April 12.

Mr. MAGEE. April 12.

Mr. DISQUE. Right after this conference.

Mr. MAGEE. That was signed by whom?

Mr. DISQUE. It was signed only by the company; not by myself.

Mr. MAGEE. It was not signed by—

Mr. DISQUE. Not by the War Department at all.

Mr. MAGEE. Never signed?

Mr. DISQUE. That contract never became a contract. Only was signed by the company.

Mr. MAGEE. That is the one you referred to?

Mr. DISQUE. That is the one that I—

Mr. MAGEE. That you would not sign until a railroad—

Mr. DISQUE. Until a railroad—that is right.

Mr. MAGEE. Is that right?

Mr. DISQUE. That is right.

Mr. LEA. Now, take up the other matter you refer to.

Mr. DISQUE. In the Hughes report of October 25 appears this definite statement: "The accounts of the sales department for the fiscal year ending June 30, 1918, show that spruce orders amounting to \$76,211,360.35, on which there had been deliveries and payments aggregating \$6,357,853.83, leaving unfilled orders of \$69,853,506.52, and of the spruce delivered the Government had resold to the extent of \$3,679,155.95." Now, that indicates there, clearly, that there is about \$3,000,000 worth of spruce which had been bought by the Government and wasted or lost and never accounted for, the actual facts being, on August 31, the first time our office or anybody else in the whole world knew accurate figures on this thing, and this which is a month later—two months later—our record showed that we had actually spent \$14,648,822.83 for spruce and fir, and that we had charged and either received or had it as a bill receivable from our American factories, or Allies, \$15,160,947.70. Instead of being short \$3,000,000, we had a credit actually of about one-half million dollars.

Now, the next statement—and I am sincere in saying that this is what led us to lose faith in Mr. Hughes's investigation—

Mr. MAGEE. Well, that was an investigation of the Department of Justice.

Mr. DISQUE. Yes; it was supposed to be made, however, in a perfectly honest and fair way.

Mr. MAGEE. What I mean to say is that the Attorney General was working with him, as I understand.

Mr. DISQUE. He didn't approve of this, I don't believe.

Mr. MAGEE. What I mean to say is, and let it be on the record, in all fairness: I am not passing on what was said, but it was investigation made, as I understand, under the direction of the President and Department of Justice, and the Department of Justice obtained Mr. Hughes to assist them, and he gave his services without compensation.

Mr. DISQUE. The next statement in his report: "The Government had also (to June 30, 1918) invested in its cut-up plant at Vancouver, Wash., the sum of \$1,487,237.81." The comptroller of the Spruce Corporation this morning gave me these figures, which include the cost of the cut-up plant, the dry kilns, the dismantling of it, the liquidation expenses, and every dollar that went into it for construction or dismantling up to July 1 of this year—a solid year after Mr. Hughes's report, and this total gives, instead of being fourteen hundred thousand and some dollars, is \$884,427.79, of which \$221,099.15 were expended for a dry kiln, which Mr. Hughes knew nothing about at this time, and a dry kiln that would have cost, had we accepted the contract offered to the Government, at least double what it cost us when we built it.

Mr. MAGEE. What do you say, General, was the general cost of the Vancouver cut-up plant?

Mr. DISQUE. Have you got that? See if it is correct in the record. (The reporter here read \$884,427.79.)

Mr. MAGEE. I understand there were certain items there—you used some amount later—a million eight hundred thousand; I don't know what it included, whether it was labor or not.

Mr. DISQUE. Mr. Frear presented a statement of \$1,900,000 yesterday, which included every bit that was paid for labor, electricity, building, tearing it down, and everything else, the operation of the plant for a year and a half or two years, nearly.

I want to say, further, that this cost of the cut-up plant includes charge for soldier labor used in building it, which we put in as a bookkeeping charge, \$3 per day, and the soldiers were not paid anything but their regular Army pay while that plant was being built, over a period of 45 days, when several hundred of them were working on it.

Mr. LEA. When did the construction of that plant begin?

Mr. DISQUE. Begin?

Mr. LEA. Yes.

Mr. DISQUE. It began in December, I think, December 15, 1917. The plant was operating on February 7, 1918, and it speeded up to a production of a million and a half feet a day, over a million of which was the best airplane lumber that any factory ever received.

Mr. LEA. Now, in that connection, so far as the reason for building this plant, would you prefer to take that up now, or go ahead with something else that you had in mind there in correcting the testimony?

Mr. DISQUE. The reasons for building it—

Mr. LEA. Are you through with the corrections now?

Mr. DISQUE. Yes; I am through.

Mr. MAGEE. Well, if you are prepared at this time to go ahead with the cut-up plant, and give the reasons for its construction, do

so; if you are not prepared on that, I will ask you about another feature.

Mr. DISQUE. I am prepared to go into that.

Mr. LEA. What I would like to know is why it was built and what resulted from its building, in a financial way?

Mr. DISQUE. It should be said that when I came to the Northwest, knowing nothing about lumber operations, I was guided largely by men who had made a success, here, of that business. One of the first things that occurred was a recommendation from several experienced lumbermen, that the mills were not equipped, as they operated commercially, to cut aircraft lumber; they were cutting for production; they were built for tremendous speed, and there was so much lumber or logs—so many logs available, apparently, that they hadn't reached such a stage in the economic phase of the lumber industry which compelled them to be more careful in the manufacture of it, nor had anybody in this Northwest country ever been asked to produce straight-grained lumber. I think the matchmakers are the only people—and the pencil makers—are the only people who are interested in that as a commercial proposition.

Straight grained lumber is necessary for airplanes, and it can only be produced accidentally in the bigger saw mills as they operate here. In order to get the most out of a log, it was necessary that we handle each piece that came out of the first sawing, as an individual, carefully watching the grain and laying it against the saw so that the saw would cut down with the grain, instead of slice through regardless of grain, as is done automatically in practically every saw mill I have seen out here.

Mr. MAGEE. It could be done in any mill, couldn't it, if their attention was called to it and machinery arranged?

Mr. DISQUE. It could have been done in any mill on earth if every mill had put in the same equipment that we concentrated in our mill. The cost probably would have been ten times as great as it was in our case.

Mr. MAGEE. Was this the only mill that cut up any lumber that was shipped?

Mr. DISQUE. What is that?

Mr. MAGEE. Was this Vancouver mill the only mill that cut up any lumber that was shipped out?

Mr. DISQUE. Oh, no.

Mr. MAGEE. Well, that is what I want.

Mr. DISQUE. The other mills shipped what became a grade satisfactory for our inspectors, largely accidentally, at it came through the mill, and the great volume of material was looked over, and when they would find a piece that was satisfactory, it would be set off as aircraft. The mills at the same time, according to the best round estimates that we could get, were not getting 5 per cent aircraft lumber out of the spruce logs that were coming into the market. We experimented and found that by careful selection, by careful sawing, by new methods of sawing, that we could get as high as 20 per cent out of those logs, and it is log production that was the big problem confronting us after we found out how to get the most out of a given log.

There is no limit to the indorsements of the cut-up plant by able lumbermen throughout this Northwest, as well as other parts of the country. A number of them came here from the East, hardwood manufacturers, Southern pine men, came through our mill and spoke in the most satisfactory terms about it and the quality and percentage of straight-grained material that that mill was producing.

We could have put table edgers and the necessary machinery in every mill in the Northwest, just like we did in this cut-up plant, but instead of that material costing, eventually, somewhere around \$250, it would have cost a thousand. You can not put four or five hundred individual units all over the Northwest, and inspect that product as well as you can to concentrate them and put it through one plant.

Mr. MAGEE. That was not done, was it? That is the point I am trying to find out.

Mr. DISQUE. What?

Mr. MAGEE. That was not done, was it, it was not all put through one cut-up plant, as I understand.

Mr. DISQUE. Well, we took practically all of it through the cut-up plant after we were under way. But we took also from those mills the leavings that they had, what they accumulated accidentally from their other operations; they would occasionally find a piece come through that was satisfactory.

Mr. LEA. Mr. Disque, in that connection can you explain a little more specifically why the ordinary mill did not want to handle the spruce-log sawing?

Mr. DISQUE. Well, the ordinary mill, as I say, is a pretty speedy affair; they have got a large number of men out there at the end of the mill, and unless the head saws keep moving pretty rapidly and it passes over their edgers and trimmers without delay, they have got a large part of their force idle, and it is not a practical thing for them to stop their head saws or to put in table edgers and divert this material from a head saw to a table edger instead of an ordinary edger, because their men would not have anything coming to them and they would be under terrific expense.

Mr. LEA. In other words, if I get it rightly, the province of a mill is determined by its head saws?

Mr. DISQUE. By the cut of the head saws; yes.

Mr. LEA. And in sawing to spruce specifications requires a good deal more delay at the head saw than it would to saw in the ordinary way; the whole force back of the head saw can do nothing more than handle that limited product; is that so?

Mr. DISQUE. Well, the head saw—at first, we tried to get the mills to block out the logs. A log is a tapered affair, it is not parallel on both sides, but the grain runs with the taper, and unless they block it out at the head saw they are going to have a cross-grained piece on the edge. The mills said they could not even take time to do that, but after a while most of them did take time to do that, and became quite speedy in their operation, and I don't think they lost—

Mr. MAGEE. In other words, the grain might run to the edge?

Mr. DISQUE. Exactly.

Mr. MAGEE. If it ran with the grain, it would run to the edge. The order was to saw it and get clear grain; is that right?

Mr. DISQUE. Get it perfectly straight grained?

Mr. MAGEE. Yes.

Mr. DISQUE. Well, that didn't affect the problems so much because the headsaw, in order to make a flitch worth anything, they had to set the log out on the carriage some, if it had much of a taper. Then the real result after that was that it went through machines automatically, whereas, to get the grain and follow it, you had to stop a log at each piece and consider it as an individual and turn it and twist it so that the saw cutting it the second time could follow the grain; whereas, in the mills as they are built here, they are not interested in grain and the cant goes right through the edger, with a man standing watching it, endeavoring to get out as much clear as he can; the saw is dropped in to split it into strips of any width that the clearness will permit or that his cutting orders demand. From there it passes over to the trimmers. A man sitting off 20 feet or probably more, controls trimmers which drop saws, break that long piece into short clear lengths; and no man on earth can sit off 20 feet away and get all the clear and straight-grained lumber out with that trimmer. It is not a criticism of the mill, it is simply that they are built for commercial production. We went at something that was not a commercial product.

Mr. LEA. Have you any facts to show how the product of the mills compared with the product of the cut-up plant, as to percentage of lumber procured?

Mr. DISQUE. I gave that, except that I didn't know what we had in the way of reports from outside mills.

Mr. MAGEE. I think you gave, yesterday, the percentages.

Mr. DISQUE. The percentages of our own product.

Mr. MAGEE. Yes.

Mr. DISQUE. We have here——

Mr. LEA. Can you tell me about——

Mr. DISQUE (continuing) —utilization correspondence, which was typical of what you could probably go through our files and get hundreds of other cases, showing the unsatisfactory quality of the material as it came from other mills, because, for one reason, the other mills didn't know what those aircraft fellows were thinking about in the factories; another reason, inspectors were few and far between, who knew how to inspect aircraft lumber.

Here is a typical letter from the Curtis Airplane Corporation, about an outside mill shipment: 1,857 feet rejected on one car, 1,189 on another, 1,757 on another. The probabilities are that those cars carried 16,000 or 17,000 feet.

Mr. MAGEE. What grade is that?

Mr. DISQUE. Supposed to be the No. 1 grade material.

The general reports, as they came to us, indicated that the—I will have to give you this as the general information that I have got—that the quality from the outside mills probably was not half as good as that from the cut-up plant. I think it is a perfectly natural thing to have happened.

Mr. LEA. Now, going back to this subject of the reason for the cut-up plant, and the financial result from it, is there anything further that you have to say?

Mr. DISQUE. The cut-up plant was first suggested by Mr. Russell Hawkins, who had come out here as Mr. Sligh's representative and

got here before I did. One of the first things that he brought up was that matter. He knew the timbermen, the lumbermen around here, and had four or five come in our office one night, and we had a discussion. We all decided that the cut-up plant was a necessity. By that time, I had seen logs go over these head saws, and I was not a lumberman, but I think it would be apparent to any man that they were not getting all that could be gotten from the spruce log. He recommended it. We called in these four or five lumbermen one night, talked it over.

Mr. LEA. That is, Mr. Hawkins recommended this plant?

Mr. DISQUE. He is the first man that suggested it.

Mr. LEA. Yes.

Mr. DISQUE. It was on that recommendation that we proceeded to look into it. We have here in our files a large number of letters which he wrote to the different lumbermen around the country, asking them their opinion about it, and if you want to burden the record with it, I can read 20 or 30 where they all favored it.

Mr. LEA. All I want is just the substance of it. I don't want to take any more time than necessary to make this clear.

Mr. MAGEE. I think it pretty well appears in the record to us that you had a cut-up plant, constructed one and utilized it.

Mr. DISQUE. Exactly.

Mr. MAGEE. The main point was to get straight-grained cuts. I think any one can see that unless you did have that in mind, that you were likely to cut across the grain and thus cut lumber which could not be used for the purpose desired.

Mr. DISQUE. There has been no serious criticism of that cut-up plant, that I have heard.

Mr. LEA. Is there anything further that you wanted to say about that, or that you thought it was necessary to say, in order to explain it?

Mr. DISQUE. I don't believe so.

Mr. MAGEE. This was the only cut-up plant, General, in operation, was it?

Mr. DISQUE. The only one in operation. Later on, after Mr. Ryan came out here and increased our requirements and said thirty and probably fifty million feet, our board was along with Mr. Ryan, we all decided—

Mr. MAGEE. I mean this was the only one?

Mr. DISQUE. The only one in operation; but it was decided best to scatter our operations, rather than to put all our eggs in one basket. That was why the others were considered and built, and were just finished when the armistice was signed.

Mr. LEA. How many other cut-up plants were provided for or arranged for?

Mr. DISQUE. One started that the Government would have operated.

Mr. LEA. Where?

Mr. DISQUE. At Yaquina or at Toledo, and the other one of the Siems-Carey-Kerbaugh Corporation was, of course, throughout the period of the war a private plant.

Mr. MAGEE. That was the one at Port Angeles?

Mr. DISQUE. Port Angeles.

Mr. LEA. And neither one of those mills were being operated, as I understand?

Mr. DISQUE. None of them. The armistice came before we got a log through them.

Mr. LEA. And each of those two mills were provided to be saw-mills as well as cut-up plants, weren't they?

Mr. DISQUE. Exactly.

Mr. LEA. Yesterday Mr. Frear called for this Mitchell contract. I have not read it, but I understood it was to go in the record, and so I suppose—

Mr. DISQUE. I will say that the essentials of that contract of Mr. Mitchell's were that he was to assume full charge and responsibility for the production through it, to employ all the labor, and he was to receive a percentage, which limited his personal return to \$25,000, from which he was required to pay three superintendents a sum which reduced his income, as I recall it now, to approximately \$12,000 a year. It limited him to that extent that he paid out of his own profits for the superintendence there.

Mr. LEA. Who was Mr. Mitchell and what experience in mill matters had he had before he was selected for this work?

Mr. DISQUE. Well, he had been in the sawmill business in one way or another, as I understand it, all his life. He is a man probably 55 years old, and was at that time managing a considerable-sized mill down the river here that was reputed to be one of the most up-to-date manufacturing plants here.

Mr. LEA. Had he had experience in the construction of mills?

Mr. DISQUE. A great deal of it. He had been with the Allis-Chalmers Co., builders of sawmill machinery, for about 15 or 20 years, I believe.

Mr. MAGEE. What contract is this?

Mr. LEA. As I understand, this is the contract with Mr. Mitchell for the construction of this mill, isn't it—the cut-up plant?

Mr. DISQUE. For the operation of it.

Mr. LEA. The operation.

Mr. MAGEE. It appears to be dated the 12th of February, 1918, and I understood the General to say it was completed about or before that time.

Mr. DISQUE. The 7th of February it was completed; but this contract we had—we hadn't the time to draw it up—that is really what happened.

Mr. MAGEE. I think he was asked yesterday, if I remember, as to what he received for designing, etc.

Mr. DISQUE. Yes.

Mr. MAGEE. For the work he performed prior to that time—state, if you know.

Mr. DISQUE. Work prior to that?

Mr. MAGEE. Yes.

Mr. DISQUE. I have forgotten, now, what he got; it was not very much, though.

Mr. MAGEE. Well, you can get it and put it in.

Mr. DISQUE. We will get the exact figures. That is the best way to do that.

Mr. MAGEE. That was from the time you began there early in December until February 7. Now, any other compensation which he received?

Mr. DISQUE. Not that I know of.

Mr. MAGEE. Extra pay?

Mr. DISQUE. I don't think he did.

(The paper above referred to, marked "Exhibit No. 8—Disque—Sept. 5, 1919," is copied in the record, in full, as follows:)

Contract No. SPD-57.

SIGNAL CORPS, UNITED STATES ARMY—CONTRACT FOR MANAGEMENT OF CUT-UP PLANT.

This memorandum of agreement entered into at Portland, Oreg., this 12th day of February, 1918, by and between H. S. Mitchell, of Portland, Oreg., party of the first part, hereinafter referred to as the "contractor," and the United States of America, hereinafter referred to as the "Government," represented by J. Van D. Crisp, First Lieutenant, Signal Corps, United States Army, hereinafter referred to as the "contracting officer" and acting by authority of the Chief Signal Officer of the United States under the direction of Secretary of War, party of the second part, witnesseth that—

Whereas the Government has erected a certain lumber mill at Vancouver, Wash., for expediting the production of lumber suitable for aeronautical purposes, the said mill being hereinafter referred to as the "cut-up plant"; and

Whereas it is not considered expedient for the Government to operate said cut-up plant; and

Whereas the contractor has had a large and varied experience in the operation of lumber mills in the States of Washington and Oregon, and is therefore qualified to operate said cut-up plant:

Now, therefore, under the provisions of section 120 of an act of Congress relating to national defense, approved June 3, 1916, and pursuant to all other laws of the United States and executive orders of the President of the United States or heads of its departments under which requirements for advertisements for proposals are disposed with and contracts in the form herewith duly authorized, and in consideration of the mutual agreements herein contained, said parties hereto have agreed by these presents and do agree with each other as follows, to wit:

1. The Government agrees to permit the contractor to use said cut-up plant, together with all equipment and appurtenant materials, for the period of and in the manner provided for in this contract, and to furnish all necessary light, heat, power, fuel, office equipment, and incidental office expenses, and to make such repairs and alterations as may be necessary to keep said plant running to fulfill the needs of the Government for lumber suitable for aeronautical purposes.

2. The Government will furnish to the contractor, without cost to him, sufficient raw material to enable the cut-up plant to operate at its fullest capacity, providing that such raw material be obtainable by the Government.

3. The contractor will operate said cut-up plant to its fullest capacity and agrees to cut, saw, and finish all lumber furnished by the Government or its authorized representative to such dimensions, sizes, and shapes as shall be designated by the contracting officer.

4. The contractor will do all acts and take all steps necessary to operate said cut-up plant in a businesslike and efficient manner, and will make the output of lumber for aeronautical purposes as large as possible consistent with the Government's delivery of raw material and sound business judgment. The Government shall be entitled to all lumber produced by said cut-up plant, which the contracting officer considers suitable for aeronautical purposes, and it may use or dispose of the same in any manner which to the contracting officer may seem advisable. All other lumber, waste material, and raw material, which in the opinion of the contracting officer is not suitable for use as airplane material, all of which material is hereinafter referred to as the side cut, shall be and remain the property of the contractor, and the contractor will sell the same upon the best terms possible, making collection on all such sales made and retaining the money collected; providing, however, that the amounts here-

inafter specified to be paid to the contractor shall be reduced in an amount equal to the gross amount of said sales and providing, further, that should the receipts from sales exceed the amount due the contractor as compensation, then any receipts in excess of such compensation shall be credited to the Government and paid monthly to the contracting officer. The contracting officer shall have the right at any time to direct the disposition of said side cut either as to purchaser, prices, or otherwise, which direction shall be binding upon the contractor.

5. The contractor shall engage, employ, and pay a sufficient operating force to carry out his obligations hereunder, including three experienced and competent mill superintendents, one of whom shall be in constant attendance and on duty at said cut-up plant whenever the same shall be operating, and including such office force, foremen, mechanics, and other laborers and employees as may be necessary to operate said plant hereunder. Before engaging any employees, however, the contractor shall submit to the contracting officer for approval a list showing the names of all employees at the cut-up plant, the amount of wages to be paid to each, and the services or duties to be performed by each. All employees shall be paid according to such wage scale unless the same shall be modified by the contracting officer, in which case the payment shall be made in accordance with the wage scale so modified. The decision of the contracting officer as to the employment of help at the cut-up plant and the wages or salaries paid shall be final. The approval of the contracting officer need not be obtained, however, as to the employment of or as to salaries paid the three superintendents which are to be furnished by the contractor.

6. The Government will reimburse the contractor for the cost of selling the side cut and for all salaries and wages paid as above set forth, with the exception of compensation paid the three superintendents furnished by the contractor. In addition thereto the Government will pay the contractor as profits 10 per cent on the "gross cost," consisting of the following amounts and none other:

(a) All sums paid by the contractor on account of salaries and wages of office force and other employees except the three superintendents which the contractor is to furnish without cost to the Government.

(b) All sums paid by the Government for repairs, upkeep, and maintenance of the plant and equipment.

(c) All sums paid by the contractor as costs in selling the side cut and collecting the money received from such sales.

7. It is estimated that the gross cut of the items set forth in section a, b, and c of the preceding paragraph, upon which the contractor's percentage of profit is to be based, will be \$65,000 per month, operating three full eight-hour shifts per day. As an inducement to the contractor for economical and efficient management of the cut-up plant, if the contractor shall be able to operate said cut-up plant in such a manner that the said items specified in paragraph 6 shall be less than \$65,000 per month, then the contractor shall also receive, in addition to the above-mentioned 10 per cent, a further sum amounting to 12 per cent of the amount under \$65,000 saved on each month's operations, providing the plant operates to full capacity. Such monthly operating cost to be figured separately for each calendar month, and any bonus to be based on such separate monthly calculations. The Government will also pay the contractor 5 per cent of all money received by the contractor and placed to the credit of the Government on account of the selling of side cut, providing, however, that the contractor shall not receive as compensation hereunder more than \$25,000 per year.

8. Payments of the above amounts shall be made to the contractor as follows:

As soon as possible after the end of each month a statement shall be prepared showing the operating cost of the plant, the cost of selling the side cut, and the receipts from the sales of side cut. Such statement shall be prepared by auditors appointed by the contracting officer and be based on accounts kept under his direction and supervision. Based on such statement, the contractor shall then be paid the amounts specified in paragraphs 6 and 7 above, both as to reimbursements and profits.

In order that the \$25,000 maximum yearly profit may not be exceeded, however, the payments of profit earned by the contractor shall be so regulated that payments already made will not average more than \$2,085 per month; but so long as this average is not exceeded, any excess over \$2,085 earned as profit

in any month can be added to payments earned in any other prior or subsequent month in which the amount of profit actually earned is less than \$2,085.

9. This contract shall continue in effect until the 1st day of July, 1918, and the Government shall have the option of continuing the same in force until the 1st day of July, 1919, by giving the contractor 10 days' written notice of its election to do so, providing, however, that the Government or the contractor may terminate this contract or any extension thereof by giving 30 days' written notice to the other. Upon the expiration of this contract or its termination from any cause, then payments shall be made on the basis of expenses incurred at the date of termination or expiration.

10. This contract shall become effective and apply to operations taking place on and after the 1st day of March, 1918.

11. No person or persons shall be employed in the performance of this contract who are undergoing sentence of imprisonment at hard labor which has been imposed by any court of any of the several States, Territories, or municipalities having criminal jurisdiction.

12. Neither this contract nor any interest therein shall be transferred or assigned by the contractor to any person, firm, or corporation without the written consent of the Government, and in case of such transfer without its written consent, the Government may refuse to carry out this contract, either with the transferor or transferee, but all rights of action for any breach of this contract by said contractor are reserved to the Government.

13. No Member of or Delegate to Congress, or Resident Commissioner, is or shall be admitted to any share or part of this contract or to any benefit that may arise therefrom. But this article shall not apply to this contract so far as it may be within the operation of exemption of section 116 of act of Congress approved March 4, 1909. (35 Stat., 1109.)

14. Any notice or other communication to be given by the Government to the contractor under this agreement shall be given to the contractor at Portland, Ore., and any notice to be given under this agreement to the Government shall be addressed to the Officer in Charge of Disbursements of the Signal Corps, War Department, Second Floor, Yeon Building, Portland, Ore.

15. This contract shall be subject to the approval of the Chief Signal Officer of the United States Army, and the operations of the contractor under this agreement shall be subject to the direction and approval of the contracting officer.

In witness whereof, the contractor has hereunto set his hand and seal and the Government has caused this contract to be executed by the undersigned contracting officer herein duly authorized.

A. J. KING,
E. C. BOCK.

H. S. MITCHELL,
Contractor.

A. J. KING,
E. C. BOCK.

J. VAN D. CRISP,
*First Lieutenant, Signal Corps, United States Army,
Contracting Officer.*

Approved March 7, 1918, by authority of the Chief Signal Officer, United States Army:

BRICE P. DISQUE,
Colonel, Signal Corps, United States Army.

Mr. LEA. Can you tell me the amount of rived stock that was received by the Spruce Corporation through operations?

Mr. DISQUE. Roughly, it was 18,000,000 feet.

Mr. LEA. Can you give me the facts on that, the exact amount? Maybe by referring to this table you can.

Mr. DISQUE. Here it is. The total amount of rived spruce from our cost-plus operations 11,503,271 feet.

Mr. LEA. What of any amount of rived stock was produced by independent contractors or other persons?

Mr. DISQUE. I have not the exact figures, but I know it was seven million and some thousand feet.

Mr. MAGEE. That is, as I understand, the cost-plus were the three cost-plus contracts?

Mr. DISQUE. Entirely.

Mr. MAGEE. The Airplane Spruce Co., the Warren Spruce Co., and Grant Smith—what was the other, Grant Smith-Porter Bros.?

Mr. DISQUE. From the independent operators, with whom we made fixed price contracts, and whose contracts were based on \$90 and a bonus of \$40, which made it \$130, and those contracts, when we got through cancelling them and making the necessary adjustment due to cancellation, ran that price up beyond what it actually appears to be, was 6,157,645 feet. The total produced by our cost-plus operations, at the cost, as I stated yesterday, of \$144.

Mr. MAGEE. Those three contracts?

Mr. DISQUE. Three contracts was 11,503,271 feet.

Mr. MAGEE. Was that all spruce?

Mr. DISQUE. All spruce.

Mr. LEA. Was there any riving of fir or cedar?

Mr. DISQUE. A little cedar, hardly enough to—it was done by the independent operators.

Mr. MAGEE. What did they use the cedar for, in airplanes?

Mr. DISQUE. For wing beams. It is made high grade with the other.

Mr. MAGEE. For the same purpose as they use spruce?

Mr. DISQUE. Practically the same as spruce, but there is practically no orford cedar in the world, and it is just a little body of it down there—

Mr. MAGEE. What cedar was coming out was used in the same manner and for the same purpose as the spruce?

Mr. DISQUE. Yes. The total cedar produced was two million and some hundred thousand feet.

Mr. MAGEE. Do you object to my asking a question while on any subject to clear it up?

Mr. LEA. No; when we are on a subject that is the best way to do, I think.

Mr. MAGEE. I was only asking it at this time to close it up.

Mr. LEA. That is a good idea. I think it facilitates to close it when we are on the subject.

Mr. DISQUE. I would like to read here from this Maj. Sligh, who was quite a witness before the committee in Chicago, stating that the cut-up plant should not have been built and stating that riving was ridiculous, and a few more personal ideas of that sort. Here is a letter of his of October 23rd, referring—

Mr. LEA (interrupting): What year?

Mr. DISQUE. 1917; referring to the quality of lumber that was being shipped after he had been in charge of this for four or five months.

Mr. MAGEE. When did his service cease? Do you have the date?

Mr. DISQUE. In November, some time.

Mr. MAGEE. This was before his service had ceased?

Mr. DISQUE. This was before his service had ceased, and he was in charge of the wood section division of the Signal Corps, and this is addressed to Mr. Russell Hawkins here in Portland.

Mr. MAGEE. Who was under whom?

Mr. DISQUE. Supposed to be under Sligh.

We sent you two telegrams yesterday and confirmations of same were mailed today. Messrs. Clements and Allen of the Dayton Wright Co., were here and claimed that the quality of spruce does not conform to the specifications and that the inspectors were rejecting nine out of ten of their beams. Curtiss is also complaining very vehemently about the poor quality that they are getting. We have ordered, as you know, 3,000,000 feet of fir stock and have sent you copies of the parties to whom these orders have been sent.

Telegram of October 22nd:

Dayton and Wright and Curtiss complaining about quality of spruce.

Telegram from Hawkins to Sligh, October 29th:

Chief difficulty sawyers do not know the difference between sawing for straight grain as against clear stock.

Mr. MAGEE. That is crossing the grain in sawing?

Mr. DISQUE. "Very prominent manufacture talked to enthusiastic. Springer and Suter are favorable. Think question as to quality and grain will be solved only by establishment of cutting up plant."

Letter from Charles Sligh to Russell Hawkins, November 10, still in charge: "I am very much gratified at your campaign for rived stock."

Mr. LEA. Now in that connection, do I understand that Mr. Sligh in his testimony before this committee in Chicago condemned the cut up plant?

Mr. DISQUE. I have been working since I came here till two and three o'clock every morning, going over the tremendous records, and I have only read a portion of his testimony, but I have read enough to convince me that he is the king when it comes to making false statements. I haven't read a word that he said that was true, and I am prepared with documents to prove that not a word of his testimony, as it applies to this Spruce Division out here, is justified, truthful or correct, and I am convinced that he has either lost his complete sanity or else he is the most deliberate liar that God ever gave breath to. I want to read further from his own records.

Mr. MAGEE. I don't know anything about the gentleman, or his differences with the Spruce Division, but he appeared like an intelligent witness, and talked like one.

Mr. DISQUE. He is intelligent in certain directions. I want to add there for the benefit of the committee that so far as I know I never saw Sligh but twice. Once I was invited in to a dinner that he was invited to, and another time I saw him for maybe two or three minutes in the office. He don't know me and I don't know him. All I know is what he has said.

Mr. MAGEE. Well, I never saw him except when he was on the witness stand.

Mr. LEA. Did you have anything to do with his removal from the War Department?

Mr. DISQUE. Not the slightest. Since that has come up I would like to read the statement of the officer who did bring about his removal from the Equipment Division of the Signal Corps. This is by Col. C. A. Seoane, executive officer of the Equipment Division of the Signal Corps, and he says: While executive officer of the Equipment Division of the Signal Corps, which later became the

Bureau of Aircraft Production, I remember Maj. Charles R. Sligh being in charge of the Woods Section.

Maj. Sligh's duties comprised principally the purchase and distribution of all woods required by the Equipment Division.

I wonder if we can have some light?

Mr. MAGEE. Is there an officer here who can turn on the light.

Mr. DISQUE. [Reading:]

These were divided specifically into two classes—hard and soft. In the hardwoods there was comprised office and other furniture in large quantities required for the equipment of the many flying fields then under course of construction and in various stages of completion.

I might interpolate here that Maj. Sligh is a hard woods, or is a furniture manufacturer.

Maj. Sligh, realizing that the situation was becoming desperate, arranged to have three persons in the Northwest take complete charge of spruce production. The principal person selected by him was Mr. Russell Hawkins. In pursuance of this plan, Maj. Sligh wrote out a letter of instructions addressed to Mr. Hawkins and the two others, empowering them to take full control and do whatever was necessary, including all kinds of expenditures, to supply whatever the spruce demands might happen to be. This letter was so broad that it empowered these individuals, who had no connection whatever with the Government, with such powers as even the Secretary of War himself did not possess. He requested that this letter be signed by Col. Deeds, the head of the division, and consideration of it resulted in the conclusion, which was quickly formed in the office, that the entire spruce situation was beyond Maj. Sligh's grasp. It was then decided to relieve Maj. Sligh of any further connection with spruce requirements and to organize that work in a different way with a different person at its head.

An office memorandum was accordingly issued, dividing the wood functions into two sections—hard and soft—with Maj. Sligh continuing in charge of the hard woods and Col. Disque being assigned to the soft woods part.

Maj. Sligh's relief from any further connection with spruce or soft woods was purely a routine office matter and based entirely upon his incapacity, which he clearly demonstrated.

This is signed by the man who issued the order, Col. C. A. Seoane.

Mr. LEA. Now, do you know how Sligh got the impression that you were the cause of his removal?

Mr. DISQUE. I think that because Maj. Leadbetter came into the thing Sligh got the idea that I was trying to interfere with him. Maj. Leadbetter was the only man in Washington at that time that I had met, and I hadn't known him two weeks. Things were moving pretty fast. He was the only man there that I found that knew anything about the Northwest, and I simply asked to have him either liaison officer for this operation out here, because I felt that he was the man that I could talk to and he would understand my language, after I got into the language of the Northwest forests.

Mr. LEA. Have you anything further in that connection?

Mr. DISQUE. I would like to say further in that connection, Maj. Sligh has said that production fell off after I got here. He has talked in the face of cold-blooded figures that are matters of permanent record. But let me quote from his letter of October 24, while he was still in charge and had been for some five or six months:

The other letter says that mill men are not buying enough of the high-grade logs, and that we are going to be grievously disappointed in shipments: Also that December and January will be worse than at present.

Mr. LEA. Whose letter is that?

Mr. DISQUE. Maj. Sligh to Mr. Lynde Palmer, Munsey Building, Washington.

Mr. MAGEE. Who was Mr. Palmer?

Mr. LEA. I would like to have that letter in full in the record, in view of the testimony that was given in Chicago. Will you kindly give it to the reporter?

Mr. DISQUE. Do you want me to read it?

Mr. LEA. It is not necessary to read it, if you have the reporter put it in the record.

Mr. DISQUE. Well, now, had we better make a copy of this and give it to him?

Mr. LEA. Is that the only copy you have?

Mr. DISQUE. It is the only copy I have.

Mr. LEA. Well, then, if you will, copy it and give the reporter a copy and he can put it in the record.

Mr. MAGEE. You had better have it marked, hadn't you, some certain number?

Mr. DISQUE. That is Sligh's letter of October 24, as I recall.

Mr. MAGEE. I think, Mr. Lea, you had better have it marked an exhibit now and then let the reporter copy it later.

Mr. LEA. If the reporter will just mark this in his usual way and let Mr. Disque take it until he has covered it, I think that will be the better way.

Mr. DISQUE. Well, he can copy it and return it.

(Said letter was thereupon given to the reporter to be copied, as follows, after which it was returned to the witness.)

OCTOBER 24, 1917.

From: Maj. Charles R. Sligh.

To: Mr. Lynde Palmer, Munsey Building, Washington, D. C.

Subject: Fir (shipments).

1. We are considerably disturbed at the slowness in starting shipments on the order that we gave you for 3,000,000 feet of fir, and especially in view of two letters which we have received this morning, both of them from lumber men on the coast, copy of which we are sending you herewith.

2. The other letter says that mill men are not buying enough of the high-grade logs, and that we are going to be grievously disappointed in shipments; also that December and January will be worse than at present.

3. The specifications were drafted with the full consent and cooperation of Mr. George H. Long and Mr. J. H. Bloedel, and are identical with the English specifications. Mr. Long and Mr. Bloedel made the price, which was accepted by the English and ourselves without any haggling and with the distinct understanding that the shipments were as a substitute for spruce, and that it was an emergency proposition on which they promised prompt delivery. This order was placed October 5, and not a car has been shipped.

4. Mr. Bloedel has wired, asking for modification of the specifications. This we can not consent to. The only purpose for which we are buying fir is wing beams, which require absolutely the best stock in a log and long lengths, and we can not consent to any change that will lower the grade.

5. With the mills cutting 700,000,000 feet a month, this small order of 3,000,000 feet ought to be rushed out in 15 days' time. We wish that you would wire these facts immediately to the West Coast Lumbermen's Association and urge upon them the vital necessity of prompt shipment.

By direction of the Chief Signal Officer.

Major, Signal Corps.

Mr. DISQUE. I would like to also read a telegram to Maj. Sligh from Mr. Russell Hawkins, October 23, not all material: "Specification No. 1"——

Mr. MAGEE (interrupting). Where was Mr. Hawkins and where was Maj. Sligh?

Mr. DISQUE. He was here in charge of this end of Maj. Sligh's office.

Mr. MAGEE. Was Sligh here, too?

Mr. DISQUE. He was in Washington. Hawkins was then in charge of Sligh's office. This is a telegram from Hawkins, in Portland, to Sligh, in Washington: "Specification No. 1 is only producing 10 to 12 per cent shipments lumber from Grays Harbor logs." That is the specification that Maj. Sligh considered the great accomplishment of his job during his work in the Bureau of Aircraft Production. Now, I have one more communication that I want to read in connection with Sligh's testimony, and if the committee can secure it I think they will find a letter or telegram addressed by him to Mr. Russell Hawkins and other people, possibly, in which he unquestionably was endeavoring to disrupt the organization of the aircraft production. This telegram was signed by Mr. Hawkins, sent to the Hon. Howard E. Coffin, Munsey Building, Washington, D. C.

Mr. MAGEE. What is the date of that?

Mr. DISQUE. December 11, 1917.

Mr. MAGEE. Now, when did Maj. Sligh's service cease?

Mr. DISQUE. I don't know the exact date.

Mr. LEA. As I remember it, it practically ceased about the 1st of December, but nominally it was about the 22d of January, 1918. But his work in the meantime was simply cleaning up. He was not performing an actual executive function.

Mr. DISQUE. I know at the time of this that he was around the Equipment Division still.

Mr. MAGEE. What I was getting at is whether this telegram or communication was sent before he ceased performing service.

Mr. DISQUE. I don't know when he left there, but it was sent as a result of a letter that had come from him, which indicated that he was still in the service.

Mr. LEA. He did retain his official position at that time, although, as I remember it, his executive functions had practically ceased.

Mr. MAGEE. I thought Gen. Disque—that the evidence showed that Gen. Disque came out here in November, 1917; is that right??

Mr. DISQUE. Yes.

Mr. MAGEE. You succeeded him, didn't you?

Mr. DISQUE. Well, I didn't succeed him. I started something new. He remained there in charge of hardwoods and furniture buying.

Mr. MAGEE. You were in charge, weren't you?

Mr. DISQUE. Of spruce.

Mr. MAGEE. From the time you came out here?

Mr. DISQUE. Yes.

Mr. MAGEE. And that was in November?

Mr. DISQUE. November.

Mr. MAGEE. Early in November, wasn't it?

Mr. DISQUE. The 15th.

Mr. MAGEE. The middle of November. That is what I thought. From the middle of November on, Gen. Disque was in charge here. That was the impression I had. I was wondering whether Maj. Sligh was still in the service after that date.

Mr. DISQUE. Now, this telegram :

Apparently there is some doubt as to my fidelity to yourself, Disque, and apparently this job of producing spruce undertaken at your request. For example received wire to-day [he means from Sligh], which prompted following reply: " Sorry situation reported not harmonious. Business can't be done successfully without harmony. Know nothing of discord between parties mentioned. Don't understand why criticism should fall on gentlemen named. The extremely rigid specifications and inspection rules reducing shipments. I stated over two months ago that money and men and methods were needed. We will have men January 1 but need money and methods. Really we need a great big comprehensive program. We are shooting rapids instead of elephants. Disque doing everything possible to increase shipments. The reorganization of the business will be slow, laborious, and irksome. Output for December will be reduced January and February also. Cut-up plant could have been producing by January 1 if proper authority had been given. Have that now but can not occupy site at barracks because authority is unknown to western commander. Meantime we are smiling but it hurts my face. Have no objection to your using this wire wherever it will do good."

That is the message he sent to Sligh.

Mr. LEA. That is, Mr. Hawkins?

Mr. DISQUE. This is, now, to Mr. Coffin:

Now, in order to clear up any foggy atmosphere I want to assure that Disque has taken hold of this job with vigor and intelligence. Has had my undivided cooperation and support. Logging camps short 3,000 men. Our men not yet available. Split spruce program killed for want of thousands of men. Changing present plan and scope of spruce production division will absolutely destroy the values already created, nullify two months' constant work and effort done organizing, and disorganize the situation. I can not too strongly emphasize my objections to any move that contemplates giving engineers or any other authority charge of the situation. If done, figure on positive calamity to your excellent board's program. There are forty thousand angles to this job that no one not on the ground can grasp or absorb. If your 1919 requirements are big, start now. You will give us men, but we want money and methods. We are gunning for squirrels where we should be hunting elephants. Will be necessary in 1918 to expend several millions for railway entry into the big bodies of spruce. Cut-up plant should be under roof. All machinery and lumber ordered. Some in transit. Proposition dead because post commander not advised building can be located on polo grounds at Vancouver Barracks. Give Disque power and let him cut corners. I am only here to get more spruce logs. Don't give continental about anything else. Message long but situation warrants same.

HAWKINS.

Shortly after that Mr. Hawkins, for some reason that I have never understood yet, was relieved in Washington; some political——

Mr. MAGEE (interrupting). What position did he hold at this time, under you?

Mr. DISQUE. He was an associate of mine at this time.

Mr. MAGEE. In just what capacity, General?

Mr. DISQUE. Well, I don't know myself. He was sent out here as a civilian and without salary to help push along spruce production.

Mr. MAGEE. I mean, what was his relation to you in charge here; was he an aid, or what?

Mr. DISQUE. Well, he was without any official status. He could not have had one.

Mr. MAGEE. Who sent him here?

Mr. DISQUE. Sligh sent him here with authority.

Mr. MAGEE. Did he have any standing or status here under you?

Mr. DISQUE. He had no official status. He had been promised a commission in the Army.

Mr. MAGEE. I mean, what did he do here? Did you direct him as to what he should do?

Mr. DISQUE. No; I would not say that. He and I were—I considered him at that time a man of experience out here. He could not take any official action binding on the Government because he had no legal status, but he did carry on correspondence and take an interest and do everything in his power to interest the lumbermen and get them started.

Mr. MAGEE. How long was he out here?

Mr. DISQUE. About two months.

Mr. MAGEE. All that time he didn't have any standing?

Mr. DISQUE. Not that I know of.

Mr. MAGEE. Or position?

Mr. LEA. But he did devote himself to this work, didn't he?

Mr. DISQUE. As far as I was concerned, he was a Government officer with all the powers that he needed. He had been sent here by Sligh with a letter empowering him to do everything that it was necessary to do.

Mr. MAGEE. Well, I would assume that each one who was engaged in the work had some particular position.

Mr. DISQUE. Yes.

Mr. LEA. Well, were you in any way responsible for his removal?

Mr. DISQUE. Absolutely not. And I did all I could, and a whole lot more than the average officer would dare do, to prevent it.

Mr. MAGEE. Well, who removed him?

Mr. DISQUE. I think the Secretary of War. There was some complaint made that Mr. Hawkins, being a Whitney representative——

Mr. MAGEE (interrupting). Being a what?

Mr. DISQUE. A representative of the Whitney Timber Co., was in position to use his Government job to benefit the timber interests which he represented.

Mr. MAGEE. What about the Whitney Timber Co.? I never heard of that company before. Is it a holding company here?

Mr. DISQUE. They have very large holdings here.

Mr. MAGEE. In this Lake Crescent or Lake Pleasant tract?

Mr. DISQUE. No; down in Toledo.

Mr. LEA. Is that a corporation?

Mr. DISQUE. That is a corporation, I think, of the State of Michigan.

Mr. MAGEE. You mean in the Siletz country?

Mr. DISQUE. No; at Tillamook, I should say.

Mr. LEA. What was the relation of that to the Spruce Production Corporation?

Mr. DISQUE. Well, they had a lot of spruce down there, but during this entire time that Mr. Hawkins was with me the subject of their spruce was never discussed, and I know he did not take any advantage of his position whatever to help that company.

Mr. MAGEE. Just a question more: There wasn't anything in your mind to indicate that he wasn't sincere in the work which he undertook to perform?

Mr. DISQUE. No; nothing at all.

Mr. LEA. Well, was the Whitney Co. trying to sell lumber to the Government?

Mr. DISQUE. No. I think the only operation they had was some independent loggers possibly had bought a little stumpage on their lands and were logging. The reports that I had later on indicated that their timber was not of the quality that was satisfactory for spruce airplane production.

Mr. LEA. Let's see. I believe you have already put in the record the production of airplane lumber?

Mr. MAGEE. Let's have him finish this subject.

Mr. LEA. Yes. Stay with this, if you are not through. I thought you were.

Mr. DISQUE. I can't finish with Mr. Sligh, because it becomes a personal matter from now on. He has made statements in here that if he were a younger man and I should ever have the opportunity of meeting him he would disappear.

Mr. MAGEE. Well, I don't think the committee want——

Mr. LEA (interrupting). Yes; we had just as well forget that.

Mr. DISQUE. Well, what I mean is this——

Mr. MAGEE (interrupting). What I meant, Mr. Lea, of course you can reserve it further, but what I had in mind was to have you finish one subject when you take it up.

Mr. DISQUE. Exactly. I would like the committee to call Mr. Frank D. Eamon, who is in the room, to testify further regarding Maj. Sligh's statements in the record about myself, who is the best witness to prove the falsity of this evidence.

Mr. MAGEE. Mr. Lea can call Mr. Eamon, or any other witness whom you desire to have called, within reason. We can't hear everybody.

Mr. LEA. Mr. Frear agreed, I think, yesterday, to call Mr. Eamon; so we will call him.

Mr. DISQUE. Well, pass that on.

Mr. LEA. Are you through with that subject?

Mr. DISQUE. I am through with that.

Mr. LEA. Now, have we placed in the record the production of airplane lumber by months?

Mr. DISQUE. I think I read that in.

Mr. MAGEE. I think that is what went in yesterday.

Mr. DISQUE. In the record day before yesterday.

Mr. LEA. Have you the table of production there?

Mr. EAMON. I have it in my hand.

Mr. DISQUE. No. I read everything in there the other day, started in after the half production for February and read it all.

Mr. MAGEE. I think that would be the best way to get it, would be to put in an itemized statement.

Mr. LEA. Here, I believe I have got it. We had better pass that temporarily until it is straightened out.

Mr. MAGEE. It would be better to put a statement in showing that, I think.

Mr. LEA. Yes. If you will just prepare that in the form of a statement and give it to the reporter this afternoon we will have it inserted in the record.

Mr. MAGEE. Just have somebody testify that it is the production.

Mr. LEA. Yes. Have you any figures to show the percentage of aero lumber in March, 1918, as compared with October, 1918?

Mr. DISQUE. The percentage obtained from logs?

Mr. LEA. Yes; or from cants, if you haven't logs.

Mr. DISQUE. Yes, sir; I think we can give something on that. As I read a moment ago in that letter from Sligh, they were getting practically nothing out of it down there, nine out of ten wing beams were being discarded. March, 1918, we were getting 44 per cent of the cants that went into the Vancouver cut-up plant. Forty-four per cent became aircraft material. The last month, October, the production of that plant had increased in its efficiency so that they were getting 62 per cent of the cants that came into the mill in aircraft lumber.

Mr. MAGEE. I suppose the percentage would depend more or less upon the grain of the log, and the size, wouldn't it?

Mr. DISQUE. Well, of course, this covered cants from the entire Northwest.

Mr. MAGEE. For my own information, what I had in mind is whether you would get as large a percentage, say, from a small run of logs as you would from a larger run of logs, larger timber—whether it would run better grain?

Mr. DISQUE. Well, some small logs—there is no rule about that. We found some young timber that had a good lot of aircraft lumber in it; we found some great big stuff that was overripe and did not make good aircraft lumber. The general rule was, or what we found was that trees running around $4\frac{1}{2}$ to $5\frac{1}{2}$ feet usually had the most in them.

Mr. MAGEE. You mean in diameter?

Mr. DISQUE. In diameter.

Mr. LEA. In this connection can you give me the percentage of airplane lumber of the "A" class produced in March, 1918, as compared with the percentage in October, 1918?

Mr. DISQUE. Yes. In March, 1918, we were getting 19 per cent into wing beams, and in October the percentage was 43.

Mr. MAGEE. Is this fir or spruce, or both?

Mr. DISQUE. Both. Wing-beam stock.

Mr. LEA. And I wish you would give me the percentage of "B" class in March, 1918, as compared with October, 1918.

Mr. DISQUE. The percentage of "B" class, or "B" grade, which was shorter, in March was 7 per cent and in October it became 23 per cent.

Mr. MAGEE. I didn't just get those figures, General.

Mr. DISQUE. The first figure was 7 per cent in March and in October 13 per cent.

Mr. LEA. I believe you said 23 before, there.

Mr. DISQUE. Well, if I did it should have been 13.

Mr. LEA. So that the reporter ought to correct that. Now, is there anything in that connection, further, that you would like to say?

Mr. DISQUE. Yes; there is just one more thing just called to my attention. This increase in the percentage of aircraft lumber that we got out of the material that came in, the raw material, from 44 to 62 per cent, was simultaneous with an increase in quantity from one million up to twenty million per month through the same plant.

Mr. MAGEE. You mean 20,000,000 feet in the log?

Mr. DISQUE. Twenty million feet of cants that were cut in the plant during the month—that is, airplane lumber produced from the plant.

Mr. LEA. You are through now with that subject?

Mr. DISQUE. Yes.

Mr. LEA. Now, in reference to the percentage of lumber produced by the cost-plus operators, as contrasted with the independents, as I understand, you testified yesterday that something like 7 per cent was produced by the cost-plus operators; that is approximately correct, is it?

Mr. DISQUE. That is what Col. Stearns testified to last week.

Mr. LEA. Now, how is it that the cost-plus contractors produced in lumber when, I understood, their contract was for logs?

Mr. DISQUE. They didn't produce any lumber. I am sure that Col. Stearns referred to the resulting aircraft lumber that came from the split cants that the cost-plus contractors got out during the winter and spring.

Mr. LEA. Was there any cost-plus contractor who had a contract to produce the finished lumber?

Mr. DISQUE. Not that I recall.

Mr. LEA. Now, what quantity of logs were produced by the cost-plus loggers?

Mr. DISQUE. The logs produced by the cost-plus loggers, it should be understood, were supposed to be, and I think they were, selected logs of a very high quality.

Mr. LEA. They did selective logging entirely?

Mr. DISQUE. Entirely selective logging; they produced, up to the signing of the armistice, 104,630,000 feet.

Mr. LEA. Of logs?

Mr. DISQUE. Of selected logs.

Mr. LEA. Does that include the rived logs?

Mr. DISQUE. That does not.

Mr. LEA. And what was the extent of rived logs that they produced?

Mr. DISQUE. They produced 11,000,000 feet of rived cants, which, of course, had all the waste removed before that 11,000,000 feet was measured.

Mr. LEA. Do you know what percentage—

Mr. DISQUE (interrupting). Eleven and a half million, that is.

Mr. LEA (continuing). The cants bore to the total log production for riving purposes?

Mr. DISQUE. Do you know what it was?

Mr. EAMON. In our own operations we got an average of 42 per cent and those we controlled directly we got 45 per cent.

Mr. DISQUE. I have no definite figures, but the assistant comptroller here tells me that in our own operations 45 per cent of the tree became cants that were accepted.

Mr. EAMON. Of the one and two logs that were accepted?

Mr. DISQUE. Yes; of the one and two logs.

Mr. LEA. Now, let's see: There were 18,000,000 cants?

Mr. DISQUE. Eighteen million cants.

Mr. LEA. That is, in round numbers?

Mr. MAGEE. I would suggest that what I had in mind was——

Mr. LEA (interrupting). Let me continue just a little bit further, if you please.

Mr. MAGEE. Yes.

Mr. LEA. There were 18,000,000, in round numbers, of cants?

Mr. EAMON. Of rived cants.

Mr. DISQUE. Of rived cants.

Mr. LEA. Which represented——

Mr. DISQUE (interrupting). Forty-five per cent of the logs. It would be about 37,000,000 feet of logs that made those cants.

Mr. LEA. So the 37 in addition to the 104——

Mr. DISQUE (interrupting). One hundred and four.

Mr. LEA (continuing). Would be about 141,000,000 feet of logs produced by the cost-plus contractors?

Mr. DISQUE. Exactly. Now, of course, all that——

Mr. MAGEE (interrupting). Now, right there, what I want to know there, so as to clear it up as we go along, and save time, is just what you mean. Were those logs all cut up? Is that what you mean? Or just logs that could be cut up?

Mr. DISQUE. No; they were all cut up. Well, now, we are talking about split cants, as I understand it, now.

Mr. MAGEE. No; the point I raise—and I would like to be cleared up right, if I have an erroneous impression; I thought I had made what I had in my mind clear—was this: That the testimony shows that 143,000,000 feet of airplane lumber was produced; that is the total, as I understand.

Mr. DISQUE. That is the total.

Mr. MAGEE. Now, what percentage of that was produced from logs or cants furnished by these three cost-plus contractors, the Airplane Spruce Company, the Warren Spruce Company, and the Grant Smith-Porter Brothers Co.; as I understand the Carey-Siems-Kerbaugh Co. not having produced any?

Mr. DISQUE. The understanding I have as to that is that the percentage of that is 143,000,000 that came through the operations of the cost-plus operators that we are now talking about, was 7.1 per cent.

Mr. MAGEE. As testified to by the president?

Mr. DISQUE. That is correct.

Mr. MAGEE. That settles it now.

Mr. DISQUE. That settles that point clearly.

Mr. MAGEE. Yes. That is what I had in mind. I wanted to get that fact, because it is a question that might very properly be asked of us by one of our colleagues.

Mr. DISQUE. Yes. That is a proper question; but it does not tell the entire truth of the operations of the cost-plus contractors.

Mr. MAGEE. Oh, I understand what that is; but I wanted to get at, and supposed it had been settled, just what percentage of this 143,000,000 was produced by those cost-plus contractors.

Mr. DISQUE. There was accumulated, though, on the day the armistice was signed, great numbers, millions of feet of logs produced by the cost-plus men.

Mr. MAGEE. But the point is, there were some down in what you call——

Mr. DISQUE (interrupting). They were all over the Northwest.

Mr. MAGEE. There at Yaquina Bay?

Mr. DISQUE. Mr. Magee, if you will let me make one statement while I am here, completely, I think I can get some truth in this record. You are continually breaking in to destroy the continuity of my statements.

Mr. MAGEE. I want to take an exception to that.

Mr. DISQUE. That is my statement, and I believe it.

Mr. MAGEE. I am trying to clear it up—it is in evidence here—as we go along, and I am trying to get the facts.

Mr. DISQUE. I know what you are trying to do.

Mr. MAGEE. Now, I take exception to that, Gen. Disque. Now, you must be courteous to this committee.

Mr. DISQUE. I will, if you will be courteous enough to let me make one complete statement.

Mr. MAGEE. Now, the trouble with you—we have gotten along pretty well until you come in here with your insinuations.

Mr. DISQUE. I didn't start the insinuations.

Mr. MAGEE. I took it up with my colleague, because I thought this would be one way to go over it all at once, and we would settle one thing before finishing it.

Mr. DISQUE. I would like to be permitted to make one statement here that would be continuous.

Mr. MAGEE. I know; but the committee must get done here; and I understood that it was entirely satisfactory to my colleague, and we must get these things cleared up.

Mr. LEA. I think we can now shortly get rid of that. About what number of logs were undelivered by the cost-plus contractors at the time of the armistice? What I mean is, which had not reached the mill or cut-up plant?

Mr. DISQUE. The figures given the other day in the place when this subject was brought up were 40,000,000 feet of selected logs in the water awaiting transportation to mills when the armistice was signed.

Mr. LEA. Does that include the logs in the timber?

Mr. DISQUE. That includes the logs that they had produced, as I understand it; all the logs scaled.

Mr. LEA. To what extent had the cost-plus operations advanced at the time of the armistice?

Mr. DISQUE. At the time of the armistice the cost-plus operations had developed into selective logging operations. The greater energy of all those contractors the entire summer was devoted to making preparations for winter logging, building the necessary railways and their production; therefore it was nothing to what it would have been had they ever got into actual logging, and they were not, in our estimation, doing anything material in the way of selective logging when the armistice came; but they were just at the edge, ready to put punch and production into it, and even in the face of that the production from our operations had advanced until in October, 1918, our cost-plus operators were producing 33 per cent of the total production of spruce logs in the Northwest, and in connection with that I think we should mention that had we been able to get such selective logging operations under way before that the result in Canada shows clearly that we probably could have sent instead of as we intended

half our men to Europe in December, I believe we could have sent three-fourths of them. Our selective logging operations convinced us, and the figures prove it, that it reduced the number of men by several fold necessary to get out the required percentage.

Mr. LEA: To what extent was the cost-plus operation designed to meet the 1919 program, as distinguished from the 1918 program?

Mr. DISQUE. They were entirely built up to meet the 1919 program which had been outlined to me as a program requiring 30,000,000 feet per month with a possible extension to 50,000,000 feet, and we were advised to play safe with a factor of safety of 25 per cent. This came clear through from the Supreme War Council in France.

Mr. LEA. I now want to place in evidence a statement showing the status of Government operations for the week ending October 26, 1918.

Mr. MAGEE. For what week?

Mr. LEA. Yes. It is simply to show the detailed report including the total production of each one of the cost-plus contractors with the number of sides operated by them during that week, and also showing the total output per spruce log per side per day, and the total amount of fir produced during that week.

Mr. MAGEE. As I understand, they were getting out material by doing selective logging as well as the other logging?

Mr. LEA. There were other loggers doing selective logging, were there not, Mr. Disque?

Mr. DISQUE. A few of them had started to do it.

Mr. LEA. You are familiar with this table, are you not [handing paper to witness]?

Mr. DISQUE. Yes; that is correct. That is a regular weekly report that came in showing our production.

Mr. LEA. From this table will you state the average production per side of spruce logs per day, by all the cost-plus operators for that week?

Mr. DISQUE. The average production per side per day in selective logging was 27,964 feet.

Mr. LEA. Now, will you state what amount of fir logs, in addition to the spruce, were produced by these same cost-plus contractors during that week?

Mr. DISQUE. In addition to the spruce production that week, the selective logging sides that I just mentioned as producing twenty-seven thousand and some feet, produced 363,054 feet of fir logs. The idea was there that we were still using fir for aircraft.

Mr. MAGEE. The spruce was what?

Mr. DISQUE. Twenty-seven thousand nine hundred and sixty-four feet of spruce logs per side. By a side I mean one section of an operation where a donkey engine and a certain crew work in the logs.

Mr. MAGEE. Yes. Does your statement show the amount of spruce as compared with the amount of fir?

Mr. DISQUE. There is not any possibility of comparison here, except of the total production of spruce during this week, 4,863,902 feet, and in addition to that this 363,000 of fir was merely incidental because a fine tree happened to be in the way and was dragged along.

Mr. MAGEE. You were also using fir in wing beams?

Mr. DISQUE. In wing beams; yes.

Mr. LEA. The total production, as I understand it, by the cost-plus contractors per week was 4,863,902 feet of spruce?

Mr. DISQUE. That is correct.

Mr. LEA. That is, logging production?

Mr. DISQUE. Yes.

(The statement heretofore referred to by Mr. Lea was marked "Exhibit 9, Disque, September 5, 1919.")

Mr. DISQUE. That same week the entire industry in the Northwest produced of spruce 9,504,595 feet, our operations producing 33 per cent, and that represents not a sudden jump, but a gradual increase in the percentage as produced by the cost-plus operators as against the total.

Mr. MAGEE. Have you a statement of fir that was produced?

Mr. DISQUE. That is not in this—the fir is not.

Mr. LEA. I would like also to introduce a statement showing the weekly production for the week ending August 17, 1918. I presume you are familiar with that?

Mr. DISQUE. Yes.

(The paper above referred to was marked "Exhibit 10, Disque, September 5, 1918.")

Mr. DISQUE. The total cost-plus production, 2,348,923 feet, or 14.86 per cent of the total.

Mr. MAGEE. What is that, spruce?

Mr. DISQUE. Of spruce logs. The independent operators that same week produced approximately 13,100,000 feet of logs, or 85 per cent.

Mr. LEA. Now, I call your attention to this table showing the percentages of spruce logs produced by independent loggers and by the cost-plus contractors in the different districts for the week ending October 26, 1918. You are familiar with that, are you?

Mr. DISQUE. I am.

(The paper above referred to was marked "Exhibit 11, Disque, September 5, 1919.")

Mr. LEA. Will you state the total produced by the independents for that week?

Mr. DISQUE. The independent loggers produced, the week ending October 26, 9,504,595, 66.98 per cent of the total spruce log production in the Northwest. The cost-plus operators produced that same week 4,686,407 feet, 33.02 per cent of the total.

Mr. LEA. What was the total weekly production of logs for that week?

Mr. DISQUE. Fourteen million one hundred and ninety-one thousand and two feet.

Mr. MAGEE. Were these logs that were delivered by the mills?

Mr. DISQUE. They were delivered as fast as they could get there.

Mr. MAGEE. No; I mean the figures you gave?

Mr. DISQUE. I do not know whether those logs got to the mills or not. Those logs were scaled and these reports made as soon as they got into the water.

Mr. LEA. I think it is perfectly apparent that they were not delivered.

Mr. DISQUE. There is no question that those logs were never sawed up. I think it would be interesting to put there that there were

some 40,000,000 feet of logs in the water the day the armistice was signed of our own.

Mr. LEA. Is there not a little modification required to that statement? You say in the water, but part of those were in the timber.

Mr. DISQUE. They have been produced by our cost-plus operations. They had been bought by the Government and paid for; the labor to produce them had been paid for.

Mr. MAGEE. As I understand it, there were 40,000,000 feet in the woods cut by the cost-plus operators that had not gotten to the mills?

Mr. DISQUE. Forty million in the water and forty million in the woods.

Mr. MAGEE. You mean 80,000,000 altogether?

Mr. DISQUE. Eighty million of selected logs, which we learned by long experience would produce not less than 50 per cent cants, and we learned, as I have read here, our production was 62 per cent of those cants became aircraft lumber. There is 24,800,000 feet of air craft lumber laying out in the woods that is not included in the 143,000,000 we reported as having shipped, which we paid for, which our operations developed and should be credited to us in all fairness.

Mr. LEA. Up to the time the armistice was signed had Siems-Carey-Kerbaugh done any logging?

Mr. DISQUE. Not a log. All their work was preparation work.

Mr. LEA. That was designed for the 1919 program?

Mr. DISQUE. As I stated several times, that is what we had in mind.

Mr. LEA. Is there anything further that you want to say in that connection?

Mr. DISQUE. As to selective logging?

Mr. LEA. Yes.

Mr. DISQUE. Yes; there is; and it is essential in view of the fact that the committee, I think, has been given a pretty broad impression that our office did not take advantage of all the opportunities to use the regular loggers, and it is a natural thing for the committee to feel that that would be unusual. I have stated many times what the efforts were to get assistance from loggers, and I have got a letter here which should be read into the record, from the president of the Pacific Northwest Loggers' Bureau, one of the most active critics of our operations, and a witness who has been before the committee and given you his views of our operations, and I think has had a great deal to do in forming the opinion that the committee would be justified in having if they do not get additional evidence from other loggers.

Mr. MAGEE. The only thing that occurred to me along that line—I do not think the committee has formed any opinion; I do not think they will until they are ready to make their report—was that there seems to be considerable dickering with the loggers and lumbermen here as to getting out spruce lumber, and that much time was spent in that way. As I understand, the evidence shows there were some 400 mills functioning here in the States of Oregon and Washington that had sufficient equipment to operate these mills. Of course, the Government had the power to commandeer these mills or equip them, and everything of that sort; in other words, they were not the

boss; the Government was supreme, and if the work of the Government was carried on by men who had experience and who had strength of character and who had decision, instead of dickering with these people they would have simply done as the Government did in many other instances, take the property and require them to do the work.

Mr. DISQUE. Was there any law existing at that time to do those things?

Mr. MAGEE. There is not any doubt about the power of the Government to commandeer.

Mr. DISQUE. There was a great deal of doubt in the minds of the Judge Advocate General and the Secretary of War, and if you wish I will show that to the committee, that it was absolutely impossible to do that at that time.

Mr. MAGEE. Congress gave great power to the administration, greater than was ever given in any country, and if there were any additional powers that were granted Congress would grant them at once. What I mean to say is that it seems to me that the question that immediately arises in the mind of any reasonable man that if the necessity existed, why the Government did not take prompt action and if they could not come to an agreement with the loggers or lumbermen to get out this lumber to meet the necessities of the Government in time of emergency and war, and take the properties and work them itself.

Mr. LEA. My impression as to that matter is that there have been a good many loggers who wanted to make terms with the Government, and the Government could not reasonably accept them, and failing to make the contract, which were unfavorable to them, as they thought, they felt a personal grievance. However, we want to get at the facts in this case. In the first place, how many mills furnished lumber to the Government during the war?

Mr. DISQUE. The comptroller says 410 separate mills.

Mr. LEA. Four hundred and ten mills did furnish airplane material to the Government during the war?

Mr. DISQUE. Yes, sir.

Mr. LEA. Under what sort of a contract, or under what conditions, did they furnish that lumber?

Mr. DISQUE. They were all offered and urged to accept contracts for either a fixed amount that they would state they could furnish over a period of 18 months, at a price which the lumbermen themselves practically set, and it was a very good price, and we had difficulty getting mills to sign the contract; although it had no penalty clause for failure to produce, yet it was freely offered to all mills. While this thought is up, gentlemen, I have tried to make this point more than once; I have started it now four or five times, and as it is going to come up now it will be four or five pages behind the place in the record where the ordinary mind would expect to receive it; but our expansion was not only justified but necessary from our own knowledge of the situation. It was said that we offered to the loggers to move their material and pay them only the cost. This contract was referred to as an example of the rather unfavorable way we handled the loggers, yet when it is realized—and the Frost contract, where the Puget Sound loggers were to participate, provided

15 per cent depreciation, 10 per cent renewal charge and a thousand a month to the manager, which was not a loss or even an even break, but a profit; but in the face of that I had invited the governors of the Pacific Logging Bureau to come to my office and discuss with me the terms under which we could make contracts in order to induce loggers who were losing men here for the draft, who were having their operations gradually become nonessential because of the quality of their timber, to induce them to move their logging material and equipment out of their own operations over into these selected spruce areas into which our cost-plus operators had been driving railroads. This meeting was held in my office on August 21.

Mr. MAGEE. 1918?

Mr. DISQUE. 1918, and included the governors of the Pacific Loggers' Bureau.

Mr. MAGEE. Well, that was at a time when it was apparent that Germany was whipped, was it not?

Mr. DISQUE. Mr. Magee, if you will let me continue this statement, I will answer any question you bring up, but you have already pushed this matter a page beyond what I want—

Mr. MAGEE. You must remember you can not boss this committee, General.

Mr. DISQUE. No; I can not; and if I can not give this statement in the way I want to—

Mr. MAGEE. You must understand that this committee is representing the Government and it is the boss here.

Mr. DISQUE. You are representing the Republican Party.

Mr. MAGEE. Now, I reply to that that we represent the Congress—both the Republican and Democratic Parties.

Mr. DISQUE. I am neither one. I have no interest in your parties.

Mr. LEA. I suggest that we are not getting anywhere.

Mr. MAGEE. But the General must understand that he is not the boss of this investigation. Now, there is no feeling about this, but I simply state that. When you understand that, General, you will be treated with the greatest courtesy, and you will be given every opportunity to make every statement you desire, and you can designate witnesses within reason whom you wish to have called.

Mr. DISQUE. You are extending the record all the time, so that no one will understand what I am talking about.

Mr. MAGEE. I object to such statements as that. I think you are very unfair and that your remarks are entirely unjustified and unwarranted, and we will get along all right, as soon as you appreciate that you are a witness called by the committee to testify. There is no need of any misunderstanding, so far as you are concerned, as to this committee. It has extended every courtesy in the world, and you must not make these statements in reference to the committee. The committee must maintain its dignity as sent here by the House of Representatives, and you can not boss this committee. You must get that out of your mind at once. You may go on and make any statement you desire in reference to the matter.

Mr. DISQUE. Did you think, Mr. Magee, that the war was over in August, 1918? Was there anyone on earth who did not think we were getting whipped then?

Mr. MAGEE. What I had reference to was that it was pretty clear in the minds of everybody after the battles of Château-Thierry and

Belleau Wood and those battles that the crisis had been passed, and I presumed you would agree with them as a military man.

Mr. DISQUE. I do not. I do not believe there was one man in a thousand in August, 1918, that had any idea that the war would end, and I do not believe you had.

Mr. MAGEE. You had that opinion, and that settles it.

Mr. DISQUE. It is very easy to say it was all over. Will you let me make my statement complete?

Mr. MAGEE. You have been told that a good many times.

Mr. DISQUE. If you will let me I will go back, so it will be a continuous story. I invited the governors of the Pacific Loggers' Bureau to come to my office in order that I might get their views and cooperation with a view to putting the experienced loggers with their own equipment into the operations which had been developed and prepared by our cost-plus operators. That was with the view of conserving energy, getting the experienced men and keeping busy that part of the industry that was here in existence, without adding to it unnecessarily. The board of governors met in my office on August 21 and we outlined the plans, and it was understood that I was talking entirely about our operations in the Yaquina district, in the Blodgett timber and the Siletz timber where we had estimated that we needed from 60 to 75 logging sides.

Mr. MAGEE. That is where these two railroads are built?

Mr. DISQUE. Out at Toledo. These gentlemen sat in my office the better part of an afternoon or evening. We got a concrete proposition in front of them and they went away for private discussion and came back the next day and had a further discussion and then went to Seattle and then got up their letter of August 30, setting in type the proposition which they made to me in reply to my invitation to come together in a conference and take up the matter. This letter reads as follows:

PACIFIC NORTHWEST LOGGERS' BUREAU,
Hoge Building, Seattle, August 30, 1918.

Col. BRICE P. DISQUE,
*United States Signal Corps,
Yeon Building, Portland, Oreg.*

DEAR SIR: Pursuant to arrangements made at Wednesday's meeting, August 21, between yourself and the board of governors, Pacific Northwest Loggers' Bureau, we await your designation of camps and mills producing material nonessential to Government requirements.

For your information the following is a memorandum of the method of arriving at figures submitted to you on above date as a basis for proposed spruce contracts:

"Figuring 40,000 feet per day as a normal output for one side in a logging camp, while cutting all the timber that is on the ground and figuring that one side will earn \$1 per M feet on the average in normal times, it makes the earning capacity of a side \$40 per day

"If spruce is 50 per cent of the total stand of timber and only 40 per cent of the spruce is taken out, assuming that is the quantity of No. 1 and No. 2 logs that will be found in spruce timber on the average, this output of No. 1 and No. 2 spruce logs is equivalent to 20 per cent of the total stand of all the timber, or one-fifth of the same.

"Figuring the average cost of logging to-day at \$10 per M, when taking out all the timber that is on the ground, this would make the cost of selective spruce logging figured on the above basis \$50 per M feet, and the earning capacity of the equivalent \$5 per M, so as to equal the earning capacity in normal times, as above set forth.

"When the stand of spruce is less than 50 per cent of the total stand of timber, the cost of selective spruce logging will increase accordingly.

"Based on the above the earning capacity of a side should be as follows :

	Per M.
50 per cent stand of spruce-----	\$5.00
30 per cent stand of spruce-----	8.33
25 per cent stand of spruce-----	10.00
15 per cent stand of spruce-----	16.66

"We presume that in making the above figures no selective logging will be undertaken containing less than 25 per cent of spruce. Under such circumstances we think contracts could possibly be closed to log on the following basis :

"Pay the loggers \$50 per M for selective spruce logging with a guarantee of a minimum earning of \$5 per M with a maximum limit of \$10 per M on their output."

Referring to our recommendations at the meeting for a further coordination on the part of the Government in its efforts to stimulate production in the logging and lumber industry, we beg you to turn to your stenographic record of our meeting and give to this matter your careful consideration, and invite your further inquiry.

Many governmental departments are now directing the industry what to do, each without reference to the activities of the other. As a suggestion, is it not possible that the power and scope of the New Aircraft Corporation, through its board of directors, be broadened to take in the administration of more of the matters pertaining especially to the logging industry? For instance, dealing with questions of price; the relative production of the various kinds of wood; terms and conditions of sale; towing; accounting; wages and conditions of labor, and many other matters.

Again referring you to your record of our meeting, this bureau wishes to renew its suggestion for representation on the board of directors of the New Aircraft Corporation. While you gave us no definite answer, and we did not press one, we are pleased to believe that this matter was favorably received by you. In view of the vast combined output of our members, estimated at over two billion seven hundred and fifty million for 1918, we ask this.

Awaiting your reply, we are,

Yours, very truly,

PACIFIC NORTHWEST LOGGERS' BUREAU,
By E. B. CHINN, *President*.

Mr. LEA. Who signed that letter?

Mr. DISQUE. It is signed by the Pacific Northwest Loggers' Bureau, by E. B. Chinn, president.

Mr. MAGEE. Is that the association with which Mr. Butler is affiliated?

Mr. DISQUE. That is the association with which Mr. Butler is closely affiliated. Mr. Chinn is the man who manages this association. He put this before me as an experienced logger, a man in whom I had a right to have confidence, and asked me to pay him and his bureau \$50 per thousand to go into our operations and log spruce. Now, let us see what it amounts to. We will assume that he is correct in saying that the average logging side will produce 40,000 feet per side per day, and at \$1 profit is fair, and therefore a side should earn \$40 per day profit. Then he says that you can only get 8,000 a day, one-fifth of that, out. Therefore you must give \$5 a day profit per side in order to get that—or per thousand in order to get that \$40. Now, he is asking \$50 a thousand to do this selective logging. What are the results? I have just testified that we got an average of 27,000 feet with our cost-plus operators, who have been called inexperienced, proven to be inexperienced, so far as the volume of evidence is concerned—27,000 feet per side per day was produced by those cost-plus contractors. The cost, according to our final figures, including sale and salvage value, the liquidation charges, is \$38.50 per thousand, in round numbers, for our selective logging, and that includes every nickel, including my salary and every other man's salary connected

with our operations. Then according to his letter he wants them to be permitted to earn \$10 per thousand. That is the maximum set, \$50. Ten dollars added to our \$38.50 would run it up to \$48.50, so that they would get, under his proposition, \$10 per thousand, we having averaged \$27 a thousand per side. His company and his fellow members on that board only wanted the Government to pay them a profit of \$270 per side per day, when they were willing to acknowledge, and any man will acknowledge, that \$40 is all the industry expects under normal or ordinary times or conditions. That is why I had to be on my guard. That is why those fellows are criticizing and discrediting our operations. They could not put that kind of stuff over, and they knew it.

Mr. MAGEE. Do you question their patriotism?

Mr. DISQUE. I do.

Mr. LEA. Mr. Chinn and Mr. Butler were both before your committee complaining that they could not get contracts to the loggers. Was there any other reason than this that they could not get them?

Mr. DISQUE. To the loggers?

Mr. LEA. That they could not get contracts from the Spruce Production Corporation?

Mr. DISQUE. That is why they could not get them, because I would not come to terms of paying them seven times as much profit as the ordinary logger expected from his operations, and when I already had the evidence, the cold figures in my office, what the cost-plus operations were costing us. They may not have known it, but I have them. We have been through several months of experience, and we were not the novices we were when we came out here. We had the cleanest, most able advisers from among the lumbermen in the Northwest. I could have stood against things like this alone, but I had advice, and I had clean, patriotic, and honest advice.

Mr. LEA. Now, is that the letter you referred to a while ago, that we interfered with your reading?

Mr. DISQUE. That is the letter, and that is one of the subjects that I wanted to present to this committee in a continuous story, so that it would be read clearly and understood by any intelligent person who might read this record.

Mr. MAGEE. The men who appeared before the committee impressed me as being very patriotic men.

Mr. LEA. They presented what was evidently a profiteering contract, and condemned you for not giving it?

Mr. DISQUE. It was the worst I ever saw in my life.

Mr. MAGEE. Mr. Butler is a brother of Dr. Butler, who is president of Columbia University, in my State.

Mr. DISQUE. The brothers of a lot of prominent men are the worst crooks that you meet.

Mr. MAGEE. Do you designate these men—

Mr. DISQUE. I do not designate them as anything except men who appeared before this committee and misrepresented the true situation.

Mr. MAGEE. The personal reputation of these men—

Mr. DISQUE. Why are you boosting their stock? Do you want them—

Mr. MAGEE. No, no; nothing of that sort, but men of the character of those men—

Mr. DISQUE. Did you subpoena them or did they ask to come before the committee?

Mr. MAGEE. I haven't anything to do with subpoenaing a witness. I only know that they came, and they impressed me as being prominent men in the community and as patriotic citizens who were willing to do everything in their power to aid their Government in the war industry. They impressed me as being very honest, efficient, and capable men, of long experience, who knew their business.

Mr. DISQUE. Did any of them ever log spruce—those men who came before the committee?

Mr. MAGEE. Well, they have given their testimony in full in the record.

Mr. DISQUE. I do not think they ever did.

Mr. MAGEE. What I mean to say is that I do not think I would feel justified in sitting here and having those men who have appeared as witnesses before this committee designated in the manner in which they have been designated, without stating to the public that men like Mr. Butler, Mr. Chinn, Mr. Chisholm, Mr. Frost, Mr. Lightner, and others who have been called before the committee, appear to me to be as patriotic citizens as I have come in contact with, and men who were willing and desirous of doing everything to aid their country in time of war that was within their power. I think we ought to be fair and just to everybody.

Mr. LEA. It does not look like anybody could approve of such a contract as that. It would be grafting upon the Government to permit it to exist.

Mr. DISQUE. These men later on made an offer which included a depreciation and interest charge, which was fair, and would not have been a loss but a profit to them. We accepted that in all sincerity.

Mr. MAGEE. Yes; but the point I make, General, is this—it is the point that occurs to me—that the power of the Government in the premises was supreme.

Mr. DISQUE. I have said that we had no power like that; and if you will let me prove it, I will bring in the papers.

Mr. MAGEE. May I make a statement? I would like to do so.

Mr. DISQUE. All right, sir.

Mr. MAGEE. Perhaps I might say if you will permit me to.

Mr. DISQUE. Well, that is perfectly all right.

Mr. MAGEE. I say that the Government is supreme; the Government, being a sovereign power, can do exactly what it chooses in the premises. If any power is lacking in time of war, Congress would give the power in record time, and it was not for this one and that one to say what they would like to do. The Government had the power to act in the premises, if they had plants or machinery or anything of that sort to commandeer, and the Government could exercise the power to commandeer and take possession of and run the property, just as the Government has done in a number of instances.

(Whereupon, at 12.50 p. m., the committee took a recess to 2.15 p. m.)

AFTER RECESS.

The committee met at 2 o'clock p. m.

(The report referred to during the morning session is copied into the record, as follows:)

Ex. 10. A DISQUE, SEPT. 5, 1919.

Statement of cut-up plant and outside mill shipments of finished airplane lumber.

¹ The footages shown above were delivered on contracts placed by outside brokers or parties in Washington prior to the time when the Spruce Production Division took charge of airplane lumber shipments. These footages are in addition to the footages shown shipped under direction or by the Spruce Production Division and the United States Spruce Production Corporation. This additional lumber was of the old specification and not very satisfactory for airplane purposes.

I hereby certify that this is a correct statement of the shipments made by and under the direction of the Spruce Production Division and the United States Spruce Production Corporation as it appears from the records of shipments in this office, which is compiled from the tallies of the cars shipped, and includes all the cars moved under and by the direction of the traffic section of the above-mentioned division and corporation, which traffic section controlled all shipments of airplane lumber from the Northwest during the period here shown.

HENRY E. WALKER.

Subscribed and sworn to before me this 5th day of September, 1919.

ROY H. HATFIELD,

Notary Public for the State of Oregon, County of Multnomah.

My commission expires January 4, 1921.

TESTIMONY OF BRICE P. DISQUE—Continued.

Mr. LEA. Mr. Disque, what was done with the 40,000,000 logs in the woods at the time of the armistice?

Mr. DISQUE. My understanding is, from the officers of the corporation, that practically all of them have been brought out and sold at the regular prevailing prices.

Mr. LEA. That was a matter that happened after you left the corporation.

Mr. DISQUE. That happened after I left the corporation.

Mr. LEA. Now, you spoke of the commandeering matter. I am not familiar with that, and I wish you would briefly set that forth in your own way.

Mr. DISQUE. We realized early that it would be necessary to commandeer in some instances in order to expedite our production and applied to the War Department for authority to take such action. We were told that the authority did not exist covering timber or logging railways, and a bill was introduced in Congress and passed through the Senate in comparatively short time, I think, in March. It then went to the House, where the committee reported it out favorably, according to the reports that came to me. It was then drawn back into the committee, because lumbermen from the South had opposed it. As I understood it, practically no lumberman in the Northwest opposed that bill. It was some time about March that I went to Washington to try and get that bill rushed along. We felt the need of it, felt that it was essential, but Mr. Dent, chairman of the House Military Committee, who was handling that bill, told me, in company with Congressman Fordney, who went there with me, that the bill could not be passed the way the Senate had passed it, that they would have to amend it and put it in the same class as those bills which provided for taking over land for cantonments, which required condemnation proceedings to be instituted in the Federal courts. I think it was something in July, maybe August, that the bill finally was passed, which required us to go to the courts for condemnation proceedings in order to commandeer timber or logging railways. It was not the bill we wanted and really was of very little value to us. We only took action, as I recall, in one instance under that bill, and that was in the case of the Goodyear Timber Co., who were trying to hold out for \$2 or \$3 more per thousand for their stumpage than any other timber owner in the Northwest. We felt that it was an exorbitant price, and we took their case to the Federal court to have it decided.

Mr. LEA. That is the company having their place of business at Clallam Bay?

Mr. DISQUE. That is the company of which Mr. Lightner is manager, and which company, by the way, among loggers, so far as their logging operations are concerned, is a very small one. A company, however, with large timber holdings, and reported to have large financial backing.

Mr. MAGEE. Did you take possession of any of the lands?

Mr. DISQUE. Of the timber?

Mr. MAGEE. You took possession of it?

Mr. DISQUE. Yes.

Mr. LEA. That is, you took possession of the timber pending the suit.

Mr. DISQUE. Oh, yes. We were allowed, as soon as we instituted proceedings, to go in and take possession.

Mr. LEA. You engaged in logging there, did you?

Mr. DISQUE. Well, we did not get that far when the armistice was signed. My recollection is that we negotiated with those folks up until, I think, in October, when we took the case into the court. Other timber owners in that district were willing to let us have their timber at \$4, including companies as large and important as the Goodyear. The Goodyear people, according to Mr. Carey, who had been negotiating with them, wanted \$6 or \$7. In their conference with me they would not tell me how much they would take.

Mr. LEA. Did you have any opinion of the Judge Advocate General that you wanted to refer to, or is that all you have to say about it?

Mr. DISQUE. That is all. The Judge Advocate General, of course, originally decided that the commandeering power did not exist for us.

Mr. LEA. Now, was there any other subject there that you were prepared to take up?

Mr. DISQUE. I would like to take up the matter of the railroad extension in Clallam County. There are two gentlemen in the city, and I think in the room to-day, each of whom owns a logging road, a main line logging road of 40 miles or longer in length. One of them this morning, Mr. Alex Polson, president of the Polson Logging Co., owns 42 miles of logging railroad, in addition to spurs to go into the timber. He told me that one of the principal officers of one of our transcontinental lines in passing over his road recently remarked that 22 miles of the Polson logging railway was better than any 22 miles of the Milwaukee road between St. Paul and Seattle. Mr. Mark E. Reed, president of the Simpson Logging Co., is also here. Their company owns a logging railroad that is more than 40 miles in length. He told me this morning that their line was as good as any part of the transcontinental lines. Both of those gentlemen will testify if called that it is absolutely essential that the main line logging railroad be built as good, if not better, than any ordinary transcontinental road. That is why it was necessary that the line extending from Joyce to Lake Pleasant should be a well-built road, and that is why the evidence that has gone into your testimony stating that logging roads were built for \$15,000 a

mile was entirely irrelevant and did not refer to a main-line road built to stand a traffic of 400 cars a day, which this road had to stand if it carried out our program.

Mr. LEA. Will you briefly state what that program is that required that number of cars to be operated?

Mr. DISQUE. The Siems-Carey-Kerbaugh Corporation, in order to accomplish their contract, had to produce and put over this line what was carefully estimated to be a million and a half feet of logs a day, and one of the oldest and most experienced loggers and lumbermen of the Northwest, Mr. E. H. Cobb, attended a meeting of the loggers' bureau in Seattle when they were considering putting their equipment into the Siems-Carey-Kerbaugh operations. He recommended to that meeting that they leave the matter alone, saying, as I have had it reported by several gentlemen, that he had been out there, studied their operations, considered it carefully, and believed that they were capable of doing the thing that they had contracted to accomplish, and it would be a mistake and interfere with the Government program for the loggers at that time to attempt to interfere with the Siems-Carey-Kerbaugh operations.

I would like also, right here, to correct the record in that the name Siems-Carey is used frequently as representing the company that we were dealing with. We were dealing entirely in this operation with the Siems-Carey-H. S. Kerbaugh Corporation.

Mr. MAGEE. That appears in the record.

Mr. DISQUE. It was a new corporation for this purpose alone, and a corporation which never at any time, so far as I know, had anything in common with the American International Corporation. And, furthermore, the Siems-Carey Co., contractors, as such, never had anything, so far as I know, in common with the American International Corporation. The American International Corporation never had anything in common with the Siems-Carey contracting company so far as I know. The real fact being that Siems and Carey, as individuals, formed with the American International Corporation what was known as the Siems-Carey Canal & Railway Corporation of China, for one specific project, and in no other way has the American International Corporation any interest financially, directly or indirectly, in the operations undertaken in connection with the Spruce Production Division.

Mr. LEA. Let us see if we understand this; there were three corporations or two corporations?

Mr. DISQUE. Three.

Mr. LEA. Three corporations concerned?

Mr. DISQUE. Three.

Mr. LEA. Then Siems and Carey, as American contractors, have nothing to do with the American International?

Mr. DISQUE. Not as American contractors.

Mr. LEA. But as contractors in China they did have?

Mr. DISQUE. Exactly.

Mr. LEA. John D. Ryan, being an owner of stock in the American International, would legally be entitled to no profit from the Siems-Carey-Kerbaugh Corporation.

Mr. DISQUE. Not legally or otherwise. I do not think Mr. Ryan knew anything about the Siems-Carey-Kerbaugh Corporation. In

fact, I am positive that he did not, that he was not interested directly or even in the most indirect manner.

Mr. MAGEE. Well, he knew about it; you would not say, General, that he did not know about it?

Mr. DISQUE. He knew of its existence after I brought it to his attention.

Mr. MAGEE. He refused to sign the contract, saying to the Secretary of War that it would be improper for him to sign it.

Mr. DISQUE. He did that after the corporation had been brought to his attention by me.

Mr. MAGEE. I say, he knew about it.

Mr. LEA. Is there anything in particular that you would prefer to go to next? If you have the data there we will take up the proposed railroads to Lake Pleasant.

Mr. DISQUE. To Lake Pleasant?

Mr. LEA. Yes. Now, in reference to these proposed routes, had the question or consideration of a route through the property of the Goodyear people been considered before this difference arose about commandeering their timber?

Mr. DISQUE. Oh, yes; several months.

Mr. LEA. That is, the timber controversy came later?

Mr. DISQUE. That followed our consideration of the method of getting into the Lake Pleasant district by some months.

Mr. LEA. Can you state whether or not there is any wagon road paralleling the proposed railroad from Clallam Bay towards Lake Pleasant?

Mr. DISQUE. The only information I have is from our Federal Forestry office, which states that there is not.

Mr. LEA. Did you place that report in the record yesterday?

Mr. DISQUE. I did.

Mr. LEA. I was under the impression that you only read some excerpts from it.

Mr. DISQUE. I gave the entire report to the chairman to be put in the record.

Mr. LEA. Does anyone know if that is in the record today? Have you that record here?

Mr. DISQUE. I gave my copy to the chairman here. We have other copies at the office.

Mr. LEA. The reporter can go ahead and place it in the record.

Mr. DISQUE. That is the Nelson report and the letter accompanying it from Mr. Cecil.

(The report above referred to is copied into the record in full as follows:)

(Clallam Spruce.)

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE DISTRICT 6,
Beck Building, Portland, Oreg., April 4, 1918.

Col. BRICE P. DISQUE,

Signal Corps, Yeon Building, Portland, Oreg.

DEAR SIR: I am inclosing for your information a report submitted by Logging Engineer Nelson on the Hoko River and adjacent areas.

It appears from this report that there is spruce sufficient in quantity and quality to justify a considerable outlay in making it available for use. If it is expected that it will be necessary to considerably augment the present output

In the immediate future it would seem the best proposition would be to undertake to reach the timber by the road via Clallam Bay and the Hoko. Even though it was decided to also develop along one of the other routes in order to reach other timber around Lake Pleasant (Lake Tyee) and then south, the above would probably be the most feasible undertaking for immediate development.

From Nelson's report it appears that the proposed route of the Milwaukie is just as long as that via Lake Crescent and down the Solduc, that it is a more difficult route in many respects, and further, it has not the advantage of the latter in opening up considerable areas of timber prior to reaching the region around Lake Pleasant (Lake Tyee). It will undoubtedly be necessary to build the latter route some time in order to develop the timber along the line and I do not believe that two routes so close together in the same territory will be justified.

I suggest, therefore, the possibility of getting the two companies together and selecting the more feasible of the two routes for development. All the timber on the Hoko would necessarily have to come out by the way of Clallam Bay in case the railroad was built up that stream, in order to justify its construction. In addition to the Lake Pleasant timber, however, the Dickey might be allotted to the other road to compensate them for the construction of their line. I believe that it is extremely important that one or the other of these two routes with mainline connections be extended to west of Lake Pleasant and then south to open up timber on the Hoh and other streams having large possibilities in the way of spruce production, eventually to connect with the Polson road from Grays Harbor. Such a line would pass through the heart of the finest spruce region of Washington, and with the necessary spurs would make this material accessible.

Mr. Nelson and I will be glad to call and discuss this matter with you further if you so desire.

Very truly, yours,

GEO. H. CECIL, *District Forester.*

REPORT ON HOKO RIVER AND ADJACENT AREAS, BY L. A. NELSON, LOGGING ENGINEER,
UNITED STATES FOREST SERVICE.

PORTLAND, OREG., April 4, 1918.

This report is based upon a rather hasty examination of the timber on the Hoko River, the headwaters of the East Fork of Dickey River and on Lake Creek. The purpose of the examination was to determine the quality of the spruce and the best route or routes for developing transportation to log the timber.

The county cruise reports indicate that on the Hoko River there are 56 sections, 22 of which are classed as "good," 20 as "fair," 12 as "poor" quality spruce, and 2 are not classified. The stand of spruce on the area by quality is:

"Good" quality	-----feet b. m.	178,000,000
"Fair" quality	-----do	62,700,000
"Poor" quality	-----do	15,000,000

Total	-----	255,700,000
-------	-------	-------------

Coke Creek area:

"Good" quality (60 per cent)	-----feet b. m.	17,300,000
"Fair" quality (40 per cent)	-----do	11,300,000

Total	-----	28,600,000
-------	-------	------------

Quality.—The quality of the spruce on the watershed is good and will produce at least 15 per cent of No. 1 specification airplane lumber. There are small areas that will produce a much higher percentage, but these must not be considered as indicative of the stand; the whole watershed must form the basis of average. The major portion of the good-quality type is of a good size, with long, clean boles, which in some instances are 150 feet in length, without limbs. The county cruise records class the spruce under three classifications—good, fair, and poor. This grade classification was checked on 20 sections and found to be correct as applied to sections, but a section classed as poor was sometimes found to have a good quality spruce on small portions of it. Taking the watershed as a whole, the classification is generally reliable.

The most compact stand of good quality spruce is located in Twp. 30 N., R. 13 W., a portion of which is on the Hoko River.

The spruce on the East Fork of Dickey River is similar to that on the Hoko River. County cruise records give the following results for spruce in the NE. $\frac{1}{4}$ of Twp. 29 N., R. 14 W., to the head of the river in Twp. 30 N., R. 13 W., as outlined on the accompanying map.

Dickey River (East Fork) :

Good quality, 76 per cent.....	feet.....	180,000,000
Fair quality, 23 per cent.....	do.....	55,200,000
Poor quality, 1 per cent.....	do.....	500,000

Total	235,700,000
-------------	-------------

Lake Creek, Lake Pleasant area :

Good quality, 64 per cent.....	feet.....	80,000,000
Fair quality, 28 per cent.....	do.....	35,400,000
Poor quality, 8 per cent.....	do.....	10,400,000

Total	125,800,000
-------------	-------------

The total amount of spruce in the logging chances outlined is as follows:

Coke Creek.....	feet.....	28,600,000
Hoko River.....	do.....	255,700,000
East Fork, Dickey River.....	do.....	235,700,000
Lake Pleasant.....	do.....	125,800,000

Total	645,800,000
-------------	-------------

Of this amount it is believed there can be secured at least 15 per cent airplane lumber, or nearly 100,000,000 feet.

Accessibility.—The main body of spruce on the Hoko River watershed lies a distance of from 14 to 22 miles southwesterly from Clallam Bay. It will require a railroad to log the timber. Logs in small quantities are being driven down the river for a distance of 7 miles, but only on flood water, which occurs about twice each year.

Railroads.—There are three railroad routes by which the timber can be reached, and each will be discussed.

Hoko River Railroad.—The Goodyear Lumber Co. operates a logging railroad from West Clallam into its holdings on the watershed of Clallam River east of the Hoko River. Their booms are located at West Clallam, where the logs are made up into rafts for towing. These rafts are of two types, known as flat and cradle rafts. The latter type of raft is not as liable to break up in rough water as the flat or regular type. Rough water at times makes it impossible either to make up rafts or to tow them to the mills. The capacity of the present rafting facilities is from 400,000 to 500,000 feet of logs per day. Additional rafting equipment could be installed to double this daily capacity. The above company has completed a preliminary survey of a railroad from its booms for a distance of 14 miles up the Hoko River, and the final location for about one-half this distance. A portion of this 14 miles is fairly heavy and the remainder light construction. From the end of the preliminary survey the construction is light, and it is possible to build the road anywhere desired on easy gradients. The gradient on the 14 miles does not exceed 3 per cent going in with empties and 1 per cent against the loads coming out, and only for short distances. About 5 miles out of Callam Bay the road goes through a body of about 28,000,000 feet of spruce lying on Coke Creek (Lamb Creek). The boundary of the main body of spruce is reached in sec. 13, T. 31 N., R. 14 W., 12 miles out, and about 7 miles more of main line would tap the remainder of the watershed. Logging spurs are necessary to reach the timber on the tributary streams. The road could be extended into the East Fork of Dickey River over a low pass, thus opening up a body of good quality spruce.

I estimate that it will require about 1,200 men 90 days to construct the road from tidewater into the main body of timber. A wagon road practically parallels the railroad survey a distance of 5 miles, and the county contemplates extending it 7 miles farther this year if possible. By cooperation with the county the road could be completed quickly for this distance and used for transporting men and camp supplies for the railroad construction. Beyond this point a temporary road will be necessary or pack horses must be depended

upon. The work must be pushed during the comparatively dry months or roads or trails will not stand up under heavy traffic. The railroad would be capable of handling as heavy a log traffic as can be rafted at the booms.

Chicago, Milwaukee & St. Paul Railway (Seattle, Port Angeles & Western).—The above railroad has its present terminus at Twin, Wash. Their projected line runs westerly to Pysht, then up the Pysht River and across the divide in sec. 35, T. 31 N., R. 12 W., then down Beaver Creek and the Solduc River. The construction of the mountain portion of the road is very heavy and in bad soil for slides.

To reach the timber in the Hoko River Valley the above line must be extended from Twin to Lake Pleasant in sec. 34, T. 30 N., R. 13 W., a distance of about 32 miles, then through a low pass in sec. 13, T. 30 N., R. 30 W., and down the Hoko River, and can be extended into the East Fork of Dickey River. In the vicinity of Lake Pleasant the road will tap an area of good spruce, and the road from sec. 34 (Lake Pleasant) into the Hoko Valley will be through a heavy stand of good-quality spruce.

Location of booms.—The location of the log booms will determine the length of rail haul over this railroad. If they are to be boomed at Port Townsend the rail haul from Lake Pleasant will be 110 miles, if at Port Angeles, 60 miles, at Pysht about 25 miles. At the first two places good boom locations could be secured, at Pysht the water is shallow and some dredging might be necessary, but booming can be done there. The best location for booms along this railroad is at Discovery Bay, about 12 miles west of Port Townsend, or 98 miles from Lake Pleasant.

Operation.—The road crosses several divides and consequently has a considerable amount of grade against the traffic coming in and the loads going out. The traffic going out will all be loads, and lifting it over these divides makes a high cost of operation, especially with heavy gradient. The haul should be as short as possible consistent with good booming facilities in order to have the minimum rolling stock in use with a maximum of output. An average car of logs will scale about 7,500 feet and for a daily output of 300,000 feet will require 40 cars. This, then, means 40 cars at camp, 40 at the boom, and 40 on the road if the round trip from camp to booms can be made in a day. This does not take into account unavoidable tieups or bad order cars which would increase the number needed.

Timber supply.—This road would tap about 45 sections of timber on the Pysht watershed, 22 of which are owned by the Merrill & Ring Lumber Co. This company is operating a logging railroad in this timber, dumping the logs into the bay at Pysht. The extension of the Chicago, Milwaukee & St. Paul Railway (S. P. A. & W.) up this valley would probably not get all of the timber haul, especially that of the Merrill & Ring Co.

In the Solduc, Bogachiel and Hoh River valleys there are large bodies of timber that will supply tonnage for the extension.

Lake Pleasant, Hoko and Dickey River route.—A branch from the road constructed down the Solduc River into the Hoko Valley would start in sec. 34 and cross a low pass in sec. 13, T. 30 N., R. 13 W., and continue down the Hoko River on about 1½ per cent grade into the main body of spruce.

The timber on the East Fork, Dickey River, could be opened up by an extension of the road from the Hoko Valley, as the country is fairly flat between the two rivers. This development would open up the main large body of spruce in Clallam County.

Solduc route.—A proposed railroad has been surveyed from Joyce, a station on the Seattle, Port Angeles & Western Railway (C. M. & St. P. Ry.) to Lake Crescent, then along the north side, crossing over to the Solduc Valley and continuing down it to Forks and projected to Grays Harbor.

The road from Joyce to Lake Pleasant is approximately 33 miles in length. The construction from Joyce to Lake Crescent is light, with the exception of about one-half mile. The construction along the lake is in rock for about one-half its length, with one short tunnel; the remainder of the distance is not difficult.

West of the lake the road is on the south side of Solduc River and is of exceptionally easy construction. With the exception of the rock work along the lake, the construction is in gravel formation, which makes a good roadbed and easily maintained. The maximum gradient against the loads coming out is 1.2 per cent.

Timber.—The timber on the Boundary Creek watershed in secs. 8, 9, 10, 15, 16, 17, and 18, Twp. 30 N., R. 9 W. will be made accessible by this road. In the upper Solduc River watershed there is a large body of about 2 billion feet of timber that would be opened up, and the timber on the Galawah River can be reached through low passes in Twp. 29 N., Rs. 11 and 12 W., eliminating the long haul down that river and back up the Solduc.

In the vicinity of Lake Pleasant there is a good body of spruce of airplane quality. The development of the Hoko River timber from Lake Pleasant would be the same as outlined in the description of the Seattle, Port Angeles & Western Railway.

Logging.—The spruce areas at the head of the Hoko and East Fork Dickey Rivers offer no difficult problems for a logging operation. In fact the chance can be said to be an easy one. The slopes are as a rule gentle and the gradient of the main streams is light, permitting railroad construction up the valleys or along the slopes. Only spruce areas will be logged, but all species removed on such areas. Heavy logging equipment of the best type will be required to get a large output per unit as the timber is generally of a good size.

If the railroad is constructed from Clallam Bay and logs rafted there the equipment and organization of the Goodyear Lumber Co. can be switched from their present operation and additional equipment added. Their present operation can not continue if a large output is expected from the Hoko area as the total boom capacity would be needed and the output from present operation could not be taken care of. If the road is built in from Lake Pleasant the logging must be contracted for or operators induced to go in, unless it appears expedient for the Government to open up logging camps of their own. The output of the camp is only limited to the amount that can be handled by the railroads, and the number of men and amount of equipment that can be secured.

Conclusions.—The heaviest stands of best quality spruce lie on the Hoko and East Dickey River watershed and the region that must be opened up first for airplane stock. The problem to be solved is not if it should or should not be opened—but by which route or routes shall it be opened up. There are three routes each of which has its good and bad points, which must be considered in deciding on the one that will give the best results now and for the opening up of additional timber.

The construction and operation of the railroad from Clallam Bay up the Hoko River will give the quickest results in log production and at the same time a reasonably steady supply can be assured. The time lost in rafting on account of storms can be offset somewhat by enlarged booming facilities. Logging can be started in less than 60 days on Coke Creek (Lamb Creek), and on the main area in ninety days. The timber on the headwaters of East Fork of Dickey River can be also opened up by this route.

If the Seattle, Port Angeles & Western Railway (C., M. & St. P.) extend their road to Lake Pleasant, operations can be started on the Hoko area about November 1, 1918, but the operations around Lake Pleasant can be started before that time. The extension of this road into the Hoko and Dickey River would probably not be constructed by this company but by the company having the logging contract and considered as a logging road. The above is also true of proposed road from Joyce to Lake Pleasant via Lake Crescent.

In order to expedite production it may be necessary to construct the road up the Hoko River. The construction over one of the other routes to be rushed and connected with the one up the Hoko as soon as possible to give an outlet for logs if storms prevent rafting on Clallam Bay, and also for opening up additional operations. Three operations can be carried on, one in the Hoko, one in the Lake Pleasant region, and one on the East Fork of Dickey River. The territory must be apportioned, giving each road its just share. Each must have sufficient timber to warrant the cost of building the logging roads.

Investigation of routes.—A further investigation of the Milwaukee and the Lake Crescent routes is necessary to determine which is the best. This must be considered, not only from the standpoint of gradient but on the character of the country and soil, the latter in regard to the possibility of slides holding up shipments. The amount of timber available to each road is another factor that should be given weight in the decision.

The Milwaukee is probably committed to building the line projected but if the other route is best some arrangement might be made for them to build by way of Lake Crescent.

A more detailed examination is necessary to define the best spruce areas.

Other species.—In the foregoing, only spruce was considered. The railroad routes mentioned will open up large bodies of timber containing species other than spruce. It is planned to log only spruce areas, but in doing so other species must be removed. The Douglas fir on these areas is high in quality, eminently suitable for airplane and shipbuilding lumber. The hemlock varies in quality—wherever it occurs with spruce it is not as good as when in pure stands. On the Pysht watershed the spruce is generally not of a good quality but the Douglas fir is of very good quality. On the upper Solduc the fir is of very good quality.

L. A. NELSON,
Logging Engineer.

I hereby certify that the foregoing is a true and correct copy of a record to be found in the files of the United States Spruce Production Corporation.

O. M. MASSEY,
Assistant Secretary United States Production Corporation.

Mr. LEA. Is there any railroad connection between Clallam Bay and any other point?

Mr. DISQUE. No, absolutely none.

Mr. LEA. And what railroad transportation facilities to Clallam Bay, so far as the shipment of men and equipment and supplies are concerned is there?

Mr. DISQUE. It is entirely by boat, up the Straits of San Juan De Fuca.

Mr. LEA. And of course Clallam Bay is not a general shipping point, or is it?

Mr. DISQUE. I have never heard anybody state that Clallam Bay was a general, or even a good shipping point. To the contrary, every bit of information that had come to my attention, except the evidence that the committee obtained from the Goodyear Logging Co. manager who is, of course, interested, every bit of information was that Clallam Bay could never be considered as a considerable shipping point for anything in any quantity, without millions of dollars expended on it.

Mr. LEA. What is the nearest railroad shipping point from Clallam Bay?

Mr. DISQUE. The nearest is Deep Creek, the stub end of the Milwaukee line that runs west from Port Angeles.

Mr. LEA. And that is the Milwaukee Railroad?

Mr. DISQUE. It belongs to the Milwaukee.

Mr. LEA. How far is it from the Milwaukee Railroad to any other railroad on the peninsula that is engaged in commercial business?

Mr. DISQUE. Well, I do not know exactly. I would say it is 60 miles over to Moclips, where the Northern Pacific reaches. I believe that is the nearest, and that is not the peninsula, it is down near Grays Harbor.

Mr. LEA. Was there any other transcontinental railroad on the north part of the peninsula?

Mr. DISQUE. None at all; none anywhere on the peninsula.

Mr. LEA. What, if any, point on the north side of the peninsula had terminal freight rates?

Mr. DISQUE. What point?

Mr. LEA. Yes.

Mr. DISQUE. Port Angeles. I have had it told me by railroad authorities that Port Angeles enjoys terminal rates, transcontinental rates.

Mr. LEA. That, I presume, means they ship at the same rate as Seattle would, for instance?

Mr. DISQUE. That is my understanding, for transcontinental freight.

Mr. LEA. Are cars for transcontinental shipment loaded at and do they pass through Port Angeles or not, or do you know?

Mr. DISQUE. I do not know, but I would say they do, from the way the matter has been reported to me in our investigation of moving our logs out of there, and our lumber.

Mr. LEA. Is there anything further that you think of that you want to say in reference to the selection of the route to Lake Pleasant?

Mr. DISQUE. Except that I feel the final statement belongs in the record that it was selected because it was the one route that all my advisers agreed could be built in the time limit left to us. And I would like to say in addition to that that while I always felt that it was sane, sensible, and businesslike to expect the Milwaukee to take this line over, it is possible for anybody to own that line by paying a reasonable price for it, and they would enjoy the same transcontinental rates from Port Angeles east that would be enjoyed were the Milwaukee road to own it. I think with that thought in mind it is possible and probable that the road could be sold to interests other than the Milwaukee.

Mr. LEA. Did you consult with Mr. Welch, the engineer, in reference to the location of the road as finally laid out?

Mr. DISQUE. I can not answer that definitely. If he was here at the time I did. He was constantly in consultation with me on all engineering problems. I do not recall the exact date when he arrived.

Mr. LEA. Who is Mr. Welch, if you will state?

Mr. DISQUE. Welch is an engineer of probably 30 years' experience, building railways in South America, Mexico, working for governments all over the continent, and at the present time he is chief engineer of the Interstate Palisades Park Commission, New York and New Jersey, and was on that duty when he came to assist us.

Mr. LEA. What was his relation to the Spruce Production Corporation?

Mr. DISQUE. He was a major in the Army and chief engineer of our Spruce Production Division and of the corporation.

Mr. LEA. Well, did the consideration of the selection of routes come through the engineer?

Mr. DISQUE. Always.

Mr. LEA. What, if any, reason will you give for the construction of the Port Angeles mill?

Mr. DISQUE. One reason was to divide or distribute our vital operations. When that mill was started the Government had nothing but the Vancouver cut-up plant to insure its refined manufacture of the product, and it was considered desirable to distribute those operations. That was one reason that led to approving the Port Angeles project. Another was that at that time the Siems-Carey-Kerbaugh Corporation was not a cost-plus contractor. They were building the mill with their own funds and under their own responsibility and for their own future use. They had as much right to build that mill as any other lumberman. They had endeavored,

before building it and at our request, to avoid adding unnecessary mills to the Northwest—our problem was not a mill problem so much as it was a cut-up problem and a logging problem—but they endeavored to buy the mill at Port Angeles from the Puget Sound Mill Co., the Puget Sound Mill & Timber Co. They negotiated with that company with a view to buying it. The company seemed willing to sell, but the company wanted more money than I was willing to approve of in payment.

Mr. LEA. How much did they want?

Mr. DISQUE. It was reported to me after the conference had been concluded that the Puget Sound Mill & Timber Co. had paid approximately \$600,000 for their property a year or so ago, and were now asking us to pay \$2,000,000 for their mill.

Mr. LEA. They wanted to charge the Government \$2,000,000 for what they had procured for \$600,000.

Mr. DISQUE. Exactly.

Mr. LEA. Who was the manager of that mill?

Mr. DISQUE. Mr. Scott is the manager for that mill. I think he was one of the witnesses before the committee. My engineers had told me that we could build a mill for \$1,200,000 that would be better than the one the Puget Sound Mill & Timber Co. had.

Mr. LEA. How far is their mill located from the mill of the Government?

Mr. DISQUE. I guess a mile and a half or 2 miles. They are both on the east and west sides, respectively, of Port Angeles.

Mr. LEA. That is, the Government mill is on the—

Mr. DISQUE. On the east side is the Government mill, and the Puget Sound Mill & Timber Co. mill is on the west side.

Mr. LEA. Have you any information here as to the quantity of spruce available, tributary to this Pleasant Lake Railroad?

Mr. DISQUE. That is in Mr. Nelson's report, which has gone into the record. I think maybe it would be interesting if I would lay out a map here, furnished me by the Federal Forestry Service, that gives a pretty good idea of the way that timber stands. The dark red is over 10,000,000 feet to the section, the orange is 5 to 10, and the dark green is 3 to 5. the light green is 1 to 3. So that this dark red, running southwest from Lake Pleasant shows—

Mr. MAGEE. Where is Lake Pleasant on the map?

Mr. DISQUE. I will show you. Right here. Here is Lake Pleasant. Now, there is the point that we were after. The big stand of timber is like that.

Mr. LEA. If you will, just indicate so that it will go in the record.

Mr. DISQUE. Running northwest, what apparently is about a fourth of it west, and southwest which appears to be three-fourths of it. You note between this heavy stand up on the headwaters of the Dickey here and the Hoko down in here, where the Good-year operations were, there is a blank in there of several miles' width, that the stand is very light and in some places none at all. The darker the red the heavier the stand; the darker the green the heavier, and the red represents twice as heavy a stand as the green. That picture gives you, at a glance, the relative stand, and was furnished me by the Federal Forestry Service.

I want to, while this map is here, show the committee this "national forest reserve" here. All this area here, which constitutes the

greater portion of the Olympic Peninsula, is Federal forest reserve, and our railway, as it finally was constructed, becomes the only outlet and a natural outlet, according to Mr. Cecil, district forester, for that tremendous stand, which is reported to be 30,000,000,000 feet, amortizing that road at a cost, which I agree is high for normal times, at 18 cents a thousand.

Mr. MAGEE. Providing that the timber was cut up there and transported over the road.

Mr. DISQUE. And moved off. When they cleaned that timber out, the eventual cost would be 18 cents a thousand.

Mr. MAGEE. I assume the Government has obtained title to that to preserve the forest, has it?

Mr. DISQUE. No; they are selling that timber; they have got to sell it; it will die and rot if they do not. They want to sell it.

Mr. MAGEE. You mean clean it off entirely?

Mr. DISQUE. They will let it be cleaned off and new growth come on, but you can't let it stand there indefinitely.

Mr. MAGEE. What I mean is, I didn't assume the Government would buy a forest reserve to cut all the timber off.

Mr. DISQUE. I think that is their purpose—to sell that timber. It will fall down and rot if they do not.

Mr. MAGEE. Well, it would not any sooner than any other timberland, would it?

Mr. DISQUE. Oh, well, yes; but the policy of that office is, as I understand it, and they are doing it now, selling that timber. It is already ripe timber, and probably in 40 or 50 years from now it will be so over ripe that they will have lost tremendous values there.

Mr. MAGEE. I had assumed the purpose of the Government in buying lands, getting title to these preserves, was to conserve rather than to cut down and destroy.

Mr. DISQUE. Well, it is their purpose to sell that timber, and they are doing it right along; and that was one of Mr. Cecil's arguments for putting the road through by way of Lake Crescent, in his recommendation to me.

Mr. MAGEE. The forester?

Mr. DISQUE. District forester.

Mr. LEA. That is just the same as the other forest reservations, so far as you know?

Mr. DISQUE. All of them.

Mr. LEA. Is this Crescent route the most practical route for that timber?

Mr. DISQUE. It certainly is. It is right alongside of it. It is the only way you can get it out except by going around on the south side here, and it is my understanding that there are logging operations now coming up into this from the south.

Mr. LEA. From the south of what?

Mr. DISQUE. South of the forest reserve; a private logging corporation, buying this timber in blocks as they go, and logging it all in accordance with the regulations of the Forest Service, which permit of a new growth coming on and proper cleaning up, and all those things.

Mr. MAGEE. I assume they will take out the rotted timber, but I didn't suppose the purpose of the forest-reserve people was to destroy forests.

Mr. DISQUE. No; but that timber, I understand, is all ripe, ready for production.

Mr. MAGEE. There would be no object in the Government purchasing the forest and then permitting it to be destroyed.

Mr. DISQUE. I don't know whether they bought that, or whether it was something that they just retained on the original grant.

Mr. LEA. Did you have the figures there as to about the quality of spruce available?

Mr. DISQUE. In Clallam County?

Mr. LEA. Yes.

Mr. DISQUE. They are in that report.

Mr. LEA. Well, then, if they are in, that is all right.

Mr. DISQUE. It was to be over and above anything that we needed to take out of there in 1919; that is probably why I haven't got them definitely in my mind.

Col. STEARNS. I can get that report.

Mr. LEA. If it is in the record, why, never mind; that is all I wanted.

Now, Mr. Disque, I wish you would briefly summarize what had been done by the Spruce Production Corporation in endeavoring to meet the Government's and Allies' demand for spruce material, to meet that demand, before the Seims-Carey contract was entered into?

Mr. DISQUE. Step by step we met with the loggers and mill men, in frequent general conferences, attended by anywhere from 100 to 300 men, all of whom were the owners or principals of the companies represented.

At the first meeting, a committee of five, I think, prominent lumbermen and loggers, were designated by this association to become an advisory committee of mine. Those gentlemen, some of them, remained advisers in a more or less official or unofficial way throughout the war period.

Mr. LEA. What is this organization you refer to?

Mr. DISQUE. I think it was called, then, the Lumbermen's Protective League. It included loggers and mill men, whereas the other associations seemed to be separate, loggers or mill men, or some special kind or part of the industry. But this meeting that I refer to now was a general meeting, including all classes of people interested in the industry.

Those meetings were held frequently. They were getting together every two or three weeks, and at every meeting our problems were discussed, our plans outlined, advice taken, and at every meeting an effort was made to increase our supply, constant and repeated offers were made, including offers for us to take up the spurs of loggers who were in fir and move them over into spruce, pay the cost to the logger, so that he would not lose anything by the operation.

Later on, as soon as we received authority to buy logs, bulletins were issued, printed and mailed to every logging concern in the Northwest, published in the papers, recorded at meetings of loggers, stating that we would contract to take all the logs—spruce logs that they would produce during the next 18 months.

In addition to that, there were any number of conferences of three or four or five or six loggers, in my office and in their offices, where all these problems were discussed, and naturally most of those

conferences were with men who—well, all of them were with men who were experienced in the logging business, had equipment, were operating at the time. And, for the record, I want to say that the true view of this thing, the extent to which we went to notify the loggers what we were willing to do, what we had to do, what we wanted them to do, how we were willing to guarantee them against loss—the following men must be called to get the correct story: Mr. Howard Holland, Portland, Oreg.; Mr. Mark E. Reed, Shelton, Wash.; Mr. Alex. Polson, Hoquiam, Wash.; Mr. C. H. Cobb, Seattle; Mr. Amis Benson, Portland, Mr. John Yeon, Portland. I could go on and name a great many more. I know the committee's time is limited.

Mr. LEA. Let me ask you a question there. You speak about guaranteeing these men against loss. What do you mean by that?

Mr. DISQUE. We were willing to pay the cost of moving this spur out of the fir and put it over into spruce, a cost which no one could determine in advance, and a cost which would not be a fair one to the logger as a part of his commercial production or his ordinary production at a fixed price. We had a form of a contract drawn up, which we offered to all the loggers. It was drawn up after consultation with a great many loggers—a contract which was made to fit every different logger's peculiar problem, and reimburse him for the peculiar expenses that he might undergo in order to change his operations into spruce.

Mr. LEA. Did you require a bond of the logger who signed that contract?

Mr. DISQUE. No; we did not. We had no such thing in it.

Mr. LEA. Was there any security for the performance of it?

Mr. DISQUE. None at all.

Mr. LEA. Was there any provision in a contract, for instance, that called for deliveries covering 18 months, that if the war terminated he could be indemnified for the investment made for the purpose of performing his contract; that is, was there any means of adjustment of loss?

Mr. DISQUE. The contract says—

Mr. MAGEE. Haven't you a form of contract that you can put in evidence here?

Mr. DISQUE. Yes; I think it would be well to put one right in.

Mr. LEA. The reporter can mark it as an exhibit.

Mr. DISQUE. I will have to have that brought over here.

Mr. LEA. You haven't one here?

Mr. DISQUE. No.

Mr. LEA. I wish you would kindly furnish one to the reporter, and it will be understood that the reporter will insert it in the record.

Mr. DISQUE. We will do that. And these contracts, like the contracts freely offered to all the spruce mills in the Northwest, had no cancellation clause in most of them, and the cancellations, when they came about, were taken care of by the contract board, which adjusted, according to their merits, on its own merit.

Mr. LEA. You mean if you would make a contract with a millman, for instance, that he should furnish a certain amount of spruce covering a period of 18 months, for a definite amount, without the power of cancellation?

Mr. DISQUE. That is it. Those contracts came out here originally printed, and we just distributed them to the loggers—or I mean to the millmen—and had a hard time getting them to sign them.

Mr. LEA. Did you have any of those contracts where there was an indemnity paid?

Mr. DISQUE. Not a one.

Mr. LEA. For what reason?

Mr. DISQUE. Do you mean paid by the logger—millman?

Mr. LEA. No; by the corporation.

Mr. DISQUE. No, we adjusted and paid the millmen what was considered by the contract board to be the actual loss that they underwent as the result of cancellation; and if that loss could be added to the price of \$105, and so on, that was supposed to be a fixed price, you would find that, even there, cost-plus contracts have another strong argument in their favor.

Mr. LEA. What do you mean by that?

Mr. DISQUE. Because, when it comes to canceling a contract with a fixed price, after a man has made all his preparation to make deliveries under it, you have got to be fair with him and give him the money that he has lost as a result of that contract, or else continue to take his product throughout the period of the time allotted. That came up very forcibly to us. The only operations that we were able to stop immediately on the day of the armistice, and not spend another dollar unnecessarily in connection with them, were our cost-plus contracts. We simply sent the word out "stop" and everything began to shrink, the business was cut off. We were not obligated to pay those fellows any more. But when we had a contract with a man at a fixed price, for, we will say, 25,000,000 feet of spruce at \$105 a thousand, and he had made all the preparations, had built his railroads, had contracted with loggers for the logs, we had to go to that man and, to be fair with him, reimburse him for the losses that he would suffer because he was unable to continue deliveries.

Mr. LEA. Were payments of that kind made?

Mr. DISQUE. Several of them.

Mr. LEA. Do you know about what they aggregate, in amount?

Mr. DISQUE. The claims as presented to us—I am speaking now in round numbers, I won't give it accurately—but it was somewhere around \$7,000,000—nearer \$8,000,000 in claims. Our payments to satisfy those claims ran, as I understand it, about \$2,500,000 in round numbers.

Mr. MAGEE. I think Mr. Donovan testified to that.

Mr. LEA. Mr. Donovan testified to that?

(The form of contract above referred to will appear in the record hereafter.)

Mr. LEA. Can you give me the cost, per thousand, of all the airplane lumber constructed by the Spruce Production Corporation or the Spruce Production Division, during the war?

Mr. DISQUE. Yes, sir. In order to do that, I want to—and I think you will agree it is only fair—to give a complete statement on it. Leaving out the airplane lumber that we actually had in 80,000,000 feet of logs, assuming we only sent, as we did, only 143,000,000 feet, in round numbers, our expenditures were \$50,000,000

up to today. That would be a total cost, including everything that could possibly be considered, of \$348 per thousand. However, the salvage must be considered. They have actually received \$4,000,000 in the way of salvage, and allowing our salvage on a 40 per cent basis, it is \$11,000,000. So that there was spent for that 142,000,000 \$39,000,000. That gives us \$272 per thousand for the lumber shipped, with the distinct condition confronting us that about \$20,000,000 of that went into construction and things that never produced a foot, because the armistice was signed. By amortizing all of it—and in that connection, the \$50,000,000 had invoices against it, to our Allies and factories, of \$27,500,000 for lumber delivered. That left \$22,000,000—\$22,500,000 unaccounted for, \$11,500,000 of which, on a 40 per cent basis, will become salvaged. That leaves \$11,500,000 unaccounted for, of which the Allies will pay two-thirds, which leaves a net loss or net deficit on account of the Spruce Production Division's activities, including the payment of every soldier who was here, every contract, even up to the liquidation expenses—a net loss to the Spruce Division and the United States Government of \$3,850,000.

Mr. LEA. That includes, of course, the Siems-Carey Railroad and all these other operations?

Mr. DISQUE. Everything.

Mr. LEA. Basing it, you said, on a salvage of \$10,000,000, that would be—

Mr. DISQUE. On 40 per cent of the cost value, and, to date, about \$4,200,000 worth of property has been sold, and they have obtained 74 per cent of its cost value. My figures contemplate getting 40 per cent of cost.

Mr. LEA. Let's get that again. You have sold to date—

Mr. DISQUE. May I interject this and explain? Col. Stearns says that he reported a deficit of \$10,000,000 in his testimony, but he did not take into consideration the sales to factories, which paid for that lumber, and the funds were credited against this \$50,000,000; so that my figure is correct—the total final deficit, \$3,850,000. That is to explain his statement made the other day.

Mr. LEA. Of course, to the extent that the corporation may fail to realize that percentage of salvage on its property, your figures would be underestimates; that is, if you don't get the \$11,000,000, then the lumber is going to cost that much more?

Mr. DISQUE. It will cost that much more; but \$11,000,000 is, as I say, 40 per cent of cost, and to date we have got 74 per cent of cost.

Mr. LEA. What is the amount that you say has been sold to date?

Mr. DISQUE. 4,200,000.

Mr. LEA. And you have received over 74 per cent of its cost price?

Mr. DISQUE. Cost price.

Mr. LEA. That property, I assume, will bring a larger percentage than the property that remains to be sold?

Mr. DISQUE. I think it will, now, as a result of the publicity, unfavorable, that has been given to these properties.

Mr. LEA. Can you give me the cost value of the remaining properties to be sold; can that be given?

Mr. DISQUE. I think I can. I would give that roughly as—

Mr. LEA. If you can get any assistance on that, get it as accurately as you can.

Mr. DISQUE. It would be around \$16,000,000 that still remains unsold.

Mr. LEA. Will you state, in a general way, of what that property consists?

Mr. DISQUE. Principally of the railways and mills produced by the Government cost-plus contractors, and also those which we were obliged to take over upon cancellation of the Siems-Carey-Kerbaugh contract.

Mr. LEA. How many railroads are involved?

Mr. MAGEE. Let me ask a question.

Mr. LEA. Yes.

Mr. MAGEE. Perhaps I may not have a correct idea of loss to the Government. As I understand, take this Lake Pleasant Railroad, that cost approximately \$4,000,000, I think that is approximately the cost—

Mr. LEA. That is about right.

Mr. MAGEE. Now, suppose that the Government in selling the road should not realize, as has been estimated in the itemized statement put in as of February, 1919, and I think as testified to by Mr. Donovan—I think he, if I remember rightly; if I am not, I will be corrected—estimated that perhaps the Government might sell it for three or four hundred thousand dollars—about 10 per cent. And suppose the Government did sell it for 10 per cent, or \$400,000, wouldn't there be a loss to the Government of \$3,600,000 on that deal?

Mr. DISQUE. Did Mr. Donovan testify that that is all that we could get for that?

Col. STEARNS. I don't think so.

Mr. MAGEE. I am under the impression that he was asked. I am not sure but perhaps some other witness—what he thought the road would sell for, or something of that sort.

Mr. DISQUE. I was reading his testimony last night. He said we would get from one-third to one-half of what it cost. That was his opinion.

Mr. MAGEE. Some witness. But, however, assume—what I want to get at is this: That in figuring the loss to the Government, suppose the Government sold it for a million, then the loss would be \$3,000,000, wouldn't it?

Mr. DISQUE. \$3,000,000.

Mr. MAGEE. On that proposition?

Mr. DISQUE. Exactly.

Mr. MAGEE. That is right, is it?

Mr. DISQUE. \$3,000,000 would be the loss, of which the Allies stand 70 per cent, or 66 per cent.

Mr. MAGEE. Well, it would be a governmental loss, loss in operation. We will have to pay it.

Mr. DISQUE. Of which the United States would stand 35 per cent.

Mr. MAGEE. Do I understand that is what you are figuring on here in getting your balance, General, of what would be the loss to the United States, but not the loss upon the proposition?

Mr. DISQUE. That is what I have just now stated.

Mr. MAGEE. Well, I wanted to get that clear in my mind. I assume that in the case of the entire property, that if it cost, for in-

stance, to build the Port Angeles cut-up plant \$1,200,000, and the Government could not sell it for more than \$300,000, why, there would be a loss of the difference on that project.

Mr. DISQUE. Certainly.

Mr. MAGEE. So that if there was any unwise expenditure for which the Government could not get the amount expended, you can't get away from a dead loss, I assume, on that particular project. That is all.

Mr. LEA. Now, I assume that the figures you gave as the total cost of lumber applied to the total operation, and which would be borne by all the Allies?

Mr. DISQUE. Yes, sir.

Mr. LEA. Have you the figures conveniently available as to the cost of the Siems-Carey-Kerbaugh Railroad?

Mr. DISQUE. Of course, my evidence or testimony on this is reading from the report as made.

Mr. LEA. Yes; I understand that.

Mr. DISQUE. Finally, by the comptroller of the corporation. The Clallam County Railroad total cost \$3,966,712.77.

Mr. MAGEE. That is what is called the Crescent Lake-Pleasant Lake Road, isn't it?

Mr. DISQUE. Cost per mile \$110,186.46. I has been repeatedly said that that cost \$115,000 a mile. There is not much difference, but enough worth mentioning.

Mr. MAGEE. I think there was some evidence of some further writings or estimates in reference to that at the time. I have forgot just what it was.

Mr. LEA. Yes. I think that a total of seventy or eighty thousand would be the difference.

Mr. MAGEE. There was something there; I don't remember just the amount.

Mr. LEA. Have you the figures there that show the elements to make up the total; like—are you able to give us the labor cost?

Mr. DISQUE. This statement is made up in accordance with the accounting methods and schedules provided by the Interstate Commerce Commission; as, engineering \$91,000. I will just read the round numbers.

Mr. LEA. Then can you put that in the record?

Mr. DISQUE. Yes, sir. Land for transportation purposes, \$100,000; grading, \$1,960,000.

Mr. MAGEE. What was that first item? I didn't get it.

Mr. DISQUE. First was engineering, \$91,000.

Mr. LEA. If you have no objection I might ask for an explanation as we go along of those items.

Mr. DISQUE. All right.

Mr. LEA. Now what item was that?

Mr. DISQUE. The second one.

Mr. LEA. The first item, wasn't it, was land?

Mr. MAGEE. The first item was engineering.

Mr. DISQUE. Engineering, \$91,000. Is this explained in here?

Mr. CAMPBELL. No.

Mr. DISQUE. I ought to have the engineer here to explain this; or the comptroller.

Mr. LEA. Well, if you will, just confer with him so as to get the fact.

Mr. DISQUE (after conferring with Mr. Campbell and Mr. Eamon). Well, the engineering, I suppose it is understood what that is.

Mr. LEA. Yes.

Mr. DISQUE. That is surveying and that work.

Mr. LEA. Now what is the land item?

Mr. DISQUE. The land item is the right of way, salary of men acquiring it and working on it; the expenses incurred in connection with it; the maps prepared, and the labor scaling the logs that had to be removed from that right of way. I see that is explained here. Now I will go ahead. Then the next item is grading, \$1,964,000. That includes clearing, labor, material, grubbing, labor, material, and excavation of embankments, rock and other materials, extra hauling, removing slides, stone walls, camp, labor, subcontractors' deficits. Now I might say that in preparing that right of way here are eight subcontractors. Any one of them would be known among contractors as an excellent right-of-way man, grading, grading man. They all of them lost money on that operation, basing their judgment as experienced contractors, making their fixed price a total of \$257,527.

Mr. MAGEE. Now what is that item?

Mr. DISQUE. That is the total that these subcontractors were in the hole as a result of their operations.

Mr. MAGEE. Well, you mean they were reimbursed to that extent?

Mr. LEA. Now can you tell me the expense of grubbing the right of way?

Mr. DISQUE. The total grubbing expense, \$67,419.

Mr. LEA. What was the general character of that grubbing?

Mr. MAGEE. May I ask a question? I don't understand just about this deficit to the subcontractors. Now the contract was let to the Siems-Carey-Kerbaugh Corporation?

Mr. DISQUE. Yes.

Mr. MAGEE. And they sublet to other contractors. This was a cost-plus contract, wasn't it?

Mr. DISQUE. Yes.

Mr. MAGEE. Well, then, the Government would have to pay the entire cost anyhow, wouldn't it?

Mr. DISQUE. Yes.

Mr. MAGEE. Then how could there be any deficit if the Government under its contract had to pay the entire expenditure?

Mr. DISQUE. That is a deficit that these subcontractors ran into as they finished their jobs, a thing that happens in every contract of this nature, and I might say—

Mr. MAGEE (interrupting). Well, what I mean is that under a cost-plus contract the Government was bound to make it good, wasn't it? That is, the contractor could not lose under a cost-plus contract?

Mr. DISQUE. Why, yes; these subcontractors could have lost.

Mr. MAGEE. That is what I am trying to get at. The Siems-Carey Co. would let a subcontract, for instance, to a man for a certain amount, say \$100,000.

Mr. DISQUE. Yes. He didn't let it that way. He let it for so many hundreds of feet of the right of way, or of grade.

Mr. MAGEE. Well, it would run into dollars and cents just the same way?

Mr. DISQUE. No; it could not, because no one could estimate the amount.

Mr. MAGEE. Now, suppose—well, suppose that it did run into \$100,000?

Mr. DISQUE. Yes.

Mr. MAGEE. That is the contract?

Mr. DISQUE. Yes.

Mr. MAGEE. Now, suppose that it actually cost \$100,000 more than that, the Government would have to pay that, wouldn't it, under the contract?

Mr. DISQUE. This is the way that is done. You haven't got the right idea about these contracts.

Mr. MAGEE. I am trying to see just exactly how it was.

Mr. DISQUE. No; the Government would not.

Mr. MAGEE. In other words, I would like to have it explained how a contractor could lose.

Mr. DISQUE. The Government would not have to pay that.

Mr. MAGEE. Under a cost-plus contract?

Mr. DISQUE. Their contracts were made something on this order: Seventy-five cents for every cubic yard of earth they would remove; a dollar and a quarter for every cubic yard of stone, and so on. Then when the job was done, accurate figures made by the engineers determined how many yards they actually did remove.

Mr. MAGEE. Yes; I understand that.

Mr. DISQUE. And if that price of 75 cents wasn't enough to take care of it, their labor and their expenses ran above it, why they stand to lose.

Mr. MAGEE. Then what I mean is, how did the Government do? Did the Government finally voluntarily pay this?

Mr. DISQUE. The Government permitted its contractor to make those adjustments in accordance with the well established rule in all that kind of work.

Mr. MAGEE. And that amounted to the amount of his expenditures?

Mr. DISQUE. Yes. This whole contract is pretty much of the same kind as the railways do their constructing under. Lots of cost-plus contracts are made by the railroads across this country, and a lot of other cost-plus contracts are made in some of our biggest construction operations. Where you have confidence in your contractor it is the cheapest way to do business.

Mr. MAGEE. You believe in it, do you?

Mr. DISQUE. I believe in them where you know your man.

Mr. LEA. What was done by the Government in the execution of the Siems-Carey contract and the other cost-plus contractors, to protect the Government against extravagance and unnecessary waste and expenditure of money and the creating of liabilities?

Mr. DISQUE. Well, in the first place the Government bought a great percentage of the heavier equipment and bought it under our own officers' supervision and our own purchasing department. Sec-

ond, we had supervisors on every job, assisted by accountants and approval officers. Every purchase, every voucher was supervised, checked and approved and verified and compared with purchases which we were making in our own office. I don't believe it possible to throw around a cost-plus operation more safeguards in the interest of the Government than were thrown here. The best evidence of that would be to call some of the cost-plus contractors, and I am sure the committee will be satisfied.

Mr. LEA. Well, to what extent, if any, did the cost-plus contractor have a discretion in creating an expense without the approval of any officer?

Mr. DISQUE. He didn't have any. He didn't have any discretion in that matter.

Mr. LEA. Well now, I interrupted you in reading that table there. If you will, go ahead and give us the rest of those costs.

Mr. DISQUE. Well then, the next item, tunnels and subways. These terms are just adopted from the Interstate Commerce Commission's \$111,496. So that the two tunnels did not include a very great part of the cost of that line.

Mr. LEA. Two tunnels and subways; what is meant by subways?

Mr. DISQUE. There is nothing meant here by subways. It is merely a term taken from the Interstate Commerce Commission's schedule.

Mr. MAGEE. There were no subways in this line?

Mr. DISQUE. There were no subways. The next is bridges and culverts \$244,000. The next item is ties \$205,000. Rails \$13,000—that is not right.

Mr. CAMPBELL. No.

Mr. DISQUE. There were more than that.

Mr. CAMPBELL. That is what they furnished. The balance was furnished by the Government, \$358,000.

Mr. DISQUE. The rail item was increased to \$358,624 at Government expense, which, of course, did not carry any percentage for the contractor.

Mr. LEA. How much was that?

Mr. DISQUE. \$358,642.53.

Mr. LEA. That makes a total of what?

Mr. DISQUE. I have got that down here. Other rail—other track material—

Mr. LEA (interrupting). Have you got the total for rails there?

Mr. DISQUE. Well, that would be 358 and 14; about 373—\$373,000

Mr. LEA. Three seventy three.

Mr. DISQUE. The next item is:

"Other track material, \$5,444; ballast, \$42,690; track laying and surfacing, \$215,452; crossings and signs, \$680; stations and office buildings, \$11,156; roadway buildings, \$38,959; water stations, \$3,421; telegraph and telephone lines, \$91,753; other expenditures for the road, \$209,015.

Mr. LEA. What would be the net of the items included in that?

Mr. CAMPBELL. Boarding houses, mess, commissions—anything of that sort.

Mr. DISQUE. Work equipment—no; unapplied construction material and supplies, \$131,171. What is the explanation for that?

Mr. CAMPBELL. Small tools.

Mr. DISQUE. That includes small tools; work train expense, fuel oil and material, office expense, temporary buildings, boarding-

house operations, equipment, groceries and supplies, labor, credit meals, yard, tracklaying, loading and unloading, and miscellaneous yard material. Then there is miscellaneous equipment, \$6,420.

Mr. LEA. What is the nature of those items?

Mr. CAMPBELL. Automobiles and horses.

Mr. DISQUE. Miscellaneous equipment, automobiles—

Mr. CAMPBELL. Horses and harness.

Mr. DISQUE. Horses and harness and wagons, I suppose.

Mr. CAMPBELL. Yes.

Mr. DISQUE. Wagons. Then general office and clerks, \$60,527. That includes traveling expenses, officers and clerks, head office expense, salaries of executives, salaries of office force. That covered a period of five months, or more than that. It went clear through about eight or nine months. The salary in my own office and Washington is more than that in one month. The legal expense, \$34,983. Fees—

Mr. MAGEE (interrupting). What was that for?

Mr. DISQUE. Expense in right of way.

Mr. MAGEE. Legal expense getting the right of way?

Mr. DISQUE. Wait a minute. No. That is wrong. \$2,658. That includes fees, expense, and right of way.

Mr. MAGEE. Not thirty-four thousand?

Mr. DISQUE. No. That was wrong. Interest during construction, \$34,983. That is interest on advances made to contractors, miscellaneous interest, and exchange. Other expenditures, \$273,853. That includes the following items: Insurance, fire, industrial, accident, medical aid. Head office expense: Rent, light and heat, telephone, telegraph, miscellaneous, haulage, purchasing department. Expense traffic and employment office: Rent, telephone, salaries, stationery and printing, advertising, miscellaneous. Rentals for leased property; Fairholm camp site; contractors' commissions.

Mr. MAGEE. Did you have insurance there, General?

Mr. DISQUE. Yes.

Mr. MAGEE. What kind of insurance is that?

Mr. DISQUE. Fire, industrial, accident, medical aid.

Mr. MAGEE. Have you that itemized?

Mr. DISQUE. Yes. Fire, \$2,022; industrial, \$2,527; accident, \$2,573; medical aid, \$229. There were quite a number of civilian employees on that job. Stationery and printing, \$7,775. That included postage. Then, there is a salvage, material salvaged from construction, \$241,279, reduced that to \$3,608,088.24; added to that the rails furnished by the Government, on which there was no plus profit.

Mr. MAGEE. What is the salvage? Where did you get that?

Mr. DISQUE. The tools and odds and ends that came off of the job after it was over.

Mr. MAGEE. They were sold?

Mr. DISQUE. Which were sold.

Mr. LEA. Now, was that anything which would be a part of the railroad, or small materials used for its construction?

Mr. DISQUE. Just contractors' tools and things that were not of value to the road.

Mr. LEA. Then, what does that leave the net cost of the road?

Mr. DISQUE. Three million nine hundred sixty-six thousand seven hundred twelve dollars seventy-seven cents.

Mr. MAGEE. There was an item of three hundred fifty-eight or some odd thousand.

Mr. DISQUE. That was the rail item.

Mr. MAGEE. What rail was used, do you know?

Mr. DISQUE. Eighty-pound rail, I think, most of the way. Isn't that right? I think it was 80 pound all the way.

Mr. LEA. You completed that list there, did you?

Mr. DISQUE. I completed that.

Mr. LEA. The reporter will just put that in the record.

(The statement, pursuant to the above direction, is set out in full as follows:)

Cost analysis, railroad construction. Siems-Carey-H. S. Kerbaugh Corporation.

Spruce Production Railroad No. 1:

1. Engineering-----	\$91,869.34
2. Land for transportation purposes-----	108,878.26

Total-----	3,608,088.24
Rails and other track material furnished by Government-----	358,624.53
Grand total-----	3,966,712.77

Mr. LEA. Have you any statement of the labor cost as distinguished from the other costs?

Mr. CAMPBELL. That is not segregated.

Mr. LEA. That is not segregated.

Mr. CAMPBELL. We could segregate it.

Mr. LEA. Could it be done conveniently?

Mr. CAMPBELL. Yes, sir.

Mr. LEA. We would like to get that if it can be done conveniently.

Mr. DISQUE. When can you have it?

Mr. CAMPBELL. I could have it in the morning.

Mr. LEA. Now, can you conveniently give me the number of soldiers employed on that operation and the percentage of the civilian labor?

Mr. CAMPBELL. That is being compiled now from the cost-plus roll at the request of the committee.

Mr. LEA. All right.

Mr. MAGEE. Couldn't we get, while I think of it, a statement here as to the distribution of these soldiers; that is, where these different soldiers were located?

Mr. STEARNS. You have a map showing just where they were.

Mr. MAGEE. No; but I mean can't we get some statement in the record showing where they are; for instance, so many thousand in this construction and so many in some other?

Mr. DISQUE. I want to say in that connection that the Siems-Carey Corporation did not take the soldiers very readily on their work.

Mr. MAGEE. What is that?

Mr. DISQUE. They did not take the soldiers very readily to their work, and we were constantly pressing them to use them to prevent them from taking labor from the private industries, and eventually we had them pretty well supplied with soldiers, but it was as a result of our constant pressure with the idea of keeping the civilian labor out with the normal industry.

Mr. MAGEE. How did this force happen to increase? Did you keep demanding more soldiers or were they sent here?

Mr. DISQUE. Each time they increased our requirements our program expanded and I requested additional strength.

Mr. LEA. Now, have you the facts available there in reference to the number of soldiers and the distribution of them?

Mr. DISQUE. Well, by districts, the Puget Sound district had 140 officers, 4,736 men.

Mr. MAGEE. What I mean is—what I had in mind was—whether you are able to give as to the entire number the same statement that you promised to put into the record for Mr. Lea of the number of soldiers on this railroad-construction contract?

Mr. DISQUE. Yes.

Mr. MAGEE. That is, who the soldiers were and what they were doing?

Mr. DISQUE. Well, this gives you—

Mr. MAGEE (interrupting). That is, so many in a district might comprise a number of operations.

Mr. DISQUE. It always did.

Mr. MAGEE. You see what I mean? For instance, did the Good-year people have any soldiers? If they did, how many? Or if you know the number of civilians. I don't know that you would have the number of civilians, but you could tell us where the soldiers were employed. And I think the House would be interested in knowing exactly about the distribution of this large force of soldiers. I only ask it for that reason, if you can provide it.

Mr. DISQUE. I want to say right there that so far as I know no logger or mill man producing spruce was ever refused soldiers to assist him in his operation, and that statement should go with any statement prepared, because it was largely because they did not use these men that we got to using them ourselves in Government operations.

Mr. MAGEE. What I mean is in answer to a question from a Member of the House, "Where would these soldiers be distributed?" I would like to be able to supply that information.

Mr. DISQUE. We ought to have a complete statement put in here. That only answers it by districts.

Mr. MAGEE. I think we ought to have a statement of that kind put in the record as a matter of interest. It will be raised, probably.

Mr. DISQUE. Certainly we will do that, very completely.

Mr. MAGEE. And it would probably interest a good many people.

Mr. STEARNS. Your accountants have that statement already, Mr. Magee, just where all troops were.

Mr. MAGEE. Well, if it is available, if you can get it so we can get it in, and the point I make is if we can close one thing at a time we will then go on to something else.

Mr. LEA. You are somewhat familiar with this, are you?

Mr. DISQUE. Yes.

Mr. LEA. Here is a statement that covers the cost of, as I understand it, every transaction of the Spruce Production Corporation.

Mr. DISQUE. Exactly.

(Mr. Lea and Mr. Campbell here consulted.)

Mr. LEA. These are the principal costs?

Mr. CAMPBELL. Yes, sir.

Mr. LEA. I was not accurate in saying it covered all the costs. As I understand, it covers the cost of the railroad being constructed.

Mr. MAGEE. I think it would be of interest, Mr. Lea, if we could get a statement of the total expenditures and then what made them up.

Mr. LEA. I was going to offer it right now.

Mr. MAGEE. You said it was only partial, I thought. If we had it complete it would be better.

Mr. LEA. Well, we will find out what these are:

Mr. CAMPBELL. The details are only in part.

Mr. LEA. But are the totals here?

Mr. CAMPBELL. The principal activities, all of our cost-plus activities and the detailed cost of them, the railroad, the riving operations, the logging operations, and the cut-up plant operations are in that statement.

Mr. MAGEE. I understand there was something over \$48,000,000 expended here. What is the total of that?

Mr. CAMPBELL. There is no total. That is a detail of each operation.

Mr. LEA. Now, if we put this in the record, what would we lack of having the total?

Mr. CAMPBELL. An analysis of the disbursements and receipts would give it all. We can get that in additions.

Mr. MAGEE. Do you see what I mean?

Mr. DISQUE. I understand what you mean; yes, sir.

Mr. MAGEE. If we have a statement of the receipts and a statement of the expenditures and a comprehensive statement, why it would be available for examination.

Mr. LEA. This includes the cost of railroads constructed and the cost analysis of railroad construction by the Siems-Carey-Kerbaugh Corporation, Airplane Spruce & Lumber Co., the Grant Smith-

Porter Bros. Co., the Warren Spruce Co., and the Portland Lumber Co.; also the rived spruce camp production, an analysis of cost of riving operations, log production, an analysis of cost logging operations, cost analysis construction operation, Vancouver cut-up plant; cost analysis of the sawmill construction Port Angeles mill, Lake Pleasant mill, and Toledo mill; statement of commissions paid to cost-plus contractors; statement of interest charges on advances to cost-plus contractors; a statement of salvage sales and cost of salvage sales. I ask that this go in the record, and then when your analysis is complete later it will be put in.

Mr. MAGEE. You haven't any idea what is the approximate total of this?

Mr. LEA. Fifty million.

Mr. MAGEE. I mean of these items which you are putting in?

Mr. LEA. These items here cover practically fifty million, don't they?

Mr. CAMPBELL. Well, they cover a good deal of it. There is some liquidation expense of course that is not included in here that did not pertain to these operations.

Mr. LEA. But this additional statement you will give us will make it complete.

Mr. CAMPBELL. It will give it all.

Mr. MAGEE. I think we ought to have a complete statement as of July or August 1.

(The statement referred to is as follows:)

Cost of railroads constructed by Spruce Production Division and United States Spruce Production Corporation.

No.		Mileage.	Construction cost.	Material furnished by Government.	Total.	Average per mile.
1	Siems, Carey-Clallam Co.	36	\$3,608,068.24	\$358,624.53	\$3,966,712.77	\$110,186.46
