STATISTICS OF RAILWAYS IN THE UNITED STATES.

INTERSTATE COMMERCE COMMISSION,
DIVISION OF STATISTICS,
Washington, D. C., August 15, 1914.

To the Interstate Commerce Commission:

Herewith is submitted the Twenty-sixth Annual Report on the Statistics of Railways in the United States. This report is compiled from the returns made for the year ended June 30, 1913, by owners and operators of steam railways engaged in interstate commerce. Such returns cover intra-state commerce, as well as interstate and foreign commerce; and with very few exceptions they cover the entire business of all the larger corporations reporting. The returns on which this report is based are verified by oath, as is required by law, but they have, nevertheless, been subjected to a careful scrutiny, and all corrections made in the returns prior to the time of going to press have, so far as they apply to this compilation, been embodied herein.

The examination and correction of returns made by carriers does not cease with the compilation and publication of figures therefrom, but is pushed as far as the resources at the command of this division permit; and it thus happens that it occasionally becomes necessary to correct figures that have already been published. In the few cases where figures published in this report as of June 30, 1912, or for the year ended on that date, differ from those previously published, it should be understood that the changes are due to corrections made in returns after the compilation of figures embodied in the prior report.

This report, like the one last preceding, contains some figures for switching and terminal companies for the year covered. Studies into the field of these companies and their operations have not yet progressed sufficiently to warrant the inclusion of many details for them in this volume, but it seems advisable to continue publication of certain data with regard to such companies in the present report.

The separation of the carriers into classes based on their financial importance was first made by the commission in connection with the forms provided for the annual reports of carriers for the year ended June 30, 1908. In the forms for small roads for that year a schedule was provided for presenting the details of operating expenses in a statement practically following the condensed classification of operating expenses, which became effective on July 1, 1908. Beginning with the statistical report covering the year ended June 30, 1908, therefore, figures published for operating expenses have recognized the two classes of operating carriers. For the 1911 and the 1912 reports it was thought advisable to recognize to a much greater extent the distinction between the two classes

and to go more fully into detail with respect to those carriers having annual operating revenues above \$1,000,000. On the other hand, the class of small carriers was subdivided, and for those having annual operating revenues below \$100,000 few details were shown because the reports made by many such carriers were too incomplete or otherwise too defective for extensive compilation. By this arrangement, however, comparisons with returns of prior years can be made only in a general way, as, for various reasons, such as changes in classification due to increases or decreases in the amount of operating revenues, absorptions or consolidations of corporations, and construction of new roads, the figures by classes of carriers do not, in every instance, represent the same corporations for succeeding years.

For the year ended June 30, 1913, the annual report form used, with some few exceptions, by steam railways having operating revenues below \$100,000 per annum, was materially changed, principally by the exclusion of statistical data and other details. As a consequence, while the report herewith submitted is similar in form and in arrangement to the reports for 1911 and 1912, it differs from its predecessors in that for the small roads covered by reports referred to above it contains only information of a general character, details being confined to carriers classified as having operating revenues of \$100,000 or more. Data contained in the statements printed are so arranged that, in addition to the totals for the United States, separate information with respect to the years ended June 30, 1911 and 1912, is given for the classes of carriers last mentioned whenever necessary for comparative purposes.

For many years the commission's reports on statistics of railways presented figures for each of the ten territorial groups into which the United States had been divided for the purpose of showing geographical variations in the conditions affecting railway transportation. Owing to the fact that the operations of many of the larger carriers lie in two or more of these groups, and that for the purpose of making returns with respect to such groups many arbitrary apportionments of revenues and expenses had to be made, and much additional expense, from which little or no benefit was realized by the reporting carriers, was incurred in recording and reporting figures applicable to such groups, it was decided, beginning with the 1911 reports, to discontinue the requirement of returns in respect to these groups, and to restrict the territorial analysis of figures to one based on three grand districts substantially identical with the three great freight classification territories. Each reporting carrier is assigned to that district in which the major part of its operations lies or with which it seems most closely allied in character, and no arbitrary subdivisions or apportion-

ments are made of the returns of any carrier. The three districts may be defined substantially as follows: The Eastern District comprises that portion of the United States bounded on the west by the northern and the western shore of Lake Michigan to Chicago, thence by a line to Peoria, thence to East St. Louis, thence down the Mississippi River to the mouth of the Ohio River, and on the south by the Ohio River from its mouth to Parkersburg, W. Va., thence by a line to the southwestern corner of Maryland, thence by the Potomac River to its mouth. The Southern District comprises that portion of the United States bounded on the north by the Eastern District and on the west by the Mississippi River. The remainder of the United States, exclusive of Alaska and of island possessions, is included in the Western District.

The assignment to these districts made with respect to certain of the carriers, the lines of which lie in two or more districts, is here briefly indicated:

Atchison, Topeka & Santa Fe Ry. assigned to Western District. Baltimore & Ohio R. R. assigned to Eastern District. Chesapeake & Ohio Ry. assigned to Southern District. Chicago & Alton R. R. assigned to Western District. Chicago, Peoria & Saint Louis Ry. of Illinois assigned to Western District. Elgin, Joliet & Eastern Ry. assigned to Eastern District. Illinois Central R. R. assigned to Southern District. Kanawha & Michigan Ry. assigned to Southern District. Louisville & Nashville R. R. assigned to Southern District. Mobile & Ohio R. R. assigned to Southern District. Norfolk & Western Ry. assigned to Southern District. Saint Louis & San Francisco R. R. assigned to Western District. Saint Louis, Iron Mountain & Southern Ry. assigned to Western District. Southern Ry. assigned to Southern District. Toledo, Peoria & Western Ry. assigned to Western District. Wabash R. R. assigned to Eastern District. Western Maryland Ry. assigned to Eastern District.

MILEAGE.

The data compiled from the returns of carriers furnish the following statements:

2. Railway mileage owned, classified by States and Territories.
3. Railway mileage owned, classified by districts.

ABSTRACTS OF RETURNS MADE BY CARRIERS AND OWNERS OF RAILWAYS.

Following this text will be found a series of abstracts of the principal details contained in the annual reports rendered to the commission by corporations and others operating or owning railways engaged in interstate commerce. The presentation of these details, as in the two preceding reports, is such that substantially all the figures relating to a particular corporation are shown on consecutive pages, thus making it easier to ascertain the facts relative to that corporation. The order of arrangement of the details is uniform for all corporations of the same class. The corporations of the same class have been grouped into families based on intercorporate relationships, but in order to ascertain most readily the position of any particular corporation in the report use should be made of the alphabetical index at the end of the report.

RECEIVERSHIPS.

On June 30, 1913, 49 roads were in the hands of receivers, and the total mileage owned by them was 13,334.52 miles. This is exclusive of switching and terminal companies. The corresponding figures a year earlier were 44 roads and 8,357.27 miles of road owned. The identity of the roads at the later date may be seen in the following statement:

4. Railway mileage, by districts, showing length of all tracks covered by reports of operations.
5. Railway mileage operated, classified by States and Territories.
6. Railway mileage, by districts, classified according to organization for operation.

¹ See notes below.² The figures shown for "United States" exclude mileage as follows: For 1913, Alaska (460.78 miles unofficial) and Hawaii (238.91 miles); for 1912, Alaska (461.66 miles, unofficial) and Hawaii (193 miles); for 1911, Alaska (459.98 miles, unofficial) and Hawaii (175.76 miles); for 1910, Alaska (389.79 miles, unofficial) and Hawaii (175.10 miles); for 1909, Alaska (302.92 miles, unofficial) and Hawaii (149.24 miles); for 1908, Alaska (185.39 miles, unofficial) and Hawaii (147.76 miles).³ On basis of 2,973,890 square miles, which covers "land surface" only and excludes Alaska and Hawaii.⁴ On basis of 96,772,266 population for 1913, which is reached by adding to the population in 1910, 91,972,266 (excluding Alaska, Hawaii, and persons in the military and naval service stationed abroad), an estimated annual increase of 1,600,000 for each successive year.⁵ On basis of 95,172,266, estimated population. See note 4.⁶ On basis of 93,572,266, estimated population. See note 4.⁷ On basis of 91,972,266 population of the United States in 1910, excluding Alaska, Hawaii, and persons in the military and naval service stationed abroad.⁸ On basis of 2,970,038 square miles, which covers "land surface" only and excludes Alaska and Hawaii.⁹ Based on an annual increase in population of 1,597,769, the population for 1900 being 75,994,575.

The foregoing statement, which gives by States and Territories the mileage and certain assignments of mileage, covers what is technically known as "owned" mileage, being compiled from returns based on engineers' records of single-track mileage. There is no duplication in this table, inasmuch as mileage operated under trackage rights, as well as mileage owned jointly by two or more reporting companies, enters but once in the figures submitted. The figures presented in the above statement are not those which are used in computing averages or for assignments of units of operation. The statement stands by itself, and is inserted to show the length of line or the roadway mileage in the United States, distributed by States.

The figures in the column headed "Official" are those derived from returns made by officers of the carriers to which they relate. Those in the column headed "Unofficial" relate to small and unimportant carriers from which no returns have been received for the year covered by this report, and are based on returns made by such carriers in prior years, items contained in railway and engineering periodicals, newspapers, and other like sources, corrected in accordance with the best information available.

The figures in the column showing increase in single-track mileage on June 30, 1913, as compared with the corresponding date of the preceding year, show the principal increases of mileage to have been in North Dakota, Texas, Oklahoma, Georgia, Kentucky, Montana, Arizona, Kansas, Washington, and Idaho in their respective order. In no other State was the increase during the year as much as 100 miles.

It will be observed that several States show decreases rather than increases in mileage as compared with the previous year. The total shown in the statement for each State is the net result of new construction, abandonment, and reclassification, as well as additions to the list of railways. The decreases in mileage shown are due principally to actual abandonment of line in the States where such decreases occur.

In the next statement will be found a classification of railway mileage owned, assigned to the three territorial districts into which the United States is divided for the purpose of statistical presentation.

The figures for single track contained in the above statement can not be checked against the statement of physical mileage representing mileage "owned," because the former contains duplications of mileage operated under trackage rights while the latter contains mileage for which detailed operating reports were not filed, and because in the case of companies operating along the Canadian border there are instances in which the operated mileage extends into Canada, and the operations of the Canadian portions are not segregated. It is single-track operated mileage (including that operated under trackage rights) upon which are based assignments per mile of line for operating and traffic statistics, allowance being made in connection with certain averages for the fact that a portion of the mileage was not operated during the entire year.

From the above statement it appears that, for Class I and Class II roads, the total mileage operated (all tracks) on June 30, 1913, was 369,579.80 miles, being an increase of 8,628.36 miles as compared with the corresponding mileage of the preceding year. Of this increase, 4,012.07 miles was in single track and 3,157.59 miles in yard track and sidings. In other words, the mileage of single (or first) track operated increased

during the year 1.67 per cent, that of yard track and sidings increased 3.46 per cent, and the total mileage of all tracks operated by roads in the two classes increased 2.39 per cent. It thus appears that miles of yard track and sidings operated increased proportionally, slightly more than twice as much, as miles of single or first track operated. The relatively small increase in single track as compared with the increase in yard track and sidings may be accepted as one of the indications that the railway systems of the United States, taken as a whole, are continuing to adjust themselves to the demands of commercial conditions fairly stable in character.

¹ Includes 1,208.87 miles lying in Canada.

² Includes 737.17 miles lying in Canada.

³ Includes 1,946.04 miles lying in Canada.

⁴ Includes 1,870.85 miles lying in Canada.

⁵ Includes 1,761.58 miles lying in Canada.

⁶ Includes 1,384.36 miles lying in Canada.

⁷ Includes 1,343.45 miles lying in Canada.

⁸ Includes 1,290.68 miles lying in Canada.

The above statement shows with respect to Class I and Class II roads the number of miles directly owned by the operating companies, the number of miles represented by stocks title to substantially all of which was held by the operating companies (excepting, however, such proprietary mileage as is also covered by formal lease or other contract), and the number of miles operated under lease with fixed rent, under operating contract with contingent rent, and under trackage rights. The table indicates, roughly, the manner in which properties are brought together for the purposes of operation and the lengths of line affected by the various methods of combining the mileage of separate corporations into operating systems.

CLASSIFICATION OF RAILWAYS.

The statements which pertain to organization for the purposes of operation are as follows:

7. Railways classified according to organization for operation.

8. Summary of changes in list of railways.

In the first of the statements in this class will be found a classification of railways according to the conditions of organization under which they were operated at the close of the years stated. From this statement it appears that during 1913 the total number of roads diminished somewhat, due in part to a slight decrease in the number of operating roads, but principally to a larger decrease in the number of nonoperating roads. The progress of consolidation is reflected in the decrease in the number of independent roads.

The next statement summarizes the changes during the year in the list of railways covered by this report. Examination of this statement indicates fairly steady progress in the direction of consolidation and merger of railway companies. For a detail of the changes, see the table beginning on page 706.

EQUIPMENT.

The equipment statements next given show, in the order named, the numbers and kinds of locomotives and cars in use, their relation to mileage and to traffic carried, their classification according to the type and power of the locomotives and the capacity of the freight cars, and the extent to which

locomotives and cars are fitted with train brake and automatic coupler. The equipment statements pertaining to cars exclude so-called "private cars."

The following is a list of the equipment statements:

9. Locomotives and cars in service.
10. Locomotives and cars per 1,000 miles of road.
11. Relation of equipment to amount of traffic.
12. Summary classification of locomotives and their principal characteristics.
13. Distribution of locomotives in service, by classes of roads and by territorial districts.
14. Detailed classification of locomotives—
 - A. Single-expansion locomotives.
 - B. Four-cylinder compound locomotives.
 - C. Two-cylinder compound locomotives.
 - D. Locomotives of the Mallet type—
 - Da. Four-cylinder compound.
15. Classification of freight cars by kinds and capacities.
16. Train brake and automatic coupler equipment.
17. Locomotives equipped with train brake and automatic coupler.
18. Cars equipped with train brake and automatic coupler.
19. Classification of cars fitted with train brake and automatic coupler.
20. Classification of cars in service.

* Does not include equipment in the service of switching and terminal companies.

In the preceding statement will be found a classified presentation of the number of locomotives and cars in the service of the railways of classes I and II on June 30, 1913. The total number of cars stated in the column preceding the last includes the number of cars contributed to fast freight line service.

The figures here given for the fiscal year 1908 exclude locomotives and cars of switching and terminal companies, and to that extent differ from the figures found in the report of that year. This exclusion was necessary in order to make the five years 1908 to 1912 comparable.

It is apparent from the preceding statement that the increasing traffic of the carriers has necessitated an appreciable increase of their equipment, although the increase in freight cars during each of the last four years is markedly less than that during the year ended June 30, 1908. It will be remembered that during 1908 the increase in freight cars exceeded 100,000, while during the next year there was an actual decrease of more than 15,000.

The two following statements show the relation of equipment to length of line and to traffic in the several territorial districts and on the various classes of roads.

1 Decrease.

The first of the two statements given above shows that equipment has increased faster than length of road; passenger cars have increased slightly faster, and locomotives and freight cars about 1½ per cent faster.

The second statement shows a fuller utilization of equipment than during the preceding year; this is due in part to the increase in both passenger traffic and in freight traffic, as may be seen by reference to page 41.

The next statement shows some of the principal physical characteristics of various classes of locomotives.

¹⁴ Includes 4,046 oil-burning locomotives.

¹⁵ Includes 3,716 oil-burning locomotives.

¹⁶ Includes 4,055 oil-burning locomotives.

The analysis shown in the statement given above is carried much further in Statement No. 14, which divides each of the previously shown classes of locomotives into subclasses based on wheel arrangement. The numbers and arrangement of truck wheels and drivers are probably indicated with sufficient clearness by the symbols used. Locomotives of the Mallet

type, the specific mention of which in such schedules was noted for the first time in the report for 1910, have during the year covered by this report increased more than 34 per cent, while the increase in the number of all other locomotives was only slightly more than 3 per cent.

A comparison of data for Class I and Class II roads in the following statement of freight cars in service on June 30, 1913, with the corresponding data of a year earlier, shows the continuance of the tendency toward larger cars. The number of cars in service has increased slightly more than 3 per cent, the total capacity has increased more than 5 per cent, and the average capacity has risen from 37.52 tons to 38.26 tons, or 1.97 per cent.

The number of cars having capacities of less than 35 tons decreased 56,114, while cars having capacities of 35 tons or more increased in number 126,142, indicating that as the smaller cars are wrecked or retired from other causes they are being replaced with cars of 35-ton capacity or greater. The relative rate of increase is more marked in the larger cars.

For a number of years the reports have included a classification of equipment showing the numbers of the several classes or kinds of equipment fitted with train brake and with automatic coupler. During the development of the safety-appliance acts these statements were very significant.

They are continued for the use of those who may be interested in the information which they contain. It should be stated that the figures given for equipment in "Fast freight line service" are included in those given under the head of "Total in service."

The statements pertaining to average daily compensation are not altogether satisfactory. The compensation of employees on account of overtime work, for example, is not clearly reflected in these averages. The fact that overtime is sometimes paid for at a higher rate than the hours covered by the ordinary day does affect the average daily compensation here reported, but the extent to which it affects the averages can not be determined from the returns received. It is not possible to change the basis of compiling and reporting

compensation for railway employees so as to arrive at the average amount earned each day by the average employee of each class without either changing the rules according to which certain classes of railway employees are paid or formulating a set of arbitrary rules for converting compensation into terms of a daily wage. Much study has been given to this question, but thus far without arriving at any satisfactory solution. Meanwhile the tables are continued, and, if properly understood, will serve a useful purpose as a basis of comparison from year to year.

CAPITALIZATION OF RAILWAY PROPERTY.

25. Railway capital on June 30, 1913.

26. Railway capital only nominally outstanding, June 30, 1913.

27. Analysis of railway capital showing basis on which average amount per mile of road is computed.

28. Railway securities owned (or controlled) by railway corporations on June 30, 1913.

29. Dividend-paying stock and dividends declared for the years ended June 30, 1913 to 1888.

30. Railway capital by rate of dividend or interest.

31. Amounts of dividends and interest.

By "railway capital," as used in this set of statements, is meant the aggregate of securities issued, including not only

those actually issued and outstanding, but also those which have been reacquired and are held alive in the hands of some fiduciary of the issuing corporation, and those which have been merely nominally issued but not yet delivered to a bona fide purchaser for value. No economic conclusion or question of equity is involved in this use of the term.

Railway capital is classified as stock and funded debt, and stock is again classified as common and preferred. Under funded debt the following classes of securities are found: Mortgage bonds; collateral trust bonds; plain bonds, debentures, and notes; income bonds; miscellaneous funded obligations; and equipment trust obligations.

From the above statement it appears that the total of railway capital on June 30, 1913, was \$19,796,125,712, being an increase of \$248,486,203 as compared with the previous year. Of this increase, \$131,723,168 was in the various classes of funded debt and \$116,763,035 was in stock. It is not possible to determine from the returns of the carriers exactly what portion of this increase in capitalization represents new construction and additions and betterments to constructed properties on the one hand, and what portion is traceable to purely financial transactions.

A comparison of the year covered by this report with the previous year shows increases of \$106,349,707 in common stock, and \$10,413,328 in preferred stock. A corresponding comparison for funded debt shows mortgage bonds to have increased \$241,833,668; collateral trust bonds to have decreased

\$136,903,014; plain bonds, debentures, and notes increased \$45,201,153; income bonds decreased \$14,530,998; miscellaneous funded obligations decreased \$57,713,026; and equipment trust obligations to have increased \$53,835,385. It is possible that some of these changes are due to reclassification.

The preceding statement is based on a somewhat arbitrary use of the word "outstanding," whereby it is made to include not only securities actually issued to and held by persons not holding on behalf of the corporation, but also securities which after such issuance have been reacquired and are held (uncanceled) by or in the interest of the corporation, and those which, while complete in form and ready for issuance, have never been actually sold and delivered. Certain particulars of such merely nominally outstanding securities are shown in the following statement:

These statistical reports have for a series of years contained statements of the average amount of actually outstanding capital securities per mile of road, and, in continuation of that custom, such an average, as of June 30, 1913, is here stated. The figure found as of that date is \$65,861, and details of the analysis on which it rests appear in the next statement.

12	Net amount not held by railway companies upon which the average amount per mile of road is computed.....	5,810,231,391	9,519,900,055	15,330,131,446
13	Average amount per mile of road (222,765.00 miles represented).....	24,962	40,899	65,861

¹ Includes \$64,029,100, par value of stocks, and \$7,727,000, par value of bonds, etc., controlled through intermediaries not reporting to the commission.

It will be noted that in arriving at the "Average amount per mile of road," the securities assigned to properties other than those used in connection with railway transportation are deducted. This assignment to "other properties" is one that can not be made with any considerable accuracy even by the reporting companies, and some of those which formerly

attempted it have since abandoned the attempt. Manifestly, a figure so constructed should not be subjected to the burden of sustaining any very weighty conclusions.

An analysis of the securities of railway companies held directly or indirectly by the issuing companies and by other railway companies appears in the following statement:

The following statement shows the amount of dividend-yielding stock, the amount of dividends, and the average rate on dividend-yielding stock for the period from 1913 to 1888. It should be noted that the figures for the fiscal years 1908 to 1913 do not include dividends declared by switching and terminal companies. It should further be noted that the funds from which dividends are declared and paid are not restricted to revenues from the operation of railway property,

but that in many cases they include comparatively large amounts of income from the operation of other property, from investments (frequently in securities of other railway companies), and from miscellaneous sources of profit. In the last two columns are shown the relation of dividends paid to the par value of dividend-yielding stock and their relation to the par value of all stock.

¹ Does not include returns for switching and terminal companies.

The next statement shows amounts of various classes of securities outstanding on June 30, 1913, classified with respect to rates of dividends and interest. The statement, like the one in the 1912 report, is similar in general character to corresponding statements contained in reports for 1911 and prior years, but the plan on which the statement is based differs from that followed in such preceding years in that for companies in the hands of receivers the classification of a security is based not on the interest accrued and charged to income, but on that actually paid, in cases in which the payment is less than the accrual. For companies not in the hands of receivers, the classification is based on the accruals of interest and the declarations of dividends charged to income or surplus. This plan disregards the fact that many of the smaller companies (and some of the larger ones) not in the hands of receivers have failed to earn their fixed charges; the identity of such companies may be learned by tracing the item "Net corporate income" for individual companies as shown on subsequent pages of this

report in the tables giving details for particular companies. The statement is thus not entitled to be considered as having much significance for any other purpose than to show the nominal rate of interest. It furnishes no information regarding the real rate of interest and none regarding the trend of the real rate; to show the real rate it would be necessary to know the prices at which the securities were issued, and to know the trend, the movement of prices of securities would have to be considered; nor is it practicable with the present form of reports required from carriers to give weight to the matter of defaults in the payment of interest, the amount of interest matured and unpaid not being called for in detail. The revised form of report soon to become effective provides this additional detail.

The present statement has been compiled and is published because of the fact that the series of statements of which it is the latest has extended over many years and has some value for comparative purposes.

* Does not include returns for switching and terminal companies. The figures in this summary slightly exceed corresponding figures in the Income Statements and Profit and Loss Statements on pages 52 and 59, because the returns of a few small companies are included in this summary that were not sufficiently complete for use in those statements.

SELECTED STATEMENTS AND ASSIGNMENTS.

32. Passenger and freight service.
33. Train-mile and mile-of-road assignments and operating ratios.
34. Freight traffic classified by commodities.
35. Selected commodities.

36. Locomotive mileage and train mileage.

37. Car mileage.

The statements contained in this group show aggregates of the facts returned by operating companies with regard to the extent and character of their service as common carriers. The first statement shows gross figures for passenger service and freight service.

¹ Figures include an apportionment of unclassified tonnage; see page 45, note 1.² The averages shown for 1908 to 1912 are not fully comparable with those for previous years, chiefly for the reason that the figures upon which they are based do not include returns for switching and terminal companies.³ Includes an estimate for certain roads, the records of which for this item were destroyed in the San Francisco fire of April, 1906.

In connection with the foregoing statement it will be noted that the heading "Average haul per ton" relates to two columns. In the first of these two columns are entered averages resulting from the division of the number of ton-miles reported by the number of tons carried. These averages thus represent the average length of haul of the railways embraced in the groups respectively indicated. It is of some interest also to know the total distance over which the typical ton of freight moves. To obtain such figure it is necessary to divide the total number of ton-miles (in which, of course, there are no duplications) by the total number of actual tons, all duplications of tonnage being excluded. When an individual shipment of 1 ton moves over the lines of two or more carriers it gets included in the number of tons reported by each carrier and may thus appear several times in the aggregate of the figures reported by all of the carriers. To obtain the number of actual tons moved it is necessary, therefore, to exclude from the aggregate figures reported all tonnage reported as received from connecting carriers. The remainder, divided into the total ton-miles, gives a figure representing the average distance that freight is moved, and it is this figure that is shown in the

column headed "Typical haul of all the railways regarded as a system." It should be understood, however, that the computations described above disregard the minor error due to the want of details not reported to the commission, especially the tonnage that originates on the lines of carriers other than railway companies and also that the basal figures for the entries in both columns exclude the returns of a few small companies that did not report both number of tons carried and number of ton-miles.

A comparison of the freight and passenger statistics for the fiscal year 1913 with those for the preceding year shows increases of 4.65 per cent in the number of passenger-miles and 14.26 per cent in the number of ton-miles.

In the foregoing statement the averages shown for the fiscal years 1908 to 1913 are compiled from figures which exclude the returns from switching and terminal companies, whereas the averages for all years prior to 1908 include the returns from that class of carriers.

The average receipts per passenger per mile for the year covered by this report for railways of the United States in Class I and Class II were 2.008 cents, the corresponding figure

for the previous year being 1.985 cents, showing an increase of 0.023 cent. Increases are also shown in the average journey per passenger and in the average receipts per passenger.

The average receipts per ton per mile for the year covered by this report were 0.729 cent, which is smaller than the corresponding averages for 1912 and 1911.

The average amount received for each ton of freight transported during the year covered by this report is slightly below

the corresponding figure of the previous year; the average haul per ton was slightly increased, but the increase was not sufficient to offset the decrease in the average receipts per ton per mile.

In the next statement will be found assignments of certain items on a train-mile basis and on a road-mile basis for the years 1913 to 1903. This statement is submitted without comment.

¹ The averages shown for 1908 to 1912 are not fully comparable with those for previous years, chiefly for the reason that the figures upon which they are based do not include returns for switching and terminal companies.

In the next statement will be found a classification of commodities so compiled as to show the tonnage reported as originating on the line of the carrier making report and the tonnage received from connecting roads and other carriers. Leaving out of account the small amount of tonnage received from connecting carriers not reporting to the Interstate Commerce Commission, the first named of these figures is the measure of actual tonnage of freight moved by the railways of the United States classified as having operating revenues of \$100,000 or more, and it should be accepted for computing the true average haul on such railways. The tonnage received from connecting carriers reporting to the Interstate Commerce Commission is, of course, included in the amounts reported by the originating carrier, and hence enters into the gross total once for each of the participating carriers reporting.

In this connection it is of interest to note the much larger proportion of tonnage received from connecting carriers on the larger roads. This statement also presents a classification of railway tonnage assigned to the three great territorial

divisions which roughly correspond to the territories covered by the three principal freight classifications, namely, the Official Classification, the Southern Classification, and the Western Classification. With respect to the two classes of carriers under consideration, a study of the percentages representing the several amounts of the commodities named for the country as a whole and for the three districts defined will throw considerable light upon the commercial conditions which affect railway management. The products of mines, for example, constitute 59.85 per cent of the total tonnage in the Eastern District and 44.18 per cent in the Western District, while manufactures furnish 17.95 per cent of the total tonnage in the former as against 12.80 per cent in the latter district. On the other hand, in the Western District products of agriculture furnish 16.75 per cent and products of forests 16.31 per cent of the total tonnage, as against 6.80 per cent and 5.53 per cent, respectively, in the Eastern District. Facts of this sort indicate clearly the different conditions under which railways operate in different parts of the country.

It is generally conceded that changes in the average receipts per ton per mile, all classes of freight being included in the computation of that average, are at best a very rough indication of the changes in rates charged for the transportation of freight, for the reason that this average is affected quite as much by the relative quantities of different classes of commodities offered for transportation as by the tariff schedules.

European railway statistics, especially those of Germany, are much more satisfactory in this regard.

One step toward remedying the defect in railway traffic and revenue statistics in the United States has been taken by requiring carriers to report ton-mileage and the revenue accruing therefrom for eight selected commodities. The results are shown in the statement following.

The figures in the preceding statement represent 151,941.13 miles of a total of 244,418.49 miles operated by Class I and Class II roads. The results of this compilation are significant, however, and illustrate the impropriety of resting any conclusion as to the movement of freight rates upon the changes in

the average receipts per ton per mile from year to year, all classes of commodities being included in the computation.

The two statements following show locomotive mileage, train mileage, and car mileage assigned to territorial districts and classified according to character of service and kind of equipment.

* The figures shown for years previous to 1908 include some returns for switching and terminal companies.

¹ The figures shown for 1908 to 1912 are not strictly comparable with those of previous years, chiefly for the reason that they are compiled from returns kept in conformity with the classification of locomotive-miles, car-miles, and train-miles prescribed by the commission, which did not become effective until July 1, 1907.

INCOME AND PROFIT AND LOSS STATEMENT.

38. Income and profit and loss statements of the railways, considered as a system, for the year ended June 30, 1913.

39. Income account and profit and loss account of operating roads.

40. Recapitulation of operating revenues and operating expenses.

41. Analysis of operating revenues.

42A. Classification of operating expenses—Class I roads.

42B. Classification of operating expenses—Class II roads.

43. Income and profit and loss statements of leased roads subsidiary to roads of Class I and Class II.

The income account statement appears somewhat complicated, but it is no more so than the joint operations and intercorporate relations of railways make necessary. A simple compilation of debits and credits as returned by carriers in their annual reports would result in duplications on both sides of the account, and while the final result—that is to say, the debit or credit balance—would not be affected by the duplications, it would not be possible to accept any particular figure affected by

intercorporate payments as a true measure of an item in question. On the other hand, it is not possible to make adjustments for these duplicate payments in the several reports, for the reason that this would result in incorrectly stating the operating and financial conditions of individual carriers; nor would it be possible to follow such corrections through the supporting statements, so far as the detailed compilations are concerned.

The statement which immediately follows presents an income account of the railways covered thereby, approximately as it would be if a single corporation owned all these railways, and if, as a result of such a consolidation, all intercorporate contracts or interests were canceled. It is not practicable, however, to identify in the reports as now rendered intercorporate payments for transportation service performed by one company for another, as, e. g., the transportation of fuel, rails, or other materials or supplies, and to the extent that such intercorporate payments get into the statements of operating revenues and expenses, duplication exists in the summary following.

*Excludes returns for so-called small roads (having operating revenues below \$100,000 for the year), switching and terminal companies, and for a few roads the reports of which were not sufficiently complete for use in this statement.

¹ The figures shown for this item represent the net remaining after intercorporate payments were eliminated.

² Less than \$1.

The condensed income account and profit and loss account next submitted is compiled without the elimination of duplications on account of intercorporate payments, and it is this statement which is made the basis for the analysis of all debit and credit charges which arise out of the operations during the year covered by this report.

A comparison of the leading items in the foregoing statement with corresponding items published in last year's report shows an increase of \$298,177,432 in rail operating revenues and of \$210,874,266 in operating expenses, resulting in an increase of \$87,303,166 in net operating revenue. The reports show that revenues and expenses of auxiliary (or outside) operations are higher than for the previous year, the net revenue from such operations showing an increase of \$987,058. The total net revenue from operations, which includes besides rail operations the net revenue from auxiliary (or outside) operations, shows an increase for the year covered by this report of \$88,290,224 over the previous year. Taxes have been increased during the year from \$113,126,907 to \$122,005,424, or nearly 8 per cent. Further comparison shows that dividends declared from current income and appropriations for new lines and extensions charged to income have decreased and appropriations for addi-

tions and betterments have increased. The balance to the credit of profit and loss for operating roads in Class I and Class II is \$183,705,547, as against \$112,977,713 for the preceding year. From this, however, should be deducted, before making final comparison, the dividends declared out of surplus, which for the present year were \$85,706,629, as against \$100,435,989 for the preceding year. It should be held in mind that this table is limited to operating companies. A corresponding table for lessor companies will be found on page 59.

There is next introduced a recapitulation of operating revenues and expenses by districts and classes followed by a series of statements supporting some of the entries found in the preceding statement. In them will be found a detailed analysis of all items of revenues and expenses. They are submitted without comment.

GENERAL BALANCE SHEET.

The general balance sheets next shown are constructed by aggregating the figures contained in such of the reports of the companies in Class I and Class II and their subsidiary nonoperating roads as are considered sufficiently complete for inclusion.

The figures shown for "Miles of line represented" indicate the aggregate single track mileage owned by the companies whose balance sheets are included in the statement.

Switching and terminal companies are excluded. There has been no attempt to make adjustments for intercorporate relations. Securities and other liabilities of one company to

another are included in the statement of liabilities as reported by the debtor company and in the statement of assets as reported by the creditor company, although it may happen in a particular case that the creditor company carries the claim on its books at only a nominal valuation. There is, therefore, no warrant for regarding these statements as representing the consolidated balance sheets of the several classes of carriers considered as individual systems.

The following statements are based on returns made under the order of the Interstate Commerce Commission covering the Form of General Balance Sheet Statement effective on June 15, 1910.

¹ Subsidiary to roads of Class I and Class II.**TAXES.**

The following statement shows taxes on railway properties of the larger carriers in the United States during the year covered by this report.

The taxes are classified with respect to States, classes of roads, and bases of assessments. The totals for the several

States are averaged on the basis of miles of actual road instead of the basis of operated mileage. For the classes of carriers involved the statement shows an increase in the sum total of taxes from \$114,935,620 to \$122,817,394, being an increase of \$7,881,774, or nearly 7 per cent. The average taxes per mile of road increased from \$503 to \$528, or nearly 5 per cent.

¹ Includes \$593,867 in excess of amount included in statements Nos. 39 and 43, pp. 52 and 59, being due to inclusion of tax figures for certain roads, the income accounts of which were not included in the statements mentioned; and excludes \$5,733, being chiefly due to overestimate of taxes accrued, \$194,127 paid in the Dominion of Canada, \$158 paid in Mexico, \$203 not localized by States, and \$4,808,212 assessed by the United States Government, chiefly as a special excise tax, which amounts were charged to income and are included in the above-mentioned statements.

INVESTMENT IN ROAD AND EQUIPMENT.

The figures presented in the statement following include returns for investment in road and equipment and miles of line represented by such investment as reported by the operating roads in Class I and Class II, exclusive of switching and terminal companies, as well as by their subsidiary nonoperating roads (leased, operated under contract, etc.). From the investments reported no deduction for the amount of reserve for accrued depreciation has been made.

The expenditures for additions and betterments, as well as the expenditures for new lines and extensions during the fiscal year 1913, are analyzed in the statement.

The annual reports prior to that for the year ended June 30, 1910, included information with respect to railway accidents. For figures regarding accidents occurring in years subsequent to 1909, reference should be made to the commission's quarterly bulletins relating to collisions, derailments, and other railway accidents.

Respectfully submitted.

SECTION A

PART I.—ABSTRACT OF REPORTS RENDERED BY OPERATING STEAM RAILWAY COMPANIES OF CLASS I

51613—15—5

EXPLANATORY NOTE.

Section A-I is devoted to statistics compiled from reports rendered by operating steam railway corporations of Class I; i. e., those having annual operating revenues above \$1,000,000. In this section, the general plan of arrangement of the corporations within each district is similar to that for Section C of this report (see "Explanatory note," p. 671), with the exception that the so-called "systems" and individual corporations are ranked according to their annual operating revenues. For example, the Pennsylvania system appears first in the eastern district to which it is assigned, and it is headed by the Pennsylvania Railroad Co., the "parent" corporation, which is followed in turn by its Class I subsidiary corporations. Then follows the New York Central system, as that system had annual operating revenues next in rank to the Pennsylvania "system."

The corporations are presented in series. For each series appropriate statistics are given, so arranged that the figures for a particular corporation are shown on consecutive pages. The particulars are shown in the following order:

Condensed balance sheet statement.

Income statement and profit and loss statement.

Operating revenues.

Operating expenses.

Operating statistics.

Equipment in service.

Description of road.

Investment other than road and equipment on June 30, 1913.

Marketable securities held on June 30, 1913.

Cash and securities in sinking and redemption funds, insurance and other reserve funds, and provident funds on June 30, 1913.

Capital stocks on June 30, 1913.

Funded debt on June 30, 1913.

In some cases the designations of items used in this section are condensed slightly from the titles of prescribed accounts or of items in the form for annual report, but they seem sufficiently clear to prevent misunderstanding.

In the bracketed notes in the headings of various statements of each group of corporations mention is made of certain "General Balance Sheet" accounts. In order that the details provided for in the accounts mentioned may be understood, reference should be made to the Form of General Balance Sheet Statement for Steam Roads, First Revised Issue, effective on June 15, 1910.

Entries for the "Cr." item in Condensed Balance Sheet Statement; the "Dr." item in Operating Revenues; the "Cr." items in Operating Expenses, and, in general, for deficits and other reverse or negative items are distinguished by italic figures. As money amounts other than averages are shown only to the nearest dollar, slight discrepancies may be noted in the totals in some instances.

SECTION A

PART II.—ABSTRACT OF REPORTS RENDERED BY OPERATING STEAM RAILWAY COMPANIES OF CLASS II

307

EXPLANATORY NOTE.

Section A-II is devoted to abstracts compiled from reports rendered by operating steam railway corporations of Class II, i. e., those, with some few exceptions, having annual operating revenues from \$100,000 to \$1,000,000. The corporations are arranged by territorial districts as defined on page 8.

The independent corporations in this section are arranged alphabetically; their subsidiary corporations follow in the same order in which they appear in Section C of this report. Corporations subsidiary to others not appropriate for this section appear in order as if the controlling corporations were also included in this section. As an illustration, the first road appearing is the Sandy Valley & Elkhorn Railway Co., it being subsidiary to the Baltimore & Ohio Railroad Co., statistics for which appear in Section A-I.

The corporations are arranged in series as in Section I, and with the exception that the condensed balance sheet statement is reduced to a smaller number of items, the statistics are identical in character with those presented in that section.

In some cases the designations of items used in this section are condensed slightly from the titles of prescribed accounts or of items in the form for annual report, but they seem sufficiently clear to prevent misunderstanding.

In the bracketed notes in the headings of various statements of each group of corporations mention is made of certain "General Balance Sheet" accounts. In order that the details provided for in the accounts mentioned may be understood, reference should be made to the Form of General Balance Sheet Statement for Steam Roads, First Revised Issue, effective on June 15, 1910.

Entries for the "Cr." item in Condensed Balance Sheet Statement; the "Dr." item in Operating Revenues; the "Cr." items in Operating Expenses, and, in general, for deficits and other reverse or negative items are distinguished by italic figures. As money amounts other than averages are shown only to the nearest dollar, slight discrepancies may be noted in the totals in some instances.

SECTION A

PART III.—ABSTRACT OF REPORTS RENDERED BY OPERATING STEAM RAILWAY COMPANIES OF CLASS III

525

EXPLANATORY NOTE.

Section A-III is devoted to abstracts compiled from reports rendered by operating steam railway corporations of Class III, or those, with some few exceptions, having annual operating revenues below \$100,000. Because of the relatively slight financial importance of this class of corporations very few details are shown.

The order of the presentation of corporations is similar to that for Section A-II. (See "Explanatory note," p. 309.)

Reverse or negative entries are distinguished by italic figures.

SECTION B

ABSTRACT OF REPORTS RENDERED BY LESSOR STEAM RAILWAY COMPANIES

551

EXPLANATORY NOTE.

Section B-Part I is devoted to abstracts compiled from reports rendered by lessor or nonoperating railway corporations subsidiary to roads of Class I and Class II, the former having annual operating revenues above \$1,000,000, and the latter, with some few exceptions, from \$100,000 to \$1,000,000.

Section B-Part II is devoted to abstracts compiled from reports rendered by lessor or nonoperating railway corporations subsidiary to roads of Class III, those having annual operating revenues below \$100,000, with some few exceptions.

The order of presentation of the corporations in series is similar to that for section A-II. (See "Explanatory note," p. 309.)

Appropriate statistics, so arranged that the figures for a particular corporation are given on consecutive pages, are shown for each series in the order given:

Condensed balance sheet, income statement, and profit and loss statement.

Investment other than road and equipment, marketable securities held, and cash and securities in funds on June 30, 1913.

Capital stocks on June 30, 1913.

Funded debt on June 30, 1913.

In some cases the designations of items used in this section are condensed slightly from the titles of prescribed accounts or of items in the form for annual report, but they seem sufficiently clear to prevent misunderstanding.

In the bracketed notes in the headings of various statements of each group of corporations mention is made of certain "General balance sheet" accounts. In order that the details provided for in the accounts mentioned may be understood, reference should be made to the Form of General Balance Sheet Statement for Steam Roads, First Revised Issue, effective on June 15, 1910.

In general, it may be said that entries for deficits and other reverse or negative items are distinguished by italic figures. As money amounts other than averages are shown only to the nearest dollar, slight discrepancies may be noted in the totals in some instances.

SECTION C

TABLE SHOWING SINGLE-TRACK MILEAGE AND INTERCORPORATE
RELATION OF STEAM RAILWAY COMPANIES
ON JUNE 30, 1913

669

EXPLANATORY NOTE.

In this table the names of all independent steam-operating companies in each of the three districts, previously described in this report, appear in alphabetical order, printed flush, while those of subsidiary companies, making either operating or financial reports, are indented, being also alphabetically arranged. The names of such subsidiary companies as operate their own mileage (and possibly that of other companies) under the control of the leading company of a system are arranged to follow the names of the subsidiary companies, the operations of which are included in the report of the leading company. For illustrations, see pages 678 to 680, Nos. 368 to 462. A subsidiary company may have in subsidiary relation to itself another company, the name of which will appear indented to the second place, and, if some other company be subsidiary to the latter, the name of this third company will be still further indented. For illustration, see page 682, No. 540, Pennsylvania Railroad Co., which appears printed flush as the principal company in an operating system, and as a subsidiary indented to it, on page 684, No. 631, the Philadelphia, Baltimore & Washington Railroad Co. On page 684, No. 637, the Philadelphia & Baltimore Central Railroad Co. is shown as subsidiary to the last-named company and indented to the second place, having as subsidiary to itself No. 638, the Chester Creek Railroad Co., which is still further indented. By this arrangement the relation of any company to the company or companies immediately preceding is shown, with certain exceptions wherein an operating company that is subsidiary to a non-operating company is not indented to that company, but is shown in the group of operating companies. Such conditions are explained in the "Remarks"; for illustration, see No. 170, Sussex Railroad Co., on page 675.

It will be noted that no data are shown in column (d) "Line operated" for roads of Class "III."

In the Supplement, pages 706 to 708, the numbers applying to the companies there included are repeated from the Twenty-fifth Annual Report, as the names of these companies do not appear in the body of the table, most of them having ceased to have a recognized corporate existence in the course of the year covered by this report.

Explanation of designations appearing in column "Class of road (b)" of this table:

"I," "II," "III" indicate roads filing operating reports the operating revenues of which for the year were, respectively, (I) above \$1,000,000; (II) from \$100,000 to \$1,000,000; and (III) less than \$100,000.

"L" indicates lessor roads filing reports. "P" indicates roads for which separate reports were not filed, the facts here shown being taken from the annual reports of other companies. The operations for this class of roads and also for certain of the nonoperating roads shown as class "C" are covered in the operating returns of roads classed as "I," "II," and "III." "C" indicates roads (operating or nonoperating) for which brief circulars showing date of incorporation, mileage, etc., were filed. "U" indicates roads for which official returns were not secured for 1913, the facts here shown being taken from previous returns or from unofficial sources.

INDEXES.

EXPLANATORY NOTE.

The "Index to Railways," beginning on page 735, gives the names of the railway corporations included in this report. References appearing in the first column under "Abstracts" are to the pages on which are begun the series of abstracts in which the railway corporations are respectively represented, and those in the second are to consecutive numbers in the columns of the same pages, by means of which the abstracts of the returns of a particular company may readily be followed through its series. The references under "Mileage," etc., are to entries in Section C, beginning on page 669, or in Appendix A, beginning on page 709.

The "General Index" begins on page 749.
